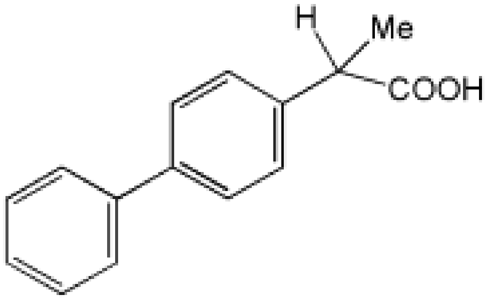
Calculate the content of $C_{15}H_{12}FNaO_2$ in the substance being examined using the declared content of $C_{15}H_{12}FNaO_2$ in *flurbiprofen sodium BPCRS*.

IMPURITIES

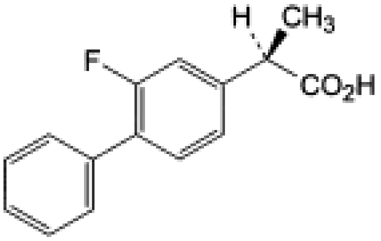


A. 2-(biphenyl-4-yl)propionic acid

Flurbiprofen

General Notices

(Ph Eur monograph 1519)



and enantiomer

$C_{15}H_{13}FO_2$ 244.3 *5104-49-4*

Action and use

Cyclo-oxygenase inhibitor; analgesic; anti-inflammatory.

Preparations

Flurbiprofen Suppositories

Flurbiprofen Tablets

Ph Eur

DEFINITION

(2*RS*)-2-(2-Fluorobiphenyl-4-yl)propanoic acid.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, freely soluble in ethanol (96 per cent) and in methylene chloride. It dissolves in aqueous solutions of alkali hydroxides and carbonates.

IDENTIFICATION

First identification C, D.

Second identification A, B, D.

A. Melting point *(2.2.14)*: 114 °C to 117 °C.

B. Ultraviolet and visible absorption spectrophotometry *(2.2.25)*.

Test solution Dissolve 0.10 g in *0.1 M sodium hydroxide* and dilute to 100.0 ml with the same alkaline solution. Dilute 1.0 ml of this solution to 100.0 ml with *0.1 M sodium hydroxide*.

Spectral range 230-350 nm.

Absorption maximum At 247 nm.

Specific absorbance at the absorption maximum 780 to 820.

C. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *flurbiprofen CRS*.

D. Mix about 5 mg with 45 mg of *heavy magnesium oxide R* and ignite in a crucible until an almost white residue is obtained (usually less than 5 min). Allow to cool, add 1 ml of *water R*, 0.05 ml of *phenolphthalein solution R1* and about 1 ml of *dilute hydrochloric acid R* to render the solution colourless. Filter. To a freshly prepared mixture of 0.1 ml of *alizarin S solution R* and 0.1 ml of *zirconyl nitrate solution R* add 1.0 ml of the filtrate. Mix, allow to stand for 5 min and compare the colour of the solution with that of a blank prepared in the same manner. The test solution is yellow and the blank is red.

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and colourless *(2.2.2, Method I)*.

Dissolve 1.0 g in *methanol R* and dilute to 10 ml with the same solvent.

Optical rotation *(2.2.7)*

- 0.1° to + 0.1°.

Dissolve 0.50 g in *methanol R* and dilute to 20.0 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*.

Solvent mixture *acetonitrile R*, *water R* (45:55 *V/V*).

Test solution Dissolve 0.20 g of the substance to be examined in the solvent mixture and dilute to 100.0 ml with the solvent mixture.

Reference solution (a) Dilute 1.0 ml of the test solution to 50.0 ml with the solvent mixture. Dilute 1.0 ml of this solution to 10.0 ml with the solvent mixture.

Reference solution (b) Dissolve 10.0 mg of *flurbiprofen impurity A CRS* in the solvent mixture and dilute to 100.0 ml with the solvent mixture. Dilute 10.0 ml of this solution to 100.0 ml with the solvent mixture.

Reference solution (c) Dissolve 10 mg of the substance to be examined in the solvent mixture and dilute to 100.0 ml with the solvent mixture. Dilute 1.0 ml of this solution to 10.0 ml with reference solution (b).

Column:

- *size: l* = 0.15 m, Ø = 3.9 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase *glacial acetic acid R*, *acetonitrile R*, *water R* (5:35:60 *V/V/V*).

Flow rate 1 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 10 µl.

Run time Twice the retention time of flurbiprofen.

System suitability Reference solution (c):

- *resolution*: minimum 1.5 between the peaks due to impurity A and flurbiprofen.

Limits:

- *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *impurities B, C, D, E*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *sum of impurities other than A*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.02 per cent).

Heavy metals *(2.4.8)*

Maximum 10 ppm.

Dissolve 2.0 g in a mixture of 10 volumes of *water R* and 90 volumes of *methanol R* and dilute to 20 ml with the same mixture of solvents. 12 ml of the solution complies with test B. Prepare the reference solution using lead standard solution (1 ppm Pb) obtained by diluting *lead standard solution (100 ppm Pb) R* with a mixture of 10 volumes of *water R* and 90 volumes of *methanol R*.

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying at 60 °C at a pressure not exceeding 0.7 kPa for 3 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g in a platinum crucible.

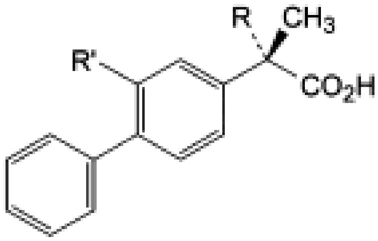
ASSAY

Dissolve 0.200 g in 50 ml of *ethanol (96 per cent) R*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M sodium hydroxide* is equivalent to 24.43 mg of $C_{15}H_{13}FO_2$.

IMPURITIES

Specified impurities *A, B, C, D, E*.

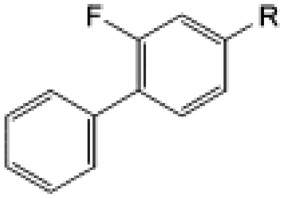


and enantiomer

A. R = R′ = H: (2*RS*)-2-(biphenyl-4-yl)propanoic acid,

B. R = CH(CH$_3$)-CO$_2$H: 2-(2-fluorobiphenyl-4-yl)-2,3-dimethylbutanedioic acid,

C. C. R = OH, R′ = F: (2*RS*)-2-(2-fluorobiphenyl-4-yl)-2-hydroxypropanoic acid,



D. R = CO-CH$_3$: 1-(2-fluorobiphenyl-4-yl)ethanone,

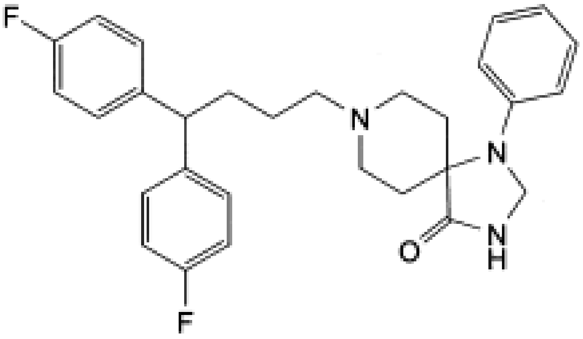
E. R = CO$_2$H: 2-fluorobiphenyl-4-carboxylic acid.

Ph Eur

Fluspirilene

General Notices

(Ph Eur monograph 1723)



$C_{29}H_{31}F_2N_3O$ *475.6* 1841-19-6

Action and use

Antipsychotic.

Ph Eur

DEFINITION

8-[4,4-bis(4-Fluorophenyl)butyl]-1-phenyl-1,3,8-triazaspiro[4.5]decan-4-one.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water, soluble in methylene chloride, slightly soluble in alcohol.

It shows polymorphism *(5.9)*.

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs.

Comparison *fluspirilene CRS*.

If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in *methylene chloride R*, gently evaporate to dryness and record new spectra using the residues.

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Dissolve 0.25 g in 25 ml of *methylene chloride R*.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 0.100 g of the substance to be examined in *dimethylformamide R* and dilute to 10.0 ml with the same solvent.

Reference solution (a) Dissolve 5.0 mg of *fluspirilene impurity C CRS* in *dimethylformamide R*, add 0.5 ml of the test solution and dilute to 100.0 ml with *dimethylformamide R*.

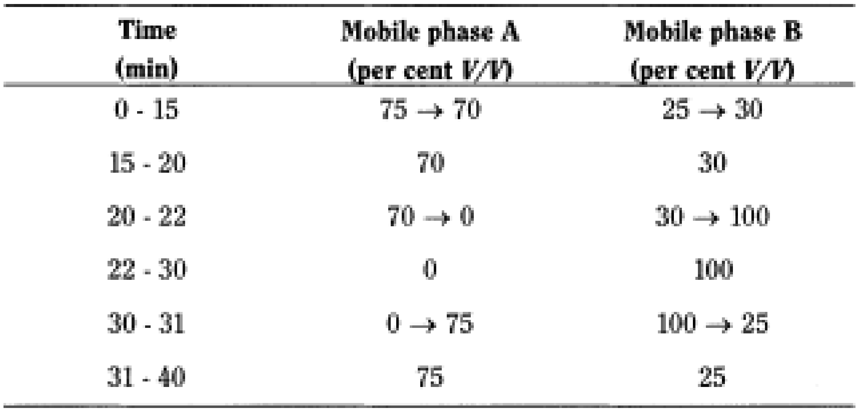
Reference solution (b) Dilute 1.0 ml of the test solution to 20.0 ml with *dimethylformamide R*. Dilute 1.0 ml of this solution to 25.0 ml with *dimethylformamide R*.

Column:

- *size:* *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (3 µm).

Mobile phase A 13.6 g/l solution of tetrabutylammonium hydrogen sulphate R,

Mobile phase B *acetonitrile R*,



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 15	75 → 70	25 → 30
15 - 20	70	30
20 - 22	70 → 0	30 → 100
22 - 30	0	100
30 - 31	0 → 75	100 → 25
31 - 40	75	25

Flow rate 1.2 ml/min.

Detection Spectrophotometer at 250 nm.

Injection 10 µl.

Relative retention With reference to fluspirilene (retention time = about 15 min): impurity A = about 0.8; impurity B = about 0.93; impurity C = 0.97.

System suitability Reference solution (a):

— *resolution*: minimum 2.2 between the peaks due to impurity C and fluspirilene.

Limits:

— *impurities A, B, C*: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);

— *any other impurity*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

— *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.6 per cent);

— *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g in a platinum crucible.

ASSAY

Dissolve 0.350 g in 50 ml of a mixture of 1 volume of *anhydrous acetic acid R* and 7 volumes of *methyl ethyl ketone R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*. Carry out a blank titration.

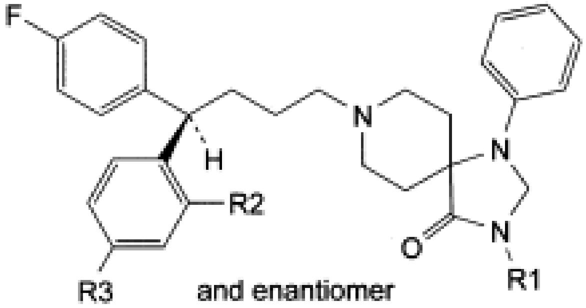
1 ml of *0.1 M perchloric acid* is equivalent to 47.56 mg of $C_{29}H_{31}F_2N_3O$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A, B, C.



A. R1 = R2 = R3 = H: 8-[(4*RS*)-4-(4-fluorophenyl)-4-phenylbutyl]-1-phenyl-1,3,8-triazaspiro[4.5]decan-4-one,

B. R1 = R3 = H, R2 = F: 8-[(4*RS*)-4-(2-fluorophenyl)-4-(4-fluorophenyl)butyl]-1-phenyl-1,3,8-triazaspiro[4.5]decan-4-one,

C. R1 = CH_2OH, R2 = H, R3 = F: 8-[4,4-bis(4-fluorophenyl)butyl]-3-(hydroxymethyl)-1-

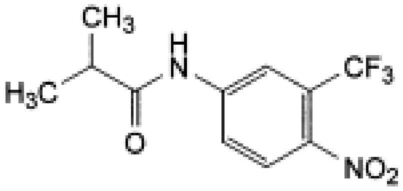
phenyl-1,3,8-triazaspiro[4.5]decan-4-one.

Ph Eur

Flutamide

General Notices

(Ph Eur monograph 1423)



$C_{11}H_{11}F_3N_2O_3$ *276.2* 13311-84-7

Action and use

Antiandrogen.

Ph Eur

DEFINITION

2-Methyl-*N*-[4-nitro-3-(trifluoromethyl)phenyl]propanamide.

Content

97.0 per cent to 103.0 per cent (dried substance).

CHARACTERS

Appearance

Pale yellow, crystalline powder.

Solubility

Practically insoluble in water, freely soluble in acetone and in ethanol (96 per cent).

mp: about 112 °C.

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)*.

Comparison flutamide CRS.

TESTS

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 20.0 ml with the mobile phase.

Reference solution (a) Dissolve 2 mg of *flutamide CRS* and 2 mg of *flutamide impurity C CRS* in the mobile phase, then dilute to 50.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 20.0 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of the test solution to 50.0 ml with the mobile phase. Dilute 2.0 ml of this solution to 20.0 ml with the mobile phase.

Column:
— *size: l* = 0.25 m, Ø = 4.0 mm;

— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase *acetonitrile R*, *water R* (50:50 *V/V*).

Flow rate 0.5 ml/min.

Detection Spectrophotometer at 240 nm.

Injection 20 µl.

Run time 1.5 times the retention time of flutamide.

Retention time Impurity C = about 14 min; flutamide = about 19 min.

Relative retention With reference to flutamide: impurity C = about 0.72.

System suitability Reference solution (a):

— *resolution*: minimum 10.5 between the peaks due to impurity C and flutamide.

Limits:
— *impurity C*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);

— *impurities A, B, D, E, F*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);

— *total*: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C for 3 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 25.0 mg in *methanol R* and dilute to 25.0 ml with the same solvent. Dilute 2.0 ml of this solution to 100.0 ml with *methanol R*. Measure the absorbance *(2.2.25)* at the absorption maximum at 295 nm.

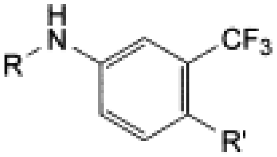
Calculate the content of $C_{11}H_{11}F_3N_2O_3$ taking the specific absorbance to be 295.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A, B, C, D, E, F.



A. R = H, R′ = NO_2: 4-nitro-3-(trifluoromethyl)aniline,

B. R = CO-CH_3, R′ = NO_2: *N*-[4-nitro-3-(trifluoromethyl)phenyl]acetamide,

6α,9-Difluoro-17-[[(fluoromethyl)sulphanyl]carbonyl]-11β-hydroxy-16α-methyl-3-oxoandrosta-1,4-dien-17α-yl propanoate.

Content

97.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water, sparingly soluble in methylene chloride, slightly soluble in alcohol.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *fluticasone propionate CRS*.

B. Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time to the principal peak in the chromatogram obtained with reference solution (b).

TESTS

Specific optical rotation *(2.2.7)*

+ 32 to + 36 (anhydrous substance).

Dissolve 0.25 g in *methylene chloride R* and dilute to 50.0 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*: use the normalisation procedure.

Test solution Dissolve 20 mg of the substance to be examined in a mixture of equal volumes of mobile phase A and mobile phase B and dilute to 100.0 ml with the same mixture of mobile phases.

Reference solution (a) Dissolve 4 mg of *fluticasone impurity D CRS* in a mixture of equal volumes of mobile phase A and mobile phase B and dilute to 100.0 ml with the same mixture of mobile phases.

Reference solution (b) Dissolve 20 mg of *fluticasone propionate CRS* in a mixture of equal volumes of mobile phase A and mobile phase B, add 1.0 ml of reference solution (a) and dilute to 100.0 ml with a mixture of equal volumes of mobile phase A and mobile phase B.

Column:

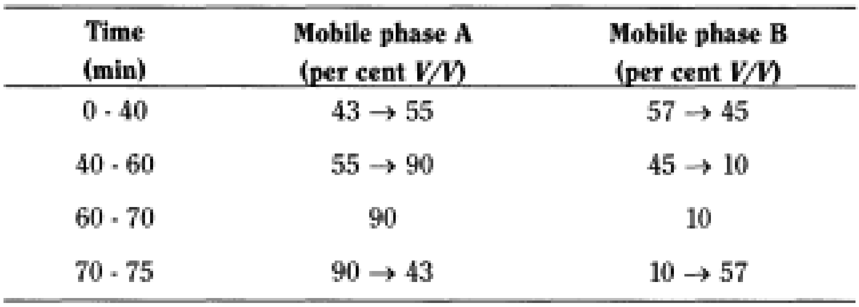
— *size:* l = 0.25 m, Ø = 4.6 mm;

— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm);

— *temperature*: 40 °C.

Mobile phase A A solution containing 0.05 per cent *V/V* of *phosphoric acid R* and 3.0 per cent *V/V* of *methanol R* in *acetonitrile R*,

Mobile phase B A solution containing 0.05 per cent *V/V* of *phosphoric acid R* and 3.0 per cent *V/V* of *methanol R* in *water R*,



Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 40	43 → 55	57 → 45
40 - 60	55 → 90	45 → 10
60 - 70	90	10
70 - 75	90 → 43	10 → 57

Flow rate 1 ml/min.

Detection Spectrophotometer at 239 nm.

Injection 50 µl; inject the test solution and reference solution (b).

Relative retention With reference to fluticasone propionate (retention time = about 30 min): impurity A = about 0.38; impurity B = about 0.46; impurity C = about 0.76; impurity D = about 0.95; impurity E = about 1.12; impurity F = about 1.18; impurity G = about 1.33; impurity H = about 1.93; impurity I = about 2.01.

System suitability Reference solution (b):

— *resolution*: minimum 1.5 between the peaks due to impurity D and to fluticasone propionate.

Limits:

— *impurities D, G*: for each impurity, maximum 0.3 per cent;

— *impurities A, B, C, E, F, H, I*: for each impurity, maximum 0.2 per cent;

— *impurity with relative retention at about 1.23*: maximum 0.2 per cent;

— *any other impurity*: maximum 0.1 per cent;

— *total*: maximum 1.2 per cent;

— *disregard limit*: 0.05 per cent.

Acetone

Gas chromatography *(2.2.28)*.

Internal standard solution Dilute 0.5 ml of *tetrahydrofuran R* to 1000 ml with *dimethylformamide R*.

Test solution Dissolve 0.50 g of the substance to be examined in the internal standard solution and dilute to 10.0 ml with the same solution.

Reference solution Dilute 0.40 g of *acetone R* to 100.0 ml with the internal standard solution. Dilute 1.0 ml to 10.0 ml with the internal standard solution.

Column:

— *material*: fused silica;

— *size: l* = 25 m, Ø = 0.53 mm;

— *stationary phase*: cross-linked *macrogol 20 000 R* (film thickness 2 µm).

Carrier gas *nitrogen for chromatography R*.

Flow rate 5.5 ml/min.

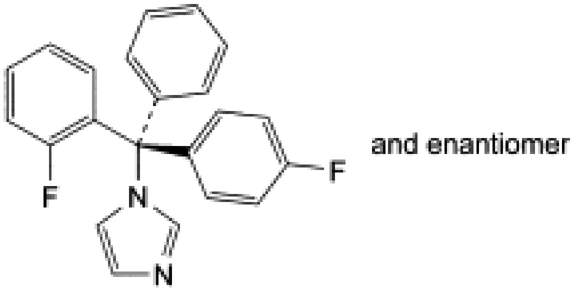
Ph Eur

Flutrimazole

General Notices

(Ph Eur monograph 1424)



$C_{22}H_{16}F_2N_2$ *346.4* 119006-77-8

Action and use

Antifungal.

Ph Eur

DEFINITION

(*RS*)-1-[(2-Fluorophenyl)(4-fluorophenyl)phenylmethyl]-1*H*-imidazole.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water, freely soluble in tetrahydrofuran, soluble in methanol.

IDENTIFICATION

First identification B.

Second identification A, C, D.

A. Melting point *(2.2.14)*: 161 °C to 166 °C.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs.

Comparison *flutrimazole CRS.*

C. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 20 mg of the substance to be examined in *acetone R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dissolve 20 mg of *flutrimazole CRS* in *acetone R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dissolve 20 mg of *flutrimazole CRS* and 10 mg of *metronidazole benzoate CRS* in *acetone R* and dilute to 10 ml with the same solvent.

Plate *TLC silica gel F_{254} plate R*.

Pretreatment Heat the plate at 110 °C for 1 h.

Mobile phase *2-propanol R*, *ethyl acetate R* (10:90 *V/V*).

Application 10 µl.

Development Over 2/3 of the plate.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Mix about 5 mg with 45 mg of *heavy magnesium oxide R* and ignite in a crucible until an almost white residue is obtained (usually less than 5 min). Allow to cool, add 1 ml of *water R*, 0.05 ml of *phenolphthalein solution R1* and about 1 ml of *dilute hydrochloric acid R* to render the solution colourless. Filter. Add 1.0 ml of the filtrate to a freshly prepared mixture of 0.1 ml of *alizarin S solution R* and 0.1 ml of *zirconyl nitrate solution R*. Mix, allow to stand for 5 min and compare the colour of the solution with that of a blank prepared in the same manner. The test solution is yellow and the blank is red.

TESTS

Solution S

Dissolve 1.00 g in *methanol R* and dilute to 50.0 ml with the same solvent.

Appearance of solution

Solution S is not more opalescent than reference suspension II *(2.2.1)* and not more intensely coloured than reference solution Y_7 *(2.2.2, Method II)*.

Optical rotation *(2.2.7)*

- 0.05° to + 0.05°, determined on solution S.

Related substances

Liquid chromatography *(2.2.29).*

Test solution Dissolve 40.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 ml with the mobile phase.

Reference solution (a) Dissolve 25.0 mg of *imidazole CRS* (impurity A) in the mobile phase and dilute to 50.0 ml with the mobile phase. Dilute 10.0 ml of this solution to 50.0 ml with the mobile phase.

Reference solution (b) Dissolve 30.0 mg of *flutrimazole impurity B CRS* in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (c) Mix 2.0 ml of reference solution (a) and 2.0 ml of reference solution (b) and dilute to 50.0 ml with the mobile phase.

Reference solution (d) Dilute 10.0 ml of reference solution (c) to 50.0 ml with the mobile phase.

Reference solution (e) Mix 2.0 ml of the test solution and 10.0 ml of reference solution (c) and dilute to 50.0 ml with the mobile phase.

Reference solution (f) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Column:
— *size:* *l* = 0.2 m, Ø = 4.6 mm;

— *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

Mobile phase *0.03 M phosphate buffer solution pH 7.0 R*, *acetonitrile R* (40:60 *V/V*).

Flow rate 1.3 ml/min.

Detection Spectrophotometer at 220 nm.

Injection 20 µl.

Run time 2.5 times the retention time of flutrimazole.

System suitability Reference solution (e):

— *resolution*: minimum 2.0 between the peaks due to impurity A (1st peak) and impurity B (2nd peak); minimum 1.5 between the peaks due to impurity B and flutrimazole (3rd peak);

— *symmetry factors*: maximum 2.0 for the peaks due to impurities A and B.

Limits:
— *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (d) (0.1 per cent);

— *impurity B*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (d) (0.3 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (f) (0.10 per cent);

— *sum of impurities other than B*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (f) (0.3 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained

with reference solution (f) (0.05 per cent).

Heavy metals ***(2.4.8)***

Maximum 10 ppm.

2.0 g complies with test F. Use a platinum crucible. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying ***(2.2.32)***

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g in a platinum crucible.

ASSAY

Dissolve 0.300 g in 50 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 34.64 mg of $C_{22}H_{16}F_2N_2$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities *A, B*.

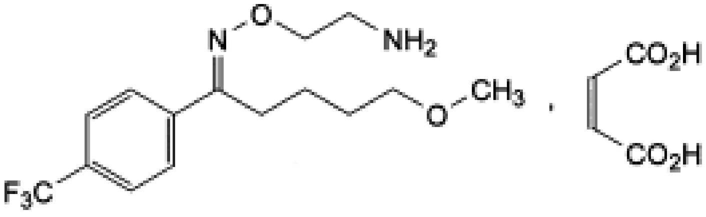
C. R = CH_3: (*RS*)-(2-fluorophenyl)(4-fluorophenyl)methoxyphenylmethane.

Ph Eur

Fluvoxamine Maleate

General Notices

(Ph Eur monograph 1977)



$C_{19}H_{25}F_3N_2O_6$ 434.4 *61718-82-9*

Action and use

Selective serotonin reuptake inhibitor; antidepressant.

Preparation

Fluvoxamine Tablets

Ph Eur

DEFINITION

2-[[[(1*E*)-5-Methoxy-1-[4-(trifluoromethyl)phenyl]pentylidene]amino]oxy]ethanamine (*Z*)-butenedioate.

Content

99.0 per cent to 101.0 per cent (dried substance).

PRODUCTION

The production method must be evaluated to determine the potential for formation of aziridine. Where necessary, a validated test for the substance is carried out or the production method is validated to demonstrate acceptable clearance.

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Sparingly soluble in water, freely soluble in ethanol (96 per cent) and in methanol.

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *fluvoxamine maleate CRS.*

TESTS

Related substances

Liquid chromatography *(2.2.29)*. *Prepare the test solution immediately before use*.

Test solution Dissolve 50 mg of the substance to be examined in the mobile phase and dilute to 25 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 10.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 100.0 ml with the mobile phase.

Reference solution (b) Dissolve the contents of a vial of *fluvoxamine for system suitability CRS* (containing impurities A, B, C and F) in the mobile phase and dilute to 5 ml with the mobile phase.

Reference solution (c) Dissolve 3.0 mg of *fluvoxamine impurity D CRS* in 5 ml of the mobile phase and dilute to 10.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 100.0 ml with the mobile phase.

Column:

- *size:* l = 0.25 m, Ø = 4.6 mm;
- *stationary phase: octylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Mix 370 volumes of *acetonitrile R1* and 630 volumes of a buffer solution containing 1.1 g/l of *potassium dihydrogen phosphate R* and 1.9 g/l of *sodium pentanesulphonate R* in *water R*, previously adjusted to pH 3.0 with *phosphoric acid R*.

Flow rate 1.2 ml/min.

Detection Spectrophotometer at 234 nm.

Injection 20 µl.

Run time 6 times the retention time of fluvoxamine.

Identification of impurities Use the chromatogram supplied with *fluvoxamine for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B, C and F.

Relative retention With reference to fluvoxamine (retention time = about 15 min): maleic acid = about 0.15; impurities F and G = about 0.5; impurity C = about 0.6; impurity B = about 0.8; impurity A = about 2.5; impurity D = about 5.4.

System suitability Reference solution (b):

- *resolution*: minimum 1.5 between the peaks due to impurities F and C.

Limits:

- *impurity B*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *impurity C*: not more than 3 times the area of the principal peak in the chromatogram

obtained with reference solution (a) (0.3 per cent);

— *impurity A*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

— *impurity D*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.15 per cent);

— *sum of impurities F and G*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

— *total*: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent); disregard the peak due to maleic acid.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with test B. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 80 °C for 2 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g in a platinum crucible.

ASSAY

Dissolve 0.350 g in 50 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 43.44 mg of $C_{19}H_{25}F_3N_2O_6$.

IMPURITIES

Specified impurities *A, B, C, D, F, G.*

Other detectable impurities (The following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. Action and use

Vitamin B component.

Preparations

Folic Acid Tablets

Ferrous Fumarate and Folic Acid Tablets

Ph Eur

DEFINITION

(2*S*)-2-[[4-[[(2-Amino-4-oxo-1,4-dihydropteridin-6-yl)methyl]amino]benzoyl]amino]pentanedioic acid.

Content

96.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

Yellowish or orange, crystalline powder.

Solubility

Practically insoluble in water and in most organic solvents. It dissolves in dilute acids and in alkaline solutions.

IDENTIFICATION

First identification *A, B.*

Second identification *A, C.*

A. Specific optical rotation *(2.2.7)*: + 18 to + 22 (anhydrous substance).

Dissolve 0.25 g in *0.1 M sodium hydroxide* and dilute to 25.0 ml with the same solvent.

B. Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time to the principal peak in the chromatogram obtained with reference solution (a).

C. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 50 mg of the substance to be examined in a mixture of 2 volumes of *concentrated ammonia R* and 9 volumes of *methanol R* and dilute to 100 ml with the same mixture of solvents.

Reference solution Dissolve 50 mg of *folic acid CRS* in a mixture of 2 volumes of *concentrated ammonia R* and 9 volumes of *methanol R* and dilute to 100 ml with the same mixture of solvents.

Plate *TLC silica gel G plate R.*

Mobile phase *concentrated ammonia R*, *propanol R*, *ethanol (96 per cent) R* (20:20:60 *V/V/V*).

Application 2 µl.

Development Over 3/4 of the plate.

Drying In air.

Detection Examine in ultraviolet light at 365 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, fluorescence and size to the principal spot in the chromatogram obtained with the reference solution.

TESTS

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 0.100 g of the substance to be examined in 5 ml of a 28.6 g/l solution of *sodium carbonate R* and dilute to 100.0 ml with the mobile phase. Dilute 2.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (a) Dissolve 0.100 g of *folic acid CRS* in 5 ml of a 28.6 g/l solution of *sodium carbonate R* and dilute to 100.0 ml with the mobile phase. Dilute 2.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (b) To 20 mg of *pteroic acid R*, add 5 ml of a 28.6 g/l solution of *sodium carbonate R*, dilute to 100.0 ml with the mobile phase and mix until completely dissolved. Mix 1.0 ml of this solution with 1.0 ml of reference solution (a) and dilute to 100.0 ml with the mobile phase.

Reference solution (c) Dilute 2.0 ml of the test solution to 20.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 20.0 ml with the mobile phase.

Reference solution (d) Dissolve 10.0 mg of *N-(4-aminobenzoyl)-L-glutamic acid R* in 1 ml of a 28.6 g/l solution of *sodium carbonate R* and dilute to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 100.0 ml with the mobile phase.

Reference solution (e) To 12.0 mg of *pteroic acid R* , add 1 ml of a 28.6 g/l solution of *sodium carbonate R*, dilute to 100.0 ml with the mobile phase and mix until completely dissolved. Dilute 1.0 ml of this solution to 100.0 ml with the mobile phase.

Column:
— *size:* l = 0.25 m, Ø = 4.0 mm;

— *stationary phase*: *spherical octylsilyl silica gel for chromatography R* (5 µm) with a carbon loading of 12.5 per cent, a specific surface of 350 m^2/g and a pore size of 10 nm.

Mobile phase Mix 12 volumes of *methanol R* and 88 volumes of a solution containing 11.16 g/l of *potassium dihydrogen phosphate R* and 5.50 g/l of *dipotassium hydrogen phosphate R*.

Flow rate 0.6 ml/min.

Detection Spectrophotometer at 280 nm.

Injection 5 µl of the test solution and reference solutions (b), (c) (d) and (e).

Run time 3 times the retention time of folic acid.

Relative retention With reference to folic acid (retention time = about 8.5 min): impurity A = about 0.5; impurity B = about 0.6; impurity C = about 0.9; impurity E = about 1.27; impurity D = about 1.33; impurity F = about 2.2.

System suitability Reference solution (b):

— *resolution*: minimum 4.0 between the peaks due to folic acid and impurity D.

Limits:
— *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (d) (0.5 per cent);

— *impurity D*: not more than the area of the principal peak in the chromatogram obtained with reference solution (e) (0.6 per cent);

— *any other impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.5 per cent);

— *Total of other impurities*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (1.0 per cent);

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

Water *(2.5.12)*

5.0 per cent to 8.5 per cent, determined on 0.150 g.

Sulphated ash *(2.4.14)*

Maximum 0.2 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modification.

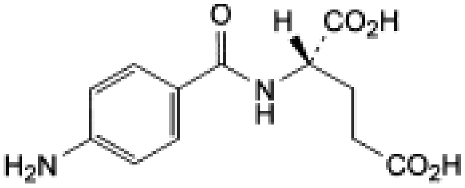
Injection Test solution and reference solution (a).

STORAGE

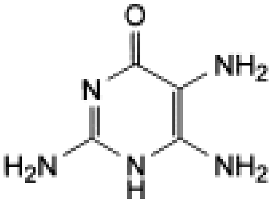
Protected from light.

IMPURITIES

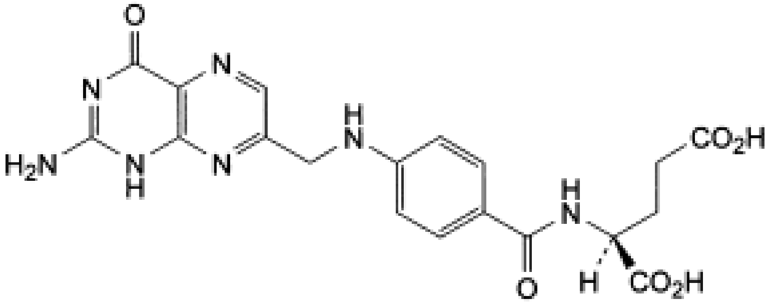
Specified impurities A, B, C, D, E, F.



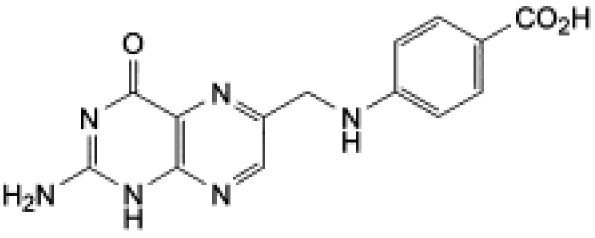
A. (2*S*)-2-[(4-aminobenzoyl)amino]pentanedioic acid (*N*-(4-aminobenzoyl)-L-glutamic acid),



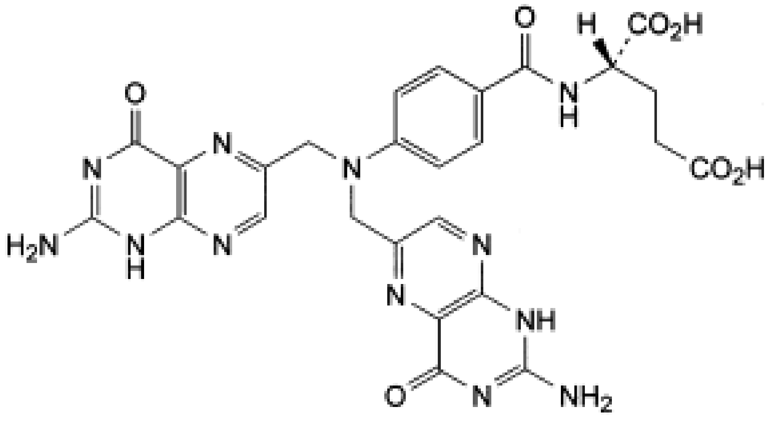
B. 2,5,6-triaminopyrimidin-4(1*H*)-one,



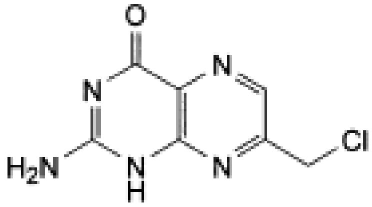
C. (2*S*)-2-[[4-[[(2-amino-4-oxo-1,4-dihydropteridin-7-yl)methyl]amino]benzoyl]amino] pentanedioic acid (isofolic acid),



D. 4-[[(2-amino-4-oxo-1,4-dihydropteridin-6-yl)methyl]amino]benzoic acid (pteroic acid),



E. (2*S*)-2-[[4-[bis[(2-amino-4-oxo-1,4-dihydropteridin-6-yl)methyl]amino]benzoyl]amino] pentanedioic acid (6-pterinylfolic acid),



F. 2-amino-7-(chloromethyl)pteridin-4(1*H*)-one.

Ph Eur

Formaldehyde Solution

General Notices

Formalin

(Formaldehyde Solution (35 per cent), Ph Eur monograph 0826)

NOTE: The name Formalin as a synonym for Formaldehyde Solution may be used freely in many countries, including the United Kingdom, but in other countries exclusive proprietary rights in this name are claimed.

CH_2O 30.03 *50-00-0*

Action and use

When suitably diluted, used in the treatment of warts.

Ph Eur

DEFINITION

Content

34.5 per cent *m/m* to 38.0 per cent *m/m* of formaldehyde (CH_2O; M_r 30.03).

It contains methanol as stabiliser.

CHARACTERS

Appearance

Clear, colourless liquid.

Solubility

Miscible with water and with ethanol (96 per cent).

It may be cloudy after storage.

IDENTIFICATION

A. Dilute 1 ml of solution S (see Tests) to 10 ml with *water R*. To 0.05 ml of the solution add 1 ml of a 15 g/l solution of *chromotropic acid sodium salt R*, 2 ml of *water R* and 8 ml of *sulphuric acid R*. A violet-blue or violet-red colour develops within 5 min.

B. To 0.1 ml of solution S add 10 ml of *water R*. Add 2 ml of a 10 g/l solution of *phenylhydrazine hydrochloride R*, prepared immediately before use, 1 ml of *potassium ferricyanide solution R* and 5 ml of *hydrochloric acid R*. An intense red colour is formed.

C. Mix 0.5 ml with 2 ml of *water R* and 2 ml of *silver nitrate solution R2* in a test-tube. Add *dilute ammonia R2* until slightly alkaline. Heat on a water-bath. A grey precipitate or a silver mirror is formed.

D. It complies with the limits of the assay.

TESTS

Solution S

Dilute 10 ml, filtered if necessary, to 50 ml with *carbon dioxide-free water R*.

Appearance of solution

Solution S is colourless *(2.2.2, Method II)*.

Acidity

To 10 ml of solution S add 1 ml of *phenolphthalein solution R*. Not more than 0.4 ml of *0.1 M sodium hydroxide* is required to change the colour of the indicator to red.

Methanol

Gas chromatography *(2.2.28)*.

Internal standard solution Dilute 10 ml of *ethanol R1* to 100 ml with *water R*.

Test solution To 10.0 ml of the solution to be examined add 10.0 ml of the internal standard solution and dilute to 100.0 ml with *water R*.

Reference solution To 1.0 ml of *methanol R* add 10.0 ml of the internal standard solution and dilute to 100.0 ml with *water R*.

Column:

- *material*: glass;
- *size:* *l* = 1.5-2.0 m, Ø = 2-4 mm;
- *stationary phase*: *ethylvinylbenzene-divinylbenzene copolymer R* (150-180 µm).

Carrier gas *nitrogen for chromatography R.*

Flow rate 30-40 ml/min.

Temperature:

- *column*: 120 °C;
- *injection port and detector*: 150 °C.

Detection Flame ionisation.

Injection 1 µl of the test solution and the reference solution.

System suitability Reference solution:

- *resolution*: minimum 2.0 between the peaks due to methanol and ethanol.

Limit:

- *methanol*: 9.0 per cent *V/V* to 15.0 per cent *V/V*.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Into a 100 ml volumetric flask containing 2.5 ml of *water R* and 1 ml of *dilute sodium hydroxide solution R*, introduce 1.000 g of the solution to be examined, shake and dilute to 100.0 ml with *water R*. To 10.0 ml of the solution add 30.0 ml of *0.05 M iodine*. Mix and add 10 ml of *dilute sodium hydroxide solution R*. After 15 min, add 25 ml of dilute *sulphuric acid R* and 2 ml of *starch solution R*. Titrate with *0.1 M sodium thiosulphate*.

1 ml of *0.05 M iodine* is equivalent to 1.501 mg of CH_2O.

STORAGE

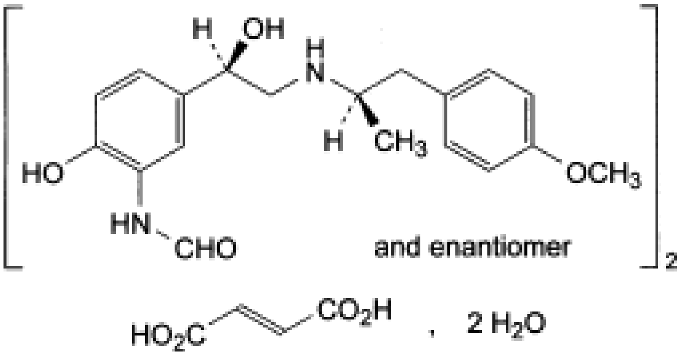
Protected from light, at a temperature of 15 °C to 25 °C.

Ph Eur

Formoterol Fumarate Dihydrate

General Notices

(Ph Eur monograph 1724)



$C_{42}H_{52}N_4O_{12},2H_2O$ 841 *43229-80-7*

(anhydrous)

Action and use

Beta$_2$-adrenoceptor agonist; bronchodilator.

Ph Eur

DEFINITION

N-[2-Hydroxy-5-[(1*RS*)-1-hydroxy-2-[[(1*RS*)-2-(4-methoxyphenyl)-1-methylethyl]amino]ethyl]phenyl]formamide (*E*)-butenedioate dihydrate.

Content

98.5 per cent to 101.5 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white or slightly yellow powder.

Solubility

Slightly soluble in water, soluble in methanol, slightly soluble in 2-propanol, practically insoluble in acetonitrile.

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)*.

Comparison formoterol fumarate dihydrate CRS .

TESTS

pH *(2.2.3)*

5.5 to 6.5.

Dissolve 20 mg in *carbon dioxide-free water R* while heating to about 40 °C, allow to cool and dilute to 20 ml with the same solvent.

Optical rotation *(2.2.7)*

- 0.10° to + 0.10°.

Dissolve 0.25 g in *methanol R* and dilute to 25.0 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*.

Solution A Dissolve 6.10 g of *sodium dihydrogen phosphate monohydrate R* and 1.03 g of *disodium hydrogen phosphate dihydrate R* in *water R* and dilute to 1000 ml with the same solvent. The pH is 6.0 ± 0.1.

Solvent mixture acetonitrile R, solution A (16:84 *V/V*).

Test solution Dissolve 20.0 mg of the substance to be examined in the solvent mixture and dilute to 100.0 ml with the solvent mixture. *Inject within 4 h of preparation, or within 24 h if stored protected from light at 4 °C.*

Reference solution (a) Dissolve 5 mg of *formoterol fumarate for system suitability CRS* (containing impurities A, B, C, D, E, F and G) in the solvent mixture and dilute to 25.0 ml with the solvent mixture.

Reference solution (b) Dilute 1.0 ml of the test solution to 25.0 ml with the solvent mixture. Dilute 1.0 ml of this solution to 20.0 ml with the solvent mixture.

Column:

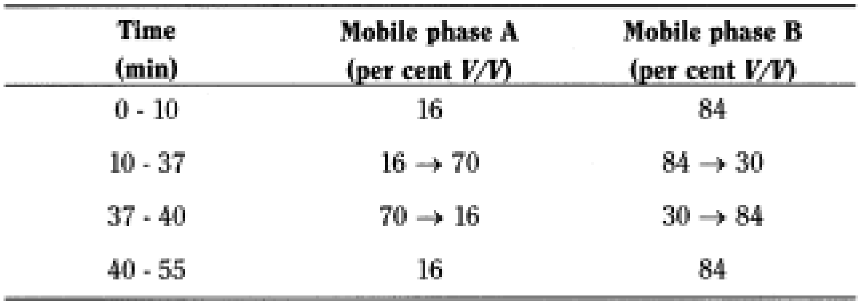
— *size: l* = 0.15 m, Ø = 4.6 mm;

— *stationary phase*: spherical *octylsilyl silica gel for chromatography R3* (5 µm) with a pore size of 8 nm.

Mobile phase:

— *mobile phase A*: *acetonitrile R1;*

— *mobile phase B*: dissolve 3.73 g of *sodium dihydrogen phosphate monohydrate R* and 0.35 g of *phosphoric acid R* in *water R* and dilute to 1000 ml with the same solvent; the pH is 3.1 ± 0.1;



Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 10	16	84
10 - 37	16 → 70	84 → 30
37 - 40	70 → 16	30 → 84
40 - 55	16	84

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 214 nm.

Injection 20 µl; inject the solvent mixture until a repeatable profile is obtained.

Identification of impurities Use the chromatogram obtained with reference solution (a) and the chromatogram supplied with *formoterol for system suitability CRS* to identify the peaks.

Relative retention With reference to formoterol (retention time = about 12 min): impurity G = about 0.4; impurity A = about 0.5; impurity B = about 0.7; impurity C = about 1.2; impurity D = about 1.3; impurity E = about 1.8; impurity F = about 2.0; impurity H = about 2.2.

System suitability Reference solution (a):

— *resolution*: minimum 1.5 between the peaks due to impurity G and impurity A.

— *peak-to-valley ratio*: minimum 2.5, where H_p = height above the baseline of the peak due to impurity C and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to formoterol.

Limits:

— *correction factor*: for the calculation of content, multiply the peak area of impurity A by 1.75;

— *impurity A*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);

— *impurities B, C, D, F*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);

— *impurity E*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

— *unspecified impurities*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

— *total*: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Impurity I

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 5.0 mg of the substance to be examined in *water R* and dilute to 50.0 ml with the same solvent. Sonicate if necessary.

Reference solution (a) Dissolve 5.0 mg of *formoterol for impurity I identification CRS* in *water R* and dilute to 50.0 ml with the same solvent. Sonicate if necessary.

Reference solution (b) Dilute 1.0 ml of the test solution to 20.0 ml with *water R*. Dilute 1.0 ml of this solution to 25.0 ml with *water R*.

Column:

- *size:* l = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *octadecyl vinyl polymer for chromatography R*.

Mobile phase Mix 12 volumes of *acetonitrile R1* with 88 volumes of a 5.3 g/l solution of *tripotassium phosphate trihydrate R* previously adjusted to pH 12.0 ± 0.1 with a 280 g/l solution of *potassium hydroxide R* or *phosphoric acid R*.

Flow rate 0.5 ml/min.

Detection Spectrophotometer at 225 nm.

Injection 20 µl.

Elution order Formoterol, impurity I.

System suitability Reference solution (a):

- *peak-to-valley ratio*: minimum 2.5, where H_p = height above the baseline of the peak due to impurity I and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to formoterol.

Limit:

- *impurity I*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent).

Water *(2.5.12)*

4.0 per cent to 5.0 per cent, determined on 0.100 g.

ASSAY

Dissolve 0.350 g in 50 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 40.24 mg of $C_{42}H_{52}N_4O_{12}$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities *A, B, C, D, E, F, I.*

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use) : G, H.*

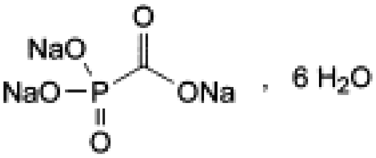
Ph Eur

Foscarnet Sodium

General Notices

(Foscarnet Sodium Hexahydrate, Ph Eur monograph 1520)



$CNa_3O_5P,6H_2O$ 300.0 *34156-56-4*

Action and use

Antiviral (cytomegalovirus).

Preparation

Foscarnet Intravenous Infusion

Ph Eur

DEFINITION

Trisodium phosphonatoformate hexahydrate.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Soluble in water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison foscarnet sodium hexahydrate CRS .

B. It gives reaction (a) of sodium *(2.3.1)*.

TESTS

Solution S

Dissolve 0.5 g in *carbon dioxide-free water R* and dilute to 25 ml with the same solvent.

Appearance of solution

Solution S is not more opalescent than reference suspension I *(2.2.1)* and is colourless *(2.2.2, Method II)*.

pH *(2.2.3)*

9.0 to 11.0 for solution S.

Impurity D

Gas chromatography *(2.2.28)*.

Test solution Dissolve 0.25 g of the substance to be examined in 9.0 ml of *0.1 M acetic acid* using a magnetic stirrer. Add 1.0 ml of *anhydrous ethanol R* and mix.

Reference solution Dissolve 25 mg of *triethyl phosphonoformate R* in *anhydrous ethanol R* and dilute to 100 ml with the same solvent. Dilute 1 ml of this solution to 10 ml with *anhydrous ethanol R*.

Column:
- *material*: fused silica;
- *size:* *l* = 25 m, Ø = 0.31 mm;
- *stationary phase*: *poly(dimethyl)(diphenyl)(divinyl)siloxane R* (film thickness 0.5 µm).

Carrier gas *helium for chromatography R.*

Split ratio 1:20.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 8	100 → 180
Injection port		200
Detector		250

Detection Flame ionisation.

Injection 3 µl

Limit:
- *impurity D*: not more than the area of the principal peak in the chromatogram obtained with the reference solution (0.1 per cent).

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 25 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 50.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (b) Dissolve 5.0 mg of *foscarnet impurity B CRS* in the mobile phase, add 2.0 ml of the test solution and dilute to 50.0 ml with the mobile phase.

Column:

— *size*: *l* = 0.10 m, Ø = 4.6 mm;

— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (3 µm).

Mobile phase Dissolve 3.22 g of *sodium sulphate decahydrate R* in *water R*, add 3 ml of *glacial acetic acid R*, 6 ml of a 44.61 g/l solution of *sodium pyrophosphate R* and dilute to 1000 ml with *water R* (solution A); dissolve 3.22 g of *sodium sulphate decahydrate R* in *water R*, add 6.8 g of *sodium acetate R* and 6 ml of a 44.61 g/l solution of *sodium pyrophosphate R* and dilute to 1000 ml with *water R* (solution B). Mix about 700 ml of solution A and about 300 ml of solution B to obtain a solution of pH 4.4. To 1000 ml of this solution, add 0.25 g of *tetrahexylammonium hydrogen sulphate R* and 100 ml of *methanol R*.

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 230 nm.

Injection 20 µl.

Run time 2.5 times the retention time of foscarnet.

System suitability Reference solution (b):

— *resolution*: minimum 7 between the peaks due to foscarnet and impurity B.

Limits:

— *impurities A, B, C*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

— *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.4 per cent);

— *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.04 per cent); disregard any peak with a relative retention time less than 0.6.

Phosphate and phosphite

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 60.0 mg of the substance to be examined in *water R* and dilute to 25.0 ml with the same solvent.

Reference solution (a) Dissolve 28 mg of *sodium dihydrogen phosphate monohydrate R* in *water R* and dilute to 100 ml with the same solvent.

Reference solution (b) Dissolve 43 mg of *sodium phosphite pentahydrate R* in *water R* and dilute to 100 ml with the same solvent.

Reference solution (c) Dilute 1.0 ml of reference solution (a) and 1.0 ml of reference solution (b) to 25 ml with *water R*.

Reference solution (d) Dilute 3 ml of reference solution (a) and 3 ml of reference solution (b) to 25 ml with *water R*.

Column:

— *size: l* = 0.05 m, Ø = 4.6 mm;

— *stationary phase*: *anion exchange resin R*.

Mobile phase Dissolve 0.102 g of *potassium hydrogen phthalate R* in *water R*, add 2.5 ml of *1 M nitric acid* and dilute to 1000 ml with *water R*.

Flow rate 1.4 ml/min.

Detection Spectrophotometer at 290 nm (indirect detection).

Injection 20 µl of the test solution and reference solutions (c) and (d).

System suitability Reference solution (d):

— *resolution*: minimum 2.0 between the peaks due to phosphate (1st peak) and phosphite;

— *signal-to-noise ratio*: minimum 10 for the principal peak.

Limits:

— *phosphate*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.3 per cent);

— *phosphite*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.3 per cent).

Heavy metals

Maximum 10 ppm.

Dissolve 1.25 g in 12.5 ml of *1 M hydrochloric acid*. Warm on a water-bath for 3 min and cool to room temperature. Transfer to a beaker and adjust the pH to about 3.5 with *dilute ammonia R1* and dilute to 25 ml with *water R* (solution A). To 12 ml of solution A, add 2.0 ml of *buffer solution pH 3.5 R*. Rapidly pour the mixture into a test tube containing 1 drop of *sodium sulphide solution R*. The solution is not more intensely coloured than a reference solution prepared simultaneously and in the same manner pouring a mixture of 5.0 ml of *lead standard solution (1 ppm Pb) R*, 5.0 ml of *water R*, 2.0 ml of solution A and 2.0 ml of *buffer solution pH 3.5 R* into a test tube containing 1 drop of *sodium sulphide solution R*.

Loss on drying *(2.2.32)*

35.0 per cent to 37.0 per cent, determined on 1.000 g by drying in an oven at 150 °C.

Bacterial endotoxins *(2.6.14)*

Less than 83.3 IU/g, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Dissolve 0.200 g in 50 ml of *water R*. Titrate with *0.05 M sulphuric acid*, determining the end-point potentiometrically *(2.2.20)* at the 1st inflexion point.

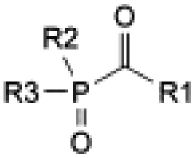
1 ml of *0.05 M sulphuric acid* is equivalent to 19.20 mg of CNa_3O_5P.

STORAGE

Protected from light.

IMPURITIES

Specified impurities *A, B, C, D.*



A. R1 = OC_2H_5, R2 = R3 = ONa: disodium (ethoxycarbonyl)phosphonate,

B. R1 = R2 = ONa, R3 = OC_2H_5: disodium (ethoxyoxydophosphanyl)formate,

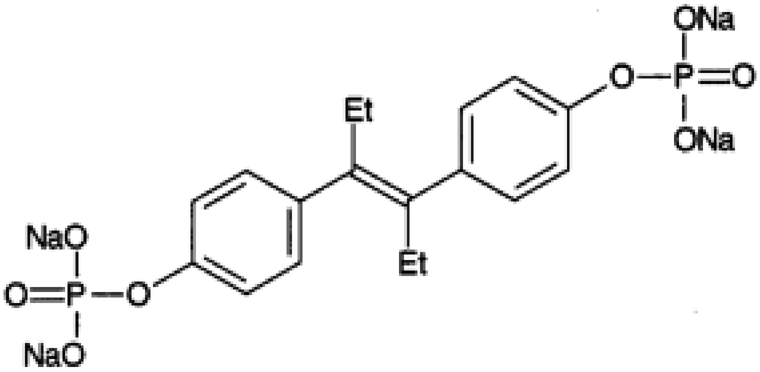
C. R1 = R2 = OC_2H_5, R3 = ONa: ethyl sodium (ethoxycarbonyl)phosphonate,

D. R1 = R2 = R3 = OC_2H_5: methyl (diethoxyphosphoryl)formate.

Ph Eur

Fosfestrol Sodium

General Notices



$C_{18}H_{18}Na_4O_8P_2,xH_2O$ 516.2(anhydrous) *23519-26-8*

Action and use

Estrogen.

Preparations

Fosfestrol Injection

Fosfestrol Tablets

DEFINITION

Fosfestrol Sodium is a hydrate of tetrasodium (*E*)-4,4′-(1,2-diethylvinylene)bis(phenyl orthophosphate). It contains not less than 98.0% and not more than 101.0% of $C_{18}H_{18}Na_4O_8P_2$, calculated with reference to the anhydrous substance.

CHARACTERISTICS

A white or almost white powder.

Freely soluble in *water*; practically insoluble in *absolute ethanol* and in *ether*.

IDENTIFICATION

A. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of fosfestrol sodium *(RS 161)*.

B. Yields the reactions characteristic of *sodium salts*, Appendix VI.

TESTS

Acidity or alkalinity

pH of a 5% w/v solution, 7.0 to 9.0, Appendix V L.

To 20 ml of a 2.5% w/v solution, add 3.0 ml of 0.01M *sodium hydroxide VS*. The pH of the resulting solution is not less than 8.8.

Light absorption

Measure the *absorbance* of a 0.0050% w/v solution in 0.1M *sodium hydroxide* at the maximum at 242 nm, Appendix II B. The A(1%, 1 cm) at the maximum is 280 to 320, calculated with reference to the anhydrous substance.

Chloride

Dissolve 1.0 g in 10 ml of *water*, add 10 ml of 2M *nitric acid*, filter, wash the precipitate with 25 ml of *water* and dilute the combined filtrate and washings to 100 ml with *water*. 15 ml of the resulting solution complies with the *limit test for chlorides*, Appendix VII (350 ppm).

Inorganic phosphate

Dissolve 0.5 g in 20 ml of *water*, add 5 ml of 2M *hydrochloric acid* and extract with four 30 ml quantities of *ether*. Discard the ether extracts and heat the aqueous solution on a water bath until any remaining ether has evaporated. Allow to cool, add sufficient *water* to produce 100 ml (solution A) and then add 4 ml of *sulphomolybdic reagent R3*, shake, add 0.1 ml of a mixture of 1 volume of freshly prepared *tin(II) chloride solution* and 9 volumes of 2M *hydrochloric acid*, shake again and examine 20 ml. Any colour produced is not more intense than that of 20 ml of a solution obtained by repeating the operation using a mixture of 5 ml of a 0.01% w/v solution of *potassium dihydrogen orthophosphate* and 95 ml of *water* in place of solution A.

Related substances

Carry out the method for *thin-layer chromatography*, Appendix III A, using a silica gel 60 F_{254} precoated plate (Merck silica gel 60 F_{254} plates are suitable) and a mixture of 15 volumes each of *pentan-1-ol*, *triethylamine* and *water* and 55 volumes of *propan-1-ol* as the mobile phase but allowing the solvent front to ascend 10 cm above the line of application. Apply separately to the plate 10 µl of each of three solutions of the substance being examined in *methanol (50%)* containing (1) 2.0% w/v (2) 0.030% w/v and (3) 0.010% w/v. After removal of the plate, allow it to dry in air and examine under *ultraviolet light (254 nm)*. Any *secondary spot* in the chromatogram obtained with solution (1) is not more intense than the spot in the chromatogram obtained with solution (2) (1.5%) and not more than two such spots are more intense than the spot in the chromatogram obtained with solution (3) (0.5%).

Free diethylstilbestrol

Dissolve a quantity of the substance being examined containing the equivalent of 2 g of anhydrous fosfestrol sodium in 50 ml of *water*, extract with two 20 ml quantities of *dichloromethane* and retain the aqueous phase. Wash the combined dichloromethane extracts with 30 ml of *water* and filter through *anhydrous sodium sulphate*. Extract the water wash with 10 ml of *dichloromethane*, filter the dichloromethane extract after filtration through *anhydrous sodium sulphate,* add to the original extract and add the aqueous extract to the original aqueous phase. Reserve the aqueous phase for the test for Diethylstilbestrol disodium monophosphate. Evaporate the combined filtrates to dryness on a water bath and dissolve the residue in 20 ml of *absolute ethanol*. To 10 ml of the resulting solution add 10 ml of a solution prepared by dissolving 1 g of *dipotassium hydrogen orthophosphate* in 55 ml of *water*. Transfer a portion of the mixture to a 1-cm closed silica cell, place the cell 10 cm from a 15-watt, short-wave ultraviolet lamp and irradiate for 30 minutes. The *absorbance* of the irradiated solution measured at the maximum at 418 nm, Appendix II B, is not greater than that obtained by repeating the operation using 10 ml of a 0.00150% w/v solution of *diethylstilbestrol EPCRS* in *absolute ethanol* , beginning at the words 'add 10 ml of a solution …' (0.015%).

Diethylstilbestrol disodium monophosphate

Dilute the combined aqueous phase reserved in the test for Free diethylstilbestrol to 100 ml with *water* (solution A). Prepare a solution containing 0.020% w/v of *diethylstilbestrol EPCRS* in *ethanol (96%) (*solution B). To 2 ml of each solution add 3 ml of *phosphomolybdotungstic reagent*, dilute to 50 ml with a 5% w/v solution of *anhydrous sodium carbonate*, mix thoroughly and allow to stand for 30 minutes; filter the solutions through a polytetrafluoroethylene filter (0.45 µm) and measure the *absorbance*, Appendix II B, at 660 nm using *water* in the reference cell. The *absorbance* of solution A, multiplied by 1.46, is not greater than that obtained for solution B (1%).

Water

13.0 to 16.5% w/w, Appendix IX C. Use 0.2 g.

ASSAY

Heat 0.2 g in a Kjeldahl flask with 2 ml of *sulphuric acid* and 2.5 ml of *nitric acid* until brown fumes cease to be evolved, allow to cool, add 1 ml of *nitric acid* and heat again. Continue adding *nitric acid* and heating until brown fumes are no longer evolved and the solution is colourless when cold. Heat until dense, white fumes are evolved, cool, transfer the solution to a flask with the aid of 150 ml of *water*, add 50 ml of *citric-molybdic acid solution* and heat slowly to boiling point. Swirling the flask continuously, add 25 ml of *quinoline solution*, at first drop wise and then in a steady stream, heat on a water bath for 5 minutes and cool. Filter, wash the precipitate with *water* until free from acid, transfer the precipitate to a flask with the aid of 100 ml of *water*, add 50 ml of 0.5M *sodium hydroxide VS* and shake until dissolved. Titrate the excess of alkali with 0.5M *hydrochloric acid VS* using *phenolphthalein-thymol blue solution* as indicator. Each ml of 0.5M *sodium hydroxide VS* is equivalent to 4.964 mg of $C_{18}H_{18}Na_4O_8P_2$.

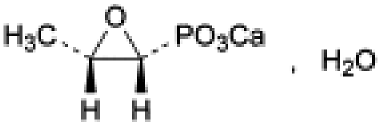
STORAGE

Fosfestrol Sodium should be protected from light.

Fosfomycin Calcium

General Notices

(Ph Eur monograph 1328)



$C_3H_5CaO_4P,H_2O$ 194.1 *26016-98-8*

Action and use

Phosphonic acid derivative; antibacterial.

Ph Eur

DEFINITION

Calcium (2*R*,3*S*)-(3-methyloxiran-2-yl)phosphonate monohydrate.

Substance produced by certain strains of *Streptomyces fradiae* or obtained by any other means.

Content

95.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Slightly soluble in water, practically insoluble in acetone, in methanol and in methylene chloride.

IDENTIFICATION

First identification *A, D.*

Second identification *B, C, D.*

A. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs of *potassium bromide R*.

Comparison   Ph. Eur. reference spectrum of fosfomycin calcium.

B. Dissolve about 0.1 g in 3 ml of a 25 per cent *V/V* solution of *perchloric acid R*. Add 1 ml of *0.1 M sodium periodate* and heat on a water-bath for 30 min. Allow to cool and add 50 ml of *water R*. Neutralise with a saturated solution of *sodium hydrogen carbonate R* and add 1 ml of a freshly prepared 400 g/l solution of *potassium iodide R*. Prepare a blank at the same time and in the same manner. The test solution remains colourless and the blank is orange.

C. To about 8 mg add 2 ml of *water R*, 1 ml of *perchloric acid R* and 2 ml of *0.1 M sodium periodate*. Heat on a water-bath for 10 min and add, without cooling, 1 ml of *ammonium molybdate solution R5* and 1 ml of *aminohydroxynaphthalenesulphonic acid solution R*. Allow to stand for 30 min. A blue colour develops.

D. It gives reaction (a) of calcium *(2.3.1)*.

TESTS

pH *(2.2.3)*

8.1 to 9.6.

Dissolve 20 mg in *carbon dioxide-free water R* and dilute to 20.0 ml with the same solvent.

Specific optical rotation *(2.2.7)*

- 11.0 to - 13.0 (anhydrous substance).

Dissolve 2.5 g in a 125 g/l solution of *sodium edetate R* previously adjusted to pH 8.5 with *strong sodium hydroxide solution R*, and dilute to 50.0 ml with the same solution. Measure at 405 nm using a mercury lamp.

Impurity A

Maximum 1.5 per cent.

In a glass-stoppered flask, dissolve 0.200 g in 100.0 ml of *water R*. Add 50 ml of *0.5 M phthalate buffer solution pH 6.4 R* and 5.0 ml of *0.005 M sodium periodate*, close and shake. Allow to stand protected from light for 90 min. Add 10 ml of a freshly prepared 400 g/l solution of *potassium iodide R*, close and shake for 2 min. Titrate with *0.0025 M sodium arsenite* until the yellow colour almost disappears. Add 2 ml of *starch solution R* and slowly continue the titration until the colour is completely discharged. Carry out a blank test under the same conditions. Calculate the percentage content of $C_3H_7CaO_5P$ using the following expression:

$$\frac{(n_1 - n_2) \times c \times 97}{m\,(100 - H)} \times 100$$

m = mass of the substance to be examined, in milligrams,

n_1 = volume *of 0.0025 M sodium arsenite* used in the blank titration,

n_2 = volume of *0.0025 M sodium arsenite* used in the titration of the test solution,

c = molarity of the sodium arsenite solution,

H = percentage content of water.

Chlorides *(2.4.4)*

Maximum 0.2 per cent.

Dissolve 0.500 g in *water R*, add 2 ml of *nitric acid R* and dilute to 50 ml with the same acid. To 2.5 ml of this solution add 12.5 ml of *water R*.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

Dissolve 2.5 g in 6 ml of *glacial acetic acid R* and dilute to 25.0 ml with *water R*. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R*.

Water *(2.5.12)*

8.5 per cent to 11.5 per cent, determined on 0.250 g. Use as the solvent a mixture of 1 volume of *pyridine R* and 3 volumes of *ethylene glycol R*.

ASSAY

In a glass-stoppered flask, dissolve 0.120 g in 20.0 ml of *0.1 M sodium periodate*. Add 5 ml of a 50 per cent *V/V* solution of *perchloric acid R* and shake. Heat in a water-bath at 37 °C for 105 min. Add 50 ml of *water R* and immediately adjust to pH 6.4 with a saturated solution of *sodium hydrogen carbonate R*. Add 10 ml of a freshly prepared 400 g/l solution of *potassium iodide R*, close and allow to stand for 2 min. Titrate with *0.1 M sodium arsenite* until the yellow colour almost disappears. Add 2 ml of *starch solution R* and slowly continue the titration until the colour is completely discharged. Carry out a blank test under the same conditions.

Calculate the percentage content of $C_3H_5CaO_4P$ using the following expression:

$$\frac{(n_1 - n_2) \times c \times 88 \times 100}{m\,(100 - H)} \times 100 - G$$

m = mass of the substance to be examined, in milligrams,

n_1 = volume of *0.1 M sodium arsenite* used in the blank titration,

n_2 = volume of *0.1 M sodium arsenite* used in the titration of the test solution,

c = molarity of the sodium arsenite solution,

G = percentage content of impurity A,

H = percentage content of water.

STORAGE

In an airtight container , protected from light.

IMPURITIES

Specified impurities *A*.

Carry out a blank test under the same conditions.

Calculate the percentage content of $C_3H_7Na_2O_5P$ using the following expression:

$$\frac{(n_1 - n_2) \times c \times 100}{m\,(100 - H)} \times 100$$

m = mass of the substance to be examined, in milligrams,

n_1 = volume of *0.0025 M sodium arsenite* used in the blank titration,

n_2 = volume of *0.0025 M sodium arsenite* used in the titration of the test solution,

c = molarity of the sodium arsenite solution,

H = percentage content of water.

Heavy metals ***(2.4.8)***

Maximum 20 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R*.

Water ***(2.5.12)***

Maximum 1.0 per cent, determined on 0.50 g. Use as the solvent a mixture of 1 volume of *pyridine R* and 3 volumes of *ethylene glycol R*.

Bacterial endotoxins ***(2.6.14)***

Less than 0.083 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for removal of bacterial endotoxins.

ASSAY

In a glass-stoppered flask, dissolve 0.120 g in 20.0 ml of *0.1 M sodium periodate*. Add 5 ml of a 50 per cent *V/V* solution of *perchloric acid R* and shake. Heat on a water-bath at 37 °C for 105 min. Add 50 ml of *water R* and immediately adjust to pH 6.4 with a saturated solution of *sodium hydrogen carbonate R*. Add 10 ml of a freshly prepared 400 g/l solution of *potassium iodide R*, close and allow to stand for 2 min. Titrate with *0.1 M sodium arsenite* until the yellow colour almost disappears. Add 2 ml of *starch solution R* and slowly continue the titration until the colour is completely discharged. Carry out a blank test under the same conditions.

Calculate the percentage content of $C_3H_5Na_2O_4P$ using the following expression:

$$\frac{(n_1 - n_2) \times c \times 91 \times 100}{m\,(100 - H)} \times 100 - G$$

m = mass of the substance to be examined, in milligrams,

n_1 = volume of *0.1 M sodium arsenite* used in the blank titration,

n_2 = volume of *0.1 M sodium arsenite* used in the titration of the test solution,

c = molarity of the sodium arsenite solution,

G = percentage content of impurity A,

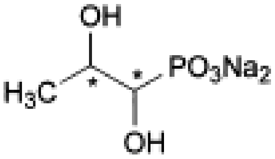
H = percentage content of water.

STORAGE

In an airtight container, protected from light. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

IMPURITIES

Specified impurities A.



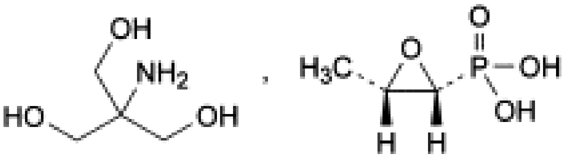
A. disodium (1,2-dihydroxypropyl)phosphonate.

Ph Eur

Fosfomycin Trometamol

General Notices

(Ph Eur monograph 1425)



$C_7H_{18}NO_7P$ 259.2 *78964-85-9*

Action and use

Phosphonic acid derivative; antibacterial.

Ph Eur

DEFINITION

2-Amino-2-(hydroxymethyl)propane-1,3-diol hydrogen (2*R*,3*S*)-(3-methyloxiran-2-yl) phosphonate.

Content

98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, hygroscopic powder.

Solubility

Very soluble in water, slightly soluble in ethanol (96 per cent) and in methanol, practically insoluble in acetone.

IDENTIFICATION

First identification *A.*

Second identification *B, C.*

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *fosfomycin trometamol CRS* .

B. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 50 mg of the substance to be examined in *water R* and dilute to 10 ml with the same solvent.

Reference solution Dissolve 50 mg of *fosfomycin trometamol CRS* in *water R* and dilute to 10 ml with the same solvent.

Plate *cellulose for chromatography R* as the coating substance.

Mobile phase *concentrated ammonia R*, *water R*, *2-propanol R* (10:20:70 *V/V/V*).

Application 10 µl.

Development Over 3/4 of the plate.

Drying In a current of warm air.

Detection Expose to iodine vapour until the spots appear.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

C. To about 15 mg add 2 ml of *water R*, 1 ml of *perchloric acid R* and 2 ml of *0.1 M sodium periodate*. Heat on a water-bath for 10 min and add, without cooling, 1 ml of *ammonium molybdate solution R5* and 1 ml of *aminohydroxynaphthalenesulphonic acid solution R*. Allow to stand for 30 min. A blue colour develops.

TESTS

Solution S

Dissolve 1.00 g in *carbon dioxide-free water R* and dilute to 20.0 ml with the same solvent.

pH *(2.2.3)*

3.5 to 5.5 for solution S.

Specific optical rotation *(2.2.7)*

- 13.5 to - 12.5 (anhydrous substance), determined on solution S at 365 nm using a mercury lamp.

Related substances

Liquid chromatography *(2.2.29)*. *Prepare the solutions immediately before use*.

Test solution Dissolve 0.600 g of the substance to be examined in the mobile phase and dilute to 5.0 ml with the mobile phase.

Reference solution (a) Dissolve 0.600 g of *fosfomycin trometamol CRS* in the mobile phase and dilute to 5.0 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 3.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (c) Wet 0.3 g of the substance to be examined with 60 µl of *water R* and heat in an oven at 60 °C for 24 h. Dissolve the residue in the mobile phase and dilute to 20.0 ml with the mobile phase (solution A). Dissolve 0.6 g of the substance to be examined in solution A and dilute to 5.0 ml with the same solution (*in situ* degradation to obtain impurities

A, B, C and D).

Blank solution The mobile phase.

Column:
- *size:* *l* = 0.25 m, Ø = 4.6 mm,
- *stationary phase*: *aminopropylsilyl silica gel for chromatography R* (5 µm).

Mobile phase 10.89 g/l solution of *potassium dihydrogen phosphate R in water for chromatography R*.

Flow rate 1.0 ml/min.

Detection Differential refractometer at 35 °C.

Injection 10 µl of the blank solution, the test solution and reference solutions (b) and (c).

Run time Twice the retention time of fosfomycin.

Relative retention With reference to fosfomycin (retention time = about 9 min): trometamol (2 peaks) = about 0.3; impurity B = about 0.48; impurity C = about 0.54; impurity A = about 0.88; impurity D = about 1.27.

System suitability Reference solution (c):

— *resolution*: minimum 1.5 between the peaks due to impurity A and fosfomycin,

— *peak-to-valley ratio*: minimum 1.5, where H_p = height above the baseline of the peak due to impurity C and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity B.

Limits:

— *impurities A, B*: for each impurity, not more than the area of the peak due to fosfomycin in the chromatogram obtained with reference solution (b) (0.3 per cent),

— *impurities C, D*: for each impurity, not more than 0.33 times the area of the peak due to fosfomycin in the chromatogram obtained with reference solution (b) (0.1 per cent),

— *unspecified impurities*: for each impurity, not more than 0.33 times the area of the peak due to fosfomycin in the chromatogram obtained with reference solution (b) (0.1 per cent),

— *total*: not more than 1.67 times the area of the peak due to fosfomycin in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *disregard limit*: 0.17 times the area of the peak due to fosfomycin in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard the 2 peaks due to trometamol and any peak due to the blank.

Phosphates

Maximum 500 ppm.

Dissolve 0.1 g in 3 ml of *dilute nitric acid R* and dilute to 10 ml with *water R*. To 5 ml of this solution add 5 ml of *water R* and 5 ml of *molybdovanadic reagent R*. Shake vigorously. After 5 min, any colour in the test solution is not more intense than that in a standard prepared at the same time in the same manner, using 5 ml of *phosphate standard solution (5 ppm PO_4) R*.

Heavy metals *(2.4.8)*

Maximum 10 ppm.

Dissolve 2.0 g in *water R* and dilute to 20 ml with the same solvent. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R.*

Water ***(2.5.12)***

Maximum 0.5 per cent, determined on 0.500 g.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modification.

Injection 5 µl of the test solution and reference solution (a).

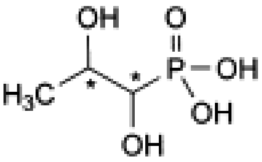
Calculate the percentage content of $C_7H_{18}NO_7P$ from the areas of the peaks due to fosfomycin and the declared content of *fosfomycin trometamol CRS* .

STORAGE

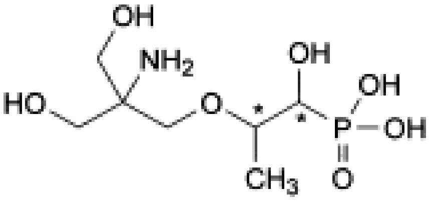
In an airtight container .

IMPURITIES

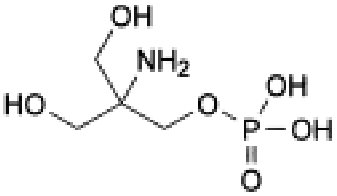
Specified impurities *A, B, C, D.*



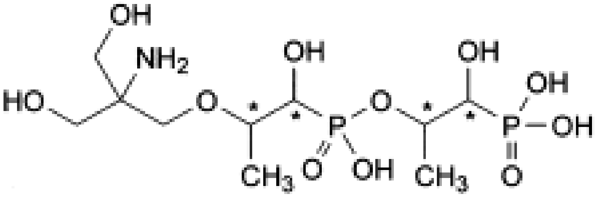
A. (1,2-dihydroxypropyl)phosphonic acid,



B. [2-[2-amino-3-hydroxy-2-(hydroxymethyl)propoxy]-1-hydroxypropyl]phosphonic acid,



C. 2-amino-3-hydroxy-2-(hydroxymethyl)propyl dihydrogen phosphate (trometamol phosphoric acid monoester),



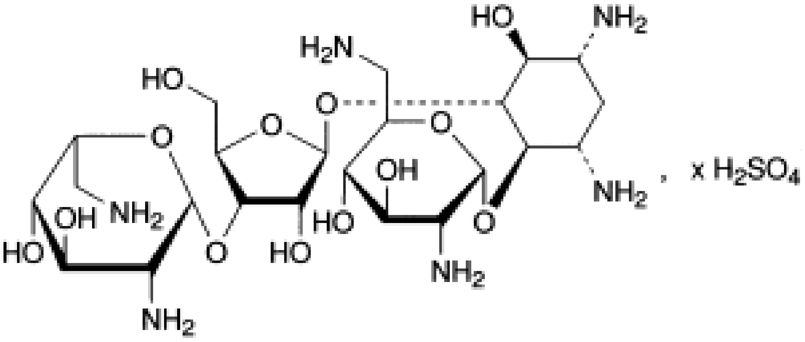
D. [2-[[[2-[2-amino-3-hydroxy-2-(hydroxymethyl)propoxy]-1-hydroxypropyl]hydroxyphosphoryl]oxy]-1-hydroxypropyl]phosphonic acid (trometamoyloxy fosfomycin dimer).

Ph Eur

Framycetin Sulphate

General Notices

(Ph Eur monograph 0180)



$C_{23}H_{46}N_6O_{13},xH_2SO_4$ 615 *4146-30-9*
(base)

Action and use

Antibacterial.

Ph Eur

DEFINITION

Sulphate of 2-deoxy-4-*O*-(2,6-diamino-2,6-dideoxy-α-D-glucopyranosyl)-5-*O*-[3-*O*-(2,6-diamino-2,6-dideoxy-β-L-idopyranosyl)-β-D-ribofuranosyl]-D-streptamine (neomycin B).

Substance produced by the growth of selected strains of *Streptomyces fradiae* or *Streptomyces decaris* or obtained by any other means.

Content

Minimum of 630 IU/mg (dried substance).

CHARACTERS

Appearance

White or yellowish-white powder, hygroscopic.

Solubility

Freely soluble in water, very slightly soluble in alcohol, practically insoluble in acetone.

IDENTIFICATION

A. Examine the chromatograms obtained in the test for related substances.

Results:

— the retention time of the principal peak in the chromatogram obtained with the test solution is approximately the same as that of the principal peak in the chromatogram obtained with reference solution (a),

— it complies with the limit given for impurity C.

B. It gives reaction (a) of sulphates *(2.3.1)*.

TESTS

pH *(2.2.3)*

6.0 to 7.0.

Dissolve 0.1 g in *carbon dioxide-free water R* and dilute to 10 ml with the same solvent.

Specific optical rotation *(2.2.7)*

+ 52.5 to + 55.5 (dried substance).

Dissolve 1.00 g in *water R* and dilute to 10.0 ml with the same solvent

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 ml with the mobile phase.

Reference solution (a) Dissolve the contents of a vial of *framycetin sulphate CRS* in the mobile phase and dilute with the mobile phase to obtain a solution containing 0.5 mg/ml.

Reference solution (b) Dilute 3.0 ml of reference solution (a) to 100.0 ml with the mobile phase.

Reference solution (c) Dilute 1.0 ml of reference solution (a) to 100.0 ml with the mobile phase.

Reference solution (d Dissolve the contents of a vial of *neamine CRS* (corresponding to 0.5 mg) in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (e) Dissolve 10 mg of *neomycin sulphate CRS* in the mobile phase and dilute to 100.0 ml with the mobile phase.

Column:

— *size: l* = 0.25 m, Ø = 4.6 mm,

— *stationary phase*: *base-deactivated octadecylsilyl silica gel for chromatography R* (5 µm),

— *temperature*: 25 °C.

Mobile phase Mix 20.0 ml of *trifluoroacetic acid R*, 6.0 ml of *carbonate-free sodium hydroxide solution R* and 500 ml of *water R*, allow to equilibrate, dilute to 1000 ml with *water R* and degas.

Flow rate 0.7 ml/min.

Post-column solution *carbonate-free sodium hydroxide solution R* diluted 1 in 25 previously degassed, which is added pulse-less to the column effluent using a 375 µl polymeric mixing coil.

Flow rate 0.5 ml/min.

Detection Pulsed amperometric detector with a gold working electrode, a silver-silver chloride reference electrode and a stainless steel auxiliary electrode which is the cell body, held at respectively 0.00 V detection, + 0.80 V oxidation and - 0.60 V reduction potentials, with pulse durations according to the instrument used.

Injection 10 µl.

Run time 1.5 times the retention time of neomycin B.

Relative retention With reference to neomycin B (retention time = about 10 min): impurity A = about 0.65; impurity C = about 0.9; impurity G = about 1.1.

System suitability:

— *resolution*: minimum 2.0 between the peaks due to impurity C and to neomycin B in the chromatogram obtained with reference solution (e); if necessary, adjust the volume of the carbonate-free sodium hydroxide solution in the mobile phase,

— *signal-to-noise ratio*: minimum 10 for the principal peak in the chromatogram obtained with reference solution (c).

Limits:

— *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (d) and taking into account the declared content of *neamine CRS* (1.0 per cent),

— *impurity C*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (3.0 per cent),

— *total of other impurities*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (3.0 per cent),

— *disregard limit*: area of the principal peak in the chromatogram obtained with reference solution (c) (1.0 per cent).

Sulphate

27.0 per cent to 31.0 per cent (dried substance).

Dissolve 0.250 g in 100 ml of *water R* and adjust the solution to pH 11 using *concentrated ammonia R*. Add 10.0 ml of *0.1 M barium chloride* and about 0.5 mg of *phthalein purple R*. Titrate with *0.1 M sodium edetate* adding 50 ml of *alcohol R* when the colour of the solution begins to change and continuing the titration until the violet-blue colour disappears.

1 ml of *0.1 M barium chloride* is equivalent to 9.606 mg of SO_4.

Loss on drying *(2.2.32)*

Maximum 8.0 per cent, determined on 1.000 g by drying at 60 °C over *diphosphorus pentoxide R* at a pressure not exceeding 0.7 kPa for 3 h.

Sulphated ash *(2.4.14)*

Maximum 1.0 per cent, determined on 1.0 g.

Sterility ***(2.6.1)***

If intended for introduction into body cavities without a further appropriate sterilisation procedure, it complies with the test for sterility.

Bacterial endotoxins ***(2.6.14, Method D)***

Less than 1.3 IU/mg if intended for introduction into body cavities without a further appropriate procedure for the removal of bacterial endotoxins.

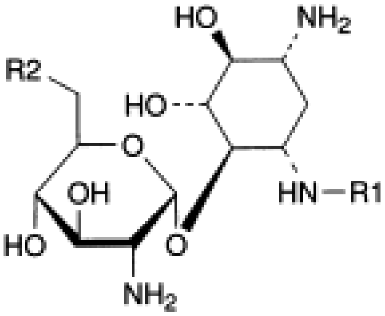
ASSAY

Carry out the microbiological assay of antibiotics *(2.7.2)*. Use *framycetin sulphate CRS* as the reference substance.

STORAGE

In an airtight container , protected from light. If the substance is intended for introduction into body cavities, store in a sterile, tamper-proof container .

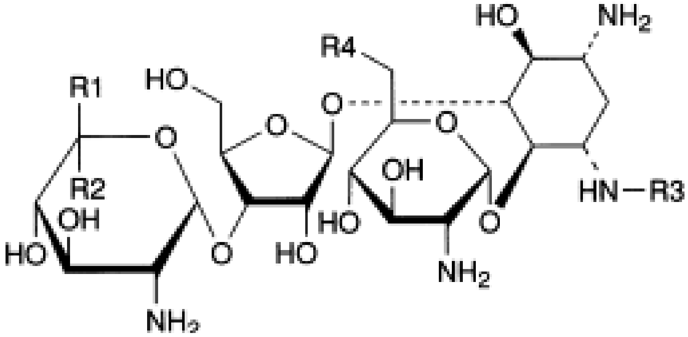
IMPURITIES



A. R1 = H, R_2 = NH_2: 2-deoxy-4-*O*-(2,6-diamino-2,6-dideoxy-α-D-glucopyranosyl)-D-streptamine (neamine or neomycin A-LP),

B. R1 = CO-CH_3, R2 = NH_2: 3-*N*-acetyl-2-deoxy-4-*O*-(2,6-diamino-2,6-dideoxy-α-D-glucopyranosyl)-D-streptamine (3-acetylneamine),

D. R1 = H, R2 = OH: 4-*O*-(2-amino-2-deoxy-α-D-glucopyranosyl)-2-deoxy-D-streptamine (paromamine or neomycin D),



C. R1 = CH_2-NH_2, R2 = R3 = H, R4 = NH_2: 2-deoxy-4-*O*-(2,6-diamino-2,6-dideoxy-α-D-glucopyranosyl)-5-*O*-[3-O-(2,6-diamino-2,6-dideoxy-α-D-glucopyranosyl)-β-D-ribofuranosyl]-D-streptamine (neomycin C),

E. R1 = R3 = H, R2 = CH_2-NH_2, R4 = OH: 4-*O*-(2-amino-2-deoxy-α-D-glucopyranosyl)-2-deoxy-5-*O*-[3-*O*-(2,6-diamino-2,6-dideoxy-β-L-idopyranosyl)-β-D-ribofuranosyl]-D-streptamine (paromomycin I or neomycin E),

F. R1 = CH_2-NH_2, R2 = R3 = H, R4 = OH: 4-*O*-(2-amino-2-deoxy-α-D-glucopyranosyl)-2-deoxy-5-*O*-[3-*O*-(2,6-diamino-2,6-dideoxy-α-D-glucopyranosyl)-β-D-ribofuranosyl]-D-streptamine (paromomycin II or neomycin F),

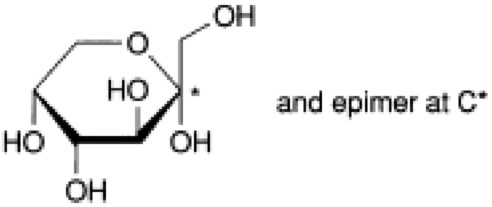
G. R1 = H, R2 = CH_2-NH_2, R3 = CO-CH_3, R4 = NH_2: 3-*N*-acetyl-2-deoxy-4-*O*-(2,6-diamino-2,6-dideoxy-α-D-glucopyranosyl)-5-*O*-[3-*O*-(2,6-diamino-2,6-dideoxy-β-L-idopyranosyl)-β-D-ribofuranosyl]-D-streptamine (neomycin B-LP).

Ph Eur

Fructose

General Notices

(Ph Eur monograph 0188)



$C_6H_{12}O_6$ 180.2 *57-48-7*

Preparation

Fructose Intravenous Infusion

Ph Eur

DEFINITION

(–)-D-Arabino-hex-2-ulopyranose.

The substance described in this monograph is not necessarily suitable for parenteral use.

CHARACTERS

Appearance

White or almost white, crystalline powder.

It has a very sweet taste.

Solubility

Very soluble in water, soluble in ethanol (96 per cent).

IDENTIFICATION

A. Thin-layer chromatography *(2.2.27)*.

Solvent mixture *water R*, *methanol R* (2:3 *V/V*).

Test solution Dissolve 10 mg of the substance to be examined in the solvent mixture and dilute to 20 ml with the solvent mixture.

Reference solution (a) Dissolve 10 mg of *fructose CRS* in the solvent mixture and dilute to 20 ml with the solvent mixture.

Reference solution (b) Dissolve 10 mg each of *fructose CRS*, *glucose CRS*, *lactose CRS* and *sucrose CRS* in the solvent mixture and dilute to 20 ml with the solvent mixture.

Plate *TLC silica gel G plate R*.

Mobile phase *water R*, *methanol R*, *anhydrous acetic acid R*, *ethylene chloride R* (10:15:25:50 *V/V/V/V*). Measure the volumes accurately since a slight excess of water produces cloudiness.

Application 2 µl; thoroughly dry the starting points.

Development A Over a path of 15 cm.

Drying A In a current of warm air.

Development B Immediately, over a path of 15 cm, after renewing the mobile phase.

Drying B In a current of warm air.

Detection Spray with a solution of 0.5 g of *thymol R* in a mixture of 5 ml of *sulphuric acid R* and 95 ml of *ethanol (96 per cent) R*. Heat at 130 °C for 10 min.

System suitability Reference solution (b):

— the chromatogram shows 4 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

B. Dissolve 0.1 g in 10 ml of *water R*. Add 3 ml of *cupri-tartaric solution R* and heat. A red precipitate is formed.

C. To 1 ml of solution S (see Tests) add 9 ml of *water R*. To 1 ml of the solution add 5 ml of *hydrochloric acid R* and heat to 70 °C. A brown colour develops.

D. Dissolve 5 g in *water R* and dilute to 10 ml with the same solvent. To 0.5 ml of the solution add 0.2 g of *resorcinol R* and 9 ml of *dilute hydrochloric acid R* and heat on a water-bath for 2 min. A red colour develops.

TESTS

Solution S

Dissolve 10.0 g in *distilled water R* and dilute to 100 ml with the same solvent.

Appearance of solution

Dissolve 5.0 g in *water R* and dilute to 10 ml with the same solvent. The solution is clear *(2.2.1)*. Add 10 ml of *water R*. The solution is colourless *(2.2.2, Method II)*.

Acidity or alkalinity

Dissolve 6.0 g in 25 ml of *carbon dioxide-free water R* and add 0.3 ml of *phenolphthalein solution R*. The solution is colourless. Not more than 0.15 ml of *0.1 M sodium hydroxide* is required to change the colour of the indicator to pink.

Specific optical rotation *(2.2.7)*

- 91.0 to - 93.5 (anhydrous substance).

Dissolve 10.0 g in 80 ml of *water R*, add 0.2 ml of *dilute ammonia R1*, allow to stand for 30 min and dilute to 100.0 ml with *water R*.

Foreign sugars

Dissolve 5.0 g in *water R* and dilute to 10 ml with the same solvent. To 1 ml of the solution add 9 ml of *ethanol (96 per cent) R*. Any opalescence in the solution is not more intense than that in a mixture of 1 ml of the initial solution and 9 ml of *water R*.

5-Hydroxymethylfurfural and related compounds

To 5 ml of solution S add 5 ml of *water R*. The absorbance *(2.2.25)* measured at 284 nm is not greater than 0.32.

Barium

To 10 ml of solution S add 1 ml of *dilute sulphuric acid R*. When examined immediately and after 1 h, any opalescence in the solution is not more intense than that in a mixture of 1 ml of *distilled water R* and 10 ml of solution S.

Lead *(2.4.10)*

Maximum 0.5 ppm.

Water *(2.5.12)*

Maximum 0.5 per cent, determined on 1.00 g.

Sulphated ash

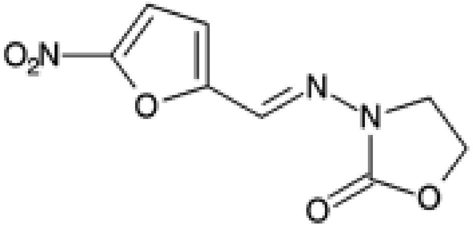
Maximum 0.1 per cent.

Dissolve 5.0 g in 10 ml of *water R*, add 2 ml of *sulphuric acid R*, evaporate to dryness on a water-bath and ignite to constant mass.

Ph Eur

Furazolidone

General Notices



$C_8H_7N_3O_5$ 225.2 *67-45-8*

Action and use

Antiprotozoal; antibacterial.

DEFINITION

Furazolidone is 3-(5-nitrofurfurylideneamino)oxazolidin-2-one. It contains not less than 97.0% and not more than 103.0% of $C_8H_7N_3O_5$, calculated with reference to the dried substance.

CHARACTERISTICS

A yellow, crystalline powder.

Very slightly soluble in *water* and in *ethanol (96%)*; practically insoluble in *ether*.

IDENTIFICATION

A. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of furazolidone *(RS 164)*.

B. Dissolve 1 mg in 1 ml of *dimethylformamide* and add 0.05 ml of 1M *ethanolic potassium hydroxide*. A deep blue colour is produced.

TESTS

Acidity or alkalinity

Shake 1 g for 15 minutes with 100 ml of *carbon dioxide-free water* and filter. The pH of the filtrate is 4.5 to 7.0, Appendix V L.

Nitrofurfural diacetate

Carry out in subdued light the method for *thin-layer chromatography*, Appendix III A, using *silica gel G* as the coating substance and a mixture of 95 volumes of *toluene* and 5 volumes of *1,4-dioxan* as the mobile phase. Apply separately to the plate 20 µl of solution (1) and 10 µl of solution (2). For solution (1) dissolve 50 mg of the substance being examined in 5 ml of *dimethylformamide* by heating on a water bath for a few minutes, allow to cool and dilute to 10 ml with *acetone*. Solution (2) contains 0.010% w/v solution of *nitrofurfural diacetate BPCRS* in a mixture of equal volumes of *dimethylformamide* and *acetone*. After removal of the plate, heat it at 105° for 5 minutes and spray with a solution prepared by dissolving 0.75 g of *phenylhydrazine hydrochloride* in 10 ml of *ethanol (96%)*, diluting to 50 ml with *water*, adding *activated charcoal*, filtering and then adding 25 ml of *hydrochloric acid* and sufficient *water* to produce 200 ml. Any spot corresponding to nitrofurfural diacetate in the chromatogram obtained with solution (1) is not more intense than the spot in the chromatogram obtained with solution (2).

Loss on drying

When dried to constant weight at 105°, loses not more than 0.5% of its weight. Use 1 g.

Sulphated ash

Not more than 0.1%, Appendix IX A.

ASSAY

Carry out the following procedure protected from light. To 80 mg add 150 ml of *dimethylformamide*, swirl to dissolve and add sufficient *water* to produce 500 ml. Dilute 5 ml to 100 ml with *water* and mix. Measure the *absorbance* of the resulting solution at the maximum at 367 nm, Appendix II B. Calculate the content of $C_8H_7N_3O_5$ taking 750 as the value of A(1%, 1 cm) at the maximum at 367 nm.

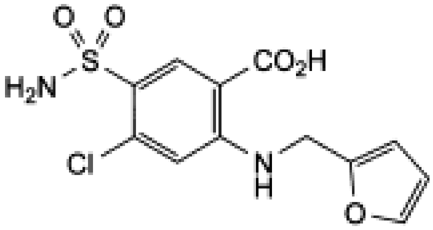
STORAGE

Furazolidone should be protected from light.

Furosemide

General Notices

(Ph Eur monograph 0391)



$C_{12}H_{11}ClN_2O_5S$ 330.7 *54-31-9*

Action and use

Loop diuretic.

Preparations

Co-amilofruse Tablets

Furosemide Injection

Furosemide Tablets

Ph Eur

DEFINITION

4-Chloro-2-[(furan-2-ylmethyl)amino]-5-sulphamoylbenzoic acid.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, soluble in acetone, sparingly soluble in ethanol (96 per cent), practically insoluble in methylene chloride. It dissolves in dilute solutions of alkali hydroxides.

mp

About 210 °C, with decomposition.

IDENTIFICATION

First identification *B*.

Second identification *A, C.*

A. Ultraviolet and visible absorption spectrophotometry *(2.2.25)*.

Test solution Dissolve 50 mg in a 4 g/l solution of *sodium hydroxide R* and dilute to 100 ml with the same solution. Dilute 1 ml of this solution to 100 ml with a 4 g/l solution of *sodium hydroxide R*.

Spectral range 220-350 nm.

Absorption maxima At 228 nm, 270 nm and 333 nm.

Absorbance ratio A_{270} / A_{228} = 0.52 to 0.57.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *furosemide CRS .*

C. Dissolve about 25 mg in 10 ml of *ethanol (96 per cent) R*. To 5 ml of this solution add 10 ml of *water R*. To 0.2 ml of the solution add 10 ml of *dilute hydrochloric acid R* and heat under a reflux condenser for 15 min. Allow to cool and add 18 ml of *1 M sodium hydroxide* and 1 ml of a 5 g/l solution of *sodium nitrite R*. Allow to stand for 3 min, add 2 ml of a 25 g/l solution of *sulphamic acid R* and mix. Add 1 ml of a 5 g/l solution of *naphthylethylenediamine dihydrochloride R*. A violet-red colour develops.

TESTS

Related substances

Liquid chromatography *(2.2.29)*. *Prepare the solutions immediately before use and protect from light.*

Test solution Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 ml with the mobile phase.

Reference solution (a) Dissolve 2.0 mg of *furosemide impurity A CRS* in the mobile phase and dilute to 2.0 ml with the mobile phase.

Reference solution (b) Dilute a mixture of 1.0 ml of the test solution and 1.0 ml of reference solution (a) to 20.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 20.0 ml with the mobile phase.

Column:

— *size:* l = 0.25 m, Ø = 4.6 mm;

— *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Dissolve 0.2 g of *potassium dihydrogen phosphate R* and 0.25 g of *cetrimide R* in 70 ml of *water R*; adjust to pH 7.0 with *ammonia R* and add 30 ml of *propanol R*.

Flow rate 1 ml/min.

Detection Spectrophotometer at 238 nm.

Injection 20 µl of the test solution and reference solution (b).

Run time 3 times the retention time of furosemide.

System suitability Reference solution (b):

— *resolution*: minimum 4 between the peaks due to impurity A (1st peak) and furosemide (2nd peak).

Limits:

— *impurities A, B, C, D, E*: for each impurity, not more than the area of the peak due to impurity A in the chromatogram obtained with reference solution (b) (0.25 per cent);

— *total*: not more than twice the area of the peak due to impurity A in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *disregard limit*: 0.1 times the area of the peak due to impurity A in the chromatogram obtained with reference solution (b) (0.025 per cent).

Chlorides ***(2.4.4)***

Maximum 200 ppm.

To 0.5 g add a mixture of 0.2 ml of *nitric acid R* and 30 ml of *water R* and shake for 5 min. Allow to stand for 15 min and filter.

Sulphates ***(2.4.13)***

Maximum 300 ppm.

To 1.0 g add a mixture of 0.2 ml of *acetic acid R* and 30 ml of *distilled water R* and shake for 5 min. Allow to stand for 15 min and filter.

Heavy metals ***(2.4.8)***

Maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying ***(2.2.32)***

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 20 ml of *dimethylformamide R*. Titrate with *0.1 M sodium hydroxide* using 0.2 ml of *bromothymol blue solution R2*. Carry out a blank titration.

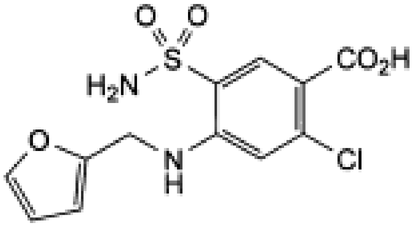
1 ml of *0.1 M sodium hydroxide* is equivalent to 33.07 mg of $C_{12}H_{11}ClN_2O_5S$.

STORAGE

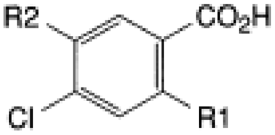
Protected from light.

IMPURITIES

Specified impurities A, B, C, D, E.



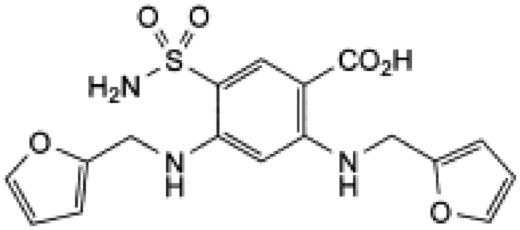
A. 2-chloro-4-[(furan-2-ylmethyl)amino]-5-sulphamoylbenzoic acid,



B. R1 = Cl, R2 = SO_2-NH_2: 2,4-dichloro-5-sulphamoylbenzoic acid,

C. R1 = NH_2, R2 = SO_2-NH_2: 2-amino-4-chloro-5-sulphamoylbenzoic acid,

E. R1 = Cl, R2 = H: 2,4-dichlorobenzoic acid,



D. 2,4-bis[(furan-2-ylmethyl)amino]-5-sulphamoylbenzoic acid.

Ph Eur

Fusidic Acid

General Notices

Fusidic Acid Oral Suspension

Ph Eur

DEFINITION

ent-(17*Z*)-16α-(Acetyloxy)-3β,11β-dihydroxy-4β,8,14-trimethyl-18-nor-5β,10α-cholesta-17(20), 24-dien-21-oic acid hemihydrate.

Antimicrobial substance produced by the growth of certain strains of *Fusidium coccineum* or by any other means.

Content

97.5 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, freely soluble in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *Ph. Eur. reference spectrum of fusidic acid .*

B. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 20 mg of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution Dissolve 24 mg of *diethanolamine fusidate CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Plate *TLC silica gel* F_{254} *plate R*.

Mobile phase *methanol R*, *cyclohexane R*, *glacial acetic acid R* , *chloroform R* (2.5:10:10:80 *V/V/V/V*).

Application 10 µl.

Development Over a path of 15 cm.

Drying In a current of warm air.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

TESTS

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 50 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dissolve 5 mg of *3-ketofusidic acid CRS* in 5 ml of the mobile phase. To 1.0 ml of this solution add 0.20 ml of the test solution and dilute to 20.0 ml with the mobile phase.

Reference solution (b) Dilute 20 µl of the test solution to 100.0 ml with the mobile phase.

Column:

— *size:* *l* = 0.125-0.15 m, Ø = 4-5 mm;

— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase *methanol R*, *10 g/l solution of phosphoric acid R* , *water R*, *acetonitrile R* (10:20:20:50 *V/V/V/V*).

Flow rate 2 ml/min.

Detection Spectrophotometer at 235 nm.

Injection 20 µl.

Run time 3.5 times the retention time of fusidic acid.

System suitability:
- — *resolution*: minimum 2.5 between the peaks due to 3-ketofusidic acid and fusidic acid in the chromatogram obtained with reference solution (a);
- — *signal-to-noise ratio*: minimum 3 for the principal peak in the chromatogram obtained with reference solution (b).

Limits:
- — *total*: not more than twice the area of the peak due to fusidic acid in the chromatogram obtained with reference solution (a) (2.0 per cent);
- — *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (b) (0.02 per cent).

Water *(2.5.12)*

1.4 per cent to 2.0 per cent, determined on 0.50 g.

Sulphated ash *(2.4.14)*

Maximum 0.2 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.500 g in 10 ml of *ethanol (96 per cent) R*. Add 0.5 ml of *phenolphthalein solution R*. Titrate with *0.1 M sodium hydroxide* until a pink colour is obtained.

1 ml of *0.1 M sodium hydroxide* is equivalent to 51.67 mg of $C_{31}H_{48}O_6$.

STORAGE

Protected from light, at a temperature of 2 °C to 8 °C.

Ph Eur

Hard Fat

General Notices

(Ph Eur monograph 0462)

Ph Eur

DEFINITION

Mixture of triglycerides, diglycerides and monoglycerides, which may be obtained either by esterification of fatty acids of natural origin with glycerol or by transesterification of natural fats.

Each type of hard fat is characterised by its melting point, its hydroxyl value and its saponification value.

It contains no added substances.

CHARACTERS

Appearance

White or almost white, waxy, brittle mass.

Solubility

Practically insoluble in water, slightly soluble in anhydrous ethanol.

When heated to 50 °C, it melts giving a colourless or slightly yellowish liquid.

IDENTIFICATION

Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 1.0 g of the substance to be examined in *ethylene chloride R* and dilute to 10 ml with the same solvent.

Plate TLC silica gel G plate R.

Mobile phase ether R, *ethylene chloride R* (10:90 *V/V*).

Application 2 µl.

Development Over a path of 12 cm.

Drying In air.

Detection Expose to iodine vapour until the spots appear and examine in daylight.

Results The chromatogram shows a spot with an R_F value of about 0.6 due to triglycerides (R_{st} 1) and spots due to 1,3-diglycerides (R_{st} 0.5) and to 1,2-diglycerides (R_{st} 0.3). A spot due to 1-monoglycerides may also be visible (R_{st} 0.05).

TESTS

Alkaline impurities

Dissolve 2.00 g in a mixture of 1.5 ml of *ethanol (96 per cent) R* and 3.0 ml of *ether R*. Add 0.05 ml of *bromophenol blue solution R*. Not more than 0.15 ml of *0.01 M hydrochloric acid* is required to change the colour of the indicator to yellow.

Melting point *(2.2.15)*

30 °C to 45 °C, and within 2 °C of the nominal value.

Introduce the melted substance into the capillary tube and allow to stand at a temperature below 10 °C for 24 h.

Acid value *(2.5.1)*

Maximum 0.5.

Dissolve 5.0 g in 50 ml of the prescribed mixture of solvents.

Hydroxyl value *(2.5.3, Method A)*

Maximum 50, and within 5 units of the nominal value; maximum 5 if the nominal value is less than 5.

Iodine value *(2.5.4, Method A)*

Maximum 3.

Peroxide value *(2.5.5, Method A)*

Maximum 3.

Saponification value *(2.5.6)*

210 to 260, and within 5 per cent of the nominal value, determined on 2.0 g.

Unsaponifiable matter *(2.5.7)*

Maximum 0.6 per cent, determined on 5.0 g.

Heavy metals *(2.4.8)*

Maximum 10 ppm.

2.0 g complies with test D. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Total ash *(2.4.16)*

Maximum 0.05 per cent, determined on 2.00 g.

STORAGE

Protected from light and heat.

LABELLING

The label states:

— the nominal melting point,

— the nominal hydroxyl value,

— the nominal saponification value.

Ph Eur

Products of Fermentation

General Notices

(Ph Eur monograph 1468)

Ph Eur

This monograph applies to indirect gene products obtained by fermentation. It is not applicable to:

- *— monographs in the Pharmacopoeia concerning vaccines for human or veterinary use;*
- *— products derived from continuous cell lines of human or animal origin;*
- *— direct gene products that result from the transcription and translation from nucleic acid to protein, whether or not subject to post-translational modification;*
- *— products obtained by semi-synthesis from a product of fermentation and those obtained by biocatalytic transformation;*
- *— whole broth concentrates or raw fermentation products.*

This monograph provides general requirements for the development and manufacture of products of fermentation. These requirements are not necessarily comprehensive in a given case and requirements complementary or additional to those prescribed in this monograph may be imposed in an individual monograph or by the competent authority.

DEFINITION

For the purposes of this monograph, products of fermentation are active or inactive pharmaceutical substances produced by controlled fermentation as indirect gene products. They are primary or secondary metabolites of micro-organisms such as bacteria, yeasts, fungi and micro-algae, whether or not modified by traditional procedures or recombinant DNA (rDNA) technology. Such metabolites include vitamins, amino acids, antibiotics, alkaloids and polysaccharides.

They may be obtained by batch or continuous fermentation processes followed by procedures such as extraction, concentration, purification and isolation.

PRODUCTION

Production is based on a process that has been validated and shown to be suitable. The extent of validation depends on the critical nature of the respective process step.

CHARACTERISATION OF THE PRODUCER MICRO-ORGANISM

The history of the micro-organism used for production is documented. The micro-organism is adequately characterised. This may include determination of the phenotype of the micro-organism, macroscopic and microscopic methods and biochemical tests and, if appropriate, determination of the genotype of the micro-organism and molecular genetic tests.

PROCESSES USING A SEED-LOT SYSTEM

The *master cell bank* is a homogeneous suspension or lyophilisate of the original cells distributed into individual containers for storage. The viability and productivity of the cells under the selected storage conditions and their suitability for initiating a satisfactory production process after storage must be demonstrated.

Propagation of the master cell bank may take place through a seed-lot system that uses a working cell bank.

The *working cell bank* is a homogeneous suspension or lyophilisate of the cell material derived from the master cell bank, distributed in equal volumes into individual containers for storage (for example, in liquid nitrogen).

Production may take place by batch or continuous culture and may be terminated under defined conditions.

All containers in a cell bank are stored under identical conditions. Once removed from storage, the individual ampoules, vials or culture straws are not returned to the cell bank.

PROCESSES USING STAGED GROWTH IN CULTURES

The contents of a container of the working cell bank are used, if necessary after resuspension, to prepare an inoculum in a suitable medium. After a suitable period of growth, the cultures are used to initiate the fermentation process, if necessary following preculture in a prefermentor. The conditions to be used at each stage of the process are defined and must be met with each production run.

CHANGE CONTROL

If the production process is altered in a way that causes a significant change in the impurity profile of the product, the critical steps associated with this change in impurity profile are revalidated.

If a significant change has taken place in the micro-organism used for production that causes a significant change in the impurity profile of the product, the critical steps of the production process associated with this change, particularly the procedure for purification and isolation, are revalidated.

Revalidation includes demonstration that new impurities present in the product as a result of the change are adequately controlled by the test procedures. If necessary, additional or alternative tests must be introduced with appropriate limits. If the change in the process or in the micro-organism results in an increase in the level of an impurity already present, the acceptability of such an increase is addressed.

When a master cell bank is replaced, the critical steps of the production process must be revalidated to the extent necessary to demonstrate that no adverse change has occurred in the quality and safety of the product. Particular attention must be given to possible changes in the impurity profile of the product if a modified or new micro-organism is introduced into the process.

RAW MATERIALS

The raw materials employed in the fermentation and/or down-stream processing are of suitable quality for the intended purpose. They are tested to ensure that they comply with written specifications.

Levels of bioburden in media or in the inlet air for aeration are reduced to an adequately low level to ensure that if microbiological contamination occurs, it does not adversely affect the quality, purity and safety of the product. Addition of components such as nutrients, precursors, and substrates during fermentation takes place aseptically.

IN-PROCESS CONTROLS

In-process controls are in place to ensure the consistency of the conditions during fermentation and down-stream processing and of the quality of the isolated product. Particular attention must be paid to ensure that any microbial contamination that adversely affects the quality, purity and safety of the product is detected by the controls applied.

Production conditions may be monitored, as appropriate, by suitable procedures for example to control and check:

— temperature,

— pH,

— rate of aeration,

— rate of agitation,

— pressure,

and to monitor the concentration of the required product.

DOWN-STREAM PROCESSING

At the end of fermentation, the producer micro-organism is inactivated or removed. Further processing is designed to reduce residues originating from the culture medium to an acceptable level and to ensure that the desired product is recovered with consistent quality.

Various purification processes may be used, for example, charcoal treatment, ultrafiltration and solvent extraction. It must be demonstrated that the process or processes chosen reduce to a minimum or remove:

— residues from the producer micro-organism, culture media, substrates and precursors,

— unwanted transformation products of substrates and precursors.

If necessary, suitable tests are performed either as in-process controls or on the isolated product of fermentation.

IDENTIFICATION, TESTS AND ASSAY

The requirements with which the product must comply throughout its period of validity, as well as specific test methods, are stated in the individual monographs.

Ph Eur

Anhydrous Glucose

General Notices

Potassium Chloride, Sodium Chloride and Glucose Intravenous Infusion

Sodium Chloride and Glucose Intravenous Infusion

Ph Eur

DEFINITION

(+)-D-Glucopyranose.

CHARACTERS

Appearance

White or almost white, crystalline powder.

It has a sweet taste.

Solubility

Freely soluble in water, sparingly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Thin-layer chromatography *(2.2.27)*.

Solvent mixture *water R*, *methanol R* (2:3 *V/V*).

Test solution Dissolve 10 mg of the substance to be examined in the solvent mixture and dilute to 20 ml with the solvent mixture.

Reference solution (a) Dissolve 10 mg of *glucose CRS* in the solvent mixture and dilute to 20 ml with the solvent mixture.

Reference solution (b) Dissolve 10 mg each of *fructose CRS*, *glucose CRS* , *lactose CRS* and *sucrose CRS* in the solvent mixture and dilute to 20 ml with the solvent mixture.

Plate *TLC silica gel G plate R.*

Mobile phase *water R*, *methanol R*, *anhydrous acetic acid R*, *ethylene chloride R* (10:15:25:50 *V/V/V/V*); measure the volumes accurately since a slight excess of water produces cloudiness.

Application 2 µl; thoroughly dry the starting points.

Development A Over a path of 15 cm.

Drying A In a current of warm air.

Development B Immediately, over a path of 15 cm, after renewing the mobile phase.

Drying B In a current of warm air.

Detection Spray with a solution of 0.5 g of *thymol R* in a mixture of 5 ml of *sulphuric acid R* and 95 ml of *ethanol (96 per cent) R*. Heat at 130 °C for 10 min.

System suitability Test solution (b):

— the chromatogram shows 4 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve 0.1 g in 10 ml of *water R*. Add 3 ml of *cupri-tartaric solution R* and heat. A red precipitate is formed.

TESTS

Solution S

Dissolve 10.0 g in distilled *water R* and dilute to 100 ml with the same solvent.

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution BY_7 *(2.2.2, Method II)*.

Dissolve 10.0 g in 15 ml of *water R*.

Acidity or alkalinity

Dissolve 6.0 g in 25 ml of *carbon dioxide-free water R* and add 0.3 ml of *phenolphthalein* *solution R*. The solution is colourless. Not more than 0.15 ml of *0.1 M sodium hydroxide* is required to change the colour of the indicator to pink.

Specific optical rotation *(2.2.7)*

+ 52.5 to + 53.3 (anhydrous substance).

Dissolve 10.0 g in 80 ml of *water R*, add 0.2 ml of *dilute ammonia R1*, allow to stand for 30 min and dilute to 100.0 ml with *water R*.

Foreign sugars, soluble starch, dextrins

Dissolve 1.0 g by boiling in 30 ml of *ethanol (90 per cent V/V) R*. Cool; the appearance of the solution shows no change.

Sulphites

Maximum 15 ppm, expressed as SO_2.

Test solution Dissolve 5.0 g in 40 ml of *water R*, add 2.0 ml of *0.1 M sodium hydroxide* and dilute to 50.0 ml with *water R*. To 10.0 ml of the solution, add 1 ml of a 310 g/l solution of *hydrochloric acid R*, 2.0 ml of *decolorised fuchsin solution R1* and 2.0 ml of a 0.5 per cent *V/V* solution of *formaldehyde R*. Allow to stand for 30 min.

Reference solution Dissolve 76 mg of *sodium metabisulphite R* in *water R* and dilute to 50.0 ml with the same solvent. Dilute 5.0 ml of this solution to 100.0 ml with *water R*. To 3.0 ml of this solution add 4.0 ml of *0.1 M sodium hydroxide* and dilute to 100.0 ml with *water R*. Immediately add to 10.0 ml of this solution 1 ml of a 310 g/l solution of *hydrochloric acid R*, 2.0 ml of *decolorised fuchsin solution R1* and 2.0 ml of a 0.5 per cent V/V solution of *formaldehyde R*. Allow to stand for 30 min.

Measure the absorbance *(2.2.25)* of the 2 solutions at the absorption maximum at 583 nm using for both measurements a solution prepared in the same manner using 10.0 ml of *water R* as the compensation liquid. The absorbance of the test solution is not greater than that of the reference solution.

Chlorides *(2.4.4)*

Maximum 125 ppm.

Dilute 4 ml of solution S with 15 ml of *water R*.

Sulphates *(2.4.13)*

Maximum 200 ppm.

Dilute 7.5 ml of solution S with 15 ml of *distilled water R*.

Arsenic *(2.4.2, Method A)*

Maximum 1 ppm, determined on 1.0 g.

Barium

To 10 ml of solution S add 1 ml of *dilute sulphuric acid R*. When examined immediately and after 1 h, any opalescence in the solution is not more intense than that in a mixture of 1 ml of *distilled water R* and 10 ml of solution S.

Calcium *(2.4.3)*

Maximum 200 ppm.

Dilute 5 ml of solution S with 15 ml of *distilled water R*.

Lead ***(2.4.10)***

Maximum 0,5 ppm.

Water ***(2.5.12)***

Maximum 1.0 per cent, determined on 0.50 g.

Sulphated ash

Maximum 0.1 per cent.

Dissolve 5.0 g in 5 ml of *water R*, add 2 ml of *sulphuric acid R*, evaporate to dryness on a water-bath and ignite to constant mass. If necessary, repeat the heating with *sulphuric acid R*.

Pyrogens ***(2.6.8)***

If intended for use in the manufacture of large-volume parental dosage forms without a further appropriate procedure for the removal of pyrogens, the competent authority may require that it comply with the test for pyrogens. Inject per kilogram of the rabbit's mass 10 ml of a solution in *water for injections R* containing 50 mg of the substance to be examined per millilitre.

Preparation Discs.

Comparison *galactose CRS* .

B. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 10 mg of the substance to be examined in a mixture of 2 volumes of *water R* and 3 volumes of *methanol R* and dilute to 20 ml with the same mixture of solvents.

Reference solution (a) Dissolve 10 mg of *galactose CRS* in a mixture of 2 volumes of *water*

R and 3 volumes of *methanol R* and dilute to 20 ml with the same mixture of solvents.

Reference solution (b) Dissolve 10 mg of *galactose CRS* , 10 mg of *glucose CRS* and 10 mg of *lactose CRS* in a mixture of 2 volumes of *water R* and 3 volumes of *methanol R* and dilute to 20 ml with the same mixture of solvents.

Plate Suitable silica gel as the coating substance.

Mobile phase *water R*, *propanol R* (15:85 *V/V*).

Application 2 µl; thoroughly dry the starting points.

Development In an unsaturated tank over a path of 15 cm.

Drying In a current of warm air.

Detection Spray with a solution of 0.5 g of *thymol R* in a mixture of 5 ml of *sulphuric acid R* and 95 ml of *ethanol (96 per cent) R*. Heat in an oven at 130 °C for 10 min.

System suitability Reference solution (b):

— the chromatogram shows 3 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve 0.1 g in 10 ml of *water R*. Add 3 ml of *cupri-tartaric solution R* and heat. An orange or red precipitate is formed.

TESTS

Solution S

Dissolve, with heating in a water-bath at 50 °C, 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution B_8 *(2.2.2, Method II)*.

Acidity or alkalinity

To 30 ml of solution S add 0.3 ml of *phenolphthalein solution R*. The solution is colourless. Not more than 1.5 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator to pink.

Specific optical rotation *(2.2.7)*

+ 78.0 to + 81.5 (anhydrous substance).

Dissolve 10.00 g in 80 ml of *water R* and add 0.2 ml of *dilute ammonia R1*. Allow to stand for 30 min and dilute to 100.0 ml with *water R*.

Barium

Dilute 5 ml of solution S to 10 ml with *distilled water R*. Add 1 ml of *dilute sulphuric acid R*. When examined immediately and after 1 h, any opalescence in the solution is not more intense than that in a mixture of 5 ml of solution S and 6 ml of *distilled water R*.

Lead ***(2.4.10)***

Maximum 0.5 ppm.

Water ***(2.5.12)***

Maximum 1.0 per cent, determined on 1.00 g.

Sulphated ash

Maximum 0.1 per cent.

To 5 ml of solution S add 2 ml of *sulphuric acid R*, evaporate to dryness on a water-bath and ignite to constant mass. The residue weighs a maximum of 1 mg.

Microbial contamination

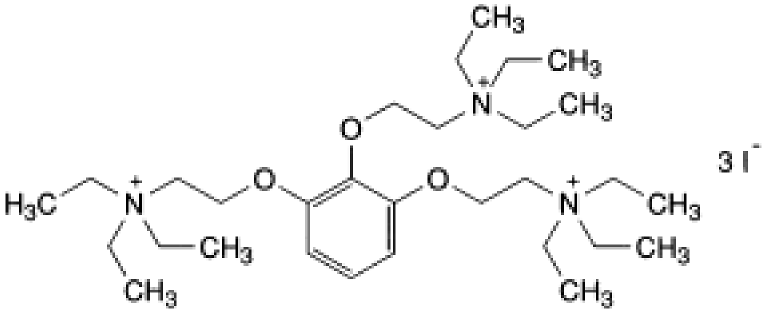
Total viable aerobic count *(2.6.12)* not more than 10^2 micro-organisms per gram.

Ph Eur

Gallamine Triethiodide

General Notices

(Ph Eur monograph 0181)



$C_{30}H_{60}I_3N_3O_3$ 892 *65-29-2*

Action and use

Non-depolarizing neuromuscular blocker.

Preparation

Gallamine Injection

Ph Eur

DEFINITION

2,2′,2″-[Benzene-1,2,3-triyltris(oxy)]tris(*N*,*N*,*N*-triethylethanaminium) triiodide.

Content

98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder, hygroscopic.

Solubility

Very soluble in water, slightly soluble in ethanol (96 per cent), practically insoluble in methylene chloride.

IDENTIFICATION

First identification B, D.

Second identification A, C, D.

A. Ultraviolet and visible absorption spectrophotometry *(2.2.25)*.

Test solution Dissolve 50 mg in *0.01 M hydrochloric acid* and dilute to 50.0 ml with the same acid. Dilute 1.0 ml of this solution to 100.0 ml with *0.01 M hydrochloric acid*.

Spectral range 220-350 nm.

Absorption maximum At 225 nm.

Specific absorbance at the absorption maximum 500 to 550.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *gallamine triethiodide CRS.*

C. To 5 ml of solution S (see Tests) add 1 ml of *potassium tetraiodomercurate solution R*. A yellow precipitate is formed.

D. Dilute 0.5 ml of solution S to 2 ml with *water R*. Add 0.2 ml of *dilute nitric acid R*. The solution gives reaction (a) of iodides *(2.3.1)*.

TESTS

Solution S

Dissolve 0.6 g in *water R* and dilute to 30 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and immediately after preparation is not more intensely coloured than reference solution Y_7 *(2.2.2, Method II)*.

Acidity or alkalinity

To 50 ml of *water R* add 0.2 ml of *methyl red solution R*. Add either *0.01 M sulphuric acid* or *0.02 M sodium hydroxide* until an orange-yellow colour is obtained. Add 1.0 g of the substance to be examined and dissolve by shaking. Not more than 0.2 ml of *0.01 M sulphuric acid* or *0.02 M sodium hydroxide* is required to restore the orange-yellow colour.

Related substances

Test solution Dissolve 30.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 ml with the mobile phase.

Reference solution Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase.

Column:

— *size:* l = 0.25 m, Ø = 4.6 mm;

— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Dissolve 14 g of *sodium perchlorate R* in 850 ml of *phosphate buffer pH 3.0 R* and add 150 ml of *methanol R2*.

Flow rate 1 ml/min.

Detection   Spectrophotometer at 205 nm.

Injection   20 µl.

Run time   1.5 times the retention time of triethylgallamine as perchlorate.

Relative retention with reference to triethylgallamine as perchlorate (retention time = about 40 min): impurity A = about 0.45; impurity B = about 0.50; impurity C = about 0.65; impurity D = about 0.75; impurity E = about 0.85; impurity F = about 0.90.

Limits:

— *impurities A, B, C, D, E, F*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with the reference solution (1 per cent);

— *total*: not more than twice the area of the principal peak in the chromatogram obtained with the reference solution (2 per cent);

— *disregard limit*: disregard the peak due to iodide with a retention time of zero.

Loss on drying *(2.2.32)*

Maximum 1.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

In order to avoid overheating in the reaction medium, mix thoroughly throughout and stop the titration immediately after the end-point has been reached.

Dissolve 0.270 g in a mixture of 5.0 ml of *anhydrous formic acid R* and 50.0 ml of *acetic anhydride R.* Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

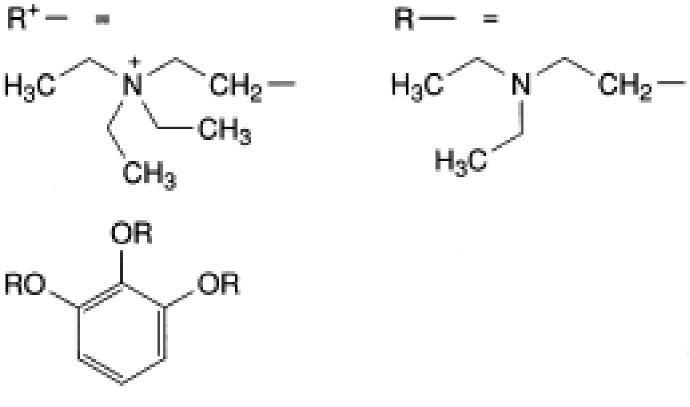
1 ml of *0.1 M perchloric acid* is equivalent to 29.72 mg of $C_{30}H_{60}I_3N_3O_3$.

STORAGE

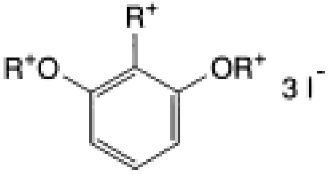
In an airtight container, protected from light.

IMPURITIES

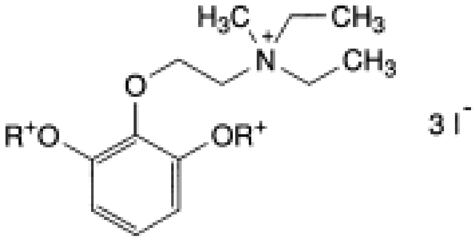
Specified impurities   *A, B, C, D, E, F*.



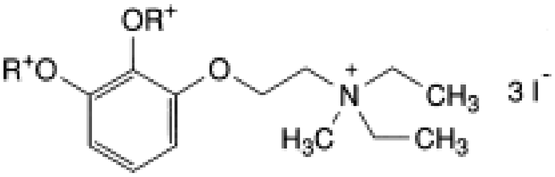
A. 2,2′,2′′-[benzene-1,2,3-triyltris(oxy)]tris(*N*,*N*-diethylethanamine),



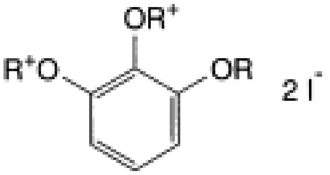
B. 2,2′-[2-[2-(triethylammonio)ethyl]-1,3-phenylenebis(oxy)]bis(*N*,*N*,*N*-triethylethanaminium) triiodide,



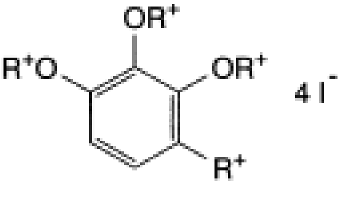
C. 2,2′-[2-[2-(diethylmethylammonio)ethoxy]-1,3-phenylenebis(oxy)]bis(*N*,*N*,*N*-triethylethanaminium) triiodide,



D. 2,2′-[3-[2-(diethylmethylammonio)ethoxy]-1,2-phenylenebis(oxy)]bis(*N*,*N*,*N*-triethylethanaminium) triiodide,



E. 2,2′-[3-[2-(diethylamino)ethoxy]-1,2-phenylenebis(oxy)]bis(*N*,*N*,*N*-triethylethanaminium) diiodide,



F. 2,2′,2′′-[4-[2-(triethylammonio)ethyl]benzene-1,2,3triyltris(oxy)]tris(*N*,*N*,*N*-triethylethanaminium) tetraiodide.

Ph Eur

Gelatin

General Notices

(Ph Eur monograph 0330)

Action and use

Excipient.

Ph Eur

DEFINITION

Purified protein obtained either by partial acid hydrolysis (type A), partial alkaline hydrolysis (type B) or enzymatic hydrolysis of collagen from animals (including fish and poultry); it may also be a mixture of different types.

The hydrolysis leads to gelling or non-gelling product grades. Both product grades are covered by this monograph.

Gelatin described in this monograph is not suitable for parenteral use or for other special purposes.

CHARACTERS

Appearance

Faintly yellow or light yellowish-brown, solid, usually occurring as translucent sheets, shreds, granules or powder.

Solubility

Practically insoluble in common organic solvents; gelling grades swell in cold water and give on heating a colloidal solution which on cooling forms a more or less firm gel.

The isoelectric point is a relevant quality parameter for use of gelatin in different applications: for type A gelatin it is typically between pH 6.0 and pH 9.5 and for type B gelatin is typically between pH 4.7 and pH 5.6. These ranges cover a variety of different gelatins and for specific applications a narrower tolerance is usually applied.

Different gelatins form aqueous solutions that vary in clarity and colour. For a particular application, a suitable specification for clarity and colour is usually applied.

IDENTIFICATION

A. To 2 ml of solution S (see Tests) add 0.05 ml of *copper sulphate solution R*. Mix and add 0.5 ml of *dilute sodium hydroxide solution R*. A violet colour is produced.

B. To 0.5 g in a test-tube add 10 ml of *water R*. Allow to stand for 10 min, heat at 60 °C for 15 min and keep the tube upright at 0 °C for 6 h. Invert the tube; the contents immediately flow out for non-gelling grades and do not flow out immediately for gelling grades.

TESTS

Solution S

Dissolve 1.00 g in *carbon dioxide-free water R* at about 55 °C, dilute to 100 ml with the same solvent and keep the solution at this temperature to carry out the tests.

pH *(2.2.3)*

3.8 to 7.6 for solution S.

Conductivity *(2.2.38)*

Maximum 1 mS·cm^{-1}, determined on a 1.0 per cent solution at 30 ± 1.0 °C.

Sulphur dioxide *(2.5.29)*

Maximum 50 ppm.

Peroxides

Maximum 10 ppm, determined using *peroxide test strips R*.

Peroxidase transfers oxygen from peroxides to an organic redox indicator which is converted to a blue oxidation product. The intensity of the colour obtained is proportional to the quantity of peroxide and can be compared with a colour scale provided with the test strips, to determine the peroxide concentration.

Suitability test Dip a test strip for 1 s into *hydrogen peroxide standard solution (10 ppm H_2O_2) R*, such that the reaction zone is properly wetted. Remove the test strip, shake off excess liquid and compare the reaction zone after 15 s with the colour scale provided with the test strips used. The colour must match that of the 10 ppm concentration, otherwise the test is invalid.

Test Weigh 20.0 ± 0.1 g of the substance to be tested in a beaker and add 80.0 ± 0.2 ml of *water R*. Stir to moisten all gelatin and allow the sample to stand at room temperature for 1-3 h. Cover the beaker with a watch-glass. Place the beaker for 20 ± 5 min in a water bath at 65 ± 2 °C to dissolve the sample. Stir the contents of the beaker with a glass rod to achieve a homogeneous solution. Dip a test strip for 1 s into the test solution, such that the reaction zone is properly wetted. Remove the test strip, shake off excess liquid and compare the reaction zone after 15 s with the colour scale provided with the test strips used. Multiply the concentration read from the colour scale by a factor of 5 to calculate the concentration in parts per million of peroxide in the test substance.

Gel strength (Bloom value)

80 to 120 per cent of the labelled nominal value.

The gel strength is expressed as the mass in grams necessary to produce the force which, applied to a plunger 12.7 mm in diameter, makes a depression 4 mm deep in a gel having a concentration of 6.67 per cent *m/m* and matured at 10 °C.

Apparatus Texture analyser or gelometer with:

— a cylindrical piston 12.7 ± 0.1 mm in diameter with a plane pressure surface with a sharp bottom edge,

— a bottle 59 ± 1 mm in internal diameter and 85 mm high.

Adjust the apparatus according to the manufacturer's manual. Settings are: distance 4 mm, test speed 0.5 mm/s.

Method Perform the test in duplicate. Place 7.5 g of the substance to be tested in each bottle. Add 105 ml of *water R*, place a watch-glass over each bottle and allow to stand for 1-4 h. Heat in a water-bath at 65 ± 2 °C for 15 min. While heating, gently stir with a glass rod. Ensure that the solution is uniform and that any condensed water on the inner walls of the bottle is incorporated. Allow to cool at room temperature for 15 min and transfer the bottles to a thermostatically controlled bath at 10.0 ± 0.1 °C, and fitted with a device to ensure that the platform on which the bottles stand is perfectly horizontal. Close the bottles with a rubber stopper and allow to stand for 17 ± 1 h. Remove the sample bottles from the bath and quickly wipe the water from the exterior of the bottle. Centre consecutively the 2 bottles on the platform of the apparatus so that the plunger contacts the sample as nearly at its midpoint as possible and start the measurement. Report the result as the average of the 2 measurements.

Iron

Maximum 30.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution To 5.00 g of the substance to be examined, in a conical flask, add 10 ml of *hydrochloric acid R*. Close the flask and place in a water-bath at 75-80 °C for 2 h. Allow to cool and adjust the content of the flask to 100.0 g with *water R*.

Reference solutions Prepare the reference solutions using *iron standard solution (8 ppm Fe) R*, diluted as necessary with *water R*.

Wavelength 248.3 nm.

Chromium

Maximum 10.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Test solution described in the test for iron.

Reference solutions Prepare the reference solutions using *chromium standard solution (100 ppm Cr) R*, diluted if necessary with *water R*.

Wavelength 357.9 nm.

Zinc

Maximum 30.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Test solution described in the test for iron.

Reference solutions Prepare the reference solutions using *zinc standard solution (10 ppm Zn) R*, diluted if necessary with *water R*.

Wavelength 213.9 nm.

Loss on drying *(2.2.32)*

Maximum 15.0 per cent, determined on 1.000 g, by drying in an oven at 105 °C.

Microbial contamination

Total viable aerobic count *(2.6.12)* not more than 10^3 micro-organisms per gram, determined by plate count. It complies with the tests for *Escherichia coli* and *Salmonella (2.6.13)*.

STORAGE

Protect from heat and moisture.

LABELLING

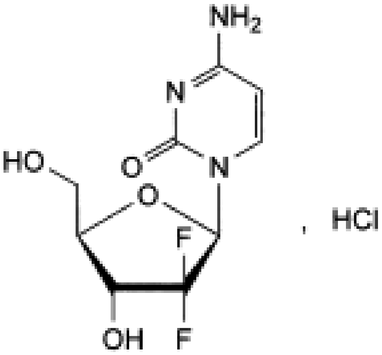
The label states the gel strength (Bloom value) or that it is a non-gelling grade.

Ph Eur

Gemcitabine Hydrochloride

General Notices

(Ph Eur monograph 2306)



$C_9H_{11}F_2N_3O_4,HCl$ 299.7 *122111-03-9*

Action and use

Pyrimidine analogue; cytotoxic.

Ph Eur

DEFINITION

4-Amino-1-(2-deoxy-2,2-difluoro-β-D-*erythro*-pentofuranosyl)pyrimidin-2(1*H*)-one hydrochloride.

Content

98.0 per cent to 102.0 per cent.

CHARACTERS

Appearance

White or almost white powder.

Solubility

Soluble in water, slightly soluble in methanol, practically insoluble in acetone.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison gemcitabine hydrochloride CRS .

B. It gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Solution S

Dissolve 1.00 g in *carbon dioxide-free water R* and dilute to 100.0 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution BY_7 *(2.2.2, Method II)*.

pH *(2.2.3)*

2.0 to 3.0 for solution S.

Specific optical rotation *(2.2.7)*

+ 43.0 to + 50.0, determined on solution S.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution (a) Dissolve 50.0 mg of the substance to be examined in *water R* and dilute to 25.0 ml with the same solvent.

Test solution (b) Dissolve 20.0 mg of the substance to be examined in *water R* and dilute to 200.0 ml with the same solvent.

Reference solution (a) Dissolve 10.0 mg of the substance to be examined and 10.0 mg of *gemcitabine impurity A CRS* in *water R* and dilute to 50.0 ml with the same solvent. Dilute 2.0 ml of this solution to 200.0 ml with *water R*.

Reference solution (b) Dissolve 20.0 mg of *gemcitabine hydrochloride CRS* in *water R* and dilute to 200.0 ml with the same solvent.

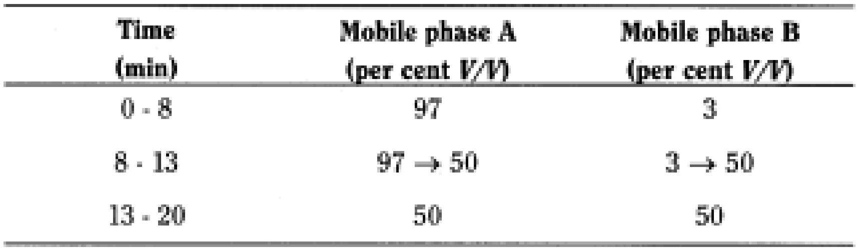
Reference solution (c) Place 10 mg of the substance to be examined in a small vial. Add 4 ml of a 168 g/l solution of *potassium hydroxide R* in *methanol R*, sonicate for 5 min then seal with a cap. The mixture may be cloudy. Heat at 55 °C for a minimum of 6 h to produce impurity B. Allow to cool, then transfer the entire contents of the vial to a 100 ml volumetric flask by successively washing with a 1 per cent *V/V* solution of *phosphoric acid R*. Dilute to 100 ml with a 1 per cent *V/V* solution of *phosphoric acid R* and mix.

Column:

- — *size: l* = 0.25 m, Ø = 4.6 mm;
- — *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:

- — *mobile phase A*: 13.8 g/l solution of *sodium dihydrogen phosphate monohydrate R* adjusted to pH 2.5 ± 0.1 with *phosphoric acid R*;
- — *mobile phase B*: *methanol R*;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 8	97	3
8 - 13	97 → 50	3 → 50
13 - 20	50	50

Flow rate 1.2 ml/min.

Detection Spectrophotometer at 275 nm.

Injection 20 µl of test solution (a) and reference solutions (a) and (c).

Relative retention with reference to gemcitabine (retention time = about 8 min): impurity A = about 0.4; impurity B = about 0.7.

System suitability Reference solution (c):

— *resolution*: minimum 8.0 between the peaks due to impurity B and gemcitabine.

Limits:

— *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the peak due to gemcitabine in the chromatogram obtained with reference solution (a) (0.10 per cent);

— *total*: not more than twice the area of the peak due to gemcitabine in the chromatogram obtained with reference solution (a) (0.2 per cent);

— *disregard limit*: 0.5 times the area of the peak due to gemcitabine in the chromatogram obtained with reference solution (a) (0.05 per cent).

Heavy metals *(2.4.8)*

Maximum 10 ppm.

Dissolve 1.0 g in *water R* and dilute to 20 ml with the same solvent. 12 ml of the solution complies with test A. Prepare the reference solution using 5 ml of *lead standard solution (1 ppm Pb) R,* 5 ml of *water R* and 2 ml of the aqueous solution to be examined. If necessary, filter the solutions and compare the spots on the membrane filter.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g in a platinum crucible.

Bacterial endotoxins *(2.6.14)*

Less than 0.05 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modifications.

Mobile phase Mobile phase A.

Injection Test solution (b) and reference solutions (b) and (c).

Relative retention with reference to gemcitabine (retention time = about 10 min): impurity B = about 0.5.

System suitability Reference solution (c):

— *resolution*: minimum 8.0 between the peaks due to impurity B and gemcitabine.

Calculate the percentage content of $C_9H_{12}ClF_2N_3O_4$ from the declared content *of gemcitabine hydrochloride CRS* .

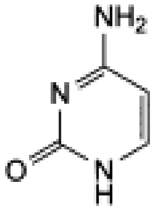
STORAGE

If the substance is sterile, store in a sterile, airtight, tamper-proof container.

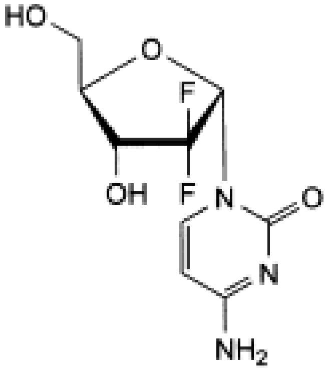
IMPURITIES

Specified impurities *A*.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use): B.*



A. 4-aminopyrimidin-2(1*H*)-one (cytosine),



B. 4-amino-1-(2-deoxy-2,2-difluoro-α-D-*erythro*-pentofuranosyl)pyrimidin-2(1*H*)-one (gemcitabine α-anomer).

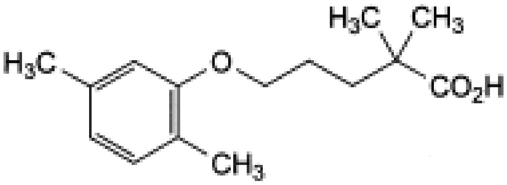
Gemfibrozil

General Notices

(Ph Eur monograph 1694)



$C_{15}H_{22}O_3$ 250.3 *25812-30-0*

Action and use

Fibrate; lipid-regulating drug.

Preparations

Gemfibrozil Capsules

Gemfibrozil Tablets

Ph Eur

DEFINITION

5-(2,5-Dimethylphenoxy)-2,2-dimethylpentanoic acid.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, waxy, crystalline powder.

Solubility

Practically insoluble in water, very soluble in methylene chloride, freely soluble in anhydrous ethanol and in methanol.

IDENTIFICATION

A. Melting point *(2.2.14)*: 58 °C to 61 °C.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *gemfibrozil CRS.*

TESTS

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 40 mg of the substance to be examined in mobile phase A and dilute to 10.0 ml with mobile phase A.

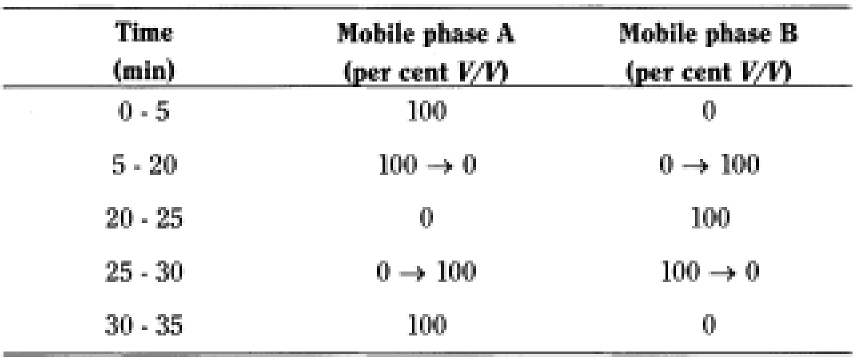
Reference solution (a) Dissolve the contents of a vial of *gemfibrozil for system suitability CRS* (containing impurities C, D and E) in 2 ml of *acetonitrile R.*

Reference solution (b) Dilute 1.0 ml of test solution to 100.0 ml with mobile phase A. Dilute 1.0 ml of this solution to 10.0 ml with mobile phase A.

Reference solution (c) Dissolve 5 mg of *2,5-dimethylphenol R* (impurity A) in mobile phase A and dilute to 10 ml with mobile phase A.

Column:
- *size:* *l* = 0.250 m, Ø = 4.0 mm,
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:
- *mobile phase A*: dissolve 0.27 g of *potassium dihydrogen phosphate R* in 400 ml of *water R*, adjust to pH 4.0 with *phosphoric acid R* and add 600 ml of *acetonitrile R*;
- *mobile phase B*: *acetonitrile R*;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 5	100	0
5 - 20	100 → 0	0 → 100
20 - 25	0	100
25 - 30	0 → 100	100 → 0
30 - 35	100	0

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 276 nm.

Injection 20 µl.

Identification of impurities Use the chromatogram supplied with *gemfibrozil for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities C, D and E. Use the chromatogram obtained with reference solution (c) to identify the peak due to impurity A.

Relative retention with reference to gemfibrozil (retention time = about 7 min): impurity A = about 0.4; impurity C = about 1.3; impurity D = about 1.5; impurity E = about 1.7; impurity I = about 2.0; impurity H = about 2.9.

System suitability Reference solution (a):

- — *resolution*: minimum 6.0 between the peaks due to gemfibrozil and impurity C, and minimum 2.0 between the peaks due to impurity D and impurity E.

Limits:

- — *correction factors*: for the calculations of content multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 0.5; impurity D = 3.3; impurity E = 0.2; impurity I = 2;
- — *impurities E, I*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- — *impurities A, D, H*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);
- — *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- — *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- — *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with test F. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Water *(2.5.12)*

Maximum 0.25 per cent, determined on 2.000 g.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 2.0 g. Allow to stand for 1 h after the first moistening before heating.

ASSAY

Dissolve 0.200 g in 25 ml of *methanol R*. Add 25 ml of *water R* and 1 ml of *0.1 M hydrochloric acid*. Carry out a potentiometric titration *(2.2.20)* using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 25.03 mg of $C_{15}H_{22}O_3$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities *A, D, E, H, I*.

Gentamicin Ointment

Ph Eur

DEFINITION

Mixture of the sulphates of antimicrobial substances produced by *Micromonospora purpurea*, the main components being gentamicins C1, C1a, C2, C2a and C2b.

Content

Minimum 590 IU/mg (anhydrous substance).

CHARACTERS

Appearance

White or almost white, hygroscopic powder.

Solubility

Freely soluble in water, practically insoluble in alcohol.

IDENTIFICATION

First identification *C, D.*

Second identification *A, B, D.*

A. Dissolve about 10 mg in 1 ml of *water R* and add 5 ml of a 400 g/l solution of *sulphuric acid R*. Heat on a water-bath for 100 min, cool and dilute to 25 ml with *water R*. Examined between 240 nm and 330 nm *(2.2.25)*, the solution shows no absorption maximum.

B. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 25 mg of the substance to be examined in *water R* and dilute to 5 ml with the same solvent.

Reference solution Dissolve the contents of a vial of *gentamicin sulphate CRS* in *water R* and dilute to 5 ml with the same solvent.

Plate *TLC silica gel plate R*.

Mobile phase The lower layer of a mixture of equal volumes of *concentrated ammonia R*, *methanol R* and *methylene chloride R*.

Application 10 µl.

Development Over 2/3 of the plate.

Drying In air.

Detection Spray with *ninhydrin solution R1* and heat at 110 °C for 5 min.

Results The 3 principal spots in the chromatogram obtained with the test solution are similar in position, colour and size to the 3 principal spots in the chromatogram obtained with the reference solution.

C. Examine the chromatograms obtained in the test for composition.

Results The chromatogram obtained with the test solution shows 5 principal peaks having the same retention times as the 5 principal peaks in the chromatogram obtained with reference solution (a).

D. It gives reaction (a) of sulphates *(2.3.1)*.

TESTS

Solution S

Dissolve 0.8 g in *carbon dioxide-free water R* and dilute to 20 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than intensity 6 of the range of reference solutions of the most appropriate colour *(2.2.2, Method II)*.

pH *(2.2.3)*

3.5 to 5.5 for solution S.

Specific optical rotation *(2.2.7)*

+ 107 to + 121 (anhydrous substance).

Dissolve 2.5 g in *water R* and dilute to 25.0 ml with the same solvent.

Composition

Liquid chromatography *(2.2.29)*: use the normalisation procedure taking into account only the peaks due to gentamicins C1, C1a, C2, C2a and C2b; use the chromatogram supplied with *gentamicin sulphate CRS* to identify the corresponding peaks.

Test solution Dissolve 50 mg of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (a) Dissolve the content of a vial of *gentamicin sulphate CRS* in the mobile phase and dilute with the mobile phase to obtain a solution containing 0.5 mg/ml.

Reference solution (b) Dilute 5.0 ml of reference solution (a) to 100.0 ml with the mobile phase.

Column:

- *size:* *l* = 0.25 m, Ø = 4.6 mm,
- *stationary phase*: *styrene-divinylbenzene copolymer R* (8 µm) with a pore size of 100 nm,
- *temperature*: 55 °C.

Mobile phase A mixture prepared with *carbon dioxide-free water R* containing 60 g/l of *anhydrous sodium sulphate R*, 1.75 g/l of *sodium octanesulphonate R*, 8 ml/l of *tetrahydrofuran R*, 50 ml/l of *0.2 M potassium dihydrogen phosphate R* previously adjusted to pH 3.0 with *dilute phosphoric acid R* and degassed.

Flow rate 1.0 ml/min.

Post-column solution A *carbonate-free sodium hydroxide solution R* diluted 1 to 25, previously degassed, which is added pulse-less to the column effluent using a 375 µl polymeric mixing coil.

Flow rate 0.3 ml/min.

Detection Pulsed amperometric detector or equivalent with a gold indicator electrode, a silver-silver chloride reference electrode, and a stainless steel auxiliary electrode which is the cell body, held at respectively + 0.05 V detection, + 0.75 V oxidation and - 0.15 V reduction potentials, with pulse durations according to the instrument used.

Injection 20 µl.

Run time 1.2 times the retention time of gentamicin C1.

System suitability Reference solution (a):

— *peak-to-valley ratio*: minimum 2.0 where H_p = height above the baseline of the peak due to gentamicin C2a, and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to gentamicin C2.

Limits:

— *gentamicin C1* : 20.0 per cent to 40.0 per cent,

— *gentamicin C1a* : 10.0 per cent to 30.0 per cent,

— *sum of gentamicins C2, C2a, and C2b*: 40.0 per cent to 60.0 per cent,

— *disregard limit*: the area of the peak due to gentamicin C1a in the chromatogram obtained with reference solution (b).

Related substances

Liquid chromatography *(2.2.29)* as described in the test for composition.

Limits (for related substances eluting before gentamicin C1a):

— *any impurity*: maximum 3.0 per cent,

— *total*: maximum 10.0 per cent.

Methanol *(2.4.24, System B)*

Maximum 1.0 per cent.

Sulphate

32.0 per cent to 35.0 per cent (anhydrous substance).

Dissolve 0.250 g in 100 ml of *distilled water R* and adjust the solution to pH 11 using *concentrated ammonia R*. Add 10.0 ml of *0.1 M barium chloride* and about 0.5 mg of *phthalein purple R*. Titrate with *0.1 M sodium edetate*, adding 50 ml of *alcohol R* when the colour of the solution begins to change and continue the titration until the violet-blue colour disappears.

1 ml of *0.1 M barium chloride* is equivalent to 9.606 mg of SO_4.

Water *(2.5.12)*

Maximum 15.0 per cent, determined on 0.300 g.

Sulphated ash *(2.4.14)*

Maximum 1.0 per cent, determined on 0.50 g.

Bacterial endotoxins *(2.6.14)*

Less than 0.71 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Carry out the microbiological assay of antibiotics *(2.7.2)*.

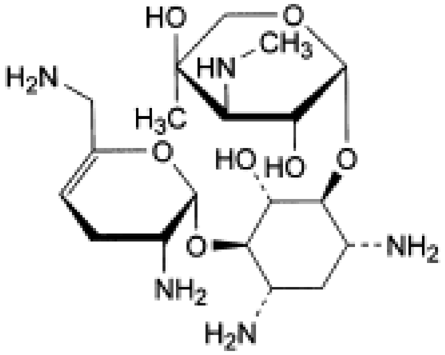
STORAGE

In an airtight container. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

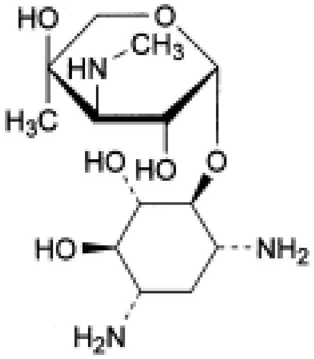
IMPURITIES

Specified impurities A, B, C.

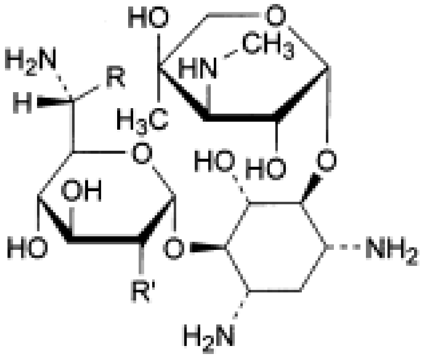
Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use) : D, E.*



A. 2-deoxy-4-*O*-[3-deoxy-4-*C*-methyl-3-(methylamino)-β-L-arabinopyranosyl]-6-*O*-(2,6-diamino-2,3,4,6-tetradeoxy-α-D-*glycero*-hex-4-enopyranosyl)-L-streptamine (sisomicin),

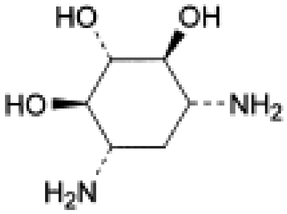


B. 2-deoxy-4-*O*-[3-deoxy-4-*C*-methyl-3-(methylamino)-β-L-arabinopyranosyl]-L-streptamine (garamine),



C. R = CH_3, R′ = OH: 4-*O*-(6-amino-6,7-dideoxy-D-*glycero*-α-D-*gluco*-heptopyranosyl)-2-deoxy-6-*O*-[3-deoxy-4-*C*-methyl-3-(methylamino)-β-L-arabinopyranosyl]-D-streptamine (gentamicin B $_1$),

D. R = H, R′ = NH_2: 2-deoxy-4-*O*-[3-deoxy-4-*C*-methyl-3-(methylamino)-β-L-arabinopyranosyl]-6-*O*-(2,6-diamino-2,6-dideoxy-α-D-*gluco*-hexopyranosyl)-L-streptamine,



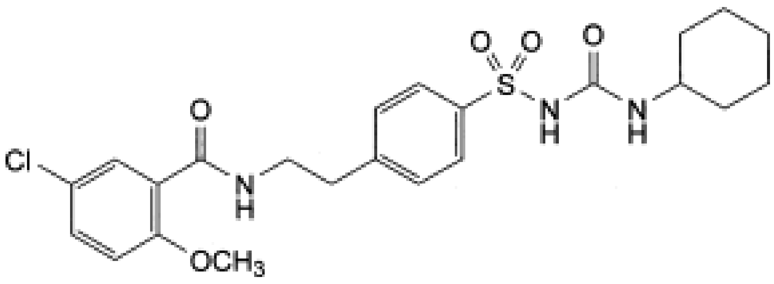
E. 2-deoxystreptamine.

Ph Eur

Glibenclamide

General Notices

(Ph Eur monograph 0718)



$C_{23}H_{28}ClN_3O_5S$ 494.0 *10238-21-8*

Action and use

Inhibition of ATP-dependent potassium channels (sulfonylurea); treatment of diabetes mellitus.

Preparation

Glibenclamide Tablets

Ph Eur

DEFINITION

1-[[4-[2-[(5-Chloro-2-methoxybenzoyl)amino]ethyl]phenyl]sulphonyl]-3-cyclohexylurea.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, sparingly soluble in methylene chloride, slightly soluble in alcohol and in methanol.

IDENTIFICATION

First identification A, C.

Second identification A, B, D, E.

A. Melting point *(2.2.14)*: 169 °C to 174 °C.

B. Dissolve 50.0 mg in *methanol R*, with the aid of ultrasound if necessary, and dilute to 50.0 ml with the same solvent. To 10.0 ml of the solution add 1.0 ml of a 103 g/l solution of *hydrochloric acid R* and dilute to 100.0 ml with *methanol R*. Examined between 230 nm and 350 nm *(2.2.25)*, the solution shows an absorption maximum at 300 nm and a less intense maximum at 275 nm. The specific absorbances at the maxima are 61 to 65 and 27 to 32, respectively.

C. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs of *potassium bromide R*.

Comparison *glibenclamide CRS* .

If the spectra obtained show differences, moisten separately the substance to be examined and the reference substance with *methanol R*, triturate, dry at 100-105 °C and record the spectra again.

D. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 10 mg of the substance to be examined in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 10 ml with the same mixture of solvents.

Reference solution Dissolve 10 mg of *glibenclamide CRS* in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 10 ml with the same mixture of solvents.

Plate *TLC silica gel* GF_{254} *plate R*.

Mobile phase *alcohol R*, *glacial acetic acid R*, *cyclohexane R*, *methylene chloride R* (5:5:45:45 *V/V/V/V*).

Application 10 µl.

Development Over a path of 10 cm.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

E. Dissolve 20 mg in 2 ml of *sulphuric acid R*. The solution is colourless and shows blue fluorescence in ultraviolet light at 365 nm. Dissolve 0.1 g of *chloral hydrate R* in the solution. Within about 5 min, the colour changes to deep yellow and, after about 20 min, develops a brownish tinge.

TESTS

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 25.0 mg of the substance to be examined in *methanol R* and dilute to 10.0 ml with the same solvent. Prepare immediately before use.

Reference solution (a) Dissolve 5.0 mg of *glibenclamide impurity A CRS* and 5.0 mg of *glibenclamide impurity B CRS* in *methanol R* and dilute to 100.0 ml with the same solvent. Dilute 5.0 ml of the solution to 20.0 ml with *methanol R*.

Reference solution (b) Dilute 2.0 ml of the test solution to 100.0 ml with *methanol R*. Dilute 5.0 ml of this solution to 50.0 ml with *methanol R*.

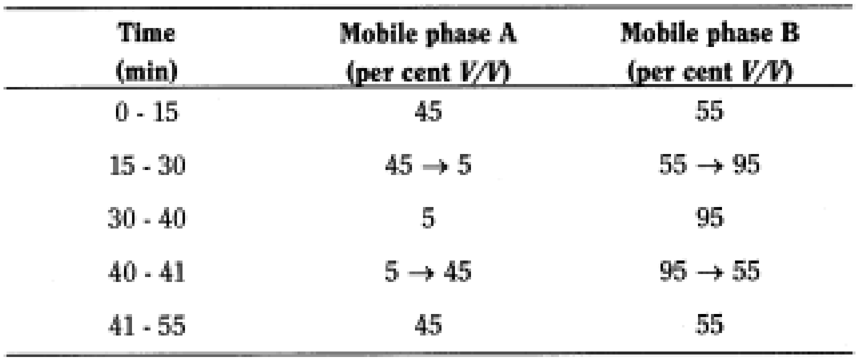
Reference solution (c) Dissolve 5 mg of *gliclazide CRS* in *methanol R*, add 2 ml of the test solution and dilute to 100 ml with *methanol R*. Dilute 1 ml of this solution to 10 ml with *methanol R.*

Column:

- *size: l* = 0.10 m, Ø = 4.6 mm,
- *stationary phase*: spherical *base-deactivated end-capped octadecylsilyl silica gel for chromatography R* (3 µm),
- *temperature*: 35 °C.

Mobile phase:

- *mobile phase A*: mix 20 ml of a 101.8 g/l solution of freshly distilled *triethylamine R* adjusted to pH 3.0 using *phosphoric acid R*, and 50 ml of *acetonitrile R*; dilute to 1000 ml with *water R*,
- *mobile phase B*: mobile phase A, *water R*, *acetonitrile R* (20:65:915 *V/V/V*),



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 15	45	55
15 - 30	45 → 5	55 → 95
30 - 40	5	95
40 - 41	5 → 45	95 → 55
41 - 55	45	55

Flow rate 0.8 ml/min.

Detection Spectrophotometer at 230 nm.

Injection 10 µl.

Relative retention With reference to glibenclamide (retention time = about 5 min): impurity A = about 0.5; impurity B = about 0.6.

System suitability Reference solution (c):

- *resolution*: minimum 5.0 between the peaks due to glibenclamide and gliclazide.

Limits:

- *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.5 per cent),
- *impurity B*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.5 per cent),
- *any other impurity*: not more than the area of the principal peak in the chromatogram

obtained with reference solution (b) (0.2 per cent), and not more than 2 such peaks have an area greater than half the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent),

— *total of other impurities*: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent),

— *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with limit test D. Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying *(2.2.32)*

Maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

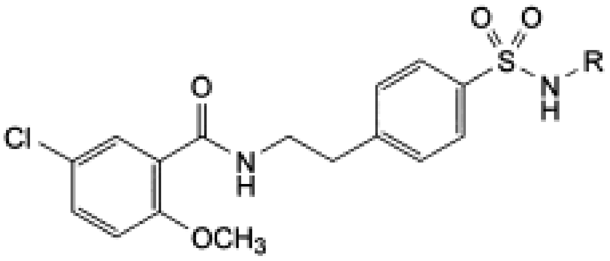
Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.400 g with heating in 100 ml of *alcohol R*. Titrate with *0.1 M sodium hydroxide*, using 1.0 ml of *phenolphthalein solution R* as indicator, until a pink colour is obtained.

1 ml of *0.1 M sodium hydroxide* is equivalent to 49.40 mg of $C_{23}H_{28}ClN_3O_5S$.

IMPURITIES



A. R = H: 5-chloro-2-methoxy-*N*-[2-(4-sulphamoylphenyl)ethyl]benzamide,

B. R = CO-OCH_3: methyl [[4-[2-[(5-chloro-2-methoxybenzoyl)amino]ethyl]phenyl]sulphonyl] carbamate.

Ph Eur

Preparation

Gliclazide Tablets

Ph Eur

DEFINITION

1-(Hexahydrocyclopenta[*c*]pyrrol-2(1*H*)-yl)-3-[(4-methylphenyl)sulphonyl]urea.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water, freely soluble in methylene chloride, sparingly soluble in acetone, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs.

Comparison *gliclazide CRS* .

TESTS

Related substances Liquid chromatography *(2.2.29)*. *Prepare the solutions immediately before use.*

Solvent mixture *acetonitrile R*, *water R* (45:55 *V/V*).

Test solution Dissolve 50.0 mg of the substance to be examined in 23 ml of *acetonitrile R* and dilute to 50.0 ml with *water R*.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with the solvent mixture. Dilute 10.0 ml of this solution to 100.0 ml with the solvent mixture.

Reference solution (b) Dissolve 5 mg of the substance to be examined and 15 mg of *gliclazide impurity F CRS* in 23 ml of *acetonitrile R* and dilute to 50 ml with *water R*. Dilute 1 ml of this solution to 20 ml with the solvent mixture.

Reference solution (c) Dissolve 10.0 mg of *gliclazide impurity F CRS* in 45 ml of *acetonitrile R* and dilute to 100.0 ml with *water R*. Dilute 1.0 ml of this solution to 100.0 ml with the solvent mixture.

Column:
— *size:* *l* = 0.25 m, Ø = 4 mm;

— *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

Mobile phase *triethylamine R*, *trifluoroacetic acid R*, *acetonitrile R*, *water R* (0.1:0.1:45:55 *V/V/V/V*).

Flow rate 0.9 ml/min.

Detection Spectrophotometer at 235 nm.

Injection 20 µl.

Run time Twice the retention time of gliclazide.

Relative retention With reference to gliclazide (retention time = about 16 min): impurity F = about 0.9.

System suitability Reference solution (b):

— *resolution*: minimum 1.8 between the peaks due to impurity F and gliclazide.

Limits:
— *impurity F*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.1 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

— *sum of impurities other than F*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

— *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.02 per cent).

Impurity B

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modifications.

Test solution Dissolve 0.400 g of the substance to be examined in 2.5 ml of *dimethyl sulphoxide R* and dilute to 10.0 ml with *water R*. Stir for 10 min, store at 4 °C for 30 min and filter.

Reference solution Dissolve 20.0 mg of *gliclazide impurity B CRS* in *dimethyl sulphoxide R* and dilute to 100.0 ml with the same solvent. To 1.0 ml of the solution, add 12 ml of *dimethyl sulphoxide R* and dilute to 50.0 ml with *water R*. To 1.0 ml of this solution, add 12 ml of *dimethyl sulphoxide R* and dilute to 50.0 ml with *water R*.

Injection 50 µl.

Retention time Impurity B = about 8 min.

Limit:

— *impurity B*: not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (2 ppm).

Heavy metals *(2.4.8)*

Maximum 10 ppm.

1.5 g complies with test F. Prepare the reference solution using 1.5 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 0.25 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 50 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 32.34 mg of $C_{15}H_{21}N_3O_3S$.

IMPURITIES

Specified impurities *B, F*.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. Glimepiride

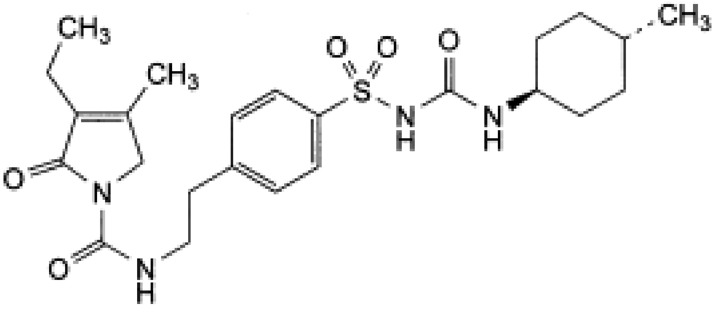
General Notices

(Ph Eur monograph 2223)



$C_{24}H_{34}N_4O_5S$ 490.6   *93479-97-1*

Action and use

Inhibition of ATP-dependent potassium channels (sulfonylurea); treatment of diabetes mellitus.

Ph Eur

DEFINITION

1-[[4-[2-(3-Ethyl-4-methyl-2-oxo-3-pyrroline-1-carboxamido)-ethyl]phenyl]sulphonyl]-3-*trans*-(4-methylcyclohexyl)urea.

Content

97.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water, soluble in dimethylformamide, slightly soluble in methylene chloride, very slightly soluble in methanol.

It shows polymorphism *(5.9)*.

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)*.

Comparison glimepiride CRS .

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *dimethylformamide R*, evaporate to dryness and record new spectra using the residues.

TESTS

Related substances

Liquid chromatography *(2.2.29) Store the solutions at a temperature not exceeding 12 °C and for not more than 15 h.*

Solvent mixture water for chromatography R, *acetonitrile for chromatography R* (1:4 *V/V*).

Test solution Dissolve 20.0 mg of the substance to be examined in the solvent mixture and dilute to 100.0 ml with the solvent mixture.

Reference solution (a) Dissolve the contents of a vial of *glimepiride for system suitability CRS* (containing impurities B, C and D) in 2.0 ml of the test solution.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with the solvent mixture. Dilute 1.0 ml of this solution to 10.0 ml with the solvent mixture.

Reference solution (c) Dissolve 20.0 mg of *glimepiride CRS* in the solvent mixture and dilute to 100.0 ml with the solvent mixture.

Column:
- *size:* *l* = 0.25 m, Ø = 4 mm,
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (4 µm).

Mobile phase Dissolve 0.5 g of *sodium dihydrogen phosphate R* in 500 ml of *water for chromatography R* and adjust to pH 2.5 with *phosphoric acid R*. Add 500 ml of *acetonitrile for chromatography R*.

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 228 nm.

Injection 20 µl of the test solution and reference solutions (a) and (b).

Run time 2.5 times the retention time of glimepiride.

Relative retention With reference to glimepiride (retention time = about 17 min): impurity B = about 0.2; impurity C = about 0.3; impurity D = about 1.1.

System suitability Reference solution (a):

- *resolution*: minimum 4.0 between the peaks due to impurity B and impurity C.

Limits:
- *impurity B*: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.4 per cent),
- *impurity D*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent),
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent),

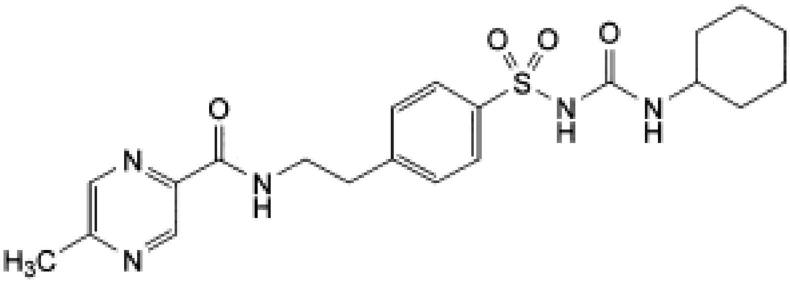
General Notices

(Ph Eur monograph 0906)



$C_{21}H_{27}N_5O_4S$ 445.5 *29094-61-9*

Action and use

Inhibition of ATP-dependent potassium channels (sulfonylurea); treatment of diabetes mellitus.

Preparation

Glipizide Tablets

Ph Eur

DEFINITION

1-Cyclohexyl-3-[[4-[2-[[(5-methylpyrazin-2-yl)carbonyl]amino]ethyl]phenyl]sulphonyl]urea.

Content

98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, very slightly soluble in methylene chloride and in acetone, practically insoluble in ethanol (96 per cent). It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

First identification *B.*

Second identification *A, C.*

A. Ultraviolet and visible absorption spectrophotometry *(2.2.25)*.

Test solution Dissolve about 2 mg in *methanol R* and dilute to 100 ml with the same solvent.

Spectral range 220-350 nm.

Absorption maxima At 226 nm and 274 nm.

Absorbance ratio A_{226}/A_{274} = 2.0 to 2.4.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *glipizide CRS*.

C. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 10 mg of the substance to be examined in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 10 ml with the same mixture of solvents.

Reference solution Dissolve 10 mg of *glipizide CRS* in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 10 ml with the same mixture of solvents.

Plate *TLC silica gel* GF_{254} *plate R*.

Mobile phase *anhydrous formic acid R*, *ethyl acetate R*, *methylene chloride R* (25:25:50 *V/V/V*).

Application 10 µl.

Development Over 2/3 of the plate.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

TESTS

Related substances.

Liquid chromatography *(2.2.29)*.

Test solution Place 25 mg of the substance to be examined into a volumetric flask and add 75 ml of the mobile phase. Dissolve using sonication. Dilute to 100.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (b) Dissolve 5 mg of *glipizide impurity A CRS* and 5 mg of *glipizide impurity D CRS* in the mobile phase and dilute to 100 ml with the mobile phase.

Column:

— *size*: *l* = 0.15 m, Ø = 4.6 mm,

— *stationary phase*: spherical *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Mix 17 volumes of *acetonitrile R* and 83 volumes of a 3.5 g/l solution of *dipotassium hydrogen phosphate R* previously adjusted to pH 8.0 with *phosphoric acid R*.

Flow rate 1 ml/min.

Detection Spectrophotometer at 274 nm.

Injection 50 µl.

Run time 1.5 times the retention time of glipizide.

Relative retention With reference to glipizide (retention time = about 24 min): impurity A = about 0.3; impurity D = about 0.4; impurity E = about 1.1.

System suitability Reference solution (b):

— *resolution*: minimum 2.0 between the peaks due to impurities A and D.

Limits:

— *impurity A*: not more 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent),

— *impurities D, E*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),

— *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent),

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Impurity B

Gas chromatography *(2.2.28)*.

Internal standard solution Dissolve 25 mg of *decane R* in *methylene chloride R* and dilute to 100 ml with the same solvent. Dilute 5 ml of this solution to 100 ml with *methylene chloride R*.

Test solution (a) Dissolve 1.0 g of the substance to be examined in 50 ml of a 12 g/l solution of *sodium hydroxide R* and shake with 2 quantities, each of 5.0 ml of *methylene chloride R*. Use the combined lower layers.

Test solution (b) Dissolve 1.0 g of the substance to be examined in 50 ml of a 12 g/l solution of *sodium hydroxide R* and shake with 2 quantities, each of 5.0 ml of the internal standard solution. Use the combined lower layers.

Reference solution Dissolve 10.0 mg of *cyclohexylamine R* (impurity B) in a 17.5 g/l solution of *hydrochloric acid R* and dilute to 100.0 ml with the same acid. To 1.0 ml of this solution add 50 ml of a 12 g/l solution of *sodium hydroxide R* and shake with 2 quantities, each of 5.0 ml of the internal standard solution. Use the combined lower layers.

Column:

— *material*: fused silica,

— *size*: *l* = 25 m, Ø = 0.32 mm,

— *stationary phase*: *poly(dimethyl)(diphenyl)siloxane R* (film thickness 0.5 µm).

Carrier gas *helium for chromatography R*.

Flow rate 1.8 ml/min.

Split ratio 1:11.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 4	40
	4 - 20	40 → 200
	20 - 25	200
Injection port		250
Detector		270

Detection Flame ionisation.

Injection 1 µl.

Elution order Impurity B, decane.

System suitability:

- *resolution*: minimum 7 between the peaks due to impurity B and the internal standard in the chromatogram obtained with the reference solution,
- there is no peak with the same retention time as that of the internal standard in the chromatogram obtained with test solution (a).

Limit:

- *impurity B*: calculate the ratio (*R*) of the area of the peak due to impurity B to the area of the peak due to the internal standard from the chromatogram obtained with the reference solution; from the chromatogram obtained with test solution (b), calculate the ratio of the area of any peak due to impurity B to the area of the peak due to the internal standard: this ratio is not greater than *R* (100 ppm).

Impurity C

Liquid chromatography *(2.2.29)*.

Solvent mixture Mixture of equal volumes of *acetonitrile R* and *water R* previously adjusted to pH 3.5 with *acetic acid R*.

Test solution Dissolve 10.0 mg of the substance to be examined in the solvent mixture and dilute to 50.0 ml with the solvent mixture.

Reference solution Dissolve 5.0 mg of *glipizide impurity C CRS* in the solvent mixture and dilute to 50.0 ml with the solvent mixture. To 5.0 ml of the solution add 1.0 ml of the test solution and dilute to 100.0 ml with the solvent mixture. Dilute 1.0 ml of this solution to 10.0 ml with the solvent mixture.

Column:
— *size: l* = 0.15 m, Ø = 4.6 mm,

— *stationary phase*: spherical *base-deactivated end-capped octadecylsilyl silica gel for chromatography R1* (3 µm).

Mobile phase Mix 35 volumes of *acetonitrile R1* and 65 volumes of *water R* previously adjusted to pH 3.5 with *acetic acid R*.

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 225 nm.

Injection 50 µl.

Run time Twice the retention time of glipizide.

Relative retention With reference to glipizide (retention time = about 6 min): impurity C = about 1.4.

System suitability Reference solution:

— *resolution*: minimum 4.0 between the peaks due to glipizide and impurity C,

— *symmetry factor*: maximum 1.2 for the peak due to glipizide.

Limit:
— *impurity C*: not more than 0.4 times the area of the corresponding peak in the chromatogram obtained with the reference solution (0.1 per cent).

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.2 per cent, determined on 1.0 g.

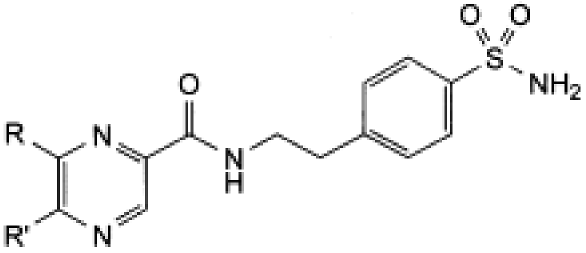
ASSAY

Dissolve 0.400 g in 50 ml of *dimethylformamide R*. Add 0.2 ml of *quinaldine red solution R*. Titrate with *0.1 M lithium methoxide* until the colour changes from red to colourless.

1 ml of *0.1 M lithium methoxide* is equivalent to 44.55 mg of $C_{21}H_{27}N_5O_4S$.

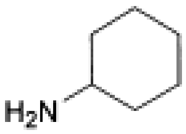
IMPURITIES

Specified impurities A, B, C, D, E.

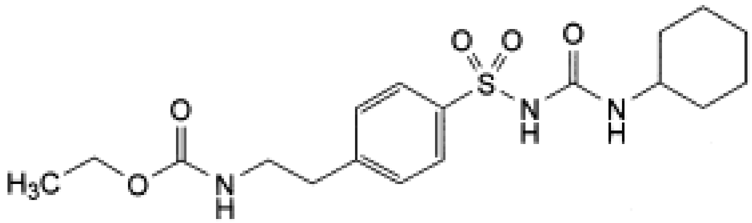


A. R = H, R′ = CH_3: 5-methyl-*N*-[2-(4-sulphamoylphenyl)ethyl]pyrazine-2-carboxamide,

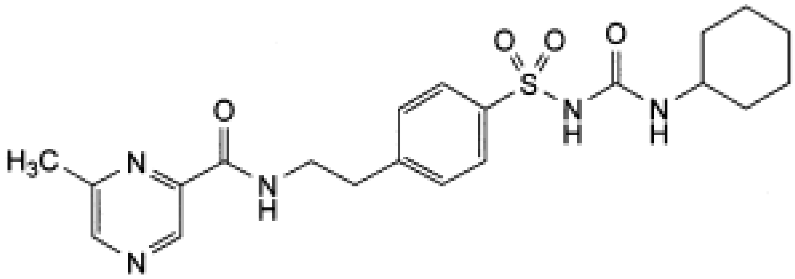
D. R = CH_3, R′ = H: 6-methyl-*N*-[2-(4-sulphamoylphenyl)ethyl]pyrazine-2-carboxamide,



B. cyclohexanamine,



C. ethyl [2-[4-[(cyclohexylcarbamoyl)sulphamoyl]phenyl]ethyl]carbamate,

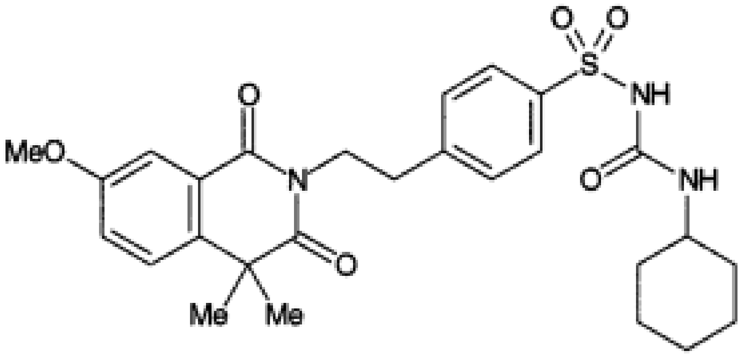


E. 1-cyclohexyl-3-[[4-[2-[[(6-methylpyrazin-2-yl)carbonyl]amino]ethyl]phenyl]sulphonyl]urea.

Ph Eur

Gliquidone

General Notices



$C_{27}H_{33}N_3O_6S$ 527.6 *33342-05-1*

Action and use

Inhibition of ATP-dependent potassium channels (sulfonylurea); treatment of diabetes mellitus.

Preparation

Gliquidone Tablets

DEFINITION

Gliquidone is 1-cyclohexyl-3-*p*-[2-(3,4-dihydro-7-methoxy-4,4-dimethyl-1,3-dioxo2(1*H*)-isoquinolyl)ethyl]phenylsulphonylurea. It contains not less than 98.5% and not more than 101.5% of $C_{27}H_{33}N_3O_6S$, calculated with reference to the dried substance.

CHARACTERISTICS

A white or almost white powder.

Practically insoluble in *water*; slightly soluble in *ethanol (96%)* and in *methanol*; soluble in *acetone*; freely soluble in *dimethylformamide*.

IDENTIFICATION

A. Dissolve 30 mg in 10 ml of *methanol*. Evaporate the methanol using a rotary evaporator and dry the residue at a temperature of 50° at a pressure of 2 kPa for 1 hour. The *infrared absorption spectrum* of the dried residue, Appendix II A, is concordant with the *reference spectrum* of gliquidone *(RS 170)*.

B. In the test for Related substances, the principal spot in the chromatogram obtained with solution (1) corresponds to that in the chromatogram obtained with solution (2).

TESTS

Melting point

176° to 181°, Appendix V A.

Related substances

Carry out the method for *thin-layer chromatography*, Appendix III A, using *silica gel 60F* as the coating substance and a mixture of 5 volumes of *glacial acetic acid*, 5 volumes of *ethanol (96%)*, 45 volumes of *chloroform* and 45 volumes of *cyclohexane* as the mobile phase but allowing the solvent front to ascend 10 cm above the line of application. Apply separately to the plate 10 µl of each of five solutions in a mixture of 50 volumes of *dichloromethane* and 50 volumes of *methanol* containing (1) 1.0% w/v of the substance being examined, (2) 1.0% w/v of *gliquidone BPCRS*, (3) 0.0030% w/v of *gliquidone BPCRS*, (4) 0.0030% w/v of *gliquidone sulphonamide BPCRS* and (5) a mixture of 1 volume of solution (3) and 1 volume of solution (4). After removal of the plate, allow it to dry in air and examine under *ultraviolet light (254 nm)*. In the chromatogram obtained with solution (1) any spot corresponding to gliquidone sulphonamide is not more intense than the spot in the chromatogram obtained with solution (4) (0.3%) and any other *secondary spot* is not more intense than the spot in the chromatogram obtained with solution (3) (0.3%). The test is not valid unless the chromatogram obtained with solution (5) shows two clearly separated principal spots.

Heavy metals

1 g complies with *limit test C for heavy metals*, Appendix VII. Use 1 ml of *lead standard solution (10 ppm Pb)* to prepare the standard (10 ppm).

Loss on drying

When dried to constant weight at 105°, loses not more than 1.0% of its weight. Use 1 g.

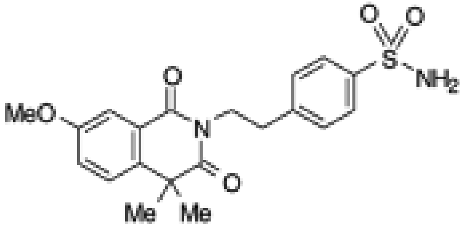
Sulphated ash

Not more than 0.1%, Appendix IX A.

ASSAY

Dissolve 0.3 g in 70 ml of *dimethylformamide* and immediately carry out Method II for *non-aqueous titration*, Appendix VIII A, in an atmosphere of nitrogen using 0.1M *tetrabutylammonium hydroxide VS* as titrant and a 0.3% w/v solution of *thymol blue* as indicator. Each ml of 0.1M *tetrabutylammonium hydroxide VS* is equivalent to 52.76 mg of $C_{27}H_{33}N_3O_6S$.

IMPURITIES



A. *p*-[2-(3,4-dihydro-7-methoxy-4,4-dimethyl-1,3-dioxo-2(1H)isoquinolyl)ethyl] benzenesulphonamide *(gliquidone sulphonamide)*

Glucose

General Notices

Ph Eur

DEFINITION

(+)-D-Glucopyranose monohydrate.

CHARACTERS

Appearance

White or almost white, crystalline powder.

It has a sweet taste.

Solubility

Freely soluble in water, sparingly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Thin-layer chromatography *(2.2.27)*.

Solvent mixture *water R*, *methanol R* (2:3 *V/V*).

Test solution Dissolve 10 mg of the substance to be examined in the solvent mixture and dilute to 20 ml with the solvent mixture.

Reference solution (a) Dissolve 10 mg of *glucose CRS* in the solvent mixture and dilute to 20 ml with the solvent mixture.

Reference solution (b) Dissolve 10 mg each of *fructose CRS*, *glucose CRS* , *lactose CRS* and *sucrose CRS* in the solvent mixture and dilute to 20 ml with the solvent mixture.

Plate *TLC silica gel G plate R*.

Mobile phase *water R*, *methanol R*, *anhydrous acetic acid R*, *ethylene chloride R* (10:15:25:50 *V/V/V/V*); measure the volumes accurately since a slight excess of water produces cloudiness.

Application 2 µl; thoroughly dry the starting points.

Development A Over a path of 15 cm.

Drying A In a current of warm air.

Development B Immediately, over a path of 15 cm, after renewing the mobile phase.

Drying B In a current of warm air.

Detection Spray with a solution of 0.5 g of *thymol R* in a mixture of 5 ml of *sulphuric acid R* and 95 ml of *ethanol (96 per cent) R*; heat at 130 °C for 10 min.

System suitability Test solution (b):

— the chromatogram shows 4 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve 0.1 g in 10 ml of *water R*. Add 3 ml of *cupri-tartaric solution R* and heat. A red precipitate is formed.

TESTS

Solution S

Dissolve 10.0 g in *distilled water R* and dilute to 100 ml with the same solvent.

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution BY_7 *(2.2.2, Method II)*.

Dissolve 10.0 g in 15 ml of *water R*.

Acidity or alkalinity

Dissolve 6.0 g in 25 ml of *carbon dioxide-free water R* and add 0.3 ml of *phenolphthalein solution R*. The solution is colourless. Not more than 0.15 ml of *0.1 M sodium hydroxide* is required to change the colour of the indicator to pink.

Specific optical rotation *(2.2.7)*

+ 52.5 to + 53.3 (anhydrous substance).

Dissolve 10.0 g in 80 ml of *water R*, add 0.2 ml of *dilute ammonia R1*, allow to stand for 30 min and dilute to 100.0 ml with *water R*.

Foreign sugars, soluble starch, dextrins

Dissolve 1.0 g by boiling in 30 ml of *ethanol (90 per cent V/V) R*. Cool; the appearance of the solution shows no change.

Sulphites

Maximum 15 ppm, expressed as SO_2.

Test solution Dissolve 5.0 g in 40 ml of *water R*, add 2.0 ml of *0.1 M sodium hydroxide* and dilute to 50.0 ml with *water R*. To 10.0 ml of the solution, add 1 ml of a 310 g/l solution of *hydrochloric acid R*, 2.0 ml of *decolorised fuchsin solution R1* and 2.0 ml of a 0.5 per cent *V/V* solution of *formaldehyde R*. Allow to stand for 30 min.

Reference solution Dissolve 76 mg of *sodium metabisulphite R* in *water R* and dilute to 50.0 ml with the same solvent. Dilute 5.0 ml of this solution to 100.0 ml with *water R*. To 3.0 ml of this solution add 4.0 ml of *0.1 M sodium hydroxide* and dilute to 100.0 ml with *water R*. Immediately add to 10.0 ml of this solution 1 ml of a 310 g/l solution of *hydrochloric acid R*, 2.0 ml of *decolorised fuchsin solution R1* and 2.0 ml of a 0.5 per cent *V/V* solution of *formaldehyde R*. Allow to stand for 30 min.

Measure the absorbance *(2.2.25)* of the 2 solutions at the absorption maximum at 583 nm using for both measurements a solution prepared in the same manner using 10.0 ml of *water R* as the compensation liquid. The absorbance of the test solution is not greater than that of the reference solution.

Chlorides *(2.4.4)*

Maximum 125 ppm.

Dilute 4 ml of solution S with 15 ml of *water R*.

Sulphates *(2.4.13)*

Maximum 200 ppm.

Dilute 7.5 ml of solution S with 15 ml of *distilled water R*.

Arsenic *(2.4.2, Method A)*

Maximum 1 ppm, determined on 1.0 g.

Barium

To 10 ml of solution S add 1 ml of *dilute sulphuric acid R*. When examined immediately and after 1 h, any opalescence in the solution is not more intense than that in a mixture of 1 ml of *distilled water R* and 10 ml of solution S.

Calcium *(2.4.3)*

Maximum 200 ppm.

Dilute 5 ml of solution S with 15 ml of *distilled water R*.

Lead ***(2.4.10)***

Maximum 0.5 ppm.

Water ***(2.5.12)***

7.0 per cent to 9.5 per cent, determined on 0.50 g.

Sulphated ash

Maximum 0.1 per cent.

Dissolve 5.0 g in 5 ml of *water R*, add 2 ml of *sulphuric acid R*, evaporate to dryness on a water-bath and ignite to constant mass. If necessary, repeat the heating with *sulphuric acid R*.

Pyrogens ***(2.6.8)***

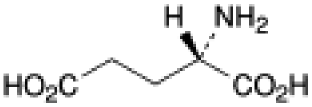
If intended for use in the manufacture of large-volume parenteral dosage forms without a further appropriate procedure for the removal of pyrogens, the competent authority may require that it comply with the test for pyrogens. Inject per kilogram of the rabbit's mass 10 ml of a solution in *water for injections R* containing 55 mg of the substance to be examined per millilitre.

Ph Eur

Glutamic Acid

General Notices

(Ph Eur monograph 0750)



$C_5H_9NO_4$ 147.1 *56-86-0*

Action and use

Amino acid.

Ph Eur

DEFINITION

Glutamic acid contains not less than 98.5 per cent and not more than the equivalent of 100.5 per cent of (2*S*)-2-aminopentanedioic acid, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder or colourless crystals, freely soluble in boiling water, slightly soluble in cold water, practically insoluble in acetic acid, in acetone and in alcohol.

IDENTIFICATION

First identification *A, B.*

Second identification *A, C, D.*

A. It complies with the test for specific optical rotation (see Tests).

B. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *glutamic acid CRS*. Examine the substances prepared as discs. If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in the minimum quantity of *water R*, evaporate to dryness at 60 °C and record new spectra using the residues.

C. Examine the chromatograms obtained in the test for ninhydrin-positive substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. To 2.0 ml of solution S (see Tests) add 0.1 ml of *phenolphthalein solution R* and 3.0 ml to 3.5 ml of *1 M sodium hydroxide* to change the colour of the indicator to red. Add a mixture of

3 ml of *formaldehyde solution R*, 3 ml of *carbon dioxide-free water R* and 0.1 ml of *phenolphthalein solution R*, to which sufficient *1 M sodium hydroxide* has been added to produce a pink colour. The solution is decolourised. Add *1 M sodium hydroxide* until a red colour is produced. The total volume of *1 M sodium hydroxide* used is 4.0 ml to 4.7 ml.

TESTS

Solution S

Dissolve 5.00 g in *1 M hydrochloric acid* with gentle heating, and dilute to 50.0 ml with the same acid.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(Method II, 2.2.2)*.

Specific optical rotation *(2.2.7)*

+ 30.5 to + 32.5, determined on solution S and calculated with reference to the dried substance.

Ninhydrin-positive substances

Examine by thin-layer chromatography *(2.2.27)*, using a *TLC silica gel plate R*.

Test solution (a) Dissolve 0.10 g of the substance to be examined in 5 ml of *dilute ammonia R2* and dilute to 10 ml with *water R*.

Test solution (b) Dilute 1 ml of test solution (a) to 50 ml with *water R*.

Reference solution (a) Dissolve 10 mg of *glutamic acid CRS* in *water R* and dilute to 50 ml with the same solvent.

Reference solution (b) Dilute 5 ml of test solution (b) to 20 ml with *water R*.

Reference solution (c) Dissolve 10 mg of *glutamic acid CRS* and 10 mg of *aspartic acid CRS* in *water R* and dilute to 25 ml with the same solvent.

Apply to the plate 5 µl of each solution. Dry the plate in a current of air for 15 min. Develop over a path of 15 cm using a mixture of 20 volumes of *glacial acetic acid R*, 20 volumes of *water R* and 60 volumes of *butanol R*. Allow the plate to dry in air, spray with *ninhydrin solution R* and heat at 100-105 °C for 15 min. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (c) shows 2 clearly separated spots.

Chlorides *(2.4.4)*

Dissolve 0.25 g in 3 ml of *dilute nitric acid R* and dilute to 15 ml with *water R*. The solution, to which 1 ml of *water R* is added instead of *dilute nitric acid R*, complies with the limit test for chlorides (200 ppm).

Sulphates *(2.4.13)*

Dilute 5 ml of solution S to 15 ml with *distilled water R*. The solution complies with the limit test for sulphates (300 ppm).

Ammonium *(2.4.1)*

50 mg complies with limit test B for ammonium (200 ppm). Prepare the standard using 0.1 ml of *ammonium standard solution (100 ppm NH_4) R*.

Iron *(2.4.9)*

In a separating funnel, dissolve 1.0 g in 10 ml of *dilute hydrochloric acid R*. Shake with 3 quantities, each of 10 ml, of *methyl isobutyl ketone R1*, shaking for 3 min each time. To the combined organic layers add 10 ml of *water R* and shake for 3 min. The aqueous layer complies with the limit test for iron (10 ppm).

Heavy metals *(2.4.8)*

2.0 g complies with limit test D for heavy metals (10 ppm). Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying *(2.2.32)*

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.130 g in 50 ml of *carbon dioxide-free water R* with gentle heating. Cool. Using 0.1 ml of *bromothymol blue solution R1* as indicator, titrate with *0.1 M sodium hydroxide* until the colour changes from yellow to blue.

1 ml of *0.1 M sodium hydroxide* is equivalent to 14.71 mg of $C_5H_9NO_4$.

STORAGE

Protected from light.

Ph Eur

Glutathione

General Notices

$C_{10}H_{17}N_3O_6S$ 307.3 *70-18-8*

Ph Eur

DEFINITION

L-γ-Glutamyl-L-cysteinylglycine.

Fermentation product.

Content

98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or colourless crystals.

Solubility

Freely soluble in water, very slightly soluble in ethanol (96 per cent) and in methylene chloride.

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison glutathione CRS.

TESTS

Solution S

Dissolve 5.0 g in *distilled water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Specific optical rotation *(2.2.7)*

- 15.5 to - 17.5 (dried substance).

Dissolve 1.0 g in *water R* and dilute to 25.0 ml with the same solvent.

Related substances

Capillary electrophoresis (*2.2.47*). *Prepare the solutions immediately before use.*

Internal standard solution (a) Dissolve 0.100 g of *phenylalanine R* in the electrolyte solution and dilute to 50.0 ml with the same solution.

Internal standard solution (b) Dilute 10.0 ml of internal standard solution (a) to 100.0 ml with the electrolyte solution.

Test solution (a) Dissolve 0.200 g of the substance to be examined in the electrolyte solution and dilute to 10.0 ml with the same solution.

Test solution (b) Dissolve 0.200 g of the substance to be examined in internal standard solution (b) and dilute to 10.0 ml with the same solution.

Reference solution (a) Dissolve 20.0 mg of the substance to be examined in internal standard solution (a) and dilute to 10.0 ml with the same solution.

Reference solution (b) Dilute 5.0 ml of reference solution (a) to 50.0 ml with the electrolyte solution.

Reference solution (c) Dissolve 0.200 g of the substance to be examined in 5 ml of the electrolyte solution. Add 1.0 ml of internal standard solution (a), 0.5 ml of a 2 mg/ml solution of *L-cysteine R* (impurity B) in the electrolyte solution, 0.5 ml of a 2 mg/ml solution of *oxidised L-glutathione R* (impurity C) in the electrolyte solution and 0.5 ml of a 2 mg/ml solution of *L-γ-glutamyl-L-cysteine R* (impurity D) in the electrolyte solution. Dilute to 10.0 ml with the electrolyte solution.

Capillary:

- *material*: uncoated fused silica;
- *size*: length to the detector cell = 0.5 m; total length = 0.6 m; Ø = 75 µm.

Temperature 25 °C.

Electrolyte solution Dissolve 1.50 g of *anhydrous sodium dihydrogen phosphate R* in 230 ml of *water R* and adjust to pH 1.80 with *phosphoric acid R.* Dilute to 250.0 ml with *water R*. Check the pH and, if necessary, adjust with *phosphoric acid R* or *dilute sodium hydroxide solution R.*

Detection Spectrophotometer at 200 nm.

Preconditioning of a new capillary: rinse the new capillary before the first injection with *0.1 M* *hydrochloric acid* at 138 kPa for 20 min and with *water R* at 138 kPa for 10 min; for complete equilibration, condition the capillary with the electrolyte solution at 350 kPa for 40 min, and subsequently at a voltage of 20 kV for 60 min.

Preconditioning of the capillary Rinse the capillary with the electrolyte solution at 138 kPa for 40 min.

Between-run rinsing Rinse the capillary with *water R* at 138 kPa for 1 min, with *0.1 M sodium hydroxide* at 138 kPa for 2 min, with *water R* at 138 kPa for 1 min, with *0.1 M hydrochloric acid* at 138 kPa for 3 min and with the electrolyte solution at 138 kPa for 10 min.

Injection Test solutions (a) and (b), reference solutions (b) and (c) and the electrolyte solution (blank): under pressure (3.45 kPa) for 5 s.

Migration Apply a voltage of 20 kV.

Run time 45 min.

Relative migration With reference to the internal standard (about 14 min): impurity A = about 0.77; impurity B = about 1.04; impurity E = about 1.2; impurity C = about 1.26; impurity D = about 1.3.

System suitability:

— *resolution*: minimum 1.5 between the peaks due to the internal standard and impurity B in the chromatogram obtained with reference solution (c); if necessary, increase the pH with *dilute sodium hydroxide solution R*;

— *peak-to-valley ratio*: minimum 2.5, where H_p = height above the baseline of the peak due to impurity D and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to glutathione in the chromatogram obtained with reference solution (c); if necessary, lower the pH with *phosphoric acid R;*

— check that in the electropherogram obtained with test solution (a) there is no peak with the same migration time as the internal standard (in such case correct the area of the phenylalanine peak).

Limits Test solution (b):

— *corrected areas*: divide all the peak areas by the corresponding migration times;

— *correction factors*: for the calculation of content, multiply the ratio of time-corrected peak areas of impurity and the internal standard by the corresponding correction factor: impurity B = 3.0; impurity D = 1.4;

— *impurity C:* not more than 1.5 times the ratio of the area of the peak due to glutathione to the area of the peak due to the internal standard in the electropherogram obtained with reference solution (b) (1.5 per cent);

— *impurity* D: not more than the ratio of the area of the peak due to glutathione to the area of the peak due to the internal standard in the electropherogram obtained with reference solution (b) (1.0 per cent);

— *impurities A, B, E*: for each impurity, not more than 0.5 times the ratio of the area of the peak due to glutathione to the area of the peak due to the internal standard in the electropherogram obtained with reference solution (b) (0.5 per cent);

— *any other impurity*: for each impurity, not more than 0.2 times the ratio of the area of the peak due to glutathione to the area of the peak due to the internal standard in the electropherogram obtained with reference solution (b) (0.2 per cent);

— *total*: not more than 2.5 times the ratio of the area of the peak due to glutathione to the area of the peak due to the internal standard in the electropherogram obtained with reference solution (b) (2.5 per cent);

— *disregard limit*: 0.05 times the ratio of the area of the peak due to glutathione to the area of the peak due to the internal standard in the electropherogram obtained with reference solution (b) (0.05 per cent).

Chlorides ***(2.4.4)***

Maximum 200 ppm.

Dilute 2.5 ml of solution S to 15 ml with *water R.*

Sulphates ***(2.4.13)***

Maximum 300 ppm.

Dilute 5 ml of solution S to 15 ml with *distilled water R*.

Ammonium ***(2.4.1, Method B*****)**

Maximum 200 ppm, determined on 50 mg.

Prepare the standard using 0.1 ml of *ammonium standard solution (100 ppm* NH_4*) R.*

Iron ***(2.4.9)***

Maximum 10 ppm.

In a separating funnel, dissolve 1.0 g in 10 ml of *dilute hydrochloric acid R*. Shake with 3 quantities, each of 10 ml, of *methyl isobutyl ketone R1*, shaking for 3 min each time. To the combined organic layers, add 10 ml of *water R* and shake for 3 min. The aqueous layer complies with the test.

Heavy metals ***(2.4.8)***

Maximum 10 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R.*

Loss on drying ***(2.2.32)***

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

In a ground-glass-stoppered flask, dissolve 0.500 g of the substance to be examined and 2 g of *potassium iodide R* in 50 ml of *water R*. Cool the solution in iced water and add 10 ml of *hydrochloric acid R1* and 20.0 ml of *0.05 M iodine*. Stopper the flask and allow to stand in the dark for 15 min. Titrate with *0.1 M sodium thiosulphate* using 1 ml of *starch solution R*, added towards the end of the titration, as indicator. Carry out a blank titration.

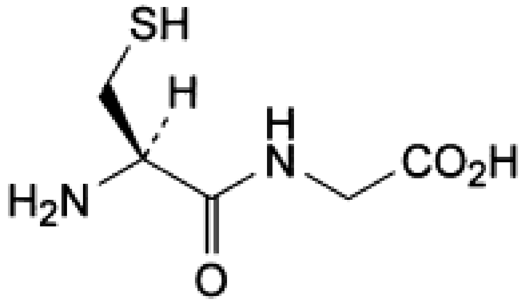
1 ml of *0.05 M iodine* is equivalent to 30.73 mg of $C_{10}H_{17}N_3O_6S$.

STORAGE

Protected from light.

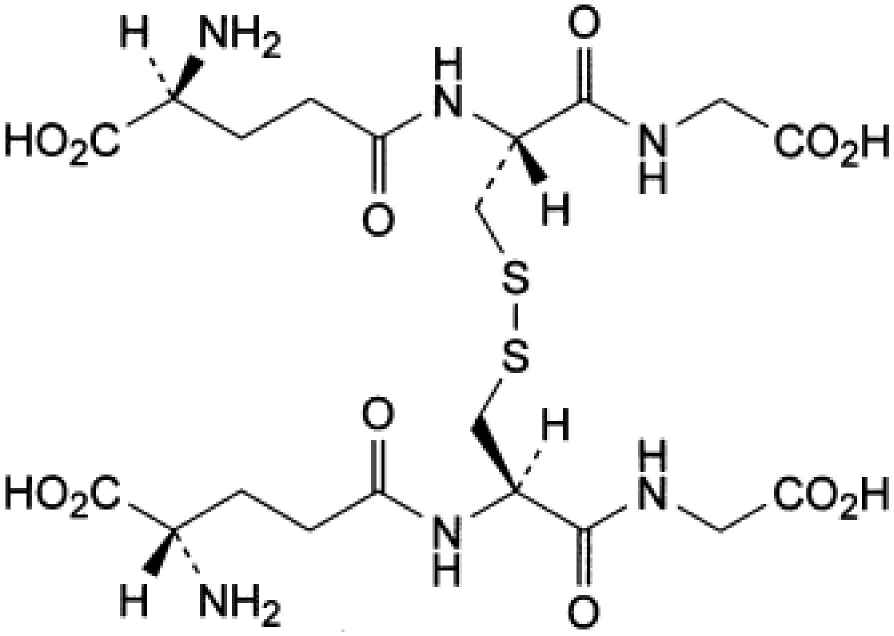
IMPURITIES

Specified impurities *A, B, C, D, E*.

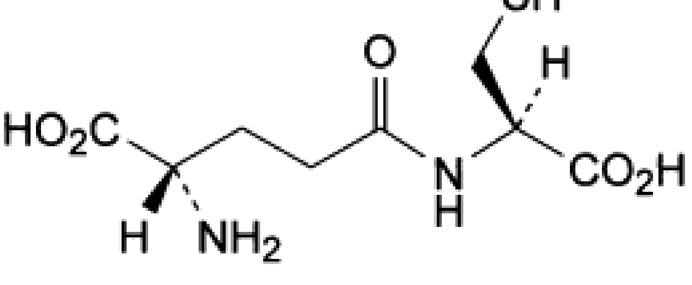


A. L-cysteinylglycine,

B. cysteine,



C. bis(L-γ-glutamyl-L-cysteinylglycine) disulfide (L-glutathione oxidised),



D. L-γ-glutamyl-L-cysteine,

E. unknown structure (product of degradation).

Ph Eur

Glycerol (85 per cent)

General Notices

(Ph Eur monograph 0497)

Ph Eur

DEFINITION

Aqueous solution of propane-1,2,3-triol.

Content

83.5 per cent *m/m* to 88.5 per cent *m/m* of propane-1,2,3-triol ($C_3H_8O_3$; M_r 92.1).

CHARACTERS

Aspect

Syrupy liquid, unctuous to the touch, colourless or almost colourless, clear, very hygroscopic.

Solubility

Miscible with water and with alcohol, slightly soluble in acetone, practically insoluble in fatty oils and in essential oils.

IDENTIFICATION

First identification A, B.

Second identification A, C, D.

A. It complies with the test for refractive index (see Tests).

B. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison Ph. Eur. reference spectrum of glycerol (85 per cent).

C. Mix 1 ml with 0.5 ml of *nitric acid R*. Superimpose 0.5 ml of *potassium dichromate solution R*. A blue ring develops at the interface of the liquids. Within 10 min, the blue colour does not diffuse into the lower layer.

D. Heat 1 ml with 2 g of *potassium hydrogen sulphate R* in an evaporating dish. Vapours (acrolein) are evolved which blacken filter paper impregnated with *alkaline potassium tetraiodomercurate solution R.*

TESTS

Solution S

Dilute 117.6 g to 200.0 ml with *carbon dioxide-free water R*.

Appearance of solution

Solution S is clear *(2.2.1)*. Dilute 10 ml of solution S to 25 ml with *water R*. The solution is colourless *(2.2.2, Method II)*.

Acidity or alkalinity

To 50 ml of solution S add 0.5 ml of *phenolphthalein solution R*. The solution is colourless. Not more than 0.2 ml of *0.1 M sodium hydroxide* is required to change the colour of the indicator to pink.

Refractive index *(2.2.6)*

1.449 to 1.455.

Aldehydes

Maximum 10 ppm.

Place 7.5 ml of solution S in a ground-glass-stoppered flask and add 7.5 ml of *water R* and 1.0 ml of *decolorised pararosaniline solution R*. Close the flask and allow to stand for 1 h at a temperature of 25 ± 1 °C. The absorbance *(2.2.25)* of the solution measured at 552 nm is not greater than that of a standard prepared at the same time and in the same manner using 7.5 ml of *formaldehyde standard solution (5 ppm CH_2O) R* and 7.5 ml of *water R*. The test is not valid unless the standard is pink.

Esters

Add 10.0 ml of *0.1 M sodium hydroxide* to the final solution obtained in the test for acidity or alkalinity. Boil under a reflux condenser for 5 min. Cool. Add 0.5 ml of *phenolphthalein solution R* and titrate with *0.1 M hydrochloric acid*. Not less than 8.0 ml of *0.1 M hydrochloric acid* is required to change the colour of the indicator.

Impurity A and related substances

Gas chromatography *(2.2.28)*.

Test solution Dilute 10.0 ml of solution S to 100.0 ml with *water R*.

Reference solution (a) Dilute 11.8 g of *glycerol (85 per cent) R1* to 20.0 ml with *water R*. Dilute 10.0 ml of the solution to 100.0 ml with water R.

Reference solution (b) Dissolve 1.000 g of *diethylene glycol R* in *water R* and dilute to 100.0 ml with the same solvent.

Reference solution (c) Dilute 1.0 ml of reference solution (b) to 10.0 ml with reference solution (a). Dilute 1.0 ml of this solution to 20.0 ml with reference solution (a).

Reference solution (d) Mix 1.0 ml of the test solution and 5.0 ml of reference solution (b) and dilute to 100.0 ml with *water R*. Dilute 1.0 ml of this solution to 10.0 ml with *water R*.

Reference solution (e) Dilute 5.0 ml of reference solution (b) to 100.0 ml with *water R*.

Column:

- *size:* l = 30 m, Ø = 0.53 mm,
- *stationary phase*: 6 per cent polycyanolpropylphenyl siloxane and 94 per cent of polydimethylsiloxane.

Carrier gas *helium for chromatography R*.

Split ratio 1:10.

Linear velocity 38 cm/s.

Temperature:

	Time (min)	Temperature (°C)
Column	0	100
	0 - 16	100 → 220
	16 - 20	220
Injection port		220
Detector		250

Detection Flame ionisation.

Injection 0.5 µl.

Elution order Impurity A, glycerol.

System suitability Reference solution (d):

— *resolution*: minimum 7.0 between the peaks due to impurity A and glycerol.

Limits:

— *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.1 per cent),

— *any other impurity with a retention time less than the retention time of glycerol*: not more than the area of the peak due to impurity A in the chromatogram obtained with reference solution (c) (0.1 per cent),

— *total of all impurities with retention times greater than the retention time of glycerol*: not more than 5 times the area of the peak due to impurity A in the chromatogram obtained with reference solution (c) (0.5 per cent),

— *disregard limit*: 0.05 times the area of the peak due to impurity A in the chromatogram obtained with reference solution (e) (0.05 per cent).

Halogenated compounds

Maximum 30 ppm.

To 10 ml of solution S add 1 ml of *dilute sodium hydroxide solution R*, 5 ml of *water R* and 50 mg of *halogen-free nickel-aluminium alloy R*. Heat on a water-bath for 10 min, allow to cool and filter. Rinse the flask and the filter with *water R* until 25 ml of filtrate is obtained. To 5 ml of the filtrate add 4 ml of *alcohol R*, 2.5 ml of *water R*, 0.5 ml of *nitric acid R* and 0.05 ml of *silver nitrate solution R2* and mix. Allow to stand for 2 min. Any opalescence in the solution is not more intense than that in a standard prepared at the same time by mixing 7.0 ml of *chloride standard solution (5 ppm Cl) R*, 4 ml of *alcohol R*, 0.5 ml of *water R*, 0.5 ml of *nitric acid R* and 0.05 ml of *silver nitrate solution R2*.

Sugars

To 10 ml of solution S add 1 ml of *dilute sulphuric acid R* and heat on a water-bath for 5 min. Add 3 ml of *carbonate-free dilute sodium hydroxide solution R* (prepared by the method described for carbonate-free *1 M sodium hydroxide (4.2.2)*), mix and add dropwise 1 ml of freshly prepared *copper sulphate solution R*. The solution is clear and blue. Continue heating on the water-bath for 5 min. The solution remains blue and no precipitate is formed.

Chlorides ***(2.4.4)***

Maximum 10 ppm.

1 ml of solution S diluted to 15 ml with *water R* complies with the limit test for chlorides. Prepare the standard using 1 ml of *chloride standard solution (5 ppm Cl) R* diluted to 15 ml with *water R*.

Heavy metals ***(2.4.8)***

Maximum 5 ppm.

Dilute 8 ml of solution S to 20 ml with *water R*. 12 ml of the solution complies with limit test A. Prepare the standard using *lead standard solution (1 ppm Pb) R*.

Water ***(2.5.12)***

12.0 per cent to 16.0 per cent, determined on 0.200 g.

Sulphated ash ***(2.4.14)***

Maximum 0.01 per cent, determined on 5.0 g after heating to boiling and ignition.

ASSAY

Thoroughly mix 0.075 g with 45 ml of *water R*. Add 25.0 ml of a mixture of 1 volume of *0.1 M sulphuric acid* and 20 volumes of *0.1 M sodium periodate*. Allow to stand protected from light for 15 min. Add 5.0 ml of a 500 g/l solution of *ethylene glycol R* and allow to stand protected from light for 20 min. Using 0.5 ml of *phenolphthalein solution R* as indicator, titrate with *0.1 M sodium hydroxide*. Carry out a blank titration.

1 ml of *0.1 M sodium hydroxide* is equivalent to 9.21 mg of $C_3H_8O_3$.

STORAGE

In an airtight container .

IMPURITIES

A. 2,2′-oxydiethanol (diethylene glycol),

B. ethane-1,2-diol (ethylene glycol),

C. propylene glycol.

Ph Eur

Glycerol Dibehenate

General Notices

(Ph Eur monograph 1427)

Action and use

Excipient.

Ph Eur

DEFINITION

Mixture of diacylglycerols, mainly dibehenylglycerol, together with variable quantities of mono- and triacylglycerols, obtained by esterification of *glycerol (0496)* with behenic (docosanoic) acid.

Content:

— *monoacylglycerols*: 15.0 per cent to 23.0 per cent,

— *diacylglycerols*: 40.0 per cent to 60.0 per cent,

— *triacylglycerols*: 21.0 per cent to 35.0 per cent.

CHARACTERS

Appearance

Hard, waxy mass or powder or white or almost white, unctuous flakes.

Solubility

Practically insoluble in water, soluble in methylene chloride, partly soluble in hot ethanol (96 per cent).

IDENTIFICATION

A. Melting point *(2.2.14)*: 65 °C to 77 °C.

B. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 1.0 g of the substance to be examined in *toluene R* with gentle heating and dilute to 20 ml with the same solvent.

Reference solution Dissolve 1.0 g of *glycerol dibehenate CRS* in *toluene R* with gentle heating and dilute to 20 ml with the same solvent.

Plate TLC silica gel plate R.

Mobile phase hexane R, *ether R* (30:70 *V/V*).

Application 10 µl.

Development Over a path of 15 cm.

Drying In air.

Detection Spray with a 0.1 g/l solution of *rhodamine B R* in *ethanol (96 per cent) R*; examine in ultraviolet light at 365 nm.

Results The spots in the chromatogram obtained with the test solution are similar in position to the spots in the chromatogram obtained with the reference solution.

C. Composition of fatty acids (see Tests).

TESTS

Acid value *(2.5.1)*

Maximum 4.0, determined on 1.0 g, using a mixture of equal volumes of *ethanol (96 per cent) R* and *toluene R* as solvent and with gentle heating.

Iodine value *(2.5.4, Method A)*

Maximum 3.0.

Saponification value *(2.5.6)*

145 to 165.

Carry out the titration with heating.

Free glycerol

Maximum 1.0 per cent, determined as described under Assay.

Composition of fatty acids *(2.4.22, Method C)*

Raise the temperature of the column to 240 °C and use the mixture of calibrating substances in Table 2.4.22.-3.

Composition of the fatty acid fraction of the substance:

- *palmitic acid*: maximum 3.0 per cent;
- *stearic acid*: maximum 5.0 per cent;
- *arachidic acid*: maximum 10.0 per cent;
- *behenic acid*: minimum 83.0 per cent;
- *erucic acid*: maximum 3.0 per cent;
- *lignoceric acid*: maximum 3.0 per cent.

Nickel *(2.4.31)*

Maximum 1 ppm.

Water *(2.5.12)*

Maximum 1.0 per cent, determined on 1.00 g. Use *pyridine R* as the solvent.

Total ash *(2.4.16)*

Maximum 0.1 per cent, determined on 1.00 g.

ASSAY

Size-exclusion chromatography *(2.2.30)*.

Stock solution Place 0.100 g of *glycerol R* in a flask and dilute to 25.0 ml with *tetrahydrofuran R.*

Test solution In a 15 ml flask, weigh 0.2 g (*m*) of the substance to be examined. Add 5.0 ml of *tetrahydrofuran R* and shake to dissolve. Heat gently, at about 35 °C. Reweigh the flask and calculate the total mass of solvent and substance (*M*).

Reference solutions Into four 15 ml flasks, introduce respectively 0.25 ml, 0.5 ml, 1.0 ml and 2.5 ml of the stock solution and add 5.0 ml of *tetrahydrofuran R*. Weigh each flask and calculate the concentration of glycerol in milligrams per gram of each reference solution.

Column:

- *size: l* = 0.6 m, Ø = 7 mm;
- *stationary phase*: *styrene-divinylbenzene copolymer R* (5 µm) with a pore size of 10 nm.

Mobile phase *tetrahydrofuran R*.

Flow rate 1 ml/min.

Detection Differential refractive index.

Injection 40 µl; when injecting the test solution, maintain the flask at about 35 °C to avoid precipitation.

Relative retention With reference to glycerol (retention time = about 15 min): triacylglycerols = about 0.73; diacylglycerols = about 0.76; monoacylglycerols = about 0.82.

Calculations:

- *free glycerol*: from the calibration curve obtained with the reference solutions, determine the concentration (*C*) in milligrams per gram in the test solution and calculate the percentage content in the substance to be examined using the following expression:

$$\frac{C \times M}{m \times 10}$$

- *monoacylglycerols*: calculate the percentage content of monoacylglycerols using the following expression:

$$A - D$$

A = percentage content of monoacylglycerols determined by the normalisation procedure,

D = percentage content of free fatty acids.

Calculate the percentage content of free fatty acids using the following expression:

$$\frac{I_A \times 340}{561.1}$$

I_A = acid value.

— *diacylglycerols, triacylglycerols*: determine the percentage content of each by the normalisation procedure.

Ph Eur

Glycerol Monocaprylate

General Notices

(Ph Eur monograph 2213)

Ph Eur

DEFINITION

Mixture of monoacylglycerols, mainly mono-*O*-octanoylglycerol, containing variable quantities of di- and triacylglycerols, obtained by direct esterification of glycerol with caprylic (octanoic) acid, followed by a distillation step in the case of glycerol monocaprylate (type II).

Content:

— *glycerol monocaprylate (type I)*:
  — *monoacylglycerols*: 45.0 per cent to 75.0 per cent;
  — *diacylglycerols*: 20.0 per cent to 50.0 per cent;
  — *triacylglycerols*: maximum 10.0 per cent;

— *glycerol monocaprylate (type II)*:
  — *monoacylglycerols*: minimum 80.0 per cent;
  — *diacylglycerols*: maximum 20.0 per cent;
  — *triacylglycerols*: maximum 5.0 per cent.

CHARACTERS

Appearance

Colourless or slightly yellow, oily liquid or soft mass.

Solubility

Practically insoluble in water, very soluble in ethanol (96 per cent) and freely soluble in methylene chloride.

IDENTIFICATION

A. Composition of fatty acids (see Tests).

B. It complies with the limits of the assay (monoacylglycerols).

TESTS

Acid value *(2.5.1)*

Maximum 3.0.

Composition of fatty acids *(2.4.22, Method C)*

Use the mixture of calibrating substances in Table 2.4.22.-2.

Composition of the fatty acid fraction of the substance:

- — *caproic acid*: maximum 1.0 per cent;
- — *caprylic acid*: minimum 90.0 per cent;
- — *capric acid*: maximum 10.0 per cent;
- — *lauric acid*: maximum 1.0 per cent;
- — *myristic acid*: maximum 0.5 per cent.

Free glycerol

Maximum 3.0 per cent.

Dissolve 1.20 g in 25.0 ml of *methylene chloride R*. Heat to about 50 °C then allow to cool. Add 100 ml of *water R*. Shake and add 25.0 ml of periodic *acetic acid solution R*. Shake again and allow to stand for 30 min. Add 40 ml of a 75 g/l solution of *potassium iodide R* and allow to stand for 1 min. Add 1 ml of *starch solution R*. Titrate with *0.1 M sodium thiosulfate* until the aqueous phase becomes colourless. Carry out a blank titration.

1 ml of *0.1 M sodium thiosulfate* is equivalent to 2.3 mg of glycerol.

Water *(2.5.12)*

Maximum 1.0 per cent, determined on 1.00 g.

Total ash *(2.4.16)*

Maximum 0.5 per cent.

ASSAY

Gas chromatography (2.2.28) Use the normalisation procedure.

Test solution To 0.25 g of the substance to be examined, add 5.0 ml of *tetrahydrofuran R* and shake to dissolve.

Reference solution (a) To 0.25 g of *glycerol monocaprylate CRS*, add 5.0 ml of *tetrahydrofuran R* and shake to dissolve.

Reference solution (b) To 50 mg of *glycerol 1-octanoate R* and 50 mg of *glycerol 1-decanoate R*, add 2.5 ml of *tetrahydrofuran R* and shake to dissolve.

Column:

- — *size: l* = 10 m, Ø = 0.32 mm;
- — *stationary phase: poly(dimethyl)(diphenyl)siloxane R* (film thickness 0.1 µm).

Carrier gas *helium for chromatography R.*

Flow rate 2.3 ml/min.

Split ratio 1:50.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 3	60
	3 - 38	60 → 340
	38 - 50	340
Injection port		350
Detector		370

Detection Flame ionisation.

Injection 1 µl.

Identification of peaks Use the chromatogram supplied with *glycerol monocaprylate CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to mono-, di- and triacylglycerols.

System suitability Reference solution (b):

— *resolution*: minimum 5 between the peaks due to glycerol 1-octanoate and glycerol 1-decanoate.

For the calculation of the contents of mono-, di- and triacylglycerols, disregard the peaks with a retention time less than that of the monoacylglycerols, which are due to impurities of the solvent and to the free fatty acids.

Calculate the percentage content of free fatty acids (C) using the following expression:

$$\frac{I_A \times 144}{561.1}$$

I_A = acid value of glycerol monocaprylate.

Calculate the content of mono-, di- and triacylglycerols using the following equations:

$$\text{Monoacylglycerols content} = \frac{X \times (100 - A - B - C)}{100}$$

$$\text{Diacylglycerols content} = \frac{Y \times (100 - A - B - C)}{100}$$

$$\text{Triacylglycerols content} = \frac{Z \times (100 - A - B - C)}{100}$$

A = percentage content of free glycerol (see Tests);

B = percentage content of water;

X = monoacylglycerols content obtained by normalisation;

Y = diacylglycerols content obtained by normalisation;

Z = triacylglycerols content obtained by normalisation.

LABELLING

The label states the type of glycerol monocaprylate (type I or II).

Ph Eur

Glycerol Monocaprylocaprate

General Notices

(Ph Eur monograph 2392)

Ph Eur

DEFINITION

Mixture of monoacylglycerols, mainly mono-*O*-octanoylglycerol and mono-*O*-decanoylglycerol, containing variable quantities of di- and triacylglycerols, obtained by direct esterification of glycerol with caprylic (octanoic) and capric (decanoic) acids, followed by a distillation step in the case of glycerol monocaprylocaprate (type II).

Content:

— *glycerol monocaprylocaprate (type I)*:
  — *monoacylglycerols*: 45.0 per cent to 75.0 per cent;
  — *diacylglycerols*: 20.0 per cent to 50.0 per cent;
  — *triacylglycerols*: maximum 10.0 per cent;

— *glycerol monocaprylocaprate (type II)*:
  — *monoacylglycerols*: minimum 80.0 per cent;
  — *diacylglycerols*: maximum 20.0 per cent;
  — *triacylglycerols*: maximum 5.0 per cent.

CHARACTERS

Appearance

Colourless or slightly yellow, oily liquid or soft mass.

The labelling states the type of glycerol monocaprylocaprate (type I or II).

Ph Eur

Glycerol Monolinoleate

General Notices

(Ph Eur monograph 1429)

Action and use

Excipient.

Ph Eur

DEFINITION

Mixture of monoacylglycerols, mainly mono-oleoyl- and monolinoleoylglycerol, together with variable quantities of di- and triacylglycerols, obtained by partial glycerolysis of vegetable oils mainly containing triacylglycerols of linoleic (*cis*,*cis*-9,12-octadecadienoic) acid. A suitable antioxidant may be added.

Content:

- *monoacylglycerols*: 32.0 per cent to 52.0 per cent;
- *diacylglycerols*: 40.0 per cent to 55.0 per cent;
- *triacylglycerols*: 5.0 per cent to 20.0 per cent.

CHARACTERS

Appearance

Amber, oily liquid which may be partially solidified at room temperature.

Solubility

Practically insoluble in water, freely soluble in methylene chloride.

IDENTIFICATION

A. Iodine value (see Tests).

B. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 1.0 g of the substance to be examined in *methylene chloride R* and dilute to 20 ml with the same solvent.

Reference solution Dissolve 1.0 g of *glycerol monolinoleate CRS* in *methylene chloride* R and dilute to 20 ml with the same solvent.

Plate TLC silica gel plate R.

Mobile phase hexane R, *ether R* (30:70 *V/V*).

Application 10 µl.

Development Over a path of 15 cm.

Drying In air.

Detection Spray with a 0.1 g/l solution of *rhodamine B R* in *ethanol (96 per cent) R* and examine in ultraviolet light at 365 nm.

Results The spots in the chromatogram obtained with the test solution are similar in position to those in the chromatogram obtained with the reference solution.

C. Composition of fatty acids (see Tests).

TESTS

Acid value ***(2.5.1)***

Maximum 6.0, determined on 1.0 g.

Iodine value ***(2.5.4, Method A)***

100 to 140.

Peroxide value ***(2.5.5, Method A)***

Maximum 12.0, determined on 2.0 g.

Saponification value ***(2.5.6)***

160 to 180, determined on 2.0 g.

Free glycerol

Maximum 6.0 per cent, determined as described in the assay.

Composition of fatty acids ***(2.4.22, Method C)*****.**

Composition of the fatty acid fraction of the substance:

- — *palmitic acid*: 4.0 per cent to 20.0 per cent;
- — *stearic acid*: maximum 6.0 per cent;
- — *oleic acid*: 10.0 per cent to 35.0 per cent;
- — *linoleic acid*: minimum 50.0 per cent;
- — *linolenic acid*: maximum 2.0 per cent;
- — *arachidic acid*: maximum 1.0 per cent;
- — *eicosenoic acid*: maximum 1.0 per cent.

Water ***(2.5.12)***

Maximum 1.0 per cent, determined on 1.00 g. Use as the solvent a mixture of equal volumes of *anhydrous methanol R* and *methylene chloride R*.

Total ash ***(2.4.16)***

Maximum 0.1 per cent.

ASSAY

Size-exclusion chromatography *(2.2.30)*.

Test solution Into a 15 ml flask, weigh about 0.2 g (*m*), to the nearest 0.1 mg. Add 5 ml of *tetrahydrofuran R* and shake to dissolve. Reweigh the flask and calculate the total mass of solvent and substance (*M*).

Reference solutions Into four 15 ml flasks, respectively weigh, to the nearest 0.1 mg, about 2.5 mg, 5 mg, 10 mg and 20 mg of *glycerol R*. Add 5 ml of *tetrahydrofuran R* and shake until well mixed. Weigh the flasks again and calculate the concentration of glycerol in milligrams per gram for each reference solution.

Column:

— *size:* l = 0.6 m, Ø = 7 mm,

— *stationary phase*: *styrene-divinylbenzene copolymer R* (5 µm) with a pore size of 10 nm.

Mobile phase *tetrahydrofuran R*.

Flow rate 1 ml/min.

Detection Differential refractometer.

Injection 40 µl.

Relative retention With reference to glycerol (retention time = about 15.6 min): triacylglycerols = about 0.76; diacylglycerols = about 0.80; monoacylglycerols = about 0.86.

Calculations:

— *free glycerol* : from the calibration curve obtained with the reference solutions, determine the concentration (*C*) of glycerol in milligrams per gram in the test solution and calculate the percentage content of free glycerol in the substance to be examined using the following expression:

$$\frac{C \times M}{m \times 10}$$

— *mono-, di- and triacylglycerols*: calculate the percentage content of mono-, di- and triacylglycerols using the normalisation procedure.

STORAGE

In an airtight container , protected from light.

Ph Eur

Glycerol Mono-oleate

General Notices

(Ph Eur monograph 1430)

Action and use

Excipient.

Ph Eur

DEFINITION

Mixture of monoacylglycerols, mainly mono-oleoylglycerol, together with variable quantities of di- and triacylglycerols. It is defined by the nominal content of monoacylglycerols and obtained by partial glycerolysis of vegetable oils mainly containing triacylglycerols of oleic (*cis*-9-octadecenoic) acid or by esterification of glycerol by oleic acid, this fatty acid being of vegetable or animal origin. A suitable antioxidant may be added.

Content:

	Nominal content of acylglycerol (per cent)		
	40	60	90
Monoacylglycerols	32.0 - 52.0	55.0 - 65.0	90.0 - 101.0
Diacylglycerols	30.0 - 50.0	15.0 - 35.0	< 10.0
Triacylglycerols	5.0 - 20.0	2.0 - 10.0	< 2.0

CHARACTERS

Appearance

Amber, oily liquid which may be partially solidified at room temperature.

LABELLING

The label states the nominal content of monoacylglycerol.

Ph Eur

Glycerol Monostearate 40-55

General Notices

(Ph Eur monograph 0495)

31566-31-1

Action and use

Excipient.

Ph Eur

DEFINITION

Mixture of monoacylglycerols, mainly monostearoylglycerol, together with variable quantities of di- and triacylglycerols. It is obtained by partial glycerolysis of vegetable oils mainly containing triacylglycerols of palmitic (hexadecanoic) or stearic (octadecanoic) acid or by esterification of glycerol with stearic acid. The fatty acids may be of vegetable or animal origin.

Content:

— *monoacylglycerols*: 40.0 per cent to 55.0 per cent;

— *diacylglycerols*: 30.0 per cent to 45.0 per cent;

— *triacylglycerols*: 5.0 per cent to 15.0 per cent.

CHARACTERS

Appearance

Hard, waxy mass or unctuous powder or flakes, white or almost white.

Solubility

Practically insoluble in water, soluble in ethanol (96 per cent) at 60 °C.

IDENTIFICATION

First identification *C, D*.

Second identification *A, B*.

A. Melting point *(2.2.15)*: 54 °C to 66 °C.

Introduce the melted substance into the capillary tubes and allow to stand for 24 h in a well-closed container.

B. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 0.5 g of the substance to be examined in *methylene chloride R*, with gentle heating, and dilute to 10 ml with the same solvent.

Reference solution Dissolve 0.5 g of *glycerol monostearate 40-55 CRS* in *methylene chloride R*, with gentle heating, and dilute to 10 ml with the same solvent.

Plate *TLC silica gel plate R*.

Mobile phase *hexane R, ether R* (30:70 *V/V*).

Application 10 µl.

Development Over a path of 15 cm.

Detection Spray with a 0.1 g/l solution of *rhodamine B R* in *ethanol (96 per cent) R* and examine in ultraviolet light at 365 nm.

Suitability system Reference solution:

— the chromatogram shows 4 clearly separated spots.

Results The spots in the chromatogram obtained with the test solution are similar in position to those in the chromatogram obtained with the reference solution.

C. Composition of fatty acids (see Tests) according to the type stated on the label.

D. It complies with the limits of the assay (monoacylglycerol content).

TESTS

Acid value *(2.5.1)*

Maximum 3.0, determined on 1.0 g.

Use a mixture of equal volumes of *ethanol (96 per cent) R* and *toluene R* as solvent and heat gently.

Iodine value *(2.5.4, Method A)*

Maximum 3.0.

Saponification value *(2.5.6)*

158 to 177, determined on 2.0 g. Carry out the titration with heating.

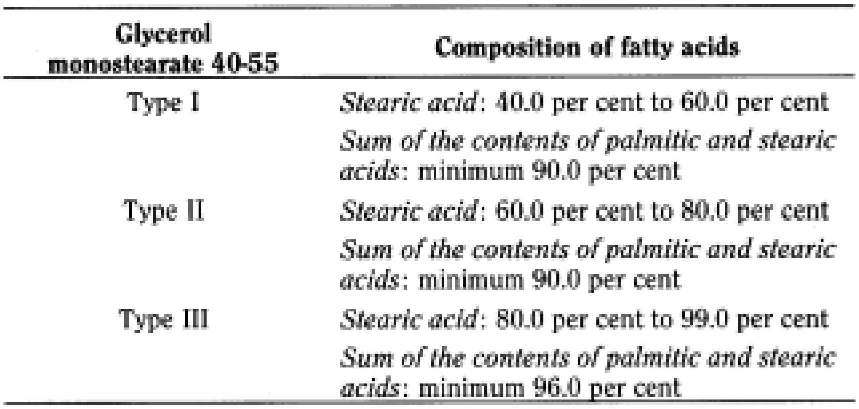
Free glycerol

Maximum 6.0 per cent, determined as described under Assay.

Composition of fatty acids *(2.4.22, Method C)*

Use the mixture of calibrating substances in Table 2.4.22.-1.

Composition of the fatty-acid fraction of the substance:



Glycerol monostearate 40-55	Composition of fatty acids
Type I	*Stearic acid*: 40.0 per cent to 60.0 per cent *Sum of the contents of palmitic and stearic acids*: minimum 90.0 per cent
Type II	*Stearic acid*: 60.0 per cent to 80.0 per cent *Sum of the contents of palmitic and stearic acids*: minimum 90.0 per cent
Type III	*Stearic acid*: 80.0 per cent to 99.0 per cent *Sum of the contents of palmitic and stearic acids*: minimum 96.0 per cent

Nickel ***(2.4.31)***

Maximum 1 ppm.

Water ***(2.5.12)***

Maximum 1.0 per cent, determined on 1.00 g. Use *pyridine R* as the solvent and heat gently.

Total ash ***(2.4.16)***

Maximum 0.1 per cent.

ASSAY

Size-exclusion chromatography *(2.2.30)*.

Test solution Into a 15 ml flask, weigh 0.200 g (*m*). Add 5.0 ml of *tetrahydrofuran R* and shake to dissolve. Reweigh the flask and calculate the total mass of solvent and substance (*M*).

Reference solutions Into four 15 ml flasks, respectively weigh 2.5 mg, 5.0 mg, 10.0 mg and 20.0 mg of *glycerol R*, and add 5.0 ml of *tetrahydrofuran R* to each flask. Weigh the flasks again and calculate the concentration of glycerol in milligrams per gram for each reference solution.

Column:
- — *size*: l = 0.6 m, Ø = 7 mm;
- — *stationary phase*: *styrene-divinylbenzene copolymer R* (5 µm) with a pore size of 10 nm.

Mobile phase *tetrahydrofuran R*.

Flow rate 1 ml/min.

Detection Differential refractometer.

Injection 40 µl.

Relative retention With reference to glycerol (retention time = about 15 min): triacylglycerols = about 0.75; diacylglycerols = about 0.80; monoacylglycerols = about 0.85.

Calculations:
- — *free glycerol*: from the calibration curve obtained with the reference solutions, determine the concentration (*C*) in milligrams per gram in the test solution and calculate the percentage content in the substance to be examined using the following expression:

$$\frac{C \times M}{m \times 10}$$

— *mono-, di- and triacylglycerols*: calculate the percentage contents by the normalisation procedure.

The label states the type of glycerol monostearate 40-55.

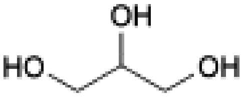
Ph Eur

Glycerol

General Notices

Glycerin

(Ph Eur monograph 0496)



$C_3H_8O_3$ 92.1 *56-81-5*

Action and use

Lubricant; laxative.

Preparations

Glycerol Eye Drops

Glycerol Suppositories

Ph Eur

DEFINITION

Propane-1,2,3-triol.

Content

98.0 per cent *m/m* to 101.0 per cent *m/m* (anhydrous substance).

CHARACTERS

Aspect

Syrupy liquid, unctuous to the touch, colourless or almost colourless, clear, very hygroscopic.

Solubility

Miscible with water and with alcohol, slightly soluble in acetone, practically insoluble in fatty oils and in essential oils.

IDENTIFICATION

First identification *A, B.*

Second identification *A, C, D.*

A. It complies with the test for refractive index (see Tests).

B. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation To 5 ml add 1 ml of *water R* and mix carefully.

Comparison Ph. Eur. reference spectrum of glycerol (85 per cent).

C. Mix 1 ml with 0.5 ml of *nitric acid R*. Superimpose 0.5 ml of *potassium dichromate solution R.* A blue ring develops at the interface of the liquids. Within 10 min, the blue colour does not diffuse into the lower layer.

D. Heat 1 ml with 2 g of *potassium hydrogen sulphate R* in an evaporating dish. Vapours (acrolein) are evolved which blacken filter paper impregnated with *alkaline potassium tetraiodomercurate solution R*.

TESTS

Solution S

Dilute 100.0 g to 200.0 ml with *carbon dioxide-free water R*.

Appearance of solution

Solution S is clear *(2.2.1)*. Dilute 10 ml of solution S to 25 ml with *water R*. The solution is colourless *(2.2.2, Method II)*.

Acidity or alkalinity

To 50 ml of solution S add 0.5 ml of *phenolphthalein solution R*. The solution is colourless. Not more than 0.2 ml of *0.1 M sodium hydroxide* is required to change the colour of the indicator to pink.

Refractive index *(2.2.6)*

1.470 to 1.475.

Aldehydes

Maximum 10 ppm.

Place 7.5 ml of solution S in a ground-glass-stoppered flask and add 7.5 ml of *water R* and 1.0 ml of *decolorised pararosaniline solution R*. Close the flask and allow to stand for 1 h at a temperature of 25 ± 1 °C. The absorbance *(2.2.25)* of the solution measured at 552 nm is not greater than that of a standard prepared at the same time and in the same manner using 7.5 ml of *formaldehyde standard solution (5 ppm CH_2O) R* and 7.5 ml of *water R*. The test is not valid unless the standard is pink.

Esters

Add 10.0 ml of *0.1 M sodium hydroxide* to the final solution obtained in the test for acidity or alkalinity. Boil under a reflux condenser for 5 min. Cool. Add 0.5 ml of *phenolphthalein solution R* and titrate with *0.1 M hydrochloric acid*. Not less than 8.0 ml of *0.1 M hydrochloric acid* is required to change the colour of the indicator.

Impurity A and related substances

Gas chromatography *(2.2.28)*.

Test solution Dilute 10.0 ml of solution S to 100.0 ml with *water R*.

Reference solution (a) Dilute 10.0 g of *glycerol R1* to 20.0 ml with *water R*. Dilute 10.0 ml of the solution to 100.0 ml with *water R*.

Reference solution (b) Dissolve 1.000 g of *diethylene glycol R* in *water R* and dilute to 100.0 ml with the same solvent.

Reference solution (c) Dilute 1.0 ml of reference solution (b) to 10.0 ml with reference solution (a). Dilute 1.0 ml of this solution to 20.0 ml with reference solution (a).

Reference solution (d) Mix 1.0 ml of the test solution and 5.0 ml of reference solution (b) and dilute to 100.0 ml with *water R*. Dilute 1.0 ml of this solution to 10.0 ml with *water R*.

Reference solution (e) Dilute 5.0 ml of reference solution (b) to 100.0 ml with *water R*.

Column:

— *size: l* = 30 m, Ø = 0.53 mm,

— *stationary phase*: 6 per cent polycyanopropylphenyl siloxane and 94 per cent of polydimethylsiloxane.

Carrier gas *helium for chromatography R*.

Split ratio 1:10.

Linear velocity 38 cm/s.

Temperature:

	Time (min)	Temperature (°C)
Column	0	100
	0 - 16	100 → 220
	16 - 20	220
Injection port		220
Detector		250

Detection Flame ionisation.

Injection 0.5 µl.

Elution order Impurity A, glycerol.

System suitability Reference solution (d):

— *resolution*: minimum 7.0 between the peaks due to impurity A and glycerol.

Limits:

— *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.1 per cent),

— *any other impurity with a retention time less than the retention time of glycerol*: not more than the area of the peak due to impurity A in the chromatogram obtained with reference solution (c) (0.1 per cent),

— *total of all impurities with retention times greater than the retention time of glycerol*: not more than 5 times the area of the peak due to impurity A in the chromatogram obtained with reference solution (c) (0.5 per cent),

— *disregard limit*: 0.05 times the area of the peak due to impurity A in the chromatogram obtained with reference solution (e) (0.05 per cent).

Halogenated compounds

Maximum 35 ppm.

To 10 ml of solution S add 1 ml of *dilute sodium hydroxide solution R*, 5 ml of *water R* and 50 mg of *halogen-free nickel-aluminium alloy R*. Heat on a water-bath for 10 min, allow to cool and filter. Rinse the flask and the filter with *water R* until 25 ml of filtrate is obtained. To 5 ml of the filtrate add 4 ml of *alcohol R*, 2.5 ml of *water R*, 0.5 ml of *nitric acid R* and 0.05 ml of *silver nitrate solution R2* and mix. Allow to stand for 2 min. Any opalescence in the solution is not more intense than that in a standard prepared at the same time by mixing 7.0 ml of *chloride standard solution (5 ppm Cl) R*, 4 ml of *alcohol R*, 0.5 ml of *water R*, 0.5 ml of *nitric acid R* and 0.05 ml of *silver nitrate solution R2*.

Sugars

To 10 ml of solution S add 1 ml of *dilute sulphuric acid R* and heat on a water-bath for 5 min. Add 3 ml of *carbonate-free dilute sodium hydroxide solution R* (prepared by the method described for carbonate-free *1 M sodium hydroxide (4.2.2)*), mix and add dropwise 1 ml of freshly prepared *copper sulphate solution R*. The solution is clear and blue. Continue heating on the water-bath for 5 min. The solution remains blue and no precipitate is formed.

Chlorides *(2.4.4)*

Maximum 10 ppm.

1 ml of solution S diluted to 15 ml with *water R* complies with the limit test for chlorides. Prepare the standard using 1 ml of *chloride standard solution (5 ppm Cl) R* diluted to 15 ml with *water R*.

Heavy metals *(2.4.8)*

Maximum 5 ppm.

Dilute 8 ml of solution S to 20 ml with *water R*. 12 ml of the solution complies with limit test A. Prepare the standard using *lead standard solution (1 ppm Pb) R*.

Water *(2.5.12)*

Maximum 2.0 per cent, determined on 1.000 g.

Sulphated ash *(2.4.14)*

Maximum 0.01 per cent, determined on 5.0 g after heating to boiling and ignition.

ASSAY

Thoroughly mix 0.075 g with 45 ml of *water R*. Add 25.0 ml of a mixture of 1 volume of *0.1 M sulphuric acid* and 20 volumes of *0.1 M sodium periodate*. Allow to stand protected from light for 15 min. Add 5.0 ml of a 500 g/l solution of *ethylene glycol R* and allow to stand protected from light for 20 min. Using 0.5 ml of *phenolphthalein solution R* as indicator, titrate with *0.1 M sodium hydroxide*. Carry out a blank titration.

1 ml of *0.1 M sodium hydroxide* is equivalent to 9.21 mg of $C_3H_8O_3$.

STORAGE

In an airtight container .

IMPURITIES

A. 2,2'-oxydiethanol (diethylene glycol),

B. ethane-1,2-diol (ethylene glycol),

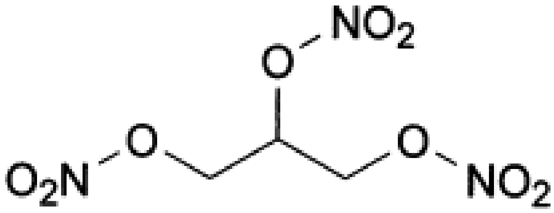
C. propylene glycol.

Ph Eur

Glyceryl Trinitrate Solution

General Notices

(Ph Eur monograph 1331)



$C_3H_5N_3O_9$ 227.1

Action and use

Vasodilator.

Preparations

Glyceryl Trinitrate Sublingual Spray

Glyceryl Trinitrate Tablets

Glyceryl Trinitrate Transdermal Patches

When concentrated glyceryl trinitrate solution is demanded, the intention of the purchaser, with respect to the strength expressed, should be ascertained.

Ph Eur

DEFINITION

Ethanolic solution of glyceryl trinitrate.

Content

1 per cent *m/m* to 10 per cent *m/m* of propane-1,2,3-triyl trinitrate and 96.5 per cent to 102.5 per cent of the declared content of glyceryl trinitrate stated on the label.

CHARACTERS

Appearance

Clear, colourless or slightly yellow solution.

Solubility

Miscible with acetone and with anhydrous ethanol.

Solubility of pure glyceryl trinitrate: practically insoluble in water, freely soluble in anhydrous ethanol, miscible with acetone.

IDENTIFICATION

First identification *A, C.*

Second identification *B, C.*

Upon diluting glyceryl trinitrate solution, care must be taken to always use anhydrous ethanol , otherwise droplets of pure glyceryl trinitrate may precipitate from the solution.

After examination, the residues and the solutions obtained in both the identification and the test sections must be heated on a water-bath for 5 min with dilute sodium hydroxide solution R.

A. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Place 50 µl of a solution diluted, if necessary, with *anhydrous ethanol R*, to contain 10 g/l of glyceryl trinitrate, on a disc of *potassium bromide R* and evaporate the solvent *in vacuo.*

Comparison *Ph. Eur. reference spectrum of glyceryl trinitrate.*

B. Thin-layer chromatography *(2.2.27)*.

Test solution Dilute a quantity of the substance to be examined corresponding to 50 mg of glyceryl trinitrate in *acetone R* and dilute to 100 ml with the same solvent.

Reference solution Dilute 0.05 ml of *glyceryl trinitrate solution CRS* to 1 ml with *acetone R*.

Plate *TLC silica gel G plate R.*

Mobile phase *ethyl acetate R*, *toluene R* (20:80 *V/V*).

Application 5 µl.

Development Over 2/3 of the plate.

Drying In air.

Detection Spray with freshly prepared *potassium iodide and starch solution R;* expose to ultraviolet light at 254 nm for 15 min and examine in daylight.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

C. It complies with the limits of the assay.

TESTS

Upon diluting glyceryl trinitrate solution, care must be taken always to use anhydrous ethanol , otherwise droplets of pure glyceryl trinitrate may precipitate from the solution.

After examination, the residues and the solutions obtained in both the identification and the test sections must be heated on a water-bath for 5 min with dilute sodium hydroxide solution R.

Appearance of solution

If necessary dilute the solution to be examined to a concentration of 10 g/l with *anhydrous ethanol R*. The solution is not more intensely coloured than reference solution Y_7 (*2.2.2, Method II*).

Inorganic nitrates

Thin-layer chromatography *(2.2.27)*.

Test solution If necessary dilute the solution to be examined to a concentration of 10 g/l with *anhydrous ethanol R.*

Reference solution Dissolve 5 mg of *potassium nitrate R* in 1 ml *of water R* and dilute to 100 ml with *ethanol (96 per cent) R.*

Plate TLC silica gel plate R.

Mobile phase glacial acetic acid R, acetone R, *toluene R* (15:30:60 *V/V/V*).

Application 10 µl.

Development Over 2/3 of the plate.

Drying In a current of air until the acetic acid is completely removed.

Detection Spray intensively with freshly prepared *potassium iodide and starch solution R*; expose to ultraviolet light at 254 nm for 15 min and examine in daylight.

Limit:
- *nitrate ion*: any spot due to the nitrate ion in the chromatogram obtained with the test solution is not more intense than the spot in the chromatogram obtained with the reference solution (0.5 per cent of the content of glyceryl trinitrate calculated as potassium nitrate).

Related substances

Liquid chromatography (*2.2.29*).

Test solution Dissolve a quantity of the substance to be examined equivalent to 2 mg of glyceryl trinitrate in the mobile phase and dilute to 20.0 ml with the mobile phase.

Reference solution (a) Dissolve 0.10 g of *glyceryl trinitrate solution CRS* and a quantity of *diluted pentaerythrityl tetranitrate CRS* equivalent to 1.0 mg of pentaerythrityl tetranitrate in the mobile phase and dilute to 100.0 ml with the mobile phase. Sonicate and filter if necessary.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase.

Column:
- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase acetonitrile R, *water R* (50:50 *V/V*).

Flow rate 1 ml/min.

Detection Spectrophotometer at 210 nm.

Injection 20 µl.

Run time 3 times the retention time of the principal peak.

System suitability Reference solution (a):

— *resolution*: minimum 2.0 between the peaks due to glyceryl trinitrate and to pentaerythrityl tetranitrate.

Limits:

— *any impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1 per cent, expressed as glyceryl trinitrate),

— *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (3 per cent, expressed as glyceryl trinitrate),

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent).

ASSAY

Test solution Prepare a solution containing 1.0 mg of glyceryl trinitrate in 250.0 ml of *methanol R.*

Reference solution Dissolve 70.0 mg of *sodium nitrite R* in *methanol R* and dilute to 250.0 ml with the same solvent. Dilute 5.0 ml of the solution to 500.0 ml with *methanol R.*

Into three 50 ml volumetric flasks introduce 10.0 ml of the test solution, 10.0 ml of the reference solution and 10 ml of *methanol R* as a blank. To each flask add 5 ml of *dilute sodium hydroxide solution R*, close the flask, mix and allow to stand at room temperature for 30 min. Add 10 ml of *sulphanilic acid solution R* and 10 ml of *dilute hydrochloric acid R* and mix. After exactly 4 min, add 10 ml of *naphthylethylenediamine dihydrochloride solution R,* dilute to volume with *water R* and mix. After 10 min read the absorbance (*2.2.25*) of the test solution and the reference solution at 540 nm using the blank solution as the compensation liquid.

Calculate the amount of glyceryl trinitrate in milligrams in the test solution using the following expression:

$$\frac{A_T \times m_S \times C}{A_R \times m_T \times 60.8}$$

A_T = absorption of the test solution

m_T = mass of the substance to be examined, in milligrams

C = percentage content of sodium nitrite used as reference

A_R = absorption of the reference solution

m_S = mass of sodium nitrite, in milligrams.

STORAGE

Store the diluted solutions (10 g/l) protected from light, at a temperature of 2 °C to 15 °C.

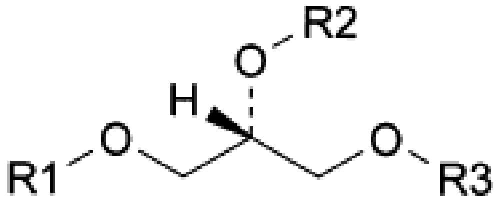
Store more concentrated solutions protected from light, at a temperature of 15 °C to 20 °C.

LABELLING

The label states the declared content of glyceryl trinitrate.

IMPURITIES

A. inorganic nitrates,



and enantiomer

B. $R1 = NO_2$, $R2 = R3 = H$: (2*RS*)-2,3-dihydroxypropyl nitrate,

C. $R1 = R3 = H$, $R2 = NO_2$: 2-hydroxy-1-(hydroxymethyl)ethyl nitrate,

D. $R1 = R2 = NO_2$, $R3 = H$: (2*RS*)-3-hydroxypropane-1,2-diyl dinitrate,

E. $R1 = R3 = NO_2$, $R2 = H$: 2-hydroxypropane-1,3-diyl dinitrate.

Ph Eur

Glycine

General Notices

(Ph Eur monograph 0614)

$C_2H_5NO_2$ 75.1 *56-40-6*

Action and use

Amino acid used for bladder irrigation during surgery.

Preparation

Glycine Irrigation Solution

Ph Eur

DEFINITION

2-Aminoacetic acid.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water, very slightly soluble in ethanol (96 per cent).

It shows polymorphism *(5.9)*.

IDENTIFICATION

First identification A.

Second identification B, C.

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison glycine CRS.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *ethanol (60 per cent V/V) R*, evaporate to dryness and record the spectra again.

B. Examine the chromatograms obtained in the test for ninhydrin-positive substances.

Results The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve 50 mg in 5 ml of *water R*, add 1 ml of *strong sodium hypochlorite solution R* and boil for 2 min. Add 1 ml of *hydrochloric acid R* and boil for 4-5 min. Add 2 ml of *hydrochloric acid R* and 1 ml of a 20 g/l solution of *resorcinol R*, boil for 1 min and cool. Add 10 ml of *water R* and mix. To 5 ml of the solution add 6 ml of *dilute sodium hydroxide solution R*. The solution is violet with greenish-yellow fluorescence. After a few minutes, the colour becomes orange and then yellow and an intense fluorescence remains.

TESTS

Solution S

Dissolve 5.0 g in *carbon dioxide-free water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution Y_7 *(2.2.2, Method II)*.

pH *(2.2.3)*

5.9 to 6.4.

Dilute 10 ml of solution S to 20 ml with *carbon dioxide-free water R*.

Ninhydrin-positive substances

Thin-layer chromatography *(2.2.27)*.

Test solution (a) Dissolve 0.10 g of the substance to be examined in *water R* and dilute to 10.0 ml with the same solvent.

Test solution (b) Dilute 1.0 ml of test solution (a) to 10.0 ml with *water R*.

Reference solution (a) Dissolve 10 mg of *glycine CRS* in *water R* and dilute to 10.0 ml with the same solvent.

Reference solution (b) Dilute 1.0 ml of test solution (a) to 200 ml with *water R*.

Reference solution (c) Dissolve 10 mg of *glycine CRS* and 10 mg of *alanine CRS* in *water R* and dilute to 25 ml with the same solvent.

Plate *cellulose for chromatography R* as the coating substance.

Mobile phase *glacial acetic acid R*, *water R*, *butanol R* (20:20:60 *V/V/V*).

Application 5 µl.

Development Over 2/3 of the plate.

Drying At 80 °C for 30 min.

Detection Spray with *ninhydrin solution R* and dry at 100-105 °C for 15 min.

System suitability The chromatogram obtained with reference solution (c) shows 2 clearly separated spots.

Limits In the chromatogram obtained with test solution (a):

— *any impurity*: any spots, apart from the principal spot, are not more intense than the principal spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

Chlorides ***(2.4.4)***

Maximum 75 ppm.

Dissolve 0.67 g in *water R* and dilute to 15 ml with the same solvent.

Heavy metals ***(2.4.8)***

Maximum 10 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R.*

Loss on drying ***(2.2.32)***

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 70.0 mg in 3 ml of *anhydrous formic acid R* and add 30 ml of *anhydrous acetic acid R*. Immediately after dissolution, titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

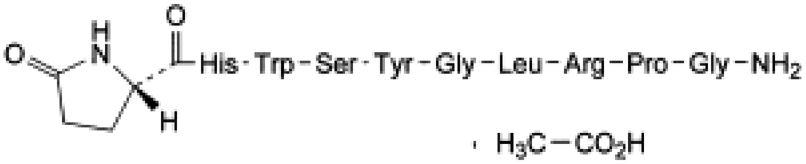
1 ml of *0.1 M perchloric acid* is equivalent to 7.51 mg of $C_2H_5NO_2$.

Ph Eur

Gonadorelin Acetate

General Notices

(Ph Eur monograph 0827)



$C_{55}H_{75}N_{17}O_{13},xC_2H_4O_2$ 1242 *52699-48-6*

Action and use

Gonadotropin-releasing hormone; treatment of prostate cancer.

Preparation

Gonadorelin Injection

Ph Eur

DEFINITION

Gonadorelin acetate is the acetate form of a hypothalamic peptide that stimulates the release of follicle-stimulating hormone and luteinising hormone from the pituitary gland. It contains not less than 95.0 per cent and not more than the equivalent of 102.0 per cent of the peptide $C_{55}H_{75}N_{17}O_{13}$, calculated with reference to the anhydrous, acetic acid-free substance. It is obtained by chemical synthesis.

CHARACTERS

A white or slightly yellowish powder, soluble in water and in a 1 per cent *V/V* solution of glacial acetic acid, sparingly soluble in methanol.

IDENTIFICATION

A. Examine the chromatograms obtained in the assay. The retention time and size of the principal peak in the chromatogram obtained with the test solution are approximately the same as those of the principal peak in the chromatogram obtained with reference solution (a).

B. Examine by thin-layer chromatography *(2.2.27)*, using a *TLC silica gel G plate R*.

Use the test solution and reference solution (a) prepared under Assay.

Apply to the plate 10 µl of each solution. Develop over a path of 15 cm using a mixture of 6 volumes of *glacial acetic acid R*, 14 volumes of *water R*, 45 volumes of *methanol R* and 60 volumes of *methylene chloride R*. Allow the plate to dry in air for 5 min. At the bottom of a chromatography tank, place an evaporating dish containing a mixture of 10 ml of a 50 g/l solution of *potassium permanganate R* and 3 ml of *hydrochloric acid R*, close the tank and allow to stand. Place the dried plate in the tank and close the tank. Leave the plate in contact with the chlorine vapour for 2 min. Withdraw the plate and place it in a current of cold air until the excess of chlorine is removed and an area of coating below the points of application no longer gives a blue colour with 0.05 ml of *potassium iodide and starch solution R*. Spray with *potassium iodide and starch solution R*. The principal spot in the chromatogram obtained with the test solution corresponds in position and size to the principal spot in the chromatogram obtained with reference solution (a).

TESTS

Appearance of solution

A 10 g/l solution is clear *(2.2.1)* and not more intensely coloured than reference solution Y_5 *(2.2.2, Method II)*.

Specific optical rotation

(2.2.7). Dissolve 10.0 mg in 1.0 ml of a 1 per cent *V/V* solution of *glacial acetic acid R*. The specific optical rotation is - 54 to - 66, calculated on the basis of the peptide content as determined in the assay.

Absorbance *(2.2.25)*

Dissolve 10.0 mg in *water R* and dilute to 100.0 ml with the same solvent. The absorbance, determined at the maximum at 278 nm, corrected to a 10 mg/100 ml solution on the basis of the peptide content determined in the assay, is 0.55 to 0.61.

Amino acids

Examine by means of an amino-acid analyser. Standardise the apparatus with a mixture containing equimolar amounts of ammonia, glycine and the L-form of the following amino acids:

lysine
histidine
arginine
aspartic acid
threonine
serine
glutamic acid
proline
alanine
valine
methionine
isoleucine
leucine
tyrosine
phenylalanine

together with half the equimolar amount of L-cystine. For the validation of the method, an appropriate internal standard, such as *DL-norleucine R*, is used.

Test solution Place 1.0 mg of the substance to be examined in a rigorously cleaned hard-glass tube 100 mm long and 6 mm in internal diameter. Add a suitable amount of a 50 per cent *V/V* solution of *hydrochloric acid R*. Immerse the tube in a freezing mixture at - 5 °C, reduce the pressure to below 133 Pa and seal. Heat at 110 °C to 115 °C for 16 h. Cool, open the tube, transfer the contents to a 10 ml flask with the aid of five quantities, each of 0.2 ml, of *water R* and evaporate to dryness over *potassium hydroxide R* under reduced pressure. Take up the residue in *water R* and evaporate to dryness over *potassium hydroxide R* under reduced pressure; repeat these operations once. Take up the residue in a buffer solution suitable for the amino-acid analyser used and dilute to a suitable volume with the same buffer solution. Apply a suitable volume to the amino-acid analyser.

Express the content of each amino acid in moles. Calculate the relative proportions of the amino acids, taking one-eighth of the sum of the number of moles of histidine, glutamic acid, leucine, proline, glycine, tyrosine and arginine as equal to one. The values fall within the following limits: serine 0.7 to 1.05; glutamic acid 0.95 to 1.05; proline 0.95 to 1.05; glycine 1.9 to 2.1; leucine 0.9 to 1.1; tyrosine 0.7 to 1.05; histidine 0.95 to 1.05 and arginine 0.95 to 1.05. Lysine and isoleucine are absent; not more than traces of other amino acids are present, with the exception of tryptophan.

Related substances

Examine by liquid chromatography *(2.2.29)* as described under Assay.

Inject 20 µl of reference solution (b). Adjust the sensitivity of the system so that the height of the principal peak in the chromatogram obtained is at least 50 per cent of the full scale of the recorder.

Inject 20 µl of the test solution. Continue the chromatography for twice the retention time of gonadorelin. In the chromatogram obtained with the test solution: the area of any peak apart from the principal peak, is not greater than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (2 per cent); the sum of the areas of the peaks, apart from the principal peak, is not greater than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (5 per cent). Disregard any peak with an area less than 0.05 times that of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Acetic acid *(2.5.34)*

4.0 per cent to 7.5 per cent.

Test solution Dissolve 10.0 mg of the substance to be examined in a mixture of 5 volumes of mobile phase B and 95 volumes of mobile phase A and dilute to 10.0 ml with the same mixture of solvents.

Water *(2.5.12)*

Not more than 7.0 per cent, determined on 0.200 g by the semi-micro determination of water.

Bacterial endotoxins *(2.6.14)*

Less than 70 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Examine by liquid chromatography *(2.2.29)*.

Test solution Dissolve 5.0 mg of the substance to be examined in *water R* and dilute to 10.0 ml with the same solvent.

Reference solution (a) Dissolve the contents of a vial of *gonadorelin CRS* in *water R* to obtain a concentration of 0.5 mg/ml.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with *water R*.

Reference solution (c) Dissolve 2.5 mg of the substance to be examined in 1 ml of *0.1 M hydrochloric acid* and heat in a water-bath at 65 °C for 4 h. Add 1 ml of *0.1 M sodium* *hydroxide* and dilute to 5.0 ml with *water R*.

The chromatographic procedure may be carried out using:

- — a stainless steel column 0.12 m long and 4.0 mm in internal diameter packed with *octadecylsilyl silica gel for chromatography R* (5 µm),
- — as mobile phase at a flow rate of 1.5 ml/min a mixture of 13 volumes of *acetonitrile R* and 87 volumes of a 1.18 per cent *V/V* solution of *phosphoric acid R* (adjusted to pH 2.3 with *triethylamine R*),
- — as detector a spectrophotometer set at 215 nm.

Inject 20 µl of reference solution (c). The test is not valid unless the resolution between the first and second peaks is at least 2.0.

Inject 20 µl of the test solution and 20 µl of reference solution (a).

Calculate the content of gonadorelin ($C_{55}H_{75}N_{17}O_{13}$) from the peak areas in the chromatograms obtained with the test solution and reference solution (a) and the declared content of $C_{55}H_{75}N_{17}O_{13}$ in *gonadorelin CRS* .

STORAGE

Store in an airtight container , protected from light at a temperature of 2 °C to 8 °C. If the substance is sterile, store in a sterile, airtight, tamper-proof container .

LABELLING

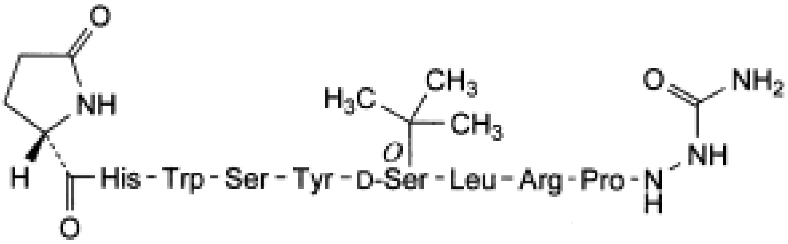
The label states the mass of peptide in the container.

Ph Eur

Goserelin

General Notices

(Ph Eur monograph 1636)



$C_{59}H_{84}N_{18}O_{14}$ 1269 *65807-02-5*

Action and use

Gonadotropin-releasing hormone, gonadorelin analogue; treatment of prostate cancer.

Ph Eur

DEFINITION

1-Carbamoyl-2-[5-oxo-L-prolyl-L-histidyl-L-tryptophyl-L-seryl-L-tyrosyl-*C*-(1,1-dimethylethyl)-D-seryl-L-leucyl-L-arginyl-L-prolyl]diazane.

Synthetic nonapeptide analogue of the hypothalamic decapeptide, gonadorelin. It is obtained by chemical synthesis and is available as an acetate.

Content

94.5 per cent to 103.0 per cent of the peptide $C_{59}H_{84}N_{18}O_{14}$ (anhydrous and acetic-acid free substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Soluble in water, freely soluble in glacial acetic acid. It dissolves in dilute solutions of mineral acids and alkali hydroxides.

IDENTIFICATION

A. Nuclear magnetic resonance spectrometry *(2.2.33)*.

Preparation 40 mg/ml solution of the substance to be examined in *deuterium oxide R* adjusted to pH 4.0 with *deuterated acetic acid R*.

Results The ^{13}C, proton decoupled NMR spectrum obtained is qualitatively similar to the *Ph. Eur. reference spectrum of goserelin.*

B. Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

C. Amino acid analysis *(2.2.56)*. For protein hydrolysis use Method 1 and for analysis use Method 1.

Express the content of each amino acid in moles. Calculate the relative proportions of the amino acids taking one sixth of the sum of the number of moles of glutamic acid, histidine, tyrosine, leucine, arginine, proline as equal to 1. The values fall within the following limits: glutamic acid, histidine, tyrosine, leucine, arginine and proline 0.9 to 1.1; serine 1.6 to 2.2. Not more than traces of other amino acids are present, with the exception of tryptophan.

TESTS

Specific optical rotation *(2.2.7)*

- 52 to - 56 (anhydrous and acetic-acid free substance).

Dissolve the substance to be examined in *water R* to obtain a concentration of 2 mg/ml.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve the substance to be examined in *water R* to obtain a concentration of 1.0 mg/ml.

Reference solution (a) Dissolve the contents of a vial of *goserelin CRS* in *water R* to obtain a concentration of 1.0 mg/ml.

Reference solution (b) Dilute 1.0 ml of the test solution to 100 ml with *water R*.

Reference solution (c) Dilute 1.0 ml of the test solution to 10.0 ml with *water R*.

Resolution solution (a) Dissolve the contents of a vial of *4-D-Ser-goserelin CRS* in *water R* to obtain a concentration of 0.1 mg/ml. Mix equal volumes of this solution and of reference solution (c).

Resolution solution (b) Dissolve the contents of a vial of *goserelin validation mixture CRS* with 1.0 ml of *water R*.

Column:

— *size:* l = 0.15 m, Ø = 4.6 mm,

— *stationary phase*: *octadecylsilyl amorphous organosilica polymer R* (3.5 µm) with a pore size of 12.5 nm,

— *temperature*: 50-55 °C.

Mobile phase *trifluoroacetic acid R*, *acetonitrile for chromatography R*, *water R* (0.5:200:800 *V/V/V*).

Flow rate 0.7-1.2 ml/min.

Detection Spectrophotometer at 220 nm.

Injection 10 µl of the test solution, reference solution (b) and the resolution solutions.

Run time 90 min.

Relative retention With reference to goserelin: impurity A = about 0.67; impurity C = about 0.78; impurity B = about 0.79; impurity D = about 0.85; impurity E = about 0.89; impurity F = about 0.92; impurity G = about 0.94; impurity H = about 0.98; impurity I = about 1.43; impurity J = about 1.53; impurity K = about 1.67; impurity L = about 1.77.

System suitability:

— *retention time*: goserelin = 40 min to 50 min in the chromatogram obtained with resolution solution (b); adjust the flow rate of the mobile phase if necessary; if adjusting the flow rate does not result in a correct retention time of the principal peak, change the composition of acetonitrile in the mobile phase to obtain the requested retention time for goserelin;

— *resolution*: minimum 7.0 between the peaks due to impurity A and goserelin in the chromatogram obtained with resolution solution (a);

— *symmetry factor*: 0.8 to 2.5 for the peaks due to impurity A and goserelin in the chromatogram obtained with resolution solution (a);

— the chromatogram obtained with resolution solution (b) is similar to the chromatogram supplied with *goserelin validation mixture CRS*. 2 peaks eluting prior to the principal peak and corresponding to impurity E and impurity G, are clearly visible. 3 peaks eluting after the principal peak are clearly visible.

Limits:

— *impurity E*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent),

— *any other impurity*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent),

— *total*: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (2.5 per cent),

— *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Acetic acid ***(2.5.34)***

4.5 per cent to 15.0 per cent.

Action and use

Polypeptide antibacterial.

Ph Eur

DEFINITION

Gramicidin consists of a family of antimicrobial linear polypeptides, usually obtained by extraction from tyrothricin, the complex isolated from the fermentation broth of *Brevibacillus brevis* Dubos. The main component is gramicidin A1, together with gramicidins A2, B1, C1 and C2 in particular.

Content

Minimum 900 IU/mg (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder, slightly hygroscopic.

Solubility

Practically insoluble in water, soluble in methanol, sparingly soluble in alcohol.

mp

About 230 °C.

IDENTIFICATION

First identification *A, C.*

Second identification *A, B.*

A. Dissolve 0.100 g in *alcohol R* and dilute to 100.0 ml with the same solvent. Dilute 5.0 ml of this solution to 100.0 ml with *alcohol R*. Examined between 240 nm and 320 nm *(2.2.25)*, the solution shows 2 absorption maxima, at 282 nm and 290 nm, a shoulder at about 275 nm and an absorption minimum at 247 nm. The specific absorbance at the maximum at 282 nm is 105 to 125.

B. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 5 mg of the substance to be examined in 6.0 ml of *alcohol R*.

Reference solution (a) Dissolve 5 mg of *gramicidin CRS* in 6.0 ml of *alcohol R*.

Reference solution (b) Dissolve 5 mg of *tyrothricin CRS* in 6.0 ml of *alcohol R*.

Plate *TLC silica gel plate R*.

Mobile phase *methanol R*, *butanol R*, *water R*, *glacial acetic acid R*, *butyl acetate R* (3:9:15:24:49 V/V/V/V/V).

Application 1 µl.

Development Over 2/3 of the plate.

Drying In air.

Detection Dip the plate into *dimethylaminobenzaldehyde solution R2*. Heat at 90 °C until the spots appear.

System suitability The chromatogram obtained with reference solution (b) shows 2 clearly separated spots or 2 clearly separated groups of spots.

Results The principal spot or group of principal spots in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot or group of principal spots in the chromatogram obtained with reference solution (a) and to the spot or group of spots with the highest R_F value in the chromatogram obtained with reference solution (b).

C. Examine the chromatograms obtained in the test for composition.

Results The 3 principal peaks in the chromatogram obtained with the test solution are similar in retention time to the 3 principal peaks in the chromatogram obtained with reference solution (a).

TESTS

Composition Liquid chromatography *(2.2.29)*: use the normalisation procedure.

Test solution Dissolve 25 mg of the substance to be examined in 10 ml of *methanol R* and dilute to 25 ml with the mobile phase.

Reference solution (a) Dissolve 25 mg of *gramicidin CRS* in 10 ml of *methanol R* and dilute to 25 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of reference solution (a) to 50.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Column:

— *size:* *l* = 0.25 m, Ø = 4.6 mm,

— *stationary phase*: *base-deactivated end-capped octadecylsilyl silica gel for chromatography R* (5 µm),

— *temperature*: 50 °C.

Mobile phase *water R*, *methanol R* (29:71 *V/V*).

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 282 nm.

Injection 20 µl.

Run time 2.5 times the retention time of gramicidin A1.

Relative retention With reference to gramicidin A1 (retention time = about 22 min): gramicidin C1 = about 0.7; gramicidin C2 = about 0.8; gramicidin A2 = about 1.2; gramicidin B1 = about 1.9.

System suitability Reference solution (a):

— *resolution*: minimum 1.5 between the peaks due to gramicidin A1 and gramicidin A2,

— the chromatogram obtained is concordant with the chromatogram supplied with *gramicidin CRS* .

Composition:

— *sum of the contents of gramicidins A1, A2, B1, C1 and C2*: minimum 95.0 per cent,

— *ratio of the content of gramicidin A1 to the sum of the contents of gramicidins A1, A2, B1, C1 and C2* : minimum 60.0 per cent,

— *disregard limit*: the area of the peak due to gramicidin A1 in the chromatogram obtained with reference solution (b).

Related substances

Liquid chromatography *(2.2.29)* as described in the test for composition.

Limit:

— *any impurity*: maximum 2.0 per cent and not more than 1 peak is more than 1.0 per cent; disregard the peaks due to gramicidins A1, A2, B1, C1 and C2.

Loss on drying ***(2.2.32)***

Maximum 3.0 per cent, determined on 1.000 g by drying over *diphosphorus pentoxide R* at 60 °C at a pressure not exceeding 0.1 kPa for 3 h.

Sulphated ash ***(2.4.14)***

Maximum 1.0 per cent, determined on 1.0 g.

ASSAY

Carry out the microbiological assay of antibiotics *(2.7.2)*, using the turbidimetric method. Use *gramicidin CRS* as the reference substance.

STORAGE

In an airtight container , protected from light.

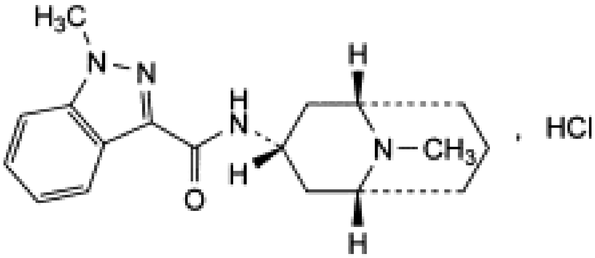
Ph Eur

Granisetron Hydrochloride

General Notices

(Ph Eur monograph 1695)



$C_{18}H_{24}N_4O,HCl$ 348.9 *107007-99-8*

Action and use

Serotonin $5HT_3$ receptor antagonist; treatment of nausea and vomiting.

Ph Eur

DEFINITION

1-Methyl-*N*-[(1*R*,3*r*,5*S*)-9-methyl-9-azabicyclo[3.3.1]non-3-yl]-1*H*-indazole-3-carboxamide hydrochloride.

Content

97.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Freely soluble in water, sparingly soluble in methylene chloride, slightly soluble in methanol.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison granisetron hydrochloride CRS .

B. It gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Solution S

Dissolve 0.2 g in *carbon dioxide-free water R* and dilute to 20 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

pH *(2.2.3)*

4.0 to 6.5 for solution S.

Impurity E

Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 0.25 g of the substance to be examined in a mixture of 20 volumes of *water R* and 80 volumes of *acetonitrile R* and dilute to 5 ml with the same mixture of solvents.

Reference solution Dissolve 5 mg of *granisetron impurity E CRS* in a mixture of 20 volumes of *water R* and 80 volumes of *acetonitrile R* and dilute to 20 ml with the same mixture of solvents.

Plate *TLC silica gel F_{254} plate R.*

Mobile phase *concentrated ammonia R*, *2-propanol R*, *ethyl acetate R* (6.5:30:50 *V/V/V*).

Application 2 µl.

Development Over half of the plate.

Drying In air.

Detection Expose to iodine vapour for 30 min.

Limit:

— *impurity E*: any spot due to impurity E is not more intense than the principal spot in the chromatogram obtained with the reference solution (0.5 per cent).

Related substances

Liquid chromatography *(2.2.29)*. *Carry out the test protected from light.*

Test solution Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 50.0 ml with the mobile phase. Dilute 5.0 ml of this solution to 20.0 ml with the mobile phase.

Reference solution (b) Transfer 2 ml of the test solution to a colourless glass vial, stopper and expose the solution either to sunlight for 4 h or under a UV lamp for 16 h (partial degradation of granisetron to impurity C). A degradation of at least about 0.3 per cent of granisetron to impurity C must be obtained as shown by appearance of a corresponding peak in the chromatogram. If not, expose the solution once again to sunlight or under a UV lamp.

Reference solution (c) Dissolve 50.0 mg of *granisetron hydrochloride CRS* in the mobile phase and dilute to 50.0 ml with the mobile phase.

Reference solution (d) Dissolve the contents of a vial of *granisetron impurity A CRS* in 1 ml of the mobile phase.

Reference solution (e) Dissolve the contents of a vial of *granisetron impurity B CRS* in 1 ml of the mobile phase.

Column:

- *size:* l = 0.25 m, Ø = 4.6 mm,
- *stationary phase*: spherical *base-deactivated end-capped octadecylsilyl silica gel for chromatography R* (5 µm),
- *temperature*: 40 °C.

Mobile phase Dilute 1.6 ml of *phosphoric acid R* to 800 ml with *water R*, add 200 ml of *acetonitrile R* and mix. Add 1.0 ml of *hexylamine R* and mix. Adjust to pH 7.5 ± 0.05 with freshly distilled *triethylamine R* (about 4 ml).

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 305 nm.

Injection 10 µl of the test solution and reference solutions (a), (b), (d) and (e).

Run time Twice the retention time of granisetron.

Relative retention With reference to granisetron (retention time = about 7 min): impurity D = about 0.4; impurity B = about 0.5; impurity A = about 0.7; impurity C = about 0.8.

System suitability:

- *resolution*: minimum 3.5 between the peaks due to impurity C and granisetron in the chromatogram obtained with reference solution (b),
- *symmetry factor*: maximum 2.0 for the peak due to granisetron.

Limits:

- *correction factor*: for the calculation of content, multiply the peak area of impurity B by 1.7,
- *impurity A*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent),
- *impurity B*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent),
- *impurity C*: not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent),
- *impurity D*: not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),
- *any other impurity*: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),
- *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent),
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent); disregard any peak due to the blank.

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modification.

Injection Test solution and reference solution (c).

Calculate the percentage content of $C_{18}H_{25}ClN_4O$ using the declared content of *granisetron hydrochloride CRS* .

IMPURITIES

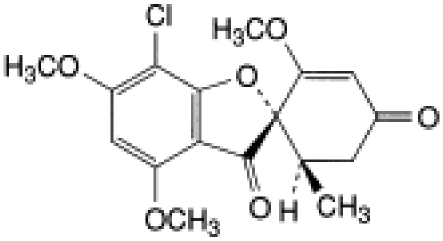
Ph Eur

Griseofulvin

General Notices

(Ph Eur monograph 0182)



$CH_{17}ClO_6$ 352.8   *126-07-8*

Action and use

Antibacterial.

Preparation

Griseofulvin Tablets

Ph Eur

DEFINITION

(1′*S*,3-6′*R*)-7-Chloro-2′,4,6-trimethoxy-6′-methylspiro[benzofuran-2(3*H*),1′-[2]cyclohexene]-3,4′-dione.

Substance produced by the growth of certain strains of *Penicillium griseofulvum* or obtained by any other means.

Content

97.0 per cent to 102.0 per cent (dried substance).

PRODUCTION

The method of manufacture is validated to demonstrate that the product if tested would comply with the following test.

Abnormal toxicity

To each of 5 healthy mice, each weighing 17-22 g, administer orally a suspension of 0.1 g of the substance to be examined in 0.5-1 ml of *water R*. None of the mice dies within 48 h.

CHARACTERS

Appearance

White or yellowish-white, microfine powder , the particles of which generally have a maximum dimension of up to 5 µm, although larger particles that may exceed 30 µm may occasionally be present.

Solubility

Practically insoluble in water, freely soluble in dimethylformamide and in tetrachloroethane, slightly soluble in anhydrous ethanol and in methanol.

mp: about 220 °C.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison griseofulvin CRS .

B. Dissolve about 5 mg in 1 ml of *sulphuric acid R* and add about 5 mg of powdered *potassium dichromate R*. A dark red colour develops.

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution Y_4 *(2.2.2, Method II)*.

Dissolve 0.75 g in *dimethylformamide R* and dilute to 10 ml with the same solvent.

Acidity

Suspend 0.25 g in 20 ml of *ethanol (96 per cent) R* and add *0.1 ml of phenolphthalein solution R*. Not more than 1.0 ml of *0.02 M sodium hydroxide* is required to change the colour of the indicator.

Specific optical rotation *(2.2.7)*

+ 354 to + 364 (dried substance).

Dissolve 0.250 g in *dimethylformamide R* and dilute to 25.0 ml with the same solvent.

Related substances

Gas chromatography *(2.2.28)*.

Internal standard solution Dissolve 0.2 g of *diphenylanthracene R* in *acetone R* and dilute to 100.0 ml with the same solvent.

Test solution (a) Dissolve 0.10 g of the substance to be examined in *acetone R* and dilute to 10.0 ml with the same solvent.

Test solution (b) Dissolve 0.10 g of the substance to be examined in *acetone R*, add 1.0 ml of the internal standard solution and dilute to 10.0 ml with *acetone R*.

Reference solution Dissolve 5.0 mg of *griseofulvin CRS* in *acetone R*, add 1.0 ml of the internal standard solution and dilute to 10.0 ml with *acetone R*.

Column:

- *material*: glass;
- *size: l* = 1 m, Ø = 4 mm;
- *stationary phase*: *diatomaceous earth for gas chromatography R* impregnated with 1 per cent *m/m* of *poly[(cyanopropyl)(methyl)][(phenyl)(methyl)]siloxane R*.

Carrier gas *nitrogen for chromatography R.*

Flow rate 50-60 ml/min.

Temperature:
- *column*: 250 °C;
- *injection* port: 270 °C;
- *detector*: 300 °C.

Detection Flame ionisation.

Run time 3 times the retention time of griseofulvin.

Relative retention With reference to griseofulvin (retention time = about 11 min): dechloro-griseofulvin = about 0.6; dehydrogriseofulvin = about 1.4.

Calculate the ratio (*R*) of the area of the peak due to griseofulvin to the area of the peak due to the internal standard in the chromatogram obtained with the reference solution.

Limits:
- *dechloro-griseofulvin* : calculate the ratio of the area of the peak due to dechloro-griseofulvin to the area of the peak due to the internal standard in the chromatogram obtained with test solution (b): this ratio is not greater than 0.6 *R* (3.0 per cent);
- *dehydrogriseofulvin*: calculate the ratio of the area of the peak due to dehydrogriseofulvin to the area of the peak due to the internal standard in the chromatogram obtained with test solution (b): this ratio is not greater than 0.15 *R* (0.75 per cent).

Substances soluble in light petroleum

Maximum 0.2 per cent.

Shake 1.0 g with 20 ml of *light petroleum R*. Boil under a reflux condenser for 10 min. Cool, filter and wash with 3 quantities, each of 15 ml, of *light petroleum R*. Combine the filtrate and washings, evaporate to dryness on a water-bath and dry at 100-105 °C for 1 h. The residue weighs not more than 2 mg.

Loss on drying *(2.2.32)*

Maximum 1.0 per cent, determined on 1.00 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.2 per cent, determined on 1.0 g.

ASSAY

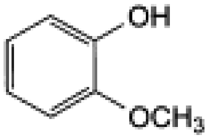
Dissolve 80.0 mg in *anhydrous ethanol R* and dilute to 200.0 ml with the same solvent. Dilute 2.0 ml of this solution to 100.0 ml with *anhydrous ethanol R*. Measure the absorbance *(2.2.25)* at the absorption maximum at 291 nm.

Calculate the content of $C_{17}H_{17}ClO_6$, taking the specific absorbance to be 686.

Guaiacol

General Notices

(Ph Eur monograph 1978)



$C_7H_8O_2$ 124.1 *90-05-1*

Ph Eur

DEFINITION

2-Methoxyphenol.

Content

97.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

Crystalline mass or colourless or yellowish liquid, hygroscopic.

Solubility

Sparingly soluble in water, very soluble in methylene chloride, freely soluble in ethanol (96 per cent).

mp

About 28 °C.

IDENTIFICATION

First identification *A*.

Second identification *B.*

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *guaiacol CRS .*

B. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 0.5 g of the substance to be examined in *methanol R* and dilute to 25

ml with the same solvent.

Reference solution Dissolve 0.5 g of *guaiacol CRS* in *methanol R* and dilute to 25 ml with the same solvent.

Plate *TLC silica gel plate R.*

Mobile phase *anhydrous acetic acid R*, *methanol R*, *toluene R* (6:14:80 *V/V/V*).

Application 5 µl.

Development Over 2/3 of the plate.

Drying In air.

Detection Spray with *ferric chloride solution R1*.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

TESTS

Solution S

Dissolve 1.00 g in *ethanol (96 per cent) R* and dilute to 10.0 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution BY_6 *(2.2.2, Method I)*.

Acidity or alkalinity

To 5.0 ml of solution S, add 10 ml of *carbon dioxide-free water R* and 0.1 ml of *methyl red mixed solution R*. Not more than 0.05 ml of *0.1 M hydrochloric acid* or *0.1 M sodium hydroxide* is required to change the colour of the indicator.

Impurity A

Liquid chromatography *(2.2.29)*.

Solvent mixture *phosphoric acid R*, *water R*, *methanol R* (0.1:49.9:50 *V/V/V*).

Test solution (a) Dissolve 1.0 g of the substance to be examined in the solvent mixture and dilute to 25.0 ml with the solvent mixture.

Test solution (b) Dissolve 0.200 g of the substance to be examined in the solvent mixture and dilute to 100.0 ml with the solvent mixture.

Reference solution (a) Dilute 1.0 ml of test solution (a) to 100.0 ml with the solvent mixture. Dilute 1.0 ml of this solution to 20.0 ml with the solvent mixture.

Reference solution (b) Dissolve 0.200 g of *pyrocatechol R* (impurity A) and 0.200 g of *phenol R* (impurity B) in the solvent mixture and dilute to 100.0 ml with the solvent mixture. Dilute 1.0 ml of this solution to 10.0 ml with the solvent mixture.

Reference solution (c) Dissolve 0.200 g of *guaiacol CRS* in the solvent mixture and dilute to 100.0 ml with the solvent mixture.

Column:

— *size:* *l* = 0.15 m, Ø = 4.6 mm;

— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm);

— *mobile phase*: *phosphoric acid R*, *methanol R*, *water R* (1:150:849 *V/V/V*).

Flow rate 1 ml/min.

Detection Spectrophotometer at 270 nm.

Injection 20 µl of test solution (a) and reference solutions (a) and (b).

Run time 1.5 times the retention time of guaiacol.

Retention time Guaiacol = about 20 min.

System suitability Reference solution (b):

— *resolution*: minimum 5 between the peaks due to impurity A (1st peak) and impurity B (2nd peak).

Limit:

— *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Related substances

Gas chromatography *(2.2.28)*: use the normalisation procedure.

Test solution Dissolve 1.00 g of the substance to be examined in *acetonitrile R* and dilute to 10.0 ml with the same solvent.

Reference solution (a) Dissolve 0.200 g of *phenol R* (impurity B) and 0.400 g of *methyl benzoate R* (impurity E) in *acetonitrile R* and dilute to 50.0 ml with the same solvent. Dilute 1.0 ml of this solution to 20.0 ml with *acetonitrile R*.

Reference solution (b) Dilute 0.5 ml of the test solution to 100.0 ml with *acetonitrile R*. Dilute 1.0 ml of this solution to 10.0 ml with *acetonitrile R*.

Reference solution (c) Dissolve 10 mg of *veratrole R* (impurity C) in *acetonitrile R* and dilute to 10 ml with the same solvent.

Column:

— *material*: fused silica;

— *size:* *l* = 25 m, Ø = 0.53 mm;

— *stationary phase*: *poly(cyanopropyl)(7)(phenyl)(7)(methyl)(86)siloxane R* (film thickness 2 µm).

Carrier gas *helium for chromatography R.*

Flow rate 6 ml/min.

Split ratio 1:5.

Temperature:

	Time (min)	Temperature (°C)

Reference solution (c) Dissolve 50.0 mg of *guaiacol R* in *acetonitrile R* and dilute to 50.0 ml with the same solvent. Dilute 5.0 ml of this solution to 10.0 ml with the test solution.

Column:

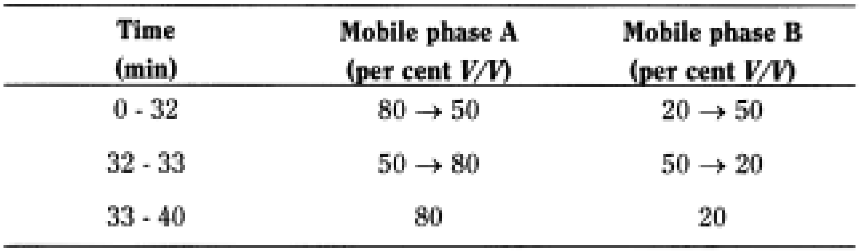
— *size*: *l* = 0.25 m, Ø = 4.6 mm,

— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:

— *mobile phase A*: *glacial acetic acid R*, *water R* (10:990 *V/V*),

— *mobile phase B*: *acetonitrile R*,



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 32	80 → 50	20 → 50
32 - 33	50 → 80	50 → 20
33 - 40	80	20

Flow rate 1 ml/min.

Detection Spectrophotometer at 276 nm.

Injection 10 µl.

Relative retention With reference to guaifenesin (retention time = about 8 min): impurity B = about 0.9; impurity A = about 1.4; impurity C = about 3.1; impurity D = about 3.7.

System suitability Reference solution (c):

— *resolution*: minimum 3.0 between the peaks due to guaifenesin and impurity A.

Limits:

— *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent),

— *impurity B*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent),

— *any other impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent),

— *total (excluding impurity B):* not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent),

— *disregard level*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Chlorides and monochlorhydrins

Maximum of 250 ppm.

To 10 ml of solution S add 2 ml of *dilute sodium hydroxide solution R* and heat on a water-bath for 5 min. Cool and add 3 ml of *dilute nitric acid R*. The resulting solution complies with the limit test for chlorides *(2.4.4)*.

Heavy metals *(2.4.8)*

Maximum of 25 ppm.

Dissolve 2.0 g in a mixture of 1 volume of *water R* and 9 volumes of *alcohol R* and dilute to 25 ml with the same mixture of solvents. 12 ml of the solution complies with limit test B. Prepare the standard using lead standard solution (2 ppm Pb) prepared by diluting *lead standard solution (100 ppm Pb) R* with a mixture of 1 volume of *water R* and 9 volumes of *alcohol R*.

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C for 3 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

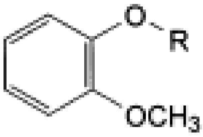
ASSAY

To 0.500 g (*m* g) add 10.0 ml of a freshly prepared mixture of 1 volume of *acetic anhydride R* and 7 volumes of *pyridine R*. Boil under a reflux condenser for 45 min. Cool and add 25 ml of *water R*. Using 0.25 ml of *phenolphthalein solution R* as indicator, titrate with *1 M sodium hydroxide* (n_1 ml). Carry out a blank titration (n_2 ml).

Calculate the percentage content of $C_{10}H_{14}O_4$ from the expression:

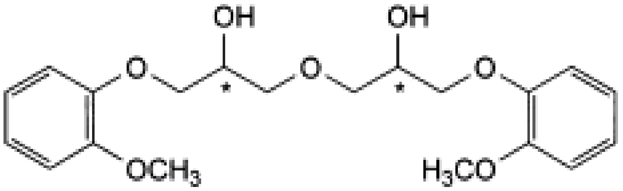
$$\frac{19.82\,(n_2 - n_1)}{2m}$$

IMPURITIES

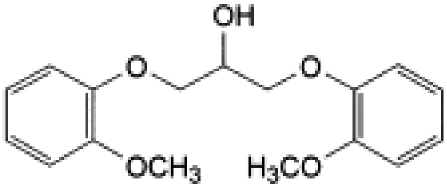


A. R = H: 2-methoxyphenol (guaiacol),

B. R = $CH(CH_2OH)_2$: 2-(2-methoxyphenoxy)propane-1,3-diol (B-isomer),



C. 1,1′-oxybis[3-(2-methoxyphenoxy)propan-2-ol] (bisether),

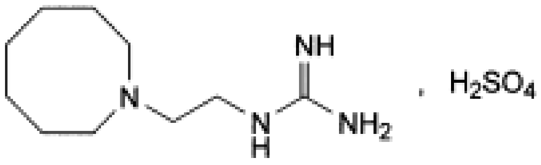


D. 1,3-bis(2-methoxyphenoxy)propan-2-ol.

Guanethidine Monosulphate

General Notices

(Ph Eur monograph 0027)



$C_{10}H_{22}N_4,H_2SO_4$ 296.4 *645-43-2*

Action and use

Adrenergic neuron blocker.

Preparation

Guanethidine Tablets

Ph Eur

DEFINITION

1-[2-(Hexahydroazocin-1(2*H*)-yl)ethyl]guanidine monosulphate.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

Colourless, crystalline powder.

Solubility

Freely soluble in water, practically insoluble in ethanol (96 per cent).

mp: about 250 °C, with decomposition.

IDENTIFICATION

A. Dissolve about 25 mg in 25 ml of *water R*, add 20 ml of *picric acid solution R* and filter. The precipitate, washed with *water R* and dried at 100-105 °C, melts *(2.2.14)* at about 154 °C.

B. Dissolve about 25 mg in 5 ml of *water R*. Add 1 ml of *strong sodium hydroxide solution R*, 1 ml of α-*naphthol solution R* and, dropwise with shaking, 0.5 ml of *strong sodium hypochlorite solution R*. A bright pink precipitate is formed and becomes violet-red on standing.

C. It gives the reactions of sulphates *(2.3.1)*.

TESTS

Solution S

Dissolve 0.4 g in *carbon dioxide-free water R* and dilute to 20 ml with the same solvent.

Appearance of solution

Solution S is not more intensely coloured than reference solution GY_6 *(2.2.2, Method II)*.

pH *(2.2.3)*

4.7 to 5.5 for solution S.

Oxidisable substances

In a conical, ground-glass-stoppered flask, dissolve 1.0 g in 25 ml of *water R* and add 25 ml of *dilute sodium hydroxide solution R*. Allow to stand for 10 min and add 1 g of *potassium bromide R* and 1 ml of *0.0083 M potassium bromate*. Acidify with 30 ml of *dilute hydrochloric acid R*. Mix and allow to stand in the dark for 5 min. Add 2 g of *potassium iodide R* and shake. Allow to stand for 2 min and titrate the liberated iodine with *0.05 M sodium thiosulphate*, using *starch solution R* as indicator. Not less than 0.3 ml of *0.05 M sodium thiosulphate* is required to decolorise the solution.

Heavy metals *(2.4.8)*

Maximum 10 ppm.

2.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.00 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g, warming if necessary, in 30 ml of *anhydrous acetic acid R* and add 15 ml of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 29.64 mg of $C_{10}H_{24}N_4O_4S$.

STORAGE

Protected from light.

Guar Galactomannan

General Notices

(Ph Eur monograph 0908)

Action and use

Excipient.

Ph Eur

DEFINITION

Guar galactomannan is obtained from the seeds of *Cyamopsis tetragonolobus* (L.) Taub. by grinding of the endosperms and subsequent partial hydrolysis. The main components are polysaccharides composed of D-galactose and D-mannose at molecular ratios of 1:1.4 to 1:2. The molecules consist of a linear main chain of β-(1→4)-glycosidically linked mannopyranoses and single α-(1→6)-glycosidically linked galactopyranoses.

CHARACTERS

Appearance

Yellowish-white powder.

Solubility

Soluble in cold water and in hot water, practically insoluble in organic solvents.

IDENTIFICATION

A. Mix 5 g of solution S (see Tests) with 0.5 ml of a 10 g/l solution of *disodium tetraborate R*. A gel forms within a short time.

B. Heat 20 g of solution S in a water-bath for 10 min. Allow to cool and adjust to the original mass with *water R*. The solution does not gel.

C. Thin-layer chromatography *(2.2.27)*.

Test solution To 10 mg of the substance to be examined in a thick-walled centrifuge tube add 2 ml of a 230 g/l solution of *trifluoroacetic acid R*, shake vigorously to dissolve the forming gel, stopper the tube and heat the mixture at 120 °C for 1 h. Centrifuge the hydrolysate, transfer the clear supernatant liquid carefully into a 50 ml flask, add 10 ml of *water R* and evaporate the solution to dryness under reduced pressure. Take up the residue in 10 ml of *water R* and evaporate again to dryness under reduced pressure. To the resulting clear film, which has no odour of acetic acid, add 0.1 ml of *water R* and 1 ml of *methanol R*. Centrifuge to separate the amorphous precipitate. Dilute the supernatant liquid, if necessary, to 1 ml with *methanol R*.

Reference solution Dissolve 10 mg of *galactose R* and 10 mg of *mannose R* in 2 ml of *water R* and dilute to 10 ml with *methanol R*.

Plate *TLC silica gel G plate R.*

Mobile phase *water R, acetonitrile R* (15:85 *V/V*).

Application 5 µl, as bands of 20 mm by 3 mm.

Development Over a path of 15 cm.

Detection Spray with *aminohippuric acid reagent R* and heat at 120 °C for 5 min.

Results The chromatogram obtained with the reference solution shows in the lower part 2 clearly separated brownish zones (galactose and mannose in order of increasing R_F value). The chromatogram obtained with the test solution shows 2 zones due to galactose and mannose.

TESTS

Solution S

Moisten 1.0 g with 2 ml of *2-propanol R*. While stirring, dilute to 100 g with *water R* and stir until the substance is uniformly dispersed. Allow to stand for at least 1 h. If the apparent viscosity is below 200 mPa·s, use 3.0 g of substance instead of 1.0 g.

pH *(2.2.3)*

5.5 to 7.5 for solution S.

Apparent viscosity *(2.2.10)*

75 per cent to 140 per cent of the value stated on the label.

Moisten a quantity of the substance to be examined equivalent to 2.00 g of the dried substance with 2.5 ml of *2-propanol R* and, while stirring, dilute to 100.0 ml with *water R*. After 1 h, determine the viscosity at 20 °C using a rotating viscometer and a shear rate of 100 s^{-1}.

Insoluble matter

Maximum 7.0 per cent.

In a 250 ml flask disperse, while stirring, 1.50 g in a mixture of 1.6 ml of *sulphuric acid R* and 150 ml of *water R* and weigh. Immerse the flask in a water-bath and heat under a reflux condenser for 6 h. Adjust to the original mass with *water R*. Filter the hot solution through a tared, sintered-glass filter (160) *(2.1.2)*. Rinse the filter with hot *water R* and dry at 100-105 °C. The residue weighs a maximum of 105 mg.

Protein

Maximum 5.0 per cent.

Carry out the determination of nitrogen by sulphuric acid digestion *(2.5.9)*, using 0.400 g. Multiply the result by 6.25.

Tragacanth, sterculia gum, agar, alginates and carrageenan

To a small amount of the substance to be examined, add 0.2 ml of freshly prepared *ruthenium red solution R*. Examined under a microscope, none of the structures are red.

Loss on drying *(2.2.32)*

Maximum 15.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 5 h.

Total ash *(2.4.16)*

Maximum 1.8 per cent, determined on 1.00 g after wetting with 10 ml of *water R*.

Microbial contamination

Total viable aerobic count *(2.6.12)* not more than 10^3 micro-organisms per gram, determined by plate count. It complies with the tests for *Escherichia coli* and for *Salmonella (2.6.13)*.

LABELLING

The label states the apparent viscosity in millipascal seconds for a 20 g/l solution.

Ph Eur

Guar

General Notices

(Ph Eur monograph 1218)

Ph Eur

DEFINITION

Guar is obtained by grinding the endosperms of seeds of *Cyamopsis tetragonolobus* (L.) Taub. It consists mainly of guar galactomannan.

CHARACTERS

Appearance

White or almost white powder.

Solubility

It yields a mucilage of variable viscosity when dissolved in water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Examined under a microscope in *glycerol R*, the substance to be examined (125) *(2.9.12)* shows pyriform or ovoid cells, usually isolated, having very thick walls around a central somewhat elongated lumen with granular contents, and smaller polyhedral cells, isolated or in clusters, with thinner walls.

B. In a conical flask place 2 g, add rapidly 45 ml of *water R* and stir vigorously for 30 s. After 5-10 min a stiff gel forms which does not flow when the flask is inverted.

C. Mix a suspension of 0.1 g in 10 ml of *water R* with 1 ml of a 10 g/l solution of *disodium tetraborate R*; the mixture soon gels.

D. Thin-layer chromatography *(2.2.27)*.

Test solution To 10 mg in a thick-walled centrifuge test tube add 2 ml of a 100 g/l solution of *trifluoroacetic acid R*, shake vigorously to dissolve the forming gel, stopper the test tube and heat the mixture at 120 °C for 1 h. Centrifuge the hydrolysate, transfer the clear supernatant liquid carefully into a 50 ml flask, add 10 ml of *water R* and evaporate the solution to dryness under reduced pressure. To the resulting clear film add 0.1 ml of *water R* and 0.9 ml of *methanol R*. Centrifuge to separate the amorphous precipitate. Dilute the supernatant liquid, if necessary, to 1 ml with *methanol R*.

Reference solution Dissolve 10 mg of *galactose R* and 10 mg of *mannose R* in 2 ml of *water R*, then dilute to 20 ml with *methanol R*.

Plate TLC silica gel plate R.

Mobile phase *water R, acetonitrile R* (15:85 *V/V*).

Application 5 µl, as bands.

Development Over a path of 15 cm.

Detection Spray with *aminohippuric acid reagent R* and dry at 120 °C for 5 min.

Results The chromatogram obtained with the reference solution shows, in the lower part 2 clearly separated brownish zones due to galactose and mannose in order of increasing R_F value. The chromatogram obtained with the test solution shows 2 zones due to galactose and mannose.

TESTS

Tragacanth, sterculia gum, agar, alginates, carrageenan

To a small amount of the substance to be examined add 0.2 ml of freshly prepared *ruthenium red solution R*. Examined under a microscope the cell walls do not stain red.

Protein

Maximum 8.0 per cent.

Carry out the determination of nitrogen by the method of sulphuric acid digestion *(2.5.9)* using 0.170 g. Multiply the result by 6.25.

Apparent viscosity *(2.2.10)*

85 per cent to 115 per cent of the value stated on the label.

Moisten a quantity equivalent to 1.00 g of the dried substance with 2.5 ml of *2-propanol R*. While stirring, dilute to 100.0 ml with *water R*. After 1 h, determine the viscosity at 20 °C using a rotating viscometer and a shear rate of 100 s^{-1}.

Loss on drying *(2.2.32)*

Maximum 15.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 5 h.

Total ash *(2.4.16)*

Maximum 1.8 per cent.

Microbial contamination

Total viable aerobic count *(2.6.12)* not more than 10^4 micro-organisms per gram, determined by plate-count. It complies with the tests *Escherichia coli* and for *Salmonella (2.6.13)*.

LABELLING

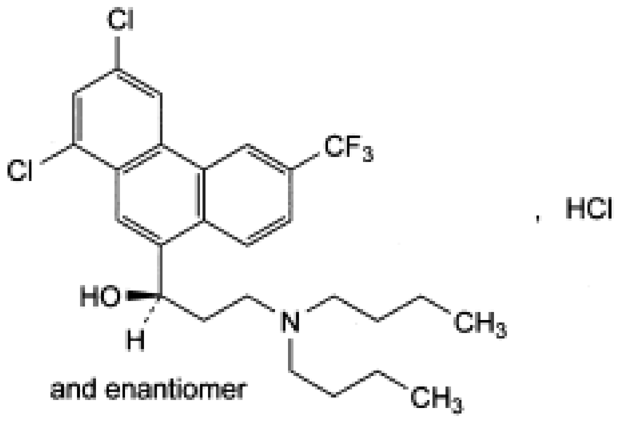
The label states the apparent viscosity in millipascal seconds for a 10 g/l solution.

Ph Eur

Halofantrine Hydrochloride

General Notices

(Ph Eur monograph 1979)



$C_{26}H_{30}Cl_2F_3NO,HCl$ 536.9   *36167-63-2*

Action and use

Antiprotozoal (malaria).

Ph Eur

DEFINITION

(1*RS*)-3-(Dibutylamino)-1-[1,3-dichloro-6-(trifluoromethyl)phenanthren-9-yl]propan-1-ol hydrochloride.

Content

97.5 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water, freely soluble in methanol, sparingly soluble in alcohol.

It shows polymorphism *(5.9)*.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *halofantrine hydrochloride CRS.*

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *methyl ethyl ketone R*, evaporate to dryness and record new spectra using the residues.

B. It gives reaction (b) of chlorides *(2.3.1)*.

TESTS

Optical rotation *(2.2.7)*

- 0.10 ° to + 0.10 °.

Dissolve 1.00 g in *alcohol R* and dilute to 100.0 ml with the same solvent.

Absorbance *(2.2.25)*

Maximum 0.085 at 450 nm.

Dissolve 0.200 g in *methanol R* and dilute to 10.0 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution (a) Dissolve 40.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Test solution (b) Dilute 5.0 ml of test solution (a) to 50.0 ml with the mobile phase.

Reference solution (a) Dissolve 40.0 mg of *halofantrine hydrochloride CRS* in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (b) Dilute 5.0 ml of reference solution (a) to 50.0 ml with the mobile phase.

Reference solution (c) Dilute 1.0 ml of test solution (a) to 100.0 ml with the mobile phase. Dilute 5.0 ml of the solution to 50.0 ml with the mobile phase.

Reference solution (d) Dissolve 10.0 mg of *halofantrine impurity C CRS* in the mobile phase and dilute to 25 ml with the mobile phase. To 5.0 ml of the solution, add 5.0 ml of reference solution (a) and dilute to 50.0 ml with the mobile phase.

Column:

— *size:* l = 0.30 m, Ø = 3.9 mm,

— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (10 µm) of irregular type, with a specific surface of 330 m^2/g, a pore size of 12.5 nm and a carbon loading of 9.8 per cent.

Mobile phase Mix 250 ml of a 2.0 g/l solution of *sodium hydroxide R*, previously adjusted to pH 2.5 with *perchloric acid R* and 750 ml of *acetonitrile R*.

Flow rate 1 ml/min.

Detection Spectrophotometer at 260 nm.

Injection 20 µl; inject the test solution (a) and reference solutions (c) and (d).

Run time 5 times the retention time of halofantrine which is about 6 min.

System suitability:

- *resolution*: minimum 3.3 between the peaks due to halofantrine and impurity C in the chromatogram obtained with reference solution (d).

Limits:

- *any impurity*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent),
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.5 per cent),
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

Heavy metals ***(2.4.8)***

Maximum 20 ppm.

1.0 g complies with limit test C. Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying ***(2.2.32)***

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances.

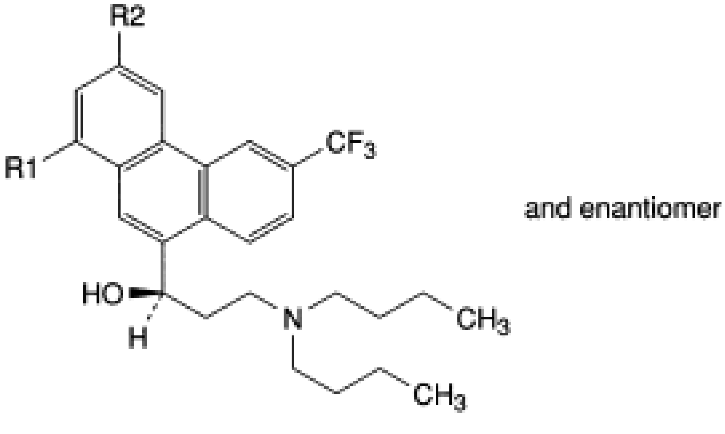
Injection Test solution (b) and reference solution (b).

Calculate the percentage content of halofantrine hydrochloride.

STORAGE

Protected from light.

IMPURITIES



A. R1 = H, R2 = Cl: (1*RS*)-1-[3-chloro-6-(trifluoromethyl)phenanthren-9-yl]-3-(dibutylamino) propan-1-ol (1-dechlorohalofantrine),

B. R1 = Cl, R2 = H: (1*RS*)-1-[1-chloro-6-(trifluoromethyl)phenanthren-9-yl]-3-(dibutylamino) propan-1-ol (3-dechlorohalofantrine),

$C_{153}H_{225}N_{43}O_{49}S$ 3483 *16941-32-5*

Action and use

Hormone; treatment of hypoglycaemia.

Ph Eur

DEFINITION

Polypeptide having the same structure (29 amino acids) as the hormone produced by the α-cells of the human pancreas, which increases the blood-glucose concentration by promoting rapid breakdown of liver glycogen.

Content

92.5 per cent to 105.0 per cent (anhydrous substance).

PRODUCTION

Human glucagon is produced by a method based on recombinant DNA (rDNA) technology. During the course of product development it must be demonstrated that the manufacturing process produces a product having a biological activity of not less than 1 IU/mg using a suitable validated bioassay.

Host-cell-derived proteins

The limit is approved by the competent authority.

Host-cell- and vector-derived DNA

The limit is approved by the competent authority.

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water and in most organic solvents. It is soluble in dilute mineral acids and in dilute solutions of alkali hydroxides.

IDENTIFICATION

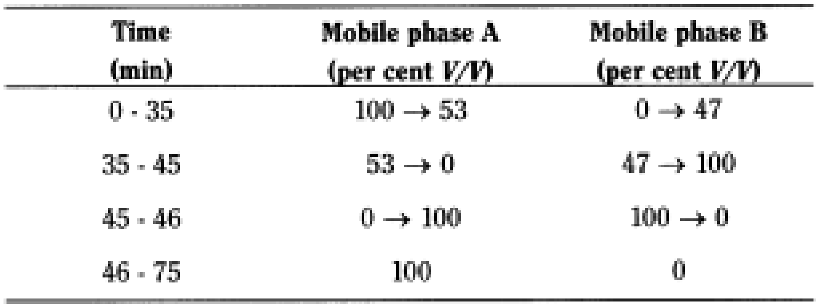
A. Peptide mapping. Liquid chromatography *(2.2.29)*.

Test solution Prepare a 5 mg/ml solution of the substance to be examined in *0.01 M hydrochloric acid*. Mix 200 µl of this solution with 800 µl of *0.1 M ammonium carbonate buffer solution pH 10.3 R* (diluted stock solution). Prepare a 2 mg/ml solution of α-*chymotrypsin for peptide mapping R* in *0.1 M ammonium carbonate buffer solution pH 10.3 R* and add 25 µl of this solution to the diluted stock solution. Place the solution in a closed vial at 37 °C for 2 h. Remove the vial and stop the reaction immediately by adding 120 µl of *glacial acetic acid R*.

Reference solution Prepare a 1 mg/ml solution of *human glucagon CRS* in *0.1 M ammonium carbonate buffer solution pH 10.3 R* (diluted stock solution) and continue as described for the test solution.

Column:
— *size: l* = 0.05 m, Ø = 4 mm;
— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:
— *mobile phase A*: mix 500 µl of *trifluoroacetic acid R* and 1000 ml of *water R*;
— *mobile phase B*: mix 500 µl of *trifluoroacetic acid R* with 600 ml of *anhydrous ethanol R* and add 400 ml of *water R;*



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 35	100 → 53	0 → 47
35 - 45	53 → 0	47 → 100
45 - 46	0 → 100	100 → 0
46 - 75	100	0

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 215 nm.

Equilibration With mobile phase A for at least 15 min.

Injection 20 µl.

Results The profile of the chromatogram obtained with the test solution corresponds to that of the chromatogram obtained with the reference solution.

B. Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time to the principal peak in the chromatogram obtained with the reference solution.

TESTS

Deamidated glucagon

Liquid chromatography *(2.2.29)*: use the normalisation procedure.

Test solution Dissolve the substance to be examined in *0.01 M hydrochloric acid* to obtain a concentration of 1.0 mg/ml.

Resolution solution Dissolve the substance to be examined in *0.1 M hydrochloric acid* to obtain a concentration of 1.0 mg/ml. Incubate in an oven at 60 °C for 2 h. Immediately after degradation, adjust to pH 2.5 with *1 M sodium hydroxide*.

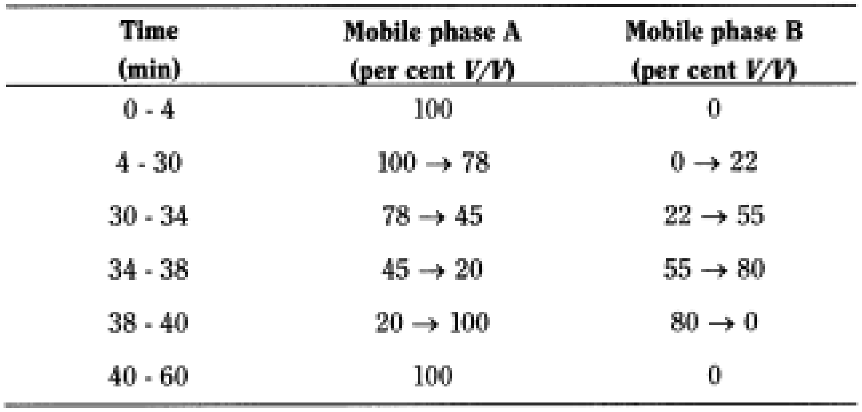
Column:
— *material*: glass;

— *size: l* = 0.05 m, Ø = 5 mm;

— *stationary phase*: *anion exchange resin R2*.

Mobile phase:
— *mobile phase A*: mix 1000 ml of *tris-hydrochloride buffer solution pH 8.3 R* and 1000 ml of *anhydrous ethanol R*;

— *mobile phase B*: dissolve 29.2 g of *sodium chloride R* in 1000 ml of *tris-hydrochloride buffer solution pH 8.3 R*; add 1000 ml of *anhydrous ethanol R*;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 4	100	0
4 - 30	100 → 78	0 → 22
30 - 34	78 → 45	22 → 55

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 214 nm.

Injection 50 µl of the test solution and the resolution solution.

Relative retention With reference to glucagon (retention time = about 20 min): carbamoylglucagon = about 1.1.

System suitability Resolution solution:

— *resolution*: minimum 2.0 between the peaks due to glucagon and carbamoylglucagon.

Limit:

- *total*: maximum 2.5 per cent.

Water *(2.5.12)*

Maximum 10 per cent, determined on 50 mg.

Bacterial endotoxins *(2.6.14)*

Less than 10 IU/mg.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related proteins with the following modification.

Injection Test solution and reference solution.

Calculate the content of human glucagon ($C_{153}H_{225}N_{43}O_{49}S$) from the declared content of $C_{153}H_{225}N_{43}O_{49}S$ in *human glucagon CRS* .

STORAGE

In an airtight container , protected from light, at a temperature lower than - 15 °C.

Ph Eur

Liquid Glucose

General Notices

(Ph Eur monograph 1330)

Action and use

Excipient.

Ph Eur

DEFINITION

Aqueous solution containing a mixture of glucose, oligosaccharides and polysaccharides obtained by hydrolysis of starch.

It contains a minimum of 70.0 per cent dry matter.

The degree of hydrolysis, expressed as dextrose equivalent (DE), is not less than 20 (nominal value).

CHARACTERS

Appearance

Clear, colourless or brown, viscous liquid.

Solubility

Miscible with water.

It may partly or totally solidify at room temperature and liquefies again when heated to 50 °C.

IDENTIFICATION

A. Dissolve 0.1 g in 2.5 ml of *water R* and heat with 2.5 ml of *cupri-tartaric solution R*. A red precipitate is formed.

B. Dip, for 1 s, a suitable stick with a reactive pad containing glucose-oxidase, peroxidase and a hydrogen-donating substance, such as tetramethylbenzidine, in a 5 g/l solution of the substance to be examined. Observe the colour of the reactive pad; within 60 s the colour changes from yellow to green or blue.

C. It is a clear, colourless or brown, viscous liquid, miscible with water. The substance may partly or totally solidify at room temperature and liquefies again when heated to 50 °C.

D. Dextrose equivalent (see Tests).

TESTS

Solution S

Dissolve 25.0 g in *carbon dioxide-free water R* and dilute to 50.0 ml with the same solvent.

pH *(2.2.3)*

4.0 to 6.0.

Mix 1 ml of a 223.6 g/l solution of *potassium chloride R* and 30 ml of solution S.

Sulphur dioxide *(2.5.29)*

Maximum 20 ppm; maximum 400 ppm if intended for the production of lozenges or pastilles obtained by high boiling techniques, provided that the final product contains maximum 50 ppm of sulphur dioxide.

Heavy metals *(2.4.8)*

Maximum 10 ppm.

Dilute 2 ml of solution S to 30 ml with *water R*. The solution complies with test E. Prepare the reference solution using 10 ml of *lead standard solution (1 ppm Pb) R*.

Loss on drying *(2.2.32)*

Maximum 30.0 per cent, determined on 1.000 g. Triturate the sample with 3.000 g of *kieselguhr G R*, previously dried at 80 °C under high vacuum for 2 h, and dry at 80 °C under high vacuum for 2 h.

Sulphated ash *(2.4.14)*

Maximum 0.5 per cent, determined on 1.0 g.

Dextrose equivalent (DE)

Within 10 per cent of the nominal value.

Weigh an amount of the substance to be examined equivalent to 2.85-3.15 g of reducing carbohydrates, calculated as dextrose equivalent, into a 500 ml volumetric flask. Dissolve in *water R* and dilute to 500.0 ml with the same solvent. Transfer the solution to a 50 ml burette.

Pipette 25.0 ml of *cupri-tartaric solution R* into a 250 ml flask and add 18.5 ml of the test solution from the burette, mix and add a few glass beads. Place the flask on a hot plate, previously adjusted so that the solution begins to boil after 2 min ± 15 s. Allow to boil for exactly 120 s, add 1 ml of a 1 g/l solution of *methylene blue R* and titrate with the test solution (V_1) until the blue colour disappears. Maintain the solution at boiling throughout the titration.

Standardise the cupri-tartaric solution using a 6.00 g/l solution of *glucose R* (V_0).

Calculate the dextrose equivalent using the following expression:

$$\frac{300 \times V_0 \times 100}{V_1 \times M \times D}$$

V_0 = total volume of glucose standard solution, in millilitres,

V_1 = total volume of test solution, in millilitres,

M = mass of the sample, in grams,

D = percentage content of dry matter in the substance.

LABELLING

The label states the dextrose equivalent (DE) (= nominal value).

Ph Eur

Self-emulsifying Glyceryl Monostearate

General Notices

Self-emulsifying Monostearin; Self-emulsifying Mono-and Diglycerides of Food Fatty Acids

Action and use

Excipient.

DEFINITION

Self-emulsifying Glyceryl Monostearate is a mixture consisting principally of mono-, di- and triglycerides of stearic and palmitic acids and of minor proportions of glycerides of other fatty acids; it may also contain free glycerol, free fatty acids and soap. It contains not less than 30.0% of monoglycerides, calculated as $C_{21}H_{42}O_4$, not more than 7.0% of free glycerol, calculated as $C_3H_8O_3$, and not more than 6.0% of soap, calculated as sodium oleate, $C_{18}H_{33}NaO_2$, all calculated with reference to the anhydrous substance.

CHARACTERISTICS

A white to cream coloured, hard, waxy solid.

Dispersible in hot *water*; soluble in hot *absolute ethanol*, in hot *liquid paraffin* and, subject to turbidity at concentrations below 20%, in hot vegetable oils.

TESTS

Acid value

Not more than 6, Appendix X B.

Iodine value

Not more than 3 *(iodine monochloride method)*, Appendix X E.

Alkalinity

Shake 1 g with 20 ml of hot *carbon dioxide-free water* and allow to cool with continuous shaking. The pH of the aqueous layer is 8.0 to 10.0, Appendix V L.

Heavy metals

2.0 g complies with *limit test C for heavy metals*, Appendix VII. Use 2 ml of *lead standard solution (10 ppm Pb)* to prepare the standard (10 ppm).

Water

Not more than 2.0% w/w, Appendix IX C. Use 0.5 g and a mixture of 10 ml of *anhydrous methanol* and 10 ml of anhydrous *chloroform* as the solvent.

ASSAY

For free glycerol

Dissolve 0.4 g in 50 ml of *dichloromethane* in a ground-glass-stoppered separating funnel, cool if necessary, add 25 ml of *water* and shake vigorously for 1 minute; add 0.2 ml of *glacial acetic acid*, if necessary, to break the emulsion. Repeat the extraction a further three times using 25-, 20- and 20- ml quantities of *water* and reserve the dichloromethane solution for the Assay for monoglycerides. Filter the combined aqueous extracts through a filter paper moistened with *water*, wash the filter with two 5 ml quantities of *water* and dilute the combined filtrate and washings to 100 ml with *water*. To 50 ml of this solution add 25 ml of *periodic acetic acid solution*, shaking cautiously, allow to stand at 25° to 30° for 30 minutes and add 100 ml of *water* and 12 ml of *potassium iodide solution*. Titrate with 0.1M *sodium thiosulphate VS* using 1 ml of *starch solution* as indicator. Repeat the determination using 50 ml of *water* in place of the 50 ml of the solution being examined. The difference between the titrations represents the amount of sodium thiosulphate required. Each ml of 0.1M *sodium thiosulphate VS* is equivalent to 2.3 mg of glycerol.

For monoglycerides

Filter the reserved dichloromethane solution obtained in the Assay for free glycerol through absorbent cotton and wash the separating funnel and the filter with three 5 ml quantities of *dichloromethane*. Dilute the combined filtrate and washings to 100 ml with *dichloromethane* and to 50 ml of the solution add 25 ml of *periodic acetic acid solution*, shaking cautiously. Allow to stand at 25° to 30° for 30 minutes and add 100 ml of *water* and 12 ml of *potassium iodide solution*. Titrate the liberated iodine with 0.1M *sodium thiosulphate VS* using 1 ml of *starch solution* as indicator. Repeat the determination using 50 ml of *dichloromethane* in place of the 50 ml of the solution of the substance being examined. The difference between the titrations represents the amount of sodium thiosulphate required. Each ml of 0.1M *sodium thiosulphate VS* is equivalent to 17.9 mg of 1-monoacylglycerols, calculated as $C_{21}H_{42}O_4$. The quantity of 0.1M *sodium thiosulphate VS* used in the assay is not less than 85% of the quantity of sodium thiosulphate used in the blank assay.

For soap

Add 10 g to a mixture of 60 ml of *acetone* and 0.15 ml of a 0.5% w/v solution of *bromophenol blue* in a mixture of 20 ml of *ethanol (20%)* and 80 ml of *water*, the solvent having been previously neutralised with 0.1M *hydrochloric acid VS* or 0.1M *sodium hydroxide VS*. Warm gently on a water bath until solution is complete and titrate with 0.1M *hydrochloric acid VS* until the blue colour is discharged. Allow to stand for 20 minutes, warm until any solidified matter has redissolved and, if the blue colour reappears, continue the titration. Each ml of 0.1M *hydrochloric acid VS* is equivalent to 30.45 mg of $C_{18}H_{33}NaO_2$.

Spray-dried Liquid Glucose

General Notices

(Glucose, Liquid, Spray-dried, Ph Eur monograph 1525)

Action and use

Excipient.

Ph Eur

DEFINITION

Mixture of glucose, oligosaccharides and polysaccharides, obtained by the partial hydrolysis of starch.

The degree of hydrolysis, expressed as dextrose equivalent (DE), is not less than 20 (nominal value).

CHARACTERS

Appearance

White or almost white, slightly hygroscopic powder or granules.

Solubility

Freely soluble in water.

IDENTIFICATION

A. Dissolve 0.1 g in 2.5 ml of *water R* and heat with 2.5 ml of *cupri-tartaric solution R*. A red precipitate is formed.

B. Dip, for 1 s, a suitable stick with a reactive pad containing glucose-oxidase, peroxidase and a hydrogen-donating substance, such as tetramethylbenzidine, in a 5 g/l solution of the substance to be examined. Observe the colour of the reactive pad; within 60 s the colour changes from yellow to green or blue.

C. It is a powder or granules.

D. Dextrose equivalent (see Tests).

TESTS

Solution S

Dissolve 12.5 g in *carbon dioxide-free water R* and dilute to 50.0 ml with the same solvent.

pH *(2.2.3)*

4.0 to 7.0.

Mix 1 ml of a 223.6 g/l solution of *potassium chloride R* and 30 ml of solution S.

Sulphur dioxide ***(2.5.29)***

Maximum 20 ppm.

Heavy metals ***(2.4.8)***

Maximum 10 ppm.

Dilute 4 ml of solution S to 30 ml with *water R*. The solution complies with test E. Prepare the reference solution using 10 ml of *lead standard solution (1 ppm Pb) R*.

Loss on drying ***(2.2.32)***

Maximum 6.0 per cent, determined on 10.00 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

Maximum 0.5 per cent, determined on 1.0 g.

Dextrose equivalent (DE)

Within 10 per cent of the nominal value.

Weigh an amount of the substance to be examined equivalent to 2.85-3.15 g of reducing carbohydrates, calculated as dextrose equivalent, into a 500 ml volumetric flask. Dissolve in *water R* and dilute to 500.0 ml with the same solvent. Transfer the solution to a 50 ml burette.

Pipette 25.0 ml of *cupri-tartaric solution R* into a 250 ml flask and add 18.5 ml of the test solution from the burette, mix and add a few glass beads. Place the flask on a hot plate, previously adjusted so that the solution begins to boil after 2 min ± 15 s. Allow to boil for exactly 120 s, add 1 ml of a 1 g/l solution of *methylene blue R* and titrate with the test solution (V_1) until the blue colour disappears. Maintain the solution at boiling throughout the titration.

Standardise the cupri-tartaric solution using a 6.00 g/l solution of *glucose R* (V_0).

Calculate the dextrose equivalent using the following expression:

$$\frac{300 \times V_0 \times 100}{V_1 \times M \times D}$$

V_0 = total volume of glucose standard solution, in millilitres,

V_1 = total volume of test solution, in millilitres,

M = mass of the sample, in grams,

D = percentage content of dry matter in the substance.

Microbial contamination

Total viable aerobic count *(2.6.12)* not more than 10^3 bacteria and not more than 10^2 fungi per gram, determined by plate count. It complies with the tests for *Escherichia coli* and *Salmonella*

(2.6.13).

LABELLING

The label states the dextrose equivalent (DE) (= nominal value).

Ph Eur

Strong Glutaraldehyde Solution

General Notices

$C_5H_8O_2$ 100.1 *111-30-8*
(anhydrous)

Action and use

Used in treatment of warts.

Preparation

Glutaraldehyde Solution

DEFINITION

Strong Glutaraldehyde Solution is an aqueous solution of glutaraldehyde (pentanedial). It contains not less than 47.0% and not more than 53.0% w/w of glutaraldehyde, $C_5H_8O_2$.

CHARACTERISTICS

A colourless or almost colourless solution.

IDENTIFICATION

A. Heat 1 ml with 10 ml of a solution containing 1 g of *hydroxylamine hydrochloride* and 2 g of *sodium acetate* in *water* on a water bath for 10 minutes, allow to cool and filter. The *melting point* of the residue, after washing with *water* and drying at 105°, is about 178°, Appendix V A.

B. Add 0.05 ml to 2 ml of *ammoniacal silver nitrate solution* and mix gently for a few minutes. Silver is deposited.

TESTS

Acidity

Dilute 10 ml with 10 ml of *carbon dioxide-free water* and titrate with 0.1M *sodium hydroxide VS* using *bromothymol blue solution R3* as indicator. Not more than 5.0 ml of 0.1M *sodium hydroxide VS* is required to change the colour of the solution.

Clarity and colour of solution

Dilute 1 volume with 4 volumes of *water*. The resulting solution is *clear*, Appendix IV A, and not more intensely coloured than *reference solution* B_6, Appendix IV B, Method I.

Weight per ml

1.126 to 1.134 g, Appendix V G.

ASSAY

Dissolve 4 g in 100 ml of a 7% w/v solution of *hydroxylamine hydrochloride* previously neutralised to *bromophenol blue solution* with 1M *sodium hydroxide VS* and allow to stand for 30 minutes. Add 20 ml of *petroleum spirit (boiling range, 40° to 60°)* and titrate with 1M *sodium hydroxide VS* until the colour of the aqueous phase matches that of a 7% w/v solution of *hydroxylamine hydrochloride* previously neutralised to *bromophenol blue solution* with 1M *sodium hydroxide VS*. Each ml of 1M *sodium hydroxide VS* is equivalent to 50.05 mg of $C_5H_8O_2$.

STORAGE

Strong Glutaraldehyde Solution should be stored at a temperature not exceeding 15°.

Dilute Hydrochloric Acid

General Notices

(Ph Eur monograph 0003)

Ph Eur

DEFINITION

Content

9.5 per cent *m/m* to 10.5 per cent *m/m* of HCl (M_r 36.46).

PREPARATION

To 726 g of *water R* add 274 g of concentrated hydrochloric acid and mix.

IDENTIFICATION

A. It is strongly acid (*2.2.4*).

B. It gives the reactions of chlorides (*2.3.1*).

C. It complies with the limits of the assay.

TESTS

Appearance

It is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Free chlorine

Maximum 1 ppm.

To 60 ml add 50 ml of *carbon dioxide-free water R*, 1 ml of a 100 g/l solution of *potassium iodide R* and 0.5 ml of *iodide-free starch solution R*. Allow to stand in the dark for 2 min. Any blue colour disappears on the addition of 0.2 ml of *0.01 M sodium thiosulphate*.

Sulphates (*2.4.13*)

Maximum 5 ppm.

To 26 ml add 10 mg of *sodium hydrogen carbonate R* and evaporate to dryness on a water-bath. Dissolve the residue in 15 ml of *distilled water R.*

Heavy metals (*2.4.8*)

Maximum 2 ppm.

Dissolve the residue obtained in the test for residue on evaporation in 1 ml of *dilute hydrochloric acid R* and dilute to 25 ml with *water R*. Dilute 5 ml of this solution to 20 ml with *water R*. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R.*

Residue on evaporation

Maximum 0.01 per cent.

Evaporate 100.0 g to dryness on a water-bath and dry at 100-105 °C. The residue weighs a maximum of 10 mg.

ASSAY

To 6.00 g add 30 ml of *water R*. Titrate with *1 M sodium hydroxide*, using *methyl red solution R* as indicator.

1 ml of *1 M sodium hydroxide* is equivalent to 36.46 mg of HCl.

Ph Eur

Halibut-liver Oil

General Notices

Action and use

Source of vitamin A.

Preparation

Halibut-liver Oil Capsules

Halibut-liver Oil may contain up to about 3000 IU of vitamin D activity per g. When a statement is made of the vitamin D content, this is determined by an appropriate method. The method described under Cod-liver Oil (Type A) may be suitable.

DEFINITION

Halibut-liver Oil is the fixed oil extracted from the fresh, or suitably preserved, liver of the halibut species belonging to the genus *Hippoglossus* and refined. It contains in 1 g not less than 30,000 IU of vitamin A.

CHARACTERISTICS

A pale to golden yellow liquid; odour and taste, fishy, but not rancid.

Practically insoluble in *ethanol (96%)*; miscible with *ether* and with *petroleum spirit (boiling range, 40° to 60°)*.

TESTS

Acid value

Not more than 2.0, Appendix X B.

Iodine value

Not less than 122 *(iodine monochloride method)*, Appendix X E.

Iodine value of glycerides

112 to 150, when determined by the following method. Isolate the unsaponifiable matter as described in Appendix X H, but using 1 g of the oil and evaporating the acetone, drying the residue at 80° in a current of nitrogen and omitting the final titration. Weigh the residue and immediately determine the *iodine value*, Appendix X E, Method B.

Calculate the iodine value of the glycerides from the expression $(100x \uparrow Sy)/(100 \uparrow S)$, where x is the iodine value of the oil, y is the iodine value of the unsaponifiable matter and S is the percentage of unsaponifiable matter in the oil.

Saponification value

Not more than 180, Appendix X G.

Unsaponifiable matter

Not less than 7.0%, Appendix X H.

Weight per ml

0.915 to 0.925 g, Appendix V G.

ASSAY

Carry out the procedure as rapidly as possible, avoiding exposure to actinic light and air, oxidising agents, oxidation catalysts (e.g. copper and iron) and acids.

Carry out Method A (ultraviolet absorption spectrophotometry) but if method A is found not to be valid, carry out method B (liquid chromatography).

Method A

To 1 g of the oil being examined in a round-bottomed flask, add 3 ml of a freshly prepared 50% w/w solution of *potassium hydroxide* and 30 ml of *ethanol*, boil under a reflux condenser in a current of *nitrogen* for 30 minutes and cool rapidly. Add 30 ml of *water* and extract with four 50 ml quantities of *ether* and discard the aqueous layer after complete separation of the final extract. Wash the combined ethereal layers with four 50 ml quantities of *water* and evaporate to dryness under a gentle current of *nitrogen* at a temperature not exceeding 30° or in a rotary evaporator at a temperature not exceeding 30° under reduced pressure. Dissolve the residue in sufficient *propan-2-ol R1* to give an expected concentration of vitamin A equivalent to 10 to 15 IU per ml. Measure the *absorbances* of the solution at 300 nm, 310 nm, 325 nm and 334 nm and at the wavelength of maximum absorption, Appendix II B, in a suitable spectrophotometer in 1-cm specially matched cells, using *propan-2-ol R1* in the reference cell.

Calculate the content of vitamin A, as all-*trans*-retinol, in IU per gram from the expression:

$$A_{325} \times \frac{1830}{100m} \times V$$

where A_{325} = absorbance at 325 nm,

m = weight of the oil being examined in grams,

V = total volume of solution containing 10 to 15 IU of vitamin A per ml,

1830 = conversion factor for the specific absorbance of all-*trans*-retinol in International Units.

The above expression can be used only if A_{325} has a value of not greater than $A_{325.corr}$/0.970 where $A_{325,corr}$ is the corrected absorbance at 325 nm and is given by the equation:

$$A_{325,corr} = 6.815A_{325}-2.555A_{310}-4.260A_{324}$$

A designates the absorbance at the wavelength indicated by the subscript.

If A_{325} has a value greater than $A_{325,corr}/0.970$, calculate the content of vitamin A from the expression:

$$A_{325,\mathrm{corr}} \times \frac{1830}{100m} \times V$$

The assay is not valid unless the wavelength of maximum absorption lies between 323 nm and 327 nm and the *absorbance* at 300 nm relative to that at 325 nm is at most 0.73.

Method B

Carry out the method for *liquid chromatography*, Appendix III D, using the following solutions. Prepare solution (1) in the following manner. To 2 g of the oil being examined in a round-bottomed flask add 5 ml of a freshly prepared 10% w/v solution of *ascorbic acid* and 10 ml of a freshly prepared 80% w/v solution of *potassium hydroxide* and 100 ml of *ethanol*, boil under a reflux condenser on a water-bath for 15 minutes. Add 100 ml of a 1% w/v solution of *sodium chloride* and cool. Transfer the solution to a 500 ml separating funnel rinsing the round-bottomed flask with about 75 ml of a 1% w/v solution of *sodium chloride* and then with 150 ml of a mixture of equal volumes of *light petroleum R3* and *ether*. Shake for 1 minute and when the layers have separated completely, discard the lower layer and wash the upper layer with 50 ml of a 3% w/v solution of *potassium hydroxide* in a 10% v/v solution of *ethanol* and then with three 50 ml quantities of a 1% w/v solution of *sodium chloride*. Filter the upper layer through 5 g of *anhydrous sodium sulphate* on a fast filter paper into a 250 ml flask suitable for a rotary evaporator. Wash the funnel with 10 ml of fresh extraction mixture, filter and combine the upper layers. Distil them at a temperature not exceeding 30° under reduced pressure (water ejector) and fill with *nitrogen* when evaporation is completed. Alternatively evaporate the solvent under a gentle current of *nitrogen* at a temperature not exceeding 30°. Dissolve the residue in *propan-2-ol*, transfer to a 25 ml graduated flask and dilute to 25 ml with *propan-2-ol*. Gentle heating with the aid of ultrasound may be required. (A large fraction of the white residue is cholesterol.) Solution (2) is a solution of *retinyl acetate EPCRS* in *propan-2-ol R1* containing about 1000 IU per ml of all-*trans*-retinol. The exact concentration of solution (2) is assessed by ultraviolet absorption spectrophotometry, Appendix II B. Dilute the solution with *propan-2-ol R1* to a presumed concentration of 10 to 15 IU per ml and measure the *absorbance* at 326 nm in matched 1-cm cells using *propan-2-ol R1* in the reference cell. Calculate the content of vitamin A in International Units per millilitre of solution (2) from the following expression, taking into account the assigned content of *retinyl acetate EPCRS*:

$$A_{326} \times \frac{1900 \times V_2}{100 \times V_1}$$

where A_{326} = absorbance at 326 nm,

V_2 = volume of the diluted solution,

V_1 = volume of reference solution (a) used,

1900 = conversion factor for the specific absorbance of *retinyl acetate EPCRS* in International Units.

Prepare solution (3) in the same manner as solution (1) but using 2 ml of solution (2) in place of the oil being examined. The exact concentration of solution (3) is assessed by ultraviolet absorption spectrophotometry, Appendix II B. Dilute solution (3) with *propan-2-ol R1* to a presumed concentration of 10 to 15 IU per ml of all-*trans*-retinol and measure the *absorbance* at 325 nm in matched 1-cm cells using *propan-2-ol R1* in the reference cell. Calculate the content of all-*trans*-retinol in International Units per millilitre of solution (3) from the expression:

$$A_{325} \times \frac{1830 \times V_4}{100 \times V_3}$$

where A_{325} = absorbance at 325 nm,

V_3 = volume of the diluted solution,

V_4 = volume of reference solution (b) used,

1830 = conversion factor for the specific absorbance of all-*trans*-retinol in International Units.

The chromatographic procedure may be carried out using (a) a stainless steel column (25 cm × 4.6 mm) packed with *octadecylsilyl silica gel for chromatography* (5 µm to 10 µm), (b) as mobile phase at a flow rate of 1 ml per minute a mixture of 3 volumes of *water* and 97 volumes of *methanol* and (c) as detector a spectrophotometer set at 325 nm.

Inject in triplicate 10 µl of solutions (1) and (3). The retention time of all-*trans*-retinol is 4 to 6 minutes.

The assay is not valid unless (a) the chromatogram obtained with solution (1) shows a peak corresponding to that of all-*trans*-retinol in the chromatogram obtained with solution (3), (b) when using the method of standard additions to solution (1) there is greater than 95% recovery of the added *retinyl acetate EPCRS* and (c) the recovery of all-*trans*-retinol in solution (3) as assessed by direct absorption spectrophotometry is greater than 95%.

Calculate the content of vitamin A using the following expression:

$$A_1 \times \frac{C \times V}{A_2} \times \frac{1}{m}$$

where A_1 = area of the peak corresponding to all-*trans*-retinol in the chromatogram obtained with solution (1),

A_2 = area of the peak corresponding to all-*trans*-retinol in the chromatogram obtained with solution (3),

C = concentration of *retinyl acetate EPCRS* in solution (2) as assessed before the saponification in IU per ml (1000 IU per ml),

V = volume of solution (2) treated (2 ml),

m = weight of the oil being examined in solution (1) (2 g).

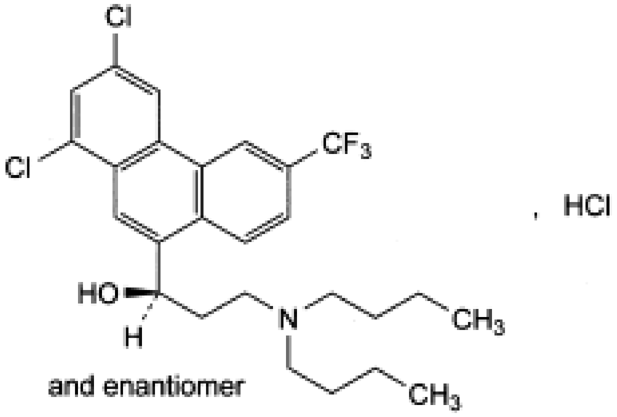
STORAGE

Halibut-liver Oil should be kept in a well-filled container and protected from light.

Halofantrine Hydrochloride

General Notices

(Ph Eur monograph 1979)



$C_{26}H_{30}Cl_2F_3NO,HCl$ 536.9 *36167-63-2*

Action and use

Antiprotozoal (malaria).

Ph Eur

DEFINITION

(1*RS*)-3-(Dibutylamino)-1-[1,3-dichloro-6-(trifluoromethyl)phenanthren-9-yl]propan-1-ol hydrochloride.

Content

97.5 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water, freely soluble in methanol, sparingly soluble in alcohol.

It shows polymorphism *(5.9)*.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *halofantrine hydrochloride CRS.*

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *methyl ethyl ketone R*, evaporate to dryness and record new spectra using the residues.

B. It gives reaction (b) of chlorides *(2.3.1)*.

TESTS

Optical rotation *(2.2.7)*

- 0.10° to + 0.10°.

Dissolve 1.00 g in *alcohol R* and dilute to 100.0 ml with the same solvent.

Absorbance *(2.2.25)*

Maximum 0.085 at 450 nm.

Dissolve 0.200 g in *methanol R* and dilute to 10.0 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution (a) Dissolve 40.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Test solution (b) Dilute 5.0 ml of test solution (a) to 50.0 ml with the mobile phase.

Reference solution (a) Dissolve 40.0 mg of *halofantrine hydrochloride CRS* in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (b) Dilute 5.0 ml of reference solution (a) to 50.0 ml with the mobile phase.

Reference solution (c) Dilute 1.0 ml of test solution (a) to 100.0 ml with the mobile phase. Dilute 5.0 ml of the solution to 50.0 ml with the mobile phase.

Reference solution (d) Dissolve 10.0 mg of *halofantrine impurity C CRS* in the mobile phase and dilute to 25 ml with the mobile phase. To 5.0 ml of the solution, add 5.0 ml of reference solution (a) and dilute to 50.0 ml with the mobile phase.

Column:

— *size:* l = 0.30 m, Ø = 3.9 mm,

— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (10 µm) of irregular type, with a specific surface of 330 m^2/g, a pore size of 12.5 nm and a carbon loading of 9.8 per cent.

Mobile phase Mix 250 ml of a 2.0 g/l solution of *sodium hydroxide R*, previously adjusted to pH 2.5 with *perchloric acid R* and 750 ml of *acetonitrile R*.

Flow rate 1 ml/min.

Detection Spectrophotometer at 260 nm.

Injection 20 µl; inject the test solution (a) and reference solutions (c) and (d).

Run time 5 times the retention time of halofantrine which is about 6 min.

System suitability:

— *resolution*: minimum 3.3 between the peaks due to halofantrine and impurity C in the chromatogram obtained with reference solution (d).

Limits:

— *any impurity*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent),

— *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.5 per cent),

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with limit test C. Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances.

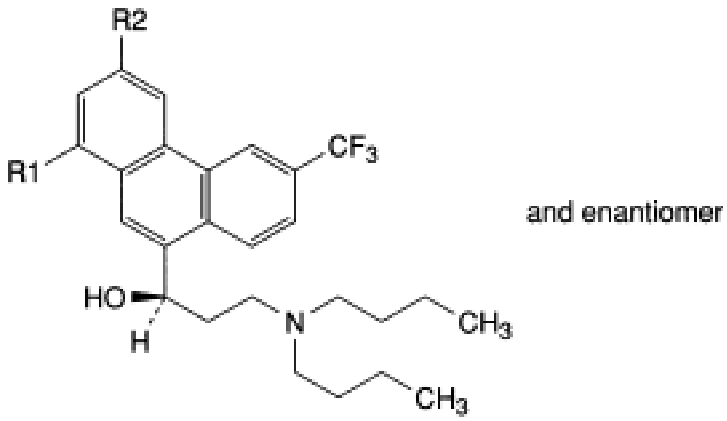
Injection Test solution (b) and reference solution (b).

Calculate the percentage content of halofantrine hydrochloride.

STORAGE

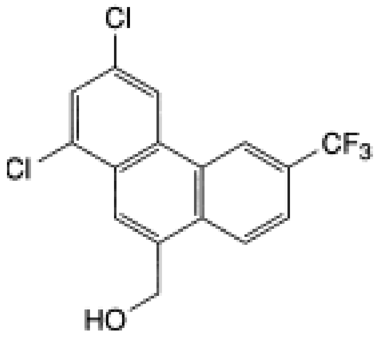
Protected from light.

IMPURITIES



A. R1 = H, R2 = Cl: (1*RS*)-1-[3-chloro-6-(trifluoromethyl)phenanthren-9-yl]-3-(dibutylamino) propan-1-ol (1-dechlorohalofantrine),

B. R1 = Cl, R2 = H: (1*RS*)-1-[1-chloro-6-(trifluoromethyl)phenanthren-9-yl]-3-(dibutylamino) propan-1-ol (3-dechlorohalofantrine),



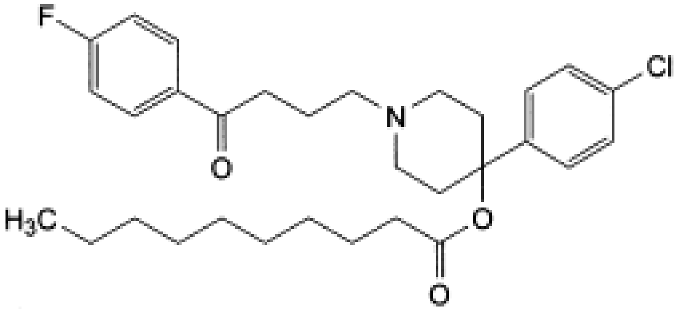
C. [1,3-dichloro-6-(trifluoromethyl)phenanthren-9-yl]methanol.

Ph Eur

Haloperidol Decanoate

General Notices

(Ph Eur monograph 1431)



$C_{31}H_{41}ClFNO_3$ 530.1 *74050-97-8*

Action and use

Dopamine receptor antagonist; neuroleptic.

Ph Eur

DEFINITION

4-(4-Chlorophenyl)-1-[4-(4-fluorophenyl)-4-oxobutyl]piperidin-4-yl decanoate.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water, very soluble in ethanol (96 per cent), in methanol and in methylene chloride.

mp: about 42 °C.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Mulls in *liquid paraffin R*.

Comparison *haloperidol decanoate CRS.*

B. To 0.1 g in a porcelain crucible add 0.5 g of *anhydrous sodium carbonate R*. Heat over an open flame for 10 min. Allow to cool. Take up the residue with 5 ml of *dilute nitric acid R* and filter. To 1 ml of the filtrate add 1 ml of *water R*. The solution gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution B_5 *(2.2.2, Method II)*.

Dissolve 2.0 g in *methylene chloride R* and dilute to 20 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*. *Prepare the solutions immediately before use and protect from light.*

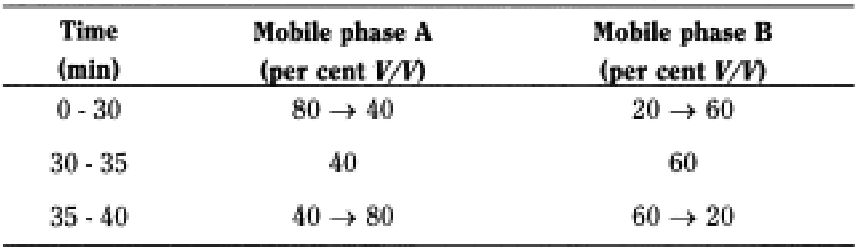
Test solution Dissolve 0.100 g of the substance to be examined in *methanol R* and dilute to 10.0 ml with the same solvent.

Reference solution (a) Dissolve 2.5 mg of *bromperidol decanoate CRS* and 2.5 mg of *haloperidol decanoate CRS* in *methanol R*, then dilute to 50.0 ml with the same solvent.

Reference solution (b) Dilute 5.0 ml of the test solution to 100.0 ml with *methanol R*. Dilute 1.0 ml of this solution to 10.0 ml with *methanol R*.

Column:
- *size: l* = 0.1 m, Ø = 4.0 mm;
- *stationary phase*: *base-deactivated octadecylsilyl silica gel for chromatography R* (3 µm).

Mobile phase:
- *mobile phase A*: 27 g/l solution of *tetrabutylammonium hydrogen sulphate R*;
- *mobile phase B*: *acetonitrile R*;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 30	80 → 40	20 → 60
30 - 35	40	60
35 - 40	40 → 80	60 → 20

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 230 nm.

Equilibration With *acetonitrile R* for at least 30 min and then with the mobile phase at the initial composition for at least 5 min.

Injection 10 µl; inject *methanol R* as a blank.

Retention time Haloperidol decanoate = about 24 min; bromperidol decanoate = about 24.5 min.

System suitability Reference solution (a):

— *resolution*: minimum 1.5 between the peaks due to haloperidol decanoate and bromperidol decanoate; if necessary, adjust the gradient or the time programme for the linear gradient elution.

Limits:

— *impurities A, B, C, D, E, F, G, H, I, J, K*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.5 per cent);

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 30 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g in a platinum crucible.

ASSAY

Dissolve 0.425 g in 50 ml of a mixture of 1 volume of *anhydrous acetic acid R* and 7 volumes of *methyl ethyl ketone R*. Titrate with *0.1 M perchloric acid* using 0.2 ml of *naphtholbenzein solution R* as indicator.

1 ml of *0.1 M perchloric acid* is equivalent to 53.01 mg of $C_{31}H_{41}ClFNO_3$.

STORAGE

Protected from light, at a temperature below 25 °C.

IMPURITIES

DEFINITION

4-[4-(4-Chlorophenyl)-4-hydroxypiperidin-1-yl]-1-(4-fluorophenyl)butan-1-one.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water, slightly soluble in ethanol (96 per cent), in methanol and in methylene chloride.

IDENTIFICATION

First identification *B, E.*

Second identification *A, C, D, E.*

A. Melting point *(2.2.14)*: 150 °C to 153 °C.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs.

Comparison *haloperidol CRS.*

C. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 10 mg of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dissolve 10 mg of *haloperidol CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dissolve 10 mg of *haloperidol CRS* and 10 mg of *bromperidol CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Plate *TLC octadecylsilyl silica gel plate R.*

Mobile phase *tetrahydrofuran R*, *methanol R*, 58 g/l solution of *sodium chloride R* (10:45:45 *V/V/V*).

Application 1 µl.

Development In an unsaturated tank, over a path of 15 cm.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

System suitability Reference solution (b):

— the chromatogram shows 2 spots which may, however, not be completely separated.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Dissolve about 10 mg in 5 ml of *anhydrous ethanol R*. Add 0.5 ml of *dinitrobenzene solution R* and 0.5 ml of *2 M alcoholic potassium hydroxide R*. A violet colour is produced and becomes brownish-red after 20 min.

E. To 0.1 g in a porcelain crucible add 0.5 g of *anhydrous sodium carbonate R*. Heat over an open flame for 10 min. Allow to cool. Take up the residue with 5 ml of *dilute nitric acid R* and filter. To 1 ml of the filtrate add 1 ml of *water R*. The solution gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution Y_7 *(2.2.2, Method II)*.

Dissolve 0.2 g in 20 ml of a 1 per cent *V/V* solution of *lactic acid R*.

Related substances

Liquid chromatography *(2.2.29)*. *Prepare the solutions immediately before use and protect from light.*

Test solution Dissolve 0.100 g of the substance to be examined in *methanol R* and dilute to 10.0 ml with the same solvent.

Reference solution (a) Dissolve 5.0 mg of *haloperidol CRS* and 2.5 mg of *bromperidol CRS* in *methanol R* and dilute to 50.0 ml with the same solvent.

Reference solution (b) Dilute 5.0 ml of the test solution to 100.0 ml with *methanol R*. Dilute 1.0 ml of this solution to 10.0 ml with *methanol R*.

Column:

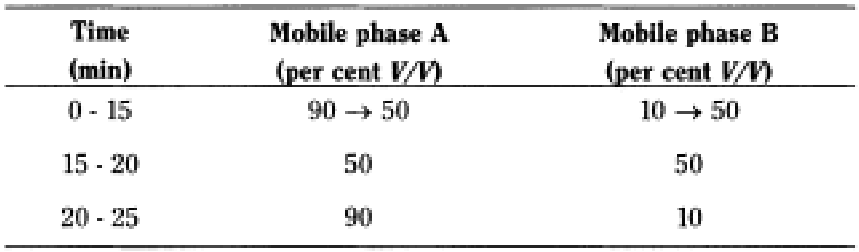
— *size*: *l* = 0.1 m, Ø = 4.6 mm;

— *stationary phase*: *base-deactivated octadecylsilyl silica gel for chromatography R* (3 µm).

Mobile phase:

— *mobile phase A*: 17 g/l solution of *tetrabutylammonium hydrogen sulphate R1*;

— *mobile phase B*: *acetonitrile R*;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 15	90 → 50	10 → 50
15 - 20	50	50
20 - 25	90	10

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 230 nm.

Injection 10 µl; inject *methanol R* as a blank.

Retention time Haloperidol = about 5.5 min; bromperidol = about 6 min.

System suitability Reference solution (a):

— *resolution*: minimum 3.0 between the peaks due to haloperidol and bromperidol; if necessary, adjust the concentration of acetonitrile in the mobile phase or adjust the time programme for the linear-gradient elution.

Limits:

— *impurities A, B, C, D, E, F*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (1 per cent);

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained

with reference solution (b) (0.05 per cent).

Loss on drying ***(2.2.32)***

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g using a platinum crucible.

ASSAY

Dissolve 0.300 g in 50 ml of a mixture of 1 volume of *anhydrous acetic acid R* and 7 volumes of *methyl ethyl ketone R*. Titrate with *0.1 M perchloric acid*, using 0.2 ml of *naphtholbenzein solution R* as indicator.

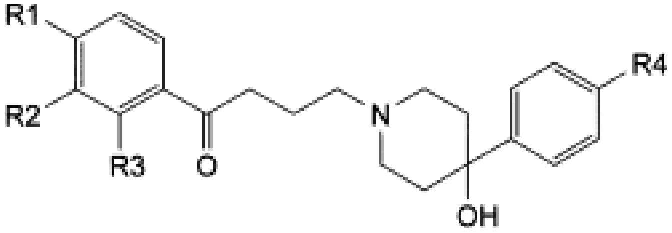
1 ml of *0.1 M perchloric acid* is equivalent to 37.59 mg of $C_{21}H_{23}ClFNO_2$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities   A, B, C, D, E, F.



A. R1 = F, R2 = R3 = R4 = H: 1-(4-fluorophenyl)-4-(4-hydroxy-4-phenylpiperidin-1-yl)butan-1-one,

B. R1 = R2 = H, R3 = F, R4 = Cl: 4-[4-(4-chlorophenyl)-4-hydroxypiperidin-1-yl]-1-(2-fluorophenyl)butan-1-one,

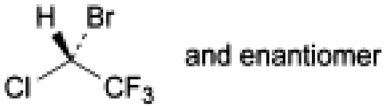
F. R = Cl, R′ = H: 4-[4-(3′-chlorobiphenyl-4-yl)-4-hydroxypiperidin-1-yl]-1-(4-fluorophenyl) butan-1-one.

Ph Eur

Halothane

General Notices

(Ph Eur monograph 0393)



$C_2HBrClF_3$ 197.4 *151-67-7*

Action and use

General anaesthetic.

Ph Eur

DEFINITION

(*RS*)-2-Bromo-2-chloro-1,1,1-trifluoroethane to which 0.01 per cent *m/m* of thymol has been added.

CHARACTERS

Appearance

Clear, colourless, mobile, heavy, non-flammable liquid.

Solubility

Slightly soluble in water, miscible with anhydrous ethanol and with trichloroethylene.

IDENTIFICATION

First identification *B.*

Second identification *A, C.*

A. Distillation range (see Tests).

B. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Examine the substance in a 0.1 mm cell.

Comparison *Ph. Eur. reference spectrum of halothane.*

C. Add 0.1 ml to 2 ml of *2-methyl-2-propanol R* in a test-tube. Add 1 ml of *copper edetate solution R*, 0.5 ml of *concentrated ammonia R* and a mixture of 0.4 ml of *strong hydrogen peroxide solution R* and 1.6 ml of *water R* (solution A). Prepare a blank at the same time (solution B). Place both tubes in a water-bath at 50 °C for 15 min, cool and add 0.3 ml of *glacial acetic acid R*. To 1 ml of each of solutions A and B add 0.5 ml of a mixture of equal volumes of freshly prepared *alizarin S solution R* and *zirconyl nitrate solution R*. Solution A is yellow and solution B is red.

To 1 ml of each of solutions A and B add 1 ml of *buffer solution pH 5.2 R*, 1 ml of *phenol red solution R* diluted 1 to 10 with *water R* and 0.1 ml of *chloramine solution R*. Solution A is bluish-violet and solution B is yellow.

To 2 ml of each of solutions A and B add 0.5 ml of a mixture of 25 volumes of *sulphuric acid R* and 75 volumes of *water R*, 0.5 ml of *acetone R* and 0.2 ml of a 50 g/l solution of *potassium bromate R* and shake. Warm the tubes in a water-bath at 50 °C for 2 min, cool and add 0.5 ml of a mixture of equal volumes of *nitric acid R* and *water R* and 0.5 ml of *silver nitrate solution R2.* Solution A is opalescent and a white precipitate is formed after a few minutes; solution B remains clear.

TESTS

Acidity or alkalinity

To 20 ml add 20 ml of *carbon dioxide-free water R*, shake for 3 min and allow to stand. Separate the aqueous layer and add 0.2 ml of *bromocresol purple solution R*. Not more than 0.1 ml of *0.01 M sodium hydroxide* or 0.6 ml of *0.01 M hydrochloric acid* is required to change the colour of the indicator.

Relative density *(2.2.5)*

1.872 to 1.877.

Distillation range *(2.2.11)*

It distils completely between 49.0 °C and 51.0 °C and 95 per cent distills within a range of 1.0 °C.

Volatile related substances

Gas chromatography *(2.2.28)*.

Internal standard *trichlorotrifluoroethane CRS.*

Test solution (a) The substance to be examined.

Test solution (b) Dilute 5.0 ml of *trichlorotrifluoroethane CRS* to 100.0 ml with the substance to be examined. Dilute 1.0 ml of the solution to 100.0 ml with the substance to be examined. Dilute 1.0 ml of this solution to 10.0 ml with the substance to be examined.

Column:

— *size:* l = 2.75 m, Ø = 5 mm;

— *stationary phase*: *silanised diatomaceous earth for gas chromatography R1* (180-250 µm), the first 1.8 m being impregnated with 30 per cent *m/m* of *macrogol 400 R* and the remainder with 30 per cent *m/m* of *dinonyl phthalate R*;

— *temperature*: 50 °C.

Carrier gas *nitrogen for chromatography R*.

Flow rate 30 ml/min.

Detection Flame ionisation.

Injection 5 µl.

Limit Test solution (b):

- *total*: not more than the area of the peak due to the internal standard, corrected if necessary for any impurity with the same retention time as the internal standard (0.005 per cent).

Thymol

Gas chromatography *(2.2.28)*.

Internal standard solution Dissolve 0.10 g of *menthol R* in *methylene chloride R* and dilute to 100.0 ml with the same solvent.

Test solution To 20.0 ml of the substance to be examined add 5.0 ml of the internal standard solution.

Reference solution Dissolve 20.0 mg of *thymol R* in *methylene chloride R* and dilute to 100.0 ml with the same solvent. To 20.0 ml of this solution, add 5.0 ml of the internal standard solution.

Column:
- *material*: fused silica;
- *size:* l = 15 m, Ø = 0.53 mm;
- *stationary phase*: *poly(dimethyl)siloxane R* (film thickness 1.5 µm).

Carrier gas *nitrogen for chromatography R*.

Flow rate 15 ml/min.

Temperature:
- *column*: 150 °C;
- *injection port*: 170 °C;
- *detector*: 200 °C.

Detection Flame ionisation.

Injection 1.0 µl.

Limit:
- *thymol*: 0.75 times to 1.15 times the area of the corresponding peak in the chromatogram obtained with the reference solution (0.008 per cent *m/m* to 0.012 per cent *m/m*).

Bromides and chlorides

To 10 ml add 20 ml of *water R* and shake for 3 min. To 5 ml of the aqueous layer add 5 ml of *water R*, 0.05 ml of *nitric acid* R and 0.2 ml of *silver nitrate solution R1*. The solution is not more opalescent than a mixture of 5 ml of the aqueous layer and 5 ml of *water R*.

Bromine and chlorine

To 10 ml of the aqueous layer obtained in the test for bromides and chlorides add 1 ml of *potassium iodide and starch solution R*. No blue colour is produced.

Non-volatile matter

Maximum 20 mg/l.

Evaporate 50 ml to dryness on a water-bath and dry the residue in an oven at 100-105 °C for 2 h. The residue weighs a maximum of 1 mg.

STORAGE

In an airtight container, protected from light, at a temperature not exceeding 25 °C. The choice of material for the container is made taking into account the particular reactivity of halothane with certain metals.

IMPURITIES

Ph Eur

Helium

General Notices

(Ph Eur monograph 2155)

He 4.00 *7440-59-7*

Ph Eur

DEFINITION

Content

Minimum 99.5 per cent *V/V* of He.

This monograph applies to helium obtained by separation from natural gas and intended for medicinal use.

CHARACTERS

Appearance

Colourless, inert gas.

IDENTIFICATION

Examine the chromatograms obtained in the assay. The retention time of the principal peak in the chromatogram obtained with the substance to be examined is approximately the same as that of the principal peak in the chromatogram obtained with the reference gas.

TESTS

Methane

Maximum 50.0 ppm *V/V*.

Infrared analyser.

Gas to be examined The substance to be examined. It must be filtered to avoid stray light phenomena (3 µm filter).

Reference gas (a) helium for chromatography R.

Reference gas (b) Mixture containing 50.0 ppm *V/V* of *methane R* in *helium for chromatography R*.

The infrared analyser generally comprises an infrared source emitting broadband infrared radiation, an optical device, a sample cell, a detector and in some analysers a reference cell. The optical device may be positioned either before or after the sample cell. It consists of one or more optical filters, through which the broadband radiation is passed. The optical device is selected for methane determination. The measurement light beam passes through the sample cell and may also pass through a reference cell if the analyser integrates such a feature. When methane is present in the sample cell, absorption of energy in the measurement light beam will occur according to the Beer-Lambert law, and this produces a change in the detector signal. This measurement signal is compared to a reference signal to generate an output related to the concentration of methane. The generated signal is linearised in order to determine the methane content.

Calibrate the apparatus and set the sensitivity using reference gases (a) and (b). Measure the methane content in the gas to be examined.

Oxygen

Maximum 50.0 ppm *V/V*, determined using an oxygen analyser equipped with an electrochemical cell and a detector scale ranging from 0-100 ppm *V/V*.

The gas to be examined passes through a detection cell containing an aqueous solution of an electrolyte, generally potassium hydroxide. The presence of oxygen in the gas to be examined produces a variation in the electric signal recorded at the outlet of the cell that is proportional to the oxygen content.

Calibrate the analyser according to the instructions of the manufacturer. Pass the gas to be examined through the analyser using a suitable pressure regulator and airtight metal tubes and operating at the prescribed flow rates until constant readings are obtained.

Water *(2.5.28)*

Maximum 67 ppm *V/V*.

ASSAY

Gas chromatography *(2.2.28)*.

Gas to be examined The substance to be examined.

Reference gas *helium for chromatography R*.

Column:
— *size:* l = 2 m, Ø = 4.5 mm;

— *stationary phase*: *molecular sieve for chromatography R* (0.5 nm).

Carrier gas *argon for chromatography R*.

Flow rate 60 ml/min.

Temperature:
— *column:* 50 °C;

— *detector*: 150 °C.

Detection Thermal conductivity.

Injection 0.5 ml.

Inject the reference gas. Adjust the injected volumes and operating conditions so that the height of the peak due to helium in the chromatogram obtained is at least 35 per cent of the full scale of the recorder.

System suitability Reference gas:

— *symmetry factor*: minimum 0.6.

Calculate the content of He in the gas to be examined.

STORAGE

As compressed gas or liquid at cryogenic temperature, in appropriate containers, complying with the legal regulations.

IMPURITIES

Specified impurities A, B, C.

A. methane,

B. oxygen,

C. water.

Ph Eur

Heparin Calcium

General Notices

(Ph Eur monograph 0332)

Action and use

Anticoagulant.

Preparation

Heparin Injection

Ph Eur

DEFINITION

Heparin calcium is a preparation containing the calcium salt of a sulphated glucosaminoglycan present in mammalian tissues. On complete hydrolysis, it liberates D-glucosamine, D-glucuronic acid, L-iduronic acid, acetic acid and sulphuric acid. It has the characteristic property of delaying the clotting of freshly shed blood. The potency of heparin calcium intended for parenteral administration is not less than 150 IU/mg, calculated with reference to the dried substance. The potency of heparin calcium not intended for parenteral administration is not less than 120 IU/mg, calculated with reference to the dried substance.

PRODUCTION

It is prepared from the lungs of oxen or from the intestinal mucosae of oxen, pigs or sheep.

It is produced by methods of manufacturing designed to minimise or eliminate substances lowering blood pressure.

CHARACTERS

A white or almost white powder, hygroscopic, freely soluble in water.

IDENTIFICATION

A. It delays the clotting of recalcified citrated sheep plasma (see Assay).

B. Dissolve 0.40 g in *water R* and dilute to 10.0 ml with the same solvent. The specific optical rotation *(2.2.7)* is not less than + 35.

C. Examine by zone electrophoresis *(2.2.31)* using *agarose for electrophoresis R* as the supporting medium. To equilibrate the agarose and as electrolyte solution use a mixture of 50 ml of *glacial acetic acid R* and 800 ml of *water R* adjusted to pH 3 by addition of *lithium hydroxide R* and diluted to 1000.0 ml with *water R*.

Test solution Dissolve 25 mg of the substance to be examined in *water R* and dilute to 10 ml with the same solvent.

Reference solution Dilute *heparin sodium BRP* with an equal volume of *water R*.

Apply separately to the strip 2 µl to 3 µl of each solution. Pass a current of 1 mA to 2 mA per centimetre of strip width at a potential difference of 300 V for about 10 min. Stain the strips using a 1 g/l solution of *toluidine blue R* and remove the excess by washing. The ratio of the mobility of the principal band or bands in the electropherogram obtained with the test solution to the mobility of the band in the electropherogram obtained with the reference solution is 0.9 to 1.1.

D. It gives the reactions of calcium *(2.3.1)*.

TESTS

Appearance of solution

Dissolve a quantity equivalent to 50 000 IU in *water R* and dilute to 10 ml with the same solvent. The solution is clear *(2.2.1)* and not more intensely coloured than degree 5 of the range of reference solutions of the most appropriate colour *(2.2.2, Method II)*.

pH *(2.2.3)*

Dissolve 0.1 g in *carbon dioxide-free water R* and dilute to 10 ml with the same solvent. The pH of the solution is 5.5 to 8.0.

Protein and nucleotidic impurities

Dissolve 40 mg in 10 ml of *water R*. The absorbance *(2.2.25)* measured at 260 nm is not greater than 0.20 and that measured at 280 nm is not greater than 0.15.

Nitrogen

Not more than 2.5 per cent, calculated with reference to the dried substance. Carry out the determination of nitrogen by sulphuric acid digestion *(2.5.9)*, using 0.100 g.

Calcium

9.5 per cent to 11.5 per cent of Ca, calculated with reference to the dried substance. Determine the calcium by complexometric titration *(2.5.11)*, using 0.200 g.

Heavy metals *(2.4.8)*

0.5 g complies with limit test C for heavy metals (30 ppm). Prepare the reference solution using 1.5 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying *(2.2.32)*

Not more than 8.0 per cent, determined on 1.000 g by drying at 60 °C over *diphosphorus pentoxide R* at a pressure not exceeding 670 Pa for 3 h.

Sulphated ash *(2.4.14)*

32 per cent to 40 per cent, determined on 0.20 g and calculated with reference to the dried substance.

Bacterial endotoxins *(2.6.14)*

Less than 0.01 IU per IU of heparin, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for removal of bacterial endotoxins. The addition of divalent cations may be necessary in order to fulfil the validation criteria.

ASSAY

Carry out the assay of heparin *(2.7.5)*. The estimated potency is not less than 90 per cent and not more than 111 per cent of the stated potency. The confidence limits of the estimated potency ($P = 0.95$) are not less than 80 per cent and not more than 125 per cent of the stated potency.

STORAGE

Store in an airtight container . If the substance is sterile, store in a sterile, airtight, tamper-proof container .

LABELLING

The label states:

— the number of International Units per milligram,

— the name and quantity of any added substance.

Ph Eur

Heparin Sodium

General Notices

(Ph Eur monograph 0333)

Action and use

Anticoagulant.

Preparation

Heparin Injection

Ph Eur

DEFINITION

Heparin sodium is a preparation containing the sodium salt of a sulphated glucosaminoglycan present in mammalian tissues. On complete hydrolysis, it liberates D-glucosamine, D-glucuronic acid, L-iduronic acid, acetic acid and sulphuric acid. It has the characteristic property of delaying the clotting of freshly shed blood. The potency of heparin sodium intended for parenteral administration is not less than 150 IU/mg, calculated with reference to the dried substance. The potency of heparin sodium not intended for parenteral administration is not less than 120 IU/mg, calculated with reference to the dried substance.

PRODUCTION

It is prepared from the lungs of oxen or from the intestinal mucosae of oxen, pigs or sheep.

It is produced by methods of manufacturing designed to minimise or eliminate substances lowering blood pressure.

CHARACTERS

A white or almost white powder, hygroscopic, freely soluble in water.

IDENTIFICATION

A. It delays the clotting of recalcified citrated sheep plasma (see Assay).

B. Dissolve 0.40 g in *water R* and dilute to 10.0 ml with the same solvent. The specific optical rotation *(2.2.7)* is not less than + 35.

C. Examine by zone electrophoresis *(2.2.31)* using *agarose for electrophoresis R* as the supporting medium. To equilibrate the agarose and as electrolyte solution use a mixture of 50 ml of *glacial acetic acid R* and 800 ml of *water R* adjusted to pH 3 by addition of *lithium hydroxide R* and diluted to 1000.0 ml with *water R*.

Test solution Dissolve 25 mg of the substance to be examined in *water R* and dilute to 10 ml with the same solvent.

Reference solution Dilute *heparin sodium BRP* with an equal volume of *water R*.

Apply separately to the strip 2 µl to 3 µl of each solution. Pass a current of 1 mA to 2 mA per centimetre of strip width at a potential difference of 300 V for about 10 min. Stain the strips using a 1 g/l solution of *toluidine blue R* and remove the excess by washing. The ratio of the mobility of the principal band or bands in the electropherogram obtained with the test solution to the mobility of the band in the electropherogram obtained with the reference solution is 0.9 to 1.1.

D. The residue obtained in the test for sulphated ash (see Tests) gives reaction (a) of sodium *(2.3.1)*.

TESTS

Appearance of solution

Dissolve a quantity equivalent to 50 000 IU in *water R* and dilute to 10 ml with the same solvent. The solution is clear *(2.2.1)* and not more intensely coloured than intensity 5 of the range of reference solutions of the most appropriate colour *(2.2.2, Method II)*.

pH *(2.2.3)*

Dissolve 0.1 g in *carbon dioxide-free water R* and dilute to 10 ml with the same solvent. The pH of the solution is 5.5 to 8.0.

Protein and nucleotidic impurities

Dissolve 40 mg in 10 ml of *water R*. The absorbance *(2.2.25)* measured at 260 nm is not greater than 0.20 and that measured at 280 nm is not greater than 0.15.

Nitrogen

Not more than 2.5 per cent, calculated with reference to the dried substance. Carry out the determination of nitrogen by sulphuric acid digestion *(2.5.9)*, using 0.100 g.

Sodium

9.5 per cent to 12.5 per cent of Na, calculated with reference to the dried substance and determined by atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Dissolve 50 mg of the substance to be examined in *0.1 M hydrochloric acid* containing 1.27 mg of *caesium chloride R* per millilitre and dilute to 100.0 ml with the same solvent.

Reference solutions Prepare reference solutions containing 25 ppm, 50 ppm and 75 ppm of Na, using *sodium standard solution (200 ppm Na) R* diluted with *0.1 M hydrochloric acid* containing 1.27 mg of *caesium chloride R* per millilitre.

Measure the absorbance at 330.3 nm using a sodium hollow-cathode lamp as the source of radiation and a flame of suitable composition (for example 11 litres of air and 2 litres of acetylene per minute).

Heavy metals *(2.4.8)*

0.5 g complies with limit test C for heavy metals (30 ppm). Prepare the reference solution using 1.5 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Not more than 8.0 per cent, determined on 1.000 g by drying at 60 °C over *diphosphorus pentoxide R* at a pressure not exceeding 670 Pa for 3 h.

Sulphated ash ***(2.4.14)***

30 per cent to 43 per cent, determined on 0.20 g and calculated with reference to the dried substance.

Bacterial endotoxins ***(2.6.14)***

Less than 0.01 IU per IU of heparin, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for removal of bacterial endotoxins.

ASSAY

Carry out the assay of heparin *(2.7.5)*. The estimated potency is not less than 90 per cent and not more than 111 per cent of the stated potency. The confidence limits of the estimated potency ($P = 0.95$) are not less than 80 per cent and not more than 125 per cent of the stated potency.

STORAGE

Store in an airtight container. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

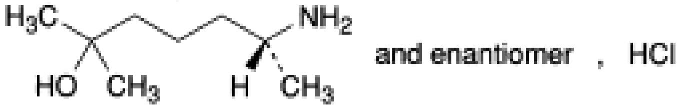
Ph Eur

Heptaminol Hydrochloride

General Notices

(Ph Eur monograph 1980)



$C_8H_{19}NO,HCl$ 181.7 *543-15-7*

Action and use

Non-selective phosphodiesterase inhibitor; treatment of reversible airways obstruction.

Ph Eur

DEFINITION

(6*RS*)-6-Amino-2-methylheptan-2-ol hydrochloride.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water, soluble in alcohol, practically insoluble in methylene chloride.

IDENTIFICATION

First identification *B, D.*

Second identification *A, C, D.*

A. To 1 ml of solution S (see Tests) add 4 ml of *water R* and 2 ml of a 200 g/l solution of *ammonium and cerium nitrate R* in *4 M nitric acid*. An orange-brown colour develops.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *heptaminol hydrochloride CRS*.

C. Examine the chromatograms obtained in the test for related substances.

Detection Examine in daylight.

Results The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (b).

D. It gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Solution S

Dissolve 5.0 g in *carbon dioxide-free water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution BY_6 *(2.2.2, Method II)*.

Acidity or alkalinity

To 10 ml of solution S add 0.1 ml of *methyl red solution R* and 0.3 ml of *0.01 M hydrochloric acid*. The solution is red. Add 0.6 ml of *0.01 M sodium hydroxide*. The solution is yellow.

Related substances

Thin-layer chromatography *(2.2.27)*.

Test solution (a) Dissolve 0.50 g of the substance to be examined in *methanol R* and dilute to 5.0 ml with the same solvent.

Test solution (b) Dilute 1.0 ml of test solution (a) to 10 ml with *methanol R*.

Reference solution (a) Dilute 3.0 ml of test solution (a) to 10.0 ml with *methanol R*. Dilute 1.0 ml of this solution to 50.0 ml with *methanol R*.

Reference solution (b) Dissolve 0.10 g of *heptaminol hydrochloride CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (c) Dissolve 10.0 mg of *heptaminol impurity A CRS* in *methanol R* and dilute to 5.0 ml with the same solvent.

Reference solution (d) Dilute 1.0 ml of reference solution (c) to 10.0 ml with *methanol R*.

Reference solution (e) To 2.5 ml of reference solution (c) add 0.5 ml of test solution (b) and dilute to 5 ml with *methanol R*.

Plate *TLC silica gel G plate R*.

Mobile phase *concentrated ammonia* R, *dioxan R*, *2-propanol R* (10:50:50 *V/V/V*).

Application 10 µl; apply test solutions (a) and (b) and reference solutions (a), (b), (d) and (e).

Development Over 2/3 of the plate.

Drying In air.

Detection Expose the plate to iodine vapour for at least 15 h.

System suitability The chromatogram obtained with reference solution (e) shows 2 clearly separated principal spots and the chromatogram obtained with reference solution (a) shows a single principal spot.

Limits In the chromatogram obtained with test solution (a):

— *impurity A*: any spot corresponding to impurity A is not more intense than the spot in the chromatogram obtained with reference solution (d) (0.2 per cent),

— *any other impurity*: any spot, apart from the principal spot and any spot corresponding to impurity A is not more intense than the spot in the chromatogram obtained with reference solution (a) (0.6 per cent).

Heavy metals *(2.4.8)*

Maximum 10 ppm.

12 ml of solution S complies with limit test A. Prepare the standard using *lead standard solution (1 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

Sulphated ash *(2.4.14)*

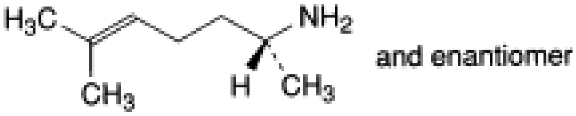
Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.140 g in 50 ml of *alcohol R* and add 5.0 ml of *0.01 M hydrochloric acid*. Carry out a potentiometric titration *(2.2.20)*, using *0.1 M sodium hydroxide.* Read the volume added between the 2 points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 18.17 mg of $C_8H_{20}ClNO$.

IMPURITIES

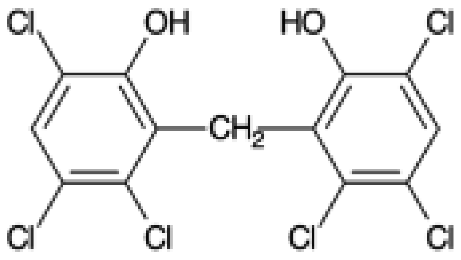


A. (2*RS*)-6-methylhept-5-en-2-amine.

Ph Eur

Hexachlorophene

General Notices



$C_{13}H_6Cl_6O_2$ 406.9 *70-30-4*

Action and use

Antiseptic.

Preparation

Hexachlorophene Dusting Powder

DEFINITION

Hexachlorophene is 2,2-methylenebis(3,4,6-trichlorophenol). It contains not less than 98.0% and not more than 100.5% of $C_{13}H_6Cl_6O_2$, calculated with reference to the dried substance.

PRODUCTION

A suitable test is carried out to demonstrate that the level of 2,3,7,8-tetrachlorodibenzo-*p*-dioxin present does not exceed 2 ppb.

CHARACTERISTICS

A white or pale buff, crystalline powder.

Practically insoluble in *water*; very soluble in *acetone*; freely soluble in *ethanol (96%)*. It dissolves in dilute solutions of the alkali hydroxides.

IDENTIFICATION

The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of hexachlorophene *(RS 174)*.

TESTS

Chloride

Dissolve 0.50 g in 2 ml of *ethanol (96%)*, dilute to 25 ml with *water* and filter. 5 ml of the clear filtrate diluted to 15 ml with *water* complies with the *limit test for chlorides*, Appendix VII (500 ppm).

Non-phenolic substances

Dissolve 5 g in 38 ml of *methanol*, add 125 ml of 0.25M *sodium hydroxide* and extract with three 15 ml quantities of n-*pentane*, retaining any foamy interphase with the aqueous layer. Dry the combined extracts over *anhydrous sodium sulphate* and evaporate to dryness at a pressure not exceeding 2 kPa. The residue weighs not more than 37.5 mg when dried to constant weight (0.75%).

Related substances

Carry out the method for *liquid chromatography*, Appendix III D, using solutions of the substance being examined in *methanol* containing (1) 0.020% w/v and (2) 1.0% w/v.

The chromatographic procedure may be carried out using (a) a stainless steel column (20 cm × 4.6 mm) packed with *octadecylsilyl silica gel for chromatography,* (10 µm) (Spherisorb ODS 1 is suitable), (b) a mixture of 100 volumes of *methanol*, 20 volumes of *water* and 1 volume of *glacial acetic acid* as the mobile phase with a flow rate of 2 ml per minute and (c) a detection wavelength of 300 nm.

Inject 20 µl of solutions (1) and (2). In the chromatogram obtained with solution (2) the sum of the areas of any *secondary peaks* with a retention time not more than 3 times that of the principal peak is not greater than twice the area of the principal peak in the chromatogram obtained with solution (1) (4.0%) and not more than one such peak has an area greater than half of the area of the principal peak in the chromatogram obtained with solution (1) (1.0%).

Loss on drying

When dried to constant weight at 105°, loses not more than 1.0% of its weight. Use 1 g.

Sulphated ash

Not more than 0.1%, Appendix IX A.

ASSAY

Dissolve 1.000 g in 25 ml of *ethanol (96%)* previously adjusted to pH 9.0 and titrate with 0.1M *sodium hydroxide VS* determining the end point potentiometrically. Each ml of 0.1M *sodium hydroxide VS* is equivalent to 40.69 mg of $C_{13}H_6Cl_6O_2$.

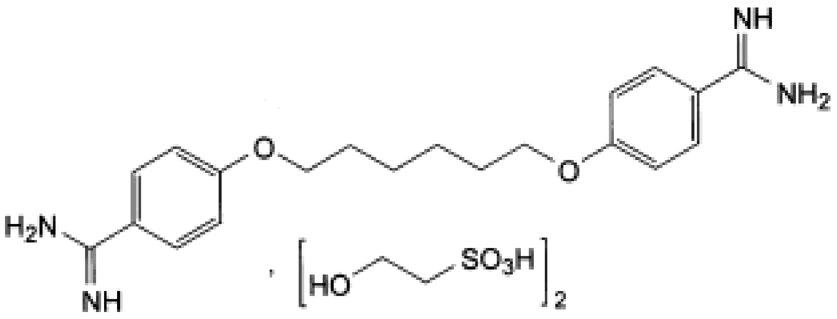
STORAGE

Hexachlorophene should be protected from light.

Hexamidine Isetionate

General Notices

(Hexamidine Diisetionate, Ph Eur monograph 1436)



$C_{24}H_{38}N_4O_{10}S_2$ 607 *659-40-5*

Action and use

Antiprotozoal.

Ph Eur

DEFINITION

4,4′-(Hexane-1,6-diylbisoxy)dibenzimidamide bis(2-hydroxyethanesulphonate).

Content

98.5 per cent to 101.5 per cent (dried substance).

PRODUCTION

The production method must be evaluated to determine the potential for formation of alkyl isetionates, which is particularly likely to occur if the reaction medium contains lower alcohols. Where necessary, the production method is validated to demonstrate that alkyl isetionates are not detectable in the final product.

CHARACTERS

Appearance

White or slightly yellow powder, hygroscopic.

Solubility

Sparingly soluble in water, slightly soluble in ethanol (96 per cent), practically insoluble in

methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *hexamidine diisetionate CRS.*

B. Dissolve about 40 mg in 5 ml of *water R* and add dropwise with shaking 1 ml of a 100 g/l solution of *sodium chloride R*. Allow to stand for 5 min. An abundant, shimmering white precipitate is slowly formed.

TESTS

Appearance of solution

Dissolve 0.50 g in *carbon dioxide-free water R*, heating at about 70 °C and dilute to 10 ml with the same solvent. Allow to cool to room temperature for 10-15 min. The solution is not more opalescent than reference suspension II *(2.2.1)* and not more intensely coloured than intensity 6 of the range of reference solutions of the most appropriate colour *(2.2.2, Method II)*.

Acidity or alkalinity

Dissolve 2.0 g in *water R* heating at about 50 °C and dilute to 20 ml with *water R* heating at about 50 °C. Allow to cool to about 35 °C, add 0.1 ml of *methyl red solution R*. Not more than 0.25 ml of *0.05 M hydrochloric acid* or *0.05 M sodium hydroxide* is required to change the colour of the indicator.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 20.0 mg of the substance to be examined in mobile phase A and dilute to 100.0 ml with mobile phase A.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with mobile phase A.

Reference solution (b) Dilute 1.0 ml of reference solution (a) to 10.0 ml with mobile phase A.

Reference solution (c) Dissolve 5 mg of the substance to be examined and 5 mg of *pentamidine diisetionate CRS* in mobile phase A and dilute to 100 ml with mobile phase A. Dilute 2 ml of the solution to 5 ml with mobile phase A.

Column:

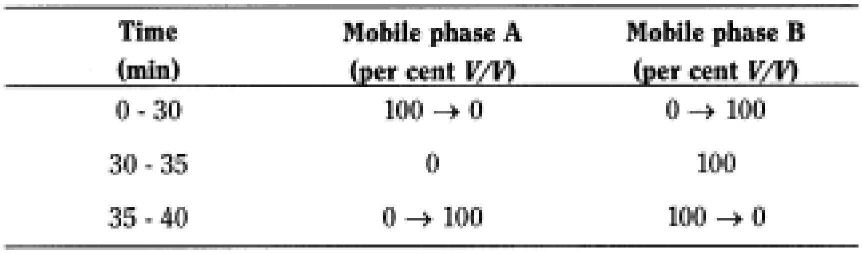
— *size:* l = 0.25 m, Ø = 4.6 mm,

— *stationary phase*: *styrene-divinylbenzene copolymer R* (8 µm).

Mobile phase:

— *mobile phase A*: mix 20 volumes of *acetonitrile R* and 80 volumes of a 6.8 g/l solution of *potassium dihydrogen phosphate R* previously adjusted to pH 3.0 using *phosphoric acid R,*

— *mobile phase B*: mix equal volumes of *acetonitrile R* and of a 6.8 g/l solution of *potassium dihydrogen phosphate R* previously adjusted to pH 3.0 using *phosphoric acid R,*



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 30	100 → 0	0 → 100
30 - 35	0	100
35 - 40	0 → 100	100 → 0

Flow rate 1 ml/min.

Detection Spectrophotometer at 263 nm.

Injection 20 µl.

Relative retention With reference to hexamidine (retention time = about 6 min): impurity B = about 1.7; impurity A = about 2.0; impurity C = about 3.7; impurity D = about 4.7.

System suitability Reference solution (c):

— *resolution*: minimum 5.0 between the peaks due to hexamidine and pentamidine.

Limits:

— *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent),

— *impurity B*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent),

— *impurities C, D*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent),

— *any other impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent),

— *total*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.5 per cent),

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Loss on drying ***(2.2.32)***

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 50 ml of *dimethylformamide R*. Titrate with *0.1 M tetrabutylammonium hydroxide* under a current of *nitrogen R*, determining the end-point potentiometrically *(2.2.20)*.

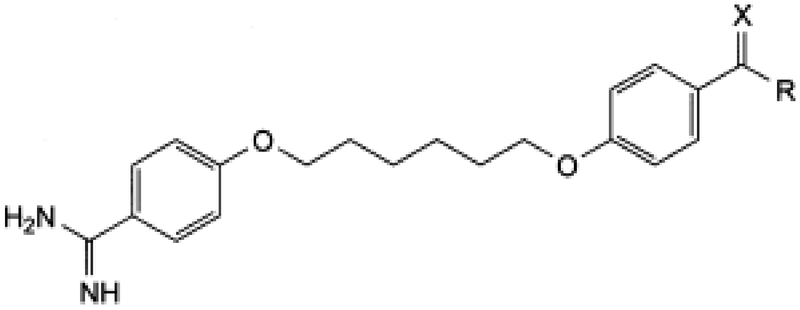
1 ml of *0.1 M tetrabutylammonium hydroxide* is equivalent to 30.35 mg of $C_{24}H_{38}N_4O_{10}S_2$.

STORAGE

In an airtight container.

IMPURITIES

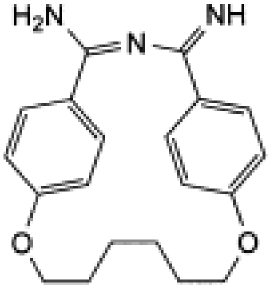
Specified impurities *A, B, C, D*.



A. X = O, R′ = NH_2: 4-[[6-(4-carbamimidoylphenoxy)hexyl]oxy]benzamide,

B. X = NH, R′ = OC_2H_5: ethyl 4-[[6-(4-carbamimidoylphenoxy)hexyl]oxy]benzimidoate,

D. X = O, R′ = OC_2H_5: ethyl 4-[[6-(4-carbamimidoylphenoxy)hexyl]oxy]benzoate,



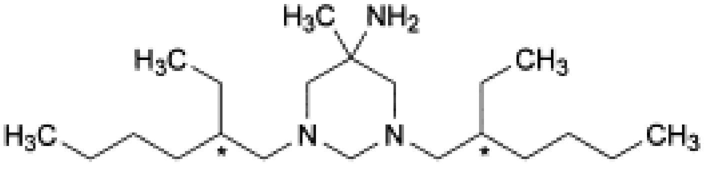
C. 4-imino-9,16-dioxa-3-azatricyclo[15.2.2.$2^{5,8}$]tricosa-1(19),2,5,7,17,20,22-heptaen-2-amine.

Ph Eur

Hexetidine

General Notices

(Ph Eur monograph 1221)



$C_{21}H_{45}N_3$ 339.6 *141-94-6*

Action and use

Antiseptic.

Ph Eur

DEFINITION

Hexetidine contains not less than 98.0 per cent and not more than the equivalent of 102.0 per cent of 1,3-bis(2-ethylhexyl)]-5-methylhexahydropyrimidin-5-amine.

CHARACTERS

An oily liquid, colourless or slightly yellow, very slightly soluble in water, very soluble in acetone, in alcohol and in methylene chloride. It dissolves in dilute mineral acids.

IDENTIFICATION

First identification *A.*

Second identification *B, C, D.*

A. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *hexetidine CRS*.

B. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. To 0.2 ml add 2 ml of *sulphuric acid R* and 2 mg of *chromotropic acid*, *sodium salt R*. Heat in a water-bath at 60 °C. A violet colour develops.

D. Dissolve 0.2 ml in 1 ml of *methylene chloride R*. Add 0.5 ml of *copper sulphate solution R*, 0.05 ml of *0.25 M alcoholic sulphuric acid R* and 5 ml of *water R*. Shake, then allow to stand. The lower layer becomes deep blue.

TESTS

Appearance

The substance to be examined is clear *(2.2.1)*and not more intensely coloured than reference solution Y_5 or reference solution GY_5 *(2.2.2, Method II)*.

Relative density *(2.2.5)*

0.864 to 0.870.

Refractive index *(2.2.6)*

1.461 to 1.467.

Optical rotation *(2.2.7)*

Dissolve 1.0 g in *ethanol R* and dilute to 10.0 ml with the same solvent. The angle of optical rotation is - 0.10 ° to + 0.10 °.

Absorbance *(2.2.25)*

Dissolve 0.50 g in *heptane R* and dilute to 50.0 ml with the same solvent. At wavelengths from 270 nm to 350 nm, the absorbance of the solution is not greater than 0.1.

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using *silica gel H R* as the coating substance. *Prepare the solutions immediately before use.*

Test solution (a) Dissolve 2.0 g of the substance to be examined in *heptane R* and dilute to 20 ml with the same solvent.

Test solution (b) Dilute 1 ml of test solution (a) to 10 ml with *heptane R*.

Reference solution (a) Dissolve 20 mg of *hexetidine CRS* in *heptane R* and dilute to 2 ml with the same solvent.

Reference solution (b) Dilute 1 ml of test solution (a) to 100 ml with *heptane R*.

Reference solution (c) Dilute 5 ml of reference solution (b) to 10 ml with *heptane R*.

Reference solution (d) Dissolve 10 mg of *dehydrohexetidine CRS* in test solution (a) and dilute to 10 ml with the same solution.

Apply separately to the plate 1 µl of each solution. At the bottom of a chromatography tank, place an evaporating dish containing *concentrated ammonia R1*. Place the dried plate in the tank and close the tank. Leave the plate in contact with the ammonia vapour for 15 min. Withdraw the plate and place it in a current of air to remove the ammonia vapour. Develop over a path of 15 cm using a mixture of 20 volumes of *methanol R* and 80 volumes of *toluene R*. Allow the plate to dry in air. Expose the plate to iodine vapour for 30 min. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (1 per cent) and at most two such spots are more intense than the spot in the chromatogram obtained with reference solution (c) (0.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (d) shows two clearly separated spots.

Heavy metals *(2.4.8)*

Dissolve 2.0 g in a mixture of 15 volumes of *water R* and 85 volumes of *acetone R* and dilute to 20 ml with the same mixture of solvents. 12 ml of the solution complies with limit test B for heavy metals (10 ppm). Prepare the standard using lead standard solution (1 ppm Pb) obtained by diluting *lead standard solution (100 ppm Pb) R* with a mixture of 15 volumes of *water R* and 85 volumes of *acetone R*.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

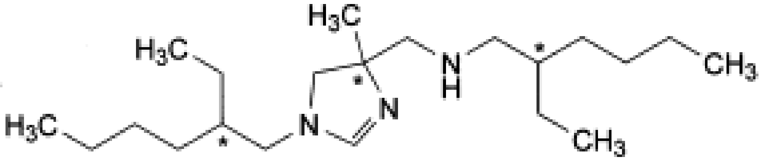
Dissolve 0.150 g in 80 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 16.98 mg of $C_{21}H_{45}N_3$.

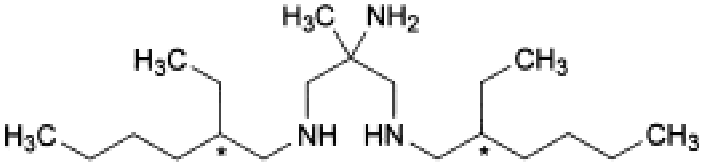
STORAGE

Store protected from light.

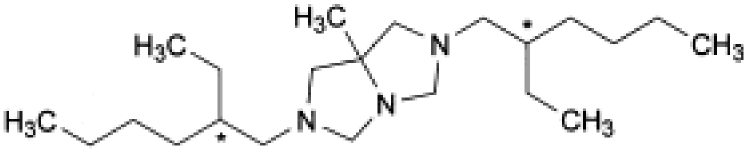
IMPURITIES



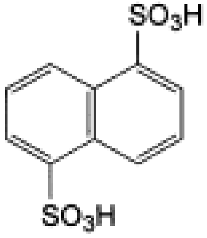
A. 2-ethyl-*N*-[[1-(2-ethylhexyl)-4-methyl-4,5-dihydro-1*H*-imidazol-4-yl]methyl]hexan-1-amine (dehydrohexetidine),



B. *N*^{1},*N*^{3}-bis(2-ethylhexyl)-2-methylpropane-1,2,3-triamine (triamine),



C. 2,6-bis(2-ethylhexyl)-7a-methylhexahydro-1*H*-imidazo[1,5-*c*]imidazole (hexedine),



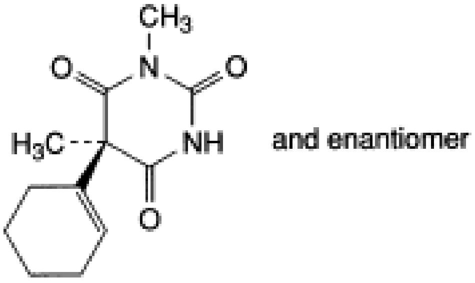
D. naphthalene-1,5-disulphonic acid.

Ph Eur

Hexobarbital

General Notices

(Ph Eur monograph 0183)



$C_{12}H_{16}N_2O_3$ 236.3 *56-29-1*

Action and use

Barbiturate.

Ph Eur

DEFINITION

Hexobarbital contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of (5*RS*)-5-(cyclohex-1-enyl)-1,5-dimethylpyrimidine-2,4,6(1*H*,3*H*,5*H*)-trione, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder, very slightly soluble in water, sparingly soluble in alcohol. It forms water-soluble compounds with alkali hydroxides and carbonates and with ammonia.

IDENTIFICATION

First identification *A, B.*

Second identification *A, C, D.*

A. Determine the melting point *(2.2.14)* of the substance to be examined. Mix equal parts of the substance to be examined and *hexobarbital CRS* and determine the melting point of the mixture. The difference between the melting points (which are about 146 °C) is not greater than 2 °C.

B. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *hexobarbital CRS*.

C. Examine by thin-layer chromatography *(2.2.27)*, using *silica gel* GF_{254} *R* as the coating substance.

Test solution Dissolve 0.1 g of the substance to be examined in *chloroform R* and dilute to 100 ml with the same solvent.

Reference solution Dissolve 0.1 g of *hexobarbital CRS* in *chloroform R* and dilute to 100 ml with the same solvent.

Apply separately to the plate 10 µl of each solution. Develop over a path of 18 cm using the lower layer of a mixture of 5 volumes of *concentrated ammonia R*, 15 volumes of *alcohol R* and 80 volumes of *chloroform R*. Examine immediately in ultraviolet light at 254 nm. The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

D. To about 10 mg add 1.0 ml of a 10 g/l solution of *vanillin R* in *alcohol R* and 2 ml of a cooled mixture of 1 volume of *water R* and 2 volumes of *sulphuric acid R*. Shake and allow to stand for 5 min. A greenish-yellow colour develops. Heat on a water-bath for 10 min. The colour becomes dark red.

TESTS

Appearance of solution

Dissolve 1.0 g in a mixture of 4 ml of *dilute sodium hydroxide solution R* and 6 ml of *water R*. The solution is clear *(2.2.1)* and not more intensely coloured than reference solution Y_6.*(2.2.2, Method II)*.

Acidity

Boil 1.0 g with 50 ml of *water R* for 2 min, allow to cool and filter. To 10 ml of the filtrate add 0.15 ml of *methyl red solution R*. The solution is orange-yellow. Not more than 0.1 ml of *0.1 M sodium hydroxide* is required to produce a pure yellow colour.

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using *silica gel* GF_{254} *R* as the coating substance.

Test solution Dissolve 1.0 g of the substance to be examined in *chloroform R* and dilute to 100 ml with the same solvent.

Reference solution Dilute 0.5 ml of the test solution to 100 ml with *chloroform R*.

Apply separately to the plate 20 µl of each solution. Develop over a path of 15 cm using the lower layer of a mixture of 5 volumes of *concentrated ammonia R*, 15 volumes of *alcohol R* and 80 volumes of *chloroform R*. Examine immediately in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with the reference solution (0.5 per cent).

Loss on drying *(2.2.32)*

Not more than 0.5 per cent, determined on 1.00 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 5 ml of *pyridine R*. Add 0.5 ml of *thymolphthalein solution R* and 10 ml of *silver nitrate solution in pyridine R*. Titrate with *0.1 M ethanolic sodium hydroxide* until a pure blue colour is obtained. Carry out a blank titration.

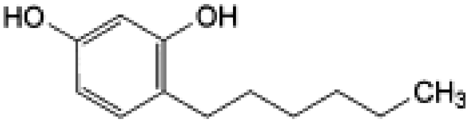
1 ml of *0.1 M ethanolic sodium hydroxide* is equivalent to 23.63 mg of $C_{12}H_{16}N_2O_3$.

Ph Eur

Hexylresorcinol

General Notices

(Ph Eur monograph 1437)



$C_{12}H_{18}O_2$ 194.3 *136-77-6*

Action and use

Antihelminthic.

Ph Eur

DEFINITION

4-Hexylbenzene-1,3-diol.

Content

98.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

Colourless, yellowish or reddish, crystalline powder or needles, turning brownish-pink on exposure to light or air.

Solubility

Very slightly soluble in water, freely soluble in ethanol (96 per cent) and in methylene chloride.

It shows polymorphism *(5.9)*.

IDENTIFICATION

First identification B.

Second identification A, C, D.

A. Melting point *(2.2.14)*: 66 °C to 68 °C, melting may occur at about 60 °C, followed by solidification and a second melting between 66 °C and 68 °C.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *hexylresorcinol CRS.*

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately *in methanol R*, evaporate to dryness and record new spectra using the residues.

C. Thin-layer chromatography *(2.2.27)*.

Test solution Dilute 0.1 ml of solution S (see Tests) to 10 ml with *ethanol (96 per cent) R*.

Reference solution (a) Dissolve 10 mg of *hexylresorcinol CRS* in *ethanol (96 per cent) R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dissolve 10 mg of *hexylresorcinol CRS* and 10 mg of *resorcinol R* in *ethanol (96 per cent) R*, then dilute to 10 ml with the same solvent.

Plate *TLC silica gel G plate R.*

Mobile phase *methyl ethyl ketone R*, *pentane R* (50:50 *V/V*).

Application 10 µl.

Development Over 2/3 of the plate.

Drying In air for 5 min.

Detection Spray with 3 ml of *anisaldehyde solution R* and heat at 100-105 °C for 5 min.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated principal spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Dissolve 0.1 g in 1 ml of *ethanol (96 per cent) R*. Add one drop of *ferric chloride solution R1*. A green colour is produced. Add *dilute ammonia R1*. The solution becomes brown.

TESTS

Solution S

Dissolve 1.0 g in *ethanol (96 per cent) R* and dilute to 10.0 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)*.

Acidity

Dissolve 0.5 g in a mixture of 25 ml of *carbon dioxide-free water R* and 25 ml of *ether R* previously neutralised to *phenolphthalein solution R1* and titrate with *0.1 M sodium hydroxide*, shaking vigorously after each addition. Not more than 0.4 ml is required to change the colour of the solution.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 0.1 g of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 200.0 ml with the mobile phase.

Reference solution (b) Dissolve 20.0 mg of *phenol R* (impurity A) in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (c) Dissolve 20.0 mg of *resorcinol R* (impurity B) in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (d) To 8.0 ml of reference solution (a) add 2.0 ml of reference solution (b) , 2.0 ml of reference solution (c) and dilute to 20.0 ml with the mobile phase.

Column:
- — *size: l* = 0.25 m, Ø = 4.6 mm;
- — *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Mix 25 volumes of a 3.0 g/l solution of *glacial acetic acid R* adjusted to pH 5.9 with *dilute ammonia R1*, and 75 volumes of *methanol R*.

Flow rate 1 ml/min.

Detection Spectrophotometer at 281 nm.

Injection 20 µl.

Run time Twice the retention time of hexylresorcinol.

System suitability Reference solution (d):
- — *resolution*: minimum 5.0 between the peaks due to impurity A (2nd peak) and hexylresorcinol (3rd peak).

Limits:
- — *impurities A, B*: for each impurity, not more than the area of the corresponding peak in the chromatogram obtained with reference solution (d) (0.2 per cent);
- — *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- — *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (1 per cent);
- — *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Water *(2.5.12)*

Maximum 0.5 per cent, determined on 1.000 g.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.100 g in 10 ml of *methanol R* in a ground-glass-stoppered flask, add 30.0 ml of *0.0167 M potassium bromate* and 2 g of *potassium bromide R*. Shake to dissolve the substance and add 15 ml of *dilute sulphuric acid R*. Stopper the flask, shake and allow to stand in the dark for 15 min, stirring continuously. Add 5 ml of *methylene chloride R* and a solution of 1 g of *potassium iodide R* in 10 ml of *water R*, allow to stand in the dark for 15 min, stirring continuously. Titrate with *0.1 M sodium thiosulphate*, using 1 ml of *starch solution R*, shaking thoroughly. Carry out a blank titration under the same conditions.

1 ml of *0.0167 M potassium bromate* is equivalent to 4.857 mg of $C_{12}H_{18}O_2$.

STORAGE

In an airtight container, protected from light.

IMPURITIES

Specified impurities A, B.

A. phenol,

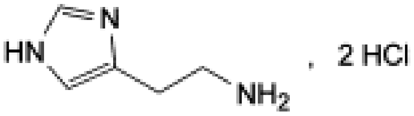
B. resorcinol.

Ph Eur

Histamine Dihydrochloride

General Notices

(Ph Eur monograph 0143)



$C_5H_9N_3$,2HCl 184.1 *56-92-8*

Ph Eur

DEFINITION

Histamine dihydrochloride contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of 2-(1*H*-imidazol-4-yl)ethanamine dihydrochloride, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder or colourless crystals, hygroscopic, very soluble in water, soluble in alcohol.

IDENTIFICATION

First identification A, D.

Second identification B, C, D.

A. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *histamine dihydrochloride CRS*. Examine as discs prepared using 1 mg of substance.

B. Examine the chromatograms obtained in the test for histidine. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve 0.1 g in 7 ml of *water R* and add 3 ml of a 200 g/l solution of *sodium hydroxide R*. Dissolve 50 mg of *sulphanilic acid R* in a mixture of 0.1 ml of *hydrochloric acid R* and 10 ml of *water R* and add 0.1 ml of *sodium nitrite solution R*. Add the second solution to the first and mix. A red colour is produced.

D. It gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Solution S

Dissolve 0.5 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 10 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution Y_7 *(2.2.2, Method II)*.

pH *(2.2.3)*

The pH of solution S is 2.85 to 3.60.

Histidine

Examine by thin-layer chromatography *(2.2.27)*, using a *TLC silica gel G plate R*.

Test solution (a) Dissolve 0.5 g of the substance to be examined in *water R* and dilute to 10 ml with the same solvent.

Test solution (b) Dilute 2 ml of test solution (a) to 10 ml with *water R*.

Reference solution (a) Dissolve 0.1 g of *histamine dihydrochloride CRS* in *water R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dissolve 50 mg of *histidine monohydrochloride R* in *water R* and dilute to 100 ml with the same solvent.

Reference solution (c) Mix 1 ml of test solution (a) and 1 ml of reference solution (b).

Apply to the plate 1 µl of test solution (a), 1 µl of test solution (b), 1 µl of reference solution (a) , 1 µl of reference solution (b) and 2 µl of reference solution (c). Develop over a path of 15 cm using a mixture of 5 volumes of *concentrated ammonia R*, 20 volumes of *water R* and 75 volumes of *acetonitrile R*. Dry the plate in a current of air. Repeat the development in the same direction, dry the plate in a current of air and spray with *ninhydrin solution R1*. Heat the plate at 110 °C for 10 min. Any spot corresponding to histidine in the chromatogram obtained with test solution (a) is not more intense than the spot in the chromatogram obtained with reference solution (b) (1 per cent). The test is not valid unless the chromatogram obtained with reference solution (c) shows 2 clearly separated spots.

Sulphates *(2.4.13)*

3 ml of solution S diluted to 15 ml with *distilled water R* complies with the limit test for sulphates (0.1 per cent).

Loss on drying *(2.2.32)*

Not more than 0.5 per cent, determined on 0.20 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 0.5 g.

ASSAY

Dissolve 0.080 g in a mixture of 5.0 ml of *0.01 M hydrochloric acid* and 50 ml of *alcohol R*. Carry out a potentiometric titration *(2.2.20)*, using *0.1 M sodium hydroxide*. Read the volume added between the first and third points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 9.203 mg of $C_5H_{11}Cl_2N_3$.

STORAGE

Store in an airtight container, protected from light.

(anhydrous)

Action and use

Amino acid.

Ph Eur

DEFINITION

Histidine hydrochloride monohydrate contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of the hydrochloride of (*S*)-2-amino-3-(imidazol-4-yl) propanoic acid, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder or colourless crystals, freely soluble in water, slightly soluble in alcohol.

IDENTIFICATION

First identification A, B, C, F.

Second identification A, B, D, E, F.

A. It complies with the test for specific optical rotation (see Tests).

B. It complies with the test for the pH (see Tests).

C. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *histidine hydrochloride monohydrate CRS*. Examine the substances prepared as discs.

D. Examine the chromatograms obtained in the test for ninhydrin-positive substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

E. Dissolve 0.1 g in 7 ml of *water R* and add 3 ml of a 200 g/l solution of *sodium hydroxide*

R. Dissolve 50 mg of *sulphanilic acid R* in a mixture of 0.1 ml of *hydrochloric acid R* and 10 ml of *water R* and add 0.1 ml of *sodium nitrite solution R*. Add the second solution to the first and mix. An orange-red colour develops.

F. About 20 mg gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Solution S

Dissolve 2.5 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution BY_6 *(2.2.2, Method II)*.

pH *(2.2.3)*

The pH of solution S is 3.0 to 5.0.

Specific optical rotation *(2.2.7)*

Dissolve 2.75 g in 12.0 ml of *hydrochloric acid R1* and dilute to 25.0 ml with *water R*. The specific optical rotation is + 9.2 to + 10.6, calculated with reference to the dried substance.

Ninhydrin-positive substances

Examine by thin-layer chromatography *(2.2.27)*, using a *TLC silica gel plate R.*

Test solution (a) Dissolve 0.10 g of the substance to be examined in *water R* and dilute to 10 ml with the same solvent.

Test solution (b) Dilute 1 ml of test solution (a) to 50 ml with *water R*.

Reference solution (a) Dissolve 10 mg of *histidine hydrochloride monohydrate CRS* in *water R* and dilute to 50 ml with the same solvent.

Reference solution (b) Dilute 5 ml of test solution (b) to 20 ml with *water R*.

Reference solution (c) Dissolve 10 mg of *histidine hydrochloride monohydrate CRS* and 10 mg of *proline CRS* in *water R* and dilute to 25 ml with the same solvent.

Apply separately to the plate 5 µl of each solution. Dry the plate in a current of air. Develop over a path of 15 cm using a mixture of 20 volumes of *glacial acetic acid R*, 20 volumes of *water R* and 60 volumes of *butanol R*. Allow the plate to dry in air. Spray with *ninhydrin solution R* and heat at 100 °C to 105 °C for 15 min. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (c) shows two clearly separated principal spots.

Sulphates *(2.4.13)*

Dilute 10 ml of solution S to 15 ml with *distilled water R*. The solution complies with the limit test for sulphates (300 ppm).

Ammonium *(2.4.1)*

50 mg complies with limit test B for ammonium (200 ppm). Prepare the standard using 0.1 ml of *ammonium standard solution (100 ppm* NH_4*) R*.

Iron *(2.4.9)*

In a separating funnel, dissolve 1.0 g in 10 ml of *dilute hydrochloric acid R*. Shake with three quantities, each of 10 ml, of *methyl isobutyl ketone R1*, shaking for 3 min each time. To the combined organic layers add 10 ml of *water R* and shake for 3 min. The aqueous layer complies with the limit test for iron (10 ppm).

Heavy metals *(2.4.8)*

Dissolve 2.0 g in *water R* and dilute to 20 ml with the same solvent. 12 ml of the solution complies with limit test A for heavy metals (10 ppm). Prepare the standard using *lead standard solution (1 ppm Pb) R.*

Loss on drying *(2.2.32)*

7.0 per cent to 10.0 per cent, determined on 1.000 g by drying in an oven at 145 °C to 150 °C.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.160 g in 50 ml of *carbon dioxide-free water R*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M sodium hydroxide* is equivalent to 19.16 mg of $C_6H_{10}ClN_3O_2$.

STORAGE

Store protected from light.

Development Over 2/3 of the plate.

Drying In air.

Detection Spray with *ninhydrin solution R* and heat at 100-105 °C for 15 min.

System suitability The chromatogram obtained with reference solution (c) shows 2 clearly separated spots.

Limits:

— *any impurity*: any spots in the chromatogram obtained with test solution (a), apart from the principal spot, are not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

Chlorides ***(2.4.4)***

Maximum 200 ppm.

Dilute 5 ml of solution S to 15 ml with *water R*.

Sulphates ***(2.4.13)***

Maximum 300 ppm.

Dilute 10 ml of solution S to 15 ml with *distilled water R*.

Ammonium ***(2.4.1, Method B)***

Maximum 200 ppm, determined on 50 mg.

Prepare the standard using 0.1 ml of *ammonium standard solution (100 ppm* NH_4*) R*.

Iron ***(2.4.9)***

Maximum 10 ppm.

In a separating funnel, dissolve 1.0 g in 10 ml of *dilute hydrochloric acid R*. Shake with 3 quantities, each of 10 ml, of *methyl isobutyl ketone R1*, shaking for 3 min each time. To the combined organic layers add 10 ml of *water R* and shake for 3 min. The aqueous layer complies with the limit test for iron.

Heavy metals ***(2.4.8)***

Maximum 10 ppm.

Dissolve 2.0 g in a mixture of 3 ml of *dilute hydrochloric acid R* and 15 ml of *water R*, with gentle warming if necessary, and dilute to 20 ml with *water R*. 12 ml of the solution complies with limit test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Loss on drying ***(2.2.32)***

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.130 g in 50 ml of *water R*. Titrate with *0.1 M hydrochloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M hydrochloric acid* is equivalent to 15.52 mg of $C_6H_9N_3O_2$.

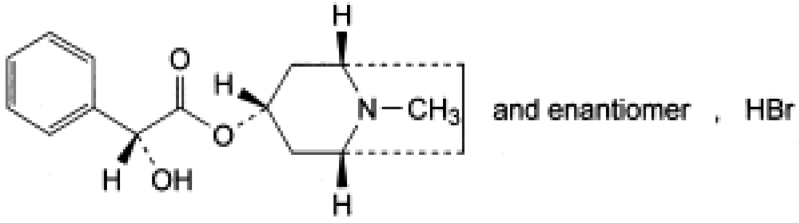
STORAGE

Protected from light.

Homatropine Hydrobromide

General Notices

(Ph Eur monograph 0500)



$C_{16}H_{21}NO_3,HBr$ 356.3 51-56-9

Action and use

Anticholinergic.

Preparation

Homatropine Eye Drops

Ph Eur

DEFINITION

(1*R*,3*r*,5*S*)-8-Methyl-8-azabicyclo[3.2.1]oct-3-yl (2*RS*)-2-hydroxy-2-phenylacetate hydrobromide.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or colourless crystals.

Solubility

Freely soluble in water, sparingly soluble in alcohol.

mp

About 215 °C, with decomposition.

IDENTIFICATION

First identification *A, C.*

Second identification *B, C.*

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *homatropine hydrobromide CRS.*

B. Dissolve 50 mg in 1 ml of *water R* and add 2 ml of *dilute acetic acid R*. Heat and add 4 ml of *picric acid solution R*. Allow to cool, shaking occasionally. Collect the crystals, wash with 2 quantities, each of 3 ml, of iced *water R* and dry at 100-105 °C. The crystals melt *(2.2.14)* at 182 °C to 186 °C.

C. It gives reaction (a) of bromides *(2.3.1)*.

TESTS

Solution S

Dissolve 1.25 g in *carbon dioxide-free water R* and dilute to 25 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

pH *(2.2.3)*

5.0 to 6.5 for solution S.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 25.0 ml with the mobile phase.

Reference solution (a) Dilute 5.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 5.0 ml of this solution to 50.0 ml with the mobile phase.

Reference solution (b) Dilute 5.0 ml of reference solution (a) to 25.0 ml with the mobile phase.

Reference solution (c) Dissolve 5.0 mg of *hyoscine hydrobromide CRS* in the mobile phase and dilute to 50.0 ml with the mobile phase. To 10.0 ml of this solution add 0.5 ml of the test solution and dilute to 100.0 ml with the mobile phase.

Column:

— *size: l* = 0.1 m, Ø = 4.6 mm,

— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (3 µm),

— *temperature*: 40 °C.

Mobile phase Mix 33 volumes of *methanol R2* and 67 volumes of a solution prepared as follows: dissolve 6.8 g of *potassium dihydrogen phosphate R* and 7.0 g of *sodium heptanesulphonate monohydrate R* in 1000 ml of *water R* and adjust to pH 2.7 with a 330 g/l solution of *phosphoric acid R*.

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 210 nm.

Injection 10 µl.

Run time 3 times the retention time of homatropine.

Relative retention With reference to homatropine (retention time = about 6.8 min): impurity C = about 0.2; impurity A = about 0.9; impurity B = about 1.1; impurity D = about 1.9.

System suitability Reference solution (c):

— *resolution*: minimum 1.5 between the peaks due to homatropine and impurity B,

— *symmetry* factor : maximum 2.5 for the peak due to homatropine.

Limits:

— *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent),

— *impurities B, C, D*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent),

— *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent),

— *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent); disregard the peak due to the bromide ion which appears close to the peak due to the solvent,

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in a mixture of 5.0 ml of *0.01 M hydrochloric acid* and 50 ml of *alcohol R*. Carry out a potentiometric titration *(2.2.20)*, using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 35.63 mg of $C_{16}H_{22}BrNO_3$.

Ph Eur

Honey

General Notices

(Ph Eur monograph 2051)

Ph Eur

DEFINITION

Honey is produced by bees (*Apis mellifera* L.) from the nectar of plants or from secretions of living parts of plants which the bees collect, transform by combining with specific substances of their own, deposit, dehydrate, store and leave in the honey comb to ripen and mature.

PRODUCTION

If the bee has been exposed to treatment to prevent or cure diseases or to any substance intended for preventing, destroying or controlling any pest, unwanted species of plants or animals, appropriate steps are taken to ensure that the levels of residues are as low as possible.

CHARACTERS

Appearance

Viscous liquid which may be partly crystalline, almost white to dark brown.

IDENTIFICATION

Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 0.6 g of the substance to be examined in 50 ml of *ethanol (30 per cent V/V) R*.

Reference solution Dissolve 0.5 g of *fructose R,* 0.5 g of *glucose R* and 0.1 g of *sucrose R* in 100 ml of *ethanol (30 per cent V/V) R.*

Plate TLC silica gel plate R.

Mobile phase Water R, *acetonitrile R* (13:87 *V/V*).

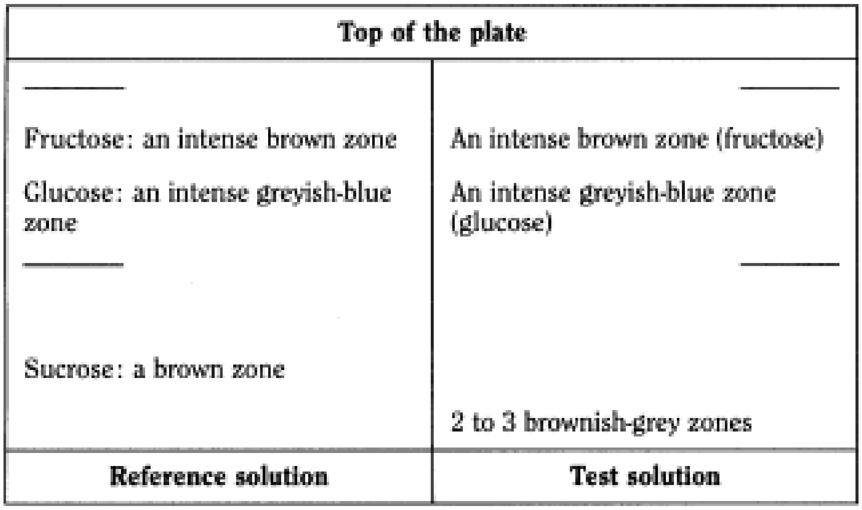
Application 5 µl as bands.

Development 3 times over a path of 15 cm.

Drying In warm air.

Detection Spray with a solution prepared as follows: dissolve 2 g of *diphenylamine R* and 2 ml of *aniline R* in 100 ml of *acetone R*. Add a 850 g/l solution of *phosphoric acid R* until the precipitate formed dissolves again (about 15-20 ml). Examine in daylight after heating at 100-105 °C for 5-10 min.

Results See below the sequence of the zones present in the chromatograms obtained with the reference solution and the test solution. Furthermore, the weak brown zone due to sucrose in the chromatogram obtained with the reference solution may be present in the chromatogram obtained with the test solution. One or more other weak zones may be present in the chromatogram obtained with the test solution.



Top of the plate	
———	———
Fructose: an intense brown zone	An intense brown zone (fructose)
Glucose: an intense greyish-blue zone	An intense greyish-blue zone (glucose)
———	———
Sucrose: a brown zone	
	2 to 3 brownish-grey zones
Reference solution	**Test solution**

TESTS

Refractive index *(2.2.6)*

Minimum 1.487 (equivalent to a maximum water content of 20 per cent).

Homogenise 100 g and transfer into a flask. Close tightly and place in a water-bath at 50 ± 0.2 °C until all sugar crystals have dissolved. Cool the solution to 20 °C and rehomogenise. Immediately after rehomogenisation, cover the surface of the refractometer prism evenly with the sample. Determine the refractive index after 2 min if using an Abbe refractometer and after 4 min if using a digital refractometer. Use the average value of 2 determinations.

Conductivity *(2.2.38)*

Maximum 800 µS·cm^{-1}.

Using the value obtained for the refractive index, determine the water content of the substance to be examined from Table 2051.-1. Using this information, dissolve an amount of the substance to be examined equivalent to 20.0 g of honey dry solids, in *water R* to produce 100.0 ml.

Optical rotation *(2.2.7)*

Maximum + 0.6°.

Using the value obtained for the refractive index, determine the water content of the substance to be examined from Table 2051.-1. Using this information, dissolve an amount of the substance to be examined, equivalent to 20.0 g of honey dry solids, in 50 ml of *water R*. Add 0.2 ml of *concentrated ammonia R* and dilute to 100.0 ml with *water R*. If necessary decolourise the solution with *activated charcoal R*.

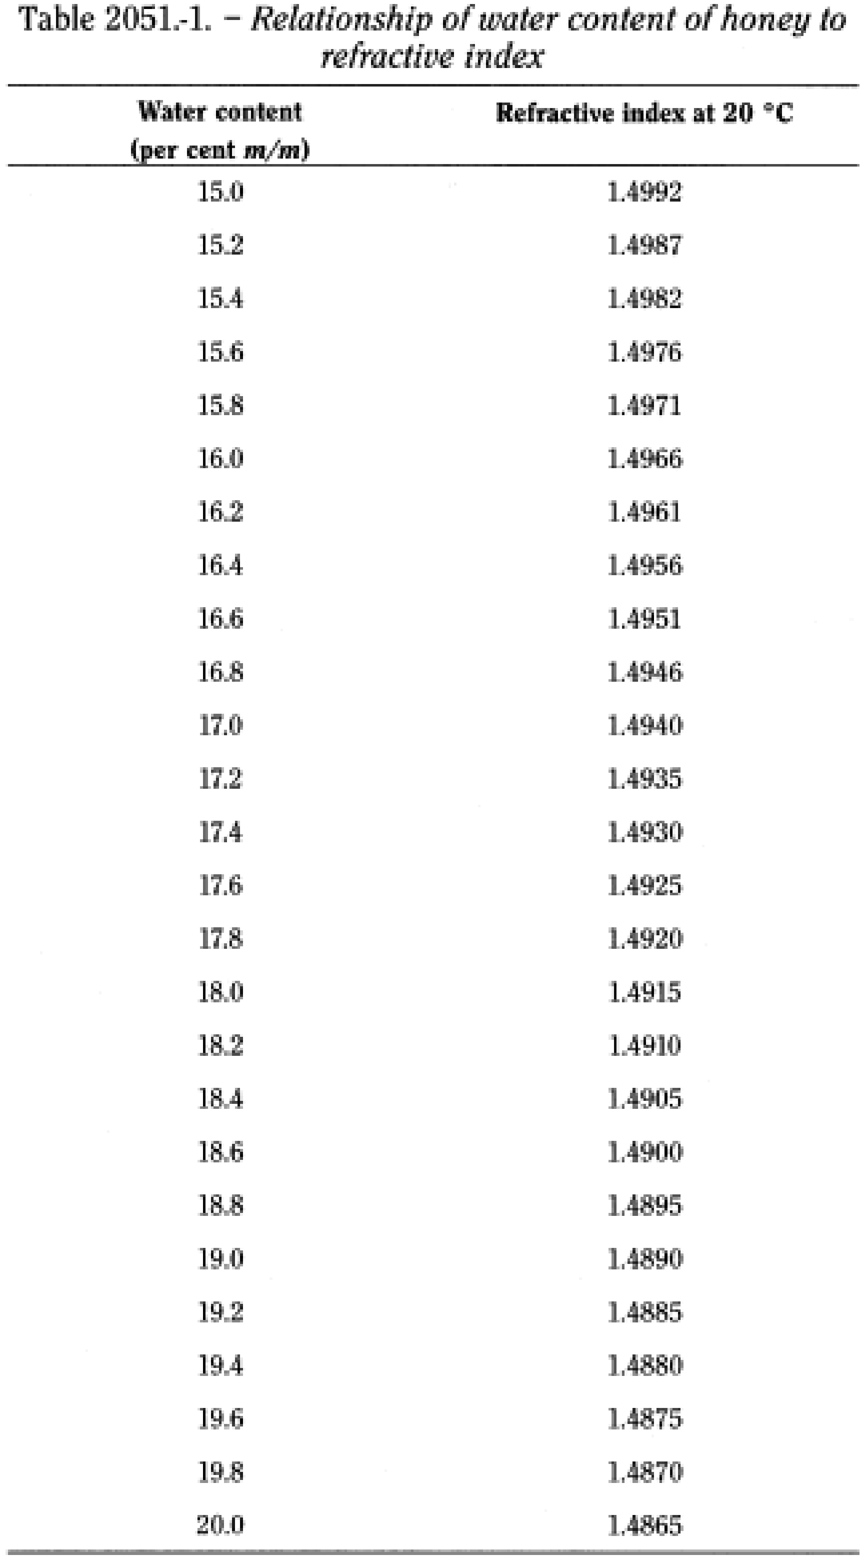


Table 2051.-1. – *Relationship of water content of honey to refractive index*

5-Hydroxymethylfurfural

Maximum 80 ppm, calculated on dry solids.

Using the value obtained for the refractive index, determine the water content of the substance to be examined from Table 2051.-1. Using this information, dissolve an amount of the substance to be examined, equivalent to 5.0 g of honey dry solids, in 25 ml of *water R* and transfer to a 50.0 ml volumetric flask with the same solvent. Add 0.5 ml of a 150 g/l solution of *potassium ferrocyanide R* and mix. Add 0.5 ml of a 300 g/l solution of *zinc acetate R*, mix and dilute to 50.0 ml with *water R* (a drop of *anhydrous ethanol R* may be added to avoid foaming). Filter. Transfer 5.0 ml of the filtered solution into each of 2 tubes. To one tube add 5.0 ml of *water R* (test solution). To the other tube add 5.0 ml of a 2.0 g/l solution of *sodium hydrogensulphite R* (reference solution). Determine the absorbance *(2.2.25)* of the test solution against the reference solution at 284 nm and 336 nm within 60 min. If the absorbance at 284 nm is greater than 0.8, dilute to the same extent the test solution with *water R* and the reference solution with a 2.0 g/l solution of *sodium hydrogensulphite R* so as to obtain an absorbance of less than 0.8.

Calculate the content of 5-hydroxymethylfurfural from the expression:

$$(A_1 - A_2) \times D \times 149.7$$

A_1 = absorbance at 284 nm,

A_2 = absorbance at 336 nm,

D = dilution factor, where applicable.

Chlorides ***(2.4.4)***

Maximum 350 ppm, determined on 15 ml of a 10 g/l solution.

Sulphates ***(2.4.13)***

Maximum 250 ppm, determined on 15 ml of a 40 g/l solution.

Ph Eur

Hyaluronidase

General Notices

(Ph Eur monograph 0912)

Action and use

Used to promote absorption of fluid into tissues.

Preparation

Hyaluronidase Injection

Ph Eur

DEFINITION

Hyaluronidase is an enzyme extracted from mammalian testes (for example bovine testes) and capable of hydrolysing mucopolysaccharides of the hyaluronic acid type. It contains not less than 300 IU of hyaluronidase activity per milligram, calculated with reference to the dried substance. It may contain a suitable stabiliser.

PRODUCTION

The animals from which hyaluronidase is derived must fulfil the requirements for the health of animals suitable for human consumption.

CHARACTERS

A white or yellowish-white, amorphous powder, soluble in water, practically insoluble in acetone and in ethanol.

IDENTIFICATION

A solution containing the equivalent of 100 IU of hyaluronidase in 1 ml of a 9 g/l solution of *sodium chloride R* depolymerises an equal volume of a 10 g/l solution of *sodium hyaluronate BRP* in 1 min at 20 °C as shown by a pronounced decrease in viscosity. This action is destroyed by heating the hyaluronidase at 100 °C for 30 min.

TESTS

Appearance of solution

Dissolve 0.10 g of the substance to be examined in *water R* and dilute to 10 ml. The solution is clear *(2.2.1)*.

pH *(2.2.3)*

Dissolve 30 mg in 10 ml of *carbon dioxide-free water R*. The pH of the solution is 4.5 to 7.5.

Loss on drying ***(2.2.32)***

Not more than 5.0 per cent, determined on 0.500 g by drying at 60 °C at a pressure not exceeding 670 Pa for 2 h.

Bacterial endotoxins ***(2.6.14)***

Less than 0.2 IU per IU of hyaluronidase.

ASSAY

The activity of hyaluronidase is determined by comparing the rate at which it hydrolyses *sodium hyaluronate BRP* with the rate obtained with the International Standard, or a reference preparation calibrated in International Units, using a slope-ratio assay.

Substrate solution To 0.10 g of *sodium hyaluronate BRP* in a 25 ml conical flask add slowly 20.0 ml of *water R* at 4 °C. The rate of addition must be slow enough to allow the substrate particles to swell (about 5 min). Maintain at 4 °C and stir for at least 12 h. Store at 4 °C and use within 4 days.

For the test solution and the reference solution, prepare the solution and carry out the dilution at 0 °C to 4 °C.

Test solution Dissolve a suitable amount of the substance to be examined in *hyaluronidase diluent R* so as to obtain a solution containing 0.6 ± 0.3 IU of hyaluronidase per millilitre.

Reference solution Dissolve a suitable amount of *hyaluronidase BRP* in *hyaluronidase diluent R* so as to obtain a solution containing 0.6 IU of hyaluronidase per millilitre.

In a reaction vessel, mix 1.50 ml of *phosphate buffer solution pH 6.4 R* and 1.0 ml of the substrate solution and equilibrate at 37 ± 0.1 °C. At time $t_1 = 0$ (first chronometer) add 0.50 ml of the test solution containing E_t mg of the enzyme to be examined, mix, measure the viscosity of the solution using a suitable viscometer maintained at 37 ± 0.1 °C and record the outflow time t_2 using a second chronometer (graduated in 0.1 second intervals), several times during about 20 min (read on the first chronometer). The following viscometer has been found suitable: Ubbelohde microviscometer (DIN 51 562, Part 2), capillary type MII, viscometer constant about 0.1 mm^2/s^2.

Repeat the procedure using 0.50 ml of the reference solution containing E_r mg of *hyaluronidase BRP*.

Calculate the viscosity ratio from the expression:

$$\eta_r = \frac{k \times t_2}{0.6915}$$

k = the viscometer constant in mm^2/s^2 (indicated on the viscometer);

t_2 = the outflow time (in seconds) of the solution;

0.6915 = the kinematic viscosity in mm^2/s of the buffer solution at 37 °C.

Since the enzymatic reaction continues during the outflow time measurements, the real reaction time equals $t_1 + t_2/2$, half of the outflow time ($t_2/2$) for which a certain measurement is valid being added to the time t_1 at which the measurement is started. Plot $(\ln \eta_r)^{-1}$ as a function of the reaction time ($t_1 + t_2/2$) in seconds. A linear relationship is obtained. Calculate the slope for the substance to be examined (b_t) and the reference preparation (b_r).

Calculate the specific activity in International Units per milligram from the expression:

$$\frac{b_t}{b_r} \times \frac{E_r}{E_t} \times A$$

A = the specific activity of *hyaluronidase BRP* in International Units per milligram.

Carry out the complete procedure at least three times and calculate the average activity of the substance to be examined.

STORAGE

Store in an airtight container at a temperature of 2 °C to 8 °C. If the substance is sterile, store in a sterile, tamper-proof container.

LABELLING

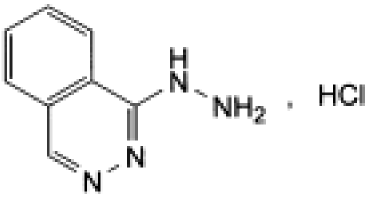
The label states the activity in International Units per milligram.

Ph Eur

Hydralazine Hydrochloride

General Notices

(Ph Eur monograph 0829)



$C_8H_8N_4$,HCl   196.6   *304-20-1*

Action and use

Vasodilator; treatment of hypertension.

Preparations

Hydralazine Injection

Hydralazine Tablets

Ph Eur

DEFINITION

1-Hydrazinophthalazine hydrochloride.

Content 98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance White or almost white, crystalline powder.

Solubility Soluble in water, slightly soluble in ethanol (96 per cent), very slightly soluble in methylene chloride.

mp: about 275 °C, with decomposition.

IDENTIFICATION

First identification B, E.

Second identification A, C, D, E.

A. Ultraviolet and visible absorption spectrophotometry *(2.2.25)*.

Test solution Dissolve 50 mg in *water R* and dilute to 100 ml with the same solvent. Dilute 2 ml of this solution to 100 ml with *water R*.

Spectral range 220-350 nm.

Absorption maxima At 240 nm, 260 nm, 303 nm and 315 nm.

Absorbance ratio A_{240}/A_{303} = 2.0 to 2.2.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs.

Comparison hydralazine hydrochloride CRS.

C. Dissolve 0.5 g in a mixture of 8 ml of *dilute hydrochloric acid R* and 100 ml of *water R*. Add 2 ml of *sodium nitrite solution R*, allow to stand for 10 min and filter. The precipitate, washed with *water R* and dried at 100-105 °C, melts *(2.2.14)* at 209 °C to 212 °C.

D. Dissolve about 10 mg in 2 ml of *water R*. Add 2 ml of a 20 g/l solution of *nitrobenzaldehyde R* in *ethanol (96 per cent) R*. An orange precipitate is formed.

E. It gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Solution S

Dissolve 0.5 g in *carbon dioxide-free water R* and dilute to 25 ml with the same solvent.

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution GY_6 *(2.2.2, Method II)*.

Dilute 4 ml of solution S to 20 ml with *water R*.

pH *(2.2.3)*

3.5 to 4.2 for solution S.

Hydrazine

Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 0.12 g of the substance to be examined in 4 ml of *water R* and add 4 ml of a 150 g/l solution of *salicylaldehyde R* in *methanol R* and 0.2 ml of *hydrochloric acid R*. Mix and keep at a temperature not exceeding 25 °C for 2-4 h, until the precipitate formed has sedimented. Add 4 ml of *toluene R*, shake vigorously and centrifuge. Transfer the clear supernatant liquid to a 100 ml separating funnel and shake vigorously, each time for 3 min, with 2 quantities, each of 20 ml, of a 200 g/l solution of *sodium metabisulphite R* and with 2 quantities, each of 50 ml, of *water R*. Separate the upper toluene layer which is the test solution.

Reference solution (a) Dissolve 12 mg of *hydrazine sulphate R* in *dilute hydrochloric acid R* and dilute to 100.0 ml with the same acid. Dilute 1.0 ml of this solution to 100.0 ml with *dilute hydrochloric acid R*.

Reference solution (b) Prepare the solution at the same time and in the same manner as for the test solution, using 1.0 ml of reference solution (a) and 3 ml of *water R*.

Plate TLC silica gel G plate R.

Mobile phase *ethanol (96 per cent) R*, *toluene R* (10:90 *V/V*).

Application 20 µl of the test solution and reference solution (b).

Development Over a path of 10 cm.

Drying In air.

Detection Examine in ultraviolet light at 365 nm.

Limit:

— *hydrazine*: any yellow fluorescent spot due to hydrazine is not more intense than the corresponding spot in the chromatogram obtained with reference solution (b) (10 ppm).

Related substances

Liquid chromatography *(2.2.29)*. *The solutions must be injected within one working day.*

Test solution Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase.

Reference solution (b) Dilute 10.0 ml of reference solution (a) to 50.0 ml with the mobile phase.

Reference solution (c) Dissolve 25.0 mg of *phthalazine R* in the mobile phase and dilute to 50.0 ml with the mobile phase. Dilute 4.0 ml of this solution to 100.0 ml with the mobile phase.

Reference solution (d) Dilute a mixture of 4.0 ml of the test solution and 10.0 ml of reference solution (c) to 100.0 ml with the mobile phase.

Column:

— *size:* l = 0.25 m, Ø = 4.6 mm;

— *stationary phase*: *nitrile silica gel for chromatography R1* (10 µm).

Mobile phase: mix 22 volumes of *acetonitrile R* and 78 volumes of a solution containing 1.44 g/l of *sodium laurilsulfate R* and 0.75 g/l of *tetrabutylammonium bromide R*, then adjust to pH 3.0 with *0.05 M sulphuric acid*.

Flow rate 1 ml/min.

Detection Spectrophotometer at 230 nm.

Injection 20 µl.

Run time 3 times the retention time of hydralazine.

Retention time hydralazine = about 10 min to 12 min; if necessary, adjust the concentration of acetonitrile in the mobile phase.

System suitability:

— the chromatogram obtained with reference solution (d) shows 2 principal peaks;

— *resolution*: minimum 2.5 between the peaks due to hydralazine and phtalazine in the chromatogram obtained with reference solution (d);

— *signal-to-noise ratio*: minimum 3 for the principal peak in the chromatogram obtained with reference solution (b).

Limit:

- *any impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent).

Heavy metals ***(2.4.8)***

Maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying ***(2.2.32)***

Maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo*.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 80.0 mg in 25 ml of *water R*. Add 35 ml of *hydrochloric acid R* and titrate with *0.05 M potassium iodate*, determining the end-point potentiometrically *(2.2.20)*, using a calomel reference electrode and a platinum indicator electrode.

1 ml of *0.05 M potassium iodate* is equivalent to 9.832 mg of $C_8H_9ClN_4$.

STORAGE

Protected from light.

Ph Eur

Hydrochloric Acid

General Notices

(Concentrated Hydrochloric Acid, Ph Eur monograph 0002)

HCl 36.46 *7647-01-0*

Preparation

Dilute Hydrochloric Acid

Ph Eur

DEFINITION

Content

35.0 per cent *m/m* to 39.0 per cent *m/m*.

CHARACTERS

Appearance

Clear, colourless, fuming liquid.

Solubility

Miscible with water.

Relative density

About 1.18.

IDENTIFICATION

A. Dilute with *water R*. The solution is strongly acid *(2.2.4)*.

B. It gives the reactions of chlorides *(2.3.1)*.

C. It complies with the limits of the assay.

TESTS

Appearance of solution

To 2 ml add 8 ml of *water R*. The solution is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Free chlorine

Maximum 4 ppm.

To 15 ml add 100 ml of *carbon dioxide-free water R*, 1 ml of a 100 g/l solution of *potassium* *iodide R* and 0.5 ml of *iodide-free starch solution R*. Allow to stand in the dark for 2 min. Any blue colour disappears on the addition of 0.2 ml of *0.01 M sodium thiosulphate*.

Sulphates ***(2.4.13)***

Maximum 20 ppm.

To 6.4 ml add 10 mg of *sodium hydrogen carbonate R* and evaporate to dryness on a water-bath. Dissolve the residue in 15 ml of *distilled water R*.

Heavy metals ***(2.4.8)***

Maximum 2 ppm.

Dissolve the residue obtained in the test for residue on evaporation in 1 ml of *dilute hydrochloric acid R* and dilute to 25 ml with *water R*. Dilute 5 ml of this solution to 20 ml with *water R*. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R.*

Residue on evaporation

Maximum 0.01 per cent.

Evaporate 100.0 g to dryness on a water-bath and dry at 100-105 °C. The residue weighs a maximum of 10 mg.

ASSAY

Weigh accurately a ground-glass-stoppered flask containing 30 ml of *water R*. Introduce 1.5 ml of the acid to be examined and weigh again. Titrate with *1 M sodium hydroxide*, using *methyl red solution R* as indicator.

1 ml of *1 M sodium hydroxide* is equivalent to 36.46 mg of HCl.

STORAGE

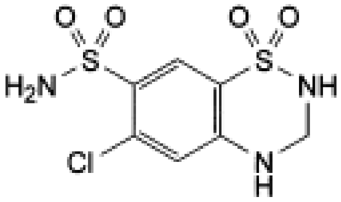
In a stoppered container made of glass or another inert material, at a temperature not exceeding 30 °C.

Ph Eur

Hydrochlorothiazide

General Notices

(Ph Eur monograph 0394)



$C_7H_8ClN_3O_4S_2$ 297.7 *58-93-5*

Action and use

Thiazide diuretic.

Preparations

Co-amilozide Oral Solution

Co-amilozide Tablets

Co-triamterzide Tablets

Hydrochlorothiazide Tablets

Ph Eur

DEFINITION

6-Chloro-3,4-dihydro-2*H*-1,2,4-benzothiadiazine-7-sulphonamide 1,1-dioxide.

Content

98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Very slightly soluble in water, soluble in acetone, sparingly soluble in ethanol (96 per cent). It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

First identification *B.*

Second identification *A, C, D.*

A. Ultraviolet and visible absorption spectrophotometry *(2.2.25)*.

Test solution Dissolve 50.0 mg in 10 ml of *0.1 M sodium hydroxide* and dilute to 100.0 ml with *water R*. Dilute 2.0 ml of this solution to 100.0 ml with *0.01 M sodium hydroxide*.

Spectral range 250-350 nm.

Absorption maxima At 273 nm and 323 nm.

Absorbance ratio A_{273}/A_{323} = 5.4 to 5.7.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *hydrochlorothiazide CRS.*

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *ethanol R1*, evaporate to dryness and record new spectra using the residues.

C. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 50 mg of the substance to be examined in *acetone R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dissolve 50 mg of *hydrochlorothiazide CRS* in *acetone R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dissolve 25 mg of *chlorothiazide R* in reference solution (a) and dilute to 5 ml with reference solution (a).

Plate *TLC silica gel F_{254} plate R.*

Mobile phase *ethyl acetate R.*

Application 2 µl.

Development Over a path of 10 cm.

Drying In a current of air.

Detection Examine in ultraviolet light at 254 nm.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Gently heat about 1 mg with 2 ml of a freshly prepared 0.5 g/l solution of *chromotropic acid, sodium salt R* in a cooled mixture of 35 volumes of *water R* and 65 volumes of *sulphuric acid R*. A violet colour develops.

TESTS

Acidity or alkalinity

Shake 0.5 g of the powdered substance to be examined with 25 ml of *water R* for 2 min and filter. To 10 ml of the filtrate, add 0.2 ml of *0.01 M sodium hydroxide* and 0.15 ml of *methyl red solution R*. The solution is yellow. Not more than 0.4 ml of *0.01 M hydrochloric acid* is required to change the colour of the indicator to red.

Related substances

Liquid chromatography *(2.2.29)*.

Solvent mixture Dilute 50.0 ml of a mixture of equal volumes of *acetonitrile R* and *methanol R* to 200.0 ml with *phosphate buffer solution pH 3.2 R1*.

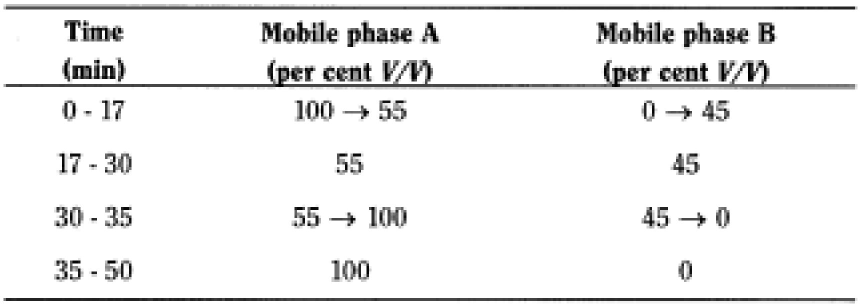
Test solution Dissolve 30.0 mg of the substance to be examined in 5 ml of a mixture of equal volumes of *acetonitrile R* and *methanol R*, using sonication if necessary, and dilute to 20.0 ml with *phosphate buffer solution pH 3.2 R1*.

Reference solution (a) Dissolve 15 mg of *hydrochlorothiazide CRS* and 15 mg of *chlorothiazide CRS* (impurity A) in 25 ml of a mixture of equal volumes of *acetonitrile R* and *methanol R*, using sonication if necessary, and dilute to 100 ml with *phosphate buffer solution pH 3.2 R1*. Dilute 5 ml of this solution to 100 ml with the solvent mixture.

Reference solution (b) Dilute 1.0 ml of the test solution to 50.0 ml with the solvent mixture. Dilute 5.0 ml of this solution to 20.0 ml with the solvent mixture.

Column:
- *size: l* = 0.1 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (3 µm).

Mobile phase:
- *mobile phase A*: to 940 ml of *phosphate buffer solution pH 3.2 R1* add 60.0 ml of *methanol R* and 10.0 ml of *tetrahydrofuran R* and mix;
- *mobile phase B*: to a mixture of 500 ml of *methanol R* and 500 ml of *phosphate buffer solution pH 3.2 R1* add 50.0 ml of *tetrahydrofuran R* and mix;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 17	100 → 55	0 → 45
17 - 30	55	45
30 - 35	55 → 100	45 → 0
35 - 50	100	0

Flow rate 0.8 ml/min.

Detection Spectrophotometer at 224 nm.

Equilibration With mobile phase A for at least 20 min.

Injection 10 µl; inject the solvent mixture as a blank.

Retention time Impurity A = about 7 min; hydrochlorothiazide = about 8 min.

System suitability Reference solution (a):

— *resolution*: minimum 2.5 between the peaks due to impurity A and hydrochlorothiazide; if necessary, adjust slightly the composition of the mobile phase or the time programme of the linear gradient.

Limits:

— *impurities A, B, C*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (1 per cent);

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Chlorides ***(2.4.4)***

Maximum 100 ppm.

Dissolve 1.0 g in 25 ml of *acetone R* and dilute to 30 ml with *water R*. Prepare the standard using 5 ml of *acetone R* containing 15 per cent *V/V* of *water R* and 10 ml of *chloride standard solution (5 ppm Cl) R.*

Loss on drying ***(2.2.32)***

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

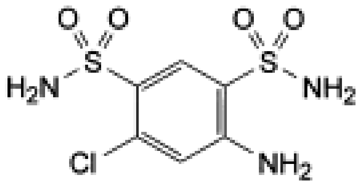
Dissolve 0.120 g in 50 ml of *dimethyl sulphoxide R*. Titrate with *0.1 M tetrabutylammonium hydroxide in 2-propanol*, determining the end-point potentiometrically *(2.2.20)* at the 2nd point of inflexion. Carry out a blank titration.

1 ml of *0.1 M tetrabutylammonium hydroxide in 2-propanol* is equivalent to 14.88 mg of $C_7H_8ClN_3O_4S_2$.

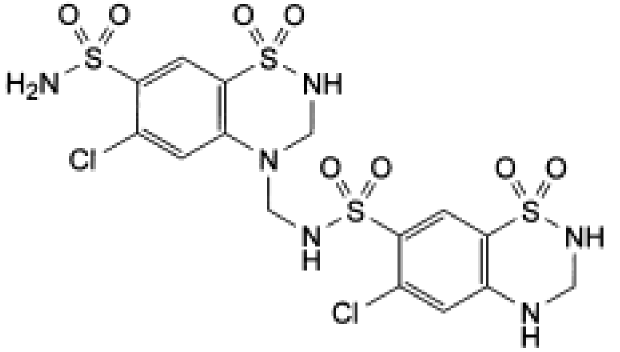
IMPURITIES

Specified impurities *A, B, C*.

A. chlorothiazide,



B. 4-amino-6-chlorobenzene-1,3-disulphonamide (salamide),



C. 6-chloro-*N*-[(6-chloro-7-sulphamoyl-2,3-dihydro-4*H*-1,2,4-benzothiadiazin-4-yl 1,1-dioxide)methyl]-3,4-dihydro-2*H*-1,2,4-benzothiadiazine-7-sulphonamide 1,1-dioxide.

$C_{18}H_{21}NO_3,C_4H_6O_6,2½H_2O$ 494.5 *34195-34-1*

Action and use

Opioid receptor agonist; antitussive.

Ph Eur

DEFINITION

4,5α-Epoxy-3-methoxy-17-methylmorphinan-6-one hydrogen (2*R*,3*R*)-2,3-dihydroxybutanedioate 2.5-hydrate.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, hygroscopic, crystalline powder.

Solubility

Freely soluble or soluble in water, sparingly soluble in ethanol (96 per cent), practically insoluble in cyclohexane.

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)*.

Comparison hydrocodone hydrogen tartrate 2.5-hydrate CRS.

If the spectra obtained in the solid state show differences, dry the substance to be examined and the reference substance at 105 °C and record new spectra using the residues.

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution Y_5 *(2.2.2, Method II)*.

Dissolve 0.5 g in *water R* and dilute to 10 ml with the same solvent.

pH *(2.2.3)*

3.2 to 3.8.

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 50.0 ml with the same solvent.

Specific optical rotation *(2.2.7)*

- 87 to - 91 (anhydrous substance).

Dissolve 2.50 g in *carbon dioxide-free water R* and dilute to 50.0 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 0.100 g of the substance to be examined in mobile phase A and dilute to 10.0 ml with mobile phase A.

Reference solution (a) Dissolve 5 mg of *oxycodone hydrochloride CRS* (impurity D) in mobile phase A, add 0.5 ml of the test solution and dilute to 5.0 ml with mobile phase A.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with mobile phase A. Dilute 1.0 ml of this solution to 10.0 ml with mobile phase A.

Reference solution (c) Dissolve 20 mg of *benzophenone CRS* (impurity H) in 50.0 ml of *methanol R*. Dilute 1.0 ml of this solution to 20.0 ml with mobile phase A.

Reference solution (d) Dissolve the contents of a vial of *hydrocodone for peak identification CRS* in 1 ml of mobile phase A.

Column:

— *size:* l = 0.25 m, Ø = 4.6 mm;

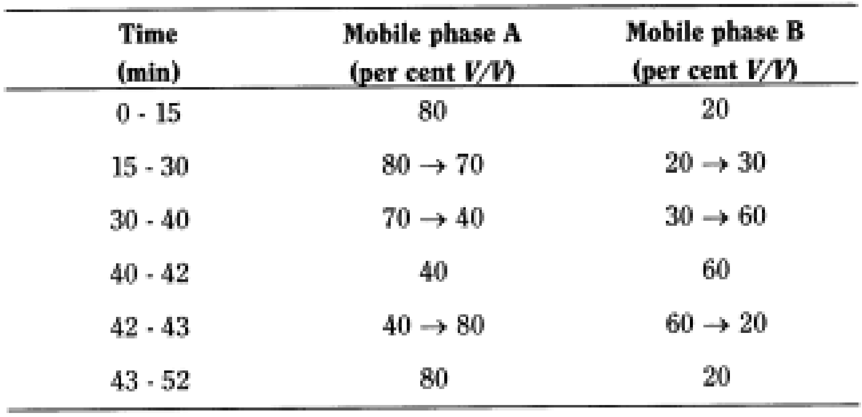
— *stationary phase*: *octadecylsilyl silica gel for chromatography end-capped R* (5 µm);

— *temperature*: 40 °C.

Mobile phase:

— *mobile phase A*: dissolve 1.08 g of *sodium octanesulphonate R* in *water R*, adjust to pH 2.0 with *phosphoric acid R* and dilute to 1000 ml with *water R*;

— *mobile phase B*: *acetonitrile R*;



Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 15	80	20
15 - 30	80 → 70	20 → 30
30 - 40	70 → 40	30 → 60
40 - 42	40	60
42 - 43	40 → 80	60 → 20
43 - 52	80	20

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 283 nm.

Injection 10 µl.

Identification of impurities Use the chromatogram supplied with *hydrocodone for peak identification CRS* and the chromatogram obtained with reference solution (d) to identify the peaks due to impurities A, B, C, D, E, F and I.

Relative retention With reference to hydrocodone (retention time = about 14 min): impurity A = about 0.3; impurity K = about 0.43; impurity B = about 0.57; impurity C = about 0.61; impurity D = about 0.9; impurity E = about 1.1; impurity F = about 1.5; impurity I = about 2.0; impurity H = about 2.9.

System suitability Reference solution (a):

— *resolution*: minimum 3.0 between the peaks due to hydrocodone and impurity D.

Limits:

— *correction factor*: for the calculation of content, multiply the peak area of impurity I by 0.2;

— *impurity I*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

— *impurity H*: not more than 0.5 times the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.1 per cent);

— *impurities A, B, C, D, E, F, K*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

— *total*: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Water *(2.5.12)*

7.0 per cent to 12.0 per cent, determined on 0.100 g.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.350 g in 60 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 44.95 mg of $C_{22}H_{27}NO_9$.

STORAGE

In an airtight container , protected from light.

IMPURITIES

Specified impurities *A, B, C, D, E, F, H, I, K*.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10*. *Control of impurities in substances for pharmaceutical use)*

DEFINITION

11β,17-Dihydroxy-3,20-dioxopregn-4-en-21-yl acetate.

Content

97.0 per cent to 103.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, slightly soluble in anhydrous ethanol and in methylene chloride.

mp: about 220 °C, with decomposition.

IDENTIFICATION

First identification *A, B.*

Second identification *C, D, E.*

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *hydrocortisone acetate CRS.*

B. Thin-layer chromatography *(2.2.27)*.

Solvent mixture *methanol R*, *methylene chloride R* (1:9 *V/V*).

Test solution Dissolve 10 mg of the substance to be examined in the solvent mixture and dilute to 10 ml with the solvent mixture.

Reference solution (a) Dissolve 20 mg of *hydrocortisone acetate CRS* in the solvent mixture and dilute to 20 ml with the solvent mixture.

Reference solution (b) Dissolve 10 mg of *cortisone acetate R* in reference solution (a) and dilute to 10 ml with reference solution (a).

Plate *TLC silica gel F_{254} plate R.*

Mobile phase Add a mixture of 1.2 volumes of *water R* and 8 volumes of *methanol R* to a mixture of 15 volumes of *ether R* and 77 volumes of *methylene chloride R*.

Application 5 µl.

Development Over a path of 15 cm.

Drying In air.

Detection A Examine in ultraviolet light at 254 nm.

Results A The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

Detection B Spray with *alcoholic solution of sulphuric acid R*. Heat at 120 °C for 10 min or until the spots appear and allow to cool; examine in daylight and in ultraviolet light at 365 nm.

Results B The principal spot in the chromatogram obtained with the test solution is similar in position, colour in daylight, fluorescence in ultraviolet light at 365 nm and size to the principal spot in the chromatogram obtained with reference solution (a).

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

C. Thin-layer chromatography *(2.2.27)*.

Test solution (a) Dissolve 25 mg of the substance to be examined in *methanol R* and dilute to 5 ml with the same solvent (solution A). Dilute 2 ml of this solution to 10 ml with *methylene chloride R.*

Test solution (b) Transfer 2 ml of solution A to a 15 ml glass tube with a ground-glass stopper or a polytetrafluoroethylene cap. Add 10 ml of *saturated methanolic potassium hydrogen carbonate solution R* and immediately pass a stream of *nitrogen R* briskly through the solution for 5 min. Stopper the tube. Heat in a water-bath at 45 °C protected from light for 2 h 30 min. Allow to cool.

Reference solution (a) Dissolve 25 mg of *hydrocortisone acetate CRS* in *methanol R* and dilute to 5 ml with the same solvent (solution B). Dilute 2 ml of this solution to 10 ml with *methylene chloride R*.

Reference solution (b) Transfer 2 ml of solution B to a 15 ml glass tube with a ground-glass stopper or a polytetrafluoroethylene cap. Add 10 ml of *saturated methanolic potassium hydrogen carbonate solution R* and immediately pass a stream of *nitrogen R* briskly through the solution for 5 min. Stopper the tube. Heat in a water-bath at 45 °C protected from light for 2 h 30 min. Allow to cool.

Plate *TLC silica gel F_{254} plate R*.

Mobile phase Add a mixture of 1.2 volumes of *water R* and 8 volumes of *methanol R* to a mixture of 15 volumes of *ether R* and 77 volumes of *methylene chloride R*.

Application 5 µl.

Development Over a path of 15 cm.

Drying In air.

Detection A Examine in ultraviolet light at 254 nm.

Results A The principal spot in each of the chromatograms obtained with the test solutions is similar in position and size to the principal spot in the chromatogram obtained with the corresponding reference solution.

Detection B Spray with *alcoholic solution of sulphuric acid R* and heat at 120 °C for 10 min or until the spots appear and allow to cool; examine in daylight and in ultraviolet light at 365 nm.

Results B The principal spot in each of the chromatograms obtained with the test solutions is similar in position, colour in daylight, fluorescence in ultraviolet light at 365 nm and size to the principal spot in the chromatogram obtained with the corresponding reference solution. The principal spots in the chromatograms obtained with test solution (b) and reference solution (b) have an R_F value distinctly lower than that of the principal spots in the chromatograms obtained with test solution (a) and reference solution (a).

D. Add about 2 mg to 2 ml of *sulphuric acid R* and shake to dissolve. Within 5 min an intense brownish-red colour develops with a green fluorescence which is particularly intense when viewed in ultraviolet light at 365 nm. Add this solution to 10 ml of *water R* and mix. The colour fades and the fluorescence in ultraviolet light does not disappear.

E. About 10 mg gives the reaction of acetyl *(2.3.1)*.

TESTS

Specific optical rotation *(2.2.7)*

+ 158 to + 167 (dried substance).

Dissolve 0.250 g in *dioxan R* and dilute to 25.0 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 25.0 mg of the substance to be examined in *methanol R* and dilute to 10.0 ml with the same solvent.

Reference solution (a) Dissolve 2 mg of *hydrocortisone acetate CRS* and 2 mg of *cortisone acetate R* in the mobile phase, then dilute to 100.0 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase.

Column:
- *size:* l = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase In a 1000 ml volumetric flask mix 400 ml of *acetonitrile R* with 550 ml of *water R* and allow to equilibrate; dilute to 1000 ml with *water R* and mix again.

Flow rate 1 ml/min.

Detection Spectrophotometer at 254 nm.

Equilibration With the mobile phase for about 30 min.

Injection 20 µl.

Run time 2.5 times the retention time of hydrocortisone acetate.

Retention time Hydrocortisone acetate = about 10 min; cortisone acetate = about 12 min.

System suitability Reference solution (a):

- *resolution*: minimum 4.2 between the peaks due to hydrocortisone acetate and cortisone acetate; if necessary, adjust the concentration of acetonitrile in the mobile phase.

Limits:
- *any impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent), and not more than one such peak has an area greater than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *total*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.5 per cent);
- *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 0.500 g by drying in an oven at 105 °C.

ASSAY

Dissolve 0.100 g in *ethanol (96 per cent) R* and dilute to 100.0 ml with the same solvent. Dilute 2.0 ml of this solution to 100.0 ml with *ethanol (96 per cent) R*. Measure the absorbance *(2.2.25)* at the absorption maximum at 241.5 nm.

Calculate the content of $C_{23}H_{32}O_6$ taking the specific absorbance to be 395.

STORAGE

Protected from light.

DEFINITION

11β,17-Dihydroxy-3,20-dioxopregn-4-en-21-yl hydrogen butanedioate.

Content

97.0 per cent to 103.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, hygroscopic powder.

Solubility

Practically insoluble in water, freely soluble in acetone and in anhydrous ethanol. It dissolves in dilute solutions of alkali carbonates and alkali hydroxides.

IDENTIFICATION

First identification *A, B.*

Second identification *C, D.*

A. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Dry the substances before use at 100-105 °C for 3 h.

Comparison *hydrocortisone hydrogen succinate CRS.*

B. Thin-layer chromatography *(2.2.27)*.

Solvent mixture *methanol R*, *methylene chloride R* (1:9 *V/V*).

Test solution Dissolve 10 mg of the substance to be examined in the solvent mixture and dilute to 10 ml with the solvent mixture.

Reference solution (a) Dissolve 20 mg of *hydrocortisone hydrogen succinate CRS* in the solvent mixture and dilute to 20 ml with the solvent mixture.

Reference solution (b) Dissolve 10 mg of *methylprednisolone hydrogen succinate CRS* in reference solution (a) and dilute to 10 ml with reference solution (a).

Plate *TLC silica gel F_{254} plate R*.

Mobile phase *anhydrous formic acid R*, *anhydrous ethanol R*, *methylene chloride R* (0.1:1:15 *V/V/V*).

Application 5 µl.

Development Over a path of 15 cm.

Drying In air.

Detection A Examine in ultraviolet light at 254 nm.

Results A The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

Detection B Spray with *alcoholic solution of sulphuric acid R*. Heat at 120 °C for 10 min or until the spots appear. Allow to cool. Examine in daylight and in ultraviolet light at 365 nm.

Results B The principal spot in the chromatogram obtained with the test solution is similar in position, colour in daylight, fluorescence in ultraviolet light at 365 nm and size to the principal spot in the chromatogram obtained with reference solution (a).

System suitability Reference solution (b):

— the chromatogram shows 2 spots which may, however, not be completely separated.

C. Thin-layer chromatography *(2.2.27)*.

Test solution (a) Dissolve 25 mg of the substance to be examined in *methanol R* with gentle heating and dilute to 5 ml with the same solvent (solution A). Dilute 2 ml of this solution to 10 ml with *methylene chloride R*.

Test solution (b) Transfer 2 ml of solution A to a 15 ml glass tube with a ground-glass stopper or a polytetrafluoroethylene cap. Add 10 ml of a 0.8 g/l solution of *sodium hydroxide R* in *methanol R* and immediately pass a stream of *nitrogen R* briskly through the solution for 5 min. Stopper the tube. Heat in a water-bath at 45 °C, protected from light, for 30 min. Allow to cool.

Reference solution (a) Dissolve 25 mg of *hydrocortisone hydrogen succinate CRS* in *methanol R* with gentle heating and dilute to 5 ml with the same solvent (solution B). Dilute 2 ml of this solution to 10 ml with *methylene chloride R*.

Reference solution (b) Transfer 2 ml of solution B to a 15 ml glass tube with a ground-glass stopper or a polytetrafluoroethylene cap. Add 10 ml of a 0.8 g/l solution of *sodium hydroxide R* in *methanol R* and immediately pass a stream of *nitrogen R* briskly through the solution for 5 min. Stopper the tube. Heat in a water-bath at 45 °C, protected from light, for 30 min. Allow to cool.

Plate *TLC silica gel F_{254} plate R*.

Mobile phase Add a mixture of 1.2 volumes of *water R* and 8 volumes of *methanol R* to a mixture of 15 volumes of *ether R* and 77 volumes of *methylene chloride R*.

Application 5 µl.

Developement Over a path of 15 cm.

Drying In air.

Detection A Examine in ultraviolet light at 254 nm.

Results A The principal spot in each of the chromatograms obtained with the test solutions is similar in position and size to the principal spot in the chromatogram obtained with the corresponding reference solution.

Detection B Spray with *alcoholic solution of sulphuric acid R.* Heat at 120 °C for 10 min or until the spots appear. Allow to cool. Examine in daylight and in ultraviolet light at 365 nm

Results B The principal spot in each of the chromatograms obtained with the test solutions is similar in position, colour in daylight, fluorescence in ultraviolet light at 365 nm and size to the principal spot in the chromatogram obtained with the corresponding reference solution. The principal spot in each of the chromatograms obtained with test solution (b) and reference solution (b) has an R_F value distinctly higher than that of the principal spot in each of the chromatograms obtained with test solution (a) and reference solution (a).

D. Add about 2 mg to 2 ml of *sulphuric acid R* and shake to dissolve. Within 5 min, an intense brownish-red colour develops with a green fluorescence which is particularly intense when viewed in ultraviolet light at 365 nm. Add this solution to 10 ml of *water R* and mix. The colour fades and a clear solution remains. The fluorescence in ultraviolet light does not disappear.

TESTS

Appearance of solution

The solution is clear *(2.2.1)*.

Dissolve 0.10 g in 5 ml of *sodium hydrogen carbonate solution R*.

Specific optical rotation *(2.2.7)*

+ 147 to + 153 (dried substance).

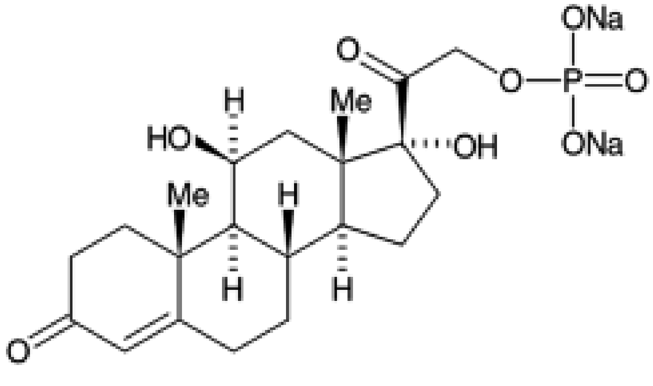
Ph Eur

Hydrocortisone Sodium Phosphate

General Notices



$C_{21}H_{29}Na_2O_8P$ 486.4 *6000-74-4*

Action and use

Corticosteroid.

Preparations

Hydrocortisone Sodium Phosphate Injection

Hydrocortisone Sodium Phosphate Oral Solution

DEFINITION

Hydrocortisone Sodium Phosphate is disodium 11β,17α-dihydroxy-3,20-dioxopregn-4-en-21-yl orthophosphate. It contains not less than 96.0% and not more than 103.0% of $C_{21}H_{29}Na_2O_8P$, calculated with reference to the anhydrous substance.

CHARACTERISTICS

A white or almost white powder; hygroscopic.

Freely soluble in *water*; practically insoluble in *absolute ethanol* .

IDENTIFICATION

Test A may be omitted if tests B, C and D are carried out. Tests B and C may be omitted if tests A and D are carried out.

A. The *infrared absorption spectrum*, Apppendix II A, is concordant with the *reference spectrum* of hydrocortisone sodium phosphate (*RS 386*).

B. Carry out the method for *thin-layer chromatography*, Appendix III A, using *silica gel G* as the coating substance and a freshly prepared mixture of 60 volumes of *butan-1-ol*, 20 volumes of *acetic anhydride* and 20 volumes of *water* as the mobile phase. Apply separately to the plate 2 µl of each of the following solutions. Solution (1) contains 0.25% w/v of the substance being examined in *methanol*. Solution (2) contains 0.25% w/v of *hydrocortisone sodium phosphate BPCRS* in *methanol*. Solution (3) is a mixture of equal volumes of solutions (1) and (2). Solution (4) is a mixture of equal volumes of solution (1) and a 0.25% w/v solution of *betamethasone sodium phosphate BPCRS* in *methanol*. After removal of the plate, allow it to dry in air until the solvent has evaporated, spray with *ethanolic sulphuric acid (20%)*, heat at 120° for 10 minutes and examine under *ultraviolet light (365 nm)*. The principal spot in the chromatogram obtained with solution (1) corresponds to that in the chromatogram obtained with solution (2). The principal spot in the chromatogram obtained with solution (3) appears as a single, compact spot and the chromatogram obtained with solution (4) shows two principal spots with almost identical R_f values.

C. Dissolve 2 mg in 2 ml of *sulphuric acid*. A yellowish green fluorescence is produced immediately (distinction from betamethasone sodium phosphate, dexamethasone sodium phosphate and prednisolone sodium phosphate).

D. Heat gently 40 mg with 2 ml of *sulphuric acid* until white fumes are evolved, add *nitric acid* dropwise until oxidation is complete and cool. Add 2 ml of *water*, heat until white fumes are again evolved, cool, add 10 ml of *water* and neutralise to *litmus paper* with 5M *ammonia*. The resulting solution yields reaction A characteristic of *sodium salts* and reaction B characteristic of *phosphates*, Appendix VI.

TESTS

Alkalinity

pH of a 0.5% w/v solution, 7.5 to 9.0, Appendix V L.

Specific optical rotation

In a 1% w/v solution, +121 to +129, calculated with reference to the anhydrous substance, Appendix V F.

Inorganic phosphate

Dissolve 25 mg in 10 ml of *water*, add 4 ml of 1M *sulphuric acid*, 1 ml of a 10% w/v solution of *ammonium molybdate* and 2 ml of *methylaminophenol-sulphite reagent* and allow to stand for 15 minutes. Add sufficient *water* to produce 25 ml and allow to stand for a further 15 minutes. The *absorbance* of a 4-cm layer of the resulting solution at 730 nm, Appendix II B, is not more than that of a 4-cm layer of a solution prepared by treating 10 ml of a 0.0036% w/v solution of *potassium dihydrogen orthophosphate* in the same manner, beginning at the words 'add 4 ml …'.

Related substances

Carry out the method for *thin-layer chromatography*, Appendix III A, using *silica gel* GF_{254} as the coating substance and a mixture of 77 volumes of *dichloromethane*, 15 volumes of *ether*, 8 volumes of *methanol* and 1.2 volumes of *water* as the mobile phase. Apply separately to the plate 2 µl of each of three solutions in *methanol* containing (1) 1.0% w/v of the substance being examined, (2) 1.0% w/v of *hydrocortisone sodium phosphate BPCRS* and (3) 0.020% w/v of *hydrocortisone BPCRS*. After removal of the plate, allow it to dry in air for 5 minutes and examine under *ultraviolet light (254 nm)*. Any *secondary spot* in the chromatogram obtained with solution (1) is not more intense than the spot in the chromatogram obtained with solution (3) (2%).

Water

Not more than 10.0%, Appendix IX C. Use 0.4 g.

ASSAY

Dissolve 0.1 g in sufficient *water* to produce 200 ml. Dilute 5 ml to 100 ml with *water* and measure the *absorbance* of the resulting solution at the maximum at 248 nm, Appendix II B. Calculate the content of $C_{21}H_{29}Na_2O_8P$ taking 333 as the value of A(1%, 1 cm) at the maximum at 248 nm.

STORAGE

Hydrocortisone Sodium Phosphate should be protected from light.

DEFINITION

Hydrocortisone contains not less than 97.0 per cent and not more than the equivalent of 103.0 per cent of 11β,17,21-trihydroxypregn-4-ene-3,20-dione, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder, practically insoluble in water, sparingly soluble in acetone and in alcohol, slightly soluble in methylene chloride.

It shows polymorphism *(5.9)*.

IDENTIFICATION

First identification A, B.

Second identification C, D.

A. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *hydrocortisone CRS*. If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *acetone R*, evaporate to dryness on a water-bath and record new spectra using the residues.

B. Examine by thin-layer chromatography *(2.2.27)*, using as the coating substance a suitable silica gel with a fluorescent indicator having an optimal intensity at 254 nm.

Test solution Dissolve 10 mg of the substance to be examined in a mixture of 1 volume of *methanol R* and 9 volumes of *methylene chloride R* and dilute to 10 ml with the same mixture of solvents.

Reference solution (a) Dissolve 20 mg of *hydrocortisone CRS* in a mixture of 1 volume of *methanol R* and 9 volumes of *methylene chloride R* and dilute to 20 ml with the same mixture of solvents.

Reference solution (b) Dissolve 10 mg of *prednisolone CRS* in reference solution (a) and dilute to 10 ml with reference solution (a).

Apply to the plate 5 µl of each solution. Prepare the mobile phase by adding a mixture of 1.2 volumes of *water R* and 8 volumes of *methanol R* to a mixture of 15 volumes of *ether R* and 77 volumes of *methylene chloride R.* Develop over a path of 15 cm. Carry out a second development over a path of 15 cm using a mixture of 5 volumes of *butanol R* saturated with *water R*, 15 volumes of *toluene R* and 80 volumes of *ether R*. Allow the plate to dry in air. Examine in ultraviolet light at 254 nm. The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a). Spray with *alcoholic solution of sulphuric acid R*. Heat at 120 °C for 10 min or until the spots appear. Allow to cool. Examine the chromatograms in daylight and in ultraviolet light at 365 nm. The principal spot in the chromatogram obtained with the test solution is similar in position, colour in daylight, fluorescence in ultraviolet light at 365 nm and size to the principal spot in the chromatogram obtained with reference solution (a). The test is not valid unless the chromatogram obtained with reference solution (b) shows two clearly separated spots.

C. Examine by thin-layer chromatography *(2.2.27)*, using as the coating substance a suitable silica gel with a fluorescent indicator having an optimal intensity at 254 nm.

Test solution (a) Dissolve 25 mg of the substance to be examined in *methanol R* and dilute to 5 ml with the same solvent. This solution is also used to prepare test solution (b). Dilute 2 ml of the solution to 10 ml with *methylene chloride R*.

Test solution (b) Transfer 0.4 ml of the solution obtained during preparation of test solution (a) to a glass tube 100 mm long and 20 mm in diameter and fitted with a ground-glass stopper or a polytetrafluoroethylene cap and evaporate the solvent with gentle heating under a stream of *nitrogen R*. Add 2 ml of a 15 per cent *V/V* solution of *glacial acetic acid R* and 50 mg of *sodium bismuthate R*. Stopper the tube and shake the suspension for 1 h in a mechanical shaker, protected from light. Add 2 ml of a 15 per cent *V/V* solution of *glacial acetic acid R* and filter into a 50 ml separating funnel, washing the filter with two quantities, each of 5 ml, of *water R*. Shake the clear filtrate with 10 ml of *methylene chloride R.* Wash the organic layer with 5 ml of *1 M sodium hydroxide* and two quantities, each of 5 ml, of *water R*. Dry over *anhydrous sodium sulphate R*.

Reference solution (a) Dissolve 25 mg of *hydrocortisone CRS* in *methanol R* and dilute to 5 ml with the same solvent. This solution is also used to prepare reference solution (b). Dilute 2 ml of the solution to 10 ml with *methylene chloride R*.

Reference solution (b) Transfer 0.4 ml of the solution obtained during preparation of reference solution (a) to a glass tube 100 mm long and 20 mm in diameter and fitted with a ground-glass stopper or a polytetrafluoroethylene cap and evaporate the solvent with gentle heating under a stream of *nitrogen R.* Add 2 ml of a 15 per cent *V/V* solution of *glacial acetic acid R* and 50 mg of *sodium bismuthate R*. Stopper the tube and shake the suspension for 1 h in a mechanical shaker protected from light. Add 2 ml of a 15 per cent *V/V* solution of *glacial acetic acid R* and filter into a 50 ml separating funnel, washing the filter with two quantities, each of 5 ml, of *water R*. Shake the clear filtrate with 10 ml of *methylene chloride R*. Wash the organic layer with 5 ml of *1 M sodium hydroxide* and two quantities, each of 5 ml, of *water R*. Dry over *anhydrous sodium sulphate R.*

Apply to the plate 5 µl of test solution (a), 5 µl of reference solution (a), 25 µl of test solution (b) and 25 µl of reference solution (b), applying the latter two in small quantities to obtain small spots. Prepare the mobile phase by adding a mixture of 1.2 volumes of *water R* and 8 volumes of *methanol R* to a mixture of 15 volumes of *ether R* and 77 volumes of *methylene chloride R.* Develop over a path of 15 cm. Carry out a second development over a path of 15 cm using a mixture of 5 volumes of *butanol R* saturated with *water R*, 15 volumes of *toluene R* and 80 volumes of *ether R*. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. The principal spot in each of the chromatograms obtained with the test solutions is similar in position and size to the principal spot in the chromatogram obtained with the corresponding reference solution. Spray with *alcoholic solution of sulphuric acid R* and heat at 120 °C for 10 min or until the spots appear. Allow to cool. Examine the plate in daylight and in ultraviolet light at 365 nm. The principal spot in each of the chromatograms obtained with the test solutions is similar in position, colour in daylight, fluorescence in ultraviolet light at 365 nm and size to the principal spot in the chromatogram obtained with the corresponding reference solution. The principal spots in the chromatograms obtained with test solution (b) and reference solution (b) have an R_F value distinctly higher than that of the principal spots in the chromatograms obtained with test solution (a) and reference solution (a).

D. Add about 2 mg to 2 ml of *sulphuric acid R* and shake to dissolve. Within 5 min, an intense brownish-red colour develops with a green fluorescence which is particularly intense when examined in ultraviolet light at 365 nm. Add the solution to 10 ml of *water R* and mix. The colour fades and a clear solution remains. The fluorescence in ultraviolet light does not disappear.

TESTS

Specific optical rotation *(2.2.7)*

Dissolve 0.250 g in *dioxan R* and dilute to 25.0 ml with the same solvent. The specific optical rotation is + 150 to + 156, calculated with reference to the dried substance.

Related substances

Examine by liquid chromatography *(2.2.29)*. *Prepare the solutions immediately before use.*

Test solution Dissolve 25.0 mg of the substance to be examined in 2 ml of *tetrahydrofuran R* and dilute to 10.0 ml with *water R*.

Reference solution (a) Dissolve 2 mg of *hydrocortisone CRS* and 2 mg of *prednisolone CRS* in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase.

The chromatographic procedure may be carried out using:

— a stainless steel column 0.25 m long and 4.6 mm in internal diameter packed with *base-deactivated end-capped octadecylsilyl silica gel for chromatography R* (5 µm),

— as mobile phase at a flow rate of 1 ml/min a mixture prepared as follows: in a 1000 ml volumetric flask mix 220 ml of *tetrahydrofuran R* with 700 ml of *water R* and allow to equilibrate; dilute to 1000 ml with *water R* and mix again,

— as detector a spectrophotometer set at 254 nm, maintaining the temperature of the column at 45 °C.

Equilibrate the column with the mobile phase at a flow rate of 1 ml/min for about 30 min.

Adjust the sensitivity of the system so that the height of the principal peak in the chromatogram obtained with 20 µl of reference solution (b) is at least 50 per cent of the full scale of the recorder.

Inject 20 µl of reference solution (a). When the chromatograms are recorded in the prescribed conditions, the retention times are: prednisolone about 14 min and hydrocortisone about 15.5 min. The test is not valid unless the resolution between the peaks due to prednisolone and hydrocortisone is at least 2.2. If necessary, adjust the concentration of *tetrahydrofuran R* in the mobile phase.

Inject separately 20 µl of the solvent mixture of the test solution as a blank, 20 µl of the test solution and 20 µl of reference solution (b). Continue the chromatography of the test solution for four times the retention time of the principal peak. In the chromatogram obtained with the test solution: the area of any peak, apart from the principal peak, is not greater than half the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent): the sum of the areas of all the peaks, apart from the principal peak, is not greater than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.5 per cent). Disregard any peak obtained with the blank run and any peak with an area less than 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b).

Loss on drying *(2.2.32)*

Not more than 1.0 per cent, determined on 0.500 g by drying in an oven at 105 °C.

ASSAY

Dissolve 0.100 g in *alcohol R* and dilute to 100.0 ml with the same solvent. Dilute 2.0 ml of the solution to 100.0 ml with *alcohol R*. Measure the absorbance *(2.2.25)* at the maximum at 241.5 nm.

Calculate the content of $C_{21}H_{30}O_5$ taking the specific absorbance to be 440.

STORAGE

Store protected from light.

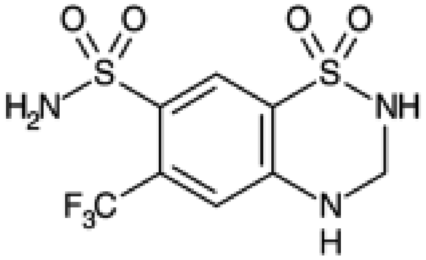
Hydroflumethiazide

General Notices



$C_8H_8F_3N_3O_4S_2$ 331.3 *135-09-1*

Action and use

Thiazide diuretic.

Preparation

Hydroflumethiazide Tablets

DEFINITION

Hydroflumethiazide is 3,4-dihydro-6-trifluoromethyl-2*H*-1,2,4-benzothiadiazine-7sulphonamide 1,1-dioxide. It contains not less than 98.0% and not more than 102.0% of $C_8H_8F_3N_3O_4S_2$, calculated with reference to the dried substance.

CHARACTERISTICS

White or almost white, glistening crystals or crystalline powder.

Practically insoluble in *water*; soluble in *ethanol (96%)*; practically insoluble in *ether*.

IDENTIFICATION

A. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of hydroflumethiazide *(RS 181)*.

B. Dissolve 10 mg in 10 ml of 0.1M *sodium hydroxide*, add sufficient *water* to produce 100 ml and dilute 10 ml to 50 ml with 0.01M *sodium hydroxide*. The *light absorption* of the resulting solution, Appendix II B, in the range 230 to 350 nm exhibits two maxima, at 274 nm and 333 nm. The *absorbance* at the maxima is about 0.92 and about 0.19 respectively.

C. Carry out the method for *thin-layer chromatography*, Appendix III A, using *silica gel* GF_{254} as the coating substance and *ethyl acetate* as the mobile phase. Apply separately to the plate 5 µl of each of two solutions in *acetone* containing (1) 0.1% w/v of the substance being examined and (2) 0.1% w/v of *hydroflumethiazide BPCRS*. After removal of the plate, dry it in a current of air, examine under *ultraviolet light (254 nm)* and then reveal the spots by

Method I and examine again. By each method of visualisation the principal spot in the chromatogram obtained with solution (1) corresponds in colour and intensity to that in the chromatogram obtained with solution (2).

TESTS

Related substances

Carry out the method for *thin-layer chromatography*, Appendix III A, using *silica gel G* as the coating substance and *ethyl acetate* as the mobile phase. Apply separately to the plate 10 µl of each of two solutions of the substance being examined in *acetone* containing (1) 1.0% w/v and (2) 0.010% w/v. After removal of the plate, dry it in a current of air and reveal the spots by *Method I*. Any *secondary spot* in the chromatogram obtained with solution (1) is not more intense than the spot in the chromatogram obtained with solution (2).

Loss on drying

When dried to constant weight at 105°C, loses not more than 0.5% of its weight. Use 1 g.

Sulphated ash

Not more than 0.1%, Appendix IX A.

ASSAY

Dissolve 0.3 g in 50 ml of *anhydrous pyridine* and carry out Method II for *non-aqueous titration*, Appendix VIII A, using 0.1M *tetrabutylammonium hydroxide VS* as titrant and determining the end point potentiometrically. Each ml of 0.1M *tetrabutylammonium hydroxide VS* is equivalent to 16.56 mg of $C_8H_8F_3N_3O_4S_2$.

Hydrogen Peroxide Solution (3 per cent)

General Notices

Dilute Hydrogen Peroxide Solution
(Ph Eur monograph 0395)

Action and use

Antiseptic; deodorant.

When hydrogen peroxide is prescribed or demanded, Hydrogen Peroxide Solution (6 per cent) shall be dispensed or supplied.

Ph Eur

DEFINITION

Content

2.5 per cent *m/m* to 3.5 per cent *m/m* of H_2O_2 (M_r 34.01).

1 volume of hydrogen peroxide solution (3 per cent) corresponds to about 10 times its volume of oxygen. A suitable stabiliser may be added.

CHARACTERS

Appearance

Colourless, clear liquid.

IDENTIFICATION

A. To 2 ml add 0.2 ml of *dilute sulphuric acid R* and 0.2 ml of *0.02 M potassium permanganate*. The solution becomes colourless or slightly pink within 2 min.

B. To 0.5 ml add 1 ml of *dilute sulphuric acid R*, 2 ml of *ether R* and 0.1 ml of *potassium chromate solution R* and shake. The ether layer is blue.

C. It complies with the requirement for the content of H_2O_2.

TESTS

Acidity

To 10 ml add 20 ml of *water R* and 0.25 ml of *methyl red solution R*. Not less than 0.05 ml and not more than 1.0 ml of *0.1 M sodium hydroxide* is required to change the colour of the indicator.

Organic stabilisers

Maximum 250 ppm.

Shake 20 ml with 10 ml of *chloroform R* and then with 2 quantities, each of 5 ml, of *chloroform R*. Evaporate the combined chloroform layers under reduced pressure at a temperature not exceeding 25 °C and dry in a desiccator. The residue weighs a maximum of 5 mg.

Non-volatile residue

Maximum 2 g/l.

Allow 10 ml to stand in a platinum dish until all effervescence has ceased. Evaporate to dryness on a water-bath and dry at 100-105 °C. The residue weighs a maximum of 20 mg.

ASSAY

Dilute 10.0 g to 100.0 ml with *water R*. To 10.0 ml of this solution add 20 ml of *dilute sulphuric acid R*. Titrate with *0.02 M potassium permanganate* until a pink colour is obtained.

1 ml of *0.02 M potassium permanganate* is equivalent to 1.701 mg of H_2O_2 or 0.56 ml of oxygen.

STORAGE

Protected from light, and if the solution does not contain a stabiliser, at a temperature below 15 °C.

LABELLING

If the solution contains a stabiliser, the label states that the contents are stabilised. The competent authority may require that the name of the stabiliser be stated on the label.

CAUTION

It decomposes in contact with oxidisable organic matter and with certain metals and if allowed to become alkaline.

Ph Eur

Hydrogen Peroxide Solution (30 per cent)

General Notices

(Ph Eur monograph 0396)

7722-84-1

Action and use

Antiseptic; deodorant.

When hydrogen peroxide is prescribed or demanded, Hydrogen Peroxide Solution (6 per cent) shall be dispensed or supplied.

Ph Eur

DEFINITION

Content

29.0 per cent *m/m* to 31.0 per cent *m/m* of H_2O_2 (M_r 34.01).

1 volume of hydrogen peroxyde solution (30 per cent) corresponds to about 110 times its volume of oxygen. A suitable stabiliser may be added.

CHARACTERS

Appearance

Colourless, clear liquid.

IDENTIFICATION

A. To 1 ml add 0.2 ml of *dilute sulphuric acid R* and 0.25 ml of *0.02 M potassium permanganate*. The solution becomes colourless with evolution of gas.

B. To 0.05 ml add 2 ml of *dilute sulphuric acid R*, 2 ml of *ether R* and 0.05 ml of *potassium chromate solution R* and shake. The ether layer is blue.

C. It complies with the requirement for the content of H_2O_2.

TESTS

Acidity

To 10 ml add 100 ml of *water R* and 0.25 ml of *methyl red solution R*. Not less than 0.05 ml and not more than 0.5 ml of *0.1 M sodium hydroxide* is required to change the colour of the indicator.

Organic stabilisers

Maximum 500 ppm.

Shake 20 ml with 10 ml of *chloroform R* and then with 2 quantities, each of 5 ml, of *chloroform R*. Evaporate the combined chloroform layers under reduced pressure at a temperature not exceeding 25 °C and dry in a desiccator. The residue weighs a maximum of 10 mg.

Non-volatile residue

Maximum 2 g/l.

Allow 10 ml to stand in a platinum dish until all effervescence has ceased, cooling if necessary. Evaporate to dryness on a water-bath and dry at 100-105 °C. The residue weighs a maximum of 20 mg.

ASSAY

Dilute 1.00 g to 100.0 ml with *water R*. To 10.0 ml of this solution add 20 ml of *dilute sulphuric acid R*. Titrate with *0.02 M potassium permanganate* until a pink colour is obtained.

1 ml of *0.02 M potassium permanganate* is equivalent to 1.701 mg of H_2O_2 or 0.56 ml of oxygen.

STORAGE

Protected from light, and if the solution does not contain a stabiliser, at a temperature below 15 °C.

LABELLING

If the solution contains a stabiliser, the label states that the contents are stabilised. The competent authority may require that the name of the stabiliser be stated on the label.

CAUTION

It decomposes vigorously in contact with oxidisable organic matter and with certain metals and if allowed to become alkaline.

Ph Eur

Hydrogen Peroxide Solution (6 per cent)

General Notices

Hydrogen Peroxide Solution

Action and use

Antiseptic; deodorant.

Preparation

Hydrogen Peroxide Mouthwash

When hydrogen peroxide is prescribed or demanded, Hydrogen Peroxide Solution (6 per cent) shall be dispensed or supplied.

DEFINITION

Hydrogen Peroxide Solution (6 per cent) is an aqueous solution of hydrogen peroxide containing not less than 5.0% w/v and not more than 7.0% w/v of H_2O_2 (34.01), corresponding to about 20 times its volume of available oxygen. It may contain a suitable stabilising agent.

CHARACTERISTICS

A clear, colourless liquid. It decomposes in contact with oxidisable organic matter and with certain metals and if allowed to become alkaline.

IDENTIFICATION

A. To 1 ml add 0.2 ml of 1M *sulphuric acid* and 0.25 ml of 0.02M *potassium permanganate*. The solution becomes colourless with evolution of gas.

B. Shake 0.05 ml with 2 ml of 1M *sulphuric acid*, 2 ml of *ether* and 0.05 ml of *potassium chromate solution*. The ether layer is blue.

C. Complies with the requirement for the content of H_2O_2.

TESTS

Acidity

Dilute 10 ml with 20 ml of *water* and add 0.25 ml of *methyl red solution*. Not less than 0.05 ml and not more than 1.0 ml of 0.1M *sodium hydroxide VS* is required to change the colour of the solution.

Organic stabilisers

Shake 20 ml with successive quantities of 10, 5 and 5 ml of *chloroform*. Evaporate the combined chloroform extracts at a temperature not exceeding 25° at a pressure of 2 kPa and dry in a desiccator. Any residue weighs not more than 5 mg (250 ppm).

Non-volatile matter

Place 10 ml in a platinum dish and allow to stand until effervescence has ceased, cooling if necessary. Evaporate the solution on a water bath. Any residue, when dried at 100°C to 105°C, weighs not more than 20 mg (0.2% w/v).

ASSAY

Dilute 10 ml to 100 ml with *water*. To 10 ml of the resulting solution add 20 ml of 1M *sulphuric acid* and titrate with 0.02M *potassium permanganate VS*. Each ml of 0.02M *potassium permanganate VS* is equivalent to 1.701 mg of H_2O_2 or 0.56 ml of oxygen.

STORAGE

Hydrogen Peroxide Solution (6 per cent) should be protected from light. If the solution does not contain a stabilising agent, it should be stored at a temperature not exceeding 15°C. It should not be stored for long periods.

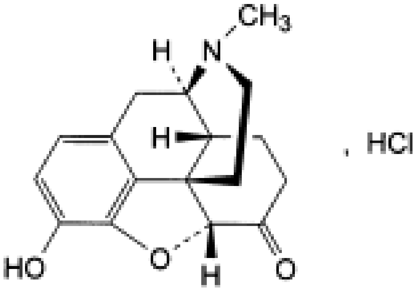
LABELLING

The label states, where applicable, that the solution contains a stabilising agent.

Hydromorphone Hydrochloride

General Notices

(Ph Eur monograph 2099)



$C_{17}H_{19}NO_3,HCl$ 321.8   *71-68-1*

Action and use

Opioid receptor agonist; analgesic.

Ph Eur

DEFINITION

4,5α-Epoxy-3-hydroxy-17-methylmorphinan-6-one hydrochloride.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water, very slightly soluble in ethanol (96 per cent), practically insoluble in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison   hydromorphone hydrochloride CRS.

B. It gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Solution S

Dissolve 1.250 g in *carbon dioxide-free water R* and dilute to 25.0 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution BY_5 *(2.2.2, Method II)*.

Acidity or alkalinity

To 2 ml of solution S add 0.1 ml of *methyl red solution R*. The solution is not yellow. To 2 ml of solution S add 0.05 ml of *bromocresol green solution R*. The solution is not yellow.

Specific optical rotation *(2.2.7)*

- 136 to - 140 (dried substance), determined on solution S.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 0.100 g of the substance to be examined in *water R*, sonicating if necessary and dilute to 100.0 ml with the same solvent.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with *water R*. Dilute 1.0 ml of this solution to 10.0 ml with *water R*.

Reference solution (b) To 5 ml of the test solution add 5 mg of *naloxone hydrochloride dihydrate CRS* and dilute to 50 ml with *water R*.

Column:
— *size:* *l* = 0.25 m, Ø = 4.6 mm,

— *stationary phase*: *base-deactivated end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Dissolve 18.29 g of *diethylamine R* and 2.88 g of *sodium laurilsulfate R* in *water R* and dilute to 1000 ml with the same solvent. Adjust 800 ml of this solution to pH 3.0 with *phosphoric acid R.* Add 100 ml of *acetonitrile R* and 100 ml of *methanol R.*

Flow rate 1 ml/min.

Detection Spectrophotometer at 284 nm.

Injection 20 µl.

Run time 4 times the retention time of hydromorphone.

Relative retention with reference to hydromorphone (retention time = about 9 min): impurity D = about 0.72; impurity B = about 0.77; impurity C = about 0.82; impurity A = about 3.2.

System suitability Reference solution (b):

— *resolution*: minimum 4.0 between the peaks due to hydromorphone and naloxone.

Limits:
— *impurity A*: not more than 3 times the area of the principal peak in the chromatogram

obtained with reference solution (a) (0.3 per cent),

— *impurities B, C, D*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent),

— *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),

— *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent),

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Loss on drying ***(2.2.32)***

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on the residue obtained in the test for loss on drying.

ASSAY

Dissolve 0.250 g in 50 ml of *ethanol (96 per cent) R* and add 5.0 ml of *0.01 M hydrochloric acid*. Carry out a potentiometric titration *(2.2.20)*, using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

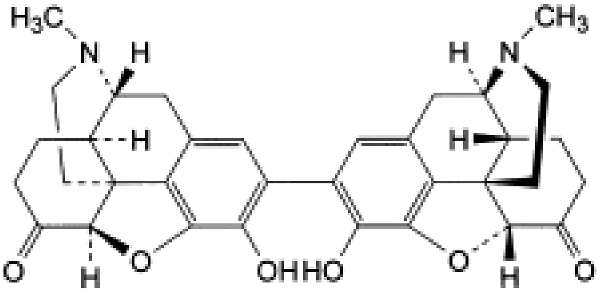
1 ml of *0.1 M sodium hydroxide* is equivalent to 32.18 mg of $C_{17}H_{20}ClNO_3$.

STORAGE

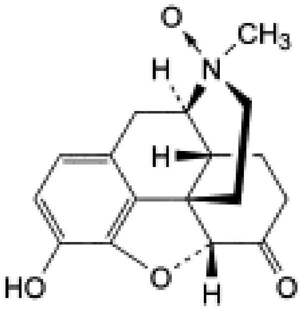
Protected from light.

IMPURITIES

Specified impurities A, B, C, D.

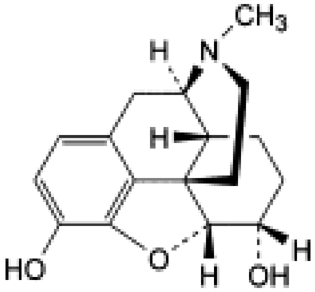


A. 4,5α:4′,5′α-diepoxy-3,3′-dihydroxy-17,17′-dimethyl-2,2′-bimorphinanyl-6,6′-dione (pseudohydromorphone),



B. 4,5α-epoxy-3-hydroxy-17-methylmorphinan-6-one 17-oxide (hydromorphone *N*-oxide),

C. morphine,



D. 4,5α-epoxy-17-methylmorphinan-3,6α-diol (dihydromorphine).

Ph Eur

Hydrotalcite

General Notices

$Mg_6Al_2(OH)_{16}CO_3,4H_2O$ 604.0 *12304-65-3*

Action and use

Antacid.

Preparation

Hydrotalcite Tablets

DEFINITION

Hydrotalcite is a hydrated form of an aluminium magnesium basic carbonate corresponding to the formula $Mg_6Al_2(OH)_{16}CO_3,4H_2O$. It contains not less than 15.3% and not more than 18.7% of Al_2O_3 and not less than 36.0% and not more than 44.0% of MgO. The ratio of the content of Al_2O_3 to the content of MgO is not less than 0.40 and not more than 0.45.

CHARACTERISTICS

A white or almost white, free-flowing, granular powder.

Practically insoluble in *water*. It dissolves in dilute mineral acids with slight effervescence.

IDENTIFICATION

A. Dissolve 1.0 g in 20 ml of 2M *hydrochloric acid*. Effervescence occurs. Add 30 ml of *water*, boil, add 2M *ammonia* until just alkaline to *methyl red solution*, continue boiling for 2 minutes and filter, reserving the filtrate for test B. Wash the precipitate with 50 ml of a hot 2% w/v solution of *ammonium chloride* and dissolve in 15 ml of 2M *hydrochloric acid*. The resulting solution yields the reaction characteristic of *aluminium salts*, Appendix VI.

B. Dilute 1 ml of the filtrate obtained in test A to 10 ml with *water*. The resulting solution yields the reactions characteristic of *magnesium salts*, Appendix VI.

TESTS

Alkalinity

pH of a 4% w/v suspension in *carbon dioxide-free water*, 8.0 to 10.0, Appendix V L.

Neutralising capacity

Mix 0.2 g with a small quantity of *water* to give a smooth paste and gradually add sufficient further quantities of *water* to produce 100 ml. Warm at 37°, add 100 ml of 0.1M *hydrochloric acid VS* previously heated to 37° and stir continuously for 1 hour using a paddle stirrer at a rate of about 200 revolutions per minute, maintaining the temperature at 37°, and titrate with 0.1M *sodium hydroxide VS* to pH 3.5. Subtract the volume of 0.1M *sodium hydroxide VS* from 100 ml to obtain the number of ml of 0.1M *hydrochloric acid VS* required for neutralisation. Not less than 260 ml of 0.1M *hydrochloric acid VS* is required to neutralise 1 g.

Arsenic

Dissolve 0.33 g in 5 ml of 2M *hydrochloric acid*. The resulting solution complies with the *limit test for arsenic*, Appendix VII (3 ppm).

Heavy metals

Dissolve 2.7 g in 20 ml of 5M *hydrochloric acid* and 10 ml of *water*, add 0.5 ml of *nitric acid* and boil for 30 seconds. Cool, add 2 g of *ammonium chloride* and 2 g of *ammonium thiocyanate* and extract with three 10 ml quantities of a mixture of equal volumes of *isoamyl alcohol* and *ether*. Add to the aqueous layer 0.1 ml of *phenolphthalein solution* and 13.5M *ammonia* until a pink colour is produced. Cool, add *glacial acetic acid* until the solution is decolorised and add a further 5 ml of *glacial acetic acid*. Filter, if necessary, and dilute the solution to 40 ml with *water*. 12 ml of the resulting solution complies with *limit test A for heavy metals*, Appendix VII. Use *lead standard solution (2 ppm Pb)* to prepare the standard (30 ppm) .

Sodium

Not more than 0.1% of Na when determined by Method II for *atomic emission spectrophotometry*, Appendix II D, measuring at 589 nm. To prepare the test solution dissolve 0.1 g in 4 ml of 5M *hydrochloric acid*, dilute to 200 ml with *water* and use *sodium standard solution (200 ppm Na)*, diluted if necessary with 0.1M *hydrochloric acid*, to prepare the standard solutions.

Chloride

Dissolve 0.18 g in 10 ml of 2M *nitric acid*, boil, allow to cool and dilute to 100 ml with *water*. To 10 ml add 5 ml of *water*. The resulting solution complies with the *limit test for chlorides*, Appendix VII (0.3%).

Sulphate

Dissolve 0.14 g in 15 ml of 1M *hydrochloric acid* and dilute to 100 ml with *water*. 15 ml of the resulting solution complies with the *limit test for sulphates*, Appendix VII (0.7%).

Loss on ignition

When ignited at 800°, loses 40.0 to 50.0% of its weight. Use 1 g.

ASSAY

For Al_2O_3

Dissolve 0.3 g in 2 ml of 7M *hydrochloric acid*, add 250 ml of *water* and 50 ml of 0.05M *disodium edetate VS* and neutralise with 1M *sodium hydroxide* using *methyl red solution* as indicator. Heat the solution on a water bath for 30 minutes and allow to cool. Add 3 g of *hexamine* and titrate the excess of disodium edetate with 0.05M *lead nitrate VS* using *xylenol orange solution* as indicator. Each ml of 0.05M *disodium edetate VS* is equivalent to 2.549 mg of Al_2O_3.

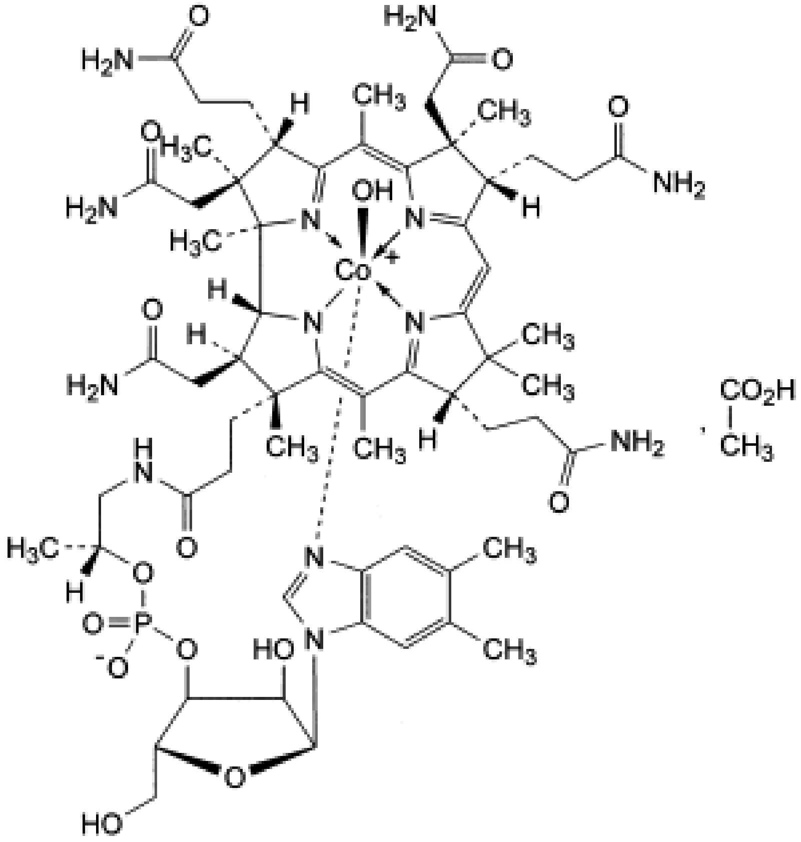
For MgO

Dissolve 0.125 g in the minimum volume of 7M *hydrochloric acid*, add 30 ml of *water*, 1 g of *ammonium chloride*, 10 ml of *triethanolamine*, 150 ml of *water* and 5 ml of *ammonia buffer pH 10.9* and titrate immediately with 0.05M *disodium edetate VS* using *mordant black 11 solution* as indicator. Each ml of 0.05M *disodium edetate VS* is equivalent to 2.015 mg of MgO.

Hydroxocobalamin Acetate

General Notices

(Ph Eur monograph 0913)



$C_{62}H_{89}CoN_{13}O_{15}P,C_2H_4O_2$ 1406 *22465-48-1*

Action and use

Vitamin B_{12} analogue.

Preparation

Hydroxocobalamin Injection

Ph Eur

DEFINITION

Coα-[α-(5,6-dimethylbenzimidazolyl)]-Coβ-hydroxocobamide acetate.

Content

96.0 per cent to 102.0 per cent (dried substance).

This monograph applies to hydroxocobalamin acetate produced by fermentation.

CHARACTERS

Appearance

Dark red, crystalline powder or dark red crystals, very hygroscopic.

Solubility

Soluble in water.

Some decomposition may occur on drying.

IDENTIFICATION

A. Ultraviolet and visible absorption spectrophotometry *(2.2.25)*.

Test solution Dissolve 2.5 mg in a solution containing 0.8 per cent *V/V* of *glacial acetic acid R* and 10.9 g/l of *sodium acetate R*, then dilute to 100 ml with the same solution.

Spectral range 260-610 nm.

Absorption maxima At 274 nm, 351 nm and 525 nm.

Absorbance ratio:

— A_{274}/A_{351} = 0.75 to 0.83;

— A_{525}/A_{351} = 0.31 to 0.35.

B. Thin-layer chromatography *(2.2.27)*. *Carry out the test protected from light.*

Test solution Dissolve 2 mg of the substance to be examined in 1 ml of a mixture of equal volumes of *ethanol 96 per cent R* and *water R*.

Reference solution Dissolve 2 mg of *hydroxocobalamin CRS* in 1 ml of a mixture of equal volumes of *ethanol 96 per cent R* and *water R*.

Plate *TLC silica gel G plate R.*

Mobile phase *Dilute ammonia R1*, *methanol R* (25:75 *V/V*).

Application 10 µl.

Development In an unlined tank, over a path of 12 cm.

Drying In air.

Detection Examine in daylight.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

C. It gives reaction (a) of acetates *(2.3.1)*.

TESTS

Related substances

Liquid chromatography *(2.2.29)*. *Use freshly prepared solutions and protect them from bright light.*

Test solution Dissolve 10.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dilute 5.0 ml of the test solution to 100.0 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of the test solution to 10.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 100.0 ml with the mobile phase.

Reference solution (c) Dissolve 25 mg of the substance to be examined in 10 ml of *water R*, warming if necessary. Allow to cool and add 1 ml of a 20 g/l solution of *chloramine R* and 0.5 ml of *0.05 M hydrochloric acid*. Dilute this solution to 25 ml with *water R*. Shake and allow to stand for 5 min. Inject immediately.

Column:
- *size:* l = 0.25 m, Ø = 4 mm;
- *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Mix 19.5 volumes of *methanol R* and 80.5 volumes of a solution containing 15 g/l of *citric acid R* and 8.1 g/l of *disodium hydrogen phosphate R.*

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 351 nm.

Injection 20 µl.

Run time 4 times the retention time of hydroxocobalamine.

System suitability:
- the chromatogram obtained with reference solution (c) shows 3 principal peaks;
- *resolution*: minimum 3.0 between each pair of adjacent peaks in the chromatogram obtained with reference solution (c);
- *signal-to-noise ratio*: minimum 5 for the principal peak in the chromatogram obtained with reference solution (b).

Limits:
- *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (5 per cent);
- *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent).

Loss on drying *(2.2.32)*

8.0 per cent to 12.0 per cent, determined on 0.400 g by drying at 105 °C at a pressure not exceeding 0.7 kPa.

ASSAY

Protect the solutions from light throughout the assay. Dissolve 25.0 mg in a solution containing 0.8 per cent *V/V* of *glacial acetic acid R* and 10.9 g/l of *sodium acetate R*, then dilute to 1000.0 ml with the same solution. Measure the absorbance *(2.2.25)* at the absorption maximum at 351 nm.

Calculate the content of $C_{64}H_{93}CoN_{13}O_{17}P$ taking the specific absorbance to be 187.

STORAGE

In an airtight container, protected from light, at a temperature of 2 °C to 8 °C.

Allow to cool and add 1 ml of a 20 g/l solution of *chloramine R* and 0.5 ml of *0.05 M hydrochloric acid*. Dilute to 25 ml with *water R*. Shake and allow to stand for 5 min. Inject immediately.

Column:

— *size:* *l* = 0.25 m, Ø = 4 mm;

— *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Mix 19.5 volumes of *methanol R* and 80.5 volumes of a solution containing 15 g/l of *citric acid R* and 8.1 g/l of *disodium hydrogen phosphate R*.

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 351 nm.

Injection 20 µl.

Run time 4 times the retention time of hydroxocobalamin.

System suitability:

— the chromatogram obtained with reference solution (c) shows 3 principal peaks;

— *resolution*: minimum 3.0 between each pair of adjacent peaks in the chromatogram obtained with reference solution (c);

— *signal-to-noise ratio*: minimum 5 for the principal peak in the chromatogram obtained with reference solution (b).

Limits:

— *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (5.0 per cent);

— *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent).

Loss on drying *(2.2.32)*

8.0 per cent to 12.0 per cent, determined on 0.400 g by drying at 105 °C at a pressure not exceeding 0.7 kPa.

ASSAY

Protect the solutions from light throughout the assay.

Dissolve 25.0 mg in a solution containing 0.8 per cent *V/V* of *glacial acetic acid R* and 10.9 g/l of *sodium acetate R*, then dilute to 1000.0 ml with the same solution. Measure the absorbance *(2.2.25)* at the absorption maximum at 351 nm.

Calculate the content of $C_{62}H_{90}ClCoN_{13}O_{15}P$ taking the specific absorbance to be 190.

STORAGE

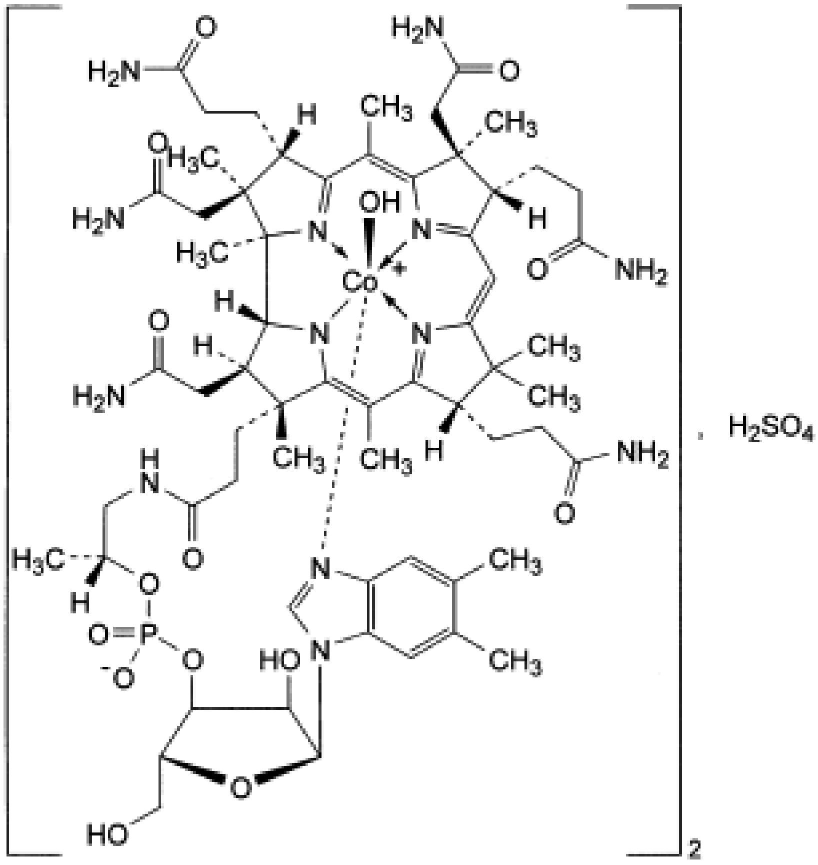
In an airtight container protected from light, at a temperature of 2 °C to 8 °C.

Ph Eur

Hydroxocobalamin Sulphate

General Notices

(Ph Eur monograph 0915)



$(C_{62}H_{89}CoN_{13}O_{15}P)_2,H_2SO_4$ 2791

Action and use

Vitamin B_{12} analogue.

Preparation

Hydroxocobalamin Injection

Ph Eur

DEFINITION

Di-(Coα-[α-(5,6-dimethylbenzimidazolyl)]-Coβ-hydroxocobamide) sulphate.

Fermentation product.

Content

96.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

Dark red crystalline powder or dark red crystals, very hygroscopic.

Solubility

Soluble in water.

Some decomposition may occur on drying.

IDENTIFICATION

A. Ultraviolet and visible absorption spectrophotometry *(2.2.25)*.

Test solution Dissolve 2.5 mg in a solution containing 0.8 per cent *V/V* of *glacial acetic acid R* and 10.9 g/l of *sodium acetate R*, then dilute to 100 ml with the same solution.

Spectral range 260-610 nm.

Absorption maxima At 274 nm, 351 nm and 525 nm.

Absorbance ratios:

— A_{274}/A_{351} = 0.75 to 0.83;

— A_{525}/A_{351} = 0.31 to 0.35.

B. Thin-layer chromatography *(2.2.27)*. *Carry out the test protected from light.*

Test solution Dissolve 2 mg of the substance to be examined in 1 ml of a mixture of equal volumes of *ethanol 96 per cent R* and *water R*.

Reference solution Dissolve 2 mg of *hydroxocobalamin CRS* in 1 ml of a mixture of equal volumes of *ethanol 96 per cent R* and *water R*.

Plate *TLC silica gel G plate R*.

Mobile phase *dilute ammonia R1*, *methanol R* (25:75 *V/V*).

Application 10 µl.

Development In an unlined tank, over a path of 12 cm.

Drying In air.

Detection Examine in daylight.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

C. It gives reaction (a) of sulphates *(2.3.1)*.

TESTS

Related substances

Liquid chromatography *(2.2.29)*. *Use freshly prepared solutions and protect them from bright light.*

Test solution Dissolve 10.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dilute 5.0 ml of the test solution to 100.0 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of the test solution to 10.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 100.0 ml with the mobile phase.

Reference solution (c) Dissolve 25 mg of the substance to be examined in 10 ml of *water R*, warming if necessary. Allow to cool and add 1 ml of a 20 g/l solution of *chloramine R* and 0.5 ml of *0.05 M hydrochloric acid*. Dilute to 25 ml with *water R*. Shake and allow to stand for 5 min. Inject immediately.

Column:

— *size:* *l* = 0.25 m, Ø = 4 mm;

— *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Mix 19.5 volumes of *methanol R* and 80.5 volumes of a solution containing 15 g/l of *citric acid R* and 8.1 g/l of *disodium hydrogen phosphate R*.

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 351 nm.

Injection 20 µl.

Run time 4 times the retention time of hydroxocobalamin.

System suitability:

— the chromatogram obtained with reference solution (c) shows 3 principal peaks;

— *resolution*: minimum 3.0 between each pair of adjacent peaks in the chromatogram obtained with reference solution (c);

— *signal-to-noise ratio*: minimum 5 for the principal peak in the chromatogram obtained with reference solution (b).

Limits:

— *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (5.0 per cent);

— *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent).

Loss on drying *(2.2.32)*

8.0 per cent to 16.0 per cent, determined on 0.400 g by drying at 105 °C at a pressure not exceeding 0.7 kPa.

ASSAY

Protect the solutions from light throughout the assay.

Dissolve 25.0 mg in a solution containing 0.8 per cent *V/V* of *glacial acetic acid R* and 10.9 g/l of *sodium acetate R* and dilute to 1000.0 ml with the same solution. Measure the absorbance *(2.2.25)* at the absorption maximum at 351 nm.

Calculate the content of $C_{124}H_{180}Co_2N_{26}O_{34}P_2S$ taking the specific absorbance to be 188.

STORAGE

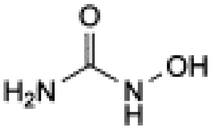
In an airtight container protected from light, at a temperature of 2 ℃ to 8 ℃.

Ph Eur

Hydroxycarbamide

General Notices

(Ph Eur monograph 1616)



$CH_4N_2O_2$ 76.05 *127-07-1*

Action and use

Cytotoxic alkylating drug.

Preparation

Hydroxycarbamide Capsules

Ph Eur

DEFINITION

N-Hydroxyurea.

Content

97.5 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder, hygroscopic.

Solubility

Freely soluble in water, practically insoluble in alcohol.

It shows polymorphism *(5.9)*.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison hydroxycarbamide CRS.

If the spectra obtained in the solid state show differences dissolve the substance to be examined and the reference substance separately in *alcohol R*, evaporate to dryness and record new spectra using the residues.

B. Examine the chromatograms obtained in the test for urea.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (c).

TESTS

Urea

Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 50 mg of the substance to be examined in *water R* and dilute to 1.0 ml with the same solvent.

Reference solution (a) Dissolve 12.5 mg of *urea R* in *water R* and dilute to 50 ml with the same solvent.

Reference solution (b) Dissolve 5 mg of the substance to be examined and 5 mg of *urea R* in *water R* and dilute to 20 ml with the same solvent.

Reference solution (c) Dissolve 50 mg of *hydroxycarbamide CRS* in *water R* and dilute to 1 ml with the same solvent.

Plate *TLC silica gel plate R*.

Mobile phase *pyridine R*, *water R*, *ethyl acetate R* (2:2:10 *V/V/V*).

Application 10 µl.

Development Over 2/3 of the plate.

Drying In air.

Detection Spray with a 10 g/l solution of *dimethylaminobenzaldehyde R* in *1 M hydrochloric acid*.

System suitability The test is not valid unless the chromatogram obtained with reference solution (b) shows 2 clearly separated spots.

Limit:

— *urea*: any spot corresponding to urea in the chromatogram obtained with the test solution is not more intense than the spot in the chromatogram obtained with the reference solution (a) (0.5 per cent).

Related substances

Liquid chromatography *(2.2.29)*.

Test solution (a) Dissolve 0.100 g of the substance to be examined in the mobile phase and dilute to 10.0 ml with the same mobile phase.

Test solution (b) Dilute 5.0 ml of test solution (a) to 50.0 ml with the mobile phase.

Reference solution (a) Dissolve 0.100 g of *hydroxylamine hydrochloride R* and 5 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase. Prepare immediately before use.

Reference solution (b) Dilute 0.1 ml of test solution (a) to 100.0 ml with the mobile phase.

Reference solution (c) Dissolve 0.100 g of *hydroxycarbamide CRS* in the mobile phase and dilute to 10.0 ml with the same solvent. Dilute 5.0 ml to 50.0 ml with the mobile phase.

Column:
- *size:* l = 0.25 m, Ø = 4.6 mm,
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase *methanol R*, *water R* (5:95 *V/V*).

Flow rate 0.5 ml/min.

Detection Spectrophotometer at 214 nm.

Injection 20 µl; inject test solution (a) and reference solutions (a) and (b).

Run time 3 times the retention time of hydroxycarbamide which is about 5 min.

System suitability Reference solution (a):

- *resolution*: minimum of 1.0 between the peaks due to impurity A and to hydroxycarbamide.

Limits:
- *any impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent),
- *total*: not more than 2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent),
- *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.02 per cent).

Chlorides *(2.4.4)*

Maximum 50 ppm.

Dissolve 1.0 g in *water R* and dilute to 15 ml with the same solvent. The solution complies with the limit test for chlorides.

Heavy metals *(2.4.8)*

Maximum 10 ppm.

Dissolve 2.0 g in *water R* and dilute to 20 ml with the same solvent. 12 ml of the solution complies with limit test A. Prepare the standard using *lead standard solution (1 ppm Pb) R*.

Water *(2.5.12)*

Maximum 0.5 per cent, determined on 2.00 g.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances.

Injection Test solution (b) and reference solution (c).

STORAGE

In an airtight container, protected from light.

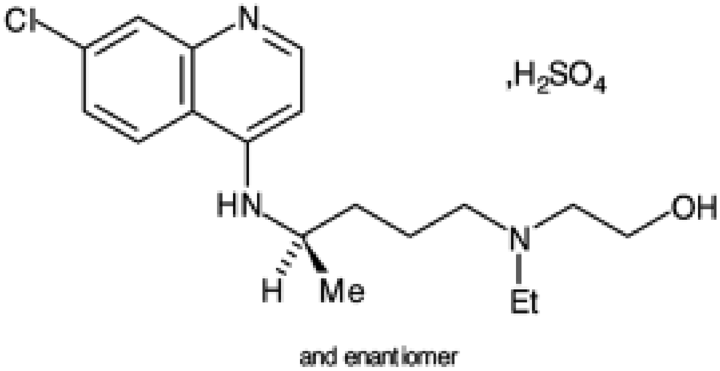
IMPURITIES

A. H_2N-OH: hydroxylamine.

Ph Eur

Hydroxychloroquine Sulphate

General Notices



$C_{18}H_{26}ClN_3O,H_2SO_4$ 434.0 *747-36-4*

Action and use

Antiprotozoal (malaria).

Preparation

Hydroxychloroquine Tablets

DEFINITION

Hydroxychloroquine Sulphate is (*RS*)-2-*N*-[4-(7-chloro-4-quinolylamino)pentyl]-*N*-ethylaminoethanol sulphate. It contains not less than 98.0% and not more than 100.5% of $C_{18}H_{26}ClN_3O,H_2SO_4$, calculated with reference to the dried substance.

CHARACTERISTICS

A white or almost white, crystalline powder.

Freely soluble in *water*; practically insoluble in *ethanol (96%)* and in *ether*.

IDENTIFICATION

A. Dissolve 0.1 g in 10 ml of *water*, add 2 ml of 2M *sodium hydroxide* and extract with two 20 ml quantities of *dichloromethane*. Wash the dichloromethane extracts with *water*, dry with *anhydrous sodium sulphate*, evaporate to dryness and dissolve the residue in 2 ml of *dichloromethane*. The *infrared absorption spectrum* of the resulting solution, Appendix II A, is concordant with the *reference spectrum* of hydroxychloroquine *(RS 182)*.

B. Yields the reactions characteristic of *sulphates*, Appendix VI.

TESTS

Acidity

pH of a 1% w/v solution, 3.5 to 5.5, Appendix V L.

Clarity and colour of solution

A 10.0% w/v solution is not more than slightly turbid and not more than slightly yellow.

Lead

Not more than 20 ppm when determined by the following method. Carefully heat 2.0 g for 10 minutes with 8 ml of *water* and 6 ml of *nitric acid* in a Kjeldahl flask. Cool, add 4 ml of *sulphuric acid* and heat until the mixture darkens. Continue heating, with the dropwise addition of *nitric acid*, until the liquid becomes colourless and white fumes of sulphur trioxide are produced. Add 3 ml of *water*, carefully evaporate until white fumes are again produced, cool and dilute to 18 ml with *water*. Add and dissolve 2 g of *citric acid*, make alkaline with 5M *ammonia* and add 1 ml of *potassium cyanide solution PbT*. Transfer to a separating funnel, add 10 ml of *dithizone solution*, shake vigorously and remove the lower layer. Repeat the extraction with two 5 ml quantities of *dithizone solution*. If, after the third extraction, the dichloromethane layer is bright red, continue the extraction with further 5 ml quantities of *dithizone solution* until the colour of the reagent no longer changes to bright red. Wash the combined dichloromethane solutions by shaking with 10 ml of *water* and then extract with two 10 ml quantities of 2M *hydrochloric acid*. Wash the combined acid solutions with 10 ml of *dichloromethane* and discard the dichloromethane. Transfer the solution to a *Nessler cylinder* and make alkaline with 5M *ammonia*. In a second *Nessler cylinder* mix 2 ml of 6M *acetic acid* with 20 ml of 2M *hydrochloric acid*, make alkaline with 5M *ammonia* and add 4 ml of *lead standard solution (10 ppm Pb)*.

Treat the contents of each cylinder as follows. Add 1 ml of *potassium cyanide solution PbT*; the solutions should not be more than faintly opalescent. If the colours of the solutions differ, equalise them by the addition of a few drops of a highly diluted solution of burnt sugar or other non-reactive substance. Dilute to 50 ml with *water*, add 0.1 ml of a solution prepared by dissolving 10 g of *sodium sulphide* in sufficient *water* to produce 100 ml and filtering and mix thoroughly. Compare the colours of the two solutions by a suitable method, such as by light reflected from a white tile through the Nessler cylinders. The colour of the solution in the first cylinder is not more intense than that of the solution in the second cylinder.

Chloride

Dissolve 0.50 g in 50 ml of *water*. 15 ml of the resulting solution complies with the *limit test for chlorides*, Appendix VII (350 ppm).

Related substances

Carry out the method for *thin-layer chromatography*, Appendix III A, using the following solutions of the substance being examined in *water*.

(1) 5.0% w/v.

(2) 0.050% w/v.

(3) 0.025% w/v.

CHROMATOGRAPHIC CONDITIONS

(a) Use as the coating *silica gel* F_{254}.

(b) Use the mobile phase described below.

(c) Apply 2 µl of each solution.

(d) Develop the plate to 15 cm.

(e) After removal of the plate, dry in air and examine under *ultraviolet light (254 nm)*.

MOBILE PHASE

3 volumes of 13.5M *ammonia*, 25 volumes of *water* and 72 volumes of *methanol*,

LIMITS

In the chromatogram obtained with solution (1):

— any *secondary spot* is not more intense than the spot in the chromatogram obtained with solution (2) (1%);

— not more than one such spot is more intense than the spot in the chromatogram obtained with solution (3) (0.5%).

Loss on drying

When dried to constant weight at 105°, loses not more than 2.0% of its weight. Use 1 g.

Sulphated ash

Not more than 0.2%, Appendix IX A.

ASSAY

Dissolve 0.5 g in 10 ml of *water*, add 20 ml of 1M *sodium hydroxide* and extract with four 25 ml quantities of *dichloromethane*. Combine the dichloromethane extracts and evaporate to a volume of about 10 ml. Add 40 ml of *anhydrous acetic acid* and carry out Method I for *non-aqueous titration*, Appendix VIII A, determining the end-point potentiometrically. Each ml of 0.1M *perchloric acid VS* is equivalent to 21.70 mg of $C_{18}H_{26}ClN_3O,H_2SO_4$.

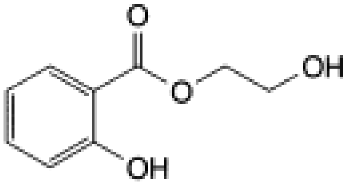
STORAGE

Hydroxychloroquine Sulphate should be protected from light.

Hydroxyethyl Salicylate

General Notices

(Ph Eur monograph 1225)



$C_9H_{10}O_4$ 182.2 *87-28-5*

Ph Eur

DEFINITION

2-Hydroxyethyl 2-hydroxybenzoate.

Content

98.0 per cent to 102.0 per cent.

CHARACTERS

Appearance

Oily, colourless or almost colourless liquid, or colourless crystals.

Solubility

Sparingly soluble in water, very soluble in acetone and in methylene chloride, freely soluble in alcohol.

mp

About 21 °C.

IDENTIFICATION

First identification *A, B.*

Second identification *A, C, D, E.*

A. It complies with the test for refractive index (see Tests).

B. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Thin films.

Comparison *hydroxyethyl salicylate CRS.*

C. Examine the chromatograms obtained in the test for related substances.

Results The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. To 1 ml of solution S (see Tests), add 1 ml of *water R* and 0.2 ml of *ferric chloride solution R2*. A violet-red colour appears which disappears immediately after the addition of 2 ml of *dilute acetic acid R*. A very faint violet colour may remain.

E. In a test tube 160 mm long, mix 1.0 g with 2.0 g of finely powdered *manganese sulphate R*. Insert 2 cm into the test-tube a strip of filter paper impregnated with a freshly prepared mixture of 1 volume of a 20 per cent *V/V* solution of *diethanolamine R* and 11 volumes of a 50 g/l solution of *sodium nitroprusside R* adjusted to pH 9.8 with *1 M hydrochloric acid*. Heat the test-tube over a naked flame for 1-2 min. The filter paper becomes blue.

TESTS

Solution S

Dissolve 2.5 g in 40 ml of *alcohol R* and dilute to 50 ml with *distilled water R*.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Acidity or alkalinity

To 2 ml of solution S add 0.1 ml of *methyl red solution R* and 0.2 ml of *0.01 M sodium hydroxide*. The solution is yellow. Add 0.3 ml of *0.01 M hydrochloric acid*. The solution is red.

Relative density *(2.2.5)*

1.252 to 1.257.

Refractive index *(2.2.6)*

1.548 to 1.551.

Related substances

Thin-layer chromatography *(2.2.27)*.

Test solution (a) Dissolve 0.50 g of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Test solution (b) Dilute 2 ml of test solution (a) to 50 ml with *methanol R*.

Reference solution (a) Dissolve 50.0 mg of *hydroxyethyl salicylate CRS* in *methanol R* and dilute to 25 ml with the same solvent.

Reference solution (b) Dilute 2.5 ml of test solution (b) to 10 ml with *methanol R*.

Reference solution (c) Dissolve 0.10 g of *ethylene glycol R* in *methanol R* and dilute to 50 ml with the same solvent. Dilute 1.25 ml of the solution to 10 ml with *methanol R*.

Plate *TLC silica gel* F_{254} *plate R*.

Mobile phase *ethyl acetate R*, *glacial acetic acid R*, *cyclohexane R* (20:20:60 *V/V/V*).

Application 10 µl.

Development Over a path of 15 cm.

Drying In a current of cold air.

Detection A In ultraviolet light at 254 nm.

Limits A:

— *Any impurity*: any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (1 per cent).

Detection B Spray the plate with *ammonium vanadate solution R* and heat at 100 °C for 10 min. Allow to cool for 10 min and examine in daylight.

Limits B In the chromatogram obtained with test solution (a):

— *impurity B*: any spot corresponding to impurity B is not more intense than the spot in the chromatogram obtained with reference solution (c) (0.5 per cent),

— *any other impurity*: any spot, apart from the principal spot and any spot corresponding to impurity B is not more intense than the spot in the chromatogram obtained with reference solution (b) (1 per cent).

System suitability The chromatogram obtained with reference solution (c) shows a clearly visible spot.

Chlorides ***(2.4.4)***

Maximum 100 ppm.

Dilute 10 ml of solution S to 15 ml with *water R*. The solution complies with the limit test for chlorides.

Sulphates ***(2.4.13)***

Maximum 250 ppm.

Dilute 12 ml of solution S to 15 ml with *distilled water R*. The solution complies with the limit test for sulphates.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

In a flask with a ground-glass stopper, dissolve 0.125 g in 30 ml of *glacial acetic acid R*. Add 10 ml of *dilute sulphuric acid R,* 1.5 g of *potassium bromide R* and 50.0 ml of *0.0167 M potassium bromate*. Immediately close the flask and allow to stand protected from light for 15 min. Add 1.5 g of *potassium iodide R* immediately after removing the stopper and titrate with *0.1 M sodium thiosulphate*, adding 1 ml of *starch solution R* towards the end of the titration. Carry out a blank titration.

1 ml of *0.0167 M potassium bromate* is equivalent to 4.555 mg of $C_9H_{10}O_4$.

STORAGE

Protected from light.

IMPURITIES

A. salicylic acid,

B. ethane-1,2-diol (ethylene glycol).

Ph

Hydroxyethylcellulose

General Notices

(Ph Eur monograph 0336)

9004-62-0

Action and use

Excipient.

Ph Eur

DEFINITION

Partly *O*-(2-hydroxyethylated) cellulose.

CHARACTERS

Appearance

White, yellowish-white or greyish-white powder or granules.

Solubility

Soluble in hot and cold water giving a colloidal solution, practically insoluble in acetone, in ethanol (96 per cent) and in toluene.

IDENTIFICATION

A. Heat 10 ml of solution S (see Tests) to boiling. The solution remains clear.

B. To 10 ml of solution S add 0.3 ml of *dilute acetic acid R* and 2.5 ml of a 100 g/l solution of *tannic acid R*. A yellowish-white, flocculent precipitate is formed which dissolves in *dilute ammonia R1*.

C. In a test-tube about 160 mm in length, thoroughly mix 1 g with 2 g of finely powdered *manganese sulphate R*. Introduce to a depth of 2 cm into the upper part of the tube a strip of filter paper impregnated with a freshly prepared mixture of 1 volume of a 200 g/l solution of *diethanolamine R* and 11 volumes of a 50 g/l solution of *sodium nitroprusside R*, adjusted to about pH 9.8 with *1 M hydrochloric acid*. Insert the tube 8 cm into a silicone-oil bath and heat at 190-200 °C. The filter paper becomes blue within 10 min. Carry out a blank test.

D. Dissolve 0.2 g completely, without heating, in 15 ml of a 700 g/l solution of *sulphuric acid R*. Pour the solution with stirring into 100 ml of iced *water R* and dilute to 250 ml with iced *water R*. In a test-tube, mix thoroughly while cooling in iced water 1 ml of the solution with 8 ml of *sulphuric acid R*, added dropwise. Heat on a water-bath for exactly 3 min and immediately cool in iced water. While the mixture is cold, carefully add 0.6 ml of *ninhydrin solution R2* and mix well. Allow to stand at 25 °C. A pink colour is produced immediately and does not become violet within 100 min.

TESTS

Solution S

Disperse a quantity of the substance to be examined equivalent to 1.0 g of the dried substance in 50 ml of *carbon dioxide-free water R.* After 10 min, dilute to 100 ml with *carbon dioxide-free water R* and stir until dissolution is complete.

pH *(2.2.3)*

5.5 to 8.5 for solution S.

Apparent viscosity *(2.2.10)*

75 per cent to 140 per cent of the value stated on the label.

While stirring, introduce a quantity of the substance to be examined equivalent to 2.00 g of the dried substance into 50 g of *water R.* Dilute to 100.0 g with *water R* and stir until dissolution is complete. Determine the viscosity using a rotating viscometer at 25 °C and at a shear rate of 100 s^{-1} for substances with an expected viscosity up to 100 mPa·s, at a shear rate of 10 s^{-1} for substances with an expected viscosity between 100 mPa·s and 20 000 mPa·s and at a shear rate of 1 s^{-1} for substances with an expected viscosity above 20 000 mPa·s. If it is impossible to obtain a shear rate of exactly 1 s^{-1}, 10 s^{-1} or 100 s^{-1} respectively, use a rate slightly higher and a rate slightly lower and interpolate.

Chlorides *(2.4.4)*

Maximum 1.0 per cent.

Dilute 1 ml of solution S to 30 ml with *water R*. 15 ml of the solution complies with the limit test for chlorides.

Nitrates

Maximum 3.0 per cent (dried substance), if hydroxyethylcellulose has an apparent viscosity of 1000 mPa·s or less and maximum 0.2 per cent (dried substance), if hydroxyethylcellulose has an apparent viscosity of more than 1000 mPa·s.

Determine potentiometrically *(2.2.36, Method I)* using as indicator a nitrate selective electrode and a silver-silver chloride electrode with a 13.2 g/l solution of *ammonium sulphate R* as reference electrolyte.

Prepare the solutions immediately before use.

Buffer solution To a mixture of 50 ml of *1 M sulphuric acid* and 800 ml of *water R*, add 135 g of *potassium dihydrogen phosphate R* and dilute to 1000 ml with *water R*.

Buffered water Dilute 80 ml of buffer solution to 2000 ml with *water R*.

Nitrate standard solution (500 ppm NO_3) Dissolve 0.8154 g of *potassium nitrate R* in 500 ml of buffered water and dilute to 1000.0 ml with the same solvent.

Test solution Dissolve 0.50 g of the substance to be examined in buffered water and dilute to 100.0 ml with the same solvent.

Reference solutions If hydroxyethylcellulose has an apparent viscosity of 1000 mPa·s or less, dilute 10.0 ml, 20.0 ml and 40.0 ml of nitrate standard solution (500 ppm NO_3) to 100.0 ml with buffered water and mix.

If hydroxyethylcellulose has an apparent viscosity of more than 1000 mPa·s, dilute 1.0 ml, 2.0

ml and 4.0 ml of nitrate standard solution (500 ppm NO_3) to 100.0 ml with buffered water and mix.

Carry out the measurements for each solution. Calculate the concentration of nitrates using the calibration curve.

Glyoxal

Maximum 20 ppm.

Introduce 1.0 g into a test-tube with a ground-glass stopper and add 10.0 ml of *anhydrous ethanol R*. Stopper the tube and stir mechanically for 30 min. Centrifuge. To 2.0 ml of the supernatant liquid add 5.0 ml of a 4 g/l solution of *methylbenzothiazolone hydrazone hydrochloride R* in an 80 per cent *V/V* solution of *glacial acetic acid R* in *water R*. Shake to homogenise. After 2 h, the solution is not more intensely coloured than a standard prepared at the same time and in the same manner using 2.0 ml of *glyoxal standard solution (2 ppm* $C_2H_2O_2$*) R* instead of the 2.0 ml of supernatant liquid.

Ethylene oxide

Head-space gas chromatography *(2.4.25)*.

Test preparation Place 1.00 g of the substance to be examined in a 5 ml vial (other sizes may be used depending on the operating conditions) and add 1 ml of *water R*. It swells in water but does not dissolve.

Reference preparation (a) Place 1.00 g of the substance to be examined in an identical 5 ml vial. Add 0.1 ml of cooled *ethylene oxide solution R2* and 0.9 ml of *water R*. It swells in water but does not dissolve.

Reference preparation (b) To 0.1 ml of *ethylene oxide solution R2* in a 5 ml vial add 0.1 ml of a freshly prepared 10 mg/l solution of *acetaldehyde R.*

Close the vials immediately with a butyl rubber membrane stopper, coated with aluminium or polytetrafluoroethylene and secured with an aluminium crimped cap.

Limit:
— ethylene oxide: maximum 1 ppm.

2-Chloroethanol

Head-space gas chromatography *(2.2.28)*.

Test preparation To 50 mg of the substance to be examined in a 10 ml vial (other sizes may be used depending on the operating conditions), add 2 µl of *2-propanol R*. Seal the flask and mix.

Reference preparation (a) Dissolve 0.125 g of *2-chloroethanol R* and dilute to 50.0 ml with *2-propanol R*. Dilute 1.0 ml of the solution to 10.0 ml with *2-propanol R*.

Reference preparation (b) To 50 mg of the substance to be examined in an identical 10 ml vial, add 2 µl of reference solution (a). Seal the flask and mix.

Close the vials immediately with a butyl rubber membrane stopper, coated with aluminium or polytetrafluoroethylene and secured with an aluminium crimped cap.

Column:
— *size: l* = 50 m, Ø = 0.32 mm,
— *stationary phase*: *poly(dimethyl)siloxane R* (1.2 µm).

Carrier gas *helium for chromatography R*.

Flow rate 25-35 cm/s.

Split ratio 1:10.

Static head-space conditions which may be used:

- — *equilibration temperature*: 110 °C,
- — *equilibration time*: 20 min,
- — *temperature of injection system*: 115 °C.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 6	60
	6 - 16	60 → 110
	16 - 31	110 → 230
	31 - 36	230
Injection port		150
Detector		250

Detection Flame ionisation.

Injection 2 ml.

Retention time 2-chloroethanol = about 7.8 min.

Limit:

- — *2-chloroethanol*: not more than 0.5 times the area of the peak due to 2-chloroethanol in the chromatogram obtained with reference solution (b) (10 ppm).

Heavy metals ***(2.4.8)***

Maximum 20 ppm.

1.0 g complies with limit test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying ***(2.2.32)***

Maximum 10.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

Sulphated ash ***(2.4.14)***

Maximum 4.0 per cent, determined on 1.0 g.

LABELLING

The label states the apparent viscosity, in millipascal seconds for a 2 per cent *m/m* solution.

Ph Eur

Hydroxyethylmethylcellulose

General Notices

(Methylhydroxyethylcellulose, Ph Eur monograph 0346)

Action and use

Excipient.

Ph Eur

DEFINITION

Partly *O*-methylated and *O*-(2-hydroxyethylated) cellulose.

CHARACTERS

Appearance

White, yellowish-white or greyish-white powder or granules, hygroscopic after drying.

Solubility

Practically insoluble in hot water, in acetone, in anhydrous ethanol and in toluene. It dissolves in cold water giving a colloidal solution.

IDENTIFICATION

A. Heat 10 ml of solution S (see Tests) in a water-bath while stirring. At a temperature above 50 °C, the solution becomes cloudy or a flocculent precipitate is formed. The solution becomes clear again on cooling.

B. To 10 ml of solution S add 0.3 ml of *dilute acetic acid R* and 2.5 ml of a 100 g/l solution of *tannic acid R*. A yellowish-white flocculent precipitate is formed which dissolves in *dilute ammonia R1.*

C. In a test-tube about 160 mm long, thoroughly mix 1 g with 2 g of finely powdered *manganese sulphate R*. Introduce to a depth of 2 cm into the upper part of the tube a strip of filter paper impregnated with a freshly prepared mixture of 1 volume of a 20 per cent *V/V* solution of *diethanolamine R* and 11 volumes of a 50 g/l solution of *sodium nitroprusside R*, adjusted to about pH 9.8 with *1 M hydrochloric acid*. Insert the tube 8 cm into a silicone-oil bath at 190-200 °C. The filter paper becomes blue within 10 min. Carry out a blank test.

D. Dissolve completely 0.2 g without heating in 15 ml of a 70 per cent *m/m* solution of *sulphuric acid R*. Pour the solution with stirring into 100 ml of iced *water R* and dilute to 250 ml with iced *water R*. In a test-tube, mix thoroughly while cooling in iced water 1 ml of this solution with 8 ml of *sulphuric acid R* added dropwise. Heat in a water-bath for exactly 3 min and immediately cool in iced water. While the mixture is cold, carefully add 0.6 ml of *ninhydrin solution R2* and mix well. Allow to stand at 25 °C. A pink colour is produced immediately and does not become violet within 100 min.

E. Place 1 ml of solution S on a glass plate. After evaporation of the water a thin film is formed.

TESTS

Solution S

While stirring, introduce a quantity of the substance to be examined equivalent to 1.0 g of the dried substance into 50 g of *carbon dioxide-free water R* heated to 90 °C. Allow to cool, adjust the mass of the solution to 100 g with *carbon dioxide-free water R* and stir until dissolution is complete.

Appearance of solution

Solution S is not more opalescent than reference suspension III *(2.2.1)* and not more intensely coloured than reference solution Y_6 *(2.2.2, Method II)*.

pH (2.2.3)

5.5 to 8.0 for solution S.

Apparent viscosity *(2.2.10)*

75 per cent to 140 per cent of the value stated on the label.

While stirring, introduce a quantity of the substance to be examined equivalent to 6.00 g of the dried substance into 150 g of *water R* heated to 90 °C. Stir with a propeller-type stirrer for 10 min, place the flask in a bath of iced water, continue the stirring and allow to remain in the bath of iced water for 40 min to ensure that dissolution is complete. Adjust the mass of the solution to 300 g and centrifuge the solution to expel any entrapped air. Adjust the temperature of the solution to 20 ± 0.1 °C. Determine the viscosity with a rotating viscometer at 20 °C and a shear rate of 10 s^{-1}.

Chlorides *(2.4.4)*

Maximum 0.5 per cent.

Dilute 1 ml of solution S to 15 ml with *water R*.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 10.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 1.0 per cent, determined on 1.000 g.

LABELLING

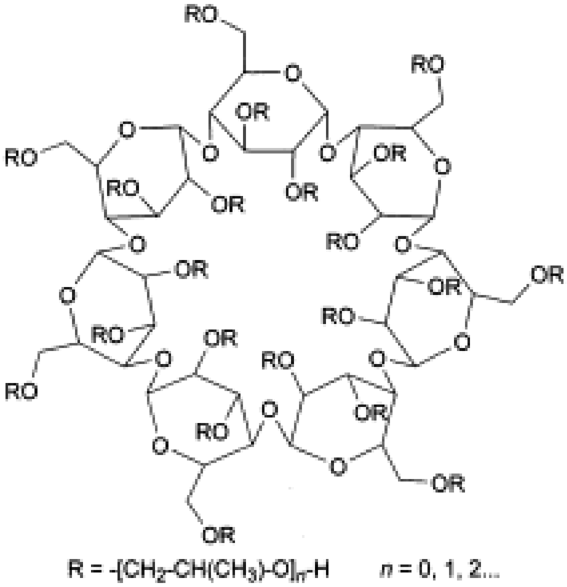
The label states the apparent viscosity in millipascal seconds for a 2 per cent *m/m* solution.

Ph Eur

Hydroxypropylbetadex

General Notices

(Ph Eur monograph 1804)



$C_{42}H_{70}O_{35}(C_3H_6O)_x$ with x = 7 *MS*

Action and use

Excipient.

Ph Eur

DEFINITION

Hydroxypropylbetadex (β-cyclodextrin, 2-hydroxypropyl ether) is a partially substituted poly (hydroxypropyl) ether of betadex. The number of hydroxypropyl groups per anhydroglucose unit, expressed as molar substitution (*MS*), is not less than 0.40 and not more than 1.50 and is within 10 per cent of the value stated on the label.

CHARACTERS

Appearance

White or almost white, amorphous or crystalline powder.

Solubility

Freely soluble in water and in propylene glycol.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *hydroxypropylbetadex CRS.*

Results The spectrum obtained with the substance to be examined shows the same absorption bands as the spectrum obtained with *hydroxypropylbetadex CRS*. Due to the difference in the substitution of the substance, the intensity of some absorption bands can vary.

B. Appearance of solution (see Tests).

TESTS

Solution S

Dissolve 5.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 50.0 ml with the same solvent.

Appearance of solution

The solution is clear *(2.2.1)* and colourless *(2.2.2, Method II)*, and remains so after cooling to room temperature.

Dissolve 1.0 g in 2.0 ml of *water R*, with heating.

Conductivity *(2.2.38)*

Maximum 200 µS·cm^{-1}.

Measure the conductivity of solution S, while gently stirring with a magnetic stirrer.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 2.50 g of the substance to be examined in *water R* with heating, cool, and dilute to 25.0 ml with the same solvent.

Reference solution (a) Dissolve 0.15 g of *betadex CRS* and 0.25 g of *propylene glycol R* in *water R* and dilute to 10.0 ml with the same solvent.

Reference solution (b) Dilute 5.0 ml of reference solution (a) to 50.0 ml with *water R*.

Precolumn:
— *stationary phase*: *phenylsilyl silica gel for chromatography R*.

Column:
— *size*: *l* = 0.30 m, Ø = 3.9 mm;
— *stationary phase*: *phenylsilyl silica gel for chromatography R*;
— *temperature*: 40 °C.

Mobile phase *water for chromatography R.*

Flow rate 1.5 ml/min.

Detection Differential refractometer, at 40 °C.

Injection 20 µl.

Run time 6 times the retention time of impurity A.

Relative retention With reference to impurity B (retention time = about 2.5 min): impurity A = about 4.2; hydroxypropylbetadex = about 6 for the beginning of the elution.

Hydroxypropylbetadex elutes as a very wide peak or several peaks.

System suitability Reference solution (a):

— *resolution*: minimum 4 between the peaks due to impurities A and B.

Limits:

— *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (1.5 per cent);

— *impurity B*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (2.5 per cent);

— *any other impurity*: for each impurity, not more than 0.04 times the area of the peak due to impurity B in the chromatogram obtained with reference solution (b) (0.1 per cent);

— *sum of impurities other than A and B*: not more than 0.4 times the area of the peak due to impurity B in the chromatogram obtained with reference solution (b) (1.0 per cent);

— *disregard limit*: 0.02 times the area of the peak due to impurity B in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard any peak eluting before impurity B or after impurity A.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R*.

Loss on drying *(2.2.32)*

Maximum 10.0 per cent, determined on 1.000 g by drying in an oven at 120 °C for 2 h.

Molar substitution

Nuclear magnetic resonance spectrometry *(2.2.33)*.

The molar substitution (*MS*) is calculated from the ratio between the signal from the 3 protons of the methyl group that is part of the hydroxypropyl group and the signal from the proton attached to the C1 carbon (glycosidic proton) of the anhydroglucose units.

Use a Fourier transform nuclear magnetic resonance spectrometer of minimum frequency 250 MHz, suited to record a proton spectrum and to carry out quantitative analysis, at a temperature of at least 25 °C.

Introduce not less than the equivalent of 10.0 mg of the substance to be examined (dried substance) into a 5 mm NMR tube, equipped with a spinner in order to record the spectrum in rotation. Add approximately 0.75 ml of *deuterium oxide R1*. Cap the tube, mix thoroughly and adapt the spinner.

Make the appropriate instrument settings (frequency, gain, digital resolution, sample rotation, shims, probe tuning, resolution/data point, receiver gain etc.) so as to obtain a suitable spectrum for quantitative analysis (good FID (Free Induction Decay), no distortion of the spectrum after Fourier transform and phase corrections). The relaxation delay must be adapted to the pulse angle in order to have sufficient relaxation of the protons concerned between 2 pulses (for example: 10 s for a 90° pulse).

Record the FID, with at least 8 scans, so as to obtain a spectral window comprised, at least, between 0 ppm and 6.2 ppm, referring to the signal of exchangeable protons (solvent) at 4.8 ppm (25 °C).

Make a zero filling of at least 3-fold in size relative to the acquisition data file and transform the FID to the spectrum without any correction of Gaussian broadening factor (GB = 0) and with a line broadening factor not greater than 0.2 (LB ≤ 0.2). Call the integration sub-routine after phase corrections and baseline correction between 0.5 ppm and 6.2 ppm.

Measure the peak areas of the doublet from the methyl groups at 1.2 ppm (A_1), and of the signals of the glycosidic protons between 5 ppm and 5.4 ppm (A_2).

The molar substitution is obtained using the following equation:

$$MS = \frac{A_1}{(3 \times A_2)}$$

A_1 = area of the signal due to the 3 protons of the methyl groups that are part of the hydroxypropyl groups;

A_2 = area of the signals due to the glycosidic protons.

The degree of substitution is the number of hydroxypropyl groups per molecule of β-cyclodextrin and is obtained by multiplying the *MS* by 7.

Microbial contamination

Total viable aerobic count *(2.6.12)* not more than 10^3 bacteria and 10^2 fungi per gram, determined by plate count. If intended for use in the manufacture of parenteral preparations, the total viable aerobic count is not more than 10^2 bacteria and 10^2 fungi per gram. It complies with the tests for *Escherichia coli* and *Salmonella (2.6.13)*.

Bacterial endotoxins *(2.6.14)*

Less than 10 IU/g, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

LABELLING

The label states:

— the molar substitution (*MS*);

— where applicable, that the substance is suitable for use in the manufacture of parenteral preparations.

IMPURITIES

A. betadex,

B. propylene glycol.

Hydroxypropylcellulose

General Notices

(Ph Eur monograph 0337)

9004-64-2

Action and use

Excipient.

Ph Eur

DEFINITION

Partly *C*-(2-hydroxypropylated) cellulose.

It may contain maximum 0.6 per cent of silica (SiO_2).

CHARACTERS

Appearance

White or yellowish-white powder or granules, hygroscopic after drying.

Solubility

Soluble in cold water, in glacial acetic acid, in anhydrous ethanol, in methanol and in propylene glycol and in a mixture of 10 parts of methanol and 90 parts of methylene chloride giving colloidal solutions, sparingly soluble or slightly soluble in acetone depending on the degree of substitution, practically insoluble in hot water, in ethylene glycol and in toluene.

IDENTIFICATION

A. Heat 10 ml of solution S (see Tests) in a water-bath while stirring. At a temperature above 40 °C the solution becomes cloudy or a flocculent precipitate is formed. The solution becomes clear again on cooling.

B. To 10 ml of solution S add 0.3 ml of *dilute acetic acid R* and 2.5 ml of a 100 g/l solution of *tannic acid R*. A yellowish-white flocculent precipitate is formed which dissolves in *dilute ammonia R1*.

C. In a test-tube about 160 mm long, thoroughly mix 1 g with 2 g of finely powdered *manganese sulphate R*. Introduce to a depth of 2 cm into the upper part of the tube a strip of filter paper impregnated with a freshly prepared mixture of 1 volume of a 20 per cent *V/V* solution of *diethanolamine R* and 11 volumes of a 50 g/l solution of *sodium nitroprusside R*, adjusted to about pH 9.8 with *1 M hydrochloric acid*. Insert the tube 8 cm into a silicone-oil bath at 190-200 °C. The filter paper becomes blue within 10 min. Carry out a blank test.

D. Dissolve completely 0.2 g without heating in 15 ml of a 70 per cent *m/m* solution of *sulphuric acid R*. Pour the solution with stirring into 100 ml of iced *water R* and dilute to 250 ml with iced *water R*. In a test-tube, mix thoroughly while cooling in iced water 1 ml of this solution with 8 ml of *sulphuric acid R* added dropwise. Heat in a water-bath for exactly 3 min and immediately cool in iced water. While the mixture is cold, carefully add 0.6 ml of *ninhydrin solution R2* and mix well. Allow to stand at 25 °C. A pink colour is produced immediately and becomes violet within 100 min.

E. Place 1 ml of solution S on a glass plate. After evaporation of the water a thin film is formed.

F. 0.2 g does not dissolve in 10 ml of *toluene R* but dissolves completely in 10 ml of *anhydrous ethanol R*.

TESTS

Solution S

While stirring, introduce a quantity of the substance to be examined equivalent to 1.0 g of the dried substance into 50 g of *carbon dioxide-free water R* heated to 90 °C. Allow to cool, adjust the mass of the solution to 100 g with *carbon dioxide-free water R* and stir until dissolution is complete.

Appearance of solution

Solution S is not more opalescent than reference suspension III *(2.2.1)* and not more intensely coloured than reference solution Y_6 *(2.2.2, Method II)*.

pH *(2.2.3)*

5.0 to 8.5 for solution S.

Apparent viscosity *(2.2.10)*

75 per cent to 140 per cent of the value stated on the label.

While stirring, introduce a quantity of the substance to be examined equivalent to 6.00 g of the dried substance into 150 g of *water R* heated to 90 °C. Stir with a propeller-type stirrer for 10 min, place the flask in a bath of iced water, continue the stirring and allow to remain in the bath of iced water for 40 min to ensure that dissolution is complete. Adjust the mass of the solution to 300 g and centrifuge the solution to expel any entrapped air. Adjust the temperature of the solution to 20 ± 0.1 °C. Determine the viscosity with a rotating viscometer at 20 °C and a shear rate of $10\ s^{-1}$.

For a product of low viscosity, use a quantity of the substance to be examined sufficient to prepare a solution of the concentration stated on the label.

Silica

Maximum 0.6 per cent.

To the residue obtained in the test for sulphated ash add sufficient *ethanol (96 per cent) R* to moisten the residue completely. Add 6 ml of *hydrofluoric acid R* in small portions. Evaporate to dryness at 95-105 °C, taking care to avoid loss from sputtering. Cool and rinse the wall of the platinum crucible with 6 ml of *hydrofluoric acid R*. Add 0.5 ml of *sulphuric acid R* and evaporate to dryness. Progressively increase the temperature, ignite at 900 ± 50 °C, allow to cool in a desiccator and weigh. The difference between the mass of the residue obtained in the test for sulphated ash and the mass of the final residue is equal to the amount of silica in the substance to be examined.

Chlorides *(2.4.4)*

Maximum 0.5 per cent.

Dilute 1 ml of solution S to 15 ml with *water R*.

Heavy metals ***(2.4.8)***

Maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying ***(2.2.32)***

Maximum 7.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

Maximum 1.6 per cent, determined on 1.0 g using a platinum crucible.

LABELLING

The label states:

— the apparent viscosity in millipascal seconds for a 2 per cent m/m solution,

— for a product of low viscosity, the concentration of the solution to be used and the apparent viscosity in millipascal seconds,

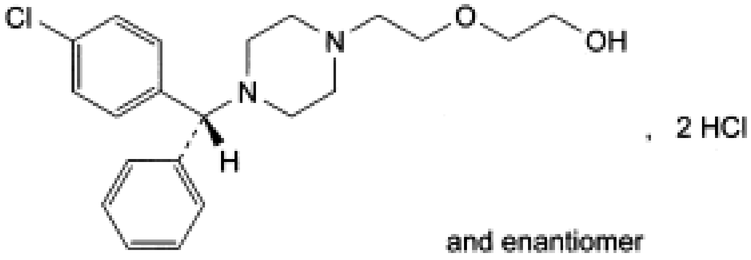
— where applicable, that the substance contains silica.

Ph Eur

Hydroxyzine Hydrochloride

General Notices

(Ph Eur monograph 0916)



$C_{21}H_{27}ClN_2O_2,2HCl$ 447.8 *2192-20-3*

Action and use

Histamine H_1 receptor antagonist.

Ph Eur

DEFINITION

(*RS*)-2-[2-[4-[(4-Chlorophenyl)phenylmethyl]piperazin-1-yl]ethoxy]ethanol dihydrochloride.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, hygroscopic, crystalline powder.

Solubility

Freely soluble in water and in ethanol (96 per cent), very slightly soluble in acetone.

mp: about 200 °C, with decomposition.

IDENTIFICATION

First identification A, D.

Second identification B, C, D.

A. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs.

Comparison *hydroxyzine hydrochloride CRS*.

B. Thin-layer chromatography *(2.2.27)*.

Solvent mixture *methanol R*, *methylene chloride R* (50:50 *V/V*).

Test solution Dissolve 0.50 g of the substance to be examined in the solvent mixture and dilute to 10 ml with the solvent mixture.

Reference solution (a) Dissolve 0.50 g of *hydroxyzine hydrochloride CRS* in the solvent mixture and dilute to 10 ml with the solvent mixture.

Reference solution (b) Dissolve 0.50 g of *meclozine hydrochloride R* in the solvent mixture and dilute to 10 ml with the solvent mixture. Dilute 1 ml of this solution to 2 ml with reference solution (a).

Plate *TLC silica gel G plate R*.

Mobile phase *concentrated ammonia R*, *ethanol (96 per cent) R*, *toluene R* (1:24:75 *V/V/V*).

Application 2 µl.

Development Over a path of 15 cm.

Drying In air.

Detection Spray with *potassium iodobismuthate solution R2*.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated principal spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve 0.1 g in *ethanol (96 per cent) R* and dilute to 15 ml with the same solvent. Add 15 ml of a saturated solution of *picric acid R* in *ethanol (96 per cent) R*. Allow to stand for 15 min. A precipitate is formed. Filter. Recrystallise from *ethanol (96 per cent) R*. Initiate crystallisation, if necessary, by scratching the wall of the tube with a glass rod. The crystals melt *(2.2.14)* at 189 °C to 192 °C.

D. It gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Test solution Dissolve 10 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dissolve 20 mg of *hymecromone CRS*, 10 mg of *hymecromone impurity A CRS* and 10 mg of *hymecromone impurity B CRS* in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of reference solution (a) to 200.0 ml with the mobile phase.

Column:
- *size:* *l* = 0.25 m, Ø = 4 mm,
- *stationary phase*: *spherical octadecylsilyl silica gel for chromatography R* (10 µm).

Mobile phase *methanol R*, *buffer solution* (465:535 *V/V*).

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 270 nm.

Injection 20 µl.

Run time 1.5 times the retention time of hymecromone.

Relative retention with reference to hymecromone (retention time = about 6 min): impurity A = about 0.5; impurity B = about 0.7.

System suitability Reference solution (a):

- *resolution*: minimum of 2 between the peaks due to impurity A and to impurity B and minimum of 3 between the peaks due to impurity B and to hymecromone.

Limits:
- *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.05 per cent),
- *impurity B*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.05 per cent),
- *any other impurity*: not more than the area of the peak due to hymecromone in the chromatogram obtained with reference solution (b) (0.1 per cent),
- *total*: not more than twice the area of the peak due to hymecromone in the chromatogram obtained with reference solution (b) (0.2 per cent),
- *disregard limit*: 0.1 times the area of the peak due to hymecromone in the chromatogram obtained with reference solution (b) (0.01 per cent).

Heavy metals ***(2.4.8)***

Maximum 10 ppm.

Dissolve 1.5 g in a mixture of 15 volumes of *water R* and 85 volumes of *dimethylformamide R* and dilute to 18 ml with the same mixture of solvents. The solution complies with limit test B. Prepare the standard using a lead standard solution (1 ppm Pb) obtained by diluting *lead standard solution (100 ppm Pb) R* with a mixture of 15 volumes of *water R* and 85 volumes of *dimethylformamide R*.

Loss on drying ***(2.2.32)***

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.100 g in 80 ml of *2-propanol R*. Titrate with *0.1 M tetrabutylammonium hydroxide in 2-propanol* determining the end-point potentiometrically *(2.2.20)*. Carry out a blank titration.

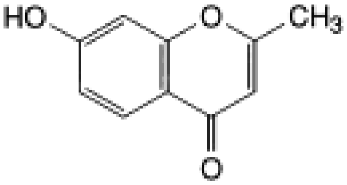
1 ml of *0.1 M tetrabutylammonium hydroxide in 2-propanol* is equivalent to 17.62 mg of $C_{10}H_8O_3$.

STORAGE

Protected from light.

IMPURITIES

A. resorcinol,



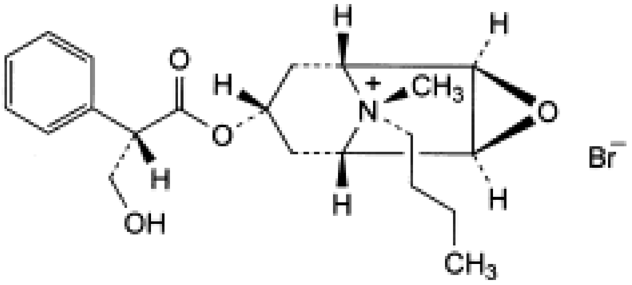
B. 7-hydroxy-2-methyl-4*H*-1-benzopyran-4-one.

Ph Eur

Hyoscine Butylbromide

General Notices

(Ph Eur monograph 0737)



$C_{21}H_{30}BrNO_4$ 440.4 *149-64-4*

Action and use

Anticholinergic.

Preparations

Hyoscine Butylbromide Injection

Hyoscine Butylbromide Tablets

Ph Eur

DEFINITION

(1*R*,2*R*,4*S*,5*S*,7*s*,9*r*)-9-Butyl-7-[[(2*S*)-3-hydroxy-2-phenylpropanoyl]oxy]-9-methyl-3-oxa-9-azoniatricyclo[3.3.1.0^{2},^{4}]nonane bromide.

Content

98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water and in methylene chloride, sparingly soluble in anhydrous ethanol.

IDENTIFICATION

First identification A, C, F.

Second identification A, B, D, E, F.

A. It complies with the test for specific optical rotation (see Tests).

B. Melting point *(2.2.14)*: 139 °C to 141 °C.

C. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *hyoscine butylbromide CRS.*

D. To about 1 mg add 0.2 ml of *nitric acid R* and evaporate to dryness on a water-bath. Dissolve the residue in 2 ml of *acetone R* and add 0.1 ml of a 30 g/l solution of *potassium hydroxide R* in *methanol R*. A violet colour develops.

E. To 5 ml of solution S (see Tests) add 2 ml of *dilute sodium hydroxide solution R*. No precipitate is formed.

F. It gives reaction (a) of bromides *(2.3.1)*.

TESTS

Solution S

Dissolve 1.25 g in *carbon dioxide-free water R* and dilute to 25.0 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

pH (2.2.3)

5.5 to 6.5 for solution S.

Specific optical rotation *(2.2.7)*

- 18 to - 20 (dried substance), determined on solution S.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 50.0 ml with the mobile phase. Dilute 5.0 ml of this solution to 50.0 ml with the mobile phase.

Reference solution (b) Dilute 10.0 ml of reference solution (a) to 20.0 ml with the mobile phase.

Reference solution (c) Dissolve 5.0 mg of *hyoscine butylbromide impurity E CRS* in the mobile phase, add 1.0 ml of the test solution and dilute to 10.0 ml with the mobile phase. Dilute 5.0 ml of this solution to 50.0 ml with the mobile phase.

Column:
— *size: l* = 0.125 m, Ø = 4.0 mm;
— *stationary phase*: *octylsilyl silica gel for chromatography R* (4 µm);
— *temperature*: 25 ± 1 °C.

Mobile phase Dissolve 5.8 g of *sodium dodecyl sulphate R* in a mixture of 410 ml of *acetonitrile R* and 605 ml of a 7.0 g/l solution of *potassium dihydrogen phosphate R* previously adjusted to pH 3.3 with *0.05 M phosphoric acid*.

Flow rate 2.0 ml/min.

Detection Spectrophotometer at 210 nm.

Injection 10 µl.

Run time 3.5 times the retention time of butylhyoscine.

Relative retention With reference to butylhyoscine (retention time = about 7.0 min): impurity B = about 0.1; impurity A = about 0.36; impurity C = about 0.40; impurity D = about 0.7; impurity E = about 0.8; impurity F = about 0.9; impurity G = about 3.0.

System suitability Reference solution (c):

— *resolution*: minimum 1.5 between the peaks due to butylhyoscine and impurity E;

— *symmetry factor*: maximum 2.5 for the peak due to butylhyoscine.

Limits:

— *correction factors*: for the calculation of contents, multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 0.3; impurity G = 0.6;

— *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

— *impurities B, C, D, E, F, G*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

— *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

— *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.4 per cent); disregard any peak due to the bromide ion which appears close to the solvent peak;

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Loss on drying *(2.2.32)*

Maximum 2.5 per cent, determined on 0.500 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 0.5 g.

ASSAY

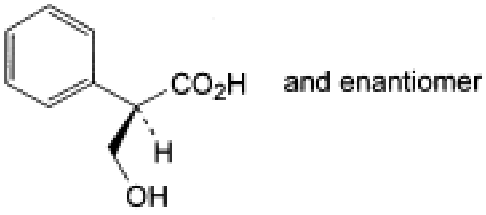
Dissolve 0.400 g in 50 ml of *water R*. Titrate with *0.1 M silver nitrate*, determining the end-point potentiometrically *(2.2.20)* using a silver indicator electrode and a silver-silver chloride reference electrode.

1 ml of *0.1 M silver nitrate* is equivalent to 44.04 mg of $C_{21}H_{30}BrNO_4$.

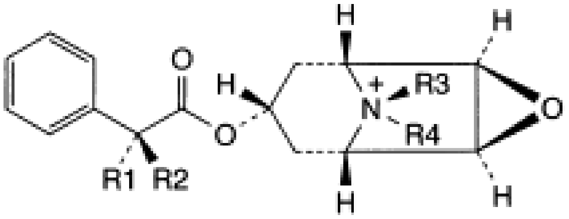
IMPURITIES

Specified impurities *A, B, C, D, E, F, G.*

A. hyoscine,



B. (2*RS*)-3-hydroxy-2-phenylpropanoic acid (dl-tropic acid),

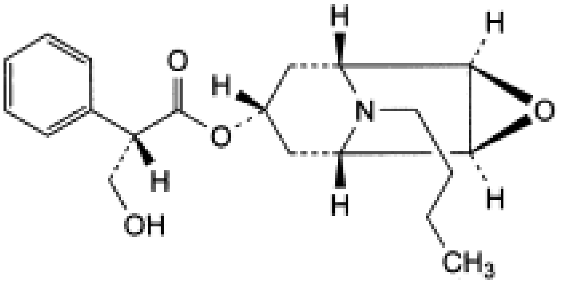


C. R1 = CH_2OH, R2 = H, R3 = R4 = CH_3: (1*R*,2*R*,4*S*,5*S*,7*s*)-7-[[(2*S*)-3-hydroxy-2-phenylpropanoyl]oxy]-9,9-dimethyl-3-oxa-9-azoniatricyclo[3.3.1.$0^{2,4}$]nonane (methylhyoscine),

D. R1 = CH_2OH, R2 = H, R3 = CH_3, R4 = CH_2-CH_2-CH_3: (1*R*,2*R*,4*S*,5*S*,7*s*,9*r*)-7-[[(2*S*)-3-hydroxy-2-phenylpropanoyl]oxy]-9-methyl-9-propyl-3-oxa-9-azoniatricyclo[3.3.1.$0^{2,4}$]nonane (propylhyoscine),

F. R1 = CH_2OH, R2 = H, R3 = CH_2-CH_2-CH_2-CH_3, R4 = CH_3: (1*R*,2*R*,4*S*,5*S*,7*s*,9*s*)-9-butyl-7-[[(2*S*)-3-hydroxy-2-phenylpropanoyl]oxy]-9-methyl-3-oxa-9-azoniatricyclo[3.3.1.$0^{2,4}$]nonane (pseudo-isomer),

G. R1 + R2 = CH_2 , R3 = CH_3, R4 = CH_2-CH_2-CH_2-CH_3: (1*R*,2*R*,4*S*,5*S*,7*s*,9*r*)-9-butyl-9-methyl-7-[(2-phenylprop-2-enoyl)oxy]-3-oxa-9-azoniatricyclo[3.3.1.$0^{2,4}$]nonane (apo-*N*-butylhyoscine);



E. (1*R*,2*R*,4*S*,5*S*,7*s*)-9-butyl-3-oxa-9-azatricyclo[3.3.1.$0^{2,4}$]nonan-7-yl (2*S*)-3-hydroxy-2-phenylpropanoate (*N*-butylhyoscine).

DEFINITION

(1*R*,2*R*,4*S*,5*S*,7*s*)-9-Methyl-3-oxa-9-azatricyclo[3.3.1.$0^{2,4}$]non-7-yl (2*S*)-3-hydroxy-2-phenylpropanoate hydrobromide trihydrate.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or colourless crystals, efflorescent.

Solubility

Freely soluble in water, soluble in ethanol (96 per cent).

IDENTIFICATION

First identification B, E.

Second identification A, C, D, E.

A. It complies with the test for specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison hyoscine hydrobromide CRS.

If the spectra obtained in the solid state show differences, proceed as follows: dissolve 3 mg of the substance to be examined in 1 ml of *ethanol (96 per cent) R* and evaporate to dryness on a water-bath; dissolve the residue in 0.5 ml of *methylene chloride R* and add 0.2 g of *potassium bromide R* and 15 ml of *ether R*; allow to stand for 5 min shaking frequently; decant; dry the residue on a water-bath until the solvents have evaporated; using the residue prepare a disc and dry at 100-105 °C for 3 h. Repeat the procedure with *hyoscine hydrobromide CRS* and record the spectra.

C. Dissolve about 50 mg in 5 ml of *water R* and add 5 ml of *picric acid solution R* dropwise and with shaking. The precipitate, washed with *water R* and dried at 100-105 °C for 2 h, melts *(2.2.14)* at 188 °C to 193 °C.

D. To about 1 mg add 0.2 ml of *fuming nitric acid R* and evaporate to dryness on a water-bath. Dissolve the residue in 2 ml of *acetone R* and add 0.1 ml of a 30 g/l solution of *potassium hydroxide R* in *methanol R*. A violet colour develops.

E. It gives reaction (a) of bromides *(2.3.1)*.

TESTS

Solution S

Dissolve 2.50 g in *carbon dioxide-free water R* and dilute to 50.0 ml with the same solvent.

pH *(2.2.3)*

4.0 to 5.5 for solution S.

Specific optical rotation *(2.2.7)*

- 24 to - 27 (anhydrous substance), determined on solution S.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 70.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 ml with the mobile phase.

Reference solution (a) Dilute 2.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 5.0 ml of this solution to 20.0 ml with the mobile phase.

Reference solution (b) Dilute 5.0 ml of reference solution (a) to 25.0 ml with the mobile phase.

Reference solution (c) Dissolve 5.0 mg of *hyoscine hydrobromide impurity B CRS* in the mobile phase, add 5.0 ml of the test solution and dilute to 50.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Column:

— *size:* *l* = 0.125 m, Ø = 4.0 mm;

— *stationary phase*: *octylsilyl silica gel for chromatography R* (3 µm);

— *temperature*: 25 ± 1 °C.

Mobile phase Mix 330 ml of *acetonitrile R* with 670 ml of a 2.5 g/l solution of *sodium dodecyl sulphate R* previously adjusted to pH 2.5 with *3 M phosphoric acid*.

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 210 nm.

Injection 5 µl.

Run time 3 times the retention time of hyoscine.

Relative retention With reference to hyoscine (retention time = about 5.0 min): impurity D = about 0.2; impurity B = about 0.9; impurity A = about 1.3; impurity C = about 2.4.

System suitability Reference solution (c):

— *resolution*: minimum 1.5 between the peaks due to impurity B and hyoscine;

— *symmetry factor*: maximum 2.5 for the peak due to hyoscine.

Limits:

— *correction factors*: for the calculation of contents, multiply the peak areas of the following impurities by the corresponding correction factor: impurity D = 0.3; impurity C = 0.6;

— *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

— *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Water *(2.5.12)*

2.0 per cent to 5.5 per cent, determined on 0.500 g.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.500 g in 25 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

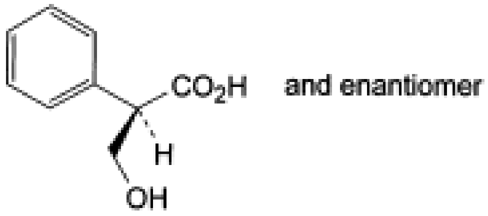
1 ml of *0.1 M perchloric acid* is equivalent to 67.7 mg of $C_{34}H_{48}N_2O_{10}S$.

STORAGE

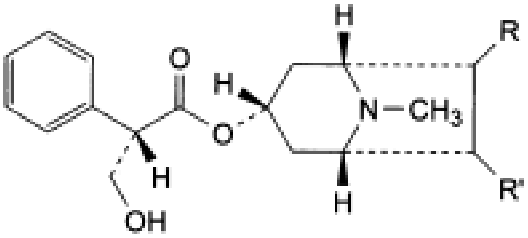
In an airtight container, protected from light.

IMPURITIES

Specified impurities A, B, C, D, E, F, G.



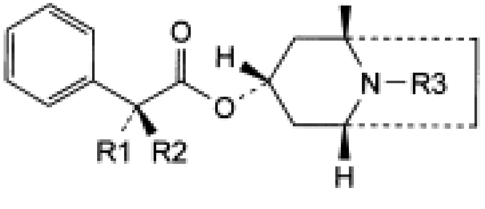
A. (2*RS*)-3-hydroxy-2-phenylpropanoic acid (DL-tropic acid),



B. R = OH, R′ = H: (1*R*,3*S*,5*R*,6*RS*)-6-hydroxy-8-methyl-8-azabicyclo[3.2.1]oct-3-yl (2*S*)-3-hydroxy-2-phenylpropanoate (7-hydroxyhyoscyamine),

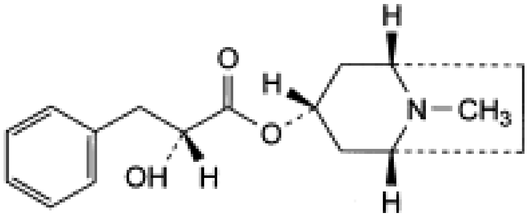
C. R = H, R′ = OH: (1*S*,3*R*,5*S*,6*RS*)-6-hydroxy-8-methyl-8-azabicyclo[3.2.1]oct-3-yl (2*S*)-3-hydroxy-2-phenylpropanoate (6-hydroxyhyoscyamine),

D. hyoscine,



E. R1 = CH_2OH, R2 = R3 = H: (1*R*,3*r*,5*S*)-8-azabicyclo[3.2.1]oct-3-yl (2*S*)-3-hydroxy-2-phenylpropanoate (norhyoscyamine),

G. R1 + R2 = CH_2, R3 = CH_3: (1*R*,3*r*,5*S*)-8-methyl-8-azabicyclo[3.2.1]oct-3-yl 2-phenylprop-2-enoate (apoatropine),



F. (1*R*,3*r*,5*S*)-8-methyl-8-azabicyclo[3.2.1]oct-3-yl (2*R*)-2-hydroxy-3-phenylpropanoate (littorine).

Ph Eur

Hypromellose Phthalate

General Notices

(Ph Eur monograph 0347)

Action and use

Artificial tears.

Ph Eur

DEFINITION

Hydroxypropylmethylcellulose phtalate.

Monophthalic acid ester of hypromellose, containing methoxy (-OCH_3), 2-hydroxypropoxy (-$OCH_2CHOHCH_3$) and phthaloyl (*o*-carboxybenzoyl $C_8H_5O_3$) groups.

CHARACTERS

Appearance

White or almost white, free-flowing flakes or granular powder.

Solubility

Practically insoluble in water, soluble in a mixture of equal volumes of acetone and methanol and in a mixture of equal volumes of methanol and methylene chloride, very slightly soluble in acetone and in toluene, practically insoluble in anhydrous ethanol.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

Comparison   *hypromellose phthalate CRS.*

TESTS

Free phthalic acid

Liquid chromatography (*2.2.29*).

Test solution   Dissolve 0.20 g of the substance to be examined in about 50 ml of *acetonitrile R* with the aid of ultrasound. Add 10 ml of *water R*, cool to room temperature, dilute to 100.0 ml with *acetonitrile R* and mix.

Reference solution   Dissolve 12.5 mg of *phthalic acid R* in 125 ml of *acetonitrile R.* Add 25 ml of *water R*, dilute to 250.0 ml with *acetonitrile R* and mix.

Column:
— *size*: *l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5-10 µm).

Mobile phase *acetonitrile R*, 1 g/l solution of *trifluoroacetic acid R* (1:9 *V/V*).

Flow rate 2.0 ml/min.

Detection Spectrophotometer at 235 nm.

Injection 10 µl.

System suitability Reference solution:

— *repeatability*: maximum relative standard deviation of 1.0 per cent after 2 injections.

Limit:

— *phthalic acid*: not more than 0.4 times the area of the corresponding peak in the chromatogram obtained with the reference solution (1.0 per cent).

Chlorides

Maximum 0.07 per cent.

Dissolve 1.0 g in 40 ml of *0.2 M sodium hydroxide*, add 0.05 ml of *phenolphthalein solution R* and add *dilute nitric acid R* dropwise, with stirring, until the red colour disappears. Add an additional 20 ml of *dilute nitric acid R* with stirring. Heat on a water-bath with stirring until the gel-like precipitate formed becomes granular. Cool and centrifuge. Separate the liquid phase and wash the residue with 3 quantities, each of 20 ml, of *water R*, separating the washings by centrifugation. Combine the liquid phases, dilute to 200 ml with *water R,* mix and filter. To 50 ml of this solution, add 1 ml of *0.1 M silver nitrate*. The solution is not more opalescent than a standard prepared by mixing 0.5 ml of *0.01 M hydrochloric acid* with 10 ml of *0.2 M sodium hydroxide*, adding 7 ml of *dilute nitric acid R* and 1 ml of *0.1 M silver nitrate*, and diluting to 50 ml with *water R.*

Heavy metals *(2.4.8)*

Maximum 10 ppm.

2.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Water *(2.5.12)*

Maximum 5.0 per cent, determined on 0.500 g.

Sulphated ash *(2.4.14)*

Maximum 0.2 per cent, determined on 1.0 g.

STORAGE

In an airtight container .

FUNCTIONALITY-RELATED CHARACTERISTICS

This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient. This section is a non-mandatory part of the monograph and it is not necessary to verify the characteristics to demonstrate compliance. Control of these characteristics can however contribute to the quality of a medicinal product by improving the consistency of the *manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.*

The following characteristics may be relevant for hypromellose phthalate used as a gastro-resistant coating agent.

Apparent viscosity ***(2.2.9)***

80 per cent to 120 per cent of the nominal value.

Dissolve 10 g, previously dried at 105 °C for 1 h, in 90 g of a mixture of equal masses of *methanol R* and *methylene chloride R* by mixing and shaking.

Solubility

0.2 g does not dissolve in *0.1 M hydrochloric acid* but dissolves quickly and completely in 100 ml of *phosphate buffer solution pH 6.8 R* with stirring.

Phthaloyl groups

Typically 21.0 per cent to 35.0 per cent (anhydrous substance).

Dissolve 1.000 g in 50 ml of a mixture of 1 volume of *water R*, 2 volumes of *acetone R* and 2 volumes of *ethanol (96 per cent) R*. Add 0.1 ml of *phenolphthalein solution R* and titrate with *0.1 M sodium hydroxide* until a faint pink colour is obtained. Carry out a blank titration.

Calculate the percentage content of phthaloyl groups using the following expression:

$$\frac{149n}{(100-a)\,m} - 1.795S$$

a = percentage content of water

m = mass of the substance to be examined, in grams

n = volume of *0.1 M sodium hydroxide* used, in millilitres

S = percentage content of free phthalic acid (see Tests).

Ph Eur

Hypromellose

General Notices

(Ph Eur monograph 0348)

9004-65-3

Action and use

Artificial tears.

Preparation

Hypromellose Eye Drops

Ph Eur

DEFINITION

Hydroxypropylmethylcellulose.

Partly *O*-methylated and *O*-(2-hydroxypropylated) cellulose.

CHARACTERS

Appearance

White, yellowish-white or greyish-white powder or granules, hygroscopic after drying.

Solubility

Practically insoluble in hot water, in acetone, in anhydrous ethanol and in toluene. It dissolves in cold water giving a colloidal solution.

IDENTIFICATION

A. Evenly distribute 1.0 g on the surface of 100 ml of *water R* in a beaker, tapping the top of the beaker, gently if necessary to ensure a uniform layer on the surface. Allow to stand for 1-2 min: the powdered material aggregates on the surface.

B. Evenly distribute 1.0 g into 100 ml of boiling *water R*, and stir the mixture using a magnetic stirrer with a bar 25 mm long: a slurry is formed and the particles do not dissolve. Allow the slurry to cool to 10 °C and stir using a magnetic stirrer: a clear or slightly turbid solution occurs with its thickness dependent on the viscosity grade.

C. To 0.1 ml of the solution obtained in identification B add 9 ml of a 90 per cent *V/V* solution of *sulphuric acid R*, shake, heat on a water-bath for exactly 3 min, immediately cool in an ice-bath, carefully add 0.6 ml of a 20 g/l solution of *ninhydrin R,* shake and allow to stand at 25 °C: a red colour develops at first and changes to purple within 100 min.

D. Place 2-3 ml of the solution obtained in identification B onto a glass slide as a thin film and allow the water to evaporate: a coherent, clear film forms on the glass slide.

E. Add exactly 50 ml of the solution obtained in identification B to exactly 50 ml of *water R* in a beaker. Insert a thermometer into the solution. Stir the solution on a magnetic stirrer/hot plate and begin heating, increasing the temperature at a rate of 2-5 °C per minute. Determine the temperature at which a turbidity increase begins to occur and designate the temperature as the flocculation temperature: the flocculation temperature is higher than 50 °C.

TESTS

Solution S

While stirring, introduce a quantity of the substance to be examined equivalent to 1.0 g of the dried substance into 50 g of *carbon dioxide-free water R* heated to 90 °C. Allow to cool, adjust the mass of the solution to 100 g with *carbon dioxide-free water R* and stir until dissolution is complete.

Appearance of solution

Solution S is not more opalescent than reference suspension III (*2.2.1*) and not more intensely coloured than reference solution Y_6 (*2.2.2, Method II*).

pH *(2.2.3)*

5.0 to 8.0 for the solution prepared as described under Apparent viscosity.

Carry out the test at 20 ± 2 °C and read the indicated pH value after the probe has been immersed for 5 ± 0.5 min.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with test F. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 5.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 1 h.

Sulphated ash *(2.4.14)*

Maximum 1.5 per cent, determined on 1.0 g.

FUNCTIONALITY-RELATED CHARACTERISTICS

This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient. This section is a non-mandatory part of the monograph and it is not necessary to verify the characteristics to demonstrate compliance. Control of these characteristics can however contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.

The following characteristics may be relevant for hypromellose used as binder, viscosity-increasing agent or film former.

Apparent viscosity

Minimum 80 per cent and maximum 120 per cent of the nominal value for samples with a viscosity less than 600 mPa·s (Method 1); minimum 75 per cent and maximum 140 per cent of the nominal value for samples with a viscosity of 600 mPa·s or higher (Method 2).

Method 1, to be applied to samples with a viscosity of less than 600 mPa·s Weigh accurately a quantity of the substance to be examined equivalent to 4.000 g of the dried substance. Transfer into a wide-mouthed bottle, and adjust the mass to 200.0 g with hot *water R*. Capping the bottle, stir by mechanical means at 400 ± 50 r/min for 10-20 min until the particles are thoroughly dispersed and wetted. Scrape down the insides of the bottle with a spatula if necessary, to ensure that there is no undissolved material on the sides of the bottle, and continue the stirring in a cooling water-bath maintained at a temperature below 10 °C for another 20-40 min. Adjust the solution mass if necessary to 200.0 g using cold *water R*. Centrifuge the solution if necessary to expel any entrapped air bubbles. Using a spatula, remove any foam, if present. Determine the viscosity of this solution using the capillary viscometer method (*2.2.9*) to obtain the kinematic viscosity (ν). Separately, determine the density (ρ) (*2.2.5*) of the solution and calculate the dynamic viscosity (η), as $\eta = \rho\nu$.

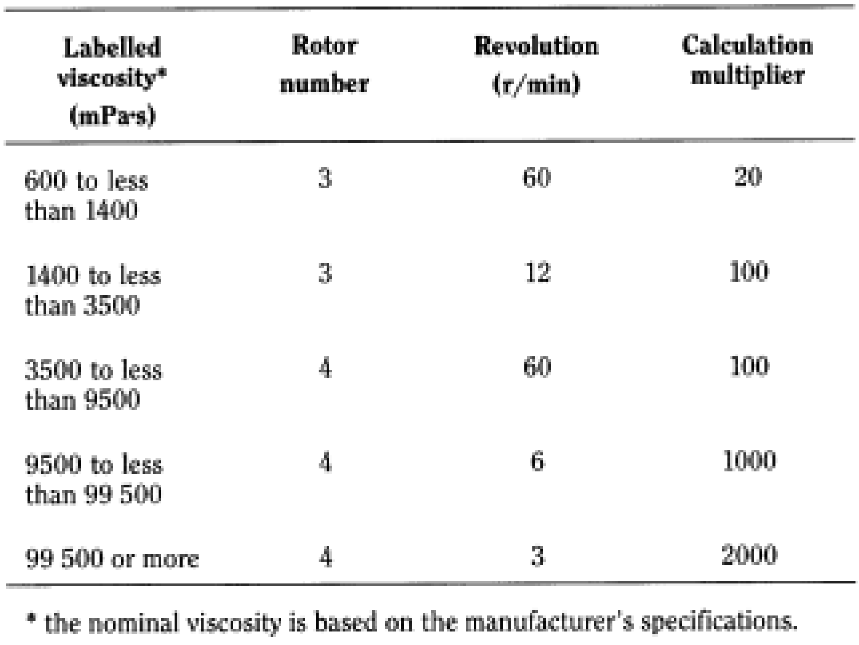
Method 2, to be applied to samples with a viscosity of 600 mPa·s or higher Weigh accurately a quantity of the substance to be examined equivalent to 10.00 g of the dried substance. Transfer into a wide-mouthed bottle, and adjust the mass to 500.0 g with hot *water R*. Capping the bottle, stir by mechanical means at 400 ± 50 r/min for 10-20 min until the particles are thoroughly dispersed and wetted. Scrape down the insides of the bottle with a spatula if necessary, to ensure that there is no undissolved material on the sides of the bottle, and continue the stirring in a cooling water-bath maintained at a temperature below 10 °C for another 20-40 min. Adjust the solution mass if necessary to 500.0 g using cold *water R*. Centrifuge the solution if necessary to expel any entrapped air bubbles. Using a spatula, remove any foam, if present. Determine the viscosity (*2.2.10*) of this solution at 20 ± 0.1 °C using a rotating viscometer.

Apparatus Single-cylinder type spindle viscometer.

Rotor number, revolution and calculation multiplier Apply the conditions specified in Table 0348.-1.

Allow the spindle to rotate for 2 min before taking the measurement. Allow a rest period of 2 min between subsequent measurements. Repeat the measurement twice and determine the mean of the 3 readings.

Table 0348.-1.



Labelled viscosity* (mPa·s)	Rotor number	Revolution (r/min)	Calculation multiplier
600 to less than 1400	3	60	20
1400 to less than 3500	3	12	100
3500 to less than 9500	4	60	100
9500 to less than 99 500	4	6	1000
99 500 or more	4	3	2000

* the nominal viscosity is based on the manufacturer's specifications.

Degree of substitution

Gas chromatography (*2.2.28*).

Apparatus:

— *reaction vial*: a 5 ml pressure-tight vial, 50 mm in height, 20 mm in external diameter and 13 mm in internal diameter at the mouth, equipped with a pressure-tight butyl rubber membrane stopper coated with polytetrafluoroethylene and secured with an aluminium crimped cap or another sealing system providing a sufficient air-tightness;

— *heater*: a heating module with a square aluminium block having holes 20 mm in diameter and 32 mm in depth, so that the reaction vials fit; mixing of the contents of the vial is effected using a magnetic stirrer equipped in the heating module or using a reciprocal shaker that performs approximately 100 cycles/min.

Internal standard solution 30 g/l solution of *octane R* in *xylene R.*

Test solution Weigh 65.0 mg of the substance to be examined, place in a reaction vial, add 0.06-0.10 g of *adipic acid R*, 2.0 ml of the internal standard solution and 2.0 ml of a 570 g/l solution of *hydriodic acid R*, immediately cap and seal the vial, and weigh accurately. Mix the contents of the vial continuously for 60 min while heating the block so that the temperature of the contents is maintained at 130 ± 2 °C. If a reciprocal shaker or magnetic stirrer cannot be used, shake the vial well by hand at 5-minute intervals during the initial 30 min of the heating time. Allow the vial to cool, and again weigh accurately. If the loss of mass is less than 0.50 per cent of the contents and there is no evidence of a leak, use the upper layer of the mixture as the test solution.

Reference solution Place 0.06-0.10 g of *adipic acid R*, 2.0 ml of the internal standard solution and 2.0 ml of *hydroiodic acid R* in another reaction vial, cap and seal the vial, and weigh accurately. Add 15-22 µl of *isopropyl iodide R* through the septum with a syringe, weigh accurately, add 45 µl of *methyl iodide R* in the same manner, and weigh accurately. Shake the reaction vial well, and use the upper layer as the reference solution.

Column:

— *size*: *l* = 1.8-3 m, Ø = 3-4 mm;

— *stationary phase*: *diatomaceous earth for gas chromatography R* impregnated with 10-20 per cent of *poly(dimethyl)(75)(diphenyl)(25)siloxane R* (film thickness 125-150 µm);

— *temperature*: 100 °C.

Carrier gas *helium for chromatography R* (thermal conductivity); *helium for chromatography R* or *nitrogen for chromatography R* (flame ionisation).

Flow rate Adjusted so that the retention time of the internal standard is about 10 min.

Detection Flame ionisation or thermal conductivity.

Injection 1-2 µl.

System suitability Reference solution:

— *resolution*: well resolved peaks of methyl iodide (1st peak), isopropyl iodide (2nd peak) and internal standard (3rd peak).

Calculation:

— *methoxy and hydroxypropoxy groups*: calculate the ratios (Q_1 and Q_2) of the areas of the peaks due to methyl iodide and isopropyl iodide to the area of the peak due to the internal standard in the chromatogram obtained with the test solution, and the ratios (Q_3 and Q_4) of the areas of the peaks due to methyl iodide and isopropyl iodide to the area of the peak due to the internal standard in the chromatogram obtained with the reference solution.

Calculate the percentage content of methoxy groups using the following expression:

$$\frac{Q_1}{Q_3} \times \frac{m_1}{m} \times 21.864$$

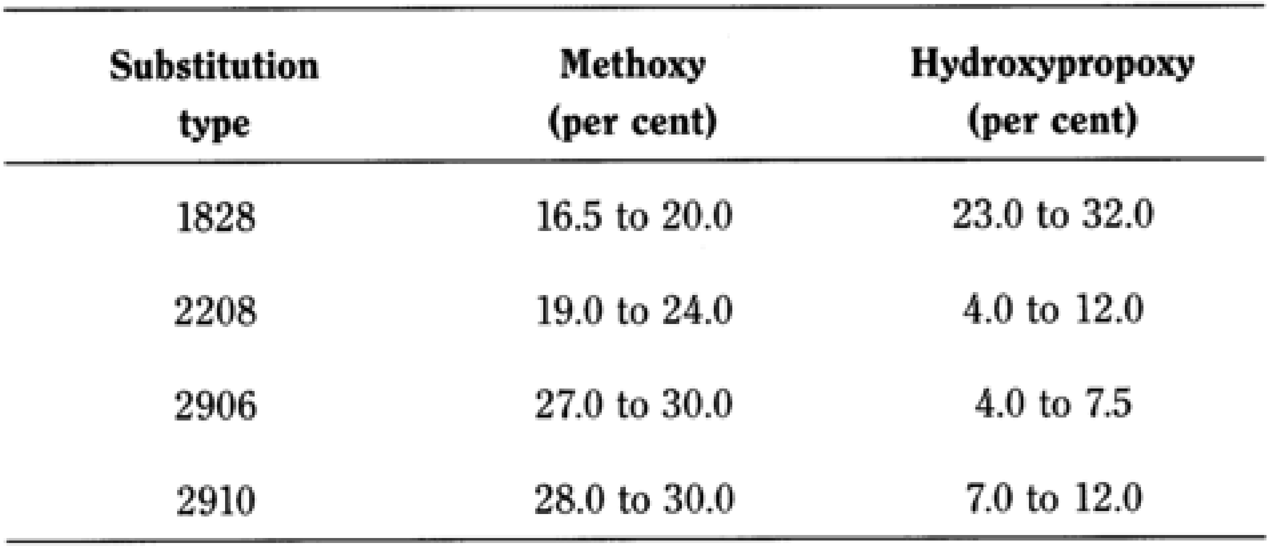
Calculate the percentage content of hydroxypropoxy groups using the following expression:

$$\frac{Q_2}{Q_4} \times \frac{m_2}{m} \times 44.17$$

m_1 = mass of methyl iodide in the reference solution, in milligrams

m_2 = mass of isopropyl iodide in the reference solution, in milligrams

m = mass of the sample (dried substance), in milligrams.



Substitution type	Methoxy (per cent)	Hydroxypropoxy (per cent)
1828	16.5 to 20.0	23.0 to 32.0
2208	19.0 to 24.0	4.0 to 12.0
2906	27.0 to 30.0	4.0 to 7.5
2910	28.0 to 30.0	7.0 to 12.0

The following characteristics may be relevant for hypromellose used as matrix former in prolonged-release tablets.

Apparent viscosity

See test above.

Degree of substitution

See test above.

Molecular mass distribution *(2.2.30)*.

Particle-size distribution *(2.9.31* or *2.9.38)*.

Powder flow *(2.9.36)*.

Ph Eur

Low-molecular-weight Heparins

General Notices

(Low-molecular-mass Heparins, Ph Eur monograph 0828)

Action and use

Anticoagulant.

Ph Eur

DEFINITION

Salts of sulphated glucosaminoglycans having a mass-average relative molecular mass less than 8000 and for which at least 60 per cent of the total mass has a relative molecular mass less than 8000. Low-molecular-mass heparins display different chemical structures at the reducing, or the non-reducing end of the polysaccharide chains.

The potency is not less than 70 IU of anti-factor Xa activity per milligram, calculated with reference to the dried substance. The ratio of anti-factor Xa activity to anti-factor IIa activity, determined as described under Assay, is not less than 1.5.

PRODUCTION

Low-molecular-mass heparins are obtained by fractionation or depolymerisation of heparin of natural origin that complies with the monograph on *Heparin sodium (0333)* or *Heparin calcium (0332)*, whichever is appropriate, for parenteral use, unless otherwise justified and authorised. For each type of low-molecular-mass heparin the batch-to-batch consistency is ensured by demonstrating, for example, that the mass-average relative molecular mass and the mass percentage within defined relative molecular-mass ranges lower than 8000 are not less than 75 per cent and not more than 125 per cent of the mean value stated as type specification. The same limits apply also to the ratio of anti-factor Xa activity to anti-factor IIa activity.

Nucleotide and protein impurities of the source material

Dissolve 40 mg of the source material before fractionation in 10 ml of *water R*. The absorbance *(2.2.25)* measured at 260 nm and 280 nm is not greater than 0.20 and 0.15, respectively.

CHARACTERS

Appearance

White or almost white powder, hygroscopic.

Solubility

Freely soluble in water.

IDENTIFICATION

A. Nuclear magnetic resonance spectrometry *(2.2.33)*.

Preparation Dissolve 0.200 g of the substance to be examined in a mixture of 0.2 ml of *deuterium oxide R* and 0.8 ml of *water R*.

Comparison Dissolve 0.200 g of the appropriate specific low-molecular-mass heparin reference standard in a mixture of 0.2 ml of *deuterium oxide R* and 0.8 ml of *water R*.

Operating conditions Use a pulsed (Fourier transform) spectrometer operating at 75 MHz for ^{13}C. Record the spectra at 40 °C, using cells 5 mm in diameter. Use *deuterated methanol R* as internal reference at $\delta = 50.0$ ppm.

Results The spectrum obtained is similar to the appropriate specific low-molecular-mass heparin reference standard.

B. The ratio of anti-factor Xa activity to anti-factor IIa activity, determined as described under Assay, is not less than 1.5.

C. Size-exclusion chromatography *(2.2.30)*.

Test solution Dissolve 20 mg of the substance to be examined in 2 ml of the mobile phase.

Reference solution Dissolve 20 mg of *heparin low-molecular-mass for calibration CRS* in 2 ml of the mobile phase.

Column:

— *size*: *l* = 0.30 m, Ø = 7.5 mm;

— *stationary phase*: appropriate porous silica beads (5 µm) with a fractionation range for proteins of approximately 15 000 to 100 000;

— *number of theoretical plates*: minimum of 20 000 per metre.

Mobile phase 28.4 g/l solution of *anhydrous sodium sulphate R* adjusted to pH 5.0 using *dilute sulphuric acid R*.

Flow rate 0.5 ml/min.

Detection Differential refractometer.

Injection 25 µl.

Calibration For detection, use a differential refractometer (RI) detector connected in series to a ultraviolet spectrophotometer (UV) set at 234 nm such that the UV monitor is connected to the column outlet, and the RI detector to the UV-monitor outlet.

It is necessary to measure the time lapse between the 2 detectors accurately, so that their chromatograms can be aligned correctly. The retention times used in the calibration must be those from the RI detector.

The normalisation factor used to calculate the relative molecular mass from the RI/UV ratio is obtained as follows: calculate the total area under the UV_{234} (ΣUV_{234}) and the RI (ΣRI) curves by numerical integration over the range of interest (i.e. excluding salt and solvent peaks at the end of the chromatogram). Calculate the ratio r using the following expression:

$$\frac{\sum \mathrm{RI}}{\sum \mathrm{UV}_{234}}$$

Calculate the factor f using the following expression:

$$\frac{M_{na}}{r}$$

M_{na} = assigned number-average relative molecular mass of the *Heparin low-molecular-mass for calibration CRS* found in the leaflet supplied with the CRS.

Provided the UV_{234} and the RI responses are aligned, the relative molecular mass M at any point is calculated using the following expression:

$$f\frac{\mathrm{RI}}{\mathrm{UV}_{234}}$$

The resulting table of retention times and relative molecular masses may be used to derive a calibration for the chromatographic system by fitting a suitable mathematical relationship to the data. A polynomial of the 3rd degree is recommended. *It must be stressed that the extrapolation of this fitted calibration curve to higher molecular masses is not valid*.

Inject 25 µl of the test solution and record the chromatogram for a period of time, ensuring complete elution of sample and solvent peaks.

The mass-average relative molecular mass is defined by the following expression:

$$\frac{\sum(\mathrm{RI}_i M_i)}{\sum \mathrm{RI}_i}$$

RI_i = mass of substance eluting in the fraction i;

M_i = relative molecular mass corresponding to fraction i.

Any low-molecular-mass heparin covered by a specific monograph complies with the requirements for identification C prescribed in the corresponding monograph.

Where no specific monograph exists for the low-molecular-mass heparin to be examined, the mass-average relative molecular mass is not greater than 8000 and at least 60 per cent of the total mass has a relative molecular mass lower than 8000. In addition, the molecular mass parameters (mass-average molecular mass and mass percentages of chains comprised between specified values) correspond to that of the manufacturer's reference preparation.

D. It gives reaction (a) of sodium or the reactions of calcium (as appropriate) *(2.3.1)*.

TESTS

pH *(2.2.3)*

5.5 to 8.0.

Dissolve 0.1 g in *carbon dioxide-free water R* and dilute to 10 ml with the same solvent.

Nitrogen *(2.5.9)*

1.5 per cent to 2.5 per cent (dried substance).

Calcium *(2.5.11)*

9.5 per cent to 11.5 per cent (dried substance), if prepared from heparin complying with the monograph on *Heparin calcium (0332)*. Use 0.200 g.

Sodium

9.5 per cent to 12.5 per cent (dried substance), if prepared from heparin complying with the monograph on *Heparin sodium (0333)*.

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Dissolve 50 mg in *0.1 M hydrochloric acid* containing 1.27 mg of *caesium chloride R* per millilitre and dilute to 100.0 ml with the same solvent.

Reference solutions Prepare reference solutions (25 ppm, 50 ppm and 75 ppm) using *sodium standard solution (200 ppm Na) R* diluted with *0.1 M hydrochloric acid* containing 1.27 mg of *caesium chloride R* per millilitre.

Source Sodium hollow-cathode lamp.

Wavelength 330.3 nm.

Atomisation device Flame of suitable composition (for example, 11 litres of air and 2 litres of acetylene per minute).

Molar ratio of sulphate ions to carboxylate ions *(2.2.38)*

Minimum 1.8.

The sample of heparin used in this titration must be free from ionisable impurities, particularly salts.

Weigh 0.100 g of the substance to be examined taking the necessary measures to avoid the problems linked to hygroscopicity.

Take up into about 20 ml of double-glass-distilled *water R*. Cool to 4 °C and apply 2.0 ml of this solution to a pre-cooled column (approximately 10 × 1 cm), packed with a suitable *cation exchange resin R*. Wash through with double-glass-distilled *water R* into the titration vessel up to a final volume of about 10-15 ml (*the titration vessel must be just large enough to hold the electrodes from the conductivity meter, a small stirrer bar and a fine flexible tube from the outlet of a 2 ml burette*). Stir magnetically. When the conductivity reading is constant, note it and titrate with *0.05 M sodium hydroxide* added in approximately 50 µl portions. Record the burette level and the conductivity meter reading a few seconds after each addition until the end-point is reached.

For each measured figure, calculate the number of milliequivalents of sodium hydroxide added from the volume and the known concentration of the sodium hydroxide solution. Plot on a graph the figures for conductivity (as *y*-axis) against the figures of milliequivalent of sodium hydroxide (as *x*-axis). The graph will have 3, approximately linear sections: an initial steep downward slope, a middle slight rise and a final steep rise. Estimate the best straight lines through these 3 parts of the graph. At the points where the 1st and 2nd lines intersect, and where the 2nd and 3rd lines intersect, draw perpendiculars to the *x*-axis to estimate the milliequivalents of sodium hydroxide taken up by the sample at those points. The point where the 1st and 2nd lines intersect will give the number of milliequivalents of sodium hydroxide taken up by the sulphate groups, and the point where the 2nd and 3rd lines intersect will give the number of milliequivalents taken up by the sulphate and carboxylate groups together. The difference between the 2 will therefore give the number of milliequivalents taken up by the carboxylate groups.

Heavy metals ***(2.4.8)***

Maximum 30 ppm.

0.5 g complies with test C. Prepare the reference solution using 1.5 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying ***(2.2.32)***

Maximum 10.0 per cent, determined on 1.000 g by drying at 60 °C over *diphosphorus pentoxide R* at a pressure not exceeding 0.67 kPa for 3 h.

Bacterial endotoxins ***(2.6.14)***

Less than 0.01 IU per International Unit of anti-Xa activity, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins. The addition of divalent cations may be necessary to fulfil the validation criteria.

ASSAY

The anticoagulant activity of low-molecular-mass heparins is determined *in vitro* by 2 assays which determine its ability to accelerate the inhibition of factor Xa (anti-Xa assay) and thrombin, factor IIa (anti-IIa assay), by antithrombin III.

The International Units for anti-Xa and anti-IIa activity are the activities contained in a stated amount of the International Standard for low-molecular-mass heparin.

Heparin low-molecular-mass for assay BRP, calibrated in International Units by comparison with the International Standard using the 2 assays given below, is used as reference preparation.

ANTI-FACTOR XA ACTIVITY

Reference and test solutions

Prepare 4 independent series of 4 dilutions each, of the substance to be examined and of the reference preparation of low-molecular-mass heparin in *tris(hydroxymethyl)aminomethane sodium chloride buffer solution pH 7.4 R*; the concentration range should be within 0.025 IU to 0.2 IU of anti-factor Xa activity per millilitre and the dilutions chosen should give a linear response when results are plotted as absorbance against log concentration.

Procedure

Label 16 tubes in duplicate: T_1, T_2, T_3, T_4 for the dilutions of the substance to be examined and S_1, S_2, S_3, S_4 for the dilutions of the reference preparation. To each tube add 50 µl of *antithrombin III solution R1* and 50 µl of the appropriate dilution of the substance to be examined, or the reference preparation. After each addition, mix but do not allow bubbles to form. Treating the tubes in the order S_1, S_2, S_3, S_4, T_1, T_2, T_3, T_4, T_1, T_2, T_3, T_4, S_1, S_2, S_3, S_4, allow to equilibrate at 37 °C (water-bath or heating block) for 1 min and add to each tube 100 µl of *bovine factor Xa solution R*. Incubate for exactly 1 min and add 250 µl of *chromogenic substrate R1*. Stop the reaction after exactly 4 min by adding 375 µl of *acetic acid R*. Transfer the mixtures to semi-micro cuvettes and measure the absorbance *(2.2.25)* at 405 nm using a suitable reading device. Determine the blank amidolytic activity at the beginning and at the end of the procedure in a similar manner, using *tris(hydroxymethyl)aminomethane sodium chloride buffer solution pH 7.4 R* instead of the reference and test solutions; the 2 blank values do not differ significantly. Calculate the regression of the absorbance on log concentrations of the solutions of the substance to be examined and of the reference preparation of low-molecular-mass heparins and calculate the potency of the substance to be examined in International Units of anti-factor Xa activity per millilitre using the usual statistical methods for parallel-line assays.

ANTI-FACTOR IIA ACTIVITY

Reference and test solutions

Prepare 4 independent series of 4 dilutions each, of the substance to be examined and of the reference preparation of low molecular-mass heparin in *tris(hydroxymethyl)aminomethane sodium chloride buffer solution pH 7.4 R*; the concentration range should be within 0.015 IU to 0.075 IU of anti-factor IIa activity per millilitre and the dilutions chosen should give a linear response when results are plotted as absorbance against log concentration.

Procedure

Label 16 tubes in duplicate: T_1, T_2, T_3, T_4 for the dilutions of the substance to be examined and S_1, S_2, S_3, S_4 for the dilutions of the reference preparation. To each tube add 50 µl of *antithrombin III solution R2* and 50 µl of the appropriate dilution of the substance to be examined or the reference preparation. After each addition, mix but do not allow bubbles to form. Treating the tubes in the order S_1, S_2, S_3, S_4, T_1, T_2, T_3, T_4, T_1, T_2, T_3, T_4, S_1, S_2, S_3, S_4, allow to equilibrate at 37 °C (water-bath or heating block) for 1 min and add to each tube 100 µl of *human thrombin solution R*. Incubate for exactly 1 min and add 250 µl of *chromogenic substrate R2*. Stop the reaction after exactly 4 min by adding 375 µl of *acetic acid R*. Transfer the mixtures to semi-micro cuvettes and measure the absorbance *(2.2.25)* at 405 nm using a suitable reading device. Determine the blank amidolytic activity at the beginning and at the end of the procedure in a similar manner, using *tris(hydroxymethyl)aminomethane sodium chloride buffer solution pH 7.4 R* instead of the reference and test solutions; the 2 blank values do not differ significantly. Calculate the regression of the absorbance on log concentrations of the solutions of the substance to be examined and of the reference preparation of low-molecular-mass heparins, and calculate the potency of the substance to be examined in International Units of anti-factor IIa activity per millilitre using the usual statistical methods for parallel-line assays.

LABELLING

The label states:

— the number of International Units of anti-factor Xa activity per milligram;

— the number of International Units of anti-factor IIa activity per milligram;

— the mass-average molecular mass and the percentage of molecules within defined molecular mass ranges;

— where applicable, that the contents are the sodium salt;

— where applicable, that the contents are the calcium salt.

STORAGE

In an airtight tamper-proof container. If the product is sterile and free of bacterial endotoxins, store in a sterile and apyrogenic container.

$C_{254}H_{377}N_{65}O_{75}S_6$ 5734 *11070-73-8*

Action and use

Hormone; treatment of diabetes mellitus.

Preparation

Insulin Preparations

Ph Eur

DEFINITION

Bovine insulin is the natural antidiabetic principle obtained from beef pancreas and purified.

Content:

— *sum of bovine insulin ($C_{254}H_{377}N_{65}O_{75}S_6$) and A21 desamido bovine insulin*: 93.0 per cent to 105.0 per cent (dried subtance).

By convention, for the purpose of labelling insulin preparations, 0.0342 mg of bovine insulin is equivalent to 1 IU of insulin.

PRODUCTION

The animals from which bovine insulin is derived must fulfil the requirements for the health of animals suitable for human consumption.

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water and in ethanol. It dissolves in dilute mineral acids and with decomposition in dilute solutions of alkali hydroxides.

IDENTIFICATION

A. Examine the chromatograms obtained in the assay.

Results The retention time of the principal peak in the chromatogram obtained with the test solution corresponds to that of the principal peak in the chromatogram obtained with reference solution (c).

B. Peptide mapping.

Test solution Prepare a 2.0 mg/ml solution of the substance to be examined in *0.01 M hydrochloric acid* and transfer 500 µl of this solution to a clean tube. Add 2.0 ml of *HEPES buffer solution pH 7.5 R* and 400 µl of a 1 mg/ml solution of *Staphylococcus aureus strain V8 protease R*. Cap the tube and incubate at 25 °C for 6 h. Stop the reaction by adding 2.9 ml of *sulphate buffer solution pH 2.0 R.*

Reference solution Prepare at the same time and in the same manner as for the test solution but using *bovine insulin CRS* instead of the substance to be examined.

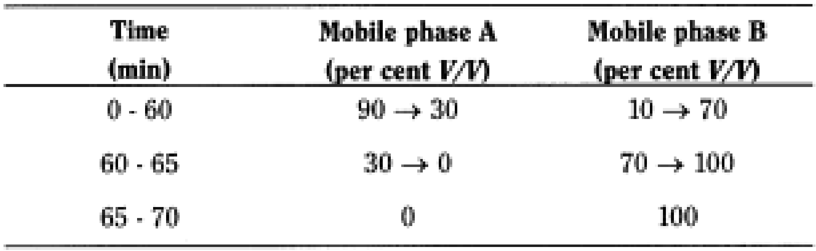
Examine the digests by liquid chromatography *(2.2.29)*.

Column:

- *size*: *l* = 0.10 m, Ø = 4.6 mm;
- *stationary phase: octadecylsilyl silica gel for chromatography R* (3 µm);
- *temperature:* 40 °C.

Mobile phase:

- *mobile phase A*: mix 100 ml of *acetonitrile for chromatography R*, 700 ml of *water R* and 200 ml of *sulphate buffer solution pH 2.0 R*; filter and degas;
- *mobile phase B:* mix 400 ml of *acetonitrile for chromatography R*, 400 ml of *water R* and 200 ml of *sulphate buffer solution pH 2.0 R*; filter and degas;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 60	90 → 30	10 → 70
60 - 65	30 → 0	70 → 100
65 - 70	0	100

Flow rate 1 ml/min.

Detection Spectrophotometer at 214 nm.

Equilibration At initial conditions for at least 15 min. Carry out a blank run using the above-mentioned gradient.

Injection 50 µl.

System suitability The chromatograms obtained with the test solution and the reference solution are qualitatively similar to the chromatogram of bovine insulin digest supplied with *bovine insulin CRS*. In the chromatogram obtained with the reference solution, identify the peaks due to digest fragments I, II and III. The symmetry factor of the peaks due to fragments II and III is not greater than 1.5, and the resolution between the 2 peaks is at least 1.9.

Results The profile of the chromatogram obtained with the test solution corresponds to that of the chromatogram obtained with the reference solution.

NOTE: The retention time of fragment I is the same for porcine insulin and for human insulin. The retention times of fragments II and IV are the same for all insulins. The retention time of fragment III is the same for bovine insulin and for porcine insulin.

TESTS

Impurities with molecular masses greater than that of insulin

Size-exclusion chromatography (*2.2.30*): use the normalisation procedure. *Maintain the solutions at 2-10 °C and use within 7 days. If an automatic injector is used, maintain the temperature at 2-10 °C.*

Test solution Dissolve 4 mg of the substance to be examined in 1.0 ml of *0.01 M hydrochloric acid*.

Resolution solution Use a solution of insulin (approximately 4 mg/ml), containing more than 0.4 per cent of high molecular mass proteins. An injectable insulin preparation, whether a solution or a suspension, that has been clarified with a sufficient amount of *6 M hydrochloric acid R,* containing the indicated percentage of high molecular mass proteins, or a solution prepared from insulin, dissolved in *0.01 M hydrochloric acid*, may be used. Insulin containing the indicated percentage of high molecular mass proteins may be prepared by allowing insulin powder to stand at room temperature for about 10 days.

Column:

- *size*: *l* = 0.3 m, Ø = at least 7.5 mm;
- *stationary phase*: *hydrophilic silica gel for chromatography R* (5-10 µm), of a grade suitable for the separation of insulin monomer from dimer and polymers.

Mobile phase Mix of 15 volumes of *glacial acetic acid R*, 20 volumes of *acetonitrile R* and 65 volumes of a 1.0 g/l solution of *arginine R*; filter and degas.

Flow rate 0.5 ml/min.

Detection Spectrophotometer at 276 nm.

Equilibration Before using a new column for chromatographic analysis, equilibrate by repeated injections of an insulin solution containing high molecular mass proteins. This can be done by at least 3 injections of the resolution solution. The column is equilibrated when repeatable results are obtained from 2 subsequent injections.

Injection 100 µl.

Run time About 35 min.

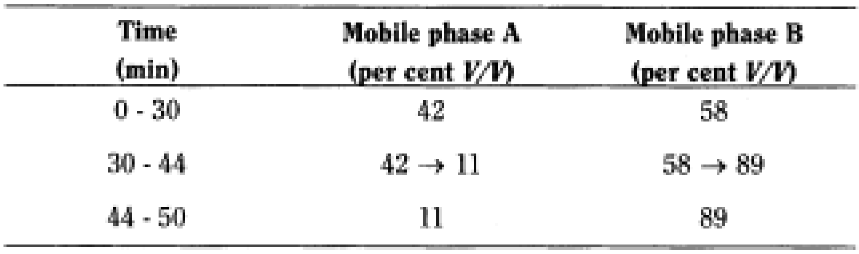
Retention times Polymeric insulin complexes = 13 min to 17 min; covalent insulin dimer = about 17.5 min; insulin monomer = about 20 min; salts = about 22 min.

System suitability Resolution solution:

— *peak-to-valley ratio*: minimum 2.0, where H_p = height above the baseline of the peak due to the dimer and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to the monomer.

Limits The sum of the areas of any peaks with a retention time less than that of the principal peak is not greater than 1.0 per cent of the total area of the peaks; disregard any peak with a retention time greater than that of the insulin peak.

Related proteins Liquid chromatography *(2.2.29)* as described under Assay, following the elution conditions as described in the table below.



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 30	42	58
30 - 44	42 → 11	58 → 89
44 - 50	11	89

Maintain the solutions at 2-10 °C and use within 24 h. Perform a system suitability test (resolution, linearity) as described under Assay. If necessary, the relative proportions of the mobile phases may be adjusted to ensure complete elution of A21 desamido porcine insulin before commencement of the gradient. The profile of the gradient may also be adjusted to ensure complete elution of all insulin related impurities.

Inject 20 µl of reference solution (c) and 20 µl of the test solution. If necessary, adjust the injection volume to between 10 µl and 20 µl in accordance with the results obtained in the test for linearity as described under Assay. Record the chromatograms for approximately 50 min. In the chromatogram obtained with reference solution (c), A21 desamido bovine insulin appears as a small peak after the principal peak and has a relative retention of about 1.3 with reference to the principal peak. In the chromatogram obtained with the test solution, the area of the peak due to A21 desamido bovine insulin is not greater than 3.0 per cent of the total area of the peaks; the sum of the areas of all the peaks, apart from those due to bovine insulin and A21 desamido bovine insulin, is not greater than 3.0 per cent of the total area of the peaks.

Bovine proinsulin-like immunoreactivity (PLI)

Maximum 10 ppm (dried substance).

Use a suitably sensitive immunochemical method *(2.7.1)* such as radio-immunoassay, using the International Reference Reagent for bovine proinsulin to calibrate the method.

Zinc

Maximum 1.0 per cent (dried substance).

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Dissolve 50.0 mg of the substance to be examined in *0.01 M hydrochloric acid* and dilute to 25.0 ml with the same acid. Dilute if necessary to a suitable concentration (for example, 0.4 µg to 1.6 µg of Zn per millilitre) with *0.01 M hydrochloric acid*.

Reference solutions Use solutions containing 0.40 µg, 0.80 µg, 1.00 µg, 1.20 µg and 1.60 µg of Zn per millilitre, freshly prepared by diluting *zinc standard solution (5 mg/ml Zn) R* with *0.01 M hydrochloric acid*.

Source Zinc hollow-cathode lamp.

Wavelength 213.9 nm.

Flame Air-acetylene flame of suitable composition (for example, 11 litres of air and 2 litres of acetylene per minute).

Loss on drying *(2.2.32)*

Maximum 10.0 per cent, determined on 0.200 g by drying in an oven at 105 °C for 24 h.

Sulphated ash *(2.4.14)*

Maximum 2.5 per cent (dried substance), determined on 0.200 g.

Bacterial endotoxins *(2.6.14)*

Less than 10 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography *(2.2.29)*.

Test solution Dissolve a suitable amount of the substance to be examined in *0.01 M hydrochloric acid* to obtain a concentration of 4.0 mg/ml.

Reference solution (a) Dissolve the contents of a vial of *human insulin CRS* in *0.01 M hydrochloric acid* to obtain a concentration of 4.0 mg/ml.

Reference solution (b) Dissolve the contents of a vial of *porcine insulin CRS* in *0.01 M hydrochloric acid* to obtain a concentration of 4.0 mg/ml.

Reference solution (c) Dissolve the contents of a vial of *bovine insulin CRS* in *0.01 M hydrochloric acid* to obtain a concentration of 4.0 mg/ml.

Reference solution (d) Dilute 1.0 ml of reference solution (c) to 10.0 ml with *0.01 M hydrochloric acid*.

Resolution solution Mix 1.0 ml of reference solution (a) and 1.0 ml of reference solution (b).

Maintain the solutions at 2-10 °C and use within 48 h. If an automatic injector is used, maintain the temperature at 2-10 °C.

Column:
- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 40 °C.

Mobile phase Mix 42 volumes of mobile phase A and 58 volumes of mobile phase B, adjusting the composition of the mixture if necessary.

Prepare and maintain the following solutions at a temperature of at least 20 °C:

— *mobile phase A*: dissolve 28.4 g of *anhydrous sodium sulphate R* in *water R* and dilute to 1000 ml with the same solvent; add 2.7 ml of *phosphoric acid R;* adjust to pH 2.3, if necessary, with *ethanolamine R*; filter and degas;

— *mobile phase B*: mix 550 ml of mobile phase A with 450 ml of *acetonitrile R*. Warm the solution to a temperature of at least 20 °C in order to avoid precipitation (mixing of mobile phase A with acetonitrile is endothermic); filter and degas.

Flow rate 1 ml/min.

Detection Spectrophotometer at 214 nm.

System suitability:

— *resolution*: inject 20 µl of the resolution solution and 20 µl of reference solution (b). Record the chromatogram of the resolution solution until the peak corresponding to the principal peak in the chromatogram obtained with reference solution (b) is clearly visible. In the chromatogram obtained with the resolution solution, identify the peaks due to porcine insulin and human insulin. The test is not valid unless the resolution between the peaks corresponding to human insulin and porcine insulin is at least 1.2. If necessary, adjust the concentration of acetonitrile in the mobile phase until this resolution is achieved;

— *linearity*: inject 20 µl each of reference solutions (c) and (d). The test is not valid unless the area of the principal peak in the chromatogram obtained with reference solution (c) is 10 ± 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (d). If this test fails, adjust the injection volume to between 10 µl and 20 µl, in order that the responses are within the linearity range of the detector.

Injection 20 µl of the test solution.

Calculate the content of bovine insulin $C_{254}H_{377}N_{65}O_{75}S_6$ plus A21 desamido bovine insulin from the area of the principal peak and the area of the peak corresponding to A21 desamido bovine insulin in the chromatograms obtained with the test solution and reference solution (c) and the declared content of bovine insulin plus A21 desamido bovine insulin in *bovine insulin CRS.*

STORAGE

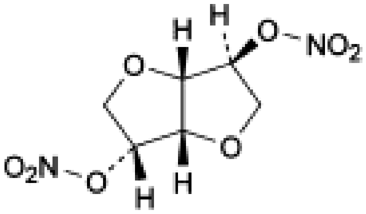
In an airtight container, protected from light, at - 20 °C until released by the manufacturer. When thawed, insulin may be stored at 5 ± 3 °C and used for manufacturing preparations within a short period of time. To avoid absorption of humidity from the air during weighing, the insulin must be at room temperature.

Ph Eur

Diluted Isosorbide Dinitrate

General Notices

(Ph Eur monograph 1117)



$C_6H_8N_2O_8$ 236.1   *87-33-2*

Action and use

Nitric acid analogue; treatment of angina pectoris.

Preparation

Isosorbide Dinitrate Tablets

Ph Eur

DEFINITION

Dry mixture of isosorbide dinitrate and *Lactose monohydrate (0187)* or *Mannitol (0559)*.

Content

95.0 per cent *m/m* to 105.0 per cent *m/m* of the content of 1,4:3,6-dianhydro-D-glucitol 2,5-dinitrate stated on the label.

CAUTION: undiluted isosorbide dinitrate may explode if subjected to percussion or excessive heat. Appropriate precautions must be taken and only very small quantities handled.

CHARACTERS

Appearance

Undiluted isosorbide dinitrate is a fine, white or almost white, crystalline powder.

Solubility

Undiluted isosorbide dinitrate is very slightly soluble in water, very soluble in acetone, sparingly soluble in ethanol (96 per cent).

The solubility of the diluted product depends on the diluent and its concentration.

IDENTIFICATION

First identification *A, C, D.*

Second identification *B, C, D.*

A. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs prepared with the residue obtained in identification test D.

Comparison *isosorbide dinitrate CRS.*

B. Thin-layer chromatography *(2.2.27)*.

Test solution Shake a quantity of the substance to be examined corresponding to 10 mg of isosorbide dinitrate with 10 ml of *ethanol (96 per cent) R* for 5 min and filter.

Reference solution Shake a quantity of *isosorbide dinitrate CRS* corresponding to 10 mg of isosorbide dinitrate with 10 ml of *ethanol (96 per cent) R* for 5 min and filter.

Plate *TLC silica gel G plate R*.

Mobile phase *methanol R, methylene chloride R* (5:95 *V/V*).

Application 10 µl.

Development Over a path of 15 cm.

Drying In a current of air.

Detection Spray with freshly prepared *potassium iodide* and *starch solution R*; expose to ultraviolet light at 254 nm for 15 min and examine in daylight.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

C. Thin-layer chromatography *(2.2.27)*.

Test solution Shake a quantity of the substance to be examined corresponding to 0.10 g of lactose or mannitol with 10 ml of *water R.* Filter if necessary.

Reference solution (a) Dissolve 0.10 g of *lactose R* in *water R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dissolve 0.10 g of *mannitol R* in *water R* and dilute to 10 ml with the same solvent.

Reference solution (c) Mix equal volumes of reference solutions (a) and (b).

Plate *TLC silica gel G plate R.*

Mobile phase *water R, methanol R, anhydrous acetic acid R, ethylene chloride R* (10:15:25:50 *V/V/V/V*); measure the volumes accurately since a slight excess of water produces cloudiness.

Application 1 µl; thoroughly dry the starting points.

Development A Over a path of 15 cm.

Drying A In a current of warm air.

Development B Immediately, over a path of 15 cm, after renewing the mobile phase.

Drying B In a current of warm air.

Detection Spray with *4-aminobenzoic acid solution R*, dry in a current of cold air until the acetone is removed, then heat at 100 °C for 15 min; allow to cool, spray with a 2 g/l solution of *sodium periodate R*, dry in a current of cold air, and heat at 100 °C for 15 min.

System suitability Reference solution (c):

— the chromatogram shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a) for lactose or to the principal spot in the chromatogram obtained with reference solution (b) for mannitol.

D. Shake a quantity of the substance to be examined corresponding to 25 mg of isosorbide dinitrate with 10 ml of *acetone R* for 5 min. Filter, evaporate to dryness at a temperature below 40 °C and dry the residue over *diphosphorus pentoxide R* at a pressure of 0.7 kPa for 16 h. The melting point *(2.2.14)* of the residue is 69 °C to 72 °C.

TESTS

Impurity A

Thin-layer chromatography *(2.2.27)*.

Test solution Shake a quantity of the substance to be examined corresponding to 0.10 g of isosorbide dinitrate with 5 ml of *ethanol (96 per cent) R* and filter.

Reference solution Dissolve 10 mg of *potassium nitrate R* in 1 ml of *water R* and dilute to 100 ml with *ethanol (96 per cent) R*.

Plate *TLC silica gel plate R*.

Mobile phase *glacial acetic acid R*, *acetone R*, *toluene R* (15:30:60 *V/V/V*).

Application 10 µl.

Development Over a path of 15 cm.

Drying In a current of air until the acetic acid is completely removed.

Detection Spray copiously with freshly prepared *potassium iodide and starch solution R*; expose to ultraviolet light at 254 nm for 15 min and examine in daylight.

Limit:

— *impurity A*: any spot due to impurity A is not more intense than the principal spot in the chromatogram obtained with the reference solution (0.5 per cent, calculated as potassium nitrate).

Impurities B and C

Liquid chromatography *(2.2.29)*.

Test solution (a) Sonicate a quantity of the substance to be examined corresponding to 25.0 mg of isosorbide dinitrate with 20 ml of the mobile phase for 15 min and dilute to 25.0 ml with the mobile phase. Filter the solution through a suitable membrane filter.

Test solution (b) Dilute 1.0 ml of test solution (a) to 10.0 ml with the mobile phase.

Reference solution (a) Sonicate a quantity of *isosorbide dinitrate CRS* corresponding to 25.0 mg of *isosorbide dinitrate CRS* with 20 ml of the mobile phase for 15 min and dilute to 25.0 ml with the mobile phase. Filter the solution through a suitable membrane filter.

Reference solution (b) Dilute 1.0 ml of reference solution (a) to 10.0 ml with the mobile phase.

Reference solution (c) Dissolve 10.0 mg of *isosorbide 2-nitrate CRS* (impurity B) in the mobile phase and dilute to 10.0 ml with the mobile phase. Dilute 0.1 ml of this solution to 20.0 ml with the mobile phase.

Reference solution (d) Dissolve 10.0 mg of *isosorbide mononitrate CRS* (impurity C) in the mobile phase and dilute to 10.0 ml with the mobile phase. Dilute 0.1 ml of this solution to 20.0 ml with the mobile phase.

Reference solution (e) Dissolve 5 mg of *isosorbide 2-nitrate CRS* (impurity B) in the mobile phase and dilute to 10 ml with the mobile phase. To 1 ml of this solution add 0.5 ml of reference solution (a) and dilute to 10 ml with the mobile phase.

Column:

— *size*: l = 0.25 m, Ø = 4.6 mm;

— *stationary phase: aminopropylmethylsilyl silica gel for chromatography R* (10 µm).

Mobile phase *anhydrous ethanol R, trimethylpentane R* (15:85 *V/V*).

Flow rate 1 ml/min.

Detection Spectrophotometer at 210-215 nm.

Injection 10 µl of test solution (a) and reference solutions (c), (d) and (e).

Retention time Isosorbide dinitrate = about 5 min; impurity B = about 8 min; impurity C = about 11 min.

System suitability Reference solution (e):

— *resolution*: minimum 6.0 between the peaks due to isosorbide dinitrate and impurity B.

Limits:

— *impurity B*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.5 per cent);

— *impurity C*: not more than the area of the principal peak in the chromatogram obtained with reference solution (d) (0.5 per cent).

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for impurities B and C with the following modifications.

Detection Spectrophotometer at 230 nm.

Injection 20 µl of test solution (b) and reference solution (b).

If the areas of the peaks from 2 successive injections of reference solution (b) do not agree to within 1.0 per cent, then inject a further 4 times and calculate, for the 6 injections, the relative standard deviation.

System suitability Reference solution (b):

— *repeatability*: maximum relative standard deviation of 2.0 per cent after 6 injections.

Calculate the content of isosorbide dinitrate as a percentage of the declared content.

STORAGE

Protected from light.

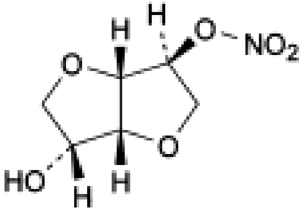
LABELLING

The label states the percentage content of isosorbide dinitrate.

IMPURITIES

Specified impurities *A, B, C.*

A. inorganic nitrates,



B. isosorbide 2-nitrate,

Application 10 µl.

Development Over a path of 15 cm.

Drying In a current of air.

Detection Spray with freshly prepared *potassium iodide and starch solution R*. Expose to ultraviolet light at 254 nm for 15 min and examine in daylight.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

C. Thin-layer chromatography *(2.2.27)*.

Test solution Shake a quantity of the substance to be examined corresponding to 0.10 g of lactose or mannitol with 10 ml of *water R*; filter if necessary.

Reference solution (a) Dissolve 0.10 g of *lactose R* in *water R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dissolve 0.10 g of *mannitol R* in *water R* and dilute to 10 ml with the same solvent.

Reference solution (c) Mix equal volumes of reference solutions (a) and (b).

Plate *TLC silica gel G plate R*.

Mobile phase *water R*, *methanol R*, *anhydrous acetic acid R*, *ethylene chloride* R (10:15:25:50 *V/V/V/V*); measure the volumes accurately since a slight excess of water produces cloudiness.

Application 1 µl; thoroughly dry the starting points.

Development A Over a path of 15 cm.

Drying A In a current of warm air.

Development B Immediately, over a path of 15 cm, after renewing the mobile phase.

Drying B In a current of warm air.

Detection Spray with *4-aminobenzoic acid solution R* and dry in a current of cold air until the acetone is removed; heat at 100 °C for 15 min and allow to cool; spray with a 2 g/l solution of *sodium periodate R* and dry in a current of cold air; heat at 100 °C for 15 min.

System suitability Reference solution (c):

— the chromatogram shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a) for lactose or to the principal spot in the chromatogram obtained with reference solution (b) for mannitol.

D. Shake a quantity of the substance to be examined corresponding to 25 mg of isosorbide mononitrate with 10 ml of *acetone R* for 5 min. Filter, evaporate to dryness at a temperature below 40 °C and dry the residue over *diphosphorus pentoxide R* at a pressure of 0.7 kPa for 16 h. The melting point *(2.2.14)* of the residue is 89 °C to 91 °C.

TESTS

Impurity A

Thin-layer chromatography *(2.2.27)*.

Test solution Shake a quantity of the substance to be examined corresponding to 0.10 g of isosorbide mononitrate with 5 ml of *ethanol (96 per cent) R* and filter.

Reference solution Dissolve 10 mg of *potassium nitrate R* in 1 ml of *water R* and dilute to 100 ml with *ethanol (96 per cent) R*.

Plate *TLC silica gel plate R*.

Mobile phase *glacial acetic acid R, acetone R, toluene R* (15:30:60 *V/V/V*).

Application 10 µl.

Development Over a path of 15 cm.

Drying In a current of air until the acetic acid is completely removed.

Detection Spray copiously with freshly prepared *potassium iodide and starch solution R*; expose to ultraviolet light at 254 nm for 15 min and examine in daylight.

Limit:

— *impurity A*: any spot due to impurity A is not more intense than the principal spot in the chromatogram obtained with the reference solution (0.5 per cent, calculated as potassium nitrate).

Impurities B and C

Liquid chromatography *(2.2.29)*.

Test solution (a) Sonicate a quantity of the substance to be examined corresponding to 25.0 mg of isosorbide mononitrate with 20 ml of the mobile phase for 15 min and dilute to 25.0 ml with the mobile phase. Filter the solution through a suitable membrane filter.

Test solution (b) Dilute 1.0 ml of test solution (a) to 10.0 ml with the mobile phase.

Reference solution (a) Dissolve 25.0 mg of *isosorbide mononitrate CRS* in the mobile phase and dilute to 25.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (b) Dissolve 10.0 mg of *isosorbide-2-nitrate CRS* (impurity C) in the mobile phase and dilute to 10.0 ml with the mobile phase. Dilute 0.1 ml of this solution to 20.0 ml with the mobile phase.

Reference solution (c) Sonicate a quantity of *isosorbide dinitrate CRS* (impurity B) corresponding to 10.0 mg of isosorbide dinitrate in 15 ml of the mobile phase for 15 min and dilute to 20.0 ml with the mobile phase. Filter the solution through a suitable membrane filter. Dilute 0.1 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (d) Dissolve 5 mg of *isosorbide mononitrate CRS* and 5 mg of *isosorbide-2-nitrate CRS* (impurity C) in the mobile phase and dilute to 10 ml with the mobile phase. Dilute 1 ml of this solution to 10 ml with the mobile phase.

Column:

— *size*: *l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase: aminopropylmethylsilyl silica gel for chromatography R* (10 µm).

Mobile phase *anhydrous ethanol R, trimethylpentane R* (15:85 *V/V*).

Flow rate 1 ml/min.

Detection Spectrophotometer at 210-215 nm.

Injection 10 µl of test solution (a) and reference solutions (b), (c) and (d).

Retention time Impurity B = about 5 min; impurity C = about 8 min; isosorbide 5-nitrate = about 11 min.

System suitability Reference solution (d):

— *resolution*: minimum 4.0 between the peaks due to impurity C and isosorbide 5-nitrate.

Limits:

— *impurity B*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.5 per cent);

— *impurity C:* not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent).

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for impurities B and C with the following modifications.

Detection Spectrophotometer at 230 nm.

Injection 20 µl of test solution (b) and reference solution (a).

If the areas of the peaks from 2 successive injections of reference solution (a) do not agree to within 1.0 per cent, then inject a further 4 times and calculate, for the 6 injections, the relative standard deviation.

System suitability Reference solution (a):

— *repeatability*: maximum relative standard deviation of 2.0 per cent after 6 injections.

Calculate the content of isosorbide mononitrate as a percentage of the declared content.

STORAGE

Protected from light.

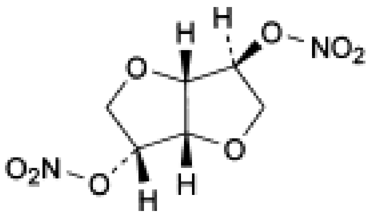
LABELLING

The label states the percentage content of isosorbide mononitrate.

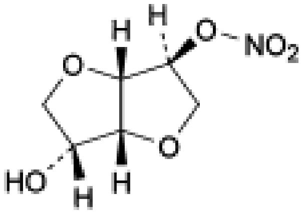
IMPURITIES

Specified impurities   A, B, C.

A. inorganic nitrates,



B. isosorbide dinitrate,



C. isosorbide 2-nitrate.

Ph Eur

Heavy Kaolin

General Notices

(Ph Eur monograph 0503)

Preparation

Kaolin Poultice

When kaolin is prescribed or demanded, Light Kaolin shall be dispensed or supplied, unless it is ascertained that Light Kaolin (Natural) is required.

Ph Eur

DEFINITION

Purified, natural, hydrated aluminium silicate of variable composition.

CHARACTERS

Appearance

Fine, white or greyish-white, unctuous powder.

Solubility

Practically insoluble in water and in organic solvents.

IDENTIFICATION

A. To 0.5 g in a metal crucible add 1 g of *potassium nitrate R* and 3 g of *sodium carbonate R* and heat until the mixture melts. Allow to cool. To the residue add 20 ml of boiling *water R*, mix and filter. Wash the residue with 50 ml of *water R*. To the residue add 1 ml of *hydrochloric acid R* and 5 ml of *water R*. Filter. To the filtrate add 1 ml of *strong sodium hydroxide solution R* and filter. To the filtrate add 3 ml of *ammonium chloride solution R*. A gelatinous white precipitate is formed.

B. Add 2.0 g in 20 portions to 100 ml of a 10 g/l solution of *sodium laurilsulfate R* in a 100 ml graduated cylinder about 30 mm in diameter. Allow 2 min between additions for each portion to settle. Allow to stand for 2 h. The apparent volume of the sediment is not greater than 5 ml.

C. 0.25 g gives the reaction of silicates *(2.3.1)*.

TESTS

Solution S

To 4 g add a mixture of 6 ml of *acetic acid R* and 34 ml of *distilled water R*, shake for 1 min and filter.

Acidity or alkalinity

To 1.0 g add 20 ml of *carbon dioxide-free water R*, shake for 2 min and filter. To 10 ml of the filtrate add 0.1 ml of *phenolphthalein solution R*. The solution is colourless. Not more than 0.25 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator to pink.

Organic impurities

Heat 0.3 g to redness in a calcination tube. The residue is only slightly more coloured than the original substance.

Adsorption power

To 1.0 g in a ground-glass-stoppered test-tube add 10.0 ml of a 3.7 g/l solution of *methylene blue R* and shake for 2 min. Allow to settle. Centrifuge and dilute the solution 1 to 100 with *water R*. The solution is not more intensely coloured than a 0.03 g/l solution of *methylene blue R.*

Swelling power

Triturate 2 g with 2 ml of *water R*. The mixture does not flow.

Substances soluble in mineral acids

Maximum 1 per cent.

To 5.0 g add 7.5 ml of *dilute hydrochloric acid R* and 27.5 ml of *water R* and boil for 5 min. Filter, wash the residue on the filter with *water R* and dilute the combined filtrate and washings to 50.0 ml with *water R.* To 10.0 ml of the solution add 1.5 ml of *dilute sulphuric acid R*, evaporate to dryness on a water-bath and ignite. The residue weighs a maximum of 10 mg.

Chlorides ***(2.4.4)***

Maximum 250 ppm.

Dilute 2 ml of solution S to 15 ml with *water R.*

Sulphates ***(2.4.13)***

Maximum 0.1 per cent.

Dilute 1.5 ml of solution S to 15 ml with *distilled water R.*

Calcium ***(2.4.3)***

Maximum 250 ppm.

Dilute 4 ml of solution S to 15 ml with *distilled water R*.

Heavy metals ***(2.4.8)***

Maximum 50 ppm.

To 5 ml of the solution prepared for the test for substances soluble in mineral acids add 5 ml of *water R*, 10 ml of *hydrochloric acid R* and 25 ml of *methyl isobutyl ketone R*. Shake for 2 min. Separate the layers. Evaporate the aqueous layer to dryness on a water-bath. Dissolve the residue in 1 ml of *acetic acid R* and dilute to 25 ml with *water R*. Filter. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R.*

If intended for internal use, the above test is replaced by the following test for heavy metals *(2.4.8)*: maximum 25 ppm.

To 10 ml of the solution prepared for the test for substances soluble in mineral acids add 10 ml of *water R*, 20 ml of *hydrochloric acid R* and 25 ml of *methyl isobutyl ketone R*. Shake for 2 min. Separate the layers. Evaporate the aqueous layer to dryness on a water-bath. Dissolve the residue in 1 ml of *acetic acid R* and dilute to 25 ml with *water R.* Filter. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R.*

Microbial contamination

Total viable aerobic count *(2.6.12)* not more than 10^3 micro-organisms per gram, determined by plate-count.

LABELLING

The label states, where applicable, that the substance is suitable for internal use.

$C_{257}H_{383}N_{65}O_{77}S_6$ 5808 *11061-68-0*

Action and use

Hormone; treatment of diabetes mellitus.

Preparations

Insulin Preparations

Ph Eur

DEFINITION

Human insulin is a 2-chain peptide having the structure of the antidiabetic hormone produced by the human pancreas.

Content

95.0 per cent to 105.0 per cent of human insulin $C_{257}H_{383}N_{65}O_{77}S_6$ plus A21 desamido human insulin (dried substance).

By convention, for the purpose of labelling insulin preparations, 0.0347 mg of human insulin is equivalent to 1 IU of insulin.

PRODUCTION

Human insulin is produced either by enzymatic modification and suitable purification of insulin obtained from the pancreas of the pig or by a method based on recombinant DNA (rDNA) technology.

Human insulin is produced under conditions designed to minimise the degree of microbial contamination.

For human insulin produced by enzymatic modification of insulin obtained from the pancreas of the pig, the manufacturing process is validated to demonstrate removal of any residual proteolytic activity. The competent authority may require additional tests.

For human insulin produced by a method based on rDNA technology, prior to release the following tests are carried out on each batch of the final bulk product, unless exemption has been granted by the competent authority.

Host-cell-derived proteins

The limit is approved by the competent authority.

Single chain precursor

The limit is approved by the competent authority. Use a suitably sensitive method.

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water and in ethanol (96 per cent). It dissolves in dilute mineral acids and with decomposition in dilute solutions of alkali hydroxides.

IDENTIFICATION

A. Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time to the principal peak in the chromatogram obtained with reference solution (a).

B. Peptide mapping *(2.2.55)*.

SELECTIVE CLEAVAGE OF THE PEPTIDE BONDS

Test solution Prepare a 2.0 mg/ml solution of the substance to be examined in *0.01 M hydrochloric acid* and transfer 500 µl of this solution to a clean tube. Add 2.0 ml of *HEPES buffer solution pH 7.5 R* and 400 µl of a 1 mg/ml solution of *Staphylococcus aureus strain V8 protease R*. Cap the tube and incubate at 25 °C for 6 h. Stop the reaction by adding 2.9 ml of *sulphate buffer solution pH 2.0 R*.

Reference solution Prepare at the same time and in the same manner as for the test solution but using *human insulin CRS* instead of the substance to be examined.

CHROMATOGRAPHIC SEPARATON

Liquid chromatography *(2.2.29)*.

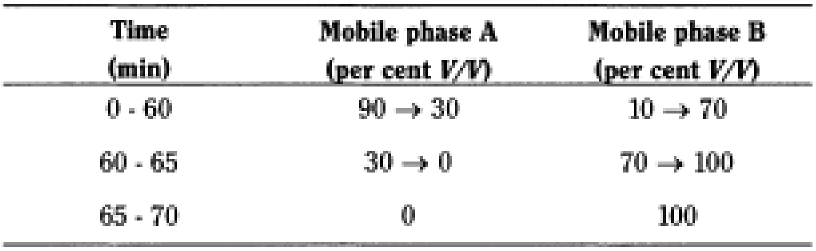
Column:

— *size*: *l* = 0.10 m, Ø = 4.6 mm,

- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (3 µm) with a pore size of 8 nm,
- *temperature*: 40 °C.

Mobile phase:

- *mobile phase A*: mix 100 ml of *acetonitrile for chromatography R*, 200 ml of *sulphate buffer solution pH 2.0 R* and 700 ml of *water R*; filter and degas;
- *mobile phase B*: mix 200 ml of *sulphate buffer solution pH 2.0 R*, 400 ml of *acetonitrile for chromatography R* and 400 ml of *water R*; filter and degas;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 60	90 → 30	10 → 70
60 - 65	30 → 0	70 → 100
65 - 70	0	100

Flow rate 1 ml/min.

Detection Spectrophotometer at 214 nm.

Equilibration At initial conditions for at least 15 min. Carry out a blank run using the above-mentioned gradient.

Injection 50 µl.

System suitability:

- the chromatograms obtained with the test solution and the reference solution are qualitatively similar to the chromatogram of human insulin digest supplied with *human insulin CRS*,
- in the chromatogram obtained with the reference solution, identify the peaks due to digest fragments I, II and III:

Symmetry factor Maximum 1.5 for the peaks due to fragments II and III,

Resolution Minimum 3.4 between the peaks due to fragments II and III.

Results The profile of the chromatogram obtained with the test solution corresponds to that of the chromatogram obtained with the reference solution.

NOTE: the retention time of fragment I is the same for porcine insulin and for human insulin. The retention times of fragments II and IV are the same for all insulins. The retention time of fragment III is the same for bovine insulin and for porcine insulin.

TESTS

Impurities with molecular masses greater than that of insulin

Size-exclusion chromatography *(2.2.30)*: use the normalisation procedure.

Test solution Prepare a solution containing 4 mg/ml of the substance to be examined in *0.01 M hydrochloric acid*.

Resolution solution Use a solution of insulin (about 4 mg/ml), containing more than 0.4 per cent of high molecular mass proteins. An injectable insulin preparation, whether a solution or a suspension, that has been clarified with a sufficient amount of *6 M hydrochloric acid R*, containing the indicated percentage of high molecular mass proteins, or a solution prepared from insulin, dissolved in *0.01 M hydrochloric acid*, may be used. Insulin containing the indicated percentage of high molecular mass proteins may be prepared by allowing insulin powder to stand at room temperature for about 10 days.

Maintain the solutions at 2-8 °C and use within 7 days. If an automatic injector is used, maintain the temperature at 2-8 °C.

Column:

- *size*: *l* = 0.3 m, Ø = minimum 7.5 mm,
- *stationary phase*: *hydrophilic silica gel for chromatography R* (5-10 µm) with a pore size of 12-12.5 nm, of a grade suitable for the separation of insulin monomer from dimer and polymers.

Mobile phase Mix 15 volumes of *glacial acetic acid R*, 20 volumes of *acetonitrile R* and 65 volumes of a 1.0 g/l solution of *arginine R*; filter and degas.

Flow rate 0.5 ml/min.

Detection Spectrophotometer at 276 nm.

Equilibration Before using a new column for chromatographic analysis, equilibrate by repeated injections of an insulin solution containing high molecular mass proteins. This can be done by at least 3 injections of the resolution solution. The column is equilibrated when repeatable results are obtained from 2 subsequent injections.

Injection 100 µl.

Run time About 35 min.

Retention time Polymeric insulin complexes = 13-17 min; covalent insulin dimer = about 17.5 min; insulin monomer = about 20 min; salts = about 22 min.

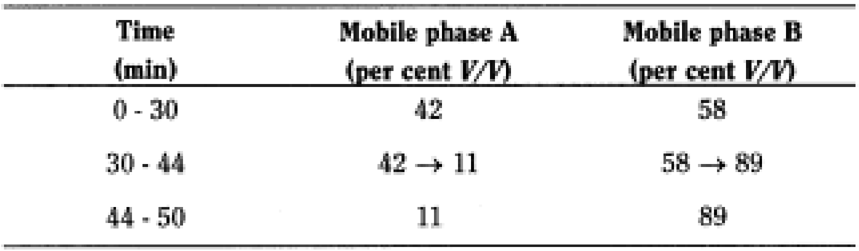
System suitability
Resolution solution:

- *peak-to-valley ratio*: minimum 2.0, where H_p = height above the baseline of the peak due to the dimer and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to the monomer.

Limits The sum of the areas of any peaks with a retention time less than that of the principal peak is not greater than 1.0 per cent of the total area of the peaks. Disregard any peak with a retention time greater than that of the peak due to insulin.

Related proteins

Liquid chromatography *(2.2.29)* as described under Assay, following the elution conditions as described below:



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 30	42	58
30 - 44	42 → 11	58 → 89
44 - 50	11	89

Maintain the solutions at 2-8 °C and use within 24 h. Perform a system suitability test (resolution, linearity) as described in the assay. If necessary, the relative proportions of the mobile phases may be adjusted to ensure complete elution of A21 desamido porcine insulin before commencement of the gradient. The profile of the gradient may also be adjusted to ensure complete elution of all insulin related impurities.

Inject 20 µl of reference solution (a), 20 µl of reference solution (b), 20 µl of reference solution (c) and 20 µl of the test solution. If necessary, adjust the injection volume to a volume between 10 µl and 20 µl in accordance with the results obtained in the test for linearity as described in the assay. Record the chromatograms for approximately 50 min. In the chromatogram obtained with reference solution (a), A21 desamido human insulin appears as a small peak after the principal peak and has a retention time of about 1.3 relative to the principal peak. In the chromatogram obtained with the test solution, the area of the peak due to A21 desamido human insulin is not greater than 2.0 per cent of the total area of the peaks; the sum of the areas of all peaks, apart from those due to human insulin and that due to A21 desamido human insulin, is not greater than 2.0 per cent of the total area of the peaks. For semisynthetic human insulin only: in the chromatogram obtained with the test solution, the area of any peak corresponding to the principal peak in the chromatogram obtained with reference solution (b) is not greater than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (1.0 per cent of porcine insulin in human insulin).

The following test applies only to human insulin produced by enzymatic modification of porcine insulin.

Proinsulin-like immunoreactivity (PLI)

Maximum 10 ppm, calculated with reference to the dried substance and determined by a suitably sensitive immunochemical method *(2.7.1)* such as radio-immunoassay. Use the International Reference Reagent for porcine proinsulin to calibrate the method.

Zinc

Maximum 1.0 per cent (dried substance).

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution

Dissolve 50.0 mg of the substance to be examined in *0.01 M hydrochloric acid* and dilute to 25.0 ml with the same acid. Dilute if necessary to a suitable concentration (for example, 0.4-1.6 µg of Zn per millilitre) with *0.01 M hydrochloric acid*.

Reference solutions

Use solutions containing 0.40 µg, 0.80 µg, 1.00 µg, 1.20 µg and 1.60 µg of Zn per millilitre, freshly prepared by diluting *zinc standard solution (5 mg/ml Zn) R* with *0.01 M hydrochloric acid*.

Source

Zinc hollow-cathode lamp.

Wavelength

213.9 nm.

Atomisation device: air-acetylene flame of suitable composition (for example, 11 litres of air and 2 litres of acetylene per minute).

Loss on drying *(2.2.32)*

Maximum 10.0 per cent, determined on 0.200 g by drying in an oven at 105 °C for 24 h.

Sulphated ash *(2.4.14)*

Maximum 2.5 per cent, determined on 0.200 g (dried substance).

Bacterial endotoxins *(2.6.14)*

Less than 10 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for removal of bacterial endotoxins.

ASSAY

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 40.0 mg of the substance to be examined in *0.01 M hydrochloric acid* and dilute to 10.0 ml with the same solvent.

Reference solution (a) Dissolve the contents of a vial of *human insulin CRS* in *0.01 M hydrochloric acid* to obtain a concentration of 4.0 mg/ml.

Reference solution (b) Dissolve the contents of a vial of *porcine insulin CRS* in *0.01 M hydrochloric acid* to obtain a concentration of 4.0 mg/ml.

Reference solution (c) Dilute 1.0 ml of reference solution (b) to 50.0 ml with *0.01 M hydrochloric acid*. To 1.0 ml of this solution add 1.0 ml of reference solution (a).

Reference solution (d) Dilute 1.0 ml of reference solution (a) to 10.0 ml with *0.01 M hydrochloric acid*.

Resolution solution Mix 1.0 ml of reference solution (a) and 1.0 ml of reference solution (b).

Maintain the solutions at 2-8 °C and use within 48 h. If an automatic injector is used, maintain at 2-8 °C.

Column:

- *size*: *l* = 0.25 , Ø = 4.6 mm,
- *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm),
- *temperature*: 40 °C.

Mobile phase Mix 42 volumes of mobile phase A and 58 volumes of mobile phase B, adjusting the composition of the mixture if necessary.

Prepare and maintain the following solutions at a temperature of at least 20 °C:

- *mobile phase A*: dissolve 28.4 g of *anhydrous sodium sulphate R* in *water R* and dilute to

1000 ml with the same solvent; add 2.7 ml of *phosphoric acid R*; adjust to pH 2.3, if necessary, with *ethanolamine R*; filter and degas;

— *mobile phase B*: mix 550 ml of mobile phase A with 450 ml of *acetonitrile R*. Warm the solution to a temperature of at least 20 °C in order to avoid precipitation (mixing of mobile phase A with acetonitrile is endothermic); filter and degas.

Flow rate 1 ml/min.

Detection Spectrophotometer at 214 nm.

System suitability:

— *resolution*: inject 20 µl of the resolution solution and 20 µl of reference solution (b). Record the chromatogram of the resolution solution until the peak corresponding to the principal peak in the chromatogram obtained with reference solution (b) is clearly visible. In the chromatogram obtained with the resolution solution, identify the peaks due to porcine insulin and human insulin. The test is not valid unless the resolution between the peaks due to human insulin and porcine insulin is at least 1.2. If necessary, adjust the concentration of acetonitrile in the mobile phase until this resolution is achieved.

— *linearity*: inject 20 µl each of reference solutions (a) and (d). The test is not valid unless the area of the principal peak in the chromatogram obtained with reference solution (a) is 10 ± 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (d). If this test fails, adjust the injection volume to between 10 µl and 20 µl, in order that the responses are within the linearity range of the detector.

Injection 20 µl of the test solution and reference solution (a).

Calculate the content of human insulin $C_{257}H_{383}N_{65}O_{77}S_6$ plus A21 desamido human insulin using the areas of the corresponding peaks in the chromatograms obtained with the test solution and reference solution (a) and the declared content of human insulin plus A21 desamido human insulin in *human insulin CRS.*

STORAGE

In an airtight container, protected from light, at - 18 °C or below, until released by the manufacturer. When thawed, insulin is stored at 5 ± 3 °C and used for manufacturing preparations within a short period of time. To avoid absorption of humidity from the air during weighing, the insulin must be at room temperature.

LABELLING

The label states whether the substance is produced by enzymatic modification of porcine insulin or by rDNA technology.

Ph Eur

Ibuprofen

General Notices

(Ph Eur monograph 0721)

Ph Eur

DEFINITION

(2*RS*)-2-[4-(2-Methylpropyl)phenyl]propanoic acid.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or colourless crystals.

Solubility

Practically insoluble in water, freely soluble in acetone, in methanol and in methylene chloride.

It dissolves in dilute solutions of alkali hydroxides and carbonates.

IDENTIFICATION

First identification *A, C.*

Second identification *A, B, D.*

A. Melting point *(2.2.14)*: 75 °C to 78 °C.

B. Ultraviolet and visible absorption spectrophotometry *(2.2.25)*.

Test solution Dissolve 50.0 mg in a 4 g/l solution of *sodium hydroxide R* and dilute to 100.0 ml with the same alkaline solution.

Spectral range 240-300 nm, using a spectrophotometer with a band width of 1.0 nm and a scan speed of not more than 50 nm/min.

Absorption maxima At 264 nm and 272 nm.

Shoulder At 258 nm.

Absorbance ratio:
— A_{264} / A_{258} = 1.20 to 1.30;
— A_{272} / A_{258} = 1.00 to 1.10.

C. Infrared absorption spectrophotometry (*2.2.24*).

Comparison *ibuprofen CRS.*

D. Thin-layer chromatography (*2.2.27*).

Test solution Dissolve 50 mg of the substance to be examined in *methylene chloride R* and dilute to 10 ml with the same solvent.

Reference solution Dissolve 50 mg of *ibuprofen CRS* in *methylene chloride R* and dilute to 10 ml with the same solvent.

Plate *TLC silica gel plate R.*

Mobile phase *anhydrous acetic acid R*, *ethyl acetate R*, *hexane R* (5:24:71 *V/V/V*).

Application 5 µl.

Development Over a path of 10 cm.

Drying At 120 °C for 30 min.

Detection Lightly spray with a 10 g/l solution of *potassium permanganate R* in *dilute sulphuric acid R* and heat at 120 °C for 20 min; examine in ultraviolet light at 365 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

TESTS

Solution S

Dissolve 2.0 g in *methanol R* and dilute to 20 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Optical rotation *(2.2.7)*

- 0.05° to + 0.05°.

Dissolve 0.50 g in *methanol R* and dilute to 20.0 ml with the same solvent.

Related substances

Liquid chromatography (*2.2.29*).

Test solution Dissolve 20 mg of the substance to be examined in 2 ml of *acetonitrile R1* and dilute to 10.0 ml with mobile phase A.

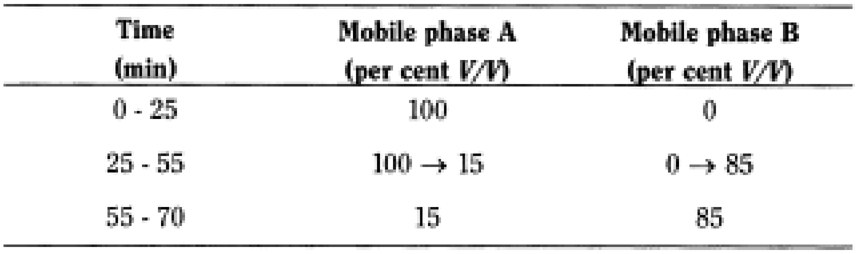
Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with mobile phase A. Dilute 1.0 ml of this solution to 10.0 ml with mobile phase A.

Reference solution (b) Dilute 1.0 ml of *ibuprofen impurity B CRS* to 10.0 ml with *acetonitrile R1* (solution A). Dissolve 20 mg of *ibuprofen CRS* in 2 ml of *acetonitrile R1*, add 1.0 ml of solution A and dilute to 10.0 ml with mobile phase A.

Reference solution (c) Dissolve the contents of a vial of *ibuprofen for peak identification CRS* (mixture of impurities A, J and N) in 1 ml of *acetonitrile R1* and dilute to 5 ml with mobile phase A.

Column:
- — *size*: *l* = 0.15 m, Ø = 4.6 mm;
- — *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:
- — *mobile phase A*: mix 0.5 volumes of *phosphoric acid R*, 340 volumes of *acetonitrile R1* and 600 volumes of *water R*; allow to equilibrate and dilute to 1000 volumes with *water R*;
- — *mobile phase B*: *acetonitrile R1*;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 25	100	0
25 - 55	100 → 15	0 → 85
55 - 70	15	85

Flow rate 2 ml/min.

Detection Spectrophotometer at 214 nm.

Injection 20 µl.

Identification of impurities Use the chromatogram supplied with *ibuprofen for peak identification CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A, J and N.

Relative retention With reference to ibuprofen (retention time = about 16 min): impurity J = about 0.2; impurity N = about 0.3; impurity A = about 0.9; impurity B = about 1.1.

System suitability Reference solution (b):

— *peak-to-valley ratio*: minimum 1.5, where H_p = height above the baseline of the peak due to impurity B, and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to ibuprofen. If necessary, adjust the concentration of acetonitrile in mobile phase A.

Limits:

— *impurities A, J, N*: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.15 per cent);

— *unspecified impurities*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent);

— *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

— *disregard limit*: 0.3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.03 per cent).

Impurity F

Gas chromatography *(2.2.28)*: use the normalisation procedure.

Methylating solution Dilute 1 ml of *N,N-dimethylformamide dimethyl acetal R* and 1 ml of *pyridine R* to 10 ml with *ethyl acetate R*.

Test solution Weigh about 50.0 mg of the substance to be examined into a sealable vial, dissolve in 1.0 ml of *ethyl acetate R*, add 1 ml of the methylating solution, seal and heat at 100 °C in a block heater for 20 min. Allow to cool. Remove the reagents under a stream of nitrogen at room temperature. Dissolve the residue in 5 ml of *ethyl acetate R.*

Reference solution (a) Dissolve 0.5 mg of *ibuprofen impurity F CRS* in *ethyl acetate R* and dilute to 10.0 ml with the same solvent.

Reference solution (b) Weigh about 50.0 mg of *ibuprofen CRS* into a sealable vial, dissolve in 1.0 ml of reference solution (a), add 1 ml of the methylating solution, seal and heat at 100 °C in a block heater for 20 min. Allow to cool. Remove the reagents under a stream of nitrogen at room temperature. Dissolve the residue in 5 ml of *ethyl acetate R.*

Column:

— *material*: fused silica;

— *size*: *l* = 25 m, Ø = 0.53 mm;

— *stationary phase*: *macrogol 20 000 R* (film thickness 2 µm).

Carrier gas *helium for chromatography R*.

Flow rate 5.0 ml/min.

Temperature:

— *column*: 150 °C;

— *injection port*: 200 °C;

— *detector*: 250 °C.

Detection Flame ionisation.

Injection 1 µl of the test solution and reference solution (b).

Run time Twice the retention time of ibuprofen.

System suitability:
— *relative retention* with reference to ibuprofen (retention time = about 17 min): impurity F = about 1.5.

Limit:
— *impurity F*: maximum 0.1 per cent.

Heavy metals ***(2.4.8)***

Maximum 10 ppm.

12 ml of solution S complies with test B. Prepare the reference solution using lead standard solution (1 ppm Pb) obtained by diluting *lead standard solution (100 ppm Pb) R* with *methanol R.*

Loss on drying ***(2.2.32)***

Maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo.*

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.450 g in 50 ml of *methanol R*. Add 0.4 ml of *phenolphthalein solution R1*. Titrate with *0.1 M sodium hydroxide* until a red colour is obtained. Carry out a blank titration.

1 ml of *0.1 M sodium hydroxide* is equivalent to 20.63 mg of $C_{13}H_{18}O_2$.

IMPURITIES

Specified impurities *A, F, J, N.*

Other detectable impurities (The following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use): B, C, D, E, G, H, I, K, L, M, O, P, Q, R.*

Ph Eur

Ichthammol

General Notices

Ammonium Ichthosulphonate

(Ph Eur monograph 0917)

Action and use

Chronic lichenified eczema.

Preparation

Zinc and Ichthammol Cream

Ph Eur

DEFINITION

Ichthammol is obtained by distillation from certain bituminous schists, sulphonation of the distillate and neutralisation of the product with ammonia.

Content:

— *dry matter*: 50.0 per cent *m/m* to 56.0 per cent *m/m*,

— *total ammonia* (NH_3; M_r 17.03): 4.5 per cent *m/m to* 7.0 per cent *m/m* (dried substance),

— *organically combined sulphur*: minimum 10.5 per cent *m/m* (dried substance),

— *sulphur in the form of sulphate*: maximum 20.0 per cent *m/m.*

CHARACTERS

Appearance

Dense, blackish-brown liquid.

Solubility

Miscible with water and with glycerol, slightly soluble in ethanol (96 per cent), in fatty oils and in liquid paraffin. It forms homogeneous mixtures with wool fat and soft paraffin.

IDENTIFICATION

A. Dissolve 1.5 g in 15 ml *of water R* (solution A). To 2 ml of solution A add 2 ml of *hydrochloric acid R*. A resinous precipitate is formed. Decant the supernatant liquid. The precipitate is partly soluble in *ether R*.

B. 2 ml of solution A, obtained in identification test A, gives the reaction of ammonium salts and salts of volatile bases *(2.3.1).*

C. Evaporate and ignite the mixture of solution A and *dilute sodium hydroxide solution R* obtained in identification test B. Take up the residue with 5 ml of *dilute hydrochloric acid R.* Gas is evolved which turns *lead acetate paper R* brown or black. Filter the solution. The filtrate gives reaction (a) of sulphates *(2.3.1)*.

TESTS

Acidity or alkalinity

To 10.0 ml of the clear filtrate obtained in the assay of total ammonia add 0.05 ml of *methyl red solution R*. Not more than 0.2 ml of *0.02 M hydrochloric acid* or *0.02 M sodium hydroxide* is required to change the colour of the indicator.

Relative density *(2.2.5)*

1.040 to 1.085, determined on a mixture of equal volumes of the substance to be examined and *water R*.

Sulphated ash *(2.4.14)*

Maximum 0.3 per cent, determined on 1.00 g.

ASSAY

Dry matter

Weigh 1.000 g in a tared flask containing 2 g of *sand R*, previously dried to constant mass, and a small glass rod. Heat on a water-bath for 2 h with frequent stirring and dry in an oven at 100-105 °C until 2 consecutive weighings do not differ by more than 2.0 mg; the 2nd weighing is carried out after drying again for 1 h.

Total ammonia

Dissolve 2.50 g in 25 ml of warm *water R*. Rinse the solution into a 250 ml volumetric flask, add 200 ml of *sodium chloride solution R* and dilute to 250.0 ml with *water R.* Filter the solution, discarding the first 20 ml of filtrate. To 100.0 ml of the clear filtrate add 25 ml of *formaldehyde solution R*, neutralised to *phenolphthalein solution R1*. Titrate with *0.1 M sodium hydroxide* until a faint pink colour is obtained.

1 ml of *0.1 M sodium hydroxide* is equivalent to 1.703 mg of NH_3.

Organically combined sulphur

Mix 0.500 g with 4 g of *anhydrous sodium carbonate R* and 3 ml of *methylene chloride R* in a porcelain crucible of about 50 ml capacity, warm and stir until all the methylene chloride has evaporated. Add 10 g of coarsely powdered *copper nitrate R*, mix thoroughly and heat the mixture very gently using a small flame. When the initial reaction has subsided, increase the temperature slightly until most of the material has blackened. Cool, place the crucible in a large beaker, add 20 ml of *hydrochloric acid R* and, when the reaction has ceased, add 100 ml of *water R* and boil until all the copper oxide has dissolved. Filter the solution, add 400 ml of *water R*, heat to boiling and add 20 ml of *barium chloride solution R1.* Allow to stand for 2 h, filter, wash with *water R,* dry and ignite at about 600 ± 50 °C until 2 successive weighings do not differ by more than 0.2 per cent of the mass of the residue.

1 g of residue is equivalent to 0.1374 g of total sulphur.

Calculate the percentage content of total sulphur and subtract the percentage content of sulphur in the form of sulphate.

Sulphur in the form of sulphate

Dissolve 2.000 g in 100 ml of *water R*, add 2 g of *cupric chloride R* dissolved in 80 ml of *water R* and dilute to 200.0 ml with *water R.* Shake and filter. Heat 100.0 ml of the filtrate almost to boiling, add *1 ml of hydrochloric acid R* and 5 ml of *barium chloride solution R1* dropwise and heat on a water-bath. Filter, wash the precipitate with *water R*, dry and ignite at about 600 ± 50 °C until 2 successive weighings do not differ by more than 0.2 per cent of the mass of the residue.

1 g of residue is equivalent to 0.1374 g of sulphur present in the form of sulphate.

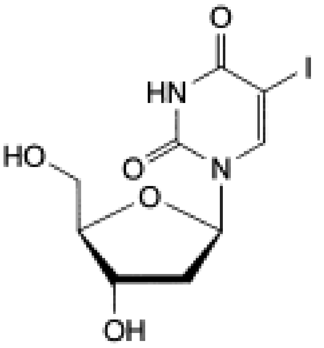
Calculate the percentage content of sulphur in the form of sulphate.

Ph Eur

Idoxuridine

General Notices

(Ph Eur monograph 0669)



$C_9H_{11}IN_2O_5$ 354.1 *54-42-2*

Action and use

Pyrimidine nucleoside analogue; antiviral (herpesviruses).

Preparation

Idoxuridine Eye Drops

Ph Eur

DEFINITION

Idoxuridine contains not less than 98.0 per cent and not more than the equivalent of 101.0 per cent of 5-iodo-1-(2-deoxy-β-D-*erythro*-pentofuranosyl)pyrimidine-2,4(1*H*,3*H*)-dione, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder, slightly soluble in water and in alcohol. It dissolves in dilute solutions of alkali hydroxides.

It melts at about 180 °C, with decomposition.

IDENTIFICATION

First identification A.

Second identification B, C, D.

A. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *idoxuridine CRS*. Examine the substances as discs prepared using 1 mg of the substance to be examined and of the reference substance each in 0.3 g of *potassium bromide R*.

B. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (c).

C. Heat about 5 mg in a test-tube over a naked flame. Violet vapour is evolved.

D. Disperse about 2 mg in 1 ml of *water R* and add 2 ml of *diphenylamine solution R2*. Heat in a water-bath for 10 min. A persistent light-blue colour develops.

TESTS

Solution S

Dissolve 0.500 g in *1 M sodium hydroxide* and dilute to 50.0 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

pH *(2.2.3)*

Dissolve 0.10 g in *carbon dioxide-free water R* and dilute to 100 ml with the same solvent. The pH of the solution is 5.5 to 6.5.

Specific optical rotation *(2.2.7)*

+ 28 to + 32, determined on solution S and calculated with reference to the dried substance.

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using as coating substance a suitable silica gel with a fluorescent indicator having an optimal intensity at 254 nm.

Test solution (a) Dissolve 0.20 g of the substance to be examined in a mixture of 1 volume of *concentrated ammonia R* and 5 volumes of *methanol R* and dilute to 5 ml with the same mixture of solvents.

Test solution (b) Dilute 1 ml of test solution (a) to 10 ml with a mixture of 1 volume of *concentrated ammonia R* and 5 volumes of *methanol R.*

Reference solution (a) Dissolve 20 mg of *5-iodouracil R*, 20 mg of *2′-deoxyuridine R* and 20 mg of *5-bromo-2′-deoxyuridine R* in a mixture of 1 volume of *concentrated ammonia R* and 5 volumes of *methanol R* and dilute to 100 ml with the same mixture of solvents.

Reference solution (b) Dissolve 0.20 g of the substance to be examined in 5 ml of reference solution (a).

Reference solution (c) Dissolve 20 mg of *idoxuridine CRS* in a mixture of 1 volume of *concentrated ammonia R* and 5 volumes of *methanol R* and dilute to 5 ml with the same mixture of solvents.

Reference solution (d) Dilute 1 ml of test solution (b) to 20 ml with a mixture of 1 volume of *concentrated ammonia R* and 5 volumes of *methanol R*.

Apply separately to the plate 5 µl of each solution. Develop twice over a path of 15 cm using a mixture of 10 volumes of *concentrated ammonia R*, 40 volumes of *chloroform R* and 50 volumes of *2-propanol R*, drying the plate in a current of cold air after each development. Examine in ultraviolet light at 254 nm. In the chromatogram obtained with test solution (a): any spots corresponding to 5-iodouracil, 2′-deoxyuridine and 5-bromo-2′-deoxyuridine are not more intense than the corresponding spots in the chromatogram obtained with reference solution (a) (0.5 per cent); any spot, apart from the principal spot and the spots corresponding to 5-iodouracil, 2′-deoxyuridine and 5-bromo-2′-deoxyuridine, is not more intense than the spot in the chromatogram obtained with reference solution (d) (0.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (b) shows four clearly separated spots.

Iodide

Dissolve 0.25 g in 25 ml of *0.1 M sodium hydroxide*, add 5 ml of *dilute hydrochloric acid R* and dilute to 50 ml with *water R*. Allow to stand for 10 min and filter. To 25 ml of the filtrate add 5 ml of *dilute hydrogen peroxide solution R* and 10 ml of *chloroform R* and shake. Any pink colour in the organic layer is not more intense than that in a standard prepared at the same time in the same manner using 1 ml of a 0.33 g/l solution of *potassium iodide R* instead of the substance to be examined (0.1 per cent).

Loss on drying *(2.2.32)*

Not more than 1.0 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.3000 g in 20 ml of *dimethylformamide R*. Titrate with *0.1 M tetrabutylammonium hydroxide*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M tetrabutylammonium hydroxide* is equivalent to 35.41 mg of $C_9H_{11}IN_2O_5$.

STORAGE

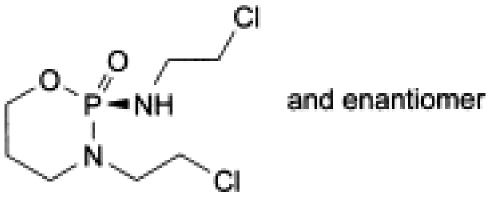
Store protected from light.

Ph Eur

Ifosfamide

General Notices

(Ph Eur monograph 1529)



$C_7H_{15}Cl_2N_2O_2P$ 261.1   *3778-73-2*

Action and use

Cytotoxic alkylating agent.

Preparation

Ifosfamide Injection

Ph Eur

DEFINITION

Ifosfamide contains not less than 98.0 per cent and not more than the equivalent of 102.0 per cent of (*RS*)-*N*,3-bis(2-chloroethyl)-1,3,2-oxazaphosphinan-2-amine 2-oxide, calculated with reference to the anhydrous substance.

CHARACTERS

A white or almost white, fine, crystalline powder, hygroscopic, soluble in water, freely soluble in methylene chloride.

IDENTIFICATION

Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the *Ph. Eur. reference spectrum of ifosfamide*. Examine the substance prepared as a disc.

TESTS

Solution S

Dissolve 5.0 g in *carbon dioxide-free water R* and dilute to 50.0 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution Y_7 *(2.2.2, Method II).*

Acidity or alkalinity

Dilute 5 ml of solution S to 50 ml with *carbon dioxide-free water R*. To 10 ml of this solution add 0.1 ml of *methyl red solution R.* Not more than 0.1 ml of *0.01 M hydrochloric acid* is required to change the colour of the indicator to red. To another 10 ml of the solution add 0.1 ml of *phenolphthalein solution R.* Not more than 0.3 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator to pink.

Optical rotation *(2.2.7).*

The angle of optical rotation, determined on solution S, is - 0.10 ° to + 0.10 °.

Related substances

A. Examine by thin-layer chromatography *(2.2.27)*, using a *TLC silica gel plate R*.

Test solution Dissolve 1.00 g of the substance to be examined in a mixture of equal volumes of *methanol R* and *water R* and dilute to 10 ml with the same mixture of solvents.

Reference solution (a) Dissolve 25 mg of *ifosfamide impurity A CRS* and 25 mg of *chloroethylamine hydrochloride R* (impurity C) in a mixture of equal volumes of *methanol R* and *water R* and dilute to 100 ml with the same mixture of solvents.

Reference solution (b) Dissolve 15 mg of *ifosfamide impurity B CRS* in a mixture of equal volumes of *methanol R* and *water R* and dilute to 100 ml with the same mixture of solvents.

Reference solution (c) Dissolve 5 mg of *ethanolamine R* (impurity D), 20 mg of *ifosfamide impurity A CRS* and 80 mg of *chloroethylamine hydrochloride R* (impurity C) in a mixture of equal volumes of *methanol R* and *water R* and dilute to 100 ml with the same mixture of solvents.

Apply to the plate 10 µl of each solution. Develop over a path of 15 cm using a mixture of 10 volumes of *water R,* 15 volumes of *methanol R*, 25 volumes of *anhydrous acetic acid R* and 50 volumes of *methylene chloride R*. Dry the plate at 115 °C for 45 min. At the bottom of a chromatography tank, place an evaporating dish containing a 3.2 g/l solution of *potassium permanganate R* and add an equal volume of *dilute hydrochloric acid R*, close the tank and allow to stand for 10 min. Place the plate whilst still hot in the tank, avoiding contact of the stationary phase with the solution, and close the tank. Leave the plate in contact with the chlorine vapour for 20 min. Withdraw the plate and place it in a current of cold air until the excess of chlorine is removed (about 20 min) and an area of coating below the points of application does not give a blue colour with a drop of *potassium iodide* and *starch solution R*. Avoid prolonged exposure to cold air. Immerse the plate in a 1 g/l solution of *tetramethylbenzidine R* in *alcohol R* for 5 s. Allow the plate to dry and examine. In the chromatogram obtained with the test solution: any spot corresponding to impurity A or impurity C is not more intense than the corresponding spot in the chromatogram obtained with reference solution (a) (0.25 per cent); any spot corresponding to impurity B is not more intense than the corresponding spot in the chromatogram obtained with reference solution (b) (0.15 per cent); any other spot is not more intense than the principal spot in the chromatogram obtained with reference solution (b) (0.15 per cent). The test is not valid unless the chromatogram obtained with reference solution (c) shows 3 clearly separated spots.

B. Examine by thin-layer chromatography *(2.2.27)*, using a *TLC silica gel plate R*.

Test solution Dissolve 0.200 g of the substance to be examined in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 10 ml with the same mixture of solvents.

Reference solution (a) Dissolve 5 mg of *ifosfamide impurity E CRS* and 5 mg of *ifosfamide impurity F CRS* in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 100 ml with the same mixture of solvents.

Reference solution (b) Dissolve 10 mg of *ifosfamide impurity E CRS* and 10 mg of *ifosfamide CRS* in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 100 ml with the same mixture of solvents.

Apply to the plate 5 µl of each solution. Develop over a path of 15 cm using a mixture of 1 volume of *methylene chloride R* and 10 volumes of *acetone R*. Dry the plate at 115 °C for 45 min. Proceed as described in Related substances test A. Any spot corresponding to impurity E or impurity F in the chromatogram obtained with the test solution is not more intense than the corresponding spot in the chromatogram obtained with reference solution (a) (0.25 per cent). The test is not valid unless the chromatogram obtained with reference solution (b) shows 2 clearly separated spots.

Chlorides ***(2.4.4)***

Dilute 5 ml of solution S to 15 ml with *water R*. The freshly prepared solution complies with the limit test for chlorides (100 ppm).

Heavy metals ***(2.4.8)***

12 ml of solution S complies with limit test A for heavy metals (10 ppm). Prepare the standard using *lead standard solution (1 ppm Pb) R*.

Water ***(2.5.12)***

Not more than 0.5 per cent, determined on 1.00 g by the semi-micro determination of water.

ASSAY

Examine by liquid chromatography *(2.2.29). Use the solutions within 24 h*.

Solution A Dissolve 50.0 mg of *ethyl parahydroxybenzoate R* in 25 ml of *alcohol R*, dilute to 100.0 ml with *water R* and mix.

Test solution To 0.150 g of the substance to be examined add 10.0 ml of solution A and dilute to 250.0 ml with *water R*.

Reference solution To 15.0 mg of *ifosfamide CRS* add 1.0 ml of solution A and dilute to 25.0 ml with *water R.*

The chromatography may be carried out using:

- a stainless steel column 0.25 m long and 4.6 mm in internal diameter packed with *octadecylsilyl silica gel for chromatography R* (5 µm),
- as mobile phase at a flow rate of 1.5 ml/min a mixture of 30 volumes of *acetonitrile R* and 70 volumes of *water R*,
- as detector a spectrophotometer set at 195 nm.

Inject 1 µl of the reference solution six times. The assay is not valid unless the resolution between the peaks due to ifosfamide and to ethyl parahydroxybenzoate is not less than 6.0 and the relative standard deviation of the peak area for ifosfamide is at most 2.0 per cent.

Inject 1 µl of the test solution. Calculate the percentage content of $C_7H_{15}Cl_2N_2O_2P$ from the area of the corresponding peak in the chromatogram obtained and the declared content of *ifosfamide CRS*.

STORAGE

Store in an airtight container .

IMPURITIES

Ph Eur

DEFINITION

(5*R*,6*S*)-6-[(*R*)-1-Hydroxyethyl]-3-[[2-[(iminomethyl)amino]-ethyl]sulphanyl]-7-oxo-1-azabicyclo[3.2.0]hept-2-ene-2-carboxylic acid monohydrate.

Semi-synthetic product derived from a fermentation product.

Content

98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white or pale yellow powder.

Solubility

Sparingly soluble in water, slightly soluble in methanol.

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24).*

Comparison

imipenem CRS.

TESTS

Appearance of solution

The solution is not more opalescent than reference suspension II *(2.2.1)* and not more intensely coloured than intensity 6 of the range of the reference solutions of the most appropriate colour *(2.2.2, Method II)*.

Dissolve 0.500 g in *phosphate buffer solution pH 7.0 R3* and dilute to 50 ml with the same solution.

pH *(2.2.3)*

4.5 to 7.0.

Dissolve 0.500 g in *carbon dioxide-free water R* and dilute to 100.0 ml with the same solvent.

Specific optical rotation *(2.2.7)*

+ 84 to + 89 (anhydrous substance), measured at 25 °C.

Dissolve 0.125 g in *phosphate buffer solution pH 7.0 R3* and dilute to 25.0 ml with the same solution.

Related substances

Liquid chromatography *(2.2.29)*. *Keep the solutions in an ice-bath and use within 8 h of preparation.*

Solvent mixture Mix 0.7 volumes of *acetonitrile R* and 99.3 volumes of a 0.135 g/l solution of *dipotassium hydrogen phosphate R* adjusted to pH 6.8 with *dilute phosphoric acid R*.

Test solution Dissolve 40.0 mg of the substance to be examined in the solvent mixture and dilute to 100.0 ml with the solvent mixture.

Reference solution (a) Dissolve 40.0 mg of *imipenem CRS* in the solvent mixture and dilute to 100.0 ml with the solvent mixture.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with the solvent mixture.

Reference solution (c) Heat 20 ml of the test solution, previously adjusted to pH 10 with *sodium hydroxide solution R,* at 80 °C for 5 min (*in situ* preparation of impurity A).

Column:

— *size*: *l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Mix 0.7 volumes of *acetonitrile R* and 99.3 volumes of a 8.7 g/l solution of *dipotassium hydrogen phosphate R* adjusted to pH 7.3 with *dilute phosphoric acid R*.

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 20 µl of the test solution and reference solutions (b) and (c).

Run time Twice the retention time of imipenem.

Relative retention with reference to imipenem (retention time = about 9 min): impurity A = about 0.8.

System suitability Reference solution (c):

— *resolution*: minimum 3.5 between the peaks due to impurity A and imipenem.

Limits:

— *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1 per cent);

— *any other impurity*: for each impurity, not more than 0.3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);

— *sum of impurities other than A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1 per cent);

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent).

Water *(2.5.12)*

5.0 per cent to 8.0 per cent, determined on 0.200 g. Use an iodosulphurous reagent containing imidazole instead of pyridine and a clean container for each determination.

Sulphated ash *(2.4.14)*

Maximum 0.2 per cent, determined on 1.0 g.

Bacterial endotoxins *(2.6.14)*

Less than 0.17 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for removal of bacterial endotoxins.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modifications.

Injection Test solution and reference solution (a).

System suitability Reference solution (a):

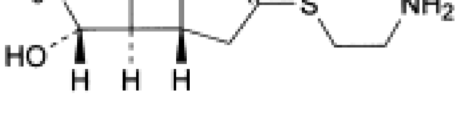
— *repeatability*: maximum relative standard deviation of 1.0 per cent after 6 injections.

STORAGE

In an airtight container, at a temperature of 2 °C to 8 °C. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

IMPURITIES

Specified impurities A.



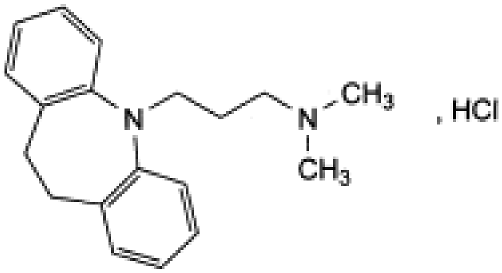
A. (5*R*,6*S*)-3-[(2-aminoethyl)sulphanyl]-6-[(*R*)-1-hydroxyethyl]-7-oxo-1-azabicyclo[3.2.0]hept-2-ene-2-carboxylic acid (thienamycin).

Ph Eur

Imipramine Hydrochloride

General Notices

(Ph Eur monograph 0029)



$C_{19}H_{24}N_2$,HCl 316.9 *113-52-0*

Action and use

Monoamine reuptake inhibitor; tricyclic antidepressant.

Preparation

Imipramine Tablets

Ph Eur

DEFINITION

3-(10,11-Dihydro-5*H*-dibenzo[*b,f*]azepin-5-yl)-*N,N*-dimethylpropan-1-amine hydrochloride.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or slightly yellow, crystalline powder.

Solubility

Freely soluble in water and in ethanol (96 per cent).

IDENTIFICATION

First identification B, D.

Second identification A, C, D.

A. Melting point *(2.2.14)*: 170 °C to 174 °C.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *imipramine hydrochloride CRS.*

C. Dissolve about 5 mg in 2 ml of *nitric acid R*. An intense blue colour develops.

D. About 20 mg gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Solution S

To 3.0 g add 20 ml of *carbon dioxide-free water R*, dissolve rapidly by shaking and triturating with a glass rod and dilute to 30 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)*. Immediately after preparation, dilute solution S with an equal volume of *water R*. This solution is not more intensely coloured than reference solution BY_6 *(2.2.2, Method II)*.

pH *(2.2.3)*

3.6 to 5.0 for solution S, measured immediately after preparation.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 ml with the mobile phase.

Reference solution Dissolve 5 mg of *imipramine for system suitability CRS* (containing impurity B) in the mobile phase and dilute to 5.0 ml with the mobile phase.

Column:
- *size*: l = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped polar-embedded octadecylsilyl amorphous organosilica polymer R* (5 µm);
- *temperature*: 40 °C.

Mobile phase Mix 40 volumes of *acetonitrile R1* with 60 volumes of a 5.2 g/l solution of *dipotassium hydrogen phosphate R* previously adjusted to pH 7.0 with *phosphoric acid R*.

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 220 nm.

Injection 10 µl.

Run time 2.5 times the retention time of imipramine.

Relative retention With reference to imipramine (retention time = about 7 min): impurity B = about 0.7.

System suitability Reference solution:

— *resolution*: minimum 5.0 between the peaks due to impurity B and imipramine.

Limits:

— *impurity B*: not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (0.1 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the peak due to imipramine in the chromatogram obtained with the reference solution (0.10 per cent);

— *total*: not more than 3 times the area of the peak due to imipramine in the chromatogram obtained with the reference solution (0.3 per cent);

— *disregard limit*: 0.5 times the area of the peak due to imipramine in the chromatogram obtained with the reference solution (0.05 per cent).

Heavy metals *(2.4.8)*

Maximum 20 ppm.

Test solution Dissolve 0.500 g of the substance to be examined in 20 ml of *water R*.

Reference solution Dilute 10 ml of *lead standard solution (1 ppm Pb) R* to 20 ml with *water R*.

Blank solution 20 ml of *water R*.

Monitor solution Dissolve 0.500 g of the substance to be examined in 10 ml of *lead standard solution (1 ppm Pb) R* and dilute to 20 ml of *water R*.

To each solution add 2 ml of *buffer solution pH 3.5 R*. Mix and add to 1.2 ml of *thioacetamide reagent R*. Mix immediately. Filter the solutions through a suitable membrane filter (pore size 0.45 µm). Compare the spots on the filters obtained with the different solutions. The test is invalid if the reference solution and the monitor solution do not show a slight brown colour compared to the blank solution. The substance to be examined complies with the test if the brown colour of the spot resulting from the test solution is not more intense than that of the spot resulting from the reference solution.

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 50 ml of *ethanol (96 per cent) R* and add 5.0 ml of *0.01 M hydrochloric acid*. Carry out a potentiometric titration *(2.2.20)*, using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 31.69 mg of $C_{19}H_{25}ClN_2$.

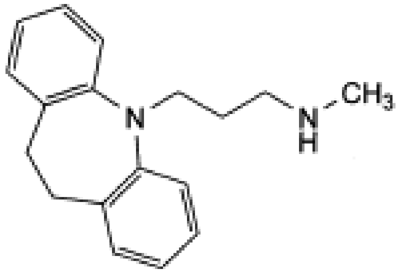
STORAGE

Protected from light.

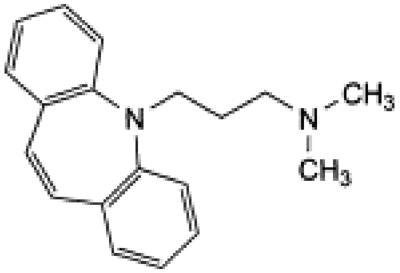
IMPURITIES

Specified impurities *B.*

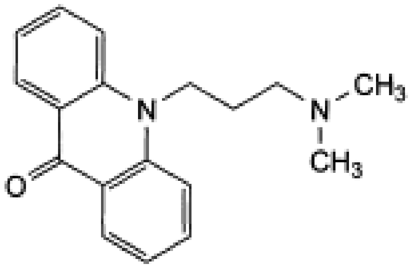
Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, C.*



A. 3-(10,11-dihydro-5*H*-dibenzo[*b,f*]azepin-5-yl)-*N*-methylpropan-1-amine (desipramine),



B. 3-(5*H*-dibenzo[*b,f*]azepin-5-yl)-*N,N*-dimethylpropan-1-amine (depramine),



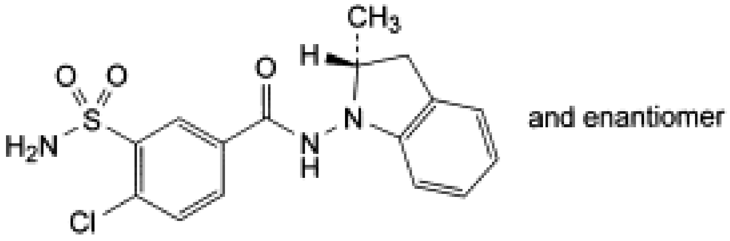
C. 10-[3-(dimethylamino)propyl]acridin-9(10*H*)-one.

Ph Eur

Indapamide

General Notices

(Ph Eur monograph 1108)



$C_{16}H_{16}ClN_3O_3S$ 365.8 *26807-65-8*

Action and use

Thiazide-like diuretic.

Preparation

Indapamide Tablets

Ph Eur

DEFINITION

4-Chloro-*N*-[(2*RS*)-2-methyl-2,3-dihydro-1*H*-indol-1-yl]-3-sulphamoylbenzamide.

Content

98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water, soluble in ethanol (96 per cent).

IDENTIFICATION

First identification *B.*

Second identification *A, C.*

A. Ultraviolet and visible absorption spectrophotometry *(2.2.25)*.

Test solution Dissolve 50.0 mg in *ethanol (96 per cent) R* and dilute to 100.0 ml with the same solvent. Dilute 2.0 ml of this solution to 100.0 ml with *ethanol (96 per cent) R*.

Spectral range 220-350 nm.

Absorption maximum At 242 nm.

Shoulders At 279 nm and 287 nm.

Specific absorbance at the absorption maximum 590 to 630.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs of *potassium bromide R*.

Comparison *indapamide CRS.*

C. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 20 mg of the substance to be examined in *ethanol (96 per cent) R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dissolve 20 mg of *indapamide CRS* in *ethanol (96 per cent) R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dissolve 10 mg *of indometacin R* in 5 ml of reference solution (a) and dilute to 10 ml with *ethanol (96 per cent) R.*

Plate *TLC silica gel* GF_{254} *plate R*.

Mobile phase *glacial acetic acid R, acetone R, toluene R* (1:20:79 *V/V/V*).

Application 10 µl.

Development Over a path of 15 cm.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

System suitability
Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

TESTS

Optical rotation *(2.2.7)*

- 0.02 ° to + 0.02 °.

Dissolve 0.250 g in *anhydrous ethanol R* and dilute to 25.0 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*. *Carry out the test protected from light and prepare the* *solutions immediately before use or maintain them at 4 °C.*

Test solution Dissolve 20.0 mg of the substance to be examined in 7 ml of a mixture of equal volumes of *acetonitrile R* and *methanol R* and dilute to 20.0 ml with a 0.2 g/l solution of *sodium edetate R.*

Reference solution (a) Dissolve 3.0 mg of *indapamide impurity B CRS* in 3.5 ml of a mixture of equal volumes of *acetonitrile R* and *methanol R* and dilute to 10.0 ml with a 0.2 g/l solution of *sodium edetate R.* To 1.0 ml of this solution, add 35 ml of a mixture of equal volumes of *acetonitrile R* and *methanol R* and dilute to 100.0 ml with a 0.2 g/l solution of *sodium edetate R*.

Reference solution (b) Dilute 1.0 ml of the test solution to 50.0 ml with a mixture of 17.5 volumes of *acetonitrile R,* 17.5 volumes of *methanol R* and 65 volumes of a 0.2 g/l solution of *sodium edetate R*. Dilute 1.0 ml of this solution to 20.0 ml with a mixture of 17.5 volumes of *acetonitrile R*, 17.5 volumes of *methanol R* and 65 volumes of a 0.2 g/l solution of *sodium edetate R.*

Reference solution (c) Dissolve 20.0 mg of *indapamide CRS* in 7 ml of a mixture of equal volumes of *acetonitrile R* and *methanol R* and dilute to 20.0 ml with a 0.2 g/l solution of *sodium edetate R*.

Reference solution (d) Dissolve 25.0 mg of *indapamide CRS* and 45.0 mg of *methylnitrosoindoline CRS* (impurity A) in 17.5 ml of a mixture of equal volumes of *acetonitrile R* and *methanol R* and dilute to 50.0 ml with a 0.2 g/l solution of *sodium edetate R.*

Column:

— *size*: *l* = 0.20 m, Ø = 4.6 mm;

— *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm);

— *temperature*: 40 °C.

Mobile phase *glacial acetic acid R, acetonitrile R, methanol R*, 0.2 g/l solution of *sodium edetate R* (0.1:17.5:17.5:65 *V/V/V/V*).

Flow rate 2 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 10 µl.

Run time 2.5 times the retention time of indapamide.

Retention time Indapamide = about 11 min.

System suitability:

— *resolution*: minimum 4.0 between the peaks due to indapamide and impurity A in the chromatogram obtained with reference solution (d);

— *signal-to-noise ratio*: minimum 6 for the principal peak in the chromatogram obtained with reference solution (b).

Limits:

— *impurity B*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

— *total*: not more than 5 times the area of the principal peak in the chromatogram obtained

with reference solution (b) (0.5 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Impurity A

Liquid chromatography *(2.2.29)*. *Carry out the test protected from light.*

Test solution Dissolve 25.0 mg of the substance to be examined in 1 ml of *acetonitrile R* and dilute to 10.0 ml with *water R*. Shake for 15 min. Allow to stand at 4 °C for 1 h and filter.

Reference solution Dissolve 25.0 mg of the substance to be examined in 1.0 ml of a 0.125 mg/l solution of *methylnitrosoindoline CRS* (impurity A) in *acetonitrile R* and dilute to 10.0 ml with *water R*. Shake for 15 min. Allow to stand at 4 °C for 1 h and filter.

Column:
— *size*: *l* = 0.15 m, Ø = 4.6 mm;

— *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm);

— *temperature*: 30 °C.

Mobile phase Mix 7 volumes of *acetonitrile R*, 20 volumes of *tetrahydrofuran R* and 73 volumes of a 1.5 g/l solution of *triethylamine R* adjusted to pH 2.8 with *phosphoric acid R.*

Flow rate 1.4 ml/min.

Detection Spectrophotometer at 305 nm.

Injection 0.1 ml.

System suitability Reference solution:

— *signal-to-noise ratio*: minimum 3 for the peak due to impurity A appearing just before the peak due to indapamide;

— *peak-to-valley-ratio:* minimum 6.7, where H_p = height above the baseline of the peak due to impurity A and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to indapamide.

Limit:
— *impurity A:* not more than the difference between the areas of the peaks due to impurity A in the chromatograms obtained with the reference solution and the test solution (5 ppm).

Heavy metals *(2.4.8)*

Maximum 10 ppm.

2.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Water *(2.5.12)*

Maximum 3.0 per cent, determined on 0.100 g.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modifications.

Injection The test solution and reference solution (c).

System suitability Reference solution (c)

- — *repeatability*: maximum relative standard deviation of 1.0 per cent after 6 injections; if necessary, adjust the integrator parameters.

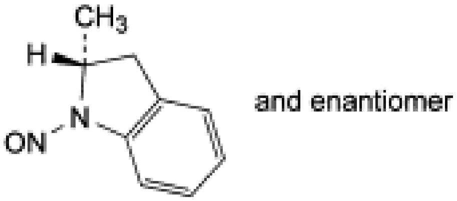
Calculate the percentage content of $C_{16}H_{16}ClN_3O_3S$ from the declared content of *indapamide CRS*.

STORAGE

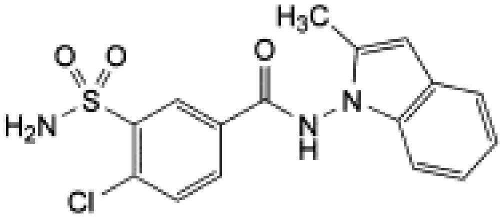
Protected from light.

IMPURITIES

Specified impurities A, B.



A. (2*RS*)-2-methyl-1-nitroso-2,3-dihydro-1*H*-indole,



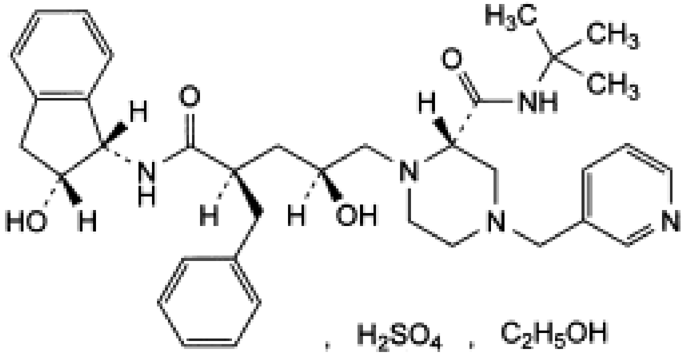
B. 4-chloro-*N*-(2-methyl-1*H*-indol-1-yl]-3-sulphamoylbenzamide.

Ph Eur

Indinavir Sulphate

General Notices

(Ph Eur monograph 2214)



$C_{36}H_{47}N_5O_4,H_2SO_4,C_2H_6O$ 758 *157810-81-6*

Action and use

Protease inhibitor; antiviral (HIV).

Ph Eur

DEFINITION

(2*S*)-1-[(2*S*,4*R*)-4-Benzyl-2-hydroxy-5-[[(1*S*,2*R*)-2-hydroxy-2,3-dihydro-1*H*-inden-1-yl]amino]-5-oxopentyl]-*N*-(1,1-dimethylethyl)-4-(pyridin-3-ylmethyl)piperazine-2-carboxamide sulphate ethanolate.

Content

98.0 per cent to 102.0 per cent (anhydrous and ethanol-free substance).

PRODUCTION

A test for enantiomeric purity is carried out unless it has been demonstrated that the manufacturing process is enantioselective for the substance.

CHARACTERS

Appearance

White or almost white, hygroscopic powder.

Solubility

Freely soluble in water, soluble in methanol, practically insoluble in heptane.

IDENTIFICATION

A. Specific optical rotation *(2.2.7)*: + 122 to + 129 (anhydrous and ethanol-free substance), determined at 365 nm and at 25 °C.

Dissolve 0.500 g in *water R* and dilute to 50.0 ml with the same solvent.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *Ph. Eur. reference spectrum of indinavir sulphate*.

C. It gives reaction (a) of sulphates *(2.3.1)*.

D. It complies with the test for ethanol (see Tests).

TESTS

Related substances

Liquid chromatography *(2.2.29)*.

Solution A Thoroughly mix equal volumes of mobile phase A and *acetonitrile R1*.

Test solution Dissolve 50.0 mg of the substance to be examined in solution A and dilute to 100.0 ml with the same solution.

Reference solution (a) Dissolve 4 mg of *indinavir for system suitability CRS* (containing impurities B, C and E) in solution A and dilute to 10 ml with the same solution.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with solution A. Dilute 1.0 ml of this solution to 10.0 ml with solution A.

Reference solution (c) Dissolve 5.0 mg of *cis-aminoindanol R* (impurity A) in solution A and dilute to 10.0 ml with the same solution. Dilute 1.0 ml of the solution to 100.0 ml with solution A. Dilute 1.0 ml of this solution to 10.0 ml with solution A.

Reference solution (d) To 30 mg of the substance to be examined add 0.25 ml of *2 M hydrochloric acid R* and allow to stand at room temperature for 1 h. Dilute to 100 ml with a mixture of 2 volumes of *acetonitrile R1* and 3 volumes of mobile phase A and mix (*in situ* degradation to obtain impurity D).

Column:

— *size:* l = 0.25 m, Ø = 4.6 mm;

— *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:

— *mobile phase A*: solution containing 0.27 g/l of *potassium dihydrogen phosphate R* and 1.40 g/l of *dipotassium hydrogen phosphate R*; filter and degas;

— *mobile phase B*: *acetonitrile R1*;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 5	80	20
5 - 40	80 → 30	20 → 70
40 - 45	30	70
45 - 47	30 → 80	70 → 20
47 - 52	80	20

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 220 nm.

Injection 20 µl.

Identification of impurities Use the chromatogram supplied with *indinavir for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities B, C and E; use the chromatogram obtained with reference solution (d) to identify the peak due to impurity D.

Relative retention With reference to indinavir (retention time = about 25 min): impurity A = about 0.2; impurity B = about 0.8; impurity C = about 0.98; impurity D = about 1.1; impurity E = about 1.3.

System suitability Reference solution (a):

— *resolution*: minimum 1.8 between the peaks due to impurity C and indinavir.

Limits:

— *correction factor*: for the calculation of content, multiply the peak area of impurity D by 1.8;

— *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent);

— *impurity D*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);

— *impurities B, C, E*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

— *unspecified impurities*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent);

— *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *disregard limit*: 0.3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.03 per cent).

Ethanol

Gas chromatography *(2.2.28)*.

Internal standard solution Dilute 1.0 ml of *propanol R* to 200.0 ml with *water R*.

Test solution Dissolve 0.400 g of the substance to be examined in 50.0 ml of *water R*, add

8.0 ml of the internal standard solution and dilute to 100.0 ml with *water R*.

Reference solution Dilute 1.0 ml of *anhydrous ethanol R* to 200.0 ml. Dilute 2.0 ml of this solution and 2.0 ml of the internal standard solution to 25.0 ml with *water R*.

Column:
- *material*: fused silica;
- *size:* l = 30 m, Ø = 0.53 mm;
- *stationary phase: macrogol 20 000 R* (film thickness 1.0 µm).

Carrier gas *helium for chromatography R.*

Flow rate 10 ml/min.

Split ratio 1:10.

Temperature:
- *column*: 35 °C;
- *injection port*: 140 °C;
- *detector*: 220 °C.

Detection Flame ionisation.

Injection 1.0 µl.

System suitability Reference solution:
- *retention time*: ethanol = 2 min to 4 min;
- *resolution*: minimum 5.0 between the peaks due to ethanol and propanol.

Calculate the percentage content of ethanol taking the density *(2.2.5)* to be 0.790 g/ml.

Limit:
- *ethanol* : 5.0 per cent to 8.0 per cent (*m/m*).

Heavy metals *(2.4.8)*

Maximum 10 ppm.

Dissolve 2.0 g in *water R* and dilute to 20 ml with the same solvent. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Water *(2.5.12)*

Maximum 1.5 per cent, determined on 0.500 g.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography *(2.2.29)*.

Solution B Add 20 ml of *dibutylammonium phosphate for ion-pairing R* to 1000 ml of *water R*. Adjust to pH 6.5 with *1 M sodium hydroxide*.

Test solution Dissolve 60.0 mg of the substance to be examined in the mobile phase and

dilute to 100.0 ml with the mobile phase.

Reference solution Dissolve 50.0 mg of *indinavir CRS* in the mobile phase and dilute to 100.0 ml with the mobile phase.

Column:

— *size:* *l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase: base-deactivated octylsilyl silica gel for chromatography R* (5 µm);

— *temperature*: 40 °C.

Mobile phase *acetonitrile R, solution B* (45:55 *V/V*).

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 260 nm.

Injection 10 µl.

Run time Twice the retention time of indinavir.

Retention time Indinavir = about 10 min.

Calculate the percentage content of $C_{36}H_{49}N_5O_8S$ using the declared content of *indinavir CRS* and multiplying by a correction factor of 1.1598.

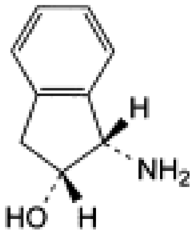
STORAGE

In an airtight container, protected from light.

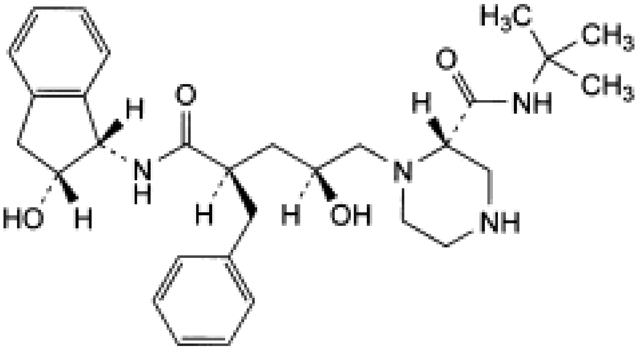
IMPURITIES

Specified impurities *A, B, C, D, E.*

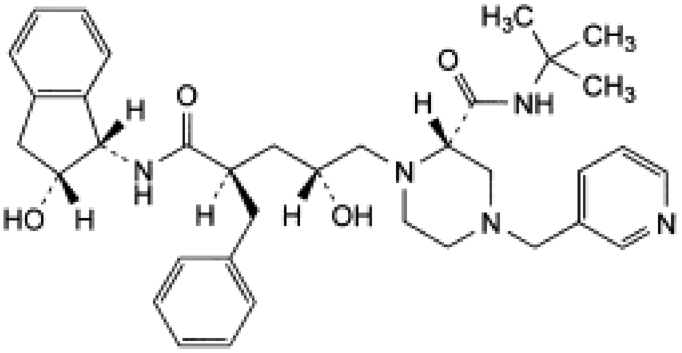
Other detectable impurities (The following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use): F.*



A. (1*S*,2*R*)-1-amino-2,3-dihydro-1*H*-inden-2-ol (*cis*-aminoindanol),



B. (2*S*)-1-[(2*S*,4*R*)-4-benzyl-2-hydroxy-5-[[(1*S*,2*R*)-2-hydroxy-2,3-dihydro-1*H*-inden-1-yl]amino]-5-oxopentyl]-*N*-(1,1-dimethylethyl)piperazine-2-carboxamide,



C. (2*S*)-1-[(2*R*,4*R*)-4-benzyl-2-hydroxy-5-[[(1*S*,2*R*)-2-hydroxy-2,3-dihydro-1*H*-inden-1-yl]amino]-5-oxopentyl]-*N*-(1,1-dimethylethyl)-4-(pyridin-3-ylmethyl)piperazine-2-carboxamide,

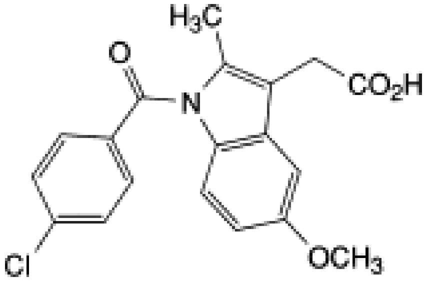
Ph Eur

Indometacin

General Notices

(Ph Eur monograph 0092)



$C_{19}H_{16}ClNO_4$ 357.8   *53-86-1*

Action and use

Cyclo-oxygenase inhibitor; analgesic; anti-inflammatory.

Preparations

Indometacin Capsules

Indometacin Suppositories

Ph Eur

DEFINITION

Indometacin contains not less than 98.5 per cent and not more than the equivalent of 100.5 per cent of [1-(4-chlorobenzoyl)-5-methoxy-2-methylindol-3-yl]acetic acid, calculated with reference to the dried substance.

CHARACTERS

A white or yellow, crystalline powder, practically insoluble in water, sparingly soluble in alcohol.

IDENTIFICATION

First identification   *A, C.*

Second identification   *A, B, D, E.*

A. Melting point *(2.2.14)*: 158 °C to 162 °C.

B. Dissolve 25 mg in a mixture of 1 volume of *1 M hydrochloric acid* and 9 volumes of *methanol R* and dilute to 100.0 ml with the same mixture of solvents. Dilute 10.0 ml of the solution to 100.0 ml with a mixture of 1 volume of *1 M hydrochloric acid* and 9 volumes of *methanol R*. Examined between 300 nm and 350 nm *(2.2.25)*, the solution shows an absorption maximum at 318 nm. The specific absorbance at the maximum is 170 to 190.

C. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *indometacin CRS*. Examine the substances in the solid state without recrystallisation.

D. Dissolve 0.1 g in 10 ml of *alcohol R*, heating slightly if necessary. To 0.1 ml of the solution add 2 ml of a freshly prepared mixture of 1 volume of a 250 g/l solution of *hydroxylamine hydrochloride R* and 3 volumes of *dilute sodium hydroxide solution R*. Add 2 ml of *dilute hydrochloric acid R* and 1 ml of *ferric chloride solution R2* and mix. A violet-pink colour develops.

E. To 0.5 ml of the solution in alcohol prepared in identification test D, add 0.5 ml of *dimethylaminobenzaldehyde solution R2*. A precipitate is formed that dissolves on shaking. Heat on a water-bath. A bluish-green colour is produced. Continue to heat for 5 min and cool in iced water for 2 min. A precipitate is formed and the colour changes to light greyish-green. Add 3 ml of *alcohol R*. The solution is clear and violet-pink in colour.

TESTS

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using *silica gel* HF_{254} *R* as the coating substance. Prepare the slurry using a 46.8 g/l solution of *sodium dihydrogen phosphate R*.

Test solution Dissolve 0.2 g of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent. Prepare immediately before use.

Reference solution Dilute 1 ml of the test solution to 200 ml with *methanol R.*

Apply separately to the plate 10 µl of each solution. Develop over a path of 15 cm using a mixture of 30 volumes of *light petroleum R* and 70 volumes of *ether R*. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with the reference solution (0.5 per cent).

Heavy metals *(2.4.8)*

2.0 g complies with limit test C for heavy metals (20 ppm). Prepare the standard using 4 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

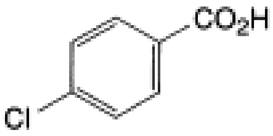
Dissolve 0.300 g in 75 ml of *acetone R,* through which *nitrogen R*, free from carbon dioxide, has been passed for 15 min. Maintain a constant stream of nitrogen through the solution. Add 0.1 ml of *phenolphthalein solution R*. Titrate with *0.1 M sodium hydroxide*. Carry out a blank titration.

1 ml of *0.1 M sodium hydroxide* is equivalent to 35.78 mg of $C_{19}H_{16}ClNO_4$.

STORAGE

Store protected from light.

IMPURITIES

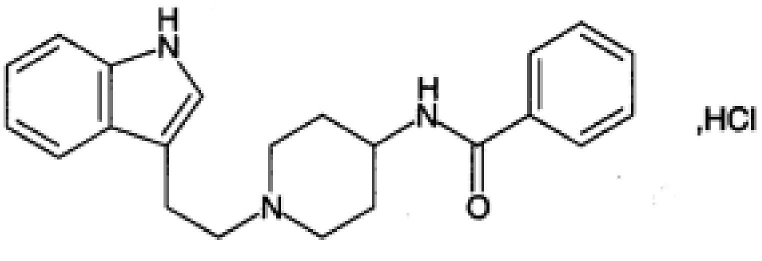


A. 4-chlorobenzoic acid.

Ph Eur

Indoramin Hydrochloride

General Notices



$C_{22}H_{25}N_3O,HCl$ 383.9 *33124-53-7*

Action and use

Alpha$_1$-adrenoceptor antagonist.

Preparation

Indoramin Tablets

DEFINITION

Indoramin Hydrochloride is *N*-1-[2-(indol-3-yl)ethyl]-4-piperidylbenzamide hydrochloride. It contains not less than 98.5% and not more than 100.5% of $C_{22}H_{25}N_3O,HCl$, calculated with reference to the dried substance.

CHARACTERISTICS

A white or almost white powder. It exhibits polymorphism.

Slightly soluble in *water*; sparingly soluble in *ethanol (96%)*; soluble in *methanol*; very slightly soluble in *ether*.

IDENTIFICATION

A. The *light absorption*, Appendix II B, in the range 230 to 350 nm of a 0.0045% w/v solution in *ethanol (96%)* exhibits three maxima, at 273, 280 and 290 nm. The *absorbances* at the maxima are about 0.76, 0.77 and 0.64, respectively.

B. Dissolve 50 mg in 30 ml of *water*, make the solution alkaline by the addition of 5M *ammonia* and shake with 50 ml of *dichloromethane*. Dry the dichloromethane layer with *anhydrous sodium sulphate*, filter and evaporate the filtrate to dryness using a rotary evaporator. The *infrared absorption spectrum* of the residue, Appendix II A, is concordant with the *reference spectrum* of indoramin *(RS 188)*.

C. Yields reaction A characteristic of *chlorides*, Appendix VI.

TESTS

Acidity

pH of a 2% w/v suspension in *water*, 4.0 to 5.5, Appendix V L.

Related substances

Carry out the method for *thin-layer chromatography*, Appendix III A, using a *silica gel F_{254}* precoated plate (Merck silica gel 60 F_{254} plates are suitable)and a mixture of 1 volume of 18M *ammonia,* 20 volumes of *absolute ethanol* and 79 volumes of *toluene* as the mobile phase. Apply separately to the plate 10 µl of each of three solutions of the substance being examined in *ethanol (96%)* containing (1) 1.0% w/v, (2) 0.0050% w/v and (3) 0.0010% w/v. After removal of the plate, allow it to dry in a current of warm air and examine under *ultraviolet light (254 nm)*. Any *secondary spot* in the chromatogram obtained with solution (1) is not more intense than the spot in the chromatogram obtained with solution (2) (0.5%) and not more than one such spot is more intense than the spot in the chromatogram obtained with solution (3) (0.1%).

Loss on drying

When dried at 100° to 105° for 4 hours, loses not more than 0.5% of its weight. Use 1 g.

Sulphated ash

Not more than 0.1%, Appendix IX A.

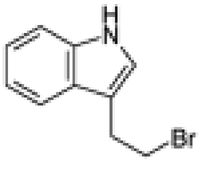
ASSAY

Dissolve 0.2 g in 30 ml of *anhydrous acetic acid*, add 6 ml of *acetic anhydride* and 6 ml of *mercury(II) acetate* solution. Titrate with 0.1M *perchloric acid VS* determining the end point potentiometrically. Each ml of 0.1M *perchloric acid VS* is equivalent to 38.39 mg of $C_{22}H_{25}N_3O,HCl$.

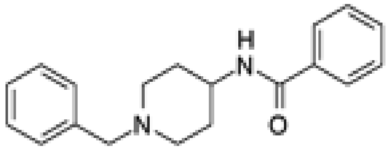
STORAGE

Indoramin Hydrochloride should be protected from light.

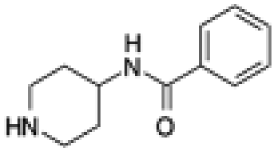
IMPURITIES



A. 3-(2-bromoethyl)indole



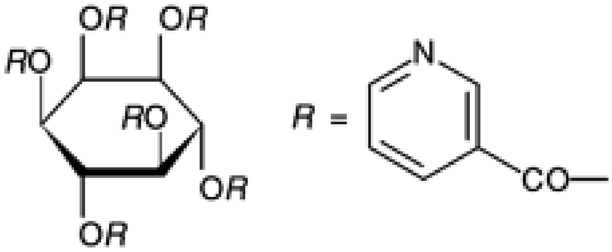
B. *N*-(1-benzyl-4-piperidyl)benzamide



C. *N*-(4-piperidyl)benzamide

Inositol Nicotinate

General Notices



$C_{42}H_{30}N_6O_{12}$ 810.7 *6556-11-2*

Action and use

Vasodilator.

Preparation

Inositol Nicotinate Tablets

DEFINITION

Inositol Nicotinate is *myo*-inositol hexanicotinate. It contains not less than 98.0% and not more than 101.0% of $C_{42}H_{30}N_6O_{12}$, calculated with reference to the dried substance.

CHARACTERISTICS

A white or almost white powder.

Practically insoluble in *water*; practically insoluble in *acetone*, in *ethanol (96%)* and in *ether*. It dissolves in dilute mineral acids.

IDENTIFICATION

The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of inositol nicotinate *(RS 190)*.

TESTS

Clarity and colour of solution

A 5.0% w/v solution in 0.5M *sulphuric acid* is *clear*, Appendix IV A, and not more intensely coloured than *reference solution* BY_6, Appendix IV B, Method II.

Heavy metals

2.0 g complies with *limit test C for heavy metals*, Appendix VII. Use 2 ml of *lead standard solution (10 ppm Pb)* to prepare the standard (10 ppm).

Chloride

Dissolve 0.14 g in a sufficient quantity of 2M *nitric acid* and dilute to 16 ml with *water*. The resulting solution complies with the *limit test for chlorides*, Appendix VII, beginning at the words 'pour the mixture as a single addition...' (350 ppm).

Free nicotinic acid

To 1 g add 75 ml of *water*, shake for 15 minutes and titrate with 0.02M *sodium hydroxide VS* using *phenolphthalein solution R1* as indicator. Not more than 0.8 ml of 0.02M *sodium hydroxide VS* is required to produce the first pink colour.

Related substances

Carry out the method for *thin-layer chromatography*, Appendix III A, using a plate 200 mm × 200 mm in size and *silica gel* GF_{254} as the coating substance. For the first development use a mixture of 90 volumes of *chloroform* and 10 volumes of *methanol* as the mobile phase. Apply to the bottom right-hand corner of the plate 5 µl of solution (1) containing 5.0% w/v of the substance being examined in a mixture of 9 volumes of *chloroform* and 1 volume of *methanol* and develop over a path of 12 cm. After removal of the plate, allow it to dry in air and turn the plate through 90° in a clockwise direction. Apply separately to the bottom right-hand corner of the plate, and to the right of the solvent front, 5 µl of each of two solutions of the substance being examined in a mixture of 9 volumes of *chloroform* and 1 volume of *methanol* containing (2) 0.075% w/v and (3) 0.050% w/v. For the second development use a mixture of 50 volumes of *ethyl acetate* and 5 volumes each of *glacial acetic acid*, *ethanol (96%)* and *water* as the mobile phase. After removal of the plate, allow it to dry in air and examine under *ultraviolet light (254 nm)*. In the chromatogram obtained with solution (1) any *secondary spot* is not more intense than the spot in the chromatogram obtained with solution (2) (1.5%) and not more than one such spot is more intense than the spot in the chromatogram obtained with solution (3) (1%).

Acetone

Prepare a 0.020% v/v solution of *butan-2-one* (internal standard) in *dimethylformamide* (solution A). Carry out the method for *gas chromatography*, Appendix III B, using the following solutions. Solution (1) contains 0.020% v/v of *acetone* in solution A. For solution (2) add 5 ml of *dimethylformamide* to 0.20 g of the substance being examined contained in a suitable vessel, stopper securely, suspend in a water bath until solution is complete and allow to cool. Prepare solution (3) in the same manner as solution (2) but using 5 ml of solution A in place of the dimethylformamide.

The chromatographic procedure may be carried out using a glass column (1.5 m × 4 mm) packed with *acid-washed, silanised diatomaceous support* coated with 10% w/w of polyethylene glycol 1000 and maintained at 60°.

In the chromatogram obtained with solution (3) the ratio of the area of any peak corresponding to acetone to the area of the peak due to the internal standard is not greater than the corresponding ratio in the chromatogram obtained with solution (1).

Loss on drying

When dried to constant weight at 105°, loses not more than 0.5% of its weight. Use 1 g.

Sulphated ash

Not more than 0.1%, Appendix IX A.

ASSAY

Carry out Method I for *non-aqueous titration*, Appendix VIII A, using 0.2 g and *1-naphtholbenzein solution* as indicator. Each ml of 0.1M *perchloric acid VS* is equivalent to 13.51 mg of $C_{42}H_{30}N_6O_{12}$.

$C_{256}H_{381}N_{65}O_{79}S_6$ 5826 *116094-23-6*

Action and use

Hormone; treatment of diabetes mellitus.

Ph Eur

DEFINITION

28^B-L-Aspartate insulin (human).

Insulin aspart is a 2-chain peptide containing 51 amino acids. The A-chain is composed of 21 amino acids and the B-chain is composed of 30 amino acids. It is identical in primary structure to human insulin, except that it has aspartic acid instead of proline at position 28 of the B-chain. As in human insulin, insulin aspart contains 2 interchain disulphide bonds and 1 intrachain disulphide bond.

Content

90.0 per cent to 104.0 per cent of insulin aspart $C_{256}H_{381}N_{65}O_{79}S_6$ plus A21Asp insulin aspart, B3Asp insulin aspart, B3isoAsp insulin aspart and B28isoAsp insulin aspart (dried substance).

By convention, for the purpose of labelling insulin aspart preparations, 0.0350 mg of insulin aspart is equivalent to 1 unit.

PRODUCTION

Insulin aspart is produced by a method based on recombinant DNA (rDNA) technology under conditions designed to minimise the degree of microbial contamination.

Prior to release the following tests are carried out on each batch of the final bulk product, unless exemption has been granted by the competent authority.

Host-cell-derived proteins

The limit is approved by the competent authority.

Single-chain precursor

The limit is approved by the competent authority. Use a suitably sensitive method.

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in ethanol (96 per cent), in methanol and in aqueous solutions with a pH around 5.1. In aqueous solutions below pH 3.5 or above pH 6.5, the solubility is greater than or equal to 25 mg/ml.

IDENTIFICATION

A. Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time to the principal peak in the chromatogram obtained with reference solution (a).

B. Peptide mapping *(2.2.55)*.

SELECTIVE CLEAVAGE OF THE PEPTIDE BONDS

Test solution Prepare a 2.0 mg/ml solution of the substance to be examined in *0.01 M hydrochloric acid* and transfer 25 µl of this solution to a clean tube. Add 100 µl of *HEPES buffer solution pH 7.5 R* and 20 µl of a 1 mg/ml solution of *Staphylococcus aureus strain V8 protease R.* Cap the tube and incubate at 25 °C for 6 h. Stop the reaction by adding 145 µl of *sulphate buffer solution pH 2.0 R*.

Reference solution Prepare at the same time and in the same manner as for the test solution, but using *insulin aspart CRS* instead of the substance to be examined.

CHROMATOGRAPHIC SEPARATION

Liquid chromatography *(2.2.29)*.

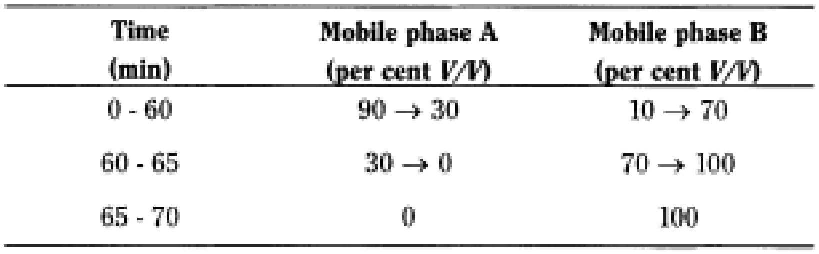
Column:

- *size*: *l* = 0.10 m, Ø = 4.6 mm,
- *stationary phase: octadecylsilyl silica gel for chromatography R* (3 µm) with a pore size of 8 nm,
- *temperature*: 40 °C.

Mobile phase:

- *mobile phase A:* mix 100 ml of *acetonitrile for chromatography R,* 200 ml of *sulphate buffer solution pH 2.0 R* and 700 ml of *water R;* filter and degas;

— *mobile phase B*: mix 200 ml of *sulphate buffer solution pH 2.0 R*, 400 ml of *acetonitrile for chromatography R* and 400 ml of *water R*; filter and degas;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 60	90 → 30	10 → 70
60 - 65	30 → 0	70 → 100
65 - 70	0	100

Flow rate 1 ml/min.

Detection Spectrophotometer at 214 nm.

Equilibration At initial conditions for at least 15 min. Carry out a blank run using the above-mentioned gradient.

Injection 50 µl.

System suitability:

— the chromatograms obtained with the test solution and the reference solution are qualitatively similar to the chromatogram of insulin aspart digest supplied with *insulin aspart CRS*,

— in the chromatogram obtained with the reference solution, identify the peaks due to digest fragments I, II and III:

Symmetry factor Maximum 1.5, for the peaks due to fragments II and III,

Resolution Minimum 8.0, between the peaks due to fragments II and III.

Results The profile of the chromatogram obtained with the test solution corresponds to that of the chromatogram obtained with the reference solution.

NOTE: the retention times of fragments I, II and IV are the same as for human insulin. The retention time of fragment III differs from human insulin due to substitution of proline by aspartic acid.

TESTS

Impurities with molecular masses greater than that of insulin aspart

Size-exclusion chromatography *(2.2.30)*: use the normalisation procedure.

Test solution Prepare a solution containing 4 mg/ml of the substance to be examined in *0.01 M hydrochloric acid*. Maintain the solution at 2-8 °C and use within 48 h.

Resolution solution Use a solution of insulin (about 4 mg/ml), containing more than 0.4 per cent of high molecular mass proteins. An injectable insulin preparation, whether a solution or a suspension, that has been clarified with a sufficient amount of *6 M hydrochloric acid R*, containing the indicated percentage of high molecular mass proteins, or a solution prepared from insulin, dissolved in *0.01 M hydrochloric acid* may be used. Insulin containing the indicated percentage of high molecular mass proteins may be prepared by allowing insulin powder to stand at room temperature for about 10 days. Maintain the solution at 2-8 °C and use within 7 days.

Column:

- *size*: *l* = 0.3 m, Ø = 7.8 mm,
- *stationary phase*: *hydrophilic silica gel for chromatography R* (5-10 µm) with a pore size of 12-12.5 nm, of a grade suitable for the separation of insulin monomer from dimer and polymers.

Mobile phase Mix 15 volumes of *glacial acetic acid R*, 20 volumes of *acetonitrile for chromatography R* and 65 volumes of a 1.0 g/l solution of *arginine R*; filter and degas.

Flow rate 0.5 ml/min.

Detection Spectrophotometer at 276 nm.

Equilibration At least 3 injections of the resolution solution; the column is equilibrated when repeatable results are obtained from 2 subsequent injections.

Injection 100 µl.

Run time About 35 min.

Retention time Insulin aspart polymers = 13-17 min; insulin aspart dimer = about 17.5 min; insulin aspart monomer = about 20 min; salts = about 22 min.

System suitability Resolution solution:

- *peak-to-valley ratio*: minimum 2.0, where H_p = height above the baseline of the peak due to the dimer and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to the monomer.

Limits The sum of the areas of the peaks with a retention time less than that of the principal peak is not more than 0.5 per cent of the total area of the peaks. Disregard any peak with a retention time greater than that of the peak due to insulin aspart monomer.

Related proteins

Liquid chromatography *(2.2.29)* as described under Assay: use the normalisation procedure.

Limits:

- *B28isoAsp insulin aspart*: maximum 1.0 per cent,
- *total of the peaks due to A21Asp insulin aspart, B3Asp insulin aspart and B3isoAsp insulin aspart*: maximum 2.0 per cent,
- *total of other impurities*: maximum 1.5 per cent.

Loss on drying *(2.2.32)*

Maximum 10.0 per cent, determined on 0.200 g by drying in an oven at 105 °C for 24 h.

Sulphated ash *(2.4.14)*

Maximum 6.0 per cent, determined on 0.200 g (dried substance).

Bacterial endotoxins *(2.6.14)*

Less than 10 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography *(2.2.29)*.

Test solution Dissolve the substance to be examined in *0.01 M hydrochloric acid* to obtain a concentration of 4.0 mg/ml. Maintain the solution at 2-8 °C and use within 24 h.

Reference solution Dissolve the contents of a vial of *insulin aspart CRS* in *0.01 M hydrochloric acid* to obtain a concentration of 4.0 mg/ml. Maintain the solution at 2-8 °C and use within 48 h.

Resolution solution Use an appropriate solution with a content of B3Asp insulin aspart and A21Asp insulin aspart of not less than 1 per cent. This may be achieved by storing reference solution at room temperature for about 1-3 days. Maintain the solution at 2-8 °C and use within 72 h.

Column:

— *size*: *l* = 0.25 m, Ø = 4 mm,

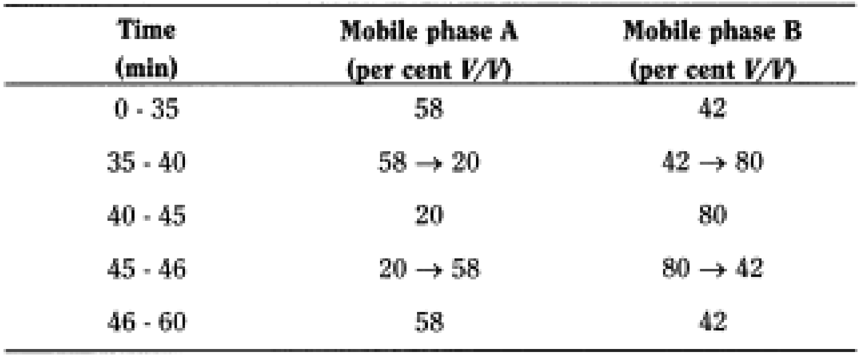
— *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm),

— *temperature*: 40 °C.

Mobile phase:

— *mobile phase A*: dissolve 142.0 g of *anhydrous sodium sulphate R* in *water R*; add 13.5 ml of *phosphoric acid R* and dilute to 5000 ml with *water R*; adjust to pH 3.6, if necessary, with *strong sodium hydroxide solution R*; filter and degas; mix 9 volumes of the solution with 1 volume of *acetonitrile for chromatography R*; filter and degas;

— *mobile phase B*: mix equal volumes of *water R* and *acetonitrile for chromatography R*; filter and degas;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 35	58	42
35 - 40	58 → 20	42 → 80
40 - 45	20	80
45 - 46	20 → 58	80 → 42
46 - 60	58	42

Flow rate 1 ml/min.

Detection Spectrophotometer at 214 nm.

Injection 10 µl.

Relative retention with reference to insulin aspart (retention time = 20-24 min): B28isoAsp insulin aspart = about 0.9; B3Asp insulin aspart plus A21Asp insulin aspart (generally coeluted) = about 1.3; B3isoAsp insulin aspart = about 1.5.

System suitability Resolution solution:

— *resolution*: minimum 2.0 between the peak due to insulin aspart and the peak due to A21Asp insulin aspart and to B3Asp insulin aspart.

Calculate the content of insulin aspart $C_{256}H_{381}N_{65}O_{79}S_6$, plus B28isoAsp insulin aspart, A21Asp insulin aspart, B3Asp insulin aspart and B3isoAsp insulin aspart using the areas of the corresponding peaks in the chromatograms obtained with the test solution and reference solution and the declared content of insulin aspart plus B28isoAsp insulin aspart, A21Asp insulin aspart, B3Asp insulin aspart and B3isoAsp insulin aspart in *insulin aspart CRS*.

STORAGE

In an airtight container, protected from light, at or below - 18 °C until released by the manufacturer. When thawed, insulin aspart is stored at 5 ± 3 °C and used for manufacturing preparations within a short period of time. To avoid absorption of humidity from the air during weighing, insulin aspart must be at room temperature before opening the container.

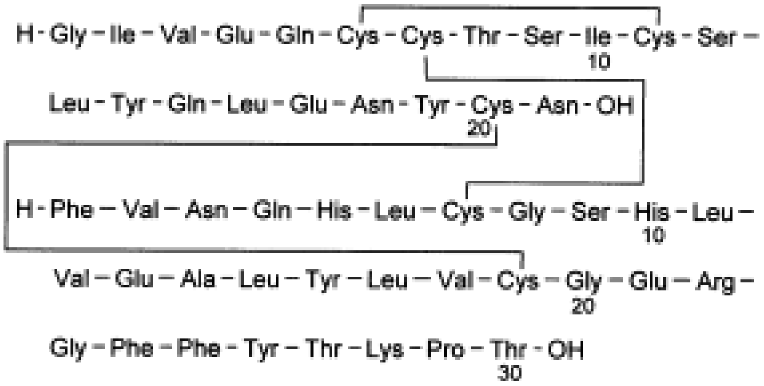
Insulin Lispro

General Notices

(Ph Eur monograph 2085)



$C_{257}H_{383}N_{65}O_{77}S_6$ 5808 *133107-64-9*

Action and use

Hormone; treatment of diabetes mellitus.

Ph Eur

DEFINITION

28^B-L-Lysine-29^B-L-proline insulin (human).

Insulin lispro is a 2-chain peptide containing 51 amino acids. The A-chain is composed of 21 amino acids and the B-chain is composed of 30 amino acids. It is identical in primary structure to human insulin, only differing in amino acid sequence at positions 28 and 29 of the B-chain. Human insulin is Pro(B28), Lys(B29), whereas insulin lispro is Lys(B28), Pro(B29). As in human insulin, insulin lispro contains 2 interchain disulphide bonds and 1 intrachain disulphide bond.

Content

94.0 per cent to 104.0 per cent (dried substance).

By convention, for the purpose of labelling insulin lispro preparations, 0.0347 mg of insulin lispro is equivalent to 1 unit.

PRODUCTION

Insulin lispro is produced by a method based on recombinant DNA (rDNA) technology under conditions designed to minimise the degree of microbial contamination.

Prior to release the following tests are carried out on each batch of final bulk product, unless exemption has been granted by the competent authority.

Host-cell-derived proteins

The limit is approved by the competent authority.

Single-chain precursor

The limit is approved by the competent authority. Use a suitably sensitive method.

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water and in ethanol (96 per cent). It dissolves in dilute mineral acids and with decomposition in dilute solutions of alkali hydroxides.

IDENTIFICATION

A. Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time to the principal peak in the chromatogram obtained with the reference solution.

B. Peptide mapping *(2.2.55)*.

SELECTIVE CLEAVAGE OF THE PEPTIDE BONDS

Test solution Prepare a 2.0 mg/ml solution of the substance to be examined in *0.01 M hydrochloric acid* and transfer 500 µl of this solution to a clean tube. Add 2.0 ml of *HEPES buffer solution pH 7.5 R* and 400 µl of a 1 mg/ml solution of *Staphylococcus aureus strain V8 protease R*. Cap the tube and incubate at 25 °C for 6 h. Stop the reaction by adding 2.9 ml of *sulphate buffer solution pH 2.0 R*.

Reference solution Prepare at the same time and in the same manner as for the test solution but using *insulin lispro CRS* instead of the substance to be examined.

CHROMATOGRAPIC SEPARATION

Liquid chromatography *(2.2.29)*.

Column:

— *size*: *l* = 0.10 m, Ø = 4.6 mm,

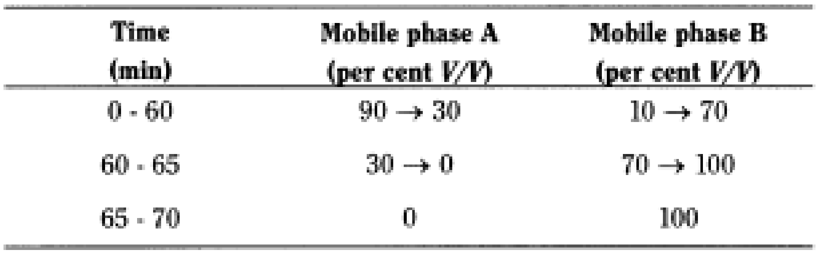
— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (3 µm) with a pore size of 8 nm,

— *temperature*: 40 °C.

Mobile phase:

— *mobile phase A*: mix 100 ml of *acetonitrile for chromatography R*, 200 ml of *sulphate buffer solution pH 2.0 R* and 700 ml of *water R*; filter and degas;

— *mobile phase B*: mix 200 ml of *sulphate buffer solution pH 2.0 R*, 400 ml of *acetonitrile for chromatography R* and 400 ml of *water R*; filter and degas;



Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 60	90 → 30	10 → 70
60 - 65	30 → 0	70 → 100
65 - 70	0	100

Flow rate 1 ml/min.

Detection Spectrophotometer at 214 nm.

Equilibration At initial conditions for at least 15 min. Carry out a blank run using the above-mentioned gradient.

Injection 50 µl.

System suitability:

— the chromatograms obtained with the test solution and the reference solution are qualitatively similar to the chromatogram of insulin lispro digest supplied with *insulin lispro CRS,*

— in the chromatogram obtained with the reference solution, identify the peaks due to digest fragments I, II and III

Symmetry factor Maximum 1.5 for the peaks due to fragments II and III,

Resolution Minimum 8.0 between the peaks due to fragments II and III.

Results The profile of the chromatogram obtained with the test solution corresponds to that of the chromatogram obtained with the reference solution.

NOTE: the retention times of fragments I, II and IV are the same as for human insulin. The retention time of fragment III differs from human insulin due to differences in sequence at positions 28 and 29 of the B-chain.

TESTS

Impurities with molecular masses greater than that of insulin lispro

Size-exclusion chromatography *(2.2.30)*: use the normalisation procedure.

Test solution Prepare a solution containing 4 mg/ml of the substance to be examined in *0.01 M hydrochloric acid*. Maintain the solution at 2-8 °C and use within 48 h.

Resolution solution Use a solution of insulin (about 4 mg/ml), containing more than 0.4 per cent of high molecular mass proteins. An injectable insulin preparation, whether a solution or a suspension, that has been clarified with a sufficient amount of *6 M hydrochloric acid R*, containing the indicated percentage of high molecular mass proteins, or a solution prepared from insulin, dissolved in *0.01 M hydrochloric acid*, may be used. Insulin containing the indicated percentage of high molecular mass proteins may be prepared by allowing insulin powder to stand at room temperature for about 10 days. Maintain the solution at 2-8 °C and use within 8 days.

Column:

— *size*: *l* = 0.30 m, Ø = 7.8 mm,

- *stationary phase*: *hydrophilic silica gel for chromatography R* (5-10 µm) with a pore size of 12-12.5 nm, of a grade suitable for the separation of insulin monomer from dimer and polymers.

Mobile phase Mix 15 volumes of *glacial acetic acid R*, 20 volumes of *acetonitrile for chromatography R* and 65 volumes of a 1.0 g/l *solution of arginine R*; filter and degas.

Flow rate 0.5 ml/min.

Detection Spectrophotometer at 276 nm.

Equilibration At least 3 injections of the resolution solution; the column is equilibrated when repeatable results are obtained for 2 subsequent injections.

Injection 100 µl.

Run time About 35 min.

Retention time Insulin lispro polymers = 13-17 min; insulin lispro dimer = about 17.5 min; insulin lispro monomer = about 20 min; salts = about 22 min.

System suitability Resolution solution:

- *peak-to-valley ratio*: minimum 2.0, where H_p = height above the baseline of the peak due to the dimer and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to the monomer,
- *symmetry factor*: maximum 2.0 for the peak due to insulin lispro.

Limits The sum of the areas of the peaks with a retention time less than that of the principal peak is not more than 0.25 per cent of the total area of the peaks. Disregard any peak with a retention time greater than that of the peak due to insulin lispro monomer.

Related proteins

Liquid chromatography *(2.2.29)*: use the normalisation procedure.

Test solution Dissolve 3.5 mg of the substance to be examined in 1.0 ml of *0.01 M hydrochloric acid*. Maintain the solution at 2-8 °C and use within 56 h.

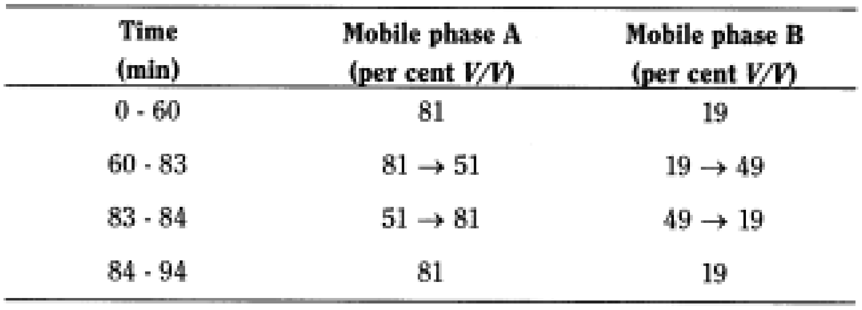
Resolution solution Dissolve 3.5 mg of the substance to be examined in 1.0 ml of *0.01 M hydrochloric acid*. Allow to stand at room temperature to obtain a solution containing between 0.8 per cent and 11 per cent of A21 desamido insulin lispro.

Column:

- *size*: *l* = 0.25 m, Ø = 4.6 mm,
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm) with a pore size of 30 nm,
- *temperature*: 40 °C.

Mobile phase:

- *mobile phase A*: mix 82 volumes of a 28.4 g/l solution of *anhydrous sodium sulphate R* adjusted to pH 2.3 with *phosphoric acid R* and 18 volumes of *acetonitrile for chromatography R*; filter and degas;
- *mobile phase B*: mix equal volumes of a 28.4 g/l solution of *anhydrous sodium sulphate R* adjusted to pH 2.3 with *phosphoric acid R* and *acetonitrile for chromatography R*; filter and degas;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 60	81	19
60 - 83	81 → 51	19 → 49
83 - 84	51 → 81	49 → 19
84 - 94	81	19

Flow rate 1 ml/min.

Detection Spectrophotometer at 214 nm.

Injection 20 µl.

Retention time Adjust the mobile phase composition to obtain a retention time of about 41 min for insulin lispro; A21 desamido insulin lispro elutes near the start of the gradient elution.

System suitability Resolution solution:

— *resolution*: minimum 1.5 between the 1st peak (insulin lispro) and the 2nd peak (A21 desamido insulin lispro),

— *symmetry factor*: maximum 2.0 for the peak due to insulin lispro.

Limits:

— *A21 desamido insulin lispro*: maximum 1.0 per cent,

— *any other impurity*: maximum 0.50 per cent,

— *total (excluding A21)*: maximum 2.0 per cent.

Zinc

Maximum 1.0 per cent (dried substance).

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Dissolve at least 50 mg of the substance to be examined in *0.01 M hydrochloric acid* and dilute to 25 ml with the same acid. Dilute if necessary to a suitable concentration (for example 0.4-0.6 µg of Zn per millilitre) with *0.01 M hydrochloric acid*.

Reference solutions Use solutions of concentrations which bracket the expected zinc concentration of the samples, for example, 0.2-0.8 µg of Zn per millilitre, freshly prepared by diluting *zinc standard solution (5 mg/ml Zn) R* with *0.01 M hydrochloric acid*.

Source Zinc hollow-cathode lamp.

Wavelength 213.9 nm.

Atomisation device Air-acetylene flame of suitable composition (for example, 11 litres of air and 2 litres of acetylene per minute).

Loss on drying ***(2.2.32)***

Maximum 10.0 per cent, determined on 0.200 g by drying in an oven at 105 °C for 16 h.

Sulphated ash ***(2.4.14)***

Maximum 2.5 per cent, determined on 0.200 g (dried substance).

Bacterial endotoxins *(2.6.14, Method D)*

Less than 10 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography (*2.2.29*).

Test solution Dissolve the substance to be examined in *0.01 M hydrochloric acid* to obtain a concentration of 0.8 mg/ml. Maintain the solution at 2-8 °C and use within 48 h.

Reference solution Dissolve the contents of a vial *of insulin lispro CRS* in *0.01 M hydrochloric acid* to obtain a concentration of 0.8 mg/ml. Maintain the solution at 2-8 °C and use within 48 h.

Resolution solution Dissolve about 10 mg of the substance to be examined in 10 ml of *0.01 M hydrochloric acid*. Allow to stand at room temperature to obtain a solution containing between 0.8 per cent and 11 per cent of A21 desamido insulin lispro. Maintain the solution at 2-8 °C and use within 14 days.

Column:

— *size*: *l* = 0.10 m, Ø = 4.6 mm,

— *stationary phase: octadecylsilyl silica gel for chromatography R* (3 µm) with a pore size of 8 nm,

— *temperature*: 40 °C.

Mobile phase Mix 745 volumes of a 28.4 g/l solution of *anhydrous sodium sulphate R* adjusted to pH 2.3 with *phosphoric acid R* and 255 volumes of *acetonitrile for chromatography R;* filter and degas.

Flow rate 0.8 ml/min.

Detection Spectrophotometer at 214 nm.

Injection 20 µl.

Retention time Insulin lispro = about 24 min.

System suitability:

— *resolution*: minimum 1.8 between the 1st peak (insulin lispro) and the 2nd peak (A21 desamido insulin lispro), in the chromatogram obtained with the resolution solution,

— *repeatability*: maximum relative standard deviation of 1.1 per cent after 3 injections of the reference solution.

Calculate the content of insulin lispro $C_{257}H_{383}N_{65}O_{77}S_6$ using the chromatograms obtained with the test solution and the reference solution and the declared content of $C_{257}H_{383}N_{65}O_{77}S_6$ in *insulin lispro CRS*.

STORAGE

In an airtight container, protected from light, at or below - 18 °C. When thawed, insulin lispro is stored and weighed under conditions defined by the manufacturer to maintain the quality attributes of the drug substance and is used for manufacturing preparations within a short period of time. To avoid absorption of humidity from the air during weighing, insulin lispro must be at room temperature before opening the container.

Ph Eur

DEFINITION

Interferon alfa-2 concentrated solution is a solution of a protein that is produced according to the information coded by the alfa-2 sub-species of interferon alfa gene and that exerts non-specific antiviral activity, at least in homologous cells, through cellular metabolic processes involving synthesis of both ribonucleic acid and protein. Interferon alfa-2 concentrated solution also exerts antiproliferative activity. Different types of alfa-2 interferon, varying in the amino acid residue at position 23, are designated by a letter in lower case.

Designation	Residue at position 23 (X_1)
alfa-2a	Lys
alfa-2b	Arg

This monograph applies to interferon alfa-2a and -2b concentrated solutions.

The potency of interferon alfa-2 concentrated solution is not less than 1.4 × 10^8 IU per milligram of protein. Interferon alfa-2 concentrated solution contains not less than 2 × 10^8 IU of interferon alfa-2 per millilitre.

PRODUCTION

Interferon alfa-2 concentrated solution is produced by a method based on recombinant DNA (rDNA) technology using bacteria as host cells. It is produced under conditions designed to minimise microbial contamination of the product.

Interferon alfa-2 concentrated solution complies with the following additional requirements.

Host-cell-derived proteins

The limit is approved by the competent authority.

Host-cell- or vector-derived DNA

The limit is approved by the competent authority.

CHARACTERS

A clear, colourless or slightly yellowish liquid.

IDENTIFICATION

A. It shows the expected biological activity (see Assay).

B. Examine by isoelectric focusing.

Test solution Dilute the preparation to be examined with *water R* to a protein concentration of 1 mg/ml.

Reference solution Prepare a 1 mg/ml solution of the appropriate *interferon alfa-2 CRS* in *water R*.

Isoelectric point calibration solution pI range 3.0 to 10.0. Prepare and use according to the manufacturer's instructions.

Use a suitable apparatus connected with a recirculating temperature controlled water-bath set at 10 °C and gels for isoelectric focusing with a pH gradient from 3.5 to 9.5. Operate the apparatus in accordance with the manufacturer's instructions. Use as the anode solution *phosphoric acid R* (98 g/l H_3PO_4) and as the cathode solution *1 M sodium hydroxide*. Samples are applied to the gel by filter papers. Place sample application filters on the gel close to the cathode.

Apply 15 µl of the test solution and 15 µl of the reference solution. Start the isoelectric focusing at 1500 V and 50 mA. Turn off the power after 30 min, remove the application filters and reconnect the power supply for 1 h. Keep the power constant during the focusing process. After focusing, immerse the gel in a suitable volume of a solution containing 115 g/l of *trichloroacetic acid R* and 34.5 g/l of *sulphosalicylic acid R* in *water R* and agitate the container gently for 60 min. Transfer the gel to a mixture of 32 volumes of *glacial acetic acid R*, 100 volumes of *anhydrous ethanol R* and 268 volumes of *water R*, and soak for 5 min. Immerse the gel for 10 min in a staining solution prewarmed to 60 °C in which 1.2 g/l of *acid blue 83 R* has been added to the previous mixture of glacial acetic acid, ethanol and water. Wash the gel in several containers with the previous mixture of glacial acetic acid, ethanol and water and keep the gel in this mixture until the background is clear (12 h to 24 h). After adequate destaining, soak the gel for 1 h in a 10 per cent *V/V* solution of *glycerol R* in the previous mixture of glacial acetic acid, ethanol and water.

The principal bands of the electropherogram obtained with the test solution correspond in position to the principal bands of the electropherogram obtained with the reference solution. Plot the migration distances of the isoelectric point markers versus their isoelectric points and determine the isoelectric points of the principal components of the test solution and the reference solution. They do not differ by more than 0.2 pI units. The test is not valid unless the isoelectric point markers are distributed along the entire length of the gel and the isoelectric points of the principal bands in the electropherogram obtained with the reference solution are between 5.8 and 6.3.

C. Examine the electropherograms obtained under reducing conditions in the test for impurities of molecular masses differing from that of interferon alfa-2. The principal band in the electropherogram obtained with test solution (a) corresponds in position to the principal band in the electropherogram obtained with reference solution (a).

D. Examine by peptide mapping.

Test solution Dilute the preparation to be examined in *water R* to a protein concentration of 1.5 mg/ml. Transfer 25 µl to a polypropylene or glass tube of 1.5 ml capacity. Add 1.6 µl of *1 M phosphate buffer solution pH 8.0 R*, 2.8 µl of a freshly prepared 1.0 mg/ml solution of *trypsin for peptide mapping R* in *water R* and 3.6 µl of *water R* and mix vigorously. Cap the tube and place it in a water-bath at 37 °C for 18 h, then add 100 µl of a 573 g/l solution of *guanidine hydrochloride R* and mix well. Add 7 µl of 154.2 g/l solution of *dithiothreitol R* and mix well. Place the capped tube in boiling water for 1 min. Cool to room temperature.

Reference solution Prepare at the same time and in the same manner as for the test solution but use a 1.5 mg/ml solution of the appropriate *interferon alfa-2 CRS* in *water R*.

Examine by liquid chromatography *(2.2.29)*.

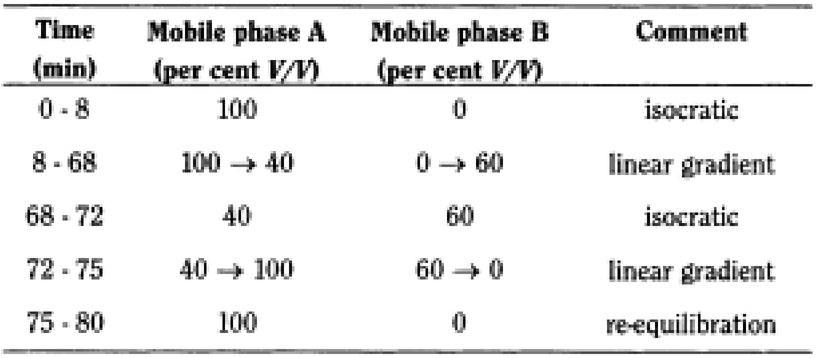
The chromatographic procedure may be carried out using:

— a stainless steel column 0.10 m long and 4.6 mm in internal diameter packed with *octadecylsilyl silica gel for chromatography R* (5 µm) with a pore size of 30 nm,

— as mobile phase at a flow rate of 1.0 ml/min:

Mobile phase A Dilute 1 ml of *trifluoroacetic acid R* to 1000 ml with *water R*,

Mobile phase B To 100 ml of *water R* add 1 ml of *trifluoroacetic acid R* and dilute to 1000 ml with *acetonitrile for chromatography R*,



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)	Comment
0 - 8	100	0	isocratic
8 - 68	100 → 40	0 → 60	linear gradient
68 - 72	40	60	isocratic
72 - 75	40 → 100	60 → 0	linear gradient
75 - 80	100	0	re-equilibration

— as detector a spectrophotometer set at 214 nm,

maintaining the temperature of the column at 30 °C.

Equilibrate the column with mobile phase A for at least 15 min.

Inject 100 µl of the test solution and 100 µl of the reference solution. The test is not valid unless the chromatogram obtained with each solution is qualitatively similar to the chromatogram of interferon alfa-2 digest supplied with the appropriate *interferon alfa-2 CRS*. The profile of the chromatogram obtained with the test solution corresponds to that of the chromatogram obtained with the reference solution.

TESTS

Impurities of molecular masses differing from that of interferon alfa-2

Examine by SDS polyacrylamide gel electrophoresis *(2.2.31)*. The test is performed under both reducing and non-reducing conditions, using resolving gels of 14 per cent acrylamide and silver staining as the detection method.

Sample buffer (non-reducing conditions) Mix equal volumes of *water R* and *concentrated SDS PAGE sample buffer R*.

Sample buffer (reducing conditions) Mix equal volumes of *water R* and *concentrated SDS PAGE sample buffer for reducing conditions R* containing 2-mercaptoethanol as the reducing agent.

Test solution (a) Dilute the preparation to be examined in sample buffer to a protein concentration of 0.5 mg/ml.

Test solution (b) Dilute 0.20 ml of test solution (a) to 1 ml with sample buffer.

Reference solution (a) Prepare a 0.625 mg/ml solution of the appropriate *interferon alfa-2 CRS* in sample buffer.

Reference solution (b) Dilute 0.20 ml of reference solution (a) to 1 ml with sample buffer.

Reference solution (c) Dilute 0.20 ml of reference solution (b) to 1 ml with sample buffer.

Reference solution (d) Dilute 0.20 ml of reference solution (c) to 1 ml with sample buffer.

Reference solution (e) Dilute 0.20 ml of reference solution (d) to 1 ml with sample buffer.

Reference solution (f) Use a solution of molecular mass standards suitable for calibrating SDS-PAGE gels in the range 15 kDa to 67 kDa.

Place test and reference solutions, contained in covered test-tubes, on a water-bath for 2 min.

Apply 10 µl of reference solution (f) and 50 µl of each of the other solutions to the stacking gel wells. Perform the electrophoresis under the conditions recommended by the manufacturer of the equipment. Detect proteins in the gel by silver staining.

The test is not valid unless: the validation criteria are met *(2.2.31)*; a band is seen in the electropherogram obtained with reference solution (e); and a gradation of intensity of staining is seen in the electropherograms obtained, respectively, with test solution (a) and test solution (b) and with reference solutions (a) to (e).

The electropherogram obtained with test solution (a) under reducing conditions may show, in addition to the principal band, less intense bands with molecular masses lower than the principal band. No such band is more intense than the principal band in the electropherogram obtained with reference solution (d) (1.0 per cent) and not more than 3 such bands are more intense than the principal band in the electropherogram obtained with reference solution (e) (0.2 per cent).

The electropherogram obtained with test solution (a) under non-reducing conditions may show, in addition to the principal band, less intense bands with molecular masses higher than the principal band. No such band is more intense than the principal band in the electropherogram obtained with reference solution (d) (1.0 per cent) and not more than 3 such bands are more intense than the principal band in the electropherogram obtained with reference solution (e) (0.2 per cent).

Related proteins

Examine by liquid chromatography *(2.2.29)*.

Test solution Dilute the preparation to be examined with *water R* to a protein concentration of 1 mg/ml.

0.25 per cent m/m hydrogen peroxide solution. Dilute *dilute hydrogen peroxide solution R* in *water R* in order to obtain a 0.25 per cent m/m solution.

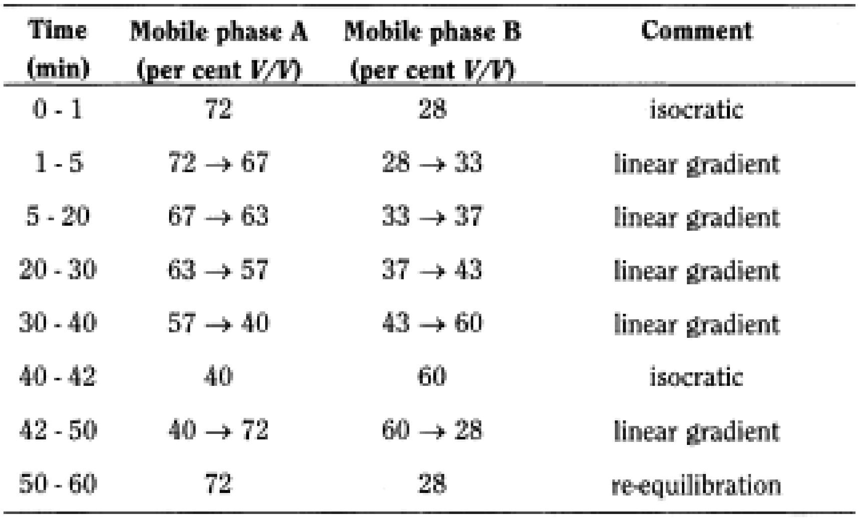
Reference solution To a volume of the test solution, add a suitable volume of 0.25 per cent *m/m* hydrogen peroxide solution to give a final hydrogen peroxide concentration of 0.005 per cent *m/m*, and allow to stand at room temperature for 1 h, or for the length of time that will generate about 5 per cent oxidised interferon. Add 12.5 mg of *L-methionine R* per millilitre of solution. Allow to stand at room temperature for 1 h. Store the solutions for not longer than 24 h at a temperature of 2-8 °C.

The chromatographic procedure may be carried out using:

- — a stainless steel column 0.25 m long and 4.6 mm in internal diameter packed with *octadecylsilyl silica gel for chromatography R* (5 µm) with a pore size of 30 nm,
- — as mobile phase at a flow rate of 1.0 ml/min:

Mobile phase A To 700 ml of *water R* add 2 ml of *trifluoroacetic acid R* and 300 ml of *acetonitrile for chromatography R,*

Mobile phase B To 200 ml of *water R* add 2 ml of *trifluoroacetic acid R* and 800 ml of *acetonitrile for chromatography R,*



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)	Comment
0 - 1	72	28	isocratic
1 - 5	72 → 67	28 → 33	linear gradient
5 - 20	67 → 63	33 → 37	linear gradient
20 - 30	63 → 57	37 → 43	linear gradient
30 - 40	57 → 40	43 → 60	linear gradient
40 - 42	40	60	isocratic
42 - 50	40 → 72	60 → 28	linear gradient
50 - 60	72	28	re-equilibration

- — as detector a spectrophotometer set at 210 nm.

Equilibrate the column with the mobile phases in the initial gradient ratio for at least 15 min. Inject 50 µl of each solution.

In the chromatograms obtained, interferon alfa-2 elutes at a retention time of about 20 min. In the chromatogram obtained with the reference solution a peak related to oxidised interferon appears at a retention time of about 0.9 relative to the principal peak. The test is not valid unless the resolution between the peaks corresponding to oxidised interferon and interferon is at least 1.0. Consider only the peaks whose retention time is 0.7 to 1.4 relative to that of the principal peak. In the chromatogram obtained with the test solution, the area of any peak, apart from the principal peak, is not greater than 3.0 per cent of the total area of all of the peaks. The sum of the areas of any peaks other than the principal peak is not greater than 5.0 per cent of the total area of all of the peaks.

Bacterial endotoxins *(2.6.14)*

Less than 100 IU in the volume that contains 1.0 mg of protein.

ASSAY

Protein

Test solution Dilute the preparation to be examined with *water R* to obtain a concentration of about 0.5 mg/ml of interferon alfa-2.

Reference solutions Prepare a stock solution of 0.5 mg/ml of *bovine albumin R*. Prepare 8 dilutions of the stock solution containing between 3 µg/ml and 30 µg/ml of *bovine albumin R*.

Prepare 30-fold and 50-fold dilutions of the test solution. Add 1.25 ml of a mixture prepared the same day by combining 2.0 ml of a 20 g/l solution of *copper sulphate R* in *water R*, 2.0 ml of a 40 g/l solution of *sodium tartrate R* in *water R* and 96.0 ml of a 40 g/l solution of *sodium carbonate R* in *0.2 M sodium hydroxide* to test-tubes containing 1.5 ml of *water R* (blank), 1.5 ml of the different dilutions of the test solution or 1.5 ml of the reference solutions. Mix after each addition. After approximately 10 min, add to each test-tube 0.25 ml of a mixture of equal volumes of *water R* and *phosphomolybdotungstic reagent R.* Mix after each addition. After approximately 30 min, measure the absorbance *(2.2.25)* of each solution at 750 nm using the blank as the compensation liquid. Draw a calibration curve from the absorbances of the 8 reference solutions and the corresponding protein contents and read from the curve the content of protein in the test solution.

Potency

The potency of interferon alfa-2 is estimated by comparing its effect to protect cells against a viral cytopathic effect with the same effect of the appropriate International Standard of human recombinant interferon alfa-2 or of a reference preparation calibrated in International Units.

The International Unit is the activity contained in a stated amount of the appropriate International Standard. The equivalence in International Units of the International Standard is stated by the World Health Organisation.

Carry out the assay by a suitable method, based on the following design.

Use, in standard culture conditions, an established cell line sensitive to the cytopathic effect of a suitable virus (a human diploid fibroblast cell line, free of microbial contamination, responsive to interferon and sensitive to encephalomyocarditis virus, is suitable).

The following cell cultures and virus have been shown to be suitable: MDBK cells (ATCC No. CCL22), or Mouse L cells (NCTC clone 929; ATCC No. CCL 1) as the cell culture and vesicular stomatitis virus VSV, Indiana strain (ATCC No. VR-158) as the infective agent; or A-549 cells (ATCC No. CCL-185) responsive to interferon as the cell culture, and encephalomyocarditis virus (ATCC No. VR-129B) as the infective agent.

Incubate in at least 4 series, cells with 3 or more different concentrations of the preparation to be examined and the reference preparation in a microtitre plate and include in each series appropriate controls of untreated cells. Choose the concentrations of the preparations such that the lowest concentration produces some protection and the largest concentration produces less than maximal protection against the viral cytopathic effect. Add at a suitable time the cytopathic virus to all wells with the exception of a sufficient number of wells in all series, which are left with uninfected control cells. Determine the cytopathic effect of virus quantitatively with a suitable method. Calculate the potency of the preparation to be examined by the usual statistical methods for a parallel line assay.

The estimated potency is not less than 80 per cent and not more than 125 per cent of the stated potency. The confidence limits of the estimated potency ($P = 0.95$) are not less than 64 per cent and not more than 156 per cent of the stated potency.

STORAGE

Store in an airtight container, protected from light, at or below - 20 °C.

LABELLING

The label states:

— the type of interferon (alfa-2a or alfa-2b),

— the type of production.

(Ph Eur monograph 1440)

$C_{734}H_{1166}N_{204}O_{216}S_{5}$ 16,465 *98059-61-1*

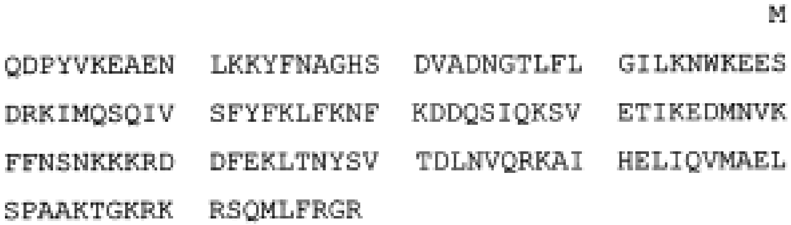
Action and use

Cytokine.

Ph Eur

DEFINITION

Interferon gamma-1b concentrated solution is a solution of the *N*-terminal methionyl form of interferon gamma, a protein which is produced and secreted by human antigen-stimulated T lymphocytes in response to viral infections and various other inducers. It has specific immunomodulatory properties, such as potent phagocyte-activating effects. The protein consists of non-covalent dimers of two identical monomers. The formula of the monomer is as follows:



```
                                              M
QDPYVKEAEN  LKKYFNAGHS  DVADNGTLFL  GILKNWKEES
DRKIMQSQIV  SFYFKLFKNF  KDDQSIQKSV  ETIKEDMNVK
FFNSNKKKRD  DFEKLTNYSV  TDLNVQRKAI  HELIQVMAEL
SPAAKTGKRK  RSQMLFRGR
```

The potency of interferon gamma-1b is not less than 20 × 10^6 IU per milligram of protein. Interferon gamma-1b concentrated solution contains not less than 30 × 10^6 IU of interferon gamma-1b per millilitre.

PRODUCTION

Interferon gamma-1b concentrated solution is produced by a method based on recombinant DNA technology, using bacteria as host-cells. It is produced under conditions designed to minimise microbial contamination.

Interferon gamma-1b concentrated solution complies with the following additional requirements.

Host-cell derived proteins

The limit is approved by the competent authority.

Host-cell- and vector-derived DNA

The limit is approved by the competent authority.

CHARACTERS

A clear, colourless or slightly yellowish liquid.

IDENTIFICATION

A. It shows the expected biological activity when tested as prescribed in the assay.

B. Examine the electropherograms obtained in the test for impurities of molecular masses differing from that of interferon gamma-1b. The principal bands in the electropherogram obtained with the test solution correspond in position to the principal bands in the electropherogram obtained with reference solution (a).

C. Examine by peptide mapping.

Solution A Prepare a solution containing 1.2 g/l of *tris(hydroxymethyl)aminomethane R*, 8.2 g/l of *anhydrous sodium acetate R*, 0.02 g/l of *calcium chloride R* and adjust to pH 8.3 (*2.2.3*) with *dilute acetic acid R*. Add *polysorbate 20 R* to a concentration of 0.1 per cent *V/V*.

Test solution Desalt a volume of the preparation to be examined containing 1 mg of protein by a suitable procedure. For example, filter in a microcentrifuge tube and reconstitute with 500 µl of solution A. Add 10 µl of a freshly prepared 1 mg/ml solution of *trypsin for peptide mapping R* in *water R* and mix gently by inversion. Incubate at 30 °C to 37 °C for 24 h, add 100 µl of *phosphoric acid R* per millilitre of digested sample and mix by inversion.

Reference solution Dilute *interferon gamma-1b CRS* in *water R* to obtain a concentration of 1 mg/ml. Prepare as for the test solution, ensuring that all procedures are carried out simultaneously and under identical conditions.

Examine by liquid chromatography *(2.2.29)*.

The chromatographic procedure may be carried out using:

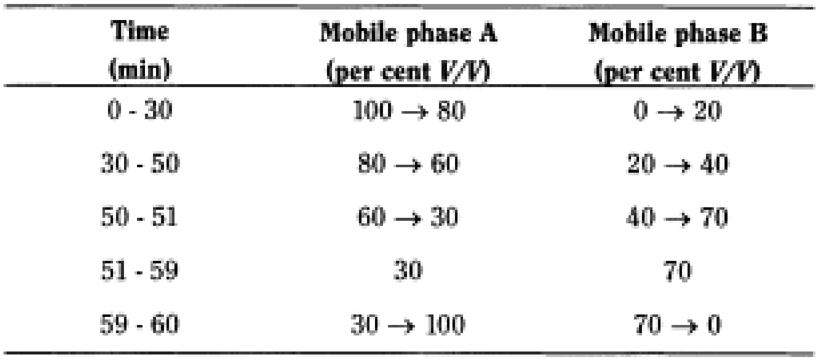
— a stainless steel column, 0.15 m long and 4.6 mm in internal diameter packed with *octadecylsilyl silica gel for chromatography R* (10 µm),

— as mobile phase at a flow rate of 1.0 ml/min:

Mobile phase A (0.05 M sodium phosphate buffer solution pH 3.3) Solution I: Dissolve 7.80 g of *sodium dihydrogen phosphate R* in *water R* and dilute to 1000.0 ml with the same solvent. Solution II: dilute 0.33 ml of *phosphoric acid R* to 100.0 ml with *water R*. Mix 920 ml of solution I and 80 ml of solution II. Adjust the pH *(2.2.3)* if necessary,

Mobile phase B *Acetonitrile for chromatography R*,

With the following elution conditions (if necessary, the gradient may be modified to improve the separation of the digest):



Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 30	100 → 80	0 → 20
30 - 50	80 → 60	20 → 40
50 - 51	60 → 30	40 → 70
51 - 59	30	70
59 - 60	30 → 100	70 → 0

— as detector a spectrophotometer set at 214 nm, maintaining the temperature of the column at 40 °C.

Equilibrate the column for at least 15 min at the initial elution composition. Carry out a blank run using the above-mentioned gradient.

Inject 100 µl of the test solution and 100 µl of the reference solution. The test is not valid unless the chromatogram obtained with each solution is qualitatively similar to the chromatogram of interferon gamma-1b digest supplied with *interferon gamma-1b CRS*. The profile of the chromatogram obtained with the test solution corresponds to that of the chromatogram obtained with the reference solution.

D. Examine by *N*-terminal sequence analysis.

Use an automated solid-phase sequencer, operated in accordance with the manufacturer's instructions.

Equilibrate by a suitable procedure the equivalent of 100 µg of interferon gamma-1b in a 10 g/l solution of *ammonium hydrogen carbonate R*, pH 9.0.

Identify the phenylthiohydantoin (PTH)-amino acids released at each sequencing cycle by reverse-phase liquid chromatography. The procedure may be carried out using the column and reagents recommended by the manufacturer of the sequencing equipment for the separation of PTH-amino acids.

The separation procedure is calibrated using:

— the mixture of PTH-amino acids provided by the manufacturer, with the gradient conditions adjusted as indicated to achieve optimum resolution of all amino acids,

— a sample from a blank sequencing cycle, obtained as recommended by the equipment manufacturer.

The first fifteen amino acids are:

Met-Gln-Asp-Pro-Tyr-Val-Lys-Glu-Ala-Glu-Asn-Leu-Lys-Lys-Tyr.

TESTS

Appearance

The preparation to be examined is clear *(2.2.1)* and not more intensely coloured than reference solution Y_7 *(2.2.2, Method II)*.

pH *(2.2.3)*

The pH of the preparation to be examined is 4.5 to 5.5.

Covalent dimers and oligomers

Not greater than 2 per cent, determined by size-exclusion chromatography *(2.2.30)*.

Test solution Dilute the preparation to be examined with the mobile phase to a protein concentration of 0.1 mg/ml.

Reference solution (a) Dilute *interferon gamma-1b CRS* with the mobile phase to a protein concentration of 0.1 mg/ml.

Reference solution (b) Prepare a mixture of the following molecular mass standards: bovine albumin, ovalbumin, trypsinogen, lysozyme, at a concentration of 0.1 mg/ml to 0.2 mg/ml for each standard.

The chromatographic procedure may be carried out using:

— a stainless steel column 0.3 m long and 7.8 mm in internal diameter packed with *hydrophilic silica gel for chromatography R*, of a grade suitable for fractionation of globular proteins in the molecular weight range of 10 000 to 500 000 (5 µm),

— as mobile phase at a flow rate of 1.0 ml/min a mixture prepared as follows (0.2 M sodium phosphate buffer solution pH 6.8). Solution I: dissolve 31.2 g of *sodium dihydrogen phosphate R* and 1.0 g of *sodium dodecyl sulphate R* in *water R* and dilute to 1000.0 ml with the same solvent. Solution II: dissolve 28.4 g of *anhydrous disodium hydrogen phosphate R* and 1.0 g of *sodium dodecyl sulphate R* in *water R* and dilute to 1000.0 ml with the same solvent. Mix 450 ml of solution I and 550 ml of solution II. Adjust the pH *(2.2.3)* if necessary,

— as detector a spectrophotometer set at 210 nm to 214 nm.

Inject 200 µl of each solution. The test is not valid unless: the molecular mass standards in reference solution (b) are well separated; the retention time of the principal peak in the chromatogram obtained with reference solution (a) is between the retention time of trypsinogen and lysozyme in the chromatogram obtained with reference solution (b).

Compare the chromatograms obtained with the test solution and with reference solution (a). There are no additional shoulders or peaks in the chromatogram obtained with the test solution compared with the chromatogram obtained with reference solution (a).

Calculate the percentage content of covalent dimers and oligomers.

Monomer and aggregates

Examine by size-exclusion chromatography *(2.2.30)*. The content of monomer and aggregates is not greater than 2 per cent.

Solution A Prepare a solution of the following composition: 0.59 g/l of *succinic acid R* and 40 g/l of *mannitol R*, adjusted to pH 5.0 *(2.2.3)* with *sodium hydroxide solution R*.

Test solution Dilute the preparation to be examined with solution A to a protein concentration of 1 mg/ml.

Reference solution Dilute *interferon gamma-1b CRS* with solution A to a protein concentration of 1 mg/ml.

Resolution solution Prepare 500 µl of a mixture consisting of 0.04 mg/ml of *bovine albumin R* and 0.2 mg/ml of *interferon gamma-1b CRS* in solution A. Use this solution within 24 h of preparation.

The chromatographic procedure may be carried out using:

— a stainless steel column 0.3 m long and 7.8 mm in internal diameter packed with *hydrophilic silica gel for chromatography R*, of a grade suitable for fractionation of globular proteins in the molecular weight range of 10 000 - 300 000 (5 µm),

— as mobile phase at a flow rate of 0.8 ml/min a 89.5 g/l solution of *potassium chloride R* (1.2 M),

— as detector a spectrophotometer set at 214 nm.

Inject 20 µl of the resolution solution. In the chromatogram obtained, the retention time of the principal peak, corresponding to the native interferon gamma-1b dimer, is about 10 min. bovine albumin elutes at a relative retention time of about 0.85, relative to the main peak. The test is not valid unless the resolution between the peaks corresponding to bovine albumin and interferon gamma-1b is at least 1.5.

Inject 20 µl of the test solution and 20 µl of the reference solution. The chromatograms obtained show principal peaks with identical retention times. Calculate the percentage content of monomer and aggregates from the peak area of the monomer peak and of peaks which elute prior to the native interferon gamma-1b peak in the chromatogram obtained with the test solution, by the normalisation procedure, disregarding any peak due to the solvent.

Deamidated and oxidised forms and heterodimers

Examine by liquid chromatography *(2.2.29)*. The content of deamidated and oxidised forms is not greater than 10 per cent. The content of heterodimers is not greater than 3 per cent.

Test solution Dilute the preparation to be examined with *water R* to a protein concentration of 1 mg/ml.

Reference solution Dilute *interferon gamma-1b CRS* with *water R* to a protein concentration of 1 mg/ml.

Resolution solution Use *interferon gamma-1b validation solution CRS*.

The chromatographic procedure may be carried out using:

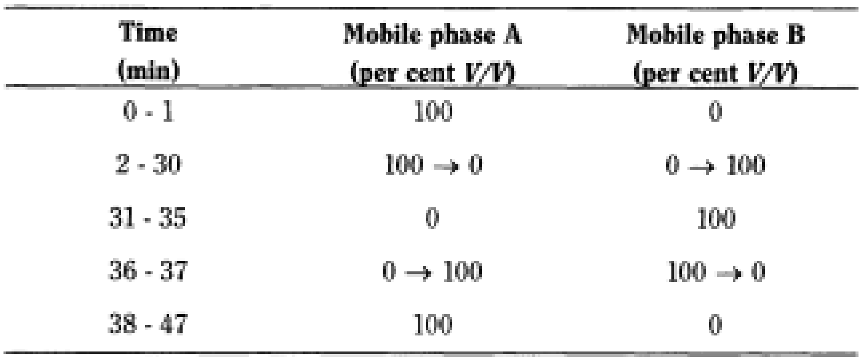
— a stainless steel column 0.075 m long and 7.5 mm in internal diameter packed with an appropriate hydrophilic polymethacrylate, strong cation exchange gel (10 µm, 100 nm),

— as mobile phase at a flow rate of 1.2 ml/min:

Mobile phase A (0.05 M ammonium acetate buffer pH 6.5) A 3.86 g/l solution of *ammonium acetate R*, adjusted to pH 6.5 with *dilute acetic acid R*,

Mobile phase B (1.2 M ammonium acetate buffer pH 6.5) A 92.5 g/l solution of *ammonium acetate R*, adjusted to pH 6.5 with *dilute acetic acid R,*

With the following elution conditions (if necessary, the slope of the gradient may be modified to improve the separation).



Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 1	100	0
2 - 30	100 → 0	0 → 100
31 - 35	0	100
36 - 37	0 → 100	100 → 0
38 - 47	100	0

— as detector a spectrophotometer set at 280 nm,

maintaining the temperature of the column at 35 °C.

Inject 25 µl of the resolution solution. In the chromatogram obtained, the retention time of the principal peak is about 26 min. Deamidated and oxidised forms co-elute at a relative retention time of about 0.95, relative to the principal peak. The test is not valid unless the resolution, defined by the ratio of the height of the peak corresponding to the deamidated and oxidised forms to the height above the baseline of the valley separating the two peaks, is at least 1.2.

Inject 25 µl of the test solution and 25 µl of the reference solution. The chromatograms obtained show principal peaks with identical retention times. Calculate the percentage content of deamidated and oxidised interferon gamma-1b as a percentage of the area of the main peak. Heterodimers have relative retention times of 0.7 and 0.85 relative to the main peak. Calculate the percentage of heterodimers as a percentage of the sum of the areas of all peaks.

Impurities of molecular masses differing from that of interferon gamma-1b

Examine by polyacrylamide gel electrophoresis *(2.2.31)*. The test is performed under both reducing and non-reducing conditions, using resolving gels of 15 per cent acrylamide and silver staining as the detection method.

Sample buffer (non-reducing conditions) Dissolve 3.78 g of *tris(hydroxymethyl) aminomethane R*, 10.0 g of *sodium dodecyl sulphate R* and 0.100 g of *bromophenol blue R* in *water R.* Add 50.0 ml of *glycerol R* and dilute to 80 ml with *water R*. Adjust the pH *(2.2.3)* to 6.8 with *hydrochloric acid R* and dilute to 100 ml with *water R*.

Sample buffer (reducing conditions) Dissolve 3.78 g of *tris(hydroxymethyl)aminomethane R*, 10.0 g of *sodium dodecyl sulphate R* and 0.100 g of *bromophenol blue R* in *water R.* Add 50.0 ml of *glycerol R* and dilute to 80 ml with *water R.* Adjust the pH *(2.2.3)* to 6.8 with *hydrochloric acid R* and dilute to 100 ml with *water R*. Immediately before use, add *dithiothreitol R* to a final concentration of 250 mM.

Test solution Dilute the preparation to be examined in *water R* to a protein concentration of 1 mg/ml. Dilute 150 µl of the solution with 38 µl of sample buffer.

Reference solution (a) Prepare in the same manner as for the test solution, but using *interferon gamma-1b CRS* instead of the preparation to be examined.

Reference solution (b) (5 ng control) Mix 50 µl of a 0.01 mg/ml solution of *bovine albumin R* with 2000 µl of *water R* and 450 µl of sample buffer.

Reference solution (c) (2 ng control) Mix 20 µl of a 0.01 mg/ml solution of *bovine albumin R* with 2000 µl of *water R* and 450 µl of sample buffer.

Reference solution (d) Use a solution of molecular mass standards suitable for calibrating SDS-polyacrylamide gels in the range of 10 kDa to 70 kDa.

Leave each solution, contained in a test tube, at ambient temperature for 15 min, then store on ice.

Apply 25 µl of each solution to the stacking gel wells. Perform the electrophoresis under the conditions recommended by the manufacturer of the equipment. Detect proteins in the gel by silver staining.

The test is not valid unless: the validation criteria are met *(2.2.31)*; a band is seen in the electropherograms obtained with reference solutions (b) and (c).

The principal band in the electropherogram obtained with the test solution is similar in intensity to the principal band in the electropherogram obtained with reference solution (a). In the electropherogram obtained with the test solution, no significant bands are observed that are not present in the electropherogram obtained with reference solution (a) (0.01 per cent). A significant band is defined as any band whose intensity is greater than or equal to that of the band in the electropherogram obtained with reference solution (c).

Norleucine

Not more than 0.2 mole of norleucine per mole of interferon gamma-1b, determined by amino acid analysis.

Test solution Add 2.5 ml of the preparation to be examined onto a column suitable for the desalting of proteins previously equilibrated with 25 ml of a 10 per cent *V/V* solution of *acetic acid R*. Elute the sample with another 2.5 ml of a 10 per cent *V/V* solution of *acetic acid R*. Determine the protein content by measuring the absorbance of this solution as described under Protein, in the Assay section. Pipette a volume containing the equivalent of 100 µg of interferon gamma-1b into each of three reaction vials. Evaporate to dryness under reduced pressure.

Perform the hydrolysis of the three samples as follows. Add to each reaction vial 200 µl of a 50 per cent *V/V* solution of *hydrochloric acid R* containing 1 per cent *V/V* of *phenol R,* evacuate the samples, purge with nitrogen and hydrolyse in the gas phase. Heat the reaction vials at 110 °C for 22 h. After hydrolysis evaporate to dryness under reduced pressure.

Perform the derivatisation of the samples as follows. Prepare immediately before use a mixture consisting of two volumes of *ethanol R*, one volume of *water R* and one volume of *triethylamine R.* Add 50 µl of this solution to each reaction vial and shake lightly. Evaporate to dryness under reduced pressure. Add to each vial 50 µl of a mixture consisting of 7 volumes of *ethanol R*, one volume of *water R*, one volume of *triethylamine R* and one volume of *phenyl isothiocyanate R*. Shake lightly and allow to stand at room temperature for about 15 min. Evaporate to dryness under reduced pressure. Reconstitute the samples in 250 µl of mobile phase A.

Norleucine stock solution Prepare a 250 nmol/ml solution of *DL-norleucine R* in *0.01 M hydrochloric acid. This solution may be kept for two months at 4 ‘C.*

Leucine stock solution Prepare a 250 nmol/ml solution of *leucine R* in *0.01 M hydrochloric acid. This solution may be kept at 4 ‘C for two months.*

Reference solution Mix 10 µl of norleucine stock solution with 100 µl of leucine stock solution in each of the three reaction vials. Evaporate to dryness under reduced pressure. Perform the derivatisation of the samples as described for the preparation of the test solution.

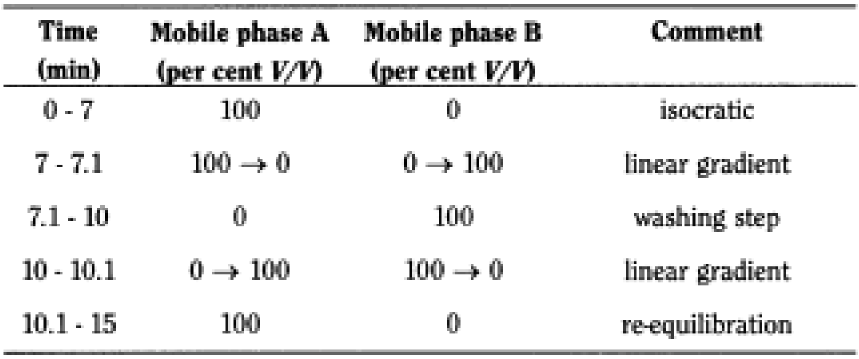
Examine by liquid chromatography *(2.2.29).*

The chromatographic procedure may be carried out using:

- — a stainless steel column 0.15 m long and 3.9 mm in diameter packed with *octadecylsilyl silica gel for chromatography R* (4 µm),
- — as mobile phase at a flow rate of 1.0 ml/min:

Mobile phase A Mix 70 volumes of a 19 g/l solution of *sodium acetate R* containing 0.05 per cent *V/V* of *triethylamine R* and adjusted to pH 6.4 with *dilute acetic acid R* and 30 volumes of mobile phase B,

Mobile phase B Mix 40 volumes of *water R* and 60 volumes of *acetonitrile R*,



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)	Comment
0 - 7	100	0	isocratic
7 - 7.1	100 → 0	0 → 100	linear gradient
7.1 - 10	0	100	washing step
10 - 10.1	0 → 100	100 → 0	linear gradient
10.1 - 15	100	0	re-equilibration

- — as detector a spectrophotometer set at 254 nm,

maintaining the temperature of the column at 43 °C.

Inject 50 µl of each solution.

In the chromatograms obtained with the test solution, identify the peaks corresponding to leucine and norleucine. The retention time of norleucine is 6.2 min to 7 min.

Calculate the content of norleucine (in moles of norleucine per mole of interferon gamma-1b) from the peak areas of leucine and norleucine in the chromatograms obtained with the reference and test solutions, considering that there are 10 moles of leucine per mole of interferon gamma-1b.

Bacterial endotoxins *(2.6.14)*

Less than 5 IU in the volume that contains 20 × 10^6 IU of interferon gamma-1b.

ASSAY

Protein *(2.2.25)*

Dilute the substance to be examined in *water R* to obtain a concentration of 1 mg/ml. Record the absorbance spectrum between 220 nm and 340 nm. Measure the value at the absorbance maximum of 280 nm, after correction for any light scattering due to turbidity measured at 316 nm. Calculate the concentration of interferon gamma-1b using a specific absorbance value of 7.5.

Potency

The potency of interferon gamma-1b is estimated by evaluating the increase of the expression of human-leukocyte-antigen-DR (HLA-DR) due to the interferon gamma-1b present in test solutions during cultivation of the cells, and comparing this increase with the same effect of the appropriate International Standard of human recombinant interferon gamma or of a reference preparation calibrated in International Units.

The International Unit is the activity contained in a stated amount of the appropriate International Standard. The equivalence in International Units of the International Standard is stated by the World Health Organisation.

Carry out the assay by a suitable method, based on the following design.

Use COLO 205 cells under standard culture conditions. Trypsinise a 3- to 5-day-old flask of COLO 205 cells and prepare a cell suspension at a concentration of 1.0×10^6 cells/ml.

Add 100 µl of the dilution medium to all wells of a 96-well microtitre plate. Add an additional 100 µl of this solution to the wells designed for the blanks. Add 100 µl of each solution to be tested onto the plate and carry out a series of twofold dilution steps in order to obtain a standard curve. Then add 100 µl of the cell suspension to all wells and incubate the plate under appropriate conditions for cell cultivation.

After cultivation remove the growth medium and wash and fix cells to the plate. Add an antibody able to detect HLA-DR expressed due to the presence of interferon gamma-1b and incubate under appropriate conditions. After washing the plate, incubate with an antibody conjugated to a marker enzyme which is able to detect the anti-HLA-DR antibody. After this incubation step, wash the plate and add an appropriate substrate solution. Stop the reaction. Measure the absorbance of the solution and calculate the potency of the preparation to be examined by the usual statistical methods.

The estimated specific activity is not less than 80 per cent and not more than 125 per cent of the stated potency. The confidence limits ($P = 0.95$) are not less than 70 per cent and not more than 140 per cent of the estimated potency.

STORAGE

Store in an airtight container , protected from light and at a temperature of - 70 °C.

Ph Eur

Inulin

General Notices

Action and use

″Diagnostic agent used in the determination of renal function (glomerular filtration rate)″.

Preparation

Inulin Injection

DEFINITION

Inulin consists of polysaccharide granules obtained from the tubers of *Dahlia variabilis*, *Helianthus tuberosus* and other genera of the family Compositae.

CHARACTERISTICS

A white, amorphous, granular powder; hygroscopic.

Microscopical When mounted in *absolute ethanol*, appears as large, very irregular, angular masses, whole or fragmented, with occasional smaller, spherical to ovoid particles.

Slightly soluble in *water*; freely soluble in hot *water*; slightly soluble in organic solvents.

IDENTIFICATION

A. Carry out the method for *thin-layer chromatography*, Appendix III A, using a suspension of *silica gel G* in a 0.3% w/v solution of *sodium acetate* to coat the plate, but spreading a layer 0.5 mm thick. Use a mixture of 70 volumes of *glacial acetic acid*, 60 volumes of *chloroform* and 10 volumes of *water* as the mobile phase. Apply separately to the plate 1 µl of each of three solutions in *water* containing (1) 2.5% w/v of the substance being examined, prepared using heat, (2) 2.5% w/v of the substance being examined and 10% w/v of *oxalic acid*, prepared by boiling for 10 minutes and cooling, and (3) 2.5% w/v of D-*fructose* and 0.1% w/v of D-*glucose monohydrate*. Develop the chromatograms in a continuous elution tank for about 4 hours. After removal of the plate, evaporate the solvent in a current of warm air and spray with a solution in *acetone* containing 1% v/v of *diphenylamine*, 1% v/v of *aniline* and 1% v/v of *orthophosphoric acid* and heat for 10 minutes at 130°. The two principal spots in the chromatogram obtained with solution (2) correspond to those in the chromatogram obtained with solution (3). The spot in the chromatogram obtained with solution (1) remains on the line of application.

B. Dissolve 10 mg in 2 ml of hot *water*, add 3 ml of a 0.15% w/v solution of *resorcinol* in *ethanol (96%)* followed by 3 ml of *hydrochloric acid*, mix and heat at 80°. A red colour is produced.

C. Boil 5 ml of a 10% w/v solution for 2 minutes with 0.5 ml of *hydrochloric acid*, cool and neutralise to *litmus paper* with 5M *sodium hydroxide*. Add 0.5 ml of *cupri-tartaric solution R1* and heat. A red precipitate is produced.

TESTS

Acidity

Dissolve 5 g in 50 ml of freshly boiled *water* and titrate with 0.1M *sodium hydroxide VS* using *phenolphthalein solution R1* as indicator. Not more than 0.20 ml is required to change the colour of the solution to pink.

Clarity and colour of solution

A 10.0% w/v solution in hot *water* is *clear*, Appendix IV A, and *colourless*, Appendix IV B, Method I.

Specific optical rotation

In a 2% w/v solution, prepared using heat, -36.5 to -40.5, calculated with reference to the dried substance, Appendix V F.

Arsenic

1.0 g dissolved in 25 ml of hot *water* complies with the *limit test for arsenic*, Appendix VII (1 ppm).

Calcium

Dissolve 1.0 g in 10 ml of hot *water*, place the solution in a water bath at 40°, add 0.5 ml of a 2.5% w/v solution of *ammonium oxalate* and allow to stand for 15 minutes. Any turbidity produced is not greater than that obtained by treating 10 ml of a 0.010% w/v solution of *calcium chloride* in the same manner (270 ppm).

Lead

Dissolve 2.5 g in 20 ml of hot *water* and transfer to a separating funnel with the aid of 5 ml of *water*. Add 2.5 ml of *hydrochloric acid* and shake for 5 minutes. Add 0.25 ml of *bromothymol blue solution R3* and sufficient 13.5M *ammonia* to produce a full blue colour and add 1.5 ml in excess. Add 1 ml of a 25% w/v solution of *citric acid* previously adjusted to pH 11 with 13.5M *ammonia* (ammonium citrate solution), 1 ml of *potassium cyanide solution PbT* and sufficient of a 0.002% w/v solution of *dithizone* in *chloroform* until, on shaking, the chloroform layer becomes purple or blue. Separate the chloroform layer, add to the aqueous layer 2 ml of the dithizone solution, shake and separate the chloroform layer. To the combined chloroform solutions add 10 ml of a 1% v/v solution of *nitric acid*, shake until the chloroform layer becomes green, allow to separate and discard the chloroform layer. To the aqueous layer add 0.2 ml of the ammonium citrate solution, 0.25 ml of 13.5M *ammonia*, 0.2 ml of *potassium cyanide solution PbT* and sufficient of the dithizone solution until, on shaking, the chloroform layer becomes purple or blue. Transfer the contents of the separating funnel to a stoppered tube. Repeat the operations without the substance being examined and using the same quantities of the reagents. To the tube containing the reference solution add *lead standard solution (10 ppm Pb)* dropwise until, on shaking, the colour of the chloroform layer matches that of the chloroform layer obtained from the substance being examined. Not more than 0.5 ml of *lead standard solution (10 ppm Pb)* is required (2 ppm).

Chloride

Dissolve 2.0 g in hot *water*, cool and dilute to 100 ml with *water*. 15 ml of the resulting solution complies with the *limit test for chlorides*, Appendix VII (170 ppm).

Oxalate

Dissolve 1.0 g in 10 ml of hot *water*, place the solution in a water bath at 40°, add 0.5 ml of a 7% w/v solution of *calcium chloride* and allow to stand for 15 minutes. Any turbidity produced is not greater than that obtained by treating 10 ml of a 0.003% w/v solution of *oxalic acid* in the same manner.

Sulphate

Dissolve 2.3 g in 20 ml of hot *water*, cool, add 2 ml of 2M *hydrochloric acid* and dilute to 45 ml with *water*. The solution complies with the *limit test for sulphates*, Appendix VII (200 ppm).

Reducing sugars

Heat 10 ml of *cupri-tartaric solution R1* and titrate with a 10% w/v solution of the substance being examined, adding a few ml at a time and boiling for 10 to 15 seconds between each addition. When the solution becomes greenish yellow, add 0.25 ml of a 1% w/v solution of *methylene blue* and continue the titration until the solution becomes orange. Repeat the operation using a 0.20% w/v solution of D-*fructose* in place of the solution of the substance being examined. The volume of the fructose solution required is not greater than that of the solution of the substance being examined.

Loss on drying

When dried to constant weight at 105°, loses not more than 10.0% of its weight. Use 1 g.

Sulphated ash

Not more than 0.1%, Appendix IX A.

Iodine

General Notices

(Ph Eur monograph 0031)

I_2 253.8 *7553-56-2*

Action and use

Antiseptic; antithyroid.

Preparations

Alcoholic Iodine Solution

Aqueous Iodine Oral Solution

Ph Eur

DEFINITION

Content

99.5 per cent to 100.5 per cent of I.

CHARACTERS

Appearance

Greyish-violet, brittle plates or fine crystals with a metallic sheen.

Solubility

Very slightly soluble in water, very soluble in concentrated solutions of iodides, soluble in ethanol (96 per cent), slightly soluble in glycerol.

It volatilises slowly at room temperature.

IDENTIFICATION

A. Heat a few fragments in a test-tube. Violet vapour is evolved and a bluish-black crystalline sublimate is formed.

B. To a saturated solution add *starch solution R*. A blue colour is produced. Heat until decolourised. On cooling, the colour reappears.

TESTS

Solution S

Triturate 3.0 g with 20 ml of *water R*, filter, wash the filter with *water R* and dilute the filtrate to 30 ml with the same solvent. To the solution add 1 g of *zinc powder R*. When the solution is decolourised, filter, wash the filter with *water R* and dilute to 40 ml with the same solvent.

Bromides and chlorides

Maximum 250 ppm.

To 10 ml of solution S add 3 ml of *ammonia R* and 6 ml of *silver nitrate solution R2*. Filter, wash the filter with *water R* and dilute the filtrate to 20 ml with the same solvent. To 10 ml of the solution add 1.5 ml of *nitric acid R*. After 1 min, any opalescence in the solution is not more intense than that in a standard prepared at the same time by mixing 10.75 ml of *water R*, 0.25 ml *of 0.01 M hydrochloric acid*, 0.2 ml of *dilute nitric acid R* and 0.3 ml of *silver nitrate solution R2.*

Non-volatile substances

Maximum 0.1 per cent.

Heat 1.00 g in a porcelain dish on a water-bath until the iodine has volatilised. Dry the residue at 100-105 °C. The residue weighs a maximum of 1 mg.

ASSAY

Introduce 0.200 g into a flask containing 1 g of *potassium iodide R* and 2 ml of *water R* and add 1 ml of *dilute acetic acid R.* When dissolution is complete, add 50 ml *of water R* and titrate with *0.1 M sodium thiosulphate*, using *starch solution R* as indicator.

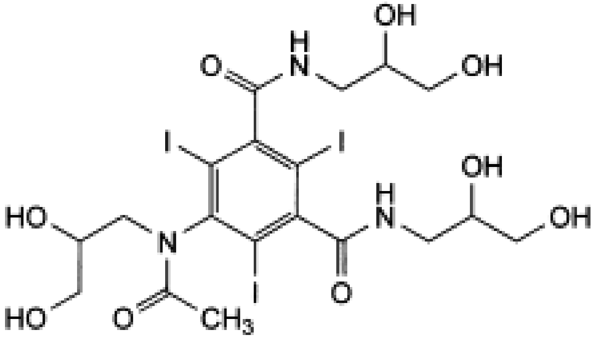
1 ml of *0.1 M sodium thiosulphate* is equivalent to 12.69 mg of I.

Ph Eur

Iohexol

General Notices

(Ph Eur monograph 1114)



$C_{19}H_{26}I_3N_3O_9$ 821 *66108-95-0*

Action and use

Iodinated contrast medium.

Ph Eur

DEFINITION

5-[Acetyl(2,3-dihydroxypropyl)amino]-*N*,*N′*-bis(2,3-dihydroxypropyl)-2,4,6-triiodobenzene-1,3-dicarboxamide.

The substance is a mixture of diastereoisomers and atropisomers.

Content

98.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or greyish-white, hygroscopic powder.

Solubility

Very soluble in water, freely soluble in methanol, practically insoluble in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24).*

Comparison iohexol CRS.

B. Examine the chromatograms obtained in test A for related substances (see Tests).

Results The principal peaks in the chromatogram obtained with reference solution (b) are similar in retention time and size to the peaks due to iohexol in the chromatogram obtained with reference solution (a).

TESTS

Solution S

Dissolve 5.0 g in *water R* and dilute to 50.0 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution Y_7 *(2.2.2, Method II)*.

Related substances

A. Liquid chromatography *(2.2.29)*.

NOTE: iohexol gives rise to 2 non-resolved peaks in the chromatogram due to endo-exo isomerism. In addition, a small peak (also due to iohexol) usually appears at the leading edge of the 1st principal peak. This small peak has a retention time about 1.2 min less than the 1st principal peak.

Test solution Dissolve 0.150 g of the substance to be examined in *water R* and dilute to 100.0 ml with the same solvent.

Reference solution (a) Dissolve 15.0 mg of *iohexol CRS* and 15.0 mg of *iohexol impurity A CRS* in a mixture of 1-2 drops of *dilute sodium hydroxide solution R* and 10 ml of *water R* and dilute to 100.0 ml with w*ater R*. Dilute 1.0 ml of this solution to 10.0 ml with *water R*.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with *water R*.

Reference solution (c) Dissolve 5.0 mg of *iohexol for peak identification CRS* (containing impurities B, C, D and E) in *water R* and dilute to 5.0 ml with the same solvent.

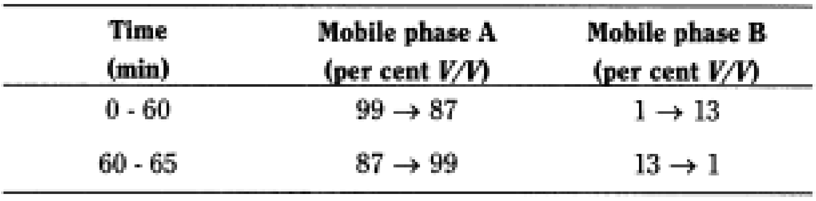
Blank solution water R.

Column:
— *size*: *l* = 0.25 m, Ø = 4.6 mm,

— *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:
— *mobile phase A: water R*;

— *mobile phase B: acetonitrile R*;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 60	99 → 87	1 → 13
60 - 65	87 → 99	13 → 1

Flow rate 1 ml/min.

Detection Spectrophotometer at 254 nm.

Equilibration At the initial eluent composition for at least 10 min.

Injection 10 µl.

Retention times Impurity A and impurity H = about 17 min; iohexol (peaks corresponding to *endo-exo* isomerism) = about 20 min.

System suitability Reference solution (a):

— *resolution*: minimum 5.0 between the peak due to impurity A and the 2nd and greater peak due to iohexol.

Limits:

— *sum of impurities B, C, D and E* (relative retention with reference to the 2nd and greater peak due to iohexol between 1.1 and 1.4): not more than 0.6 times the total area of the principal peaks in the chromatogram obtained with reference solution (b) (0.6 per cent); use the chromatogram obtained with reference solution (c) to identify the corresponding peaks;

— *sum of impurities A and H*: not more than 0.5 times the total area of the principal peaks in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *impurities M, N, O, P, Q:* for each impurity, not more than 0.1 times the total area of the principal peaks in the chromatogram obtained with reference solution (b) (0.1 per cent);

— *any other impurity*: for each impurity, not more than 0.1 times the total area of the principal peaks in the chromatogram obtained with reference solution (b) (0.1 per cent);

— *total*: not more than 1.5 times the total area of the principal peaks in the chromatogram obtained with reference solution (b) (1.5 per cent);

— *disregard limit*: 0.03 times the total area of the principal peaks in the chromatogram obtained with reference solution (b) (0.03 per cent); disregard any peak observed with the blank.

B. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 1.0 g of the substance to be examined in *water R* and dilute to 10.0 ml with the same solvent.

Reference solution (a) Dissolve 50 mg of *iohexol impurity J CRS* and 50 mg of *iohexol CRS* in *water R* and dilute to 10.0 ml with the same solvent.

Reference solution (b) Dilute 1.0 ml of the test solution to 10.0 ml with *water R*. Dilute 1.0 ml of this solution to 50.0 ml with *water R*.

Plate *TLC silica gel* F_{254} *plate R*.

Preconditioning Wash the plate with the mobile phase, dry at room temperature for 30 min, then at 90 °C for 1 h.

Mobile phase *Concentrated ammonia R, methanol R, 2-propanol R, acetone R* (16:16:28:40 *V/V/V/V*).

Application 10 µl.

Development Over half of the plate.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

System suitability Reference solution (a):

— the chromatogram shows 2 clearly separated spots.

Limits:

— *any impurity*: any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.2 per cent).

3-Chloropropane-1,2-diol

Gas chromatography *(2.2.28)*.

Test solution Dissolve 1.0 g of the substance to be examined in 1.0 ml of *water R*. Shake with 4 quantities, each of 2 ml, of *methyl acetate R*. Dry the combined upper layers over *anhydrous sodium sulphate R*. Filter and concentrate to about 0.7 ml using a warm water bath at 60 °C and a stream of nitrogen and dilute to 1.0 ml with *methyl acetate R*.

Reference solution Dissolve 0.25 g of *3-chloropropane-1,2-diol R* in 100.0 ml of *methyl acetate R*. Dilute 1.0 ml of this solution with 100.0 ml of *methyl acetate R*.

Column:

— *material*: fused silica,

— *size*: *l* = 25 m, Ø = 0.33 mm,

— *stationary phase: polymethylphenylsiloxane R* (film thickness 1 µm).

Carrier gas *helium for chromatography R*.

Flow rate 1 ml/min.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 2	80
	2 - 8	80 → 170
	8 - 10	170
Injection port		230
Detector		250

Detection Flame ionisation.

Injection 2 µl (splitless for 30 s).

System suitability Reference solution:

— *retention time*: 3-chloropropane-1,2-diol = about 8 min.

Limit:

— *3-chloropropane-1,2-diol*: not more than the area of the principal peak in the chromatogram obtained with the reference solution (25 ppm).

Free aromatic amine

Maximum 500 ppm.

Test solution Transfer 0.200 g of the substance to be examined to a 25 ml volumetric flask and dissolve in 15.0 ml of *water R*.

Reference solution Dissolve 5.0 mg of *iohexol impurity J CRS* in *water R* and dilute to 5.0 ml with *water R*. Dilute 1.0 ml of this solution to 100.0 ml with *water R*. Mix 10.0 ml of this solution with 5.0 ml of *water R* in a 25 ml volumetric flask.

Blank solution Transfer 15.0 ml of *water R* to a 25 ml volumetric flask.

In conducting the following steps, keep the flasks in iced water and protected as much as possible from light until all of the reagents have been added.

Place the 3 flasks containing respectively the test solution, the reference solution and the blank solution in iced water, protected from light, for 5 min. Add 1.5 ml of *hydrochloric acid R1* and mix by swirling. Add 1.0 ml of a 20 g/l solution of *sodium nitrite R*, mix and allow to stand for 4 min. Add 1.0 ml of a 40 g/l solution of *sulphamic acid R,* swirl gently until gas liberation has ceased and allow to stand for 1 min. *(CAUTION: considerable pressure is produced)*. Add 1.0 ml of a freshly prepared 3 g/l solution of *naphthylethylenediamine dihydrochloride R* in a mixture of 30 volumes of *water R* and 70 volumes of *propylene glycol R* and mix. Remove the flasks from the iced water, dilute to 25.0 ml with *water R*, mix and allow to stand for 5 min. Simultaneously determine the absorbance *(2.2.25)* at 495 nm of the solutions obtained from the test solution and the reference solution in 5 cm cells, using the blank as the compensation liquid. The absorbance of the test solution is not greater than that of the reference solution.

Iodide:

Maximum 10 ppm.

Dissolve 6.000 g in *water R* and dilute to 20 ml with the same solvent. Add 2.0 ml of *0.001 M potassium iodide*. Titrate with *0.001 M silver nitrate*. Determine the end-point potentiometrically *(2.2.20)*, using a silver indicator electrode and an appropriate reference electrode. Subtract the volume of titrant corresponding to the 2.0 ml of *0.001 M potassium iodide,* determined by titrating a blank to which is added 2.0 ml *of 0.001 M potassium iodide* and use the residual value to calculate the iodide content.

1 ml of *0.001 M silver nitrate* is equivalent to 126.9 µg of I-.

Ionic compounds ***(2.2.38)***

Maximum 0.01 per cent *m/m* calculated as sodium chloride.

Rinse all glassware with distilled water R 5 times before use.

Test solution Dissolve 1.0 g of the substance to be examined in *water R* and dilute to 50.0 ml with the same solvent.

Reference solution Dissolve 20.0 mg of *sodium chloride R* in *water R* and dilute to 100.0 ml with the same solvent. Dilute 1.0 ml of this solution to 100.0 ml with *water R*.

Measure the conductivity of the test solution and the reference solution using a suitable conductivity meter. The conductivity of the test solution is not greater than that of the reference solution.

Heavy metals ***(2.4.8)***

Maximum 10 ppm.

12 ml of solution S complies with limit test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R.*

Water ***(2.5.12)***

Maximum 4.0 per cent, determined on 1.00 g.

ASSAY

To 0.500 g in a 125 ml round-bottomed flask add 25 ml of a 50 g/l solution of *sodium hydroxide R*, 0.5 g of *zinc powder R* and a few glass beads. Boil under a reflux condenser for 30 min. Allow to cool and rinse the condenser with 20 ml of *water R*, adding the rinsings to the flask. Filter through a sintered-glass filter *(2.1.2)* and wash the filter with several quantities of *water R.* Collect the filtrate and washings. Add 5 ml of *glacial acetic acid R* and titrate immediately with *0.1 M silver nitrate*. Determine the end-point potentiometrically *(2.2.20).*

1 ml of *0.1 M silver nitrate* is equivalent to 27.37 mg of $C_{19}H_{26}I_3N_3O_9$.

STORAGE

In an airtight container, protected from light and moisture.

$C_{17}H_{22}I_3N_3O_8$ 777 *60166-93-0*

Action and use

Iodinated contrast medium.

Ph Eur

DEFINITION

N,*N′*-Bis[2-hydroxy-1-(hydroxymethyl)ethyl]-5-[[(2*S*)-2-hydroxypropanoyl]amino]-2,4,6-triiodobenzene-1,3-dicarboxamide.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Freely soluble in water, very slightly soluble in methanol, practically insoluble in ethanol (96 per cent) and in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison   *iopamidol CRS.*

B. It complies with the test for loss on drying (see Tests).

C. It complies with the test for specific optical rotation (see Tests).

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Dissolve 1 g in *water R* and dilute to 50 ml with the same solvent.

Acidity or alkalinity

Dissolve 10.0 g in *carbon dioxide-free water R* and dilute to 100 ml with the same solvent. Not more than 0.75 ml of *0.01 M hydrochloric acid* or 1.4 ml of *0.01 M sodium hydroxide* is required to adjust to pH 7.0 *(2.2.3)*.

Specific optical rotation *(2.2.7)*

- 4.6 to - 5.2 (dried substance), determined at 436 nm.

Dissolve 10.0 g, with heating if necessary, in *water R* and dilute to 25.0 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution   Dissolve 0.50 g of the substance to be examined in *water R* and dilute to 50.0 ml with the same solvent.

Reference solution (a)   Dissolve 5.0 mg of *iopamidol impurity H CRS* in *water R* and dilute to 100.0 ml with the same solvent.

Reference solution (b)   Dilute 2.0 ml of the test solution to 20.0 ml with *water R*. Dilute 1.0 ml of this solution to 50.0 ml with *water R*.

Reference solution (c)   Add 0.1 ml of the test solution to 20 ml of reference solution (a) and dilute to 50 ml with *water R*.

Column:
2 columns coupled in series,

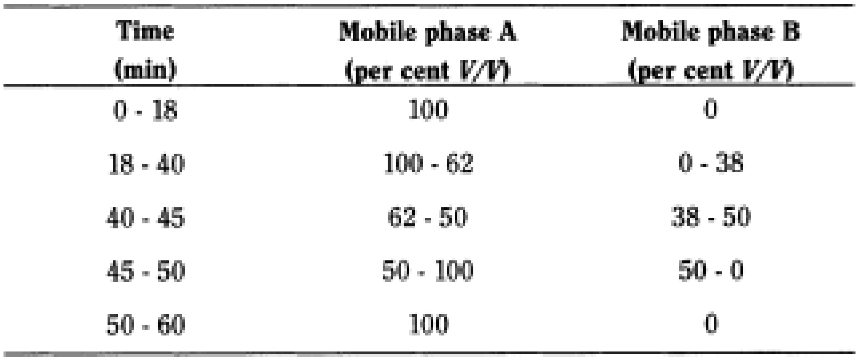
— *size*: *l* = 0.25 m, Ø = 4.6 mm,

— *stationary phase*: *phenylsilyl silica gel for chromatography R* (5 µm),

— *temperature*: 60 °C.

Mobile phase:
— *mobile phase A*: *water R*,

— *mobile phase B: acetonitrile R, water R* (50:50 *V/V*),



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 18	100	0
18 - 40	100 - 62	0 - 38
40 - 45	62 - 50	38 - 50
45 - 50	50 - 100	50 - 0
50 - 60	100	0

Flow rate 2.0 ml/min.

Detection Spectrophotometer at 240 nm.

Injection 20 µl.

Relative retention with reference to iopamidol (retention time = about 14.6 min): impurity D = about 0.1; impurity B = about 0.6; impurities I and H = about 0.9; impurity G = about 1.1; impurity K = about 1.2; impurity C = about 1.3; impurity J = about 1.5; impurity A = about 1.8; impurity E = about 2.2; impurity F = about 2.3.

System suitability Reference solution (c):

— *resolution*: minimum 2.0 between the peaks due to impurity H and iopamidol.

Limits:

— *sum of impurities H and I*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent),

— *impurities A, B, C, D, E, F, G, J, K*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent),

— *any other impurity*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent),

— *sum of impurities other than H and I*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent),

— *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.01 per cent).

Free aromatic amines

Maximum 200 ppm.

Keep the solutions and reagents in iced water, protected from bright light.

Test solution In a 25 ml volumetric flask, dissolve 0.500 g of the substance to be examined in 20.0 ml of *water R*.

Reference solution In a 25 ml volumetric flask, mix 4.0 ml of a 25.0 mg/l solution of *iopamidol impurity A CRS* with 16.0 ml of *water R*.

Blank solution Place 20.0 ml of *water R* in a 25 ml volumetric flask.

Place the flasks in iced water, protected from light, for 5 min. Add *1.0 ml of hydrochloric acid R* to each flask, mix and allow to stand for 5 min. Add 1.0 ml of a 20 g/l solution of *sodium nitrite R* prepared immediately before use, mix and allow to stand for 5 min. Add 1.0 ml of a

120 g/l solution of *ammonium sulphamate R*, swirl gently until gas liberation has ceased, and allow to stand for 5 min. *(CAUTION: considerable pressure is produced)*. Add 1.0 ml of a freshly prepared 1 g/l solution of *naphthylethylenediamine dihydrochloride R* and mix. Remove the flasks from the iced water and allow to stand for 10 min. Dilute to 25.0 ml with *water R* and mix. Measure immediately the absorbance *(2.2.25)* at 500 nm of the solutions obtained from the test solution and the reference solution using, as the compensation liquid, the solution obtained from the blank solution.

The absorbance of the test solution is not greater than that of the reference solution.

Free iodine

Maximum 10 ppm.

Dissolve 2.0 g in 25 ml of *water R* in a ground-glass stoppered centrifuge tube. Add 5 ml of *toluene R* and 5 ml of *diluted sulphuric acid R*. Shake and centrifuge. Any red colour of the upper layer is not more intense than that of the upper phase obtained in the same way from 22 ml of *water R*, 2 ml of *iodide standard solution (10 ppm I) R*, 5 ml of *dilute sulphuric acid R,* 1 ml of *concentrated hydrogen peroxide solution R* and 5 ml of *toluene R.*

Iodide

Maximum 10 ppm.

Dissolve 6.000 g in *water R* and dilute to 20 ml with the same solvent. Add 2.0 ml of *0.001 M potassium iodide*. Carry out a potentiometric titration *(2.2.20)* with *0.001 M silver nitrate* using a silver indicator electrode and an appropriate reference electrode. Subtract the volume of titrant corresponding to the 2.0 ml of *0.001 M potassium iodide*, determined by titrating a blank to which is added 2.0 ml of *0.001 M potassium iodide* and use the residual value to calculate the iodide content.

1 ml of *0.001 M silver nitrate* is equivalent to 126.9 µg of iodide.

Heavy metals *(2.4.8)*

Maximum 10 ppm.

2.0 g complies with limit test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

Bacterial endotoxins *(2.6.14)*

Less than 1.4 IU/g, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

To 0.300 g in a 250 ml round-bottomed flask add 5 ml of *strong sodium hydroxide solution R*, 20 ml of *water R*, 1 g of *zinc powder R* and a few glass beads. Boil under a reflux condenser for 30 min. Allow to cool and rinse the condenser with 20 ml of *water R*, adding the rinsings to the flask. Filter through a sintered-glass filter *(2.1.2)* and wash the filter with several quantities of *water R.* Collect the filtrate and washings. Add 5 ml of *glacial acetic acid R* and titrate immediately with *0.1 M silver nitrate*. Determine the end-point potentiometrically *(2.2.20)* using a suitable electrode system such as silver-silver chloride.

1 ml of *0.1 M silver nitrate* is equivalent to 25.90 mg of $C_{17}H_{22}I_3N_3O_8$.

STORAGE

Protected from light. If the substance is sterile, store in a sterile, airtight, tamper-proof container .

IMPURITIES

DEFINITION

Iopanoic acid contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of (*RS*)-2-(3-amino-2,4,6-tri-iodobenzyl)butanoic acid, calculated with reference to the dried substance.

CHARACTERS

A white or yellowish-white powder, practically insoluble in water, soluble in ethanol and in methanol. It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

First identification B.

Second identification A, C, D.

A. Melting point *(2.2.14):* about 155 °C, with decomposition.

B. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *iopanoic acid CRS*.

C. Examine the chromatograms obtained in the test for related substances (see Tests). Spray the plate with a 1 g/l solution of *4-dimethylaminocinnamaldehyde R* in a mixture of 1 volume of *hydrochloric acid R* and 99 volumes of *alcohol R*. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Heat 50 mg carefully in a small porcelain dish over a flame. Violet vapour is evolved.

TESTS

Appearance of solution

Dissolve 1.0 g in *1 M sodium hydroxide* and dilute to 20 ml with the same solvent. The solution is clear *(2.2.1)* and not more intensely coloured than reference solution Y_3 (*2.2.2, Method II).*

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using *silica gel* GF_{254} *R* as the coating substance.

Test solution (a) Dissolve 1.0 g of the substance to be examined in a mixture of 3 volumes of *ammonia R* and 97 volumes of *methanol R* and dilute to 10 ml with the same mixture of solvents.

Test solution (b) Dilute 1 ml of test solution (a) to 10 ml with a mixture of 3 volumes of *ammonia R* and 97 volumes of *methanol R*.

Reference solution (a) Dissolve 50 mg of *iopanoic acid CRS* in a mixture of 3 volumes of *ammonia R* and 97 volumes of *methanol R* and dilute to 5 ml with the same mixture of solvents.

Reference solution (b) Dilute 1 ml of test solution (b) to 50 ml with a mixture of 3 volumes of *ammonia R* and 97 volumes of *methanol R*.

Apply separately to the plate 5 µl of each solution. Develop over a path of 10 cm using a mixture of 10 volumes of *concentrated ammonia R*, 20 volumes of *methanol R*, 20 volumes of *toluene R* and 50 volumes of *dioxan R*. Examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.2 per cent).

Halides

To 0.46 g add 10 ml of *nitric acid R* and 15 ml of *water R*. Shake for 5 min and filter. 15 ml of the filtrate complies with the limit test for chlorides *(2.4.4)* (180 ppm, expressed as chloride).

Loss on drying *(2.2.32)*

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 1 h.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

To 0.150 g in a 250 ml round-bottomed flask add 5 ml of *strong sodium hydroxide solution R*, 20 ml of *water R*, 1 g of *zinc powder R* and a few glass beads. Boil under a reflux condenser for 60 min. Allow to cool and rinse the condenser with 20 ml of *water R*, adding the rinsings to the flask. Filter through a sintered-glass filter *(2.1.2)* and wash the filter with several quantities of *water R*. Collect the filtrate and washings. Add 40 ml of *dilute sulphuric acid R* and titrate immediately with *0.1 M silver nitrate*. Determine the end-point potentiometrically *(2.2.20)*, using a suitable electrode system such as silver-mercurous sulphate.

1 ml of *0.1 M silver nitrate* is equivalent to 19.03 mg of $C_{11}H_{12}I_3NO_2$.

STORAGE

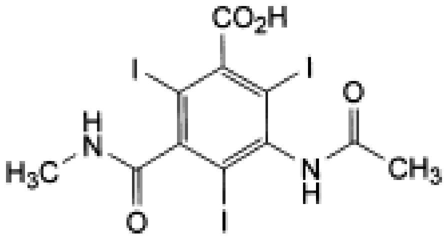
Store protected from light.

Ph Eur

Iotalamic Acid

General Notices

(Ph Eur monograph 0751)



$C_{11}H_9I_3N_2O_4$ 614 *2276-90-6*

Action and use

Iodinated contrast medium.

Ph Eur

DEFINITION

Iotalamic acid contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of 3-(acetylamino)-2,4,6-tri-iodo-5-(methylcarbamoyl)benzoic acid, calculated with reference to the dried substance.

CHARACTERS

A white or almost white powder, slightly soluble in water and in alcohol. It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

First identification *A.*

Second identification *B, C.*

A. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *iotalamic acid CRS*.

B. Examine by thin-layer chromatography *(2.2.27)*, using a *TLC silica gel* GF_{254} *plate R.*

Test solution Dissolve 50 mg of the substance to be examined in *methanol R* containing 3 per cent *V/V* of *ammonia R* and dilute to 5 ml with the same solvent.

Reference solution Dissolve 50 mg of *iotalamic acid CRS* in *methanol R* containing 3 per cent *V/V* of *ammonia R* and dilute to 5 ml with the same solvent.

Apply separately to the plate 5 µl of each solution. Develop over a path of 15 cm using a mixture of 20 volumes of *anhydrous formic acid R*, 25 volumes of *methyl ethyl ketone R* and 60 volumes of *toluene R*. Allow the plate to dry until the solvents have evaporated and examine in ultraviolet light at 254 nm. The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

C. Heat 50 mg gently in a small porcelain dish over a flame. Violet vapour is evolved.

TESTS

Appearance of solution

Dissolve 1.0 g in *1 M sodium hydroxide* and dilute to 20 ml with the same solvent. The solution is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using a *TLC silica gel* GF_{254} *plate R.*

Test solution Dissolve 1.0 g of the substance to be examined in *methanol R* containing 3 per cent *V/V* of *ammonia R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dilute 1 ml of the test solution to 50 ml with *water R*. Dilute 1 ml of the solution to 10 ml with *water R*.

Reference solution (b) Dissolve 1 mg of *iotalamic acid impurity A CRS* in 5 ml of reference solution (a).

Apply to the plate 5 µl of each solution. Develop over a path of 10 cm using a mixture of 1 volume of *glacial acetic acid R*, 1 volume of *anhydrous formic acid R*, 1 volume of *methanol R*, 5 volumes of *ether R* and 10 volumes of *methylene chloride R*. Allow the plate to dry until the solvents have evaporated. Examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (a) (0.2 per cent). The test is not valid unless the chromatogram obtained with reference solution (b) shows two clearly separated principal spots.

Halides

Dissolve 0.55 g in a mixture of 4 ml of *dilute sodium hydroxide solution R* and 15 ml of *water R*. Add 6 ml of *dilute nitric acid R* and filter. 15 ml of the filtrate complies with the limit test for chlorides *(2.4.4)* (150 ppm, expressed as chloride).

Impurity A

Not more than 0.05 per cent *m/m* determined by absorption spectrophotometry *(2.2.25)*.

Test solution Transfer 0.500 g of the substance to be examined to a 50 ml volumetric flask, add 14 ml of *water R*, shake and add 1 ml of *dilute sodium hydroxide solution R*.

Reference solution Prepare the reference solution by mixing 10.0 ml of a 8.5 g/l solution of *sodium hydroxide R* containing 25 µg/ml of *iotalamic acid impurity A CRS* with 5 ml of *water R* in a 50 ml volumetric flask.

Blank solution Transfer 14 ml of *water R* and 1 ml of *dilute sodium hydroxide solution R* to a 50 ml volumetric flask.

In conducting the following steps, keep the flasks in iced water and protected as far as *possible from light until all of the reagents have been added.*

Place all three of the flasks containing the test solution, the reference solution and the blank solution in iced water, protected from light. Add 5 ml of a 5 g/l solution of *sodium nitrite R* and 12 ml of *dilute hydrochloric acid R*. Shake gently and allow to stand for exactly 2 min after adding the hydrochloric acid. Add 10 ml of a 20 g/l solution of *ammonium sulphamate R*. Allow to stand for 5 min shaking frequently *(CAUTION: considerable pressure is produced)*, and add 0.15 ml of a 100 g/l solution of α-*naphthol R* in *alcohol R*. Shake and allow to stand for 5 min. Add 3.5 ml of *buffer solution pH 10.9 R*, mix and dilute to 50.0 ml with *water R*. Concomitantly and within 20 min determine the absorbance at 485 nm of the solutions obtained from the test solution and the reference solution in 5 cm cells, using the blank as the compensation liquid.

Calculate the content of impurity A.

Iodide

Not more than 20 ppm, determined by potentiometric titration *(2.2.20)*. Dissolve 6.000 g in 20 ml of *1 M sodium hydroxide*, add 10 ml of *water R* and adjust to pH 4.5 to 5.5 with *acetic acid R*. Add 2.0 ml of *0.001 M potassium iodide*. Titrate with *0.001 M silver nitrate* using a silver indicator electrode and an appropriate reference electrode. Subtract the volume of titrant corresponding to the 2.0 ml of *0.001 M potassium iodide*, determined by titrating a blank to which is added 2.0 ml of *0.001 M potassium iodide* and use the residual value to calculate the iodide content.

1 ml of *0.001 M silver nitrate* is equivalent to 126.9 µg of iodide.

Heavy metals *(2.4.8)*

Dissolve 2.0 g in 4 ml of *dilute sodium hydroxide solution R* and dilute to 20 ml with *water R*. 12 ml of this solution complies with limit test A for heavy metals (20 ppm). Prepare the standard using *lead standard solution (2 ppm Pb) R*.

Loss on drying *(2.2.32)*

Not more than 0.5 per cent, determined on 0.300 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

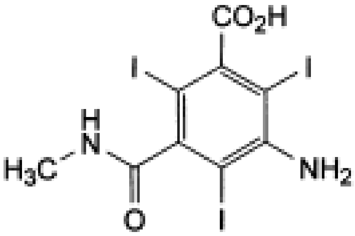
To 0.150 g in a 250 ml round-bottomed flask add 5 ml of *strong sodium hydroxide solution R*, 20 ml of *water R*, 1 g of *zinc powder R* and a few glass beads. Boil under a reflux condenser for 30 min. Allow to cool and rinse the condenser with 20 ml of *water R,* adding the rinsings to the flask. Filter through a sintered-glass filter *(2.1.2)* and wash the filter with several quantities of *water R*. Collect the filtrate and washings. Add 40 ml of *dilute sulphuric acid R* and titrate immediately with *0.1 M silver nitrate*. Determine the end-point potentiometrically *(2.2.20)*, using a suitable electrode system such as silver-mercurous sulphate.

1 ml of *0.1 M silver nitrate* is equivalent to 20.47 mg of $C_{11}H_9I_3N_2O_4$.

STORAGE

Store protected from light.

IMPURITIES



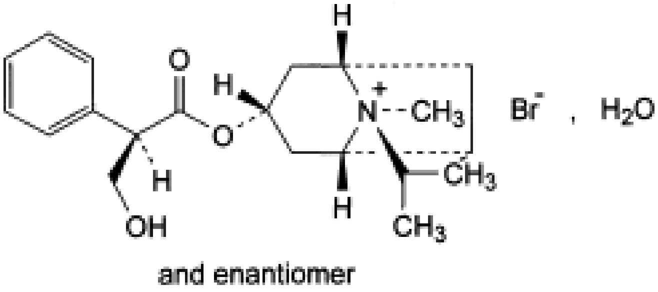
A. 3-amino-2,4,6-triiodo-5-(methylcarbamoyl)benzoic acid.

Ph Eur

Ipratropium Bromide

General Notices

(Ph Eur monograph 0919)



$C_{20}H_{30}BrNO_3,H_2O$ 430.4 *66985-17-9*

Action and use

Anticholinergic (antimuscarinic) bronchodilator.

Preparations

Ipratropium Nebuliser Solution

Ipratropium Powder for Inhalation

Ipratropium Pressurised Inhalation

Ph Eur

DEFINITION

(1*R*,3r,5*S*,8*r*)-3-[[(2*RS*)-3-Hydroxy-2-phenylpropanoyl]oxy]-8-methyl-8-(1-methylethyl)-8-azoniabicyclo[3.2.1]octane bromide monohydrate.

Content

99.0 per cent to 100.5 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Soluble in water, freely soluble in methanol, slightly soluble in ethanol (96 per cent).

mp: about 230 °C, with decomposition.

IDENTIFICATION

First identification *A, E.*

Second identification *B, C, D, E.*

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *ipratropium bromide CRS.*

B. Examine the chromatograms obtained in the test for impurity A.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. To 5 ml of solution S (see Tests), add 2 ml of *dilute sodium hydroxide solution R*. No precipitate is formed.

D. To about 1 mg add 0.2 ml of *nitric acid R* and evaporate to dryness on a water-bath. Dissolve the residue in 2 ml of *acetone R* and add 0.1 ml of a 30 g/l solution of *potassium hydroxide R* in *methanol R*. A violet colour develops.

E. It gives reaction (a) of bromides *(2.3.1)*.

TESTS

Solution S

Dissolve 0.50 g in *carbon dioxide-free water R* and dilute to 50.0 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution GY_7 *(2.2.2, Method II)*.

pH *(2.2.3)*

5.0 to 7.5 for solution S.

Impurity A

Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 20 mg of the substance to be examined in *methanol R* and dilute to 1.0 ml with the same solvent.

Reference solution (a) Dissolve 20 mg of *ipratropium bromide CRS* in *methanol R* and dilute to 1.0 ml with the same solvent.

Reference solution (b) Dissolve 20 mg of *methylatropine bromide CRS* in 1.0 ml of reference solution (a).

Reference solution (c) Dissolve 5 mg of *ipratropium impurity A CRS* in 100.0 ml of *methanol R*. Dilute 2.0 ml of the solution to 5.0 ml with *methanol R*.

Plate *TLC silica gel plate R* (2-10 µm).

Mobile phase *anhydrous formic acid R, water R, ethanol (96 per cent) R, methylene chloride*

R (1:3:18:18 *V/V/V/V*).

Application 1 µl.

Development Over a path of 6 cm.

Drying At 60 °C for 15 min.

Detection Spray with *potassium iodobismuthate solution R*, allow the plate to dry in air, spray with a 50 g/l solution of *sodium nitrite R* and protect immediately with a sheet of glass.

System suitability The chromatogram obtained with reference solution (b) shows 2 clearly separated principal spots.

Limit:

- *impurity A*: any spot due to impurity A is not more intense than the principal spot in the chromatogram obtained with reference solution (c) (0.1 per cent).

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 0.200 g of the substance to be examined in the mobile phase and dilute to 20.0 ml with the mobile phase.

Reference solution (a) Dissolve 10.0 mg of *ipratropium bromide CRS* in the mobile phase and dilute to 20.0 ml with the mobile phase. Dilute 1.0 ml of the solution to 50.0 ml with the mobile phase.

Reference solution (b) Dissolve 5 mg of *ipratropium bromide CRS* and 5 mg of *ipratropium impurity B CRS* in 1 ml of *methanol R* and dilute to 25.0 ml with the mobile phase. Dilute 1.0 ml of the solution to 20.0 ml with the mobile phase.

Column:

- *size*: *l* = 0.15 m, Ø = 3.9 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 30 °C.

Mobile phase Dissolve 12.4 g of *sodium dihydrogen phosphate R* and 1.7 g of *tetrapropylammonium chloride R* in 870 ml of *water R*; adjust to pH 5.5 with a 180 g/l solution of *disodium hydrogen phosphate R* and add 130 ml of *methanol R*.

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 220 nm.

Injection 5 µl.

Run time 6 times the retention time of ipratropium.

Relative retention With reference to ipratropium (retention time = about 4.9 min): impurity C = about 0.7; impurity B = about 1.2; impurity D = about 1.8; impurity E = about 2.3; impurity F = about 5.1.

System suitability Reference solution (b):

- *resolution*: minimum 3.0 between the peaks due to impurity B and ipratropium;
- *symmetry factor*: maximum 2.5 for the principal peak.

Limits:

- *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity C = 0.3; impurity D = 0.2; impurity F = 0.5;
- *impurity D*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent);
- *impurities B, C*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.25 per cent);
- *disregard limit*: one-third of the area of the principal peak in the chromatogram obtained with reference solution (a) (0.03 per cent); disregard the peak due to the bromide ion.

Water *(2.5.12)*

3.9 per cent to 4.4 per cent, determined on 0.50 g.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.350 g in 50 ml of *water R* and add 3 ml of *dilute nitric acid R*. Titrate with *0.1 M silver nitrate*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M silver nitrate* is equivalent to 41.24 mg of $C_{20}H_{30}BrNO_3$.

IMPURITIES

Specified impurities A, B, C, D.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *E, F.*

B. Infrared absorption spectrophotometry (*2.2.24*).

Preparation Discs.

Comparison *isoconazole nitrate CRS.*

C. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 30 mg of the substance to be examined in *methanol R* and dilute to 5 ml with the same solvent.

Reference solution (a) Dissolve 30 mg of *isoconazole nitrate CRS* in *methanol R* and dilute to 5 ml with the same solvent.

Reference solution (b) Dissolve 30 mg of *isoconazole nitrate CRS* and 30 mg of *econazole nitrate CRS* in *methanol R*, then dilute to 5 ml with the same solvent.

Plate *TLC octadecylsilyl silica gel plate R*.

Mobile phase *ammonium acetate solution R*, *dioxan R*, *methanol R* (20:40:40 *V/V/V*).

Application 5 µl.

Development Over a path of 15 cm.

Drying In a current of warm air for 15 min.

Detection Expose to iodine vapour until the spots appear and examine in daylight.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. It gives the reaction of nitrates *(2.3.1)*.

TESTS

Solution S

Dissolve 0.20 g in *methanol R* and dilute to 20.0 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution Y_7 *(2.2.2, Method II)*.

Optical rotation *(2.2.7)*

- 0.10° to + 0.10°, determined on solution S.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 0.100 g of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dissolve 2.5 mg of *isoconazole nitrate CRS* and 2.5 mg of *econazole nitrate CRS* in the mobile phase, then dilute to 100.0 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 5.0 ml of this solution to 20.0 ml with the mobile phase.

Column:

— *size*: *l* = 0.1 m, Ø = 4.6 mm;

— *stationary phase: octadecylsilyl silica gel for chromatography R* (3 µm).

Mobile phase Dissolve 6.0 g of *ammonium acetate R* in a mixture of 300 ml of *acetonitrile R*, 320 ml of *methanol R* and 380 ml of *water R*.

Flow rate 2 ml/min.

Detection Spectrophotometer at 235 nm.

Equilibration With the mobile phase for about 30 min.

Injection 10 µl.

Run time 1.5 times the retention time of *isoconazole.*

Retention time econazole = about 10 min; isoconazole = about 14 min.

System suitability Reference solution (a):

— *resolution*: minimum 5.0 between the peaks due to econazole and isoconazole; if necessary, adjust the composition of the mobile phase.

Limits:

— *impurities A, B, C*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent);

— *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard the peak due to the nitrate ion.

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.350 g in 75 ml of a mixture of 1 volume of *anhydrous acetic acid R* and 7 volumes of *methyl ethyl ketone R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 47.91 mg of $C_{18}H_{15}Cl_4N_3O_4$.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution Y_6 *(2.2.2, Method II)*.

Optical rotation *(2.2.7)*

- 0.10° to + 0.10°, determined on solution S.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 0.100 g of the substance to be examined in 3.2 ml of *methanol R*. Add 3.0 ml of *acetonitrile R* and dilute to 10.0 ml with a solution of *ammonium acetate R* (6.0 g in 380 ml of *water R).*

Reference solution (a) Dissolve 2.5 mg of *isoconazole CRS* and 2.5 mg of *econazole nitrate CRS* in the mobile phase, then dilute to 100.0 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 5.0 ml of this solution to 20.0 ml with the mobile phase.

Column:

— *size*: *l* = 0.1 m, Ø = 4.6 mm;

— *stationary phase: octadecylsilyl silica gel for chromatography R* (3 µm).

Mobile phase Dissolve 6.0 g of *ammonium acetate R* in a mixture of 300 ml of *acetonitrile R*, 320 ml of *methanol R* and 380 ml of *water R*.

Flow rate 2 ml/min.

Detection Spectrophotometer at 235 nm.

Equilibration With the mobile phase for about 30 min.

Injection 10 µl.

Run time 1.5 times the retention time of isoconazole.

Retention time econazole = about 10 min; isoconazole = about 14 min.

System suitability Reference solution (a):

— *resolution*: minimum 5.0 between the peaks due to econazole and isoconazole; if necessary, adjust the composition of the mobile phase.

Limits:

— *impurities B, C, D*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent);

— *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Loss on drying ***(2.2.32)***

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 50 ml of a mixture of 1 volume of *anhydrous acetic acid R* and 7 volumes of *methyl ethyl ketone R*. Using 0.2 ml of *naphtholbenzein solution R* as indicator, titrate with *0.1 M perchloric acid* until the colour changes from orange-yellow to green.

1 ml of *0.1 M perchloric acid* is equivalent to 41.61 mg of $C_{18}H_{14}Cl_4N_2O$.

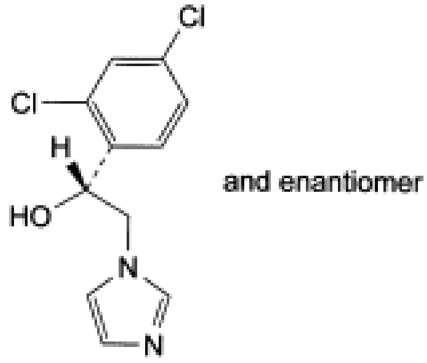
STORAGE

Protected from light.

IMPURITIES

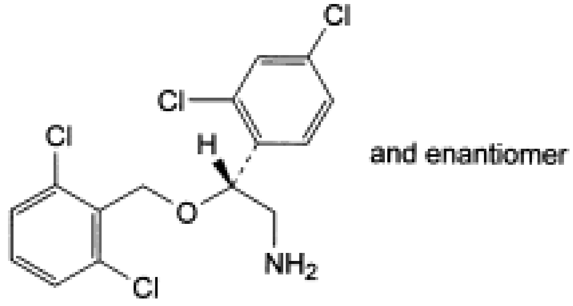
Specified impurities *B, C, D.*

A. deleted,



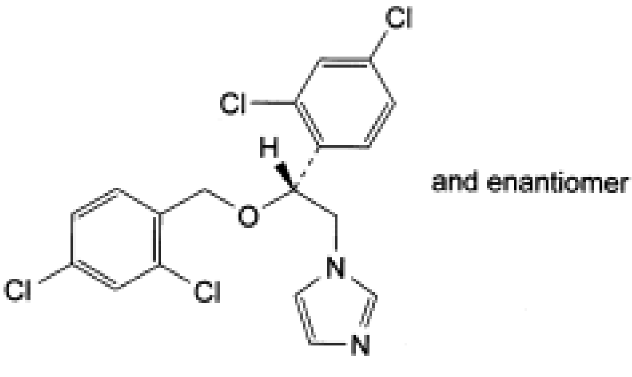
and enantiomer

B. (1*RS*)-1-(2,4-dichlorophenyl)-2-(1*H*-imidazol-1-yl)ethanol,



and enantiomer

C. (2*RS*)-2-[(2,6-dichlorobenzyl)oxy]-2-(2,4-dichlorophenyl)ethanamine,



and enantiomer

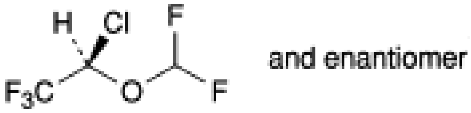
D. 1-[(2*RS*)-2-[(2,4-dichlorobenzyl)oxy]-2-(2,4-dichlorophenyl)ethyl]-1*H*-imidazole.

Ph Eur

Isoflurane

General Notices

(Ph Eur monograph 1673)



$C_3H_2ClF_5O$ 184.5   *26675-46-7*

Action and use

General anaesthetic.

Ph Eur

DEFINITION

(2*RS*)-2-Chloro-2-(difluoromethoxy)-1,1,1-trifluoroethane.

CHARACTERS

Appearance

Clear, colourless, mobile, heavy liquid.

Solubility

Practically insoluble in water, miscible with ethanol and trichloroethylene.

bp: about 48 °C.

It is non-flammable.

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Examine the substance in the gaseous state.

Comparison *Ph. Eur. reference spectrum of isoflurane.*

TESTS

Acidity or alkalinity

To 20 ml add 20 ml of *carbon dioxide-free water R*, shake for 3 min and allow to stand.

Collect the upper layer and add 0.2 ml of *bromocresol purple solution R*. Not more than 0.1 ml of *0.01 M sodium hydroxide* or 0.6 ml of *0.01 M hydrochloric acid* is required to change the colour of the indicator.

Related substances

Gas chromatography *(2.2.28).*

Test solution The substance to be examined.

Reference solution To 80 ml of *ethanol R*, add 1.0 ml of the substance to be examined and 1.0 ml of *acetone R*, avoiding loss by evaporation. Dilute to 100.0 ml with *ethanol R*. Dilute 1.0 ml of the solution to 100.0 ml with *ethanol R*.

Column:
— *material*: fused silica,

— *size*: *l* = 30 m, Ø = 0.32 mm,

— *stationary phase: macrogol 20 000 R* (film thickness 0.25 µm).

Carrier gas *helium for chromatography R.*

Flow rate 1.0 ml/min.

Split ratio 1:25.

Temperature:
— *column*: 35 °C,

— *injection port*: 150 °C,

— *detector*: 250 °C.

Detection Flame ionisation.

Injection 1.0 µl of each solution and 1.0 µl of *ethanol R* as a blank.

Run time Until elution of the ethanol peak in the chromatogram obtained with the reference solution.

Relative retention with reference to isoflurane (retention time = about 3.8 min): acetone = about 0.75.

System suitability Reference solution:

— *resolution*: minimum of 5 between the peaks due to acetone and to isoflurane,

— *repeatability*: maximum relative standard deviation 15.0 per cent for the peak due to isoflurane after 3 injections.

Limits:
— *acetone*: not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (0.01 per cent),

— *any other impurity*: not more than the area of the peak due to isoflurane in the chromatogram obtained with the reference solution (0.01 per cent),

— *total*: not more than 3 times the area of the peak due to isoflurane in the chromatogram obtained with the reference solution (0.03 per cent),

— *disregard limit*: 0.1 times the area of the peak due to isoflurane in the chromatogram obtained with the reference solution (0.001 per cent).

Chlorides ***(2.4.4)***

Maximum 10 ppm.

To 10 ml add 10 ml *of 0.01 M sodium hydroxide* and shake for 3 min. To 5 ml of the upper layer add 10 ml of *water R*. The solution complies with the limit test for chlorides.

Fluorides

Maximum 10 ppm.

Determine by potentiometry *(2.2.36, Method I)* using a fluoride-selective indicator-electrode and a silver-silver chloride reference electrode.

Test solution To 10.0 ml in a separating funnel, add 10 ml of a mixture of 30.0 ml of *dilute ammonia R2* and 70.0 ml of *distilled water R*. Shake for 1 min and collect the upper layer. Repeat this extraction procedure twice collecting the upper layer each time. Adjust the combined upper layers to pH 5.2 using *dilute hydrochloric acid R*. Add 5.0 ml of *fluoride standard solution (1 ppm F) R* and dilute to 50.0 ml with *distilled water R.* To 20.0 ml of the solution add 20.0 ml of *total-ionic-strength-adjustment buffer R* and dilute to 50.0 ml with *distilled water R*.

Reference solutions To each of 5.0 ml, 4.0 ml, 3.0 ml, 2.0 ml and 1.0 ml of *fluoride standard solution (10 ppm F) R add* 20.0 ml of *total-ionic-strength-adjustment buffer R* and dilute to 50.0 ml with *distilled water R.*

Carry out the measurements on 20 ml of each solution. Calculate the concentration of fluorides using the calibration curve, taking into account the addition of fluoride to the test solution.

Non-volatile matter

Maximum 200 mg/l.

Evaporate 10.0 ml to dryness with the aid of a stream of cold air and dry the residue at 50 °C for 2 h. The residue weighs a maximum of 2.0 mg.

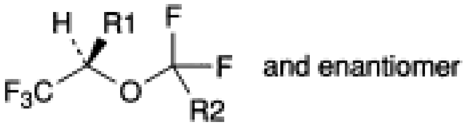
Water ***(2.5.12)***

Maximum 1.0 mg/ml, determined on 10.0 ml.

STORAGE

In an airtight container, protected from light.

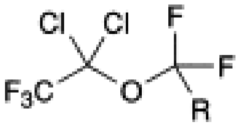
IMPURITIES



A. R1 = H, R2 = Cl: 2-(chlorodifluoromethoxy)-1,1,1-trifluoroethane,

B. R1 = R2 = H: 2-(difluoromethoxy)-1,1,1-trifluoroethane,

C. R1 = R2 = Cl: (2*RS*)-2-chloro-2-(chlorodifluoromethoxy)-1,1,1-trifluoroethane,



D. R = H: 1,1-dichloro-1-(difluoromethoxy)-2,2,2-trifluoroethane,

E. R = Cl: 1,1-dichloro-1-(chlorodifluoromethoxy)-2,2,2-trifluoroethane,

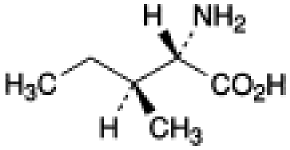
F. acetone.

Ph Eur

Isoleucine

General Notices

(Ph Eur monograph 0770)



$C_6H_{13}NO_2$ 131.2   *73-32-5*

Action and use

Amino acid.

Ph Eur

DEFINITION

Isoleucine contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of (2*S*,3*S*)-2-amino-3-methylpentanoic acid, calculated with reference to the dried substance.

CHARACTERS

White or almost white, crystalline powder or flakes, sparingly soluble in water, slightly soluble in alcohol. It dissolves in dilute mineral acids and in dilute solutions of alkali hydroxides.

IDENTIFICATION

First identification   A, C.

Second identification   A, B, D.

A. It complies with the test for specific optical rotation (see Tests).

B. Dissolve 0.5 g in *water R* and dilute to 25 ml with the same solvent. The solution is dextrorotatory.

C. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *isoleucine CRS*. Examine the substances prepared as discs.

D. Examine the chromatograms obtained in the test for ninhydrin-positive substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

TESTS

Appearance of solution

Dissolve 0.5 g in *1 M hydrochloric acid* and dilute to 10 ml with the same acid. The solution is clear *(2.2.1)* and not more intensely coloured than reference solution BY_6 *(2.2.2, Method II)*.

Specific optical rotation *(2.2.7)*

Dissolve 1.00 g in *hydrochloric acid R1* and dilute to 25.0 ml with the same acid. The specific optical rotation is + 40.0 to + 43.0, calculated with reference to the dried substance.

Ninhydrin-positive substances

Examine by thin-layer chromatography *(2.2.27)*, using a *TLC silica gel plate R.*

Test solution (a) Dissolve 0.10 g of the substance to be examined in *0.1 M hydrochloric acid* and dilute to 10 ml with the same acid.

Test solution (b) Dilute 1 ml of test solution (a) to 50 ml with *water R*.

Reference solution (a) Dissolve 10 mg of *isoleucine CRS* in *0.1 M hydrochloric acid* and dilute to 50 ml with the same acid.

Reference solution (b) Dilute 5 ml of test solution (b) to 20 ml with *water R.*

Reference solution (c) Dissolve 10 mg of *isoleucine CRS* and 10 mg of *valine CRS* in *0.1 M hydrochloric acid* and dilute to 25 ml with the same acid.

Apply separately to the plate 5 µl of each solution. Develop over a path of 15 cm using a mixture of 20 volumes of *glacial acetic acid R*, 20 volumes of *water R* and 60 volumes of *butanol R*. Allow the plate to dry in air, spray with *ninhydrin solution R* and heat at 100-105 °C for 15 min. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (c) shows 2 clearly separated spots.

Chlorides *(2.4.4)*

Dissolve 0.25 g in *water R* and dilute to 15 ml with the same solvent. The solution complies with the limit test for chlorides (200 ppm).

Sulphates *(2.4.13)*

Dissolve 0.5 g in 3 ml of *dilute hydrochloric acid R* and dilute to 15 ml with *distilled water R*. The solution complies with the limit test for sulphates (300 ppm).

Ammonium *(2.4.1)*

50 mg complies with limit test B for ammonium (200 ppm). Prepare the standard using 0.1 ml of *ammonium standard solution (100 ppm* NH_4*) R*.

Iron *(2.4.9)*

In a separating funnel, dissolve 1.0 g in 10 ml of *dilute hydrochloric acid R*. Shake with 3 quantities, each of 10 ml, of *methyl isobutyl ketone R1*, shaking for 3 min each time. To the combined organic layers add 10 ml of *water R* and shake for 3 min. The aqueous layer complies with the limit test for iron (10 ppm).

Heavy metals *(2.4.8)*

2.0 g complies with limit test D for heavy metals (10 ppm). Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying *(2.2.32)*

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.100 g in 3 ml of *anhydrous formic acid R*. Add 30 ml of *anhydrous acetic acid R*. Using 0.1 ml of *naphtholbenzein solution R* as indicator, titrate with *0.1 M perchloric acid* until the colour changes from brownish-yellow to green.

1 ml of *0.1 M perchloric acid* is equivalent to 13.12 mg of $C_6H_{13}NO_2$.

STORAGE

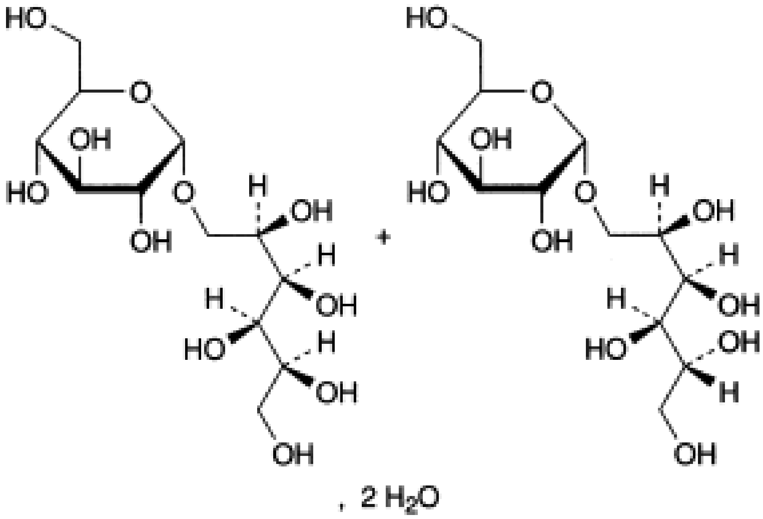
Store protected from light.

Ph Eur

Isomalt

General Notices

(Ph Eur monograph 1531)



$C_{12}H_{24}O_{11}$ 344.3

$C_{12}H_{24}O_{11},2H_2O$ 380.3

Action and use

Sweetening agent.

Ph Eur

DEFINITION

Mixture of 6-*C*-α-D-glucopyranosyl-D-glucitol (6-*C*-α-D-glucopyranosyl-D-sorbitol; 1,6-GPS) and 1-*O*-α-D-glucopyranosyl-D-mannitol (1,1-GPM).

Content

98.0 per cent to 102.0 per cent for the mixture of 1,6-GPS and 1,1-GPM and neither of the 2 components is less than 3.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white powder or granules.

Solubility

Freely soluble in water, practically insoluble in anhydrous ethanol.

IDENTIFICATION

First identification *A.*

Second identification *B, C.*

A. Examine the chromatograms obtained in the assay.

Results The 2 principal peaks in the chromatogram obtained with the test solution are similar in retention time to the 2 principal peaks in the chromatogram obtained with reference solution (a).

B. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 50 mg of the substance to be examined in *water R* and dilute to 10 ml with the same solvent.

Reference solution Dissolve 50 mg of *isomalt CRS* in *water R* and dilute to 10 ml with the same solvent.

Plate *TLC silica gel* F_{254} *plate R*.

Mobile phase *acetic acid R, propionic acid R, water R, ethyl acetate R, pyridine R* (5:5:10:50:50 *V/V/V/V/V*).

Application 1 µl; thoroughly dry the starting points in warm air.

Development Over a path of 10 cm.

Drying In a current of warm air.

Detection Dip for 3 s in a 1 g/l solution of *sodium periodate R* and dry in a current of hot air; dip for 3 s in a mixture of 1 volume of *acetic acid R,* 1 volume of *anisaldehyde* R, 5 volumes of *sulphuric acid R* and 90 volumes of *anhydrous ethanol R*; dry in a current of hot air until coloured spots become visible; the background colour may be brightened in warm steam; examine in daylight.

Results The chromatogram obtained with the reference solution shows 2 blue-grey spots with R_F values of about 0.13 (1,6-GPS) and 0.16 (1,1-GPM). The chromatogram obtained with the test solution shows principal spots similar in position and colour to the principal spots in the chromatogram obtained with the reference solution.

C. To 3 ml of a freshly prepared 100 g/l solution of *pyrocatechol R* add 6 ml of *sulphuric acid R* while cooling in iced water. To 3 ml of the cooled mixture add 0.3 ml of a 100 g/l solution of the substance to be examined. Heat gently over a naked flame for about 30 s. A pink colour develops.

TESTS

Conductivity *(2.2.38)*

Maximum 20 µS·cm^{-1}.

Dissolve 20.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100.0 ml with the same solvent. Measure the conductivity of the solution while gently stirring with a magnetic stirrer.

Reducing sugars

Maximum 0.3 per cent, expressed as glucose equivalent.

Dissolve 3.3 g in 10 ml of *water R* with the aid of gentle heat. Cool and add 20 ml of *cupri-citric solution R* and a few glass beads. Heat so that the boiling begins after 4 min and maintain boiling for 3 min. Cool rapidly and add 100 ml of a 2.4 per cent *V/V* solution of *glacial acetic acid R* and 20.0 ml of *0.025 M iodine*. With continuous shaking, add 25 ml of a mixture of 6 volumes of *hydrochloric acid R* and 94 volumes of *water R*. When the precipitate has dissolved, titrate the excess of iodine with *0.05 M sodium thiosulphate* using 1 ml of *starch solution R* as indicator, added towards the end of the titration. Not less than 12.8 ml of *0.05 M sodium thiosulphate* is required.

Related products

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 1.00 g of the substance to be examined in 20 ml of *water R* and dilute to 50.0 ml with the same solvent.

Reference solution (a) Dissolve 1.00 g of *isomalt CRS* in 20 ml of *water R* and dilute to 50.0 ml with the same solvent.

Reference solution (b) Dissolve 10.0 mg of *sorbitol CRS* (impurity C) and 10.0 mg of *mannitol CRS* (impurity B) in 20 ml of *water R* and dilute to 100.0 ml with the same solvent.

Precolumn:
— *size*: *l* = 30 mm, Ø = 4.6 mm;

— *stationary phase*: *strong cation-exchange resin (calcium form) R* (9 µm);

— *temperature*: 80 ± 1 °C.

Column:
— *size*: *l* = 0.3 m, Ø = 7.8 mm;

— *stationary phase*: *strong cation-exchange resin (calcium form) R* (9 µm);

— *temperature*: 80 ± 1 °C.

Mobile phase degassed *water R*.

Flow rate 0.5 ml/min.

Detection Differential refractometer maintained at a constant temperature.

Injection 20 µl of the test solution and reference solution (b).

Run time Until impurity C is completely eluted (about 25 min).

Relative retention with reference to 1,1-GPM (retention time = about 12.3 min): impurity A = about 0.8; 1,6-GPS = about 1.2; impurity B = about 1.6; impurity C = about 2.0.

Limits:
— *impurities B, C*: for each impurity, not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *any other impurity*: for each impurity, not more than the area of the peak due to impurity C in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *total*: not more than 4 times the area of the peak due to impurity C in the chromatogram obtained with reference solution (b) (2 per cent);

— *disregard limit*: 0.2 times the area of the peak due to impurity C in the chromatogram obtained with reference solution (b) (0.1 per cent).

Lead *(2.4.10)*

Maximum 0.5 ppm.

Nickel *(2.4.15)*

Maximum 1 ppm.

Water *(2.5.12)*

Maximum 7.0 per cent, determined on 0.3 g. As solvent, use a mixture of 20 ml of *anhydrous methanol R* and 20 ml of *formamide R* at 50 ± 5 °C.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related products with the following modification.

Injection Test solution and reference solution (a).

Calculate the percentage content of isomalt (1,1-GPM and 1,6-GPS) from the declared content of 1,1-GPM and 1,6-GPS in *isomalt CRS*.

LABELLING

The label states the percentage content of 1,6-GPS and 1,1-GPM.

IMPURITIES

Specified impurities *B, C.*

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, D*.

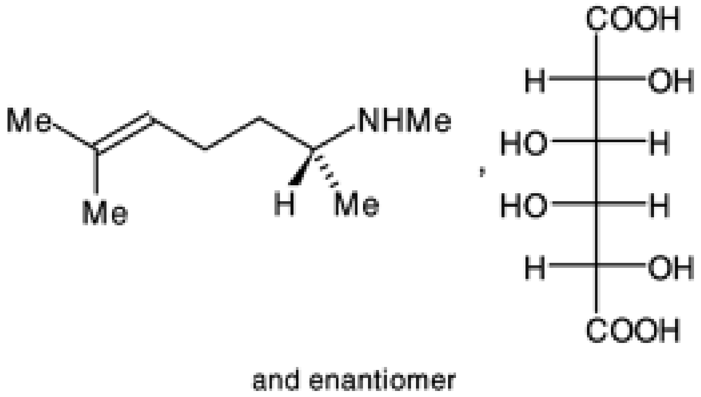
Ph Eur

Isometheptene Mucate

General Notices



$(C_9H_{19}N)_2,C_6H_{10}O_8$ 492.7 *7492-31-1*

Action and use

Adrenoceptor agonist.

DEFINITION

Isometheptene Mucate is (*RS*)-1,5-dimethylhex-4-enyl(methyl)amine *galacto*-2,3,4,5-tetrahydroxyadipate. It contains not less than 98.5% and not more than 100.5% of $(C_9H_{19}N)_2$, $C_6H_{10}O_8$, calculated with reference to the dried substance.

CHARACTERISTICS

A white, crystalline powder.

Very soluble in *water*; slightly soluble in *absolute ethanol*; practically insoluble in *ether*.

IDENTIFICATION

A. Dissolve 0.2 g in 10 ml of *water*, make the solution alkaline with 2M *sodium hydroxide*, extract with 20 ml of *dichloromethane*, dry the dichloromethane layer over *anhydrous sodium sulphate*, filter and evaporate to dryness at a pressure of 2 kPa. The *infrared absorption spectrum* of the residue, Appendix II A, is concordant with the *reference spectrum* of isometheptene *(RS 195)*.

B. Prepare a 5.0% w/v solution of the substance being examined in *carbon-dioxide free water* (solution A) and acidify 10 ml with 6M *hydrochloric acid*, scratch the side of the tube with a glass rod to initiate crystallisation, filter, wash the precipitate with *water* and dry at 105° for 10 minutes. The *infrared absorption spectrum* of the residue, Appendix II A, is concordant with the *reference spectrum* of mucic acid *(RS 377)*.

TESTS

Acidity

pH of solution A, 5.4 to 6.6, Appendix V L.

Clarity and colour of solution

Solution A is *clear*, Appendix IV A, and *colourless*, Appendix IV B, Method II.

Related substances

Dissolve 20 mg of *linalool* (internal standard) in sufficient *dichloromethane* to produce 100 ml (solution B). Carry out the method for *gas chromatography*, Appendix III B, using the following solutions. For solution (1) add 1 ml of 5M *sodium hydroxide* to 5 ml of a 0.050% w/v solution of the substance being examined, extract with 10 ml of solution B followed by 10 ml of *dichloromethane*, combine the dichloromethane layers and filter through *anhydrous sodium sulphate*. For solution (2) dissolve 0.5 g of the substance being examined in 5 ml of *water*, add 1 ml of 5M *sodium hydroxide*, extract with two 10 ml quantities of *dichloromethane*, combine the dichloromethane layers and filter through *anhydrous sodium sulphate*. Prepare solution (3) in the same manner as solution (2) but using 10 ml of solution B and 10 ml of *dichloromethane* in place of the two 10 ml quantities of *dichloromethane*. For solution (4) dissolve 10 mg of *1,5-dimethylhexyl(methyl)amine BPCRS* and 10 mg of *2-methyl-6-methylaminoheptan-2-ol BPCRS* in 50 ml of *dichloromethane*. For solution (5) dissolve 5 mg of the substance being examined and 5 mg of *linalool* in 25 ml of solution (4) and filter, if necessary.

The chromatographic procedure may be carried out using a glass column (1.5 m × 4 mm) packed with *acid-washed, silanised diatomaceous support* (100 to 120 mesh) (Chromosorb W-HP is suitable) coated with 10% w/w of polyethylene glycol (Carbowax 20M is suitable) and 5% w/w of *potassium hydroxide* at a temperature increased from 80° to 140° at a rate of 4° per minute and then maintained at 140° for 10 minutes or the time required for the emergence of the peak due to 2-methyl-6-methylaminoheptan-2-ol and with the inlet port at 190°, the detector at 200° and a flow rate of 40 ml per minute for the carrier gas.

The test is not valid unless the chromatogram obtained with solution (5) resembles the reference chromatogram provided with *1,5-dimethylhexyl(methyl)amine BPCRS* and *2-methyl-6-methylaminoheptan-2-ol BPCRS*.

Calculate the ratio (*a*) of the area of the peak due to isometheptene to that of the peak due to the internal standard in the chromatogram obtained with solution (1). In the chromatogram obtained with solution (3) the ratio of the area of any peak corresponding to 1,5-dimethylhexyl-(methyl)amine to the area of the peak due to the internal standard is not greater than 2*a*, the ratio of the area of any other *secondary peak* to the area of the peak due to the internal standard is not greater than *a* and the ratio of the sum of the areas of any secondary peaks to the area of the peak due to the internal standard is not greater than 3*a*.

Loss on drying

When dried to constant weight over *phosphorus pentoxide* at 60° at a pressure not exceeding 0.7 kPa, loses not more than 0.5% of its weight. Use 1 g.

Sulphated ash

Not more than 0.1%, Appendix IX A.

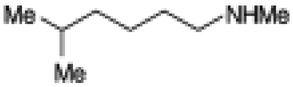
ASSAY

Dissolve 0.2 g in 25 ml of *water* and add 20 ml of 0.0167M *potassium bromate VS*, 10 ml of a 10% w/v solution of *potassium bromide* and 8 ml of *hydrochloric acid*. Allow to stand for 5 minutes in a stoppered flask, add 10 ml of *dilute potassium iodide solution*, allow to stand for 5 minutes and titrate the resulting solution with 0.1M *sodium thiosulphate VS* using *starch solution* as indicator. Repeat the procedure using 25 ml of *water* in place of the solution of the substance being examined. The difference between the titrations represents the amount of sodium thiosulphate required. Each ml of 0.0167M *potassium bromate VS* is equivalent to 12.32 mg of $(C_9H_{19}N)_2,C_6H_{10}O_8$.

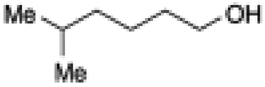
STORAGE

Isometheptene Mucate should be kept in an airtight container and protected from light.

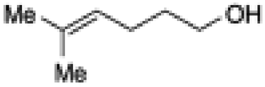
IMPURITIES



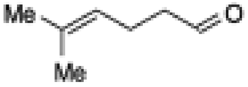
A. 1,5-dimethylhexyl(methyl)amine,



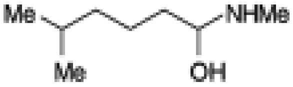
B. 2-methylheptan-6-ol,



C. 2-methylhept-2-en-6-ol,



D. 2-methylhept-2-en-6-one,

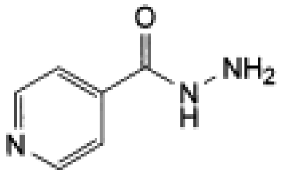


E. 2-methyl-6-methylaminoheptan-2-ol.

Isoniazid

General Notices

(Ph Eur monograph 0146)



$C_6H_7N_3O$ 137.1 *54-85-3*

Action and use

Antituberculosis drug.

Preparations

Isoniazid Injection

Isoniazid Tablets

Ph Eur

DEFINITION

Isoniazid contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of pyridine-4-carbohydrazide, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder or colourless crystals, freely soluble in water, sparingly soluble in alcohol.

IDENTIFICATION

First identification *A, B.*

Second identification *A, C.*

A. Melting point *(2.2.14)*: 170 °C to 174 °C.

B. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *isoniazid CRS*.

C. Dissolve 0.1 g in 2 ml of *water R* and add 10 ml of a warm 10 g/l solution of *vanillin R*. Allow to stand and scratch the wall of the test tube with a glass rod. A yellow precipitate is formed, which, after recrystallisation from 5 ml of *alcohol (70 per cent V/V) R* and drying at

100 °C to 105 °C, melts *(2.2.14)* at 226 °C to 231 °C.

TESTS

Solution S

Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1*) and not more intensely coloured than reference solution BY_7 *(2.2.2, Method II)*.

pH *(2.2.3)*

The pH of solution S is 6.0 to 8.0.

Hydrazine and related substances

Examine by thin-layer chromatography *(2.2.27)*, using *silica gel* GF_{254} *R* as the coating substance.

Test solution Dissolve 1.0 g of the substance to be examined in a mixture of equal volumes of *acetone R* and *water R* and dilute to 10.0 ml with the same mixture of solvents.

Reference solution Dissolve 50.0 mg of *hydrazine sulphate R* in 50 ml of *water R* and dilute to 100.0 ml with *acetone R*. To 10.0 ml of this solution add 0.2 ml of the test solution and dilute to 100.0 ml with a mixture of equal volumes of *acetone R* and *water R*.

Apply separately to the plate 5 µl of each solution and develop over a path of 15 cm using a mixture of 10 volumes of *water R*, 20 volumes of *acetone R,* 20 volumes of *methanol R* and 50 volumes of *ethyl acetate R.* Allow the plate to dry in air and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with the reference solution (0.2 per cent). Spray the plate with *dimethylaminobenzaldehyde solution R1*. Examine in daylight. An additional spot, corresponding to hydrazine, appears in the chromatogram obtained with the reference solution. Any corresponding spot in the chromatogram obtained with the test solution is not more intense than the spot corresponding to hydrazine in the chromatogram obtained with the reference solution (0.05 per cent).

Heavy metals *(2.4.8)*

2.0 g complies with limit test C for heavy metals (10 ppm). Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying *(2.2.32*)

Not more than 0.5 per cent, determined on 1.00 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in *water R* and dilute to 100.0 ml with the same solvent. To 20.0 ml of the solution add 100 ml of *water R,* 20 ml of *hydrochloric acid R*, 0.2 g of *potassium bromide R* and 0.05 ml of *methyl red solution R*. Titrate dropwise with *0.0167 M potassium bromate*, shaking continuously, until the red colour disappears.

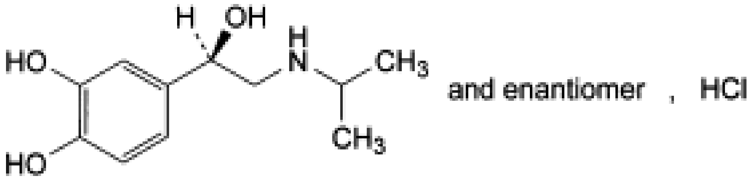
1 ml of *0.0167 M potassium bromate* is equivalent to 3.429 mg of $C_6H_7N_3O$.

Ph Eur

Isoprenaline Hydrochloride

General Notices

(Ph Eur monograph 1332)



$C_{11}H_{17}NO_3,HCl$ 247.7 *51-30-9*

Action and use

Adrenoceptor agonist.

Preparation

Isoprenaline Injection

Ph Eur

DEFINITION

(1*RS*)-1-(3,4-Dihydroxyphenyl)-2-[(1-methylethyl)amino]ethanol hydrochloride.

Content

98.0 per cent to 101.5 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water, sparingly soluble in ethanol (96 per cent), practically insoluble in methylene chloride.

IDENTIFICATION

First identification B, C, E.

Second identification A, C, D, E.

A. Melting point *(2.2.14)*: 165 °C to 170 °C, with decomposition.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs.

Comparison *isoprenaline hydrochloride CRS.*

C. Optical rotation (see Tests).

D. To 0.1 ml of solution S (see Tests) add 0.05 ml of *ferric chloride solution R1* and 0.9 ml of *water R*. A green colour is produced. Add dropwise *sodium hydrogen carbonate solution R*. The colour becomes blue then red.

E. To 0.5 ml of solution S add 1.5 ml of *water R*. The solution gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Prepare the solutions immediately before use.

Solution S

Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 25.0 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution B_7 or BY_7 *(2.2.2, Method II)*.

pH *(2.2.3)*

4.3 to 5.5.

Mix 5 ml of solution S and 5 ml of *carbon dioxide-free water R*.

Optical rotation *(2.2.7)*

- 0.10 ° to + 0.10 °, determined on solution S.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution (a) Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Test solution (b) Dilute 0.5 ml of test solution (a) to 100.0 ml with the mobile phase.

Reference solution (a) Dissolve 2.5 mg of *isoprenaline hydrochloride CRS* in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (b) Dissolve 2.5 mg of *orciprenaline sulphate CRS* in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (c) To 1.0 ml of test solution (b) add 1.0 ml of reference solution (b) and dilute to 20.0 ml with the mobile phase.

Column:

— *size*: l = 0.125 m, Ø = 4.0 mm;

— *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase *methanol R,* 11.5 g/l solution of *phosphoric acid R* (5:95 *V/V*).

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 280 nm.

Injection 20 µl of test solution (a) and reference solutions (a) and (c).

Run time 7 times the retention time of isoprenaline.

Retention time Isoprenaline = about 3 min; if necessary, adjust the concentration of methanol in the mobile phase.

System suitability Reference solution (c):

— *resolution*: minimum 3 between the peaks due to isoprenaline and orciprenaline;

— *signal-to-noise ratio*: minimum 3 for the peak due to isoprenaline.

Limits:

— *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

— *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (1 per cent);

— *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.025 per cent).

Loss on drying ***(2.2.32)***

Maximum 1.0 per cent, determined on 1.000 g by drying *in vacuo* at 15-25 °C for 4 h.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

In order to avoid overheating in the reaction medium, mix thoroughly throughout and stop the titration immediately after the end-point has been reached.

Dissolve 0.150 g in 10 ml of *anhydrous formic acid R* and add 50 ml of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

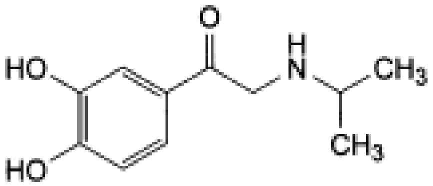
1 ml of *0.1 M perchloric acid* is equivalent to 24.77 mg of $C_{11}H_{18}ClNO_3$.

STORAGE

In an airtight container, protected from light.

IMPURITIES

Specified impurities *A.*



A. 1-(3,4-dihydroxyphenyl)-2-[(1-methylethyl)amino]ethanone.

Ph Eur

Isoprenaline Sulphate

General Notices

(Ph Eur monograph 0502)

Action and use

Adrenoceptor agonist.

Ph Eur

DEFINITION

Bis[(1*RS*)-1-(3,4-dihydroxyphenyl)-2-[(1-methylethyl)amino]ethanol] sulphate dihydrate.

Content

98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water, very slightly soluble in ethanol (96 per cent).

mp

About 128 °C, with decomposition.

IDENTIFICATION

First identification *A, D.*

Second identification *B, C, D.*

A. Infrared absorption spectrophotometry *(2.2.24)*.

Dissolve 0.5 g in 1.5 ml of *water R* and add 3.5 ml of *2-propanol R*. Scratch the wall of the tube with a glass rod to initiate crystallisation. Collect the crystals and dry *in vacuo* at 60 °C over *diphosphorus pentoxide R*.

Comparison Repeat the operations using 0.5 g of *isoprenaline sulphate CRS*.

B. To 0.1 ml of solution S (see Tests) add 0.9 ml of *water R* and 0.05 ml of *ferric chloride solution R1*. A green colour is produced. Add dropwise *sodium hydrogen carbonate solution R*. The colour becomes blue and then red.

C. Dilute 1 ml of solution S to 10 ml with *water R* and add 0.25 ml of *silver nitrate solution R1*. A shining, grey, fine precipitate is formed within 10 min and the solution becomes pink.

D. Solution S gives reaction (a) of sulphates *(2.3.1)*.

TESTS

Solution S

Dissolve 5.0 g in *carbon dioxide-free water R* and dilute to 50 ml with the same solvent. Use within 2 h of preparation.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution Y_6 *(2.2.2, Method II)*.

pH *(2.2.3)*

4.3 to 5.5.

Dilute 5 ml of solution S to 10 ml with *carbon dioxide-free water R*.

Isoprenalone

The absorbance *(2.2.25)* is not greater than 0.20 at 310 nm.

Dissolve 0.20 g in *0.005 M sulphuric acid* and dilute to 100.0 ml with the same acid.

Water *(2.5.12)*

5.0 per cent to 7.5 per cent, determined on 0.200 g.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.400 g in 20 ml of *anhydrous acetic acid R*, warming gently if necessary and add 20 ml of *methyl isobutyl ketone R*. Titrate with *0.1 M perchloric acid* determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 52.06 mg of $C_{22}H_{36}N_2O_{10}S$.

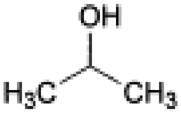
STORAGE

In an airtight container, protected from light.

Isopropyl Alcohol

General Notices

(Ph Eur monograph 0970)



C_3H_8O 60.1 *67-63-0*

Ph Eur

DEFINITION

Propan-2-ol.

CHARACTERS

Appearance

Clear, colourless liquid.

Solubility

Miscible with water and with alcohol.

IDENTIFICATION

A. Relative density *(2.2.5)*: 0.785 to 0.789.

B. Refractive index *(2.2.6)*: 1.376 to 1.379.

C. To 1 ml add 2 ml of *potassium dichromate solution R* and 1 ml of *dilute sulphuric acid R*. Boil. Vapour is produced which changes the colour of a piece of filter paper impregnated with *nitrobenzaldehyde solution R* to green. Moisten the filter paper with *dilute hydrochloric acid R*. The colour changes to blue.

TESTS

Appearance

The substance to be examined is clear *(2.2.1)* and colourless *(2.2.2, Method II).* Dilute 1 ml to 20 ml with *water R.* After 5 min, the solution is clear *(2.2.1)*.

Acidity or alkalinity

Gently boil 25 ml for 5 min. Add 25 ml of *carbon dioxide-free water R* and allow to cool protected from carbon dioxide in the air. Add 0.1 ml of *phenolphthalein solution R*. The solution is colourless. Not more than 0.6 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator to pale pink.

Absorbance *(2.2.25)*

Maximum 0.30 at 230 nm, 0.10 at 250 nm, 0.03 at 270 nm, 0.02 at 290 nm and 0.01 at 310 nm.

The absorbance is measured between 230 nm and 310 nm using *water R* as the compensation liquid. The absorption curve is smooth.

Benzene and related substances

Gas chromatography *(2.2.28*).

Test solution (a) The substance to be examined.

Test solution (b) Dilute 1.0 ml of *2-butanol R1* to 50.0 ml with test solution (a). Dilute 5.0 ml of the solution to 100.0 ml with test solution (a).

Reference solution (a) Dilute 0.5 ml of *2-butanol R1* and 0.5 ml of *propanol R* to 50.0 ml with test solution (a). Dilute 5.0 ml of the solution to 50.0 ml with test solution (a).

Reference solution (b) Dilute 100 µl of *benzene R* to 100.0 ml with test solution (a). Dilute 0.20 ml of the solution to 100.0 ml with test solution (a).

Column:

— *material*: fused silica,

— *size*: *l* = 30 m, Ø = 0.32 mm,

— *stationary phase: poly[(cyanopropyl)(phenyl)][dimethyl]siloxane R* (film thickness 1.8 µm).

Carrier gas *helium for chromatography R.*

Auxiliary gas *nitrogen for chromatography R* or *helium for chromatography R*.

Linear velocity 35 cm/s.

Split ratio 1:5.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 12	40
	12 - 32	40 → 240
	32 - 42	240
Injection port		280
Detector		280

Detection Flame ionisation.

Injection 1 µl.

Retention time benzene = about 10 min.

System suitability Reference solution (a):

— *resolution*: minimum of 10 between the first peak (propanol) and the second peak (2-butanol).

Limits

— *benzene* (test solution (a)): not more than half of the area of the corresponding peak in the chromatogram obtained with reference solution (b) (2 ppm), after the sensitivity has been adjusted so that the height of the peak due to benzene in the chromatogram obtained with reference solution (b) represents at least 10 per cent of the full scale of the recorder.

— *total of impurities apart from 2-butanol* (test solution (b)): not more than 3 times the area of the peak due to 2-butanol in the chromatogram obtained with test solution (b) (0.3 per cent), after the sensitivity has been adjusted so that the height of the 2 peaks following the principal peak in the chromatogram obtained with reference solution (a) represents at least 50 per cent of the full scale of the recorder.

Peroxides

In a 12 ml test-tube with a ground-glass stopper and a diameter of about 15 mm, introduce 8 ml of *potassium iodide and starch solution R.* Fill completely with the substance to be examined. Shake vigorously and allow to stand protected from light for 30 min. No colour develops.

Non-volatile substances

Maximum 20 ppm.

Evaporate 100 g to dryness on a water-bath *after having verified that it complies with the test for peroxides* and dry in an oven at 100-105 °C. The residue weighs a maximum of 2 mg.

Water ***(2.5.12)***

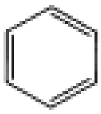
Maximum 0.5 per cent, determined on 5.0 g.

STORAGE

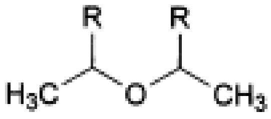
Protected from light.

IMPURITIES

A. acetone,



B. benzene,



C. R = CH_3: 2-(1-methylethoxy)propane (diisopropyl ether),

D. R = H: ethoxyethane (diethyl ether),

E. CH_3-OH: methanol,

Ph Eur

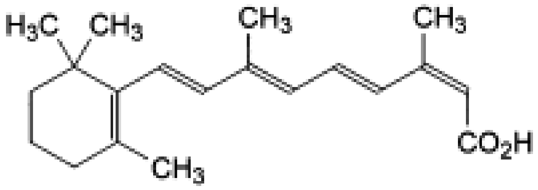
Isotretinoin

General Notices

(Ph Eur monograph 1019)



$C_{20}H_{28}O_2$ 300.4 *4759-48-2*

Action and use

Vitamin A analogue (retinoid); treatment of acne.

Preparations

Isotretinoin Capsules

Isotretinoin Gel

Ph Eur

DEFINITION

Isotretinoin contains not less than 98.0 per cent and not more than the equivalent of 102.0 per cent of (2*Z*,4*E*,6*E*,8*E*)-3,7-dimethyl-9-(2,6,6-trimethylcyclohex-1-enyl)nona-2,4,6,8-tetraenoic acid, calculated with reference to the dried substance.

CHARACTERS

A yellow or light-orange, crystalline powder, practically insoluble in water, soluble in methylene chloride, slightly soluble in alcohol. It is sensitive to air, heat and light, especially in solution.

Carry out all operations as rapidly as possible and avoid exposure to actinic light; use freshly prepared solutions.

IDENTIFICATION

First identification *A, B.*

Second identification *A, C, D.*

A. Dissolve 75.0 mg in 5 ml of *methylene chloride R* and dilute immediately to 100.0 ml with acidified 2-propanol (prepared by diluting 1 ml of *0.01 M hydrochloric acid* to 1000 ml with

2-propanol R). Dilute 5.0 ml of this solution to 100.0 ml with the acidified 2-propanol (solution A). Dilute 5.0 ml of solution A to 50.0 ml with the acidified 2-propanol. Examined between 300 nm and 400 nm *(2.2.25)*, the solution shows an absorption maximum at 354 nm. The specific absorbance at the maximum is 1290 to 1420.

B. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *isotretinoin CRS*. Examine the substances prepared as discs.

C. Examine by thin-layer chromatography *(2.2.27)*, using a *TLC silica gel* GF_{254} *plate R*.

Test solution Dissolve 10 mg of the substance to be examined in *methylene chloride R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dissolve 10 mg of *isotretinoin CRS* in *methylene chloride R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dissolve 10 mg of *isotretinoin CRS* and 10 mg of *tretinoin CRS* in *methylene chloride R* and dilute to 10 ml with the same solvent.

Apply separately to the plate 5 µl of each solution. Develop over a path of 15 cm using a mixture of 2 volumes of *glacial acetic acid R*, 4 volumes of *acetone R*, 40 volumes of *peroxide-free ether R* and 54 volumes of *cyclohexane R*. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a). The test is not valid unless the chromatogram obtained with reference solution (b) shows two clearly separated principal spots.

D. Dissolve about 5 mg in 2 ml of *antimony trichloride solution R*. An intense red colour develops and later becomes violet.

TESTS

Related substances

Examine by liquid chromatography *(2.2.29)*.

Test solution Dissolve 0.100 g of the substance to be examined in *methanol R* and dilute to 50.0 ml with the same solvent.

Reference solution (a) Dissolve 10.0 mg of *tretinoin CRS* in *methanol R* and dilute to 10.0 ml with the same solvent.

Reference solution (b) Dilute 1.0 ml of reference solution (a) to 25.0 ml with *methanol R*.

Reference solution (c) Mix 1.0 ml of reference solution (a) with 0.5 ml of the test solution and dilute to 25.0 ml with *methanol R*.

Reference solution (d) Dilute 0.5 ml of the test solution to 100.0 ml with *methanol R.*

The chromatographic procedure may be carried out using:

— a stainless steel column 0.15 m long and 4.6 mm in internal diameter packed with *octadecylsilyl silica gel for chromatography R* (3 µm),

— as mobile phase at a flow rate of 1.0 ml/min a mixture of 5 volumes of *glacial acetic acid R*, 225 volumes of *water R* and 770 volumes of *methanol R*.

— as detector a spectrophotometer set at 355 nm.

Inject separately 10 µl of each of reference solutions (b), (c) and (d) and of the test solution. Adjust the sensitivity of the detector so that the height of the principal peak in the chromatogram obtained with reference solution (b) is not less than 70 per cent of the full scale of the recorder. The test is not valid unless the resolution between the peaks due to isotretinoin and tretinoin in the chromatogram obtained with reference solution (c) is at least 2.0. In the chromatogram obtained with the test solution: the area of any peak due to tretinoin is not greater than the area of the principal peak in the chromatogram obtained with reference solution (b) (2.0 per cent); the sum of the areas of any peaks, apart from the principal peak and any peak due to tretinoin, is not greater than the area of the principal peak in the chromatogram obtained with reference solution (d) (0.5 per cent).

Heavy metals *(2.4.8)*

0.5 g complies with limit test D for heavy metals (20 ppm). Prepare the standard using 1 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying *(2.2.32)*

Not more than 0.5 per cent, determined on 1.000 g by drying *in vacuo* for 16 h.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 70 ml of *acetone R*. Titrate with *0.1 M tetrabutylammonium hydroxide* determining the end-point potentiometrically (*2.2.20).*

1 ml of *0.1 M tetrabutylammonium hydroxide* is equivalent to 30.04 mg of $C_{20}H_{28}O_2$.

STORAGE

Store in an airtight container, protected from light, at a temperature not exceeding 25 °C.

It is recommended that the contents of an opened container be used as soon as possible and any unused part be protected by an atmosphere of an inert gas.

IMPURITIES

A. tretinoin,

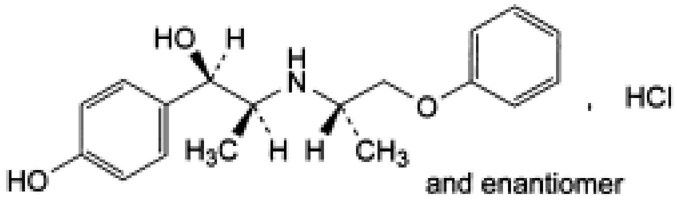
Ph Eur

Isoxsuprine Hydrochloride

General Notices

(Ph Eur monograph 1119)



$C_{18}H_{23}NO_3,HCl$ 337.8 *579-56-6*

Action and use

Beta$_2$-adrenoceptor agonist.

Ph Eur

DEFINITION

(1*RS*,2*SR*)-1-(4-Hydroxyphenyl)-2-[[(1*SR*)-1-methyl-2-phenoxyethyl]amino]propan-1-ol hydrochloride.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Sparingly soluble in water and in ethanol (96 per cent), practically insoluble in methylene chloride.

mp

About 205 °C, with decomposition.

IDENTIFICATION

First identification B, E.

Second identification *A, C, D, E*.

A. Ultraviolet and visible absorption spectrophotometry *(2.2.25)*.

Test solution Dissolve 50.0 mg in *0.1 M hydrochloric acid* and dilute to 50.0 ml with the same acid. Dilute 10.0 ml of this solution to 100.0 ml with *0.1 M hydrochloric acid*.

Spectral range 230-350 nm.

Absorption maxima At 269 nm and 275 nm.

Resolution (2.2.25) Minimum 1.7 for the absorbance ratio.

Specific absorbance at the absorption maxima:
— at 269 nm: 71 to 74;

— at 275 nm: 70 to 73.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs.

Comparison *isoxsuprine hydrochloride CRS.*

If the spectra obtained show differences, dissolve 50 mg of the substance to be examined and of the reference substance separately in 2 ml of *methanol R*, add 15 ml of *methylene chloride R*, evaporate to dryness and record new spectra using the residues.

C. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 20 mg of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution Dissolve 20 mg of *isoxsuprine hydrochloride CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Plate *TLC silica gel G plate R.*

Mobile phase *concentrated ammonia R, methanol R, methylene chloride R* (0.25:15:85 *V/V/V*).

Application 10 µl.

Development Over a path of 12 cm.

Drying In a current of warm air.

Detection Spray with a 10 g/l solution of *potassium permanganate R*.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

D. To 1 ml of solution S (see Tests) add 0.05 ml of *copper sulphate solution R* and 0.5 ml of *strong sodium hydroxide solution R*. The solution becomes blue. Add 1 ml of *ether R* and shake. Allow to separate. The upper layer remains colourless.

E. 2 ml of solution S gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Solution S

Dissolve 0.50 g, with gentle heating if necessary, in *carbon dioxide-free water R*, cool and dilute to 50.0 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II*).

pH *(2.2.3)*

4.5 to 6.0 for solution S.

Optical rotation *(2.2.7)*

- 0.05 ° to + 0.05 °, determined on solution S.

Phenones

Maximum 1.0 per cent, calculated as impurity B.

Dissolve 10.0 mg in *water R* and dilute to 100.0 ml with the same solvent. The absorbance *(2.2.25)* of the solution measured at the absorption maximum at 310 nm is not greater than 0.10.

Related substances

Gas chromatography *(2.2.28)*. *Prepare the solutions immediately before use.*

Internal standard solution (a) Dissolve 0.1 g of *hexacosane R* in *trimethylpentane R* and dilute to 20 ml with the same solvent.

Internal standard solution (b) Dilute 1 ml of internal standard solution (a) to 50 ml with *trimethylpentane R*.

Test solution To 10.0 mg of the substance to be examined, add 0.5 ml of *N-trimethylsilylimidazole R*. Heat to 65 °C for 10 min. Allow to cool, then add 2.0 ml of the internal standard solution (b) and 2.0 ml of *water R.* Shake. Use the upper layer.

Reference solution (a) To 10.0 mg of the substance to be examined, add 0.5 ml of *N-trimethylsilylimidazole R*. Heat to 65 °C for 10 min. Allow to cool, then add 2.0 ml of the internal standard solution (a) and 2.0 ml of *water R*. Shake. Dilute 1.0 ml of the upper layer to 50.0 ml with *trimethylpentane R*.

Reference solution (b) To 10.0 mg of the substance to be examined, add 0.5 ml of *N-trimethylsilylimidazole R*. Heat to 65 °C for 10 min. Allow to cool, then add 2.0 ml of *trimethylpentane R* and 2.0 ml of *water R.* Shake. Use the upper layer.

Column:

— *material: glass*;

— *size*: *l* = 1.5 m, Ø = 4 mm;

— *stationary phase*: *silanised diatomaceous earth for gas chromatography R* (125-135 µm) impregnated with 3 per cent *m/m* of *poly(dimethyl)siloxane R*.

Carrier gas *nitrogen for chromatography R.*

Flow rate 30 ml/min.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 25	195
	25 - 29	195 → 215
	29 - 39	215
Injection port		225
Detector		225

Detection Flame ionisation.

Injection 1 µl.

Elution order Isoxsuprine, hexacosane.

System suitability:
- *resolution*: minimum 5.0 between the peaks due to isoxsurpine and hexacosane in the chromatogram obtained with reference solution (a);
- in the chromatogram obtained with reference solution (b), there is no peak with the same retention time as the internal standard.

Limit:
- *total*: calculate the ratio (*R*) of the area of the peak due to the trimethylsilyl derivative of isoxsuprine to the area of the peak due to the internal standard from the chromatogram obtained with reference solution (a); from the chromatogram obtained with the test solution, calculate the ratio of the sum of the areas of any peaks, apart from the principal peak and the peak due to the internal standard, to the area of the peak due to the internal standard: this ratio is not greater than *R* (2.0 per cent).

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 80 ml of *ethanol (96 per cent) R* and add 1.0 ml of *0.1 M hydrochloric acid*. Carry out a potentiometric titration *(2.2.20)*, using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 33.78 mg of $C_{18}H_{24}ClNO_3$.

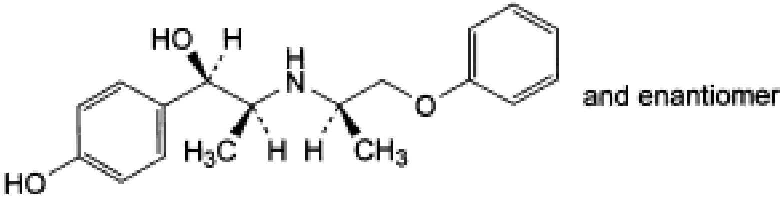
STORAGE

Protected from light.

IMPURITIES

Specified impurities *B.*

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A*.



A. (1*RS*,2*SR*)-1-(4-hydroxyphenyl)-2-[[(1*RS*)-1-methyl-2-phenoxyethyl]amino]propan-1-ol,

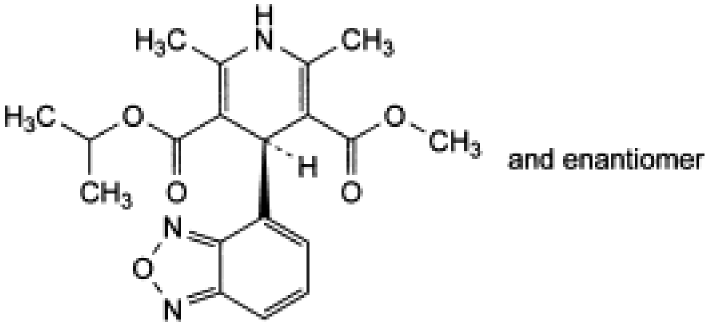
General Notices

(Ph Eur monograph 2110)



$C_{19}H_{21}N_3O_5$ 371.4 *75695-93-1*

Action and use

Calcium channel blocker.

Preparation

Isradipine Tablets

Ph Eur

DEFINITION

Methyl 1-methylethyl (4*RS*)-4-(2,1,3-benzoxadiazol-4-yl)-2,6-dimethyl-1,4-dihydropyridine-3,5-dicarboxylate.

Content

97.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

Yellow, crystalline powder.

Solubility

Practically insoluble in water, freely soluble in acetone, soluble in methanol.

mp

About 168 °C.

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)*.

Comparison isradipine CRS.

TESTS

Related substances

Liquid chromatography *(2.2.29)*.

Test solution (a) Dissolve 50.0 mg of the substance to be examined in 1 ml of *methanol R*, using an ultrasonic bath if necessary, and dilute to 25.0 ml with the mobile phase.

Test solution (b) Dissolve 50.0 mg of the substance to be examined in 2 ml of *methanol R* and dilute to 250.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of test solution (a) to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (b) Dissolve 2 mg of the substance to be examined and 2 mg of *isradipine impurity D CRS* in the mobile phase and dilute to 10.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (c) Dissolve 50.0 mg of *isradipine CRS* in 2 ml of *methanol R* and dilute to 250.0 ml with the mobile phase.

Column:
- *size*: *l* = 0.10 m, Ø = 4.6 mm,
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase *acetonitrile R, tetrahydrofuran R, water R* (125:270:625 *V/V/V*).

Flow rate 1.2 ml/min.

Detection Spectrophotometer at 230 nm.

Injection 20 µl of test solution (a) and reference solutions (a) and (b).

Run time 5 times the retention time of isradipine.

Identification of impurities Use the chromatogram supplied with *isradipine CRS* to identify the peaks due to impurities A and B.

Relative retention with reference to isradipine (retention time = about 7 min): impurity A = about 0.8; impurity D = about 0.9; impurity B = about 1.8.

System suitability Reference solution (b):

- *resolution*: minimum 2.0 between the peaks due to isradipine and impurity D.

Limits:
- *correction factor*: for the calculation of content, multiply the peak area of impurity D by 1.4;
- *impurity A*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

— *impurity B*: not more than 8 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.8 per cent);

— *impurity D*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

— *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

— *total*: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Loss on drying *(2.2.32)*

Maximum 0.2 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modifications.

Detection Spectrophotometer at 326 nm.

Injection Test solution (b) and reference solution (c).

Run time Twice the retention time of isradipine.

Calculate the percentage content of isradipine from the areas of the peaks and the declared content of *isradipine CRS*.

STORAGE

Protected from light.

IMPURITIES

its epimer at C*

and their enantiomers

$C_{35}H_{38}Cl_2N_8O_4$ 706 *84625-61-6*

Action and use

Antifungal.

Ph Eur

DEFINITION

Itraconazole contains not less than 98.5 per cent and not more than the equivalent of 101.5 per cent of 4-[4-[4-[4-[[*cis*-2-(2,4-dichlorophenyl)-2-(1*H*-1,2,4-triazol-1-ylmethyl)-1,3-dioxolan-4-yl]methoxy]phenyl]piperazin-1-yl]phenyl]-2-[(1*RS*)-1-methylpropyl]-2,4-dihydro-3*H*-1,2,4-triazol-3-one, calculated with reference to the dried substance.

CHARACTERS

A white or almost white powder, practically insoluble in water, freely soluble in methylene chloride, sparingly soluble in tetrahydrofuran, very slightly soluble in alcohol.

IDENTIFICATION

First identification *B.*

Second identification *A, C, D.*

A. Melting point *(2.2.14)*: 166 °C to 170 °C.

B. Examine by infrared spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *itraconazole CRS*. Examine the substance prepared as discs.

C. Examine by thin-layer chromatography *(2.2.27)*, using a suitable *octadecylsilyl silica gel* as the coating substance.

Test solution Dissolve 30 mg of the substance to be examined in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 5 ml with the same mixture of solvents.

Reference solution (a) Dissolve 30 mg of *itraconazole CRS* in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 5 ml with the same mixture of solvents.

Reference solution (b) Dissolve 30 mg of *itraconazole CRS* and 30 mg of *ketoconazole CRS* in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 5 ml with the same mixture of solvents.

Apply to the plate 5 µl of each solution. Develop in an unsaturated tank over a path of 10 cm using a mixture of 20 volumes of *ammonium acetate solution R,* 40 volumes of *dioxan R* and 40 volumes of *methanol R.* Dry the plate in a current of warm air for 15 min and expose it to iodine vapour until the spots appear. Examine in daylight. The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a). The test is not valid unless the chromatogram obtained with reference solution (b) shows two clearly separated spots.

D. To 30 mg in a porcelain crucible add 0.3 g of *anhydrous sodium carbonate R*. Heat over an open flame for 10 min. Allow to cool. Take up the residue with 5 ml of *dilute nitric acid R* and filter. To 1 ml of the filtrate add 1 ml of *water R*. The solution gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Solution S

Dissolve 2.0 g in *methylene chloride R* and dilute to 20.0 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution BY_6 *(2.2.2, Method II).*

Optical rotation *(2.2.7)*

The angle of optical rotation is - 0.10 ° to + 0.10 °, determined on solution S.

Related substances

Examine by liquid chromatography *(2.2.29)*.

Test solution Dissolve 0.100 g of the substance to be examined in a mixture of equal volumes of *methanol R* and *tetrahydrofuran R* and dilute to 10.0 ml with the same mixture of solvents.

Reference solution (a) Dissolve 5.0 mg of *itraconazole CRS* and 5.0 mg of *miconazole CRS* in a mixture of equal volumes of *methanol R* and *tetrahydrofuran R* and dilute to 100.0 ml with the same mixture of solvents.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with a mixture of equal volumes of *methanol R* and *tetrahydrofuran R*. Dilute to 5.0 ml of this solution to 10.0 ml with the same mixture of solvents.

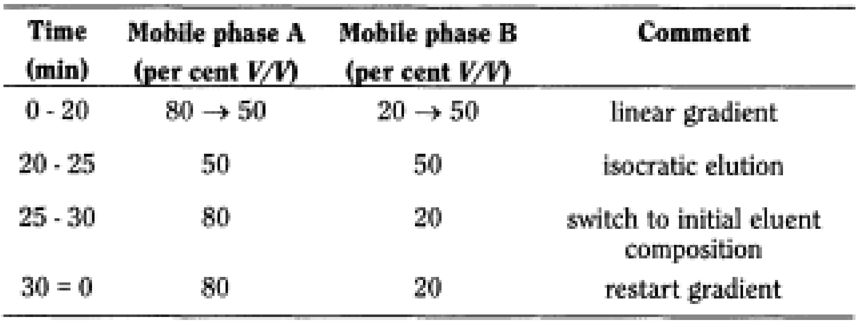
The chromatographic procedure may be carried out using:

— a stainless steel column 0.1 m long and 4.0 mm in internal diameter packed with *base-deactivated octadecylsilyl silica gel for chromatography R* (3 µm);

— as mobile phase at a flow rate of 1.5 ml/min a gradient programme using the following conditions:

Mobile phase A A 27.2 g/l solution of *tetrabutylammonium hydrogen sulphate R,*

Mobile phase B *Acetonitrile R,*



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)	Comment
0 - 20	80 → 50	20 → 50	linear gradient
20 - 25	50	50	isocratic elution
25 - 30	80	20	switch to initial eluent composition
30 = 0	80	20	restart gradient

— as detector a spectrophotometer set at 225 nm.

Equilibrate the column for at least 30 min with *acetonitrile R* at a flow rate of 1.5 ml/min and then equilibrate at the initial eluent composition for at least 5 min.

Adjust the sensitivity of the system so that the height of the principal peak in the chromatogram obtained with 10 µl of reference solution (b) is at least 50 per cent of the full scale of the recorder.

Inject 10 µl of reference solution (a). When the chromatogram is recorded in the prescribed conditions, the retention times are: miconazole about 10.5 min and itraconazole about 11 min. The test is not valid unless the resolution between the peaks corresponding to miconazole and itraconazole is at least 2.0. If necessary, adjust the concentration of acetonitrile in the mobile phase or adjust the time programme for the linear gradient elution.

Inject separately 10 µl of the mixture of equal volumes of *methanol R* and *tetrahydrofuran R* as a blank, 10 µl of the test solution and 10 µl of reference solution (b). In the chromatogram obtained with the test solution: the area of any peak, apart from the principal peak, is not greater than that of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent); the sum of the areas of all the peaks, apart from the principal peak, is not greater than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.25 per cent). Disregard any peak obtained with the blank run and any peak with an area less than 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b).

Loss on drying ***(2.2.32)***

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

Sulphated ash ***(2.4.14)***

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 70 ml of a mixture of 1 volume of *anhydrous acetic acid R* and 7 volumes of *methyl ethyl ketone R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically at the second point of inflexion *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 35.3 mg of $C_{35}H_{38}Cl_2N_8O_4$.

STORAGE

Store protected from light.

Ph Eur

DEFINITION

Mixture of (2a*E*,4*E*,5′*S*,6*S*,6′*R*,7*S*,8*E*,11*R*,13*R*,15*S*,17a*R*,20*R*,20a*R*,20b*S*)-7-[[2,6-dideoxy-4-*O*-(2,6-dideoxy-3-*O*-methyl-α-L-*arabino*-hexopyranosyl)-3-*O*-methyl-α-L-*arabino*-hexopyranosyl]oxy]-20,20b-dihydroxy-5′,6,8,19-tetramethyl-6′-[(1*S*)-1-methylpropyl]-3′,4′,5′,6,6′,7,10,11,14,15,17a,20,20a,20b-tetradecahydrospiro[11,15-methano-2*H*,13*H*,17*H*-furo[4,3,2-*pq*][2,6]benzodioxacyclooctadecene-13,2′-[2*H*]pyran]-17-one (or 5-*O*-demethyl-22,23-dihydroavermectin A_{1a}) (component H_2B_{1a}) and (2a*E*,4*E*,5′*S*,6*S*,6′*R*,7*S*,8*E*,11*R*,13*R*,15*S*, 17a*R*,20*R*,20a*R*,20b*S*)-7-[[2,6-dideoxy-4-*O*-(2,6-dideoxy-3-*O*-methyl-α-L-*arabino*-hexopyranosyl)-3-*O*-methyl-α-L-*arabino*-hexopyranosyl]oxy]-20,20b-dihydroxy-5′,6,8,19-tetramethyl-6′-(1-methylethyl)-3′,4′,5′,6,6′,7,10,11,14,15,17a,20,20a,20b-tetradecahydrospiro [11,15-methano-2*H*,13*H*,17*H*-furo[4,3,2-*pq*][2,6]benzodioxacyclooctadecene-13,2′-[2*H*]pyran]-17-one (or 5-*O*-demethyl-25-de(1-methylpropyl)-25-(1-methylethyl)-22,23-dihydroavermectin A_{1a}) (component H_2B_{1b}).

Semi-synthetic product derived from a fermentation product.

Content:

- ivermectin (H_2B_{1a} + H_2B_{1b}): 95.0 per cent to 102.0 per cent (anhydrous substance);
- ratio $H_2B_{1a}/(H_2B_{1a} + H_2B_{1b})$ (areas by liquid chromatography): minimum 90.0 per cent.

CHARACTERS

Appearance

White or yellowish-white, crystalline powder, slightly hygroscopic.

Solubility

Practically insoluble in water, freely soluble in methylene chloride, soluble in alcohol.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *ivermectin CRS.*

B. Examine the chromatograms obtained in the assay.

Results The retention times and sizes of the 2 principal peaks in the chromatogram obtained with the test solution are similar to those of the 2 principal peaks in the chromatogram obtained with reference solution (a).

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution BY_7 *(2.2.2, Method II)*.

Dissolve 1.0 g in 50 ml of *toluene R*.

Specific optical rotation *(2.2.7)*

- 17 to - 20 (anhydrous substance).

Dissolve 0.250 g in *methanol R* and dilute to 10.0 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 40.0 mg of the substance to be examined in *methanol R* and dilute to 50.0 ml with the same solvent.

Reference solution (a) Dissolve 40.0 mg of *ivermectin CRS* in *methanol R* and dilute to 50.0 ml with the same solvent.

Reference solution (b) Dilute 1.0 ml of reference solution (a) to 100.0 ml with *methanol R*.

Reference solution (c) Dilute 5.0 ml of reference solution (b) to 100.0 ml with *methanol R*.

Column:
- — *size*: *l* = 0.25 m, Ø = 4.6 mm;
- — *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase *water R, methanol R, acetonitrile R* (15:34:51 *V/V/V*).

Flow rate 1 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 20 µl.

System suitability:
- — *resolution*: minimum of 3.0 between the first peak (component H_2B_{1b}) and the second peak (component H_2B_{1a}) in the chromatogram obtained with reference solution (a);
- — *signal-to-noise ratio*: minimum of 10 for the principal peak in the chromatogram obtained with reference solution (c);
- — *symmetry factor*: maximum of 2.5 for the principal peak in the chromatogram obtained with reference solution (a).

Limits:
- — *impurity with a relative retention of 1.3 to 1.5* with reference to the principal peak: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (2.5 per cent);
- — *any other impurity* (apart from the 2 principal peaks): not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1 per cent);
- — *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (5 per cent);
- — *disregard limit*: area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

Ethanol and formamide

Gas chromatography *(2.2.28)*.

Internal standard solution Dilute 0.5 ml of *propanol R* to 100 ml with *water R*.

Test solution In a centrifuge tube, dissolve 0.120 g of the substance to be examined in 2.0 ml of *m-xylene R* (if necessary heat in a water-bath at 40-50 °C). Add 2.0 ml of *water R*, mix thoroughly and centrifuge. Remove the upper layer and extract it with 2.0 ml of *water R*. Discard the upper layer and combine the aqueous layers. Add 1.0 ml of the internal standard solution. Centrifuge and discard any remaining *m*-xylene.

Reference solution (a) Dilute 3.0 g of *ethanol R* to 100.0 ml with *water R*.

Reference solution (b) Dilute 1.0 g of *formamide R* to 100.0 ml with *water R.*

Reference solution (c) Dilute 5.0 ml of reference solution (a) and 5.0 ml of reference solution (b) to 50.0 ml with *water R*. Introduce 2.0 ml of this solution into a centrifuge tube, add 2.0 ml of *m-xylene R*, mix thoroughly and centrifuge. Remove the upper layer and extract it with 2.0 ml of *water R*. Discard the upper layer and combine the aqueous layers. Add 1.0 ml of the internal standard solution. Centrifuge and discard any remaining *m*-xylene.

Reference solution (d) Dilute 10.0 ml of reference solution (a) and 10.0 ml of reference solution (b) to 50.0 ml with *water R*. Treat as prescribed for reference solution (c) (from ″Introduce 2.0 ml of this solution...″).

Column:

- *material*: fused silica;
- *size*: *l* = 30 m, Ø = 0.53 mm;
- *stationary phase: macrogol 20 000 R* (film thickness 1 µm).

Carrier gas *helium for chromatography R.*

Flow rate 7.5 ml/min.

Split ratio 1:10.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 2	50 → 80
	2 - 8	80 → 240
Injection port		220
Detector		280

Detection Flame ionisation.

Injection 1 µl; inject the test solution and reference solutions (c) and (d).

Limits:

- *ethanol* : maximum 5.0 per cent;
- *formamide*: maximum 3.0 per cent.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with limit test C. Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R.*

Water *(2.5.12)*

Maximum 1.0 per cent, determined on 0.50 g.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances.

Injection 20 µl; inject the test solution and reference solution (a).

Calculate the percentage contents of ivermectin (H_2B_{1a} + H_2B_{1b}) and the ratio $H_2B_{1a}/(H_2B_{1a} + H_2B_{1b})$ using the declared contents of *ivermectin CRS*.

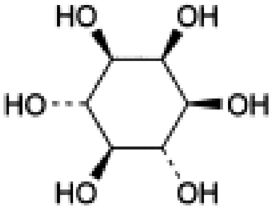
General Notices

(Ph Eur monograph 1805)



$C_6H_{12}O_6$ 180.2 *87-89-8*

Action and use

Vasodilator.

Ph Eur

DEFINITION

Cyclohexane-1,2,3,5/4,6-hexol.

Content

97.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Very soluble in water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison *myo-inositol CRS.*

B. Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference

solution (a).

TESTS

Solution S

Dissolve 10.0 g in *distilled water R* and dilute to 100.0 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Conductivity *(2.2.38)*

Maximum 30 µS·cm^{-1}.

Dissolve 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R,* with gentle warming if necessary, and dilute to 50.0 ml with the same solvent. Measure the conductivity of the solution while gently stirring with a magnetic stirrer.

Related substances

Liquid chromatography *(2.2.29).*

Test solution Dissolve 0.500 g of the substance to be examined in *water R* and dilute to 10.0 ml with the same solvent.

Reference solution (a) Dissolve 0.500 g of *myo-inositol CRS* in *water R* and dilute to 10.0 ml with the same solvent.

Reference solution (b) Dilute 2.0 ml of the test solution to 100.0 ml with *water R*. Dilute 5.0 ml of this solution to 100.0 ml with *water R*.

Reference solution (c) Dissolve 0.5 g of *myo-inositol R* and 0.5 g of *mannitol R* in *water R* and dilute to 10 ml with the same solvent.

Column:

- *size*: *l* = 0.3 m, Ø = 7.8 mm;
- *stationary phase: strong cation exchange resin (calcium form) R* (9 µm);
- *temperature:* 85 °C.

Mobile phase *water R.*

Flow rate 0.5 ml/min.

Detection Refractometer maintained at a constant temperature (at about 30-35 °C for example).

Injection 20 µl of the test solution and reference solutions (b) and (c).

Run time Twice the retention time of *myo*-inositol.

Relative retention with reference to *myo*-inositol (retention time = about 17.5 min): impurity A = about 1.3; impurity B = about 1.4.

System suitability Reference solution (c):

- *resolution*: minimum 4 between the peaks due to *myo*-inositol and impurity A.

Limits:

— *impurities A, B*: for each impurity, not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

— *total*: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Barium

To 10 ml of solution S add 1 ml of *dilute sulphuric acid R*. When examined immediately, and after 1 h, any opalescence in the solution is not more intense than that in a mixture of 1 ml of *distilled water R* and 10 ml of solution S.

Lead *(2.4.10)*

Maximum 0.5 ppm.

Prepare the test solution by dissolving 20.0 g of the substance to be examined in 100 ml of *water R*, heating if necessary, and diluting to 200.0 ml with *dilute acetic acid R*.

Water *(2.5.12)*

Maximum 0.5 per cent, determined on 1.00 g.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modification.

Injection Test solution and reference solution (a).

Calculate the percentage content of $C_6H_{12}O_6$ from the declared content of *myo-inositol CRS.*

IMPURITIES

Specified impurities A, B.

A. mannitol,

B. glycerol.

$C_{256}H_{381}N_{65}O_{76}S_6$ 5778 *12584-58-6*

Action and use

Hormone; treatment of diabetes mellitus.

Preparations

Insulin Preparations

Ph Eur

DEFINITION

Porcine insulin is the natural antidiabetic principle obtained from pork pancreas and purified.

Content:

— *sum of porcine insulin ($C_{256}H_{381}N_{65}O_{76}S_6$) and A21 desamido porcine insulin*: 95.0 per cent to 105.0 per cent (dried substance).

By convention, for the purpose of labelling insulin preparations, 0.0345 mg of porcine insulin is equivalent to 1 IU of insulin.

PRODUCTION

The animals from which porcine insulin is derived must fulfil the requirements for the health of animals suitable for human consumption.

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water and in ethanol. It dissolves in dilute mineral acids and with decomposition in dilute solutions of alkali hydroxides.

IDENTIFICATION

A. Examine the chromatograms obtained in the assay.

Results The retention time of the principal peak in the chromatogram obtained with the test solution corresponds to that of the principal peak in the chromatogram obtained with reference solution (b).

B. Peptide mapping.

Test solution Prepare a 2.0 mg/ml solution of the substance to be examined in *0.01 M hydrochloric acid* and transfer 500 µl of this solution to a clean tube. Add 2.0 ml of *HEPES buffer solution pH 7.5 R* and 400 µl of a 1 mg/ml solution of *Staphylococcus aureus strain V8 protease R*. Cap the tube and incubate at 25 °C for 6 h. Stop the reaction by adding 2.9 ml of *sulphate buffer solution pH 2.0 R*.

Reference solution Prepare at the same time and in the same manner as for the test solution but using *porcine insulin CRS* instead of the substance to be examined.

Examine the digests by liquid chromatography (*2.2.29*).

Column:

— *size*: *l* = 0.10 m, Ø = 4.6 mm;

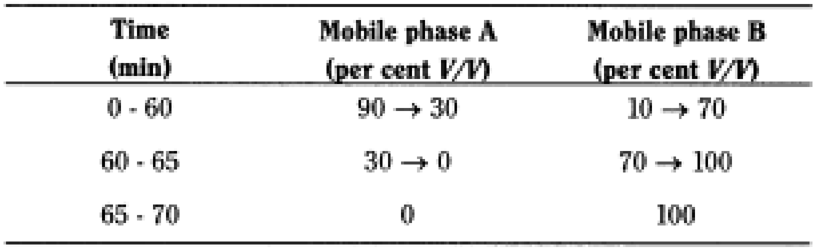
— *stationary phase: octadecylsilyl silica gel for chromatography R* (3 µm);

— *temperature*: 40 °C.

Mobile phase:

— *mobile phase A*: mix 100 ml of *acetonitrile for chromatography R*, 700 ml of *water R* and 200 ml of *sulphate buffer solution pH 2.0 R*; filter and degas;

— *mobile phase B*: mix 400 ml of *acetonitrile for chromatography R*, 400 ml of *water R* and 200 ml of *sulphate buffer solution pH 2.0 R*; filter and degas;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 60	90 → 30	10 → 70
60 - 65	30 → 0	70 → 100
65 - 70	0	100

Flow rate 1 ml/min.

Detection Spectrophotometer at 214 nm.

Equilibration At initial conditions for at least 15 min. Carry out a blank run using the above-mentioned gradient.

Injection 50 µl.

System suitability The chromatograms obtained with the test solution and the reference solution are qualitatively similar to the chromatogram of porcine insulin digest supplied with *porcine insulin CRS*. In the chromatogram obtained with the reference solution, identify the peaks due to digest fragments I, II and III. The symmetry factor of the peaks due to fragments II and III is not greater than 1.5, and the resolution between the 2 peaks is at least 1.9.

Results The profile of the chromatogram obtained with the test solution corresponds to that of the chromatogram obtained with the reference solution.

NOTE: the retention time of fragment I is the same for porcine insulin and for human insulin. The retention times of fragments II and IV are the same for all insulins. The retention time of fragment III is the same for bovine insulin and for porcine insulin.

TESTS

Impurities with molecular masses greater than that of insulin

Size-exclusion chromatography *(2.2.30)*: use the normalisation procedure. *Maintain the solutions at 2-10 °C and use within 7 days. If an automatic injector is used, maintain the temperature at 2-10 °C.*

Test solution Dissolve 4 mg of the substance to be examined in 1.0 ml of *0.01 M hydrochloric acid*.

Resolution solution Use a solution of insulin (approximately 4 mg/ml), containing more than 0.4 per cent of high molecular mass proteins. An injectable insulin preparation, whether a solution or a suspension, that has been clarified with a sufficient amount of *6 M hydrochloric acid R*, containing the indicated percentage of high molecular mass proteins, or a solution prepared from insulin, dissolved in *0.01 M hydrochloric acid*, may be used. Insulin containing the indicated percentage of high molecular mass proteins may be prepared by allowing insulin powder to stand at room temperature for about 10 days.

Column:

— *size*: *l* = 0.3 m, Ø = at least 7.5 mm;

— *stationary phase*: *hydrophilic silica gel for chromatography R* (5-10 µm), of a grade suitable for the separation of insulin monomer from dimer and polymers.

Mobile phase Mix 15 volumes of *glacial acetic acid R*, 20 volumes of *acetonitrile R* and 65 volumes of a 1.0 g/l solution of *arginine R*; filter and degas.

Flow rate 0.5 ml/min.

Detection Spectrophotometer at 276 nm.

Equilibration Before using a new column for chromatographic analysis, equilibrate by repeated injections of an insulin solution containing high molecular mass proteins. This can be done by at least 3 injections of the resolution solution. The column is equilibrated when repeatable results are obtained from 2 subsequent injections.

Injection 100 µl.

Run time About 35 min.

Retention times Polymeric insulin complexes = 13 min to 17 min; covalent insulin dimer = about 17.5 min; insulin monomer = about 20 min; salts = about 22 min.

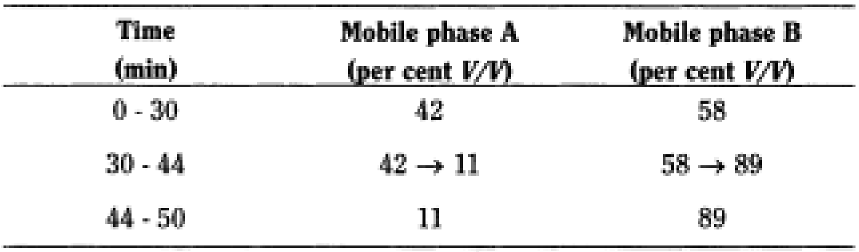
System suitability Resolution solution:

— *peak-to-valley ratio*: minimum 2.0, where H_p = height above the baseline of the peak due to the dimer and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to the monomer.

Limits The sum of the areas of any peaks with a retention time less than that of the principal peak is not greater than 1.0 per cent of the total area of the peaks; disregard any peak with a retention time greater than that of the insulin peak.

Related proteins

Liquid chromatography *(2.2.29)* as described under Assay, following the elution conditions as described in the table below.



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 30	42	58
30 - 44	42 → 11	58 → 89
44 - 50	11	89

Maintain the solutions at 2-10 °C and use within 24 h. Perform a system suitability test (resolution, linearity) as described under Assay. If necessary, the relative proportions of the mobile phases may be adjusted to ensure complete elution of A21 desamido porcine insulin before commencement of the gradient. The profile of the gradient may also be adjusted to ensure complete elution of all insulin related impurities.

Inject 20 µl of reference solution (b) and 20 µl of the test solution. If necessary, adjust the injection volume to between 10 µl and 20 µl in accordance with the results obtained in the test for linearity as described under Assay. Record the chromatograms for approximately 50 min. In the chromatogram obtained with reference solution (b), A21 desamido porcine insulin appears as a small peak after the principal peak and has a relative retention of about 1.3 with reference to the principal peak. In the chromatogram obtained with the test solution, the area of the peak due to A21 desamido porcine insulin is not greater than 2.0 per cent of the total area of the peaks; the sum of the areas of all the peaks, apart from those due to porcine insulin and A21 desamido porcine insulin, is not greater than 2.0 per cent of the total area of the peaks.

Porcine proinsulin-like immunoreactivity (PLI)

Maximum 10 ppm (dried substance).

Use a suitably sensitive immunochemical method *(2.7.1)* such as radio-immunoassay, using the International Reference Reagent for porcine proinsulin to calibrate the method.

Zinc

Maximum 1.0 per cent (dried substance).

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Dissolve 50.0 mg of the substance to be examined in *0.01 M hydrochloric acid* and dilute to 25.0 ml with the same acid. Dilute if necessary to a suitable concentration (for example, 0.4 µg to 1.6 µg of Zn per millilitre) with *0.01 M hydrochloric acid*.

Reference solutions Use solutions containing 0.40 µg, 0.80 µg, 1.00 µg, 1.20 µg and 1.60 µg of Zn per millilitre, freshly prepared by diluting *zinc standard solution (5 mg/ml Zn) R* with *0.01 M hydrochloric acid*.

Source Zinc hollow-cathode lamp.

Wavelength 213.9 nm.

Flame Air-acetylene flame of suitable composition (for example, 11 litres of air and 2 litres of acetylene per minute).

Loss on drying *(2.2.32)*

Maximum 10.0 per cent, determined on 0.200 g by drying in an oven at 105 °C for 24 h.

Sulphated ash *(2.4.14)*

Maximum 2.5 per cent (dried substance), determined on 0.200 g.

Bacterial endotoxins *(2.6.14)*

Less than 10 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 40.0 mg of the substance to be examined in *0.01 M hydrochloric acid* and dilute to 10.0 ml with the same solvent.

Reference solution (a) Dissolve the contents of a vial of *human insulin CRS* in *0.01 M hydrochloric acid* to obtain a concentration of 4.0 mg/ml.

Reference solution (b) Dissolve the contents of a vial of *porcine insulin CRS* in *0.01 M hydrochloric acid* to obtain a concentration of 4.0 mg/ml.

Reference solution (c) Dilute 1.0 ml of reference solution (b) to 10.0 ml with *0.01 M hydrochloric acid*.

Resolution solution Mix 1.0 ml of reference solution (a) and 1.0 ml of reference solution (b).

Maintain the solutions at 2-10 °C and use within 48 h. If an automatic injector is used, maintain the temperature at 2-10 °C.

Column:

- *size*: *l* = 0.25 , Ø = 4.6 mm;
- *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 40 °C.

Mobile phase Mix 42 volumes of mobile phase A and 58 volumes of mobile phase B, adjusting the composition of the mixture if necessary.

Prepare and maintain the following solutions at a temperature of at least 20 °C:

— *mobile phase A*: dissolve 28.4 g of *anhydrous sodium sulphate R* in *water R* and dilute to 1000 ml with the same solvent; add 2.7 ml of *phosphoric acid R*; adjust to pH 2.3, if necessary, with *ethanolamine R;* filter and degas;

— *mobile phase B*: mix 550 ml of mobile phase A with 450 ml of *acetonitrile R*. Warm the solution to a temperature of at least 20 °C in order to avoid precipitation (mixing of mobile phase A with acetonitrile is endothermic); filter and degas.

Flow rate: 1 ml/min.

Detection Spectrophotometer at 214 nm.

System suitability:

— *resolution*: inject 20 µl of the resolution solution and 20 µl of reference solution (b). Record the chromatogram of the resolution solution until the peak corresponding to the principal peak in the chromatogram obtained with reference solution (b) is clearly visible. In the chromatogram obtained with the resolution solution, identify the peaks due to porcine insulin and human insulin. The test is not valid unless the resolution between the peaks corresponding to human insulin and porcine insulin is at least 1.2. If necessary, adjust the concentration of acetonitrile in the mobile phase until this resolution is achieved.

— *linearity*: inject 20 µl each of reference solutions (b) and (c). The test is not valid unless the area of the principal peak in the chromatogram obtained with reference solution (b) is 10 ± 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (c). If this test fails, adjust the injection volume to between 10 µl and 20 µl, in order that the responses are within the linearity range of the detector.

Injection 20 µl of the test solution.

Calculate the content of porcine insulin $C_{256}H_{381}N_{65}O_{76}S_6$ plus A21 desamido porcine insulin from the area of the principal peak and the area of the peak corresponding to A21 desamido porcine insulin in the chromatograms obtained with the test solution and reference solution (b) and the declared content of porcine insulin plus A21 desamido porcine insulin in *porcine insulin CRS.*

STORAGE

In an airtight container, protected from light, at - 20 °C until released by the manufacturer. When thawed, insulin may be stored at 5 ± 3 °C and used for manufacturing preparations within a short period of time. To avoid absorption of humidity from the air during weighing, the insulin must be at room temperature.

(leucomycin A3 propionate)

Action and use

Antibacterial.

Ph Eur

DEFINITION

Propionyl ester of a macrolide antibiotic produced by certain strains of *Streptomyces narbonensis* var. *josamyceticus* var. *nova*, or obtained by any other means. The main component is (4*R*,5*S*,6*S*,7*R*,9*R*,10*R*,11*E*,13*E*,16*R*)-4-(acetyloxy)-6-[[3,6-dideoxy-4-*O*-[2,6-dideoxy-3-*C*-methyl-4-*O*-(3-methylbutanoyl)-α-L-*ribo*-hexopyranosyl]-3-(dimethylamino)-β-D-glucopyranosyl]oxy]-5-methoxy-9,16-dimethyl-7-(2-oxoethyl)-10-(propanoyloxy) oxacyclohexadeca-11,13-dien-2-one propionate (leucomycin A3 propionate).

Semi-synthetic product derived from a fermentation product.

Content:

— minimum 843 Ph. Eur. U./mg (dried substance).

CHARACTERS

Appearance

White or slightly yellowish, crystalline, slightly hygroscopic powder.

Solubility

Practically insoluble in water, freely soluble in methanol and in methylene chloride, soluble in acetone.

IDENTIFICATION

First identification *A, B.*

Second identification *B, C.*

Prepare solutions in methanol immediately before use.

A. Dissolve 0.10 g in *methanol R* and dilute to 100.0 ml with the same solvent. Dilute 1.0 ml of the solution to 50.0 ml with *methanol R*. Examined between 220 nm and 350 nm *(2.2.25)*, the solution shows an absorption maximum at 231 nm. The specific absorbance at the absorption maximum is 310 to 350.

B. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 10 mg of the substance to be examined in *methanol* R and dilute to 1 ml with the same solvent.

Reference solution (a) Dissolve 10 mg of *josamycin propionate CRS* in *methanol R* and dilute to 1 ml with the same solvent.

Reference solution (b) Dissolve 10 mg of *josamycin CRS* in *methanol R* and dilute to 1 ml with the same solvent.

Reference solution (c) Dissolve 10 mg of *spiramycin CRS* in *methylene chloride R* and dilute to 1 ml with the same solvent.

Reference solution (d) Mix 0.5 ml of reference solution (a) with 0.5 ml of reference solution (b).

Plate *TLC silica gel G plate R.*

Mobile phase *methanol R, acetone R, ethyl acetate R, toluene R, hexane R* (8:10:20:25:30 *V/V/V/V/V*).

Application 10 µl.

Development Over 2/3 of the plate.

Drying At 100 °C for 10 min.

Detection Spray with *dilute sulphuric acid R* and heat at 100 °C for 10 min.

System suitability The chromatogram obtained with reference solution (d) shows 2 clearly separated principal spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a) and its position is different from that of the principal spot in the chromatograms obtained with reference solutions (b) and (c).

C. Dissolve about 10 mg in 5 ml of *hydrochloric acid R1* and allow to stand for 10-20 min. A pink colour develops, turning brown.

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution BY_4 *(2.2.2, Method II)*.

Dissolve 1 g in *methanol R* and dilute to 10 ml with the same solvent.

Specific optical rotation *(2.2.7)*

- 65 to - 75 (dried substance).

Dissolve 1.000 g in *methanol R* and dilute to 100.0 ml with the same solvent. Allow to stand for 30 min before measuring the angle of rotation.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 50.0 mg of the substance to be examined in *acetonitrile for chromatography R* and dilute to 100.0 ml with the same solvent.

Reference solution (a) Dissolve 50.0 mg of *josamycin propionate CRS* in *acetonitrile for chromatography R* and dilute to 100.0 ml with the same solvent.

Reference solution (b) Dissolve 5 mg of the substance to be examined in 10 ml of *methanol R* and add 40 µl of *dilute phosphoric acid R*. Mix, allow to stand for 5 min and inject.

Reference solution (c) Dilute 2.0 ml of reference solution (a) to 100.0 ml with *acetonitrile for chromatography R.*

Column:

— *size*: *l* = 0.15 m, Ø = 3.9 mm;

— *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);

— *temperature*: 30 °C.

Mobile phase *acetonitrile R*, a 15.4 g/l solution of *ammonium acetate R* previously adjusted to pH 6.0 with *dilute phosphoric acid R* (60:40 *V/V*).

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 232 nm.

Injection 20 µl of the test solution and reference solutions (b) and (c).

Run time 3 times the retention time of leucomycin A3 propionate.

Relative retention with reference to leucomycin A3 propionate (retention time = about 18 min): impurity E = about 0.2; impurity A = about 0.3; impurity B = about 0.5; leucomycin A4 propionate = about 0.7; impurity C = about 1.4; impurity D = about 2.0.

System suitability Reference solution (b):

— *resolution*: minimum 2.0 between the 2 peaks eluting with a relative retention with reference to leucomycin A3 propionate of about 0.5 and 0.7 respectively.

Limits:

— *impurity D*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (c),

— *impurities A, B, C, E*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c),

— *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c),

— *total:* not more than 7 times the area of the principal peak in the chromatogram obtained with reference solution (c),

— *disregard limit:* 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (c).

Loss on drying *(2.2.32)*

Maximum 1.0 per cent, determined on 1.000 g by drying in an oven *in vacuo* at 60 °C for 3 h.

Sulphated ash *(2.4.14)*

Maximum 0.2 per cent, determined on 1.0 g.

ASSAY

Dissolve 40.0 mg in 20 ml of *methanol R* and dilute to 100.0 ml with *phosphate buffer solution pH 5.6 R.*

Carry out the microbiological assay of antibiotics *(2.7.2)*.

STORAGE

In an airtight container .

Reference solution (b) Dilute 1 ml of reference solution (a) to 10 ml with *methanol R*.

Reference solution (c) Dilute 1 ml of reference solution (a) to 20 ml with *methanol R*.

Reference solution (d) Dissolve 0.10 g of *josamycin propionate CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (e) Dissolve 0.10 g of *spiramycin CRS* in *methylene chloride R* and dilute to 10 ml with the same solvent.

Reference solution (f) Dissolve 10 mg of *josamycin CRS* and 10 mg of *josamycin propionate CRS* in 1 ml of *methanol R*.

Plate *TLC silica gel G plate R*.

Mobile phase *methanol R, acetone R, ethyl acetate R, toluene R, hexane R* (8:10:20:25:30 *V/V/V/V/V*).

Application 10 µl.

Development Over a path of 15 cm.

Drying At 100 °C for 10 min.

Detection Spray with *dilute sulphuric acid R* and heat at 100 °C for 10 min.

System suitability The chromatogram obtained with reference solution (f) shows 2 clearly separated principal spots.

Limits:

— *any impurity*: any spot, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (10 per cent) and not more than 1 such spot is more intense than the spot in the chromatogram obtained with reference solution (c) (5 per cent).

Heavy metals *(2.4.8)*

Maximum 30 ppm.

1.0 g complies with limit test C. Prepare the standard using 3 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 1.0 per cent, determined on 1.000 g by drying in an oven *in vacuo* at 60 °C for 3 h.

Sulphated ash *(2.4.14)*

Maximum 0.2 per cent, determined on 1.0 g.

ASSAY

Dissolve 30.0 mg in 5 ml of *methanol R* and dilute to 100.0 ml with *water R*.

Carry out the microbiological assay of antibiotics *(2.7.2)*.

STORAGE

In an airtight container .

Ph Eur

Heavy Kaolin

General Notices

(Ph Eur monograph 0503)

Preparation

Kaolin Poultice

When kaolin is prescribed or demanded, Light Kaolin shall be dispensed or supplied, unless it is ascertained that Light Kaolin (Natural) is required.

Ph Eur

DEFINITION

Purified, natural, hydrated aluminium silicate of variable composition.

CHARACTERS

Appearance

Fine, white or greyish-white, unctuous powder.

Solubility

Practically insoluble in water and in organic solvents.

IDENTIFICATION

A. To 0.5 g in a metal crucible add 1 g of *potassium nitrate R* and 3 g of *sodium carbonate R* and heat until the mixture melts. Allow to cool. To the residue add 20 ml of boiling *water R*, mix and filter. Wash the residue with 50 ml of *water R*. To the residue add 1 ml of *hydrochloric acid R* and 5 ml of *water R*. Filter. To the filtrate add 1 ml of *strong sodium hydroxide solution R* and filter. To the filtrate add 3 ml of *ammonium chloride solution R*. A gelatinous white precipitate is formed.

B. Add 2.0 g in 20 portions to 100 ml of a 10 g/l solution of *sodium laurilsulfate R* in a 100 ml graduated cylinder about 30 mm in diameter. Allow 2 min between additions for each portion to settle. Allow to stand for 2 h. The apparent volume of the sediment is not greater than 5 ml.

C. 0.25 g gives the reaction of silicates *(2.3.1)*.

TESTS

Solution S

To 4 g add a mixture of 6 ml of *acetic acid R* and 34 ml of *distilled water R*, shake for 1 min and filter.

Acidity or alkalinity

To 1.0 g add 20 ml of *carbon dioxide-free water R*, shake for 2 min and filter. To 10 ml of the filtrate add 0.1 ml of *phenolphthalein solution R*. The solution is colourless. Not more than 0.25 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator to pink.

Organic impurities

Heat 0.3 g to redness in a calcination tube. The residue is only slightly more coloured than the original substance.

Adsorption power

To 1.0 g in a ground-glass-stoppered test-tube add 10.0 ml of a 3.7 g/l solution of *methylene blue R* and shake for 2 min. Allow to settle. Centrifuge and dilute the solution 1 to 100 with *water R*. The solution is not more intensely coloured than a 0.03 g/l solution of *methylene blue R.*

Swelling power

Triturate 2 g with 2 ml of *water R*. The mixture does not flow.

Substances soluble in mineral acids

Maximum 1 per cent.

To 5.0 g add 7.5 ml of *dilute hydrochloric acid R* and 27.5 ml of *water R* and boil for 5 min. Filter, wash the residue on the filter with *water R* and dilute the combined filtrate and washings to 50.0 ml with *water R.* To 10.0 ml of the solution add 1.5 ml of *dilute sulphuric acid R*, evaporate to dryness on a water-bath and ignite. The residue weighs a maximum of 10 mg.

Chlorides *(2.4.4)*

Maximum 250 ppm.

Dilute 2 ml of solution S to 15 ml with *water R.*

Sulphates *(2.4.13)*

Maximum 0.1 per cent.

Dilute 1.5 ml of solution S to 15 ml with *distilled water R.*

Calcium *(2.4.3)*

Maximum 250 ppm.

Dilute 4 ml of solution S to 15 ml with *distilled water R*.

Heavy metals *(2.4.8)*

Maximum 50 ppm.

To 5 ml of the solution prepared for the test for substances soluble in mineral acids add 5 ml of *water R*, 10 ml of *hydrochloric acid R* and 25 ml of *methyl isobutyl ketone R*. Shake for 2 min. Separate the layers. Evaporate the aqueous layer to dryness on a water-bath. Dissolve the residue in 1 ml of *acetic acid R* and dilute to 25 ml with *water R*. Filter. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R.*

If intended for internal use, the above test is replaced by the following test for heavy metals *(2.4.8)*: maximum 25 ppm.

To 10 ml of the solution prepared for the test for substances soluble in mineral acids add 10 ml of *water R*, 20 ml of *hydrochloric acid R* and 25 ml of *methyl isobutyl ketone R*. Shake for 2 min. Separate the layers. Evaporate the aqueous layer to dryness on a water-bath. Dissolve the residue in 1 ml of *acetic acid R* and dilute to 25 ml with *water R.* Filter. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R.*

Microbial contamination

Total viable aerobic count *(2.6.12)* not more than 10^3 micro-organisms per gram, determined by plate-count.

LABELLING

The label states, where applicable, that the substance is suitable for internal use.

Ph Eur

Kanamycin Acid Sulphate

General Notices

(Ph Eur monograph 0033)

Action and use

Aminoglycoside antibacterial.

Ph Eur

DEFINITION

Kanamycin acid sulphate is a form of kanamycin sulphate prepared by adding sulphuric acid to a solution of kanamycin monosulphate and drying by a suitable method. The potency is not less than 670 IU/mg, calculated with reference to the dried substance.

Fermentation product.

PRODUCTION

It is produced by methods of manufacture designed to eliminate or minimise substances lowering blood pressure.

The method of manufacture is validated to demonstrate that the product if tested would comply with the following test.

Abnormal toxicity *(2.6.9)*

Inject into each mouse 0.5 ml of a solution containing 2 mg per millilitre of the substance to be examined.

CHARACTERS

A white or almost white powder, hygroscopic, soluble in about 1 part of water, practically insoluble in acetone and in alcohol.

IDENTIFICATION

A. Examine by thin-layer chromatography *(2.2.27),* using a plate coated with a 0.75 mm layer of the following mixture: mix 0.3 g of *carbomer R* with 240 ml of *water R* and allow to stand, with moderate shaking, for 1 h; adjust to pH 7 by the gradual addition, with continuous shaking, of *dilute sodium hydroxide solution R* and add 30 g of *silica gel H R*.

Heat the plate at 110 °C for 1 h, allow to cool and use immediately.

Test solution Dissolve 10 mg of the substance to be examined in *water R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dissolve 10 mg of *kanamycin monosulphate CRS* in *water R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dissolve 10 mg of *kanamycin monosulphate CRS*, 10 mg of *neomycin sulphate CRS* and 10 mg of *streptomycin sulphate CRS* in *water R* and dilute to 10 ml with the same solvent.

Apply separately to the plate 10 µl of each solution. Develop over a path of 12 cm using a 70 g/l solution of *potassium dihydrogen phosphate R*. Dry the plate in a current of warm air and spray with a mixture of equal volumes of a 2 g/l solution of *dihydroxynaphthalene R* in *alcohol R* and a 460 g/l solution of *sulphuric acid R*. Heat at 150 °C for 5 min to 10 min. The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a). The test is not valid unless the chromatogram obtained with reference solution (b) shows 3 clearly separated spots.

B. Dissolve 0.5 g in 10 ml of *water R*. Add 10 ml of *picric acid solution R*. Initiate crystallisation if necessary by scratching the wall of the tube with a glass rod and allow to stand. Collect the crystals, wash with 20 ml of *water R* and filter. Dry at 100 °C. The crystals melt *(2.2.14)* at about 235 °C, with decomposition.

C. Dissolve about 50 mg in 2 ml of *water R*. Add 1 ml of a 10 g/l solution of *ninhydrin R* and heat for a few minutes on a water-bath. A violet colour develops.

D. It gives the reactions of sulphates *(2.3.1)*.

TESTS

Solution S

Dissolve 0.20 g in *carbon dioxide-free water R* and dilute to 20.0 ml with the same solvent.

pH *(2.2.3)*

The pH of solution S is 5.5 to 7.5.

Specific optical rotation *(2.2.7)*

+103 to +115, determined on solution S and calculated with reference to the dried substance.

Kanamycin B

Examine by thin-layer chromatography *(2.2.27)*, using a plate prepared as prescribed under identification test A.

Heat the plate at 110 °C for 1 h, allow to cool and use immediately.

Test solution Dissolve 0.11 g of the substance to be examined in *water R* and dilute to 20 ml with the same solvent.

Reference solution Dissolve 4 mg of *kanamycin B sulphate CRS* in *water R* and dilute to 20 ml with the same solvent.

Apply separately to the plate 4 µl of each solution. Develop over a path of 12 cm using a 70 g/l solution of *potassium dihydrogen phosphate R*. Dry the plate in a current of warm air and spray with *ninhydrin and stannous chloride reagent R*. Heat the plate at 110 °C for 15 min. Any spot corresponding to *kanamycin B* in the chromatogram obtained with the test solution is not more intense than the spot in the chromatogram obtained with the reference solution (4.0 per cent).

Loss on drying *(2.2.32)*

Not more than 5.0 per cent, determined on 1.00 g by drying at 60 °C at a pressure not exceeding 670 Pa for 3 h.

Sulphated ash ***(2.4.14)***

Not more than 0.5 per cent, determined on 1.0 g.

Sulphate

23.0 per cent to 26.0 per cent of sulphate (SO_4), calculated with reference to the dried substance. Dissolve 0.175 g in 100 ml of *water R* and adjust the solution to pH 11 using *concentrated ammonia R*. Add 10.0 ml *of 0.1 M barium chloride* and about 0.5 mg of *phthalein purple R.* Titrate with *0.1 M sodium edetate* adding 50 ml of *alcohol R* when the colour of the solution begins to change and continue the titration until the violet-blue colour disappears.

1 ml of *0.1 M barium chloride* is equivalent to 9.606 mg of sulphate (SO_4).

Pyrogens ***(2.6.8)***

If intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of pyrogens, it complies with the test for pyrogens. Inject per kilogram of the rabbit's mass 1 ml of a solution in *water for injections R* containing 10 mg per millilitre of the substance to be examined.

ASSAY

Carry out the microbiological assay of antibiotics *(2.7.2)*. Use *kanamycin monosulphate CRS* as the reference substance.

STORAGE

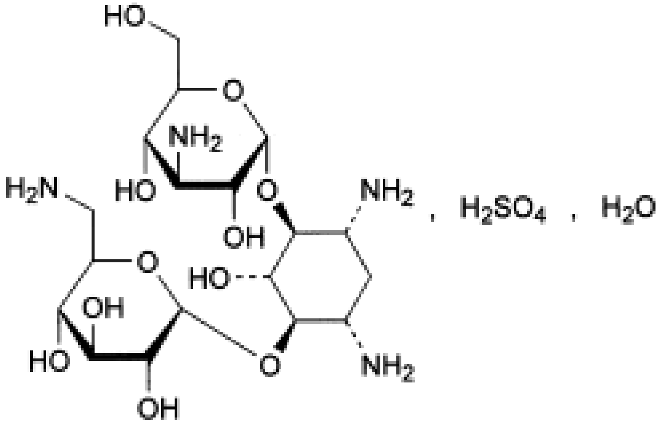
If the substance is sterile, store in a sterile, tamper-proof container.

Ph Eur

Kanamycin Sulphate

General Notices

(Kanamycin Monosulphate, Ph Eur monograph 0032)



$C_{18}H_{36}N_4O_{11},H_2SO_4,H_2O$ 601 *25389-94-0*
(anhydrous)

Action and use

Aminoglycoside antibacterial.

Ph Eur

DEFINITION

Kanamycin monosulphate is 6-*O*-(3-amino-3-deoxy-α-D-glucopyranosyl)-4-*O*-(6-amino-6-deoxy-α-D-glucopyranosyl)-2-deoxy-D-streptamine sulphate, an antimicrobial substance produced by the growth of certain strains of *Streptomyces kanamyceticus*. The potency is not less than 750 IU/mg, calculated with reference to the dried substance.

PRODUCTION

It is produced by methods of manufacture designed to eliminate or minimise substances lowering blood pressure.

The method of manufacture is validated to demonstrate that the product if tested would comply with the following test:

Abnormal toxicity *(2.6.9)*

Inject into each mouse 0.5 ml of a solution containing 2 mg per millilitre of the substance to be examined.

CHARACTERS

A white or almost white, crystalline powder, soluble in about 8 parts of water, practically insoluble in acetone and in alcohol.

IDENTIFICATION

A. Examine by thin-layer chromatography *(2.2.27)*, using a plate coated with a 0.75 mm layer of the following mixture: mix 0.3 g of *carbomer R* with 240 ml of *water R* and allow to stand, with moderate shaking, for 1 h; adjust to pH 7 by the gradual addition, with continuous shaking, of *dilute sodium hydroxide solution R* and add 30 g of *silica gel H R*.

Heat the plate at 110 °C for 1 h, allow to cool and use immediately.

Test solution Dissolve 10 mg of the substance to be examined in *water R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dissolve 10 mg of *kanamycin monosulphate CRS* in *water R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dissolve 10 mg of *kanamycin monosulphate CRS*, 10 mg of *neomycin sulphate CRS* and 10 mg of *streptomycin sulphate CRS* in *water R* and dilute to 10 ml with the same solvent.

Apply separately to the plate 10 µl of each solution. Develop over a path of 12 cm using a 70 g/l solution of *potassium dihydrogen phosphate R.* Dry the plate in a current of warm air and spray with a mixture of equal volumes of a 2 g/l solution of *dihydroxynaphthalene R* in *alcohol R* and a 460 g/l solution of *sulphuric acid R*. Heat at 150 °C for 5 min to 10 min. The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a). The test is not valid unless the chromatogram obtained with reference solution (b) shows three clearly separated spots.

B. Dissolve 0.5 g in 10 ml of *water R*. Add 10 ml of *picric acid solution R*. Initiate crystallisation if necessary by scratching the wall of the tube with a glass rod and allow to stand. Collect the crystals, wash with 20 ml of *water R* and filter. Dry at 100 °C. The crystals melt *(2.2.14)* at about 235 °C, with decomposition.

C. Dissolve about 50 mg in 2 ml of *water R*. Add 1 ml of a 10 g/l solution of *ninhydrin R* and heat for a few minutes on a water-bath. A violet colour develops.

D. It gives the reactions of sulphates *(2.3.1)*.

TESTS

Solution S

Dissolve 0.20 g in *carbon dioxide-free water R* and dilute to 20.0 ml with the same solvent.

pH *(2.2.3)*

The pH of solution S is 6.5 to 8.5.

Specific optical rotation *(2.2.7)*

+112 to +123, determined on solution S and calculated with reference to the dried substance.

Kanamycin B

Examine by thin-layer chromatography *(2.2.27),* using a plate prepared as prescribed under identification test A. Heat the plate at 110 °C for 1 h, allow to cool and use immediately.

Test solution Dissolve 0.1 g of the substance to be examined in *water R* and dilute to 20 ml with the same solvent.

Reference solution Dissolve 4 mg of *kanamycin B sulphate CRS* in *water R* and dilute to 20 ml with the same solvent.

Apply separately to the plate 4 µl of each solution. Develop over a path of 12 cm using a 70 g/l solution of *potassium dihydrogen phosphate R*. Dry the plate in a current of warm air and spray with *ninhydrin and stannous chloride reagent R*. Heat the plate at 110 °C for 15 min. Any spot corresponding to *kanamycin B* in the chromatogram obtained with the test solution is not more intense than the spot in the chromatogram obtained with the reference solution.

Loss on drying *(2.2.32)*

Not more than 1.5 per cent, determined on 1.00 g by drying at 60 °C at a pressure not exceeding 670 Pa for 3 h.

Sulphated ash *(2.4.14)*

Not more than 0.5 per cent, determined on 1.0 g.

Sulphate

15.0 per cent to 17.0 per cent of sulphate (SO_4), calculated with reference to the dried substance. Dissolve 0.250 g in 100 ml of *water R* and adjust the solution to pH 11 using *concentrated ammonia R*. Add 10.0 ml of *0.1 M barium chloride* and about 0.5 mg of *phthalein purple R.* Titrate with *0.1 M sodium edetate* adding 50 ml of *alcohol R* when the colour of the solution begins to change and continue the titration until the violet-blue colour disappears.

1 ml of *0.1 M barium chloride* is equivalent to 9.606 mg of sulphate (SO_4).

Pyrogens *(2.6.8)*

If intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of pyrogens, it complies with the test for pyrogens. Inject per kilogram of the rabbit's mass 1 ml of a solution in *water for injections R* containing 10 mg per millilitre of the substance to be examined.

ASSAY

Carry out the microbiological assay of antibiotics *(2.7.2)*.

STORAGE

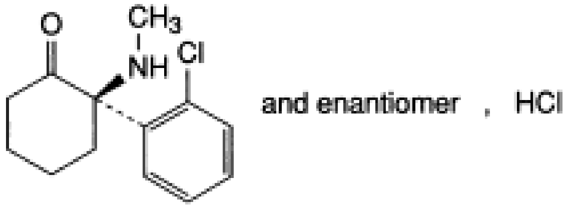
If the substance is sterile, store in a sterile, tamper-proof container.

Ph Eur

Ketamine Hydrochloride

General Notices

(Ph Eur monograph 1020)



$C_{13}H_{17}Cl2NO,HCl$ 274.2 *1867-66-9*

Ph Eur

DEFINITION

(*RS*)-2-(2-Chlorophenyl)-2-(methylamino)cyclohexanone hydrochloride.

Content

99.0 per cent to 101.0 per cent.

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water and in methanol, soluble in ethanol (96 per cent).

mp

About 260 °C, with decomposition.

IDENTIFICATION

A. Optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).

Comparison ketamine hydrochloride CRS.

C. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

Solution S

Dissolve 5.0 g in *carbon dioxide-free water R* and dilute to 25.0 ml with the same solvent.

Appearance of solution

Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

pH (*2.2.3*)

3.5 to 4.1

Dilute 10 ml of solution S to 20 ml with *carbon dioxide-free water R*.

Optical rotation (*2.2.7*)

- 0.2° to + 0.2°.

Dilute 2.5 ml of solution S to 25.0 ml with *water R*.

Related substances

Liquid chromatography (*2.2.29*).

Test solution Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 ml with the mobile phase.

Reference solution (a) Dissolve 25.0 mg of *ketamine impurity A CRS* in the mobile phase and dilute to 50.0 ml with the mobile phase (using ultrasound if necessary). To 1.0 ml of the solution, add 0.5 ml of the test solution and dilute to 100.0 ml with the mobile phase. Prepare immediately before use.

Reference solution (b) Dilute 1.0 ml of the test solution to 10.0 ml with the mobile phase. Dilute 1.0 ml of the solution to 20.0 ml with the mobile phase.

Precolumn:

— *size:* *l* = 4 mm, Ø = 4.0 mm;

— *stationary phase*: *spherical octadecylsilyl silica gel for chromatography R* (5 µm).

Column:

— *size:* *l* = 0.125 m, Ø = 4.0 mm;

— *stationary phase*: spherical *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Dissolve 0.95 g of *sodium hexanesulphonate R* in 1 litre of a mixture of 25 volumes of *acetonitrile R* and 75 volumes of *water R* and add 4 ml of *acetic acid R.*

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 215 nm.

Injection 20 µl.

Run time 10 times the retention time of ketamine.

System suitability Reference solution (a):

— *retention time*: ketamine = 3 min to 4.5 min;

— *resolution*: minimum 1.5 between the peaks due to impurity A and ketamine.

Limits:

- *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent).

Heavy metals (*2.4.8*)

Maximum 20 ppm.

Dilute 10 ml of solution S to 20 ml with *water R*. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R*.

Sulphated ash (*2.4.14*)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

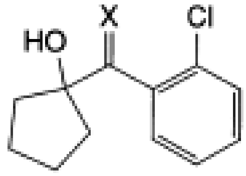
Dissolve 0.200 g in 50 ml of *methanol R* and add 1.0 ml of *0.1 M hydrochloric acid*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 27.42 mg of $C_{13}H_{17}C_{l2}NO$.

STORAGE

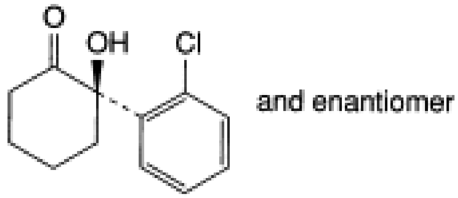
Protected from light.

IMPURITIES



A. X = N-CH_3: 1-[(2-chlorophenyl)(methylimino)methyl]cyclopentanol,

C. X = O: (2-chlorophenyl)(1-hydroxycyclopentyl)methanone,



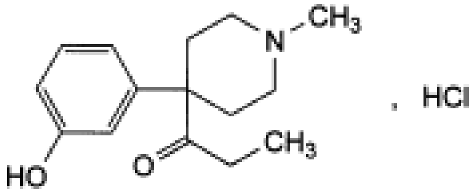
B. (2*RS*)-2-(2-chlorophenyl)-2-hydroxycyclohexanone.

Ph Eur

Ketobemidone Hydrochloride

General Notices

(Ph Eur monograph 1746)



$C_{15}H_{21}NO_2,HCl$ 283.8 *469-79-4 (base)*

Action and use

Opioid receptor agonist; analgesic.

Ph Eur

DEFINITION

1-[4-(3-Hydroxyphenyl)-1-methylpiperidin-4-yl]propan-1-one hydrochloride.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water, soluble in alcohol, very slightly soluble in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison Ph. Eur. reference spectrum of ketobemidone hydrochloride.

B. Solution S (see Tests) gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Solution S

Dissolve 0.250 g in *carbon dioxide-free water R* and dilute to 25.0 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution B_8 *(2.2.2, Method II)*.

pH *(2.2.3)*

4.5 to 5.5 for solution S.

Related substances

Liquid chromatography *(2.2.29)*.

Solution A 1.54 g/l solution of *ammonium acetate R* adjusted to pH 8.0 with *dilute ammonia R1*.

Test solution Dissolve 50.0 mg of the substance to be examined in solution A and dilute to 25.0 ml with the same solution.

Reference solution (a) Dissolve 1 mg of *ketobemidone impurity B CRS* and 1 mg of *ketobemidone impurity C CRS* in solution A and dilute to 25 ml with the same solution.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with solution A. Dilute 20.0 ml of this solution to 100.0 ml with solution A.

Column:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase: phenylhexylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 40 °C.

Mobile phase *acetonitrile R*, solution A (20:80 *V/V*).

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 278 nm.

Injection 20 µl.

Run time 4.5 times the retention time of ketobemidone.

Relative retention with reference to ketobemidone (retention time = about 10 min): impurity A = about 0.4; impurity B = about 0.6; impurity C = about 0.7; impurity D = about 3.5; impurity E = about 4.2.

System suitability Reference solution (a):

- *resolution*: minimum 4.0 between the peaks due to impurity B and impurity C.

Limits:

- *impurities A, B, C, D*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent),
- *any other impurity*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent),
- *total*: not more than 3.5 times the area of the principal peak in the chromatogram

obtained with reference solution (b) (0.7 per cent),

— *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Water ***(2.5.12)***

Maximum 1.0 per cent, determined on 0.50 g.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in a mixture of 5.0 ml of *0.01 M hydrochloric acid* and 50 ml of *alcohol R.* Carry out a potentiometric titration *(2.2.20)* using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 28.38 mg of $C_{15}H_{22}ClNO_2$.

IMPURITIES

Specified impurities *A, B, C, D.*

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. Ketoconazole

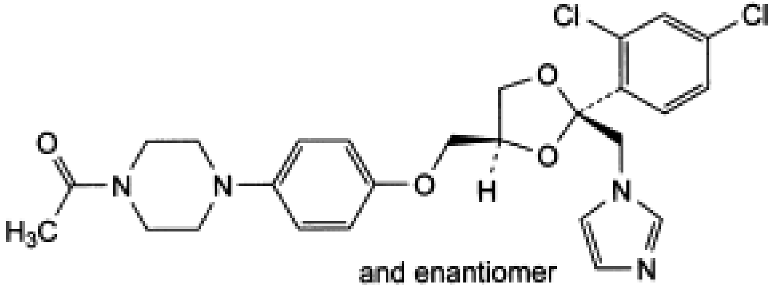
General Notices

(Ph Eur monograph 0921)



$C_{26}H_{28}Cl_2N_4O_4$ 531.4 *65277-42-1*

Action and use

Antifungal.

Ph Eur

DEFINITION

1-Acetyl-4-[4-[[(2*RS*,4*SR*)-2-(2,4-dichlorophenyl)-2-(1*H*-imidazol-1-ylmethyl)1,3-dioxolan-4-yl] methoxy]phenyl]piperazine.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water, freely soluble in methylene chloride, soluble in methanol, sparingly soluble in ethanol (96 per cent).

IDENTIFICATION

First identification B.

Second identification A, C, D.

A. Melting point *(2.2.14)*: 148 °C to 152 °C.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs.

Comparison *ketoconazole CRS.*

C. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 30 mg of the substance to be examined in the mobile phase and dilute to 5 ml with the mobile phase.

Reference solution (a) Dissolve 30 mg of *ketoconazole CRS* in the mobile phase and dilute to 5 ml with the mobile phase.

Reference solution (b) Dissolve 30 mg of *ketoconazole CRS* and 30 mg of *econazole nitrate CRS* in the mobile phase, then dilute to 5 ml with the mobile phase.

Plate *TLC octadecylsilyl silica gel plate R*.

Mobile phase *ammonium acetate solution R, dioxan R, methanol R* (20:40:40 *V/V/V*).

Application 5 µl.

Development Over a path of 15 cm.

Drying In a current of warm air for 15 min.

Detection Expose to iodine vapour until the spots appear and examine in daylight.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. To about 30 mg in a porcelain crucible add 0.3 g of *anhydrous sodium carbonate R*. Heat over an open flame for 10 min. Allow to cool. Take up the residue with 5 ml of *dilute nitric acid R* and filter. To 1 ml of the filtrate add 1 ml of *water R*. The solution gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Solution S

Dissolve 1.0 g in *methylene chloride R* and dilute to 10 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution BY_4 *(2.2.2, Method II)*.

Optical rotation *(2.2.7)*

- 0.10° to + 0.10°, determined on solution S.

Related substances

Liquid chromatography *(2.2.29)*.

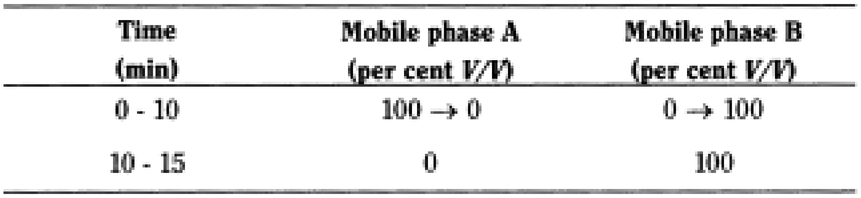
Test solution Dissolve 0.100 g of the substance to be examined in *methanol R* and dilute to 10.0 ml with the same solvent.

Reference solution (a) Dissolve 2.5 mg of *ketoconazole CRS* and 2.5 mg of *loperamide hydrochloride CRS* in *methanol R*, then dilute to 50.0 ml with the same solvent.

Reference solution (b) Dilute 5.0 ml of the test solution to 100.0 ml with *methanol R*. Dilute 1.0 ml of this solution to 10.0 ml with *methanol R*.

Column:
- *size*: *l* = 0.10 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (3 µm).

Mobile phase:
- *mobile phase A*: *acetonitrile R1*, 3.4 g/l solution of *tetrabutylammonium hydrogen sulphate R* (5:95 *V/V*);
- *mobile phase B: acetonitrile R1*, 3.4 g/l solution of *tetrabutylammonium hydrogen sulphate R* (50:50 *V/V*);



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 10	100 → 0	0 → 100
10 - 15	0	100

Flow rate 2 ml/min.

Detection Spectrophotometer at 220 nm.

Equilibration With *acetonitrile R* for at least 30 min and then with mobile phase A for at least 5 min.

Injection 10 µl; inject *methanol R* as a blank.

Retention time Ketoconazole = about 6 min; loperamide = about 8 min.

System suitability Reference solution (a):

- *resolution*: minimum 15 between the peaks due to ketoconazole and loperamide; if necessary, adjust the final concentration of acetonitrile in the mobile phase or adjust the time programme for the linear gradient elution.

Limits:
- *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with test D. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying ***(2.2.32)***

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 70 ml of a mixture of 1 volume of *anhydrous acetic acid R* and 7 volumes of *methyl ethyl ketone R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 26.57 mg of $C_{26}H_{28}Cl_2N_4O_4$.

STORAGE

Protected from light.

IMPURITIES

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated principal spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in obtained with reference solution (a).

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution Y_6 *(2.2.2, Method II)*.

Dissolve 1.0 g in *acetone R* and dilute to 10 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*. *Prepare the solutions immediately before use.*

Test solution Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 20.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 50.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (b) Dissolve 5.0 mg of *ketoprofen impurity A CRS* in the mobile phase and dilute to 50.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 50.0 ml with the mobile phase.

Reference solution (c) Dissolve 5.0 mg of *ketoprofen impurity C CRS* in the mobile phase and dilute to 50.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 50.0 ml with the mobile phase.

Reference solution (d) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. To 1.0 ml of this solution add 1.0 ml of reference solution (b).

Column:

— *size*: *l* = 0.15 m, Ø = 4.6 mm;

— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm) with a specific surface area of 350 m2/g and a pore size of 10 nm.

Mobile phase Mix 2 volumes of freshly prepared *phosphate buffer solution pH 3.5 R*, 43 volumes of *acetonitrile R* and 55 volumes of *water R.*

Flow rate 1 ml/min.

Detection Spectrophotometer at 233 nm.

Injection 20 µl.

Run time 7 times the retention time of ketoprofen.

Relative retention With reference to ketoprofen (retention time = about 7 min): impurity C = about 0.34; impurity H = about 0.39; impurity G = about 0.46; impurity E = about 0.69; impurity B = about 0.73; impurity D = about 1.35; impurity I = about 1.43; impurity A = about 1.50; impurity J = about 1.86; impurity F = about 1.95; impurity K = about 2.27; impurity L = about 2.49.

System suitability Reference solution (d):

— *resolution*: minimum 7.0 between the peaks due to ketoprofen and impurity A.

Limits:

— *impurity A*: not more than the area of the principal peak in the chromatograms obtained with reference solution (b) (0.2 per cent);

— *impurity C*: not more than the area of the principal peak in the chromatograms obtained with reference solution (c) (0.2 per cent);

— *impurities B, D, E, F*: for each impurity, not more than the area of the principal peak in the chromatograms obtained with reference solution (a) (0.2 per cent);

— *sum of impurities other than A and C*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.4 per cent);

— *disregard limit:* 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.02 per cent).

Heavy metals *(2.4.8)*

Maximum 10 ppm.

2.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g at 60 °C at a pressure not exceeding 670 Pa.

Sulphated ash (2.4.14)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 25 ml of *ethanol (96 per cent)* R. Add 25 ml of *water R*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically *(2.2.20).*

1 ml of *0.1 M sodium hydroxide* is equivalent to 25.43 mg of $C_{16}H_{14}O_3$.

Solution S

Dissolve 0.75 g in *carbon dioxide-free water R* and dilute to 25.0 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)*.

pH *(2.2.3)*

5.7 to 6.7.

Dilute 5 ml of solution S to 15 ml with *carbon dioxide-free water R*.

Absorbance *(2.2.25)*

Maximum 0.10, determined at 430 nm for solution S.

Related substances

Liquid chromatography *(2.2.29)*. *Protect the solutions from bright light.*

Solvent mixture *tetrahydrofuran R, water R* (30:70 *V/V*).

Test solution Dissolve 20 mg of the substance to be examined in the solvent mixture and dilute to 50 ml with the solvent mixture.

Reference solution (a) Dilute 1.0 ml of the test solution to 10.0 ml with the solvent mixture. Dilute 1.0 ml of this solution to 100.0 ml with the solvent mixture.

Reference solution (b) Dissolve 2 mg of *ketorolac trometamol for peak identification CRS* (containing impurities A, B, C and D) in 5 ml of the solvent mixture.

Column:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase: octylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 40 °C.

Mobile phase Mix 30 volumes of *tetrahydrofuran R* with 70 volumes of a solution prepared as follows: dissolve 5.75 g of *ammonium dihydrogen phosphate R* in 900 ml of *water R*, adjust to pH 3.0 with *phosphoric acid R* and dilute to 1000 ml with *water R*.

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 313 nm.

Injection 10 µl.

Run time 3 times the retention time of ketorolac.

Identification of impurities Use the chromatogram supplied with *ketorolac trometamol for peak identification CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B, C and D.

Relative retention with reference to ketorolac (retention time = about 10 min): impurity C = about 0.5; impurity A = about 0.6; impurity D = about 0.7; impurity B = about 0.9.

System suitability Reference solution (b):

- *resolution:* minimum 1.5 between the peaks due to impurity B and ketorolac.

Limits:

- *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 0.67; impurity B = 0.52; impurity C = 2.2;
- *impurities A, B, C, D*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with test F. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C for 3 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 60 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 37.64 mg of $C_{19}H_{24}N_2O_6$.

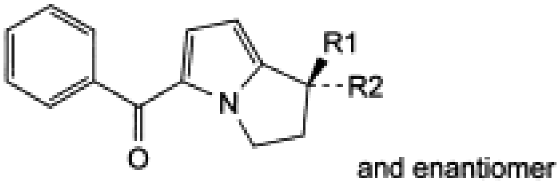
STORAGE

Protected from light.

IMPURITIES

Specified impurities *A, B, C, D.*

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use): E, F, G, H, I, J.*



A. R1 = H, R2 = OH: (1*RS*)-5-benzoyl-2,3-dihydro-1*H*-pyrrolizin-1-ol,

B. R1 + R2 = O: 5-benzoyl-2,3-dihydro-1*H*-pyrrolizin-1-one,

D. R1 = CO_2H, R2 = OCH_3: (1*RS*)-5-benzoyl-1-methoxy-2,3-dihydro-1*H*-pyrrolizine-1-carboxylic acid,

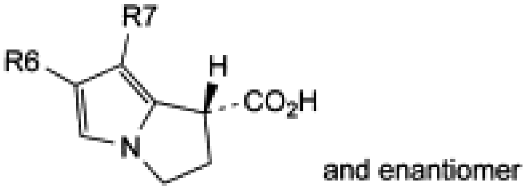
E. R1 = H, R2 = CO-NH-C(CH_2OH)$_3$: (1*RS*)-5-benzoyl-N-[2-hydroxy-1,1-bis(hydroxymethyl) ethyl]-2,3-dihydro-1H-pyrrolizine-1-carboxamide,

G. R1 = CO_2CH_3, R2 = OH: methyl (1*RS*)-5-benzoyl-1-hydroxy-2,3-dihydro-1*H*-pyrrolizine-1-carboxylate,

H. R1 = H, R2 = CO_2CH_3: methyl (1*RS*)-5-benzoyl-2,3-dihydro-1*H*-pyrrolizine-1-carboxylate,

I. R1 = R2 = H: phenyl(2,3-dihydro-1*H*-pyrrolizin-5-yl)methanone,

J. R1 = H, R2 = $CO_2C_2H_5$: ethyl (1*RS*)-5-benzoyl-2,3-dihydro-1*H*-pyrrolizine-1-carboxylate,



C. R6 = CO-C_6H_5, R7 = H: (1*RS*)-6-benzoyl-2,3-dihydro-1*H*-pyrrolizine-1-carboxylic acid,

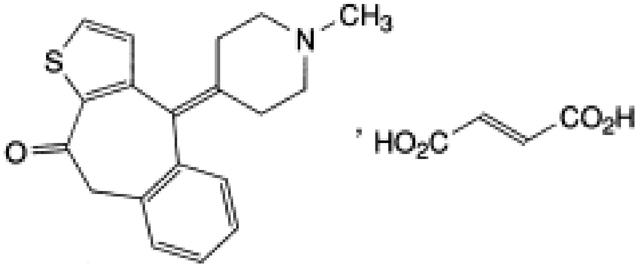
F. R6 = H, R7 = CO-C_6H_5: (1*RS*)-7-benzoyl-2,3-dihydro-1*H*-pyrrolizine-1-carboxylic acid.

Ph Eur

Ketotifen Fumarate

General Notices

(Ketotifen Hydrogen Fumarate, Ph Eur monograph 1592)



$C_{19}H_{19}NOS,C_4H_4O_4$ 425.5 *34580-14-8*

Action and use

Histamine H_1 receptor antagonist.

Ph Eur

DEFINITION

4-(1-Methylpiperidin-4-ylidene)-4,9-dihydro-10*H*-benzo[4,5]cyclohepta[1,2-*b*]thiophen-10-one hydrogen (*E*)-butenedioate.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White to brownish-yellow, fine, crystalline powder.

Solubility

Sparingly soluble in water, slightly soluble in methanol, very slightly soluble in acetonitrile.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison Ph. Eur. reference spectrum of ketotifen hydrogen fumarate.

B. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 40 mg of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution Dissolve 11 mg of *fumaric acid CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Plate *cellulose for chromatography F_{254} R* as the coating substance.

Mobile phase *water R*, *anhydrous formic acid R*, *di-isopropyl ether R* (3:7:90 *V/V/V*).

Application 5 µl.

Development Over a path of 17 cm.

Drying In a current of warm air.

Detection Examine in ultraviolet light at 254 nm. Spray lightly with a 5 g/l solution of *potassium permanganate R* in a 1.4 per cent *V/V* solution of *sulphuric acid R*. Examine in daylight by transparency.

Results The spot due to fumaric acid in the chromatogram obtained with the test solution is similar in position, colour and intensity to the principal spot in the chromatogram obtained with the reference solution.

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution Y_4, BY_4 or B_4 (*2.2.2, Method II)*.

Dissolve 0.2 g in *methanol R* and dilute to 10 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 30.0 mg of the substance to be examined in a mixture of equal volumes of *methanol R* and *water R* and dilute to 100.0 ml with the same mixture of solvents.

Reference solution (a) Dilute 1.0 ml of the test solution to 50.0 ml with a mixture of equal volumes of *methanol R* and *water R*. Dilute 1.0 ml to 10.0 ml with a mixture of equal volumes of *methanol R* and *water R*.

Reference solution (b) Dissolve 3.0 mg of *ketotifen impurity G CRS* in 10 ml of *methanol R* and dilute to 20.0 ml with *water R*. *Protect the solution from light.*

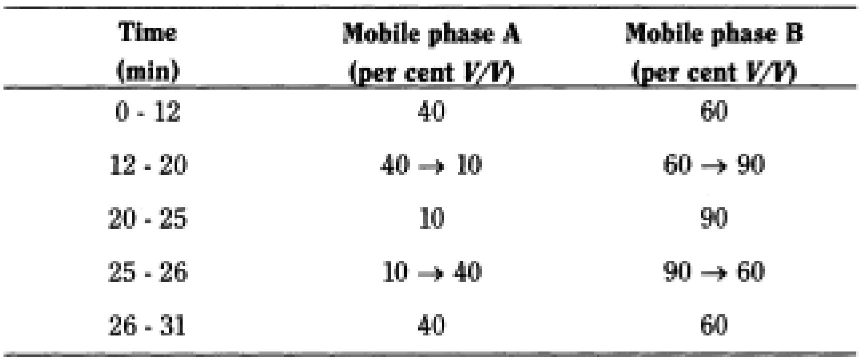
Reference solution (c) To 1.5 ml of reference solution (b) add 1.0 ml of the test solution and dilute to 10.0 ml with a mixture of equal volumes of *methanol R* and *water R*. *Protect the solution from light.*

Reference solution (d) Dilute 0.5 ml of reference solution (b) to 50.0 ml with a mixture of equal volumes of *methanol R* and *water R*. *Protect the solution from light.*

Column:
- *size*: *l* = 0.15 m, Ø = 4.0 mm;
- *stationary phase: octadecylsilyl silica gel for chromatography R* (3 µm);
- *temperature*: 40 °C.

Mobile phase:

- — *mobile phase A*: mix 175 µl of *triethylamine R* and 500 ml of *water R;*
- — *mobile phase B*: mix 175 µl of *triethylamine R* and 500 ml of *methanol R*,



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 12	40	60
12 - 20	40 → 10	60 → 90
20 - 25	10	90
25 - 26	10 → 40	90 → 60
26 - 31	40	60

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 297 nm.

Injection 20 µl; inject the test solution and reference solutions (a), (c) and (d).

Relative retentions with reference to ketotifen: impurity D = about 0.31; impurity C = about 0.61; impurity G = about 0.86; impurity E = about 1.18; impurity F = about 1.36; impurity B = about 1.72; impurity A = about 2.15.

System suitability:

- — *resolution*: minimum of 1.5 between the peaks due to ketotifen and to impurity G in the chromatogram obtained with reference solution (c);
- — *signal-to-noise ratio*: minimum of 70 for the principal peak in the chromatogram obtained with reference solution (d).

Limits:

- — *correction factor*: for the calculation of contents, multiply the area of the corresponding peak by the following correction factor: impurity G = 1.36;
- — *impurity G*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- — *any impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- — *total*: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- — *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.350 g in a mixture of 30 ml of *anhydrous acetic acid R* and 30 ml of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 42.55 mg of $C_{23}H_{23}NO_5S$.

Ph Eur

Light Kaolin (Natural)

General Notices

Action and use

Antidiarrhoeal.

Preparations

Kaolin Mixture

Kaolin and Morphine Mixture

When Kaolin or Light Kaolin is prescribed or demanded, Light Kaolin shall be dispensed or supplied unless it is ascertained that Light Kaolin (Natural) is required.

DEFINITION

Light Kaolin (Natural) is a native hydrated aluminium silicate, freed from most of its impurities by elutriation and dried. It does not contain a dispersing agent.

CHARACTERISTICS

A light, white powder free from gritty particles; odourless or almost odourless; unctuous.

Practically insoluble in *water* and in mineral acids.

IDENTIFICATION

A. To 0.5 g in a metal crucible add 1 g of *potassium nitrate* and 3 g of *sodium carbonate* and heat until the mixture melts. Allow to cool. To the residue add 20 ml of boiling *water*, mix and filter. Wash the residue with 50 ml of *water*, add to the residue 1 ml of *hydrochloric acid* and 5 ml of *water*, mix and filter. To the filtrate add 1 ml of *strong sodium hydroxide solution*, filter and add to the filtrate 3 ml of *ammonium chloride solution*. A gelatinous white precipitate is produced.

B. 0.25 g yields the reaction characteristic of *silicates*, Appendix VI.

C. Triturate 2 g with 2 ml of *water*. The resulting mixture does not flow.

TESTS

Coarse particles; Arsenic; Heavy metals; Chloride; Loss on drying; Loss on ignition; Soluble matter

Complies with the requirements stated under Light Kaolin.

Fine particles

Disperse 5 g in 250 ml of *water* containing 50 mg of *sodium pyrophosphate* by shaking vigorously for 2 minutes in a stoppered flask, pour immediately into a glass cylinder 5 cm in diameter and transfer 20 ml to a glass dish using a pipette. Evaporate to dryness and dry to constant weight at 105°. Allow the remainder of the suspension to stand for 4 hours at 20°

and withdraw a second 20 ml portion using a pipette with its tip exactly 5 cm below the surface and without disturbing the sediment. Transfer the second portion to a glass dish, evaporate to dryness and dry to constant weight at 105°. The weight of the residue from the second portion is not less than 70% of the weight of the residue from the first portion.

Antidiarrhoeal.

Preparations

Kaolin Mixture

Kaolin and Morphine Mixture

When Kaolin or Light Kaolin is prescribed or demanded, Light Kaolin shall be dispensed or supplied unless it is ascertained that Light Kaolin (Natural) is required.

DEFINITION

Light Kaolin is a native hydrated aluminium silicate, freed from most of its impurities by elutriation and dried. It contains a suitable dispersing agent.

CHARACTERISTICS

A light, white powder free from gritty particles; odourless or almost odourless; unctuous.

Practically insoluble in *water* and in mineral acids.

IDENTIFICATION

A. To 0.5 g in a metal crucible add 1 g of *potassium nitrate* and 3 g of *sodium carbonate* and heat until the mixture melts. Allow to cool. To the residue add 20 ml of boiling *water*, mix and filter. Wash the residue with 50 ml of *water*, add to the residue 1 ml of *hydrochloric acid* and 5 ml of *water*, mix and filter. To the filtrate add 1 ml of *strong sodium hydroxide solution*, filter and add to the filtrate 3 ml of *ammonium chloride solution*. A gelatinous white precipitate is produced.

B. 0.25 g yields the reaction characteristic of *silicates*, Appendix VI.

C. Triturate 2 g with 2 ml of *water*. The resulting mixture flows.

TESTS

Coarse particles

Transfer 5 g to a stoppered cylinder (about 16 cm × 35 mm), add 60 ml of a 1% w/v solution of *sodium pyrophosphate*, shake thoroughly and allow to stand for 5 minutes. Using a pipette, withdraw 50 ml from a point about 5 cm below the surface of the liquid. To the remaining liquid add 50 ml of *water*, shake, allow to stand for 5 minutes and withdraw 50 ml in the same manner as before. Repeat the operation until a total of 400 ml of suspension has been withdrawn under the prescribed conditions. Transfer the remainder to an evaporating dish and evaporate to dryness on a water bath. The residue, after drying at 105°, weighs not more than 25 mg.

Fine particles

Disperse 5 g in 250 ml of *water* by shaking vigorously for 2 minutes in a stoppered flask, pour immediately into a glass cylinder 5 cm in diameter and transfer 20 ml to a glass dish using a pipette. Evaporate to dryness and dry to constant weight at 105°. Allow the remainder of the suspension to stand for 4 hours at 20° and withdraw a second 20 ml portion using a pipette with its tip exactly 5 cm below the surface and without disturbing the sediment. Transfer the second portion to a glass dish, evaporate to dryness and dry to constant weight at 105°. The weight of the residue from the second portion is not less than 70% of the weight of the residue from the first portion.

Arsenic

0.50 g dispersed in 25 ml of *water* complies with the *limit test for arsenic*, Appendix VII (2 ppm).

Heavy metals

Heat 6.0 g for 15 minutes under a reflux condenser on a water bath with a mixture of 70 ml of *water* and 10 ml of *hydrochloric acid* and filter. To 40 ml of the filtrate add 0.5 ml of *nitric acid* and evaporate to low bulk. Add 20 ml of *water*, 2 g of *ammonium chloride* and 2 g of *ammonium thiocyanate* and extract with two 10 ml quantities of a mixture of equal volumes of *isoamyl alcohol* and *ether*. To the aqueous layer add 2 g of *citric acid* and sufficient *water* to produce 60 ml. 12 ml of the resulting solution complies with *limit test A for heavy metals*, Appendix VII. Use *lead standard solution (1 ppm Pb)* to prepare the standard (20 ppm).

Chloride

Boil 1.0 g with 80 ml of *water* and 20 ml of 2M *nitric acid* under a reflux condenser for 5 minutes, cool and filter. 15 ml of the filtrate complies with the *limit test for chlorides*, Appendix VII (330 ppm).

Loss on drying

When dried to constant weight at 105°, loses not more than 1.5% of its weight. Use 1 g.

Loss on ignition

When ignited at 600°, loses not more than 15.0% of its weight. Use 1 g.

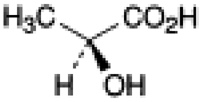
Soluble matter

Boil 2 g with 100 ml of 0.2M *hydrochloric acid* under a reflux condenser for 5 minutes, cool, filter and evaporate 50 ml of the filtrate to dryness. The residue, after ignition at about 600° for 30 minutes, weighs not more than 10 mg.

(*S*)-Lactic Acid

General Notices

(Ph Eur monograph 1771)



$C_3H_6O_3$ 90.1 *77-33-4*

Ph Eur

DEFINITION

Mixture of (*S*)-2-hydroxypropanoic acid, its condensation products, such as lactoyl-lactic acid and polylactic acids, and water. The equilibrium between lactic acid and polylactic acids depends on the concentration and temperature.

Content

88.0 per cent *m/m* to 92.0 per cent *m/m* of $C_3H_6O_3$, not less than 95.0 per cent of which is the (*S*)-enantiomer.

CHARACTERS

Appearance

Colourless or slightly yellow, syrupy liquid.

Solubility

Miscible with water and with ethanol (96 per cent).

IDENTIFICATION

A. Dissolve 1 g in 10 ml of *water R*. The solution is strongly acidic *(2.2.4)*.

B. Relative density *(2.2.5)*: 1.20 to 1.21.

C. It gives the reaction of lactates *(2.3.1)*.

D. It complies with the limits of the assay.

TESTS

Solution S

Dissolve 5.0 g in 42 ml of *1 M sodium hydroxide* and dilute to 50 ml with *distilled water R*.

Appearance

The substance to be examined is not more intensely coloured than reference solution Y_6 *(2.2.2, Method II)*.

Ether-insoluble substances

Dissolve 1.0 g in 25 ml of *ether R*. The solution is not more opalescent than the solvent used for the test.

Sugars and other reducing substances

To 1 ml of solution S add 1 ml of *1 M hydrochloric acid*, heat to boiling, allow to cool and add 1.5 ml of *1 M sodium hydroxide* and 2 ml of *cupri-tartaric solution R*. Heat to boiling. No red or greenish precipitate is formed.

Methanol ***(2.4.24)***

Maximum 50 ppm, if intended for use in the manufacture of parenteral dosage forms.

Citric, oxalic and phosphoric acids

To 5 ml of solution S add *dilute ammonia R1* until slightly alkaline *(2.2.4)*. Add 1 ml of *calcium chloride solution R.* Heat on a water-bath for 5 min. Both before and after heating, any opalescence in the solution is not more intense than that in a mixture of 1 ml of *water R* and 5 ml of solution S.

Sulphates ***(2.4.13)***

Maximum 200 ppm.

Dilute 7.5 ml of solution S to 15 ml with *distilled water R*.

Calcium ***(2.4.3)***

Maximum 200 ppm.

Dilute 5 ml of solution S to 15 ml with *distilled water R*.

Heavy metals ***(2.4.8)***

Maximum 10 ppm.

12 ml of solution S complies with limit test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R.*

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

Bacterial endotoxins ***(2.6.14)***

Less than 5 IU/g if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins. Before use, neutralise the test solution to pH 7.0-7.5 with *strong sodium hydroxide solution R* and shake vigorously.

ASSAY

Place 1.000 g in a ground-glass-stoppered flask and add 10 ml of *water R* and 20.0 ml of *1 M* *sodium hydroxide*. Close the flask and allow to stand for 30 min. Using 0.5 ml of *phenolphthalein solution R* as indicator, titrate with *1 M hydrochloric acid* until the pink colour is discharged.

1 ml of *1 M sodium hydroxide* is equivalent to 90.1 mg of $C_3H_6O_3$.

(*S*)-enantiomer

Transfer an amount of the substance to be examined equivalent to 2.00 g of lactic acid into a round-bottomed flask, add 25 ml of *1 M sodium hydroxide* and boil gently for 15 min. Cool down and adjust to pH 7.0 using *1 M hydrochloric acid*. Add 5.0 g of *ammonium molybdate R*, dissolve and dilute to 50.0 ml with *water R*. Filter and measure the angle of optical rotation *(2.2.7)*. Calculate the percentage content of (*S*)-enantiomer using the expression:

$$50 + \left(24.18 \times \alpha \times \frac{2.222}{m} \times \frac{90}{c}\right)$$

α = angle of optical rotation (absolute value),

m = mass of the substance to be examined, in grams,

c = percentage content of $C_3H_6O_3$ in the substance to be examined.

The complex of (*S*)-lactic acid formed under these test conditions is laevorotatory.

LABELLING

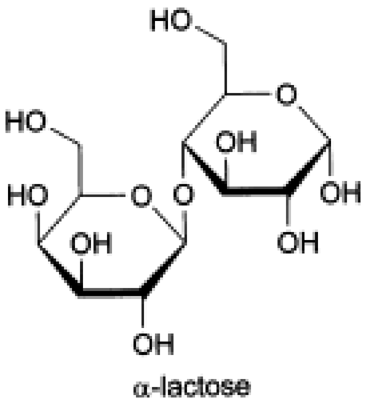
The label states, where applicable, that the substance is suitable for use in the manufacture of parenteral dosage forms.

Ph Eur

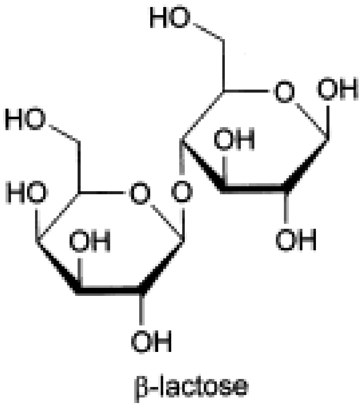
Anhydrous Lactose

General Notices

(Ph Eur monograph 1061)



α-lactose



β-lactose

$C_{12}H_{22}O_{11}$ 342.3 *63-42-3*

Action and use

Excipient.

Ph Eur

DEFINITION

O-β-D-Galactopyranosyl-(1→4)-β-D-glucopyranose or mixture of *O*-β-D-galactopyranosyl-(1→4)-α-D-glucopyranose and *O*-β-D-galactopyranosyl-(1→4)-β-D-glucopyranose.

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely but slowly soluble in water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

First identification A, D.

Second identification B, C, D.

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison *anhydrous lactose CRS.*

B. Thin-layer chromatography (*2.2.27*).

Solvent mixture *water R*, *methanol R* (2:3 *V/V*).

Test solution Dissolve 10 mg of the substance to be examined in the solvent mixture and dilute to 20 ml with the solvent mixture.

Reference solution (a) Dissolve 10 mg of *anhydrous lactose CRS* in the solvent mixture and dilute to 20 ml with the solvent mixture.

Reference solution (b) Dissolve 10 mg of *anhydrous lactose CRS*, 10 mg of *fructose CRS*, 10 mg of *glucose CR*S and 10 mg of *sucrose CRS* in the solvent mixture and dilute to 20 ml with the solvent mixture.

Plate *TLC silica gel G plate R.*

Mobile phase *water R*, *methanol R*, *glacial acetic acid R*, *ethylene chloride R* (10:15:25:50 *V/V/V/V*); measure the volumes accurately, as a slight excess of water produces cloudiness.

Application 2 µl; thoroughly dry the starting points.

Development A Over a path of 15 cm.

Drying A In a current of warm air.

Development B Immediately, over a path of 15 cm, after renewing the mobile phase.

Drying B In a current of warm air.

Detection Spray with a solution of 0.5 g of *thymol R* in a mixture of 5 ml of *sulphuric acid R* and 95 ml of *ethanol (96 per cent) R*; heat at 130 °C for 10 min.

System suitability Reference solution (b):

— the chromatogram shows 4 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve 0.25 g in 5 ml of *water R*. Add 5 ml of *ammonia R* and heat in a water-bath at 80 °C for 10 min. A red colour develops.

D. Water (see Tests).

TESTS

Appearance of solution

The solution is clear (*2.2.1*) and not more intensely coloured than reference solution BY_7 (*2.2.2, Method II*).

Dissolve 1.0 g in boiling *water R* and dilute to 10 ml with the same solvent.

Acidity or alkalinity

Dissolve 6.0 g by heating in 25 ml of *carbon dioxide-free water R*, cool and add 0.3 ml of *phenolphthalein solution R*. The solution is colourless. Not more than 0.4 ml of *0.1 M sodium hydroxide* is required to change the colour of the indicator to pink.

Specific optical rotation (*2.2.7*)

+ 54.4 to + 55.9 (anhydrous substance).

Dissolve 10.0 g in 80 ml of *water R*, heating to 50 °C. Allow to cool and add 0.2 ml of *dilute ammonia R1*. Allow to stand for 30 min and dilute to 100.0 ml with *water R.*

Absorbance (*2.2.25*).

Test solution (a) Dissolve 1.0 g in boiling *water R* and dilute to 10.0 ml with the same solvent.

Test solution (b) Dilute 1.0 ml of test solution (a) to 10.0 ml with *water R*.

Spectral range 400 nm for test solution (a) and 210-300 nm for test solution (b).

Results:

— at 400 nm: maximum 0.04 for test solution (a);

— from 210 nm to 220 nm: maximum 0.25 for test solution (b);

— from 270 nm to 300 nm: maximum 0.07 for test solution (b).

Heavy metals (*2.4.8*)

Maximum 5 ppm.

2.0 g complies with test C. Prepare the reference solution using 1.0 ml of *lead standard solution (10 ppm Pb) R.*

Water (*2.5.12*)

Maximum 1.0 per cent, determined on 0.50 g, using a mixture of 1 volume of *formamide R* and 2 volumes of *methanol R* as the solvent.

Sulphated ash (*2.4.14*)

Maximum 0.1 per cent, determined on 1.0 g.

Microbial contamination.

Total viable aerobic count (*2.6.12*) not more than 10^2 micro-organisms per gram, determined by plate-count. It complies with the test for *Escherichia coli* (*2.6.13*)

FUNCTIONALITY-RELATED CHARACTERISTICS

This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient. This section is a non-mandatory part of the monograph and it is not necessary to verify the characteristics to demonstrate compliance. Control of these characteristics can however contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.

The following characteristics may be relevant for anhydrous lactose used as a filler/diluent in solid dosage forms (compressed and powder).

Particle size distribution (*2.9.31* or *2.9.38*).

Bulk and tapped density (*2.9.15*)

Determine the bulk density and the tapped density. Calculate the Hausner index using the following expression:

$$\frac{V_0}{V_f}$$

V_0 = volume of bulk substance;

V_f = volume of tapped substance.

α-Lactose and β-lactose

Gas chromatography (*2.2.28*).

Silylation reagent Mix 28 volumes of *N-trimethylsilylimidazole R* and 72 volumes of *pyridine R.*

Test solution Dissolve about 1 mg of the substance to be examined in 0.45 ml of *dimethyl sulphoxide R*. Add 1.8 ml of the silylation reagent. Mix gently and allow to stand for 20 min.

Reference solution Prepare a mixture of α-*lactose monohydrate R* and β-*lactose R* having an anomeric ratio of about 1:1 based on the labelled anomeric contents of the α-lactose monohydrate and β-lactose. Dissolve about 1 mg of this mixture in 0.45 ml of *dimethyl sulphoxide R*. Add 1.8 ml of the silylation reagent. Mix gently and allow to stand for 20 min.

Column:

— *material*: glass;

— *size:* l = 0.9 m, Ø = 4 mm;

— *stationary phase*: *silanised diatomaceous earth for gas chromatography R* impregnated with 3 per cent *m/m* of *poly[(cyanopropyl)(methyl)][(phenyl)(methyl)] siloxane R.*

Carrier gas *helium for chromatography R*.

Flow rate 40 ml/min.

Temperature:

— *column*: 215 °C;

— *injection port and detector*: 275 °C.

Detection Flame ionisation.

Injection 2 µl.

System suitability Reference solution:

— *relative retention* with reference to β-lactose: α-lactose = about 0.7;

— *resolution*: minimum 3.0 between the peaks due to α-lactose and β-lactose.

Calculate the percentage content of α-lactose from the following expression:

$$\frac{100S_a}{S_a + S_b}$$

Calculate the percentage content of β-lactose from the following expression:

$$\frac{100S_b}{S_a + S_b}$$

S_a = area of the peak due to α-lactose,

S_b = area of the peak due to β-lactose.

Loss on drying ***(2.2.32)***

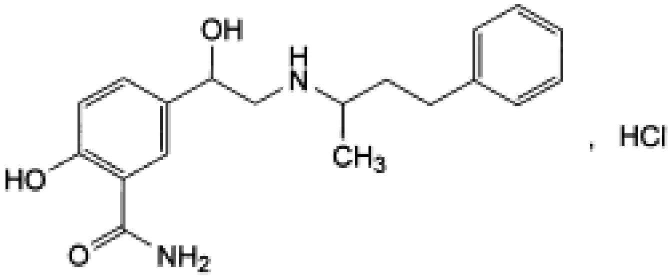
Determine on 1.000 g by drying in an oven at 80 °C for 2 h.

Ph Eur

Labetalol Hydrochloride

General Notices

(Ph Eur monograph 0923)



$C_{19}H_{24}N_2O_3,HCl$ 364.9 *32780-64-6*

Action and use

Alpha-and beta-adrenoceptor antagonist.

Preparations

Labetalol Injection

Labetalol Tablets

Ph Eur

DEFINITION

2-Hydroxy-5-[1-hydroxy-2-[(1-methyl-3-phenylpropyl)amino]ethyl]benzamide hydrochloride.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Sparingly soluble in water and in ethanol (96 per cent), practically insoluble in methylene chloride.

IDENTIFICATION

First identification A, C, E.

Second identification A, B, D, E.

A. Optical rotation *(2.2.7)*: - 0.05 ° to + 0.05 °, determined on solution S (see Tests).

B. Ultraviolet and visible absorption spectrophotometry *(2.2.25)*.

Test solution Dissolve 25.0 mg in *0.1 M hydrochloric acid* and dilute to 250.0 ml with the same acid.

Spectral range 230-350 nm.

Absorption maximum At 302 nm.

Specific absorbance at the absorption maximum 83 to 88.

C. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *labetalol hydrochloride CRS.*

D. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 10 mg of the substance to be examined in 1 ml of *ethanol (96 per cent) R.*

Reference solution (a) Dissolve 10 mg of *labetalol hydrochloride CRS* in 1 ml of *ethanol (96 per cent) R.*

Reference solution (b) Dissolve 10 mg of *labetalol hydrochloride CRS* and 10 mg of *propranolol hydrochloride CRS* in *ethanol (96 per cent) R* and dilute to 5 ml with the same solvent.

Plate *TLC octadecylsilyl silica gel* F_{254} *plate R*.

Mobile phase *perchloric acid R*, *water R*, *methanol R* (0.5:50:80 *V/V/V*).

Application 2 µl.

Development Place the plate in a chromatographic tank immediately after the addition of the mobile phase, close the tank and develop over a path of 15 cm.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

E. It gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Solution S

Dissolve 0.50 g in *carbon dioxide-free water R* and dilute to 50 ml with the same solvent. *Solution S must be freshly prepared.*

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than intensity 6 of the range of reference solutions of the most appropriate colour *(2.2.2, Method II)*.

pH *(2.2.3)*

4.0 to 5.0 for solution S.

Diastereoisomer ratio

Gas chromatography *(2.2.28)*.

Test solution Dissolve 2.0 mg of the substance to be examined in 1.0 ml of a 12.0 g/l solution of *butylboronic acid R* in *anhydrous pyridine R* and allow to stand for 20 min.

Column:
- *material*: glass;
- *size:* *l* = 1.5 m, Ø = 4 mm;
- *stationary phase*: *silanised diatomaceous earth for gas chromatography R* (125-150 µm) impregnated with 3 per cent *m/m* of *polymethylphenylsiloxane R*.

Carrier gas *nitrogen for chromatography R*.

Flow rate 40 ml/min.

Temperature:
- *column, injection port and detector*: 300 °C.

Detection Flame ionisation.

Injection 2 µl.

System suitability:
- the height of the trough separating the 2 peaks due to the pairs of diastereoisomers is less than 5 per cent of the full scale of the recorder.

Limit:
- *each pair of diastereoisomers*: for the area of each peak, 45 per cent to 55 per cent of the total area of the 2 peaks.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution Dilute 0.5 ml of the test solution to 100.0 ml with the mobile phase.

Column:
- *size:* *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Mix 150 ml of *tetrahydrofuran R*, 300 ml of *methanol R*, 550 ml of *water R*, 0.82 g of *tetrabutylammonium hydrogen sulphate R*, 1 g of *sodium octyl sulphate R* and 10 ml of a 10 per cent *V/V* solution of *sulphuric acid R*.

Flow rate 1 ml/min.

Detection Spectrophotometer at 229 nm.

Equilibration With the mobile phase for about 30 min.

Injection 20 µl.

Run time 3 times the retention time of labelatol.

Retention time Labelatol = 10 min to 15 min; if necessary, adjust the water content of the mobile phase ensuring that the 2:1 ratio of methanol to tetrahydrofuran is maintained.

Limits:

— *impurities A, B*: for each impurity, not more than 0.6 times the area of the principal peak in the chromatogram obtained with the reference solution (0.3 per cent);

— *total*: not more than the area of the principal peak in the chromatogram obtained with the reference solution (0.5 per cent);

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with the reference solution (0.05 per cent).

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C at a pressure not exceeding 0.7 kPa.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

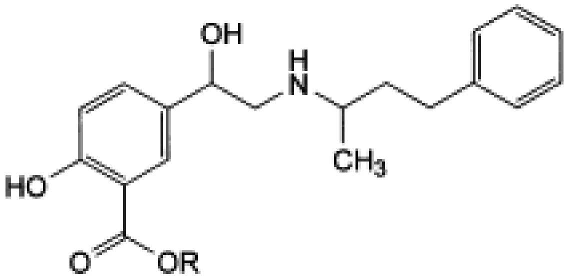
In order to avoid overheating in the reaction medium, mix thoroughly throughout and stop the titration immediately after the end-point has been reached.

Dissolve 0.200 g in a mixture of 10 ml of *anhydrous formic acid R* and 40 ml of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 36.49 mg of $C_{19}H_{25}ClN_2O_3$.

IMPURITIES

Specified impurities *A, B*.



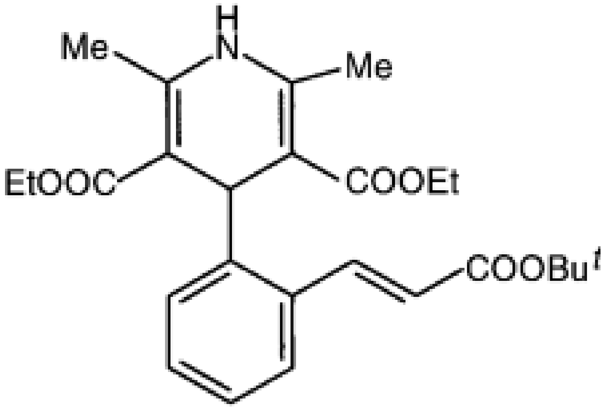
A. R = H: 2-hydroxy-5-[1-hydroxy-2-[(1-methyl-3-phenylpropyl)-amino]ethyl]benzoic acid,

B. R = CH_3: methyl 2-hydroxy-5-[1-hydroxy-2-[(1-methyl-3-phenylpropyl)amino]ethyl] benzoate.

Ph Eur

Lacidipine

General Notices



$C_{26}H_{33}NO_6$ 455.6 *103890-78-4*

Action and use

Calcium channel blocker.

Preparation

Lacidipine Tablets

DEFINITION

Lacidipine is diethyl (*E*)-4-{2-[(*tert*-butoxycarbonyl)vinyl]phenyl}-1,4-dihydro-2,6-dimethylpyridine-3,5-dicarboxylate. It contains not less than 97.5% and not more than 102.0% of $C_{26}H_{33}NO_6$, calculated with reference to the anhydrous, propan-2-ol–free substance.

CHARACTERISTICS

A white to pale yellow crystalline powder. It melts at about 178°.

Practically insoluble in *water*; freely soluble in *acetone*; sparingly soluble in *absolute ethanol*.

Carry out all of the following procedures protected from light and prepare solutions immediately before use.

IDENTIFICATION

A. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of lacidipine (*RS 407*).

B. In the Assay, the principal peak in the chromatogram obtained with solution (1) has the same retention time as the principal peak in the chromatogram obtained with solution (2).

TESTS

Propan-2-ol

Carry out the method for *gas chromatography*, Appendix III B. Prepare a 0.002% v/v solution of *1,4-dioxan* (internal standard) in *dimethylacetamide* (solution A).

(1) 0.002% v/v solution of *propan-2-ol* in solution A.

(2) 2% w/v of the substance being examined in solution A.

CHROMATOGRAPHIC CONDITIONS

(a) Use a glass column (60 m × 0.32 mm) bonded with a film (5 µm) of *polymethylsiloxane* (CP-Sil 5CB is suitable).

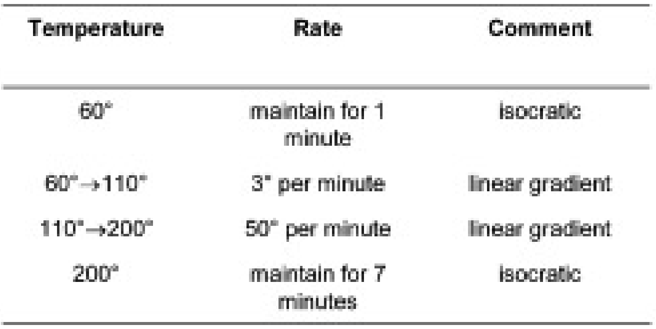
(b) Use *helium* as the carrier gas at 1.7 ml per minute.

(c) Use a temperature gradient as described below.

(d) Use an injection temperature of 170°.

(e) Use a detector temperature of 250°.

(f) Inject 1 µl of each solution.



Temperature	Rate	Comment
60°	maintain for 1 minute	isocratic
60°→110°	3° per minute	linear gradient
110°→200°	50° per minute	linear gradient
200°	maintain for 7 minutes	isocratic

SYSTEM SUITABILITY

The test is not valid unless the chromatogram obtained with solution (1) shows two clearly separated peaks. The retention time for propan-2-ol is about 6.2 minutes and that for dioxan is about 15 minutes.

LIMIT

In the chromatogram obtained with solution (2):

— the percentage content of propan-2-ol by normalisation is not more than 0.5% w/w.

Related substances

Carry out the method for *liquid chromatography*, Appendix III D, using the following solutions.

(1) Dilute 1 volume of a 0.1% w/v solution of the substance being examined in *absolute ethanol* to 5 volumes with the mobile phase.

(2) Dilute 1 volume of solution (1) to 500 volumes with the mobile phase.

(3) Dilute 1 volume of a 0.1% w/v solution of *lacidipine impurity standard BPCRS* in *absolute*

ethanol to 5 volumes with the mobile phase.

CHROMATOGRAPHIC CONDITIONS

(a) Use a stainless steel column (25 cm x 4.6 mm) packed with *cyanosilyl silica gel for chromatography* (5 µm) (Spherisorb CN is suitable).

(b) Use isocratic elution using the mobile phase described below.

(c) Use a flow rate of 2 ml per minute.

(d) Use an ambient column temperature.

(e) Use a detection wavelength of 240 nm.

(f) Inject 20 µl of each solution.

(g) If necessary adjust the composition of the mobile phase so that, in the chromatogram obtained with solution (3), the retention time of the peak due to lacidipine is about 10 minutes.

(h) For solution (1) allow the chromatography to proceed for 2 times the retention time of the principal peak.

MOBILE PHASE

3 volumes of *absolute ethanol* and 97 volumes of n-*hexane.*

SYSTEM SUITABILITY

The test is not valid unless the chromatogram obtained with solution (3) closely resembles the chromatogram supplied with *lacidipine impurity standard BPCRS*.

LIMITS

In the chromatogram obtained with solution (1):

— the area of any peak due to lacidipine impurity B is not greater than 0.5 times the area of the principal peak in the chromatogram obtained with solution (2) (0.2%, taking into account the correction factor of 2);

— the area of any other *secondary peak* is not greater than the area of the principal peak in the chromatogram obtained with solution (2) (0.2%);

— the total nominal content of impurities is not greater than 0.5%.

Water

Not more than 0.2% w/w, Appendix IX C. Use 0.5 g.

ASSAY

Carry out the method for *liquid chromatography*, Appendix III D, using the following solutions.

(1) Dilute 5 volumes of a 0.1% w/v solution of the substance being examined in *absolute ethanol* to 100 volumes with the mobile phase.

(2) Dilute 5 volumes of a 0.1% w/v solution of *lacidipine BPCRS* in *absolute ethanol* to 100 volumes with the mobile phase.

(3) Dilute 1 volume of a 0.1% w/v solution of *lacidipine impurity standard BPCRS* in *absolute ethanol* to 5 volumes with the mobile phase.

CHROMATOGRAPHIC CONDITIONS

The chromatographic procedure described under Related substances may be used.

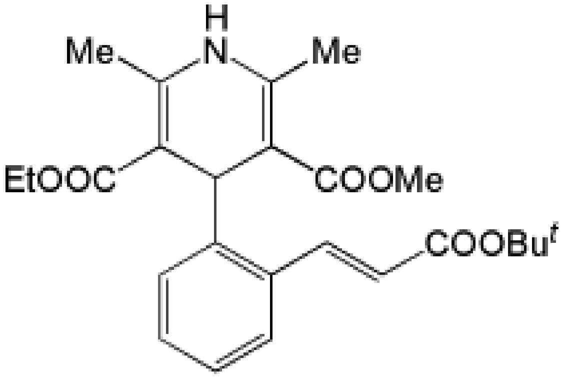
SYSTEM SUITABILITY

The test is not valid unless the chromatogram obtained with solution (3) closely resembles the corresponding chromatogram supplied with *lacidipine impurity standard BPCRS*.

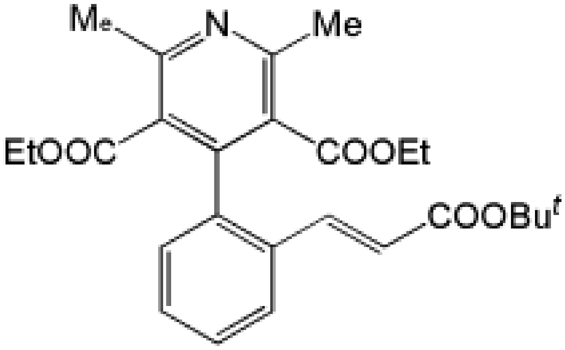
DETERMINATION OF CONTENT

Calculate the content of $C_{26}H_{33}NO_6$ from the chromatograms obtained and using the declared content of $C_{26}H_{33}NO_6$ in *lacidipine BPCRS*.

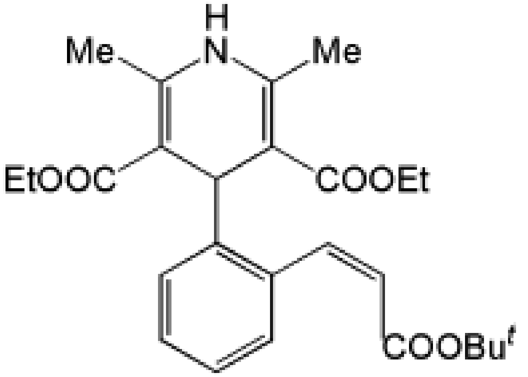
IMPURITIES



A. Ethyl methyl (*E*)-4-{2-[2-(*tert*-butoxycarbonyl)vinyl]phenyl}-1,4-dihydro-2,6-dimethylpyridine-3,5-dicarboxylate,



B. Diethyl (*E*)-4-{2-[2-(*tert*-butoxycarbonyl)vinyl]phenyl}-2,6-dimethylpyridine-3,5-dicarboxylate,



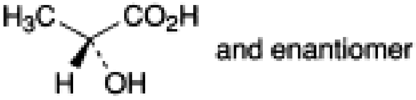
Me
H
N
Me
EtOOC
COOEt
COOBu^t

C. Diethyl (*Z*)-4-{2-[2-(*tert*-butoxycarbonyl)vinyl]phenyl}-1,4-dihydro-2,6-dimethylpyridine-3,5-dicarboxylate.

Lactic Acid

General Notices

(Ph Eur monograph 0458)



$C_3H_6O_3$ 90.1 *50-21-5*

Preparations

Sodium Lactate Intravenous Infusion

Compound Sodium Lactate Intravenous Infusion

Lactic Acid Pessaries

Ph Eur

DEFINITION

Mixture of 2-hydroxypropanoic acid, its condensation products, such as lactoyl-lactic acid and polylactic acids, and water. The equilibrium between lactic acid and polylactic acids depends on the concentration and temperature. It is usually the racemate ((*RS*)-lactic acid).

Content

88.0 per cent *m/m* to 92.0 per cent *m/m* of $C_3H_6O_3$.

CHARACTERS

Appearance

Colourless or slightly yellow, syrupy liquid.

Solubility

Miscible with water and with ethanol (96 per cent).

IDENTIFICATION

A. Dissolve 1 g in 10 ml of *water R*. The solution is strongly acidic *(2.2.4)*.

B. Relative density *(2.2.5)*: 1.20 to 1.21.

C. It gives the reaction of lactates *(2.3.1)*.

TESTS

Solution S

Dissolve 5.0 g in 42 ml of *1 M sodium hydroxide* and dilute to 50 ml with *distilled water R*.

Appearance

The substance to be examined is not more intensely coloured than reference solution Y_6 *(2.2.2, Method II)*.

Ether-insoluble substances

Dissolve 1.0 g in 25 ml of *ether R*. The solution is not more opalescent than the solvent used for the test.

Sugars and other reducing substances

To 1 ml of solution S add 1 ml of *1 M hydrochloric acid*, heat to boiling, allow to cool and add 1.5 ml of *1 M sodium hydroxide* and 2 ml of *cupri-tartaric solution R*. Heat to boiling. No red or greenish precipitate is formed.

Methanol *(2.4.24)*

Maximum 50 ppm, if intended for use in the manufacture of parenteral dosage forms.

Citric, oxalic and phosphoric acids

To 5 ml of solution S add *dilute ammonia R1* until slightly alkaline *(2.2.4)*. Add 1 ml of *calcium chloride solution R*. Heat on a water-bath for 5 min. Both before and after heating, any opalescence in the solution is not more intense than that in a mixture of 1 ml of *water R* and 5 ml of solution S.

Sulphates *(2.4.13)*

Maximum 200 ppm.

Dilute 7.5 ml of solution S to 15 ml with *distilled water R.*

Calcium *(2.4.3)*

Maximum 200 ppm.

Dilute 5 ml of solution S to 15 ml with *distilled water R*.

Heavy metals *(2.4.8)*

Maximum 10 ppm.

12 ml of solution S complies with limit test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R.*

Sulphated ash *(2.4.14)*: maximum 0.1 per cent, determined on 1.0 g.

Bacterial endotoxins *(2.6.14)*

Less than 5 IU/g, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins. Before use, neutralise the test solution to pH 7.0-7.5 with *strong sodium hydroxide solution R* and shake vigorously.

ASSAY

Place 1.000 g in a ground-glass-stoppered flask and add 10 ml of *water R* and 20.0 ml of *1 M sodium hydroxide*. Close the flask and allow to stand for 30 min. Using 0.5 ml of *phenolphthalein solution R* as indicator, titrate with *1 M hydrochloric acid* until the pink colour is discharged.

1 ml of *1 M sodium hydroxide* is equivalent to 90.1 mg of $C_3H_6O_3$.

LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of parenteral dosage forms.

Ph Eur

Appearance

White or almost white, crystalline powder.

Solubility

Very soluble in water, slightly soluble in alcohol, practically insoluble in methylene chloride

IDENTIFICATION

First identification B.

Second identification A, C.

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *lactitol monohydrate CRS.*

C. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 50 mg of the substance to be examined in *methanol R* and dilute to 20 ml with the same solvent.

Reference solution (a) Dissolve 5 mg of *lactitol monohydrate CRS* in *methanol R* and dilute to 2 ml with the same solvent.

Reference solution (b) Dissolve 5 mg of *sorbitol CRS* in 2 ml of reference solution (a) and dilute to 20 ml with *methanol R*.

Plate *TLC silica gel G plate R*.

Mobile phase *water R*, *acetonitrile R* (25:75 *V/V*).

Application 2 µl.

Development Over 2/3 of the plate.

Drying In air.

Detection Spray with *4-aminobenzoic acid solution R*. Dry the plate in a current of cold air until the solvent is removed. Heat at 100 °C for 15 min. Allow to cool and spray with a 2 g/l solution of *sodium periodate R*. Dry the plate in a current of cold air. Heat at 100 °C for 15 min.

System suitability The chromatogram obtained with reference solution (b) shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

TESTS

Solution S

Dissolve 5.000 g in *carbon dioxide-free water R* and dilute to 50.0 ml with the same solvent.

Appearance of solution

Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution BY_7 *(2.2.2, Method II)*.

Acidity or alkalinity

To 10 ml of solution S add 10 ml of *carbon dioxide-free water R*. To 10 ml of this solution add 0.05 ml of *phenolphthalein solution R*. Not more than 0.2 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator to pink. To a further 10 ml of the solution add 0.05 ml of *methyl red solution R*. Not more than 0.3 ml of *0.01 M hydrochloric acid* is required to change the colour of the indicator to red.

Specific optical rotation*(2.2.7)*

+ 13.5 to + 15.5 (anhydrous substance), determined on solution S.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution (a) Dissolve 50.0 mg of the substance to be examined in *water R* and dilute to 10.0 ml with the same solvent.

Test solution (b) Dilute 2.0 ml of test solution (a) to 50.0 ml with *water R*.

Reference solution (a) Dissolve 5.0 mg of *lactitol monohydrate CRS* and 5 mg of *glycerol R* in *water R* and dilute to 25.0 ml with the same solvent.

Reference solution (b) Dilute 1.0 ml of test solution (a) to 100.0 ml with *water R*. Dilute 5.0 ml of this solution to 100.0 ml with *water R*.

Reference solution (c) Dilute 2.5 ml of reference solution (a) to 10.0 ml with *water R*.

Column:
- *size*: *l* = 0.30 m, Ø = 7.8 mm;
- *stationary phase*: *strong cation exchange resin (calcium form) R*;
- *temperature*: 60 °C.

Mobile phase *water R*.

Flow rate 0.6 ml/min.

Detection Refractive index detector maintained at a constant temperature.

Injection 100 µl; inject test solution (a) and reference solutions (b) and (c).

Run time 2.5 times the retention time of lactitol.

Relative retention With reference to lactitol (retention time = about 13 min): impurity A = about 0.7; impurity B = about 0.8; glycerol = about 1.3; impurity C = about 1.5; impurity D = about 1.8; impurity E = about 1.9.

System suitability Reference solution (c):
- *resolution*: minimum 5 between the peaks due to lactitol and glycerol.

Limits:
- *impurity B*: not more than the area of the peak due to lactitol in the chromatogram obtained with reference solution (c) (1.0 per cent);
- *total of other impurities*: not more than the area of the peak due to lactitol in the chromatogram obtained with reference solution (c) (1.0 per cent);
- *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard any peak due to the solvent.

Reducing sugars

Maximum 0.2 per cent.

Dissolve 5.0 g in 3 ml of *water R* with gentle heating. Cool and add 20 ml of *cupri-citric solution R* and a few glass beads. Heat so that boiling begins after 4 min and maintain boiling for 3 min. Cool rapidly and add 100 ml of a 2.4 per cent *V/V* solution of *glacial acetic acid R* and 20.0 ml of *0.025 M iodine*. With continuous shaking, add 25 ml of a mixture of 6 volumes of *hydrochloric acid R* and 94 volumes of *water R*. When the precipitate has dissolved, titrate the excess of iodine with *0.05 M sodium thiosulphate* using 1 ml of *starch solution R* added towards the end of the titration, as indicator. Not less than 12.8 ml of *0.05 M sodium thiosulphate* is required.

Lead ***(2.4.10)***

Maximum 0.5 ppm.

Nickel ***(2.4.15)***

Maximum 1 ppm.

Water ***(2.5.12)***

4.5 per cent to 5.5 per cent, determined on 0.30 g.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

Microbial contamination

Total viable aerobic count *(2.6.12)* not more than 10^3 micro-organisms per gram. It complies with the tests for *Escherichia coli*, *Salmonella* and *Pseudomonas aeruginosa (2.6.13)*.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modification.

Injection Test solution (b) and reference solution (a).

Calculate the percentage content of $C_{12}H_{24}O_{11}$ using the chromatograms obtained with test solution (b) and reference solution (a) and the declared content of *lactitol monohydrate CRS*.

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *lactobionic acid CRS.*

If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in *water R*, dry at 105 °C and record new spectra using the residues.

B. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 10 mg of the substance to be examined in *water R* and dilute to 1 ml with the same solvent.

Reference solution Dissolve 10 mg of *lactobionic acid CRS* in *water R* and dilute to 1 ml with the same solvent.

Plate *TLC silica gel plate R*.

Mobile phase *concentrated ammonia R1*, *ethyl acetate R*, *water R*, *methanol R* (2:2:2:4 *V/V/V/V*).

Application 5 µl.

Development Over 3/4 of the plate.

Detection Spray 3 times with *ammonium molybdate solution R6* and heat in an oven at 110 °C for 15 min.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and colour to the principal spot in the chromatogram obtained with the reference solution.

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution Y_5 *(2.2.2, Method II)*.

Dissolve 3.0 g in 25 ml of *water R*.

Specific optical rotation *(2.2.7)*

+ 23.0 to + 29.0 (anhydrous substance).

Dissolve 1.0 g in 80 ml of *water R* and dilute to 100.0 ml with the same solvent. Allow to stand for 24 h.

Reducing sugars

Maximum 0.2 per cent, calculated as glucose.

Dissolve 5.0 g in 25 ml of *water R* with the aid of gentle heat. Cool and add 20 ml of *cupri-citric solution R* and a few glass beads. Heat so that boiling begins after 4 min and maintain boiling for 3 min. Cool rapidly and add 100 ml of a 2.4 per cent *V/V* solution of *glacial acetic acid R* and 20.0 ml of *0.025 M iodine*. With continuous shaking, add 25 ml of a mixture of 6 volumes of *hydrochloric acid R* and 94 volumes of *water R* and, when the precipitate has dissolved, titrate the excess of iodine with *0.05 M sodium thiosulphate* using 1 ml of *starch solution R,* added towards the end of the titration, as indicator. Not less than 12.8 ml of 0.05 *M sodium thiosulphate* is required.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with limit test E. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Water *(2.5.12)*

Maximum 5.0 per cent, determined on 0.50 g.

Use a mixture of 1 volume of *formamide R* and 2 volumes of *methanol R* as solvent.

Total ash *(2.4.16)*

Maximum 0.2 per cent.

ASSAY

Dissolve 0.350 g in 50 ml of *carbon dioxide-free water R*, previously heated to 30 °C. Immediately titrate with *0.1 M sodium hydroxide* and determine the 2 equivalence points potentiometrically *(2.2.20)*.

The first equivalence point (V_1) corresponds to the acid form of lactobionic acid and the second equivalence point ($V_2 - V_1$) corresponds to the δ-lactone form.

1 ml of *0.1 M sodium hydroxide* is equivalent to 35.83 mg of $C_{12}H_{22}O_{12}$.

1 ml of *0.1 M sodium hydroxide* is equivalent to 34.03 mg of $C_{12}H_{20}O_{11}$.

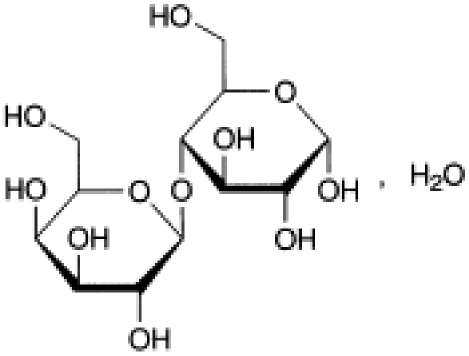
The sum of the 2 results is expressed as a percentage content of lactobionic acid.

Ph Eur

Lactose

General Notices

(Lactose Monohydrate, Ph Eur monograph 0187)



$C_{12}H_{22}O_{11},H_2O$ 360.3 *10039-26-6*

Action and use

Excipient.

Ph Eur

DEFINITION

C-β-D-Galactopyranosyl-(1→4)-α-D-glucopyranose monohydrate.

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely but slowly soluble in water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

First identification A, D.

Second identification B, C, D.

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison lactose CRS.

B. Thin-layer chromatography (*2.2.27*).

Solvent mixture *water R, methanol R* (2:3 *V/V*).

Test solution Dissolve 10 mg of the substance to be examined in the solvent mixture and dilute to 20 ml with the solvent mixture.

Reference solution (a) Dissolve 10 mg of *lactose CRS* in the solvent mixture and dilute to 20 ml with the solvent mixture.

Reference solution (b) Dissolve 10 mg of *fructose CRS*, 10 mg of *glucose CRS*, 10 mg of *lactose CRS* and 10 mg of *sucrose CRS* in the solvent mixture and dilute to 20 ml with the solvent mixture.

Plate *TLC silica gel G plate R*.

Mobile phase *water R*, *methanol R*, *glacial acetic acid R*, *ethylene chloride R* (10:15:25:50 *V/V/V/V*); measure the volumes accurately, as a slight excess of water produces cloudiness.

Application 2 µl; thoroughly dry the starting points.

Development A Over a path of 15 cm.

Drying A In a current of warm air.

Development B Immediately, over a path of 15 cm, after renewing the mobile phase.

Drying B In a current of warm air.

Detection Spray with a solution of 0.5 g of *thymol R* in a mixture of 5 ml of *sulphuric acid R* and 95 ml of *ethanol (96 per cent) R*; heat at 130 °C for 10 min.

System suitability Reference solution (b):

— the chromatogram shows 4 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve 0.25 g in 5 ml of *water R*. Add 5 ml of *ammonia R* and heat in a water-bath at 80 °C for 10 min. A red colour develops.

D. Water (see Tests).

TESTS

Appearance of solution

The solution is clear (*2.2.1*) and not more intensely coloured than reference solution BY_7 (*2.2.2, Method II*).

Dissolve 1.0 g in boiling *water R* and dilute to 10 ml with the same solvent.

Acidity or alkalinity

Dissolve 6.0 g by heating in 25 ml of *carbon dioxide-free water R*, cool and add 0.3 ml of *phenolphthalein solution R*. The solution is colourless. Not more than 0.4 ml of *0.1 M sodium hydroxide* is required to change the colour of the indicator to pink.

Specific optical rotation (*2.2.7*)

+ 54.4 to + 55.9 (anhydrous substance).

Dissolve 10.0 g in 80 ml of *water R*, heating to 50 °C. Allow to cool and add 0.2 ml of *dilute ammonia R1*. Allow to stand for 30 min and dilute to 100.0 ml with *water R.*

Absorbance (*2.2.25*).

Test solution (a) Dissolve 1.0 g in boiling *water R* and dilute to 10.0 ml with the same solvent.

Test solution (b) Dilute 1.0 ml of test solution (a) to 10.0 ml with *water R*.

Spectral range 400 nm for test solution (a) and 210-300 nm for test solution (b).

Results:
— *at 400 nm*: maximum 0.04 for test solution (a);

— *from 210 nm to 220 nm*: maximum 0.25 for test solution (b);

— *from 270 nm to 300 nm*: maximum 0.07 for test solution (b).

Heavy metals (*2.4.8*)

Maximum 5 ppm.

Dissolve 4.0 g in *water R* with warming, add 1 ml of *0.1 M hydrochloric acid* and dilute to 20 ml with *water R*. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Water (*2.5.12*)

4.5 per cent to 5.5 per cent, determined on 0.50 g, using a mixture of 1 volume of *formamide R* and 2 volumes of *methanol R* as the solvent.

Sulphated ash (*2.4.14*)

Maximum 0.1 per cent, determined on 1.0 g.

Microbial contamination

Total viable aerobic count (*2.6.12*) not more than 10^2 micro-organisms per gram, determined by plate-count. It complies with the test for *Escherichia coli* (*2.6.13*).

STORAGE

In an airtight container.

FUNCTIONALITY-RELATED CHARACTERISTICS

This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient. This section is a non-mandatory part of the monograph and it is not necessary to verify the characteristics to demonstrate compliance. Control of these characteristics can however contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.

The following characteristics may be relevant for lactose monohydrate used as a filler/diluent in solid dosage forms (compressed and powder).

Particle size distribution *(2.9.31* or *2.9.38)*.

Bulk and tapped density (*2.9.15*)

Determine the bulk density and the tapped density. Calculate the Hausner Index using the following expression:

$$\frac{V_0}{V_f}$$

V_0 = volume of bulk substance;

V_f = volume of tapped substance.

Ph Eur

Lactulose Solution

General Notices

(Liquid Lactulose, Ph Eur monograph 0924)

Action and use

Osmotic laxative.

Ph Eur

DEFINITION

Aqueous solution of 4-*C*-(β-D-galactopyranosyl)-D-*arabino*-hex-2-ulofuranose normally prepared by alkaline isomerisation of lactose. It may contain lesser amounts of other sugars including lactose, epilactose, galactose, tagatose and fructose.

Content

Minimum 620 g/l of lactulose ($C_{12}H_{22}O_{11}$; M_r 342.3) and 95.0 per cent to 105.0 per cent of the content of lactulose stated on the label.

It may contain a suitable antimicrobial preservative.

CHARACTERS

Appearance

Clear, viscous liquid, colourless or pale brownish-yellow.

Solubility

Miscible with water. It may be a supersaturated solution or may contain crystals which disappear on heating.

A 10 per cent *V/V* solution is laevorotatory.

IDENTIFICATION

First identification B, C, D.

Second identification A, C, D.

A. Thin-layer chromatography (*2.2.27*).

Test solution Dilute 0.50 g of the substance to be examined to 50 ml with *water R*.

Reference solution Dissolve 60 mg of *lactulose CRS* in *water R* and dilute to 10 ml with the same solvent.

Plate TLC silica gel G plate R.

Mobile phase *glacial acetic acid R*, 50 g/l solution of *boric acid R*, *methanol R*, *ethyl acetate R* (10:15:20:55 *V/V/V/V*).

Application 2 µl.

Development Over a path of 15 cm.

Drying At 100-105 °C for 5 min and allow to cool.

Detection Spray with a 1.0 g/l solution of *1,3-dihydroxynaphthalene R* in a mixture of 10 volumes of *sulphuric acid R* and 90 volumes of *methanol R*. Heat at 110 °C for 5 min.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

B. Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time to the principal peak in the chromatogram obtained with reference solution (b).

C. To 0.1 g add 10 ml of *water R* and 3 ml of *cupri-tartaric solution R* and heat. A red precipitate is formed.

D. To 0.25 g add 5 ml of *water R* and 5 ml of *ammonia R*. Heat in a water-bath at 80 °C for 10 min. A red colour develops.

TESTS

Solution S

Mix 10 g with *carbon dioxide-free water R* and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution BY_5 (*2.2.2, Method II*).

pH (*2.2.3*)

3.0 to 7.0.

To 10 ml of solution S, add 0.1 ml of a saturated solution of *potassium chloride R*.

Related substances

Liquid chromatography (*2.2.29*).

Test solution Mix 4.00 g of the substance to be examined with 20 ml of *water R*. Add 25.0 ml of *acetonitrile R* with gentle heating and dilute to 50.0 ml with *water R*.

Reference solution (a) To 5 ml of the test solution, add 47.5 ml of *acetonitrile R* with gentle heating and dilute to 100.0 ml with *water R*.

Reference solution (b) Dissolve 2.00 g of *lactulose CRS* in 20 ml of *water R*. Add 25.0 ml of *acetonitrile R* with gentle heating and dilute to 50.0 ml with *water R*.

Reference solution (c) Dissolve the contents of a vial of *lactulose for system suitability CRS* in 1 ml of a mixture of equal volumes of *acetonitrile R* and *water R*.

Precolumn:

— *size:* *l* = 0.05 m, Ø = 4.6 mm;

— *stationary phase*: *aminopropylsilyl silica gel for chromatography R* (3 µm);

— *temperature*: 38 ± 1 °C.

Column:

— *size*: *l* = 0.15 m, Ø = 4.6 mm;

— *stationary phase*: *aminopropylsilyl silica gel for chromatography R* (3 µm);

— *temperature*: 38 ± 1 °C.

Mobile phase Dissolve 0.253 g of *sodium dihydrogen phosphate R* in 220 ml of *water R* and add 780 ml of *acetonitrile R*.

Flow rate 1.0 ml/min.

Detection Refractometer maintained at a constant temperature.

Injection 20 µl of the test solution and reference solutions (a) and (c).

Run time 2.5 times the retention time of lactulose.

Relative retention With reference to lactulose (retention time = about 18 min): impurity E = about 0.38; impurity D = about 0.42; impurity B = about 0.57; impurity A = about 0.90; impurity C = about 1.17.

System suitability Reference solution (c):

— *resolution*: minimum 1.3 between the peaks due to lactulose and impurity A; if necessary, adjust the concentration of acetonitrile in the mobile phase to between 75.0 per cent *V/V* and 82.0 per cent *V/V*;

— the chromatogram obtained is similar to the chromatogram supplied with *lactulose for system suitability CRS.*

Limits:

— *impurities A, C*: for each impurity, not more than twice the area of the peak due to lactulose in the chromatogram obtained with reference solution (a) (10 per cent);

— *impurity B*: not more than 3 times the area of the peak due to lactulose in the chromatogram obtained with reference solution (a) (15 per cent);

— *impurity D*: not more than 0.2 times the area of the peak due to lactulose in the chromatogram obtained with reference solution (a) (1 per cent);

— *impurity E*: not more than 0.8 times the area of the peak due to lactulose in the chromatogram obtained with reference solution (a) (4 per cent).

Methanol

Head-space gas chromatography (*2.2.28*).

Internal standard solution Mix 0.5 ml of *propanol R* with 100.0 ml of *water R*. Dilute 1.0 ml of this solution to 100.0 ml with *water R*. Dilute 5.0 ml of the solution to 50.0 ml with *water R*.

Test solution To 0.13 g of the substance to be examined in a 20 ml vial add 1.0 ml of the internal standard solution and 5 µl of a 0.1 per cent *V/V* solution of *methanol R*.

Reference solution To 1.0 ml of the internal standard solution in a 20 ml vial add 5 µl of a 0.1 per cent *V/V* solution of *methanol R*.

Column:
- *size:* *l* = 2 m, Ø = 2 mm;
- *stationary phase*: *ethylvinylbenzene-divinylbenzene copolymer R* (180 µm).

Carrier gas *helium for chromatography R*.

Flow rate 30 ml/min.

Static head-space conditions which may be used:
- *equilibration temperature*: 60 °C;
- *equilibration time*: 1 h;
- *pressurisation time*: 1 min.

Temperature:
- *column*: 140 °C;
- *injection port*: 200 °C;
- *detector*: 220 °C.

Detection Flame ionisation.

Injection 1 ml of the gaseous phase.

Calculate the content of methanol taking its density (*2.2.5*) at 20 °C to be 0.79 g/ml.

Limit:
- *methanol*: calculate the ratio (*R*) of the area of the peak due to methanol to the area of the peak due to the internal standard in the chromatogram obtained with the reference solution; calculate the ratio of the area of the peak due to methanol to the area of the peak due to the internal standard in the chromatogram obtained with the test solution: this ratio is not greater than 2 *R* (30 ppm).

Sulphites

Maximum 30 ppm.

Mix 5.0 g with 40 ml of *water R*, add 2.0 ml of *0.1 M sodium hydroxide* and dilute to 100 ml with *water R*. To 10.0 ml of this solution, add 1.0 ml of *hydrochloric acid R1*, 2.0 ml of *decolorised fuchsin solution R1* and 2.0 ml of a 0.5 per cent *V/V* solution of *formaldehyde R*. Allow to stand for 30 min and measure the absorbance (*2.2.25*) at 583 nm using as the compensation liquid a solution prepared at the same time and in the same manner with 10.0 ml of *water R* instead of the solution of the substance to be examined. The absorbance is not greater than that of a reference solution prepared at the same time and in the same manner using 10.0 ml of *sulphite standard solution (1.5 ppm* SO_2*) R* instead of the solution of the substance to be examined.

Boron

Maximum 5 ppm.

Avoid where possible the use of glassware.

Reference solution Dissolve 56.0 mg of *boric acid R in water R* and dilute to 100.0 ml with the same solvent. Dilute 5.0 ml of this solution to 100.0 ml with *water R*. *Keep in a well-closed polyethylene container.*

In 4 polyethylene 25 ml flasks, place separately:

- 1.00 g of the substance to be examined and 1 ml of *water R* (solution A);
- 1.00 g of the substance to be examined and 1 ml of the reference solution (solution B);
- 1 ml of the reference solution and 1 ml of *water R* (solution C);
- 2 ml of *water R* (solution D).

To each flask, add 4.0 ml of *acetate-edetate buffer solution pH 5.5 R*. Mix and add 4.0 ml of freshly prepared *azomethine H solution R*. Mix and allow to stand for 1 h. Measure the absorbance (*2.2.25*) of solutions A, B and C at 420 nm, using solution D as the compensation liquid. The test is not valid unless the absorbance of solution C is at least 0.25. The absorbance of solution B is not less than twice that of solution A.

Lead (*2.4.10*)

Maximum 0.5 ppm, calculated with reference to the declared content of lactulose.

Sulphated ash (*2.4.14*)

Maximum 0.2 per cent, determined on 1.5 g and calculated with reference to the declared content of lactulose.

Microbial contamination

Total viable aerobic count (*2.6.12*) not more than 10^2 micro-organisms per gram, determined by plate count. It complies with the test for *Escherichia coli* (*2.6.13*).

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

Injection The test solution and reference solution (b).

Calculate the percentage content of $C_{12}H_{22}O_{11}$ from the declared content of *lactulose CRS*.

LABELLING

The label states the declared content of lactulose.

IMPURITIES

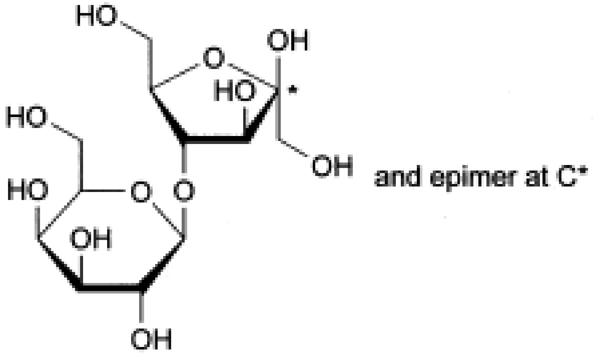
General Notices

(Ph Eur monograph 1230)



$C_{12}H_{22}O_{11}$ 342.3 *4618-18-2*

Action and use

Osmotic laxative.

Preparation

Lactulose Oral Powder

Ph Eur

DEFINITION

4-*O*-(β-D-Galactopyranosyl)-D-*arabino*-hex-2-ulofuranose.

Content

95.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water, sparingly soluble in methanol, practically insoluble in toluene.

mp: about 168 °C.

IDENTIFICATION

First identification *B, C, D, E.*

Second identification *A, C, D, E.*

A. Thin-layer chromatography (*2.2.27*).

Test solution Dissolve 50.0 mg of the substance to be examined in *water R* and dilute to 10.0 ml with the same solvent.

Reference solution Dissolve 50.0 mg of *lactulose CRS* in *water R* and dilute to 10.0 ml with the same solvent.

Plate *TLC silica gel G plate R.*

Mobile phase *glacial acetic acid R*, 50 g/l solution of *boric acid R*, *methanol R*, *ethyl acetate R* (10:15:20:55 *V/V/V/V*).

Application 2 µl.

Development Over a path of 15 cm.

Drying At 100-105 °C for 5 min and allow to cool.

Detection Spray with a 1.0 g/l solution of *1,3-dihydroxynaphthalene R* in a mixture of 10 volumes of *sulphuric acid R* and 90 volumes of *methanol R*. Heat at 110 °C for 5 min.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

B. Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (b).

C. Dissolve 50 mg in 10 ml of *water R*. Add 3 ml of *cupri-tartaric solution R* and heat. A red precipitate is formed.

D. Dissolve 0.125 g in 5 ml of *water R*. Add 5 ml of *ammonia R*. Heat on a water-bath at 80 °C for 10 min. A red colour develops.

E. Specific optical rotation (see Tests).

TESTS

Solution S

Dissolve 3.0 g in *carbon dioxide-free water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution BY_5 (*2.2.2, Method II*).

pH (*2.2.3*)

3.0 to 7.0.

To 10 ml of solution S add 0.1 ml of a saturated solution of *potassium chloride R*.

Specific optical rotation (*2.2.7*)

- 46.0 to - 50.0 (anhydrous substance).

Dissolve 1.25 g in *water R*, add 0.2 ml of *concentrated ammonia R* and dilute to 25.0 ml with *water R*.

Related substances

Liquid chromatography (*2.2.29*).

Test solution Dissolve 1.00 g of the substance to be examined in 10 ml of *water R*. Add 12.5 ml of *acetonitrile R* with gentle heating and dilute to 25.0 ml with *water R*.

Reference solution (a) To 3 ml of the test solution add 47.5 ml of *acetonitrile R* with gentle heating and dilute to 100.0 ml with *water R*.

Reference solution (b) Dissolve 1.00 g of *lactulose CRS* in 10 ml of *water R*. Add 12.5 ml of *acetonitrile R* with gentle heating and dilute to 25.0 ml with *water R*.

Reference solution (c) Dissolve the contents of a vial of *lactulose for system suitability CRS* in 1 ml of a mixture of equal volumes of *acetonitrile R* and *water R*.

Precolumn:

— *size: l* = 0.05 m, Ø = 4.6 mm;

— *stationary phase*: *aminopropylsilyl silica gel for chromatography R* (3 µm);

— *temperature*: 38 ± 1 °C.

Column:

— *size: l* = 0.15 m, Ø = 4.6 mm;

— *stationary phase*: *aminopropylsilyl silica gel for chromatography R* (3 µm);

— *temperature*: 38 ± 1 °C.

Mobile phase Dissolve 0.253 g of *sodium dihydrogen phosphate R* in 220 ml of *water R* and add 780 ml of *acetonitrile R*.

Flow rate 1.0 ml/min.

Detection Refractometer maintained at a constant temperature.

Injection 20 µl of the test solution and reference solutions (a) and (c).

Run time 2.5 times the retention time of lactulose.

Relative retention With reference to lactulose (retention time = about 18.3 min): impurity E = about 0.38; impurity D = about 0.42; impurity B = about 0.57; impurity A = about 0.90; impurity C = about 1.17.

System suitability Reference solution (c):

— *resolution*: minimum 1.3 between the peaks due to lactulose and impurity A; if necessary, adjust the concentration of acetonitrile in the mobile phase to between 75.0 per cent *V/V* and 82.0 per cent *V/V*;

— the chromatogram obtained is similar to the chromatogram supplied with *lactulose for system suitability CRS*.

Limit:

- *sum of impurities A, B, C, D, E*: not more than the area of the peak due to lactulose in the chromatogram obtained with reference solution (a) (3 per cent).

Methanol

Head-space gas chromatography (*2.2.28*).

Internal standard solution Mix 0.5 ml of *propanol R* with 100.0 ml of *water R.* Dilute 1.0 ml of this solution to 100.0 ml with *water R*. Dilute 5.0 ml of the solution to 50.0 ml with *water R*.

Test solution To 79 mg of the substance to be examined in a 20 ml vial add 1.0 ml of the internal standard solution and 5 µl of a 0.1 per cent *V/V* solution of *methanol R*.

Reference solution To 1.0 ml of the internal standard solution in a 20 ml vial add 5 µl of a 0.1 per cent *V/V* solution of *methanol R*.

Column:
- *size: l* = 2 m, Ø = 2 mm;
- *stationary phase*: *ethylvinylbenzene-divinylbenzene copolymer R* (180 µm).

Carrier gas *helium for chromatography R*.

Flow rate 30 ml/min.

Static head-space conditions which may be used:
- *equilibration temperature*: 60 °C;
- *equilibration time*: 1 h;
- *pressurisation time*: 1 min.

Temperature:
- *column*: 140 °C;
- *injection port*: 200 °C;
- *detector*: 220 °C.

Detection Flame ionisation.

Injection 1 ml of the gaseous phase.

Calculate the content of methanol taking its density (*2.2.5*) at 20 °C to be 0.79 g/ml.

Limit:
- *methanol*: calculate the ratio (*R*) of the area of the peak due to methanol to the area of the peak due to the internal standard in the chromatogram obtained with the reference solution; calculate the ratio of the area of the peak due to methanol to the area of the peak due to the internal standard in the chromatogram obtained with the test solution: this ratio is not greater than 2 *R* (50 ppm).

Boron

Maximum 9 ppm.

Avoid where possible the use of glassware.

Reference solution Dissolve 50.0 mg of *boric acid R* in *water R* and dilute to 100.0 ml with the same solvent. Dilute 5.0 ml of this solution to 100.0 ml with *water R*. *Keep in a well-closed polyethylene container.*

In 4 polyethylene 25 ml flasks, place separately:

— 0.50 g of the substance to be examined dissolved in 2.0 ml of *water R* (solution A);

— 0.50 g of the substance to be examined dissolved in 1.0 ml of the reference solution and 1.0 ml of *water R* (solution B);

— 1.0 ml of the reference solution and 1.0 ml of *water R* (solution C);

— 2.0 ml of *water R* (solution D).

To each flask, add 4.0 ml of *acetate-edetate buffer solution pH 5.5 R*. Mix and add 4.0 ml of freshly prepared *azomethine H solution R*. Mix and allow to stand for 1 h. Measure the absorbance (*2.2.25*) of solutions A, B and C at 420 nm, using solution D as the compensation liquid. The test is not valid unless the absorbance of solution C is at least 0.25. The absorbance of solution B is not less than twice that of solution A.

Lead (2.4.10)

Maximum 0.5 ppm.

Water (*2.5.12*)

Maximum 2.5 per cent, determined on 0.500 g.

Sulphated ash (*2.4.14*)

Maximum 0.1 per cent, determined on 1.0 g.

Microbial contamination

Total viable aerobic count (*2.6.12*) not more than 10^2 micro-organisms per gram, determined by plate count. It complies with the test for *Escherichia coli* (*2.6.13*).

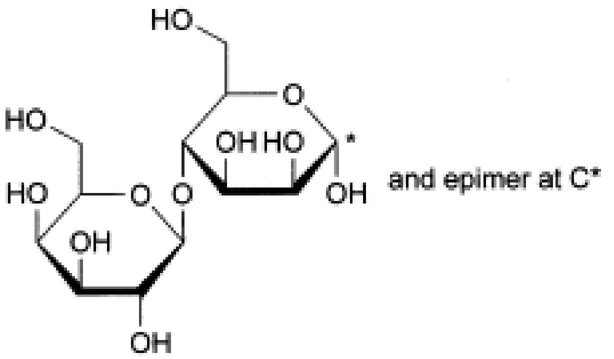
ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

Injection The test solution and reference solution (b).

Calculate the percentage content of $C_{12}H_{22}O_{11}$ from the declared content of *lactulose CRS*.

IMPURITIES

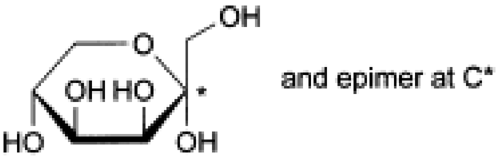


A. 4-*O*-(β-D-galactopyranosyl)-D-mannopyranose (epilactose),

B. galactose,

C. lactose,

D. fructose,



and epimer at C*

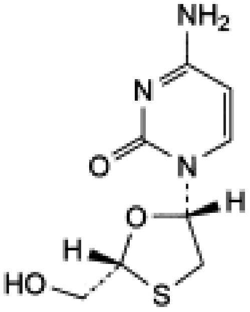
E. D-*lyxo*-hex-2-ulopyranose (tagatose).

Ph Eur

Lamivudine

General Notices

(Ph Eur monograph 2217)



$C_8H_{11}N_3O_3S$ 229.3 *134678-17-4*

Action and use

Nucleoside reverse transcriptase inhibitor; antiviral (HIV).

Ph Eur

DEFINITION

4-Amino-1-[(2*R*,5*S*)-2-(hydroxymethyl)-1,3-oxathiolan-5-yl]pyrimidin-2(1*H*)-one.

Content

97.5 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Soluble in water, sparingly soluble in methanol, slightly soluble in ethanol (96 per cent).

It shows polymorphism (*5.9*).

IDENTIFICATION

First identification *B, C.*

Second identification *A, B.*

A. Specific optical rotation (*2.2.7*): - 97 to - 99 (dried substance).

Dissolve 0.250 g in *water R* and dilute to 50.0 ml with the same solvent.

B. Infrared absorption spectrophotometry (*2.2.24*).

Comparison *lamivudine CRS.*

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *methanol R*, evaporate to dryness and record new spectra using the residues.

C. Enantiomeric purity (see Tests).

TESTS

Absorbance (*2.2.25*)

Maximum 0.3 at 440 nm, using a path length of 4 cm.

Dissolve 1.00 g in *water R*, using sonication if necessary, and dilute to 20.0 ml with the same solvent.

Related substances

Liquid chromatography (*2.2.29*).

Test solution Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (b) Dissolve 5 mg of *salicylic acid R* in the mobile phase and dilute to 100.0 ml with the mobile phase. Dilute 1.0 ml of the solution to 100.0 ml with the mobile phase.

Reference solution (c) Dissolve 50.0 mg of *lamivudine CRS* in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (d) Dissolve 5 mg of *cytosine R* and 5 mg of *uracil R* in the mobile phase and dilute to 100.0 ml with the mobile phase. Dilute 2.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (e) Dissolve 5 mg of *lamivudine for system suitability 1 CRS* (containing impurities A and B) in 2 ml of mobile phase. Add 1.0 ml of reference solution (d) and dilute to 10.0 ml with the mobile phase.

Column:

- *size:* l = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *base-deactivated octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 35 °C.

Mobile phase Mix 5 volumes of *methanol R* and 95 volumes of a 1.9 g/l solution of *ammonium acetate R*, previously adjusted to pH 3.8 with *glacial acetic acid R*.

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 277 nm.

Injection 10 µl.

Run time 3 times the retention time of lamivudine.

Identification of impurities Use the chromatograms obtained with reference solutions (e) and (b) to identify the peaks due to impurities A, B, E, F and C.

Relative retention With reference to lamivudine (retention time = about 9 min): impurity E = about 0.28; impurity F = about 0.32; impurity A = about 0.36; impurity B = about 0.91; impurity J = about 1.45; impurity C = about 2.32.

System suitability Reference solution (e):

— *resolution*: minimum 1.5 between the peaks due to impurity F and impurity A; minimum 1.5 between the peaks due to impurity B and lamivudine.

Limits:

— *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity E = 0.6; impurity F = 2.2; impurity J = 2.2;

— *impurity A*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);

— *impurity B*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

— *impurity C*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

— *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

— *total*: not more than 6 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.6 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Enantiomeric purity

Liquid chromatography (*2.2.29*): use the normalisation procedure.

Test solution Dissolve 25.0 mg of the substance to be examined in *water R* and dilute to 100.0 ml with the same solvent.

Reference solution Dissolve the contents of a vial of *lamivudine for system suitability 2 CRS* (containing impurity D) in 1.0 ml of *water R*.

Column:

— *size: l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase*: *silica gel BC for chiral chromatography R*,

— *temperature*: maintain at constant temperature between 15 °C and 30 °C; the temperature may be adjusted to optimise the resolution between lamivudine and impurity D; a lower temperature favours improved resolution.

Mobile phase Mix 5 volumes of *methanol* R and 95 volumes of a 7.7 g/l solution of *ammonium acetate R*.

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 270 nm.

Injection 10 µl.

Run time Twice the retention time of lamivudine.

Relative retention With reference to lamivudine (retention time = about 8 min): impurity D = about 1.2; impurity B and enantiomer = about 1.3 and 1.5.

System suitability Reference solution:

— *peak-to-valley-ratio*: minimum 15, where H_r = height above the baseline of the peak due to impurity D and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to lamivudine.

Calculate the sum of the percentage contents of all impurity peaks with a relative retention from 1.2 to 1.5. Subtract the percentage content of impurity B as obtained in the test for related substances.

Limit:
— *impurity* D: maximum 0.3 per cent.

Heavy metals (*2.4.8*)

Maximum 20 ppm.

1.0 g complies with test F. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying (*2.2.32*)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

Injection Test solution and reference solution (c).

Calculate the percentage content of $C_8H_{11}N_3O_3S$ using the chromatograms obtained with the test solution and reference solution (c) and the declared content of $C_8H_{11}N_3O_3S$ in *lamivudine CRS.*

STORAGE

Protected from light.

IMPURITIES

Specified impurities A, B, C, D.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these

impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use)*: *E, F, G, H, I, J.*

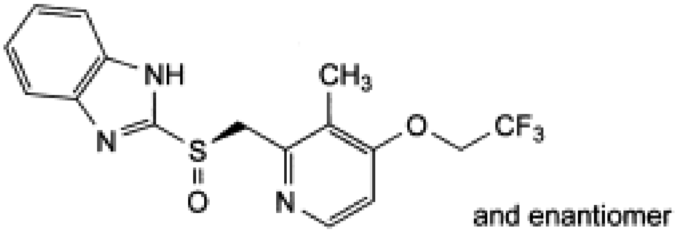
Ph Eur

Lansoprazole

General Notices

(Ph Eur monograph 2219)



$C_{16}H_{14}F_3N_3O_2S$ 369.4 *103577-45-3*

Action and use

Proton pump inhibitor; treatment of peptic ulcer disease.

Ph Eur

DEFINITION

2-[(*RS*)-[[3-Methyl-4-(2,2,2-trifluoroethoxy)pyridin-2-yl]methyl]sulphinyl]-1*H*-benzimidazole.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or brownish powder.

Solubility

Practically insoluble in water, soluble in anhydrous ethanol, very slightly soluble in acetonitrile.

It shows polymorphism *(5.9)*.

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)*.

Comparison lansoprazole CRS.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *anhydrous ethanol R*, evaporate to dryness and record new spectra using the residues.

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution B_2 or BY_2 *(2.2.2, Method II)*.

Dissolve 1.0 g in *dimethylformamide R* and dilute to 20 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*. *Prepare the solutions immediately before use and protect them from light*.

Solvent mixture Mix 1 volume of *triethylamine R* with 60 volumes of *water R*; adjust the pH to 10.5 using *phosphoric acid R*; mix the solution obtained with 40 volumes of *acetonitrile R1*.

Test solution Dissolve 10 mg of the substance to be examined in the solvent mixture and dilute to 10 ml with the solvent mixture.

Reference solution (a) Dissolve the contents of a vial of *lansoprazole for peak identification CRS* (containing impurities A and B) in 1.0 ml of the solvent mixture.

Reference solution (b) Dilute 2.0 ml of the test solution to 100.0 ml with the solvent mixture. Dilute 1.0 ml of this solution to 10.0 ml with the solvent mixture.

Reference solution (c) Dissolve 5 mg of *2-mercaptobenzimidazole R* (impurity E) and 5 mg of *2-hydroxybenzimidazole R* (impurity D) in the solvent mixture and dilute to 100 ml with the solvent mixture. Dilute 1 ml of this solution to 10 ml with the solvent mixture.

Column:

- *size:* l = 0.25 m, Ø = 4.6 mm;
- *stationary phase: amidohexadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Mix 1 volume of *triethylamine R* with 60 volumes of *water R*; adjust the pH to 6.2 using *phosphoric acid R*; mix the solution obtained with 40 volumes of *acetonitrile R1*.

Flow rate 1.2 ml/min.

Detection Spectrophotometer at 285 nm.

Injection 10 µl.

Run time 3 times the retention time of lansoprazole.

Identification of impurities Use the chromatogram supplied with *lansoprazole for peak identification CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A and B; use the chromatogram obtained with reference solution (c) to identify the peaks due to impurities D and E.

Relative retention With reference to lansoprazole (retention time = about 7 min): impurity D = about 0.4; impurity A = about 0.5; impurity E = about 0.6; impurity B = about 1.2.

System suitability Reference solution (a):

- *resolution*: minimum 3.0 between the peaks due to lansoprazole and impurity B.

Limits:

— *correction factor*: for the calculation of content, multiply the peak area of impurity E by 0.4;

— *impurity B*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.4 per cent);

— *impurities A, D, E*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

— *unspecified impurities*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

— *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.6 per cent);

— *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Water ***(2.5.32)***

Maximum 0.1 per cent, determined on 1.000 g.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 40 ml of *ethanol (96 per cent) R* and dilute to 50 ml with *water R*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M sodium hydroxide* is equivalent to 36.94 mg of $C_{16}H_{14}F_3N_3O_2S$.

STORAGE

In an airtight container , protected from light.

Ph Eur

Lauroyl Macrogolglycerides

General Notices

(Ph Eur monograph 1231)

Action and use

Excipient.

Ph Eur

DEFINITION

Mixtures of monoesters, diesters and triesters of glycerol and monoesters and diesters of macrogols with a mean relative molecular mass between 300 and 1500.

They are obtained by partial alcoholysis of saturated oils mainly containing triglycerides of lauric (dodecanoic) acid, using macrogol, or by esterification of glycerol and macrogol with saturated fatty acids, or by mixing glycerol esters and condensates of ethylene oxide with the fatty acids of these hydrogenated oils.

CHARACTERS

Appearance

Pale yellow waxy solid.

Solubility

Dispersible in hot water, freely soluble in methylene chloride.

IDENTIFICATION

A. Thin-layer chromatography (*2.2.27*).

Test solution Dissolve 1.0 g of the substance to be examined in *methylene chloride R* and dilute to 20 ml with the same solvent.

Plate *TLC silica gel plate R*.

Mobile phase *hexane R*, *ether R* (30:70 *V/V*).

Application 10 µl.

Development Over a path of 15 cm.

Drying In air.

Detection Spray with a 0.1 g/l solution of *rhodamine B R* in *ethanol (96 per cent) R* and examine in ultraviolet light at 365 nm.

Results The chromatogram shows a spot due to triglycerides with an R_F value of about 0.9

(R_{st} 1) and spots due to 1,3-diglycerides (R_{st} 0.7), to 1,2-diglycerides (R_{st} 0.6), to monoglycerides (R_{st} 0.1) and to esters of macrogol (R_{st} 0).

B. Hydroxyl value (see Tests).

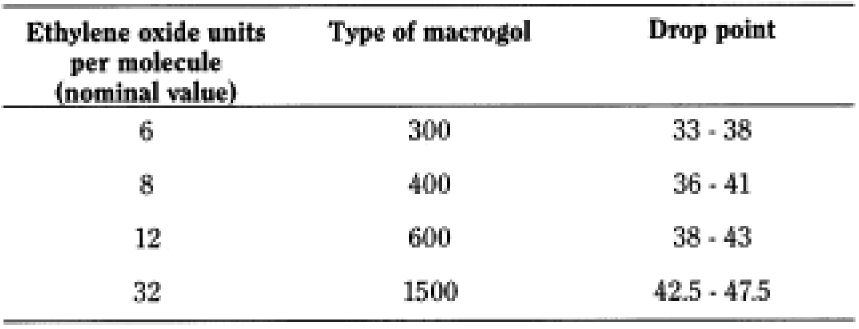
C. Saponification value (see Tests).

D. Fatty acid composition (see Tests).

TESTS

Drop point (*2.2.17*)

Introduce into the cup the substance to be examined, which has been melted by heating for 1 h in an oven at 100 ± 2 °C, and allow to stand for 5 h at about 5 °C.



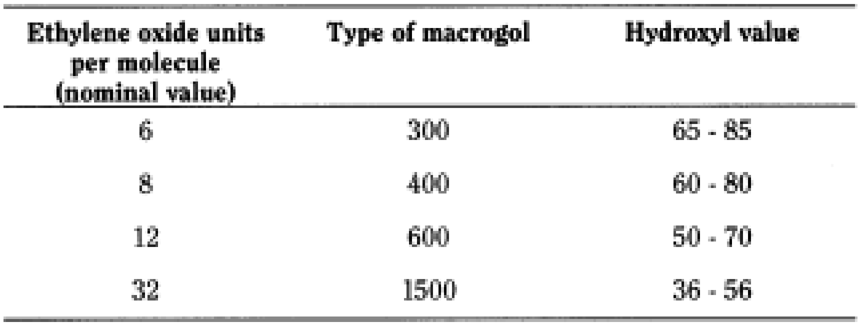
Ethylene oxide units per molecule (nominal value)	Type of macrogol	Drop point
6	300	33 - 38
8	400	36 - 41
12	600	38 - 43
32	1500	42.5 - 47.5

Acid value (*2.5.1*)

Maximum 2.0, determined on 2.0 g.

Hydroxyl value (*2.5.3, Method A*)

Use 1.0 g.



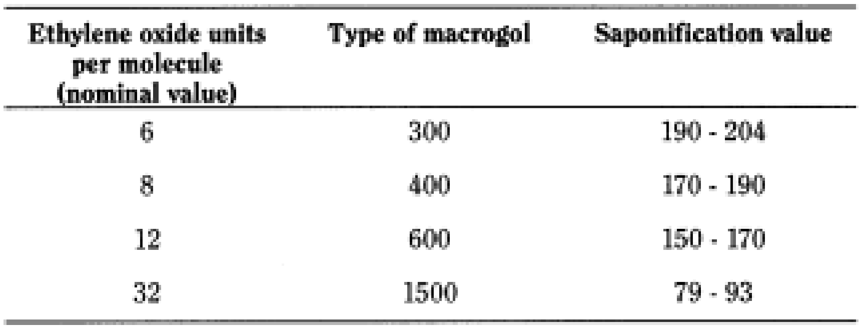
Ethylene oxide units per molecule (nominal value)	Type of macrogol	Hydroxyl value
6	300	65 - 85
8	400	60 - 80
12	600	50 - 70
32	1500	36 - 56

Peroxide value (*2.5.5, Method A*)

Maximum 6.0, determined on 2.0 g.

Saponification value (*2.5.6*)

Use 2.0 g.



Ethylene oxide units per molecule (nominal value)	Type of macrogol	Saponification value
6	300	190 - 204
8	400	170 - 190
12	600	150 - 170
32	1500	79 - 93

Alkaline impurities

Introduce 5.0 g into a test tube and carefully add a mixture, neutralised if necessary with *0.01 M hydrochloric acid* or with *0.01 M sodium hydroxide*, of 0.05 ml of a 0.4 g/l solution of *bromophenol blue R* in *ethanol (96 per cent) R*, 0.3 ml of *water R* and 10 ml of *ethanol (96 per cent) R*. Shake and allow to stand. Not more than 1.0 ml of *0.01 M hydrochloric acid* is required to change the colour of the upper layer to yellow.

Free glycerol

Maximum 3.0 per cent.

Dissolve 1.20 g in 25.0 ml of *methylene chloride R*. Heat if necessary. After cooling, add 100 ml of *water R*. Shake and add 25.0 ml of *periodic acetic acid solution R*. Shake and allow to stand for 30 min. Add 40 ml of a 75 g/l solution of *potassium iodide R*. Allow to stand for 1 min. Add 1 ml of *starch solution R*. Titrate the iodine with *0.1 M sodium thiosulphate*. Carry out a blank titration.

1 ml of *0.1 M sodium thiosulphate* is equivalent to 2.3 mg of glycerol.

Composition of fatty acids (*2.4.22, Method A*).

Composition of the fatty-acid fraction of the substance:

— *caprylic acid*: maximum 15.0 per cent;

— *capric acid*: maximum 12.0 per cent;

— *lauric acid*: 30.0 per cent to 50.0 per cent;

— *myristic acid*: 5.0 per cent to 25.0 per cent;

— *palmitic acid*: 4.0 per cent to 25.0 per cent;

— *stearic acid*: 5.0 per cent to 35.0 per cent.

Ethylene oxide and dioxan (*2.4.25*)

Maximum 1 ppm of ethylene oxide and maximum 10 ppm of dioxan.

Heavy metals (*2.4.8*)

Maximum 10 ppm.

2.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Water (*2.5.12*)

Maximum 1.0 per cent, determined on 1.0 g. Use a mixture of 30 volumes of *anhydrous methanol R* and 70 volumes of *methylene chloride R* as solvent.

Total ash (*2.4.16*)

Maximum 0.1 per cent.

LABELLING

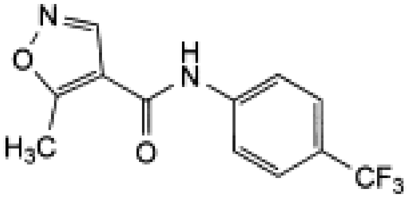
The label states the type of macrogol used (mean relative molecular mass) or the number of units of ethylene oxide per molecule (nominal value).

Ph Eur

Leflunomide

General Notices

(Ph Eur monograph 2330)



$C_{12}H_9F_3N_2O_2$ 270.2 *75706-12-6*

Action and use

Immunomodulator.

Ph Eur

DEFINITION

5-Methyl-*N*-[4-(trifluoromethyl)phenyl]isoxazole-4-carboxamide.

Content

98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water, freely soluble in methanol, sparingly soluble in methylene chloride.

It shows polymorphism (*5.9*).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

Preparation Heat the substance to be examined and the reference substance at 130 °C for 10 min.

Comparison *leflunomide CRS.*

TESTS

Related substances

Liquid chromatography (*2.2.29*). *Store all solutions protected from light*.

Test solution (a) Dissolve 25.0 mg of the substance to be examined in 5 ml of *acetonitrile for chromatography R* and dilute to 50.0 ml with the mobile phase.

Test solution (b) Dissolve 0.125 g of the substance to be examined in 5 ml of *acetonitrile for chromatography R* and dilute to 50.0 ml with the mobile phase.

Reference solution (a) Dilute 5.0 ml of test solution (a) to 50.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 100.0 ml with the mobile phase.

Reference solution (b) Dissolve 12.5 mg of *leflunomide impurity A CRS* in 5 ml of *acetonitrile for chromatography R* and dilute to 100.0 ml with the mobile phase. Dilute 10.0 ml of the solution to 100.0 ml with the mobile phase. Dilute 2.0 ml of this solution to 100.0 ml with the mobile phase.

Reference solution (c) Dissolve 25.0 mg of *leflunomide CRS* in 5 ml of *acetonitrile for chromatography R* and dilute to 50.0 ml with the mobile phase.

Reference solution (d) Dissolve the contents of 1 vial of *leflunomide for peak identification CRS* (containing impurities B and C) in 2.0 ml of the mobile phase and sonicate for 10 min.

Column:

- *size:* l = 0.125 m, Ø = 4.0 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Mix 5 volumes of *triethylamine R* with 650 volumes of *water for chromatography R,* adjust to pH 3.4 ± 0.1 with *phosphoric acid R* and add 350 volumes of *acetonitrile for chromatography R*.

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 210 nm.

Injection 20 µl of test solutions (a) and (b) and reference solutions (a), (b) and (d).

Run time Twice the retention time of leflunomide.

Identification of impurities Use the chromatogram supplied with *leflunomide for peak identification CRS* and the chromatogram obtained with reference solution (d) to identify the peaks due to impurities B and C.

Relative retention with reference to leflunomide (retention time = about 25 min): impurity B = about 0.2; impurity A = about 0.4; impurity C = about 0.9.

System suitability Reference solution (d):

- *peak-to-valley ratio*: minimum 3, where H_p = height above the baseline of the peak due to impurity C and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to leflunomide.

Limits Test solution (a):

- *impurity B*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);

— *sum of impurities C and E*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

— *sum of impurities other than B*: not more twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Limit Test solution (b):

— *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.01 per cent).

Heavy metals (*2.4.8*)

Maximum 20 ppm.

1.0 g complies with test F. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying (*2.2.32*)

Maximum 0.3 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C for 4 h.

Sulphated ash (*2.4.14*)

Maximum 0.1 per cent, determined on 1.0 g in a platinum crucible.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

Injection Test solution (a) and reference solution (c).

Calculate the percentage content of $C_{12}H_9F_3N_2O_2$ from the declared content of *leflunomide CRS.*

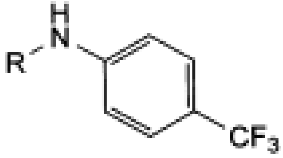
STORAGE

Protected from light.

IMPURITIES

Specified impurities A, B.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10*. *Control of impurities in substances for pharmaceutical use)*: *C, D, E, F, G, H.*



A. R = H: 4-(trifluoromethyl)aniline,

H. R = CO-CH_2-CN: 2-cyano-*N*-[4-(trifluoromethyl)phenyl]acetamide,

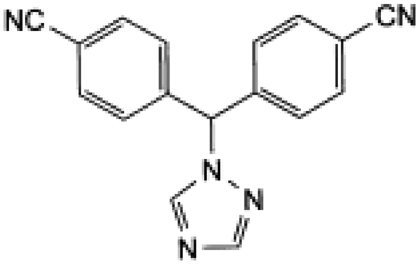
Letrozole

General Notices

(Ph Eur monograph 2334)



$C_{17}H_{11}N_5$ 285.3 *112809-51-5*

Action and use

Aromatase inhibitor; treatment of breast carcinoma.

Ph Eur

DEFINITION

4,4′-(1*H*-1,2,4-Triazol-1-ylmethylene)dibenzonitrile.

Content

97.5 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or yellowish, crystalline powder.

Solubility

Practically insoluble in water, freely soluble in methylene chloride, sparingly soluble in methanol.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

Comparison letrozole CRS.

TESTS

Related substances

Liquid chromatography (*2.2.29*).

Test solution (a) Dissolve 25.0 mg of the substance to be examined in 15 ml of *acetonitrile R1* and dilute to 50.0 ml with *water R*.

Test solution (b) To 2.0 ml of test solution (a) add 30 ml of *acetonitrile R1* and dilute to 100.0 ml with *water R*.

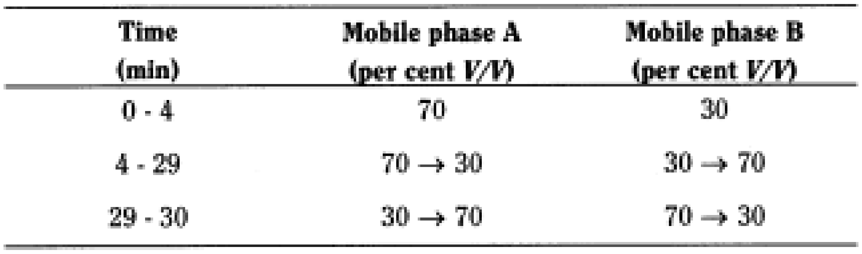
Reference solution (a) Dissolve 5.0 mg of *letrozole CRS* (containing impurities A and B) in 3 ml of *acetonitrile R1* and dilute to 10.0 ml with *water R*.

Reference solution (b) To 2.0 ml of test solution (a) add 30 ml of *acetonitrile R1* and dilute to 100.0 ml with *water R*. To 1.0 ml of this solution add 6 ml of *acetonitrile R1* and dilute to 20.0 ml with *water R*.

Reference solution (c) Dissolve 25.0 mg of *letrozole CRS* in 15 ml of *acetonitrile R1* and dilute to 50.0 ml with *water R*. To 2.0 ml of this solution add 30 ml of *acetonitrile R1* and dilute to 100.0 ml with *water R*.

Column:
- *size: l* = 0.125 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:
- *mobile phase A*: *water R*;
- *mobile phase B*: *acetonitrile R1*;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 4	70	30
4 - 29	70 → 30	30 → 70
29 - 30	30 → 70	70 → 30

Flow rate 1.0 ml/min.

Detection Sspectrophotometer at 230 nm.

Injection 20 µl of test solution (a) and reference solutions (a) and (b).

Relative retention With reference to letrozole (retention time = about 13 min): impurity A = about 0.6; impurity B = about 1.9.

System suitability Reference solution (a):

- *resolution*: minimum 5 between the peaks due to impurity A and letrozole;
- the chromatogram obtained is similar to the chromatogram supplied with *letrozole CRS*.

Limits:
- *impurity A*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);

- *impurity B*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Water (*2.5.12*)

Maximum 0.3 per cent, determined on 1.000 g. Use a validated pyridine-free iodosulphurous reagent.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

Injection Test solution (b) and reference solution (c).

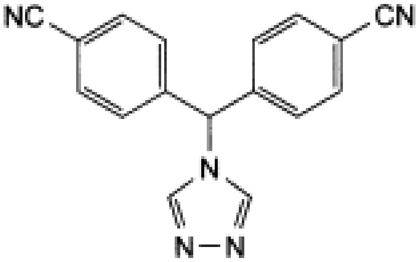
System suitability Reference solution (c):

- *symmetry factor*: maximum 1.7 for the peak due to letrozole.

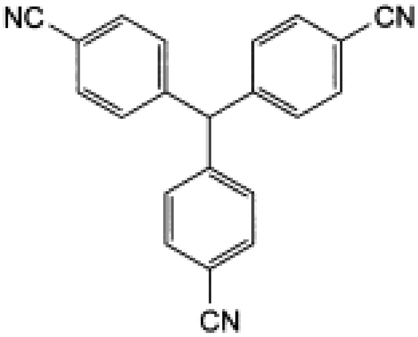
Calculate the percentage content of $C_{17}H_{11}N_5$ from the declared content of *letrozole CRS*.

IMPURITIES

Specified impurities A, B.



A. 4,4′-(4*H*-1,2,4-triazol-4-ylmethylene)dibenzonitrile,



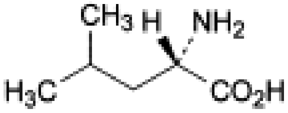
B. 4,4′,4″-methanetriyltribenzonitrile.

Ph Eur

Leucine

General Notices

(Ph Eur monograph 0771)



$C_6H_{13}NO_2$ 131.2 *61-90-5*

Action and use

Amino acid.

Ph Eur

DEFINITION

Leucine contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of (*S*)-2-amino-4-methylpentanoic acid, calculated with reference to the dried substance.

CHARACTERS

White or almost white crystalline powder or shiny flakes, sparingly soluble in water, practically insoluble in alcohol. It dissolves in dilute mineral acids and in dilute solutions of alkali hydroxides.

IDENTIFICATION

First identification *A, C.*

Second identification *A, B, D.*

A. It complies with the test for specific optical rotation (see Tests).

B. Dissolve 0.50 g in *water R* and dilute to 25 ml with the same solvent. The solution is laevorotatory.

C. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *leucine CRS*. Examine the substances prepared as discs.

D. Examine the chromatograms obtained in the test for ninhydrin-positive substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

TESTS

Appearance of solution

Dissolve 0.5 g in *1 M hydrochloric acid* and dilute to 10 ml with the same acid. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution BY_6 (*2.2.2, Method II*).

Specific optical rotation (*2.2.7*)

Dissolve 1.00 g in *hydrochloric acid R1* and dilute to 25.0 ml with the same acid. The specific optical rotation is + 14.5 to + 16.5, calculated with reference to the dried substance.

Ninhydrin-positive substances

Examine by thin-layer chromatography (*2.2.27*), using a *TLC silica gel plate R*.

Test solution (a) Dissolve 0.10 g of the substance to be examined in *0.1 M hydrochloric acid* and dilute to 10 ml with the same acid.

Test solution (b) Dilute 1 ml of test solution (a) to 50 ml with *water R*.

Reference solution (a) Dissolve 10 mg of *leucine CRS* in *0.1 M hydrochloric acid* and dilute to 50 ml with the same acid.

Reference solution (b) Dilute 5 ml of test solution (b) to 20 ml with *water R*.

Reference solution (c) Dissolve 10 mg of *leucine CRS* and 10 mg of *valine CRS* in *0.1 M hydrochloric acid* and dilute to 25 ml with the same acid.

Apply separately to the plate 5 µl of each solution. Allow the plate to dry in air. Develop over a path of 15 cm using a mixture of 20 volumes of *glacial acetic acid R*, 20 volumes of *water R* and 60 volumes of *butanol R*. Allow the plate to dry in air, spray with *ninhydrin solution R* and heat at 100 °C to 105 °C for 15 min. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (c) shows two clearly separated spots.

Chlorides (*2.4.4*)

Dissolve 0.25 g in *water R* and dilute to 15 ml with the same solvent. The solution complies with the limit test for chlorides (200 ppm).

Sulphates (*2.4.13*)

Dissolve 0.5 g in 3 ml of *dilute hydrochloric acid R* and dilute to 15 ml with *distilled water R*. The solution complies with the limit test for sulphates (300 ppm).

Ammonium (*2.4.1*)

50 mg complies with limit test B for ammonium (200 ppm). Prepare the standard using 0.1 ml of *ammonium standard solution (100 ppm NH_4) R*.

Iron (*2.4.9*)

In a separating funnel, dissolve 1.0 g in 10 ml of *dilute hydrochloric acid R*. Shake with three quantities, each of 10 ml, of *methyl isobutyl ketone R1*, shaking for 3 min each time. To the combined organic layers add 10 ml of *water R* and shake for 3 min. The aqueous layer complies with the limit test for iron (10 ppm).

Heavy metals (*2.4.8*)

2.0 g complies with limit test D for heavy metals (10 ppm). Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying (*2.2.32*)

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*)

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.100 g in 3 ml of *anhydrous formic acid R.* Add 30 ml of *anhydrous acetic acid R.* Titrate with *0.1 M perchloric acid* using 0.1 ml of *naphtholbenzein solution R* as indicator, until the colour changes from brownish-yellow to green.

1 ml of *0.1 M perchloric acid* is equivalent to 13.12 mg of $C_6H_{13}NO_2$.

STORAGE

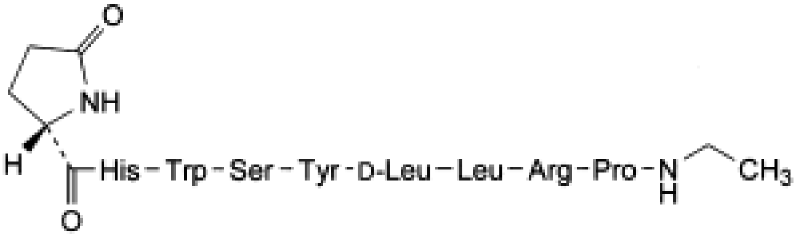
Store protected from light.

Ph Eur

Leuprorelin

General Notices

(Ph Eur monograph 1442)



$C_{59}H_{84}N_{16}O_{12}$ 1209 *53714-56-0*

Action and use

Gonadotropin releasing hormone (gonadorelin) analogue; treatment of prostate cancer.

Ph Eur

DEFINITION

5-Oxo-L-prolyl-L-histidyl-L-tryptophyl-L-seryl-L-tyrosyl-D-leucyl-L-leucyl-L-arginyl-*N*-ethyl-L-prolinamide.

Synthetic nonapeptide analogue of the hypothalamic peptide, gonadorelin. It is obtained by chemical synthesis and is available as an acetate.

Content

97.0 per cent to 103.0 per cent (anhydrous and acetic acid-free substance).

CHARACTERS

Appearance

Hygroscopic, white or almost white powder.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

Preparation Discs of *potassium bromide R*.

Comparison *Ph. Eur. reference spectrum of leuprorelin.*

B. Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with test solution (b) is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (b).

C. Amino acid analysis (*2.2.56*). For hydrolysis use Method 1 and for analysis use Method 1.

Express the content of each amino acid in moles. Calculate the relative proportions of the amino acids taking one seventh of the sum of the number of moles of histidine, glutamic acid, leucine, proline, tyrosine and arginine as equal to 1. The values fall within the following limits: serine present; glutamic acid = 0.85 to 1.1; proline = 0.85 to 1.1; leucine = 1.8 to 2.2; tyrosine = 0.85 to 1.1; histidine = 0.85 to 1.1 and arginine = 0.85 to 1.1. Not more than traces of other amino acids are present, with the exception of tryptophan.

TESTS

Specific optical rotation (*2.2.7*)

- 38.0 to - 42.0 (anhydrous and acetic acid-free substance).

Dissolve the substance to be examined in a 1 per cent *V/V* solution of *glacial acetic acid R* to obtain a concentration of 10.0 mg/ml.

Related substances

Liquid chromatography (*2.2.29*): use the normalisation procedure.

Test solution (a) Dissolve the substance to be examined in the mobile phase to obtain a concentration of 1.0 mg/ml.

Test solution (b) Dilute 0.5 ml of test solution (a) to 10.0 ml with the mobile phase.

Reference solution (a) Dissolve *leuprorelin CRS* in the mobile phase to obtain a concentration of 1.0 mg/ml.

Reference solution (b) Dilute 0.5 ml of reference solution (a) to 10.0 ml with the mobile phase.

Resolution solution Dilute 5.0 ml of reference solution (a) to 50.0 ml with *water R*. To 5 ml of the solution add 100 µl of *1 M sodium hydroxide* and shake vigorously. Heat in an oven at 100 °C for 60 min, cool immediately and add 50 µl of *dilute phosphoric acid R*. Shake vigorously.

Column:

— *size:* *l* = 0.10 m, Ø = 4.6 mm;

— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (3 µm).

Mobile phase Dissolve about 15.2 g of *triethylamine R* in 800 ml of *water R*, adjust to pH 3.0 with *phosphoric acid R* and dilute to 1000 ml with *water R*. Add 850 ml of this solution to 150 ml of a mixture of 2 volumes of *propanol R* and 3 volumes of *acetonitrile R*.

Flow rate 1.0-1.5 ml/min.

Detection Spectrophotometer at 220 nm.

Injection 20 µl of test solution (a) and the resolution solution.

Run time 90 min.

Relative retention With reference to leuprorelin (retention time = 41-49 min): impurity E = about 0.7; impurity F = about 0.7; impurity H = about 0.78; impurity A = about 0.8; impurity B =

about 0.9; impurity I = about 0.94; impurity J = about 1.09; impurity C = about 1.2; impurity G = about 1.3; impurity K = about 1.31; impurity D = about 1.5.

System suitability Resolution solution:

— *resolution*: minimum 1.5 between the peaks due to impurity B and leuprorelin.

Limits:

— *impurity D*: maximum 1.0 per cent;

— *impurities A, B, C*: for each impurity, maximum 0.5 per cent;

— *unspecified impurities*: for each impurity, maximum 0.5 per cent;

— *total*: maximum 2.5 per cent;

— *disregard limit*: 0.1 per cent.

Acetic acid (*2.5.34*)

4.7 per cent to 9.0 per cent.

Test solution Dissolve 10.0 mg of the substance to be examined in a mixture of 5 volumes of mobile phase B and 95 volumes of mobile phase A and dilute to 10.0 ml with the same mixture of mobile phases.

Water (*2.5.32*)

Maximum 5.0 per cent.

Sulphated ash (*2.4.14*)

Maximum 0.3 per cent.

Bacterial endotoxins (*2.6.14, Method D*)

Less than 16.7 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for removal of bacterial endotoxins.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

Run time 60 min.

Injection 20 µl of test solution (b) and reference solution (b).

Calculate the content of leuprorelin ($C_{59}H_{84}N_{16}O_{12}$) using the areas of the peaks and the declared content of $C_{59}H_{84}N_{16}O_{12}$ in *leuprorelin CRS*.

STORAGE

In an airtight container, protected from light, at a temperature not exceeding 30 °C.

If the substance is sterile, store in a sterile, airtight, tamper-proof container.

LABELLING

The label states the mass of peptide in the container.

IMPURITIES

Specified impurities   A, B, C, D.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10*. *Control of impurities in substances for pharmaceutical use)*: *E, F, G, H, I, J, K.*

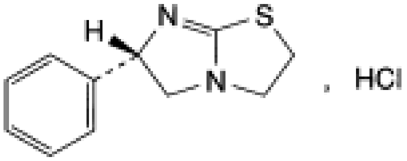
Levamisole Hydrochloride

General Notices

(Ph Eur monograph 0726)



$C_{11}H_{12}N_2S,HCl$ 240.8 *16595-80-5*

Action and use

Immunostimulant; antihelminthic.

Ph Eur

DEFINITION

(6*S*)-6-Phenyl-2,3,5,6-tetrahydroimidazo[2,1-*b*]thiazole hydrochloride.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white crystalline powder.

Solubility

Freely soluble in water, soluble in alcohol, slightly soluble in methylene chloride.

IDENTIFICATION

A. It complies with the test for specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).

Preparation Discs.

Comparison *levamisole hydrochloride CRS.*

C. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

Solution S

Dissolve 2.50 g in *carbon dioxide-free water R* and dilute to 50.0 ml with the same solvent.

Appearance of solution

Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution Y_7 (*2.2.2, Method II*).

pH (*2.2.3*)

3.0 to 4.5 for solution S.

Specific optical rotation (*2.2.7*)

- 121 to - 128(dried substance), determined on solution S.

Related substances

Liquid chromatography (2.2.29). *Prepare the solutions immediately before use, protect from light and keep below 25 °C.*

Test solution Dissolve 0.100 g of the substance to be examined in *methanol R*, add 1.0 ml of *concentrated ammonia R* and dilute to 10.0 ml with *methanol R*.

Reference solution (a) Dissolve 50 mg of *levamisole hydrochloride for system suitability CRS* in *methanol R*, add 0.5 ml of *concentrated ammonia R* and dilute to 5.0 ml with *methanol R*.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with *methanol R*. Dilute 5.0 ml of the solution to 25.0 ml with *methanol R*.

Column:

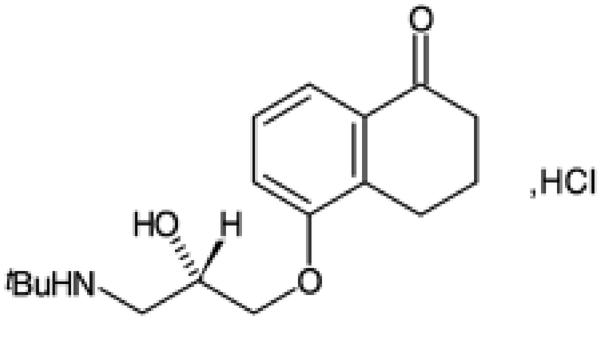
Ph Eur

Levobunolol Hydrochloride

General Notices



$C_{17}H_{25}NO_3,HCl$ 327.9 *27912-14-7*

Action and use

Beta-adrenoceptor antagonist.

Preparation

Levobunolol Eye Drops

DEFINITION

Levobunolol Hydrochloride is (*S*)-5-(3-*tert*-butylamino-2-hydroxypropoxy)-1,2,3,4-tetrahydronaphthalen-1-one hydrochloride. It contains not less than 98.5% and not more than 101.0% of $C_{17}H_{25}NO_3,HCl$, calculated with reference to the dried substance.

CHARACTERISTICS

A white or pinkish white, crystalline powder.

Freely soluble in *water*; sparingly soluble in *ethanol (96%)*.

IDENTIFICATION

A. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of levobunolol hydrochloride *(RS 200)*.

B. Yields the reactions characteristic of *chlorides*, Appendix VI.

TESTS

Acidity

pH of a 5% w/v solution, 4.5 to 6.5, Appendix V L.

Specific optical rotation

In a 3% w/v solution in *methanol*, –19.0 to –20.0, calculated with reference to the dried substance, Appendix V F.

Related substances

Carry out the method for *liquid chromatography*, Appendix III D, using solutions in the mobile phase containing (1) 0.10% w/v of the substance being examined, (2) 0.00050% w/v of the substance being examined, (3) 0.0050% w/v of each of *levobunolol hydrochloride BPCRS* and *atenolol*.

The chromatographic procedure described under Assay may be used.

For solution (1) allow the chromatography to proceed for 3 times the retention time of the principal peak. The test is not valid unless, in the chromatogram obtained with solution (3), the *resolution factor* between the two principal peaks is at least 8.

In the chromatogram obtained with solution (1) the area of any *secondary peak* is not greater than the area of the principal peak in the chromatogram obtained with solution (2) (0.5%) and the sum of the areas of any *secondary peaks* is not greater than twice the area of the principal peak in the chromatogram obtained with solution (2) (1%).

Loss on drying

When dried over *phosphorus pentoxide* at 110° at a pressure not exceeding 2 kPa for 4 hours, loses not more than 0.5% of its weight. Use 1 g.

ASSAY

Carry out the method for *liquid chromatography*, Appendix III D, using solutions in the mobile phase containing (1) 0.01% w/v of the substance being examined, (2) 0.01% w/v of *levobunolol hydrochloride BPCRS* and (3) 0.0050% w/v of each of *levobunolol hydrochloride BPCRS* and *atenolol*.

The chromatographic procedure may be carried out using (a) a stainless steel column (25 cm × 3.9 mm) packed with *end-capped octylsilyl silica gel for chromatography* (10 µm) (Lichrosorb RP 8 is suitable), (b) a solution prepared by mixing 53 volumes of 0.005M *sodium heptanesulphonate* in *methanol* with 47 volumes of 0.005M *sodium heptanesulphonate* in *water* containing 1 ml of 0.5M *sulphuric acid* as the mobile phase with a flow rate of 1 ml per minute and (c) a detection wavelength of 223 nm.

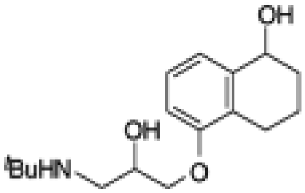
The test is not valid unless in the chromatogram obtained with solution (3) the *resolution factor* between the two principal peaks is at least 8.

Calculate the content of $C_{17}H_{25}NO_3,HCl$ from the declared content of $C_{17}H_{25}NO_3,HCl$ in *levobunolol hydrochloride BPCRS*.

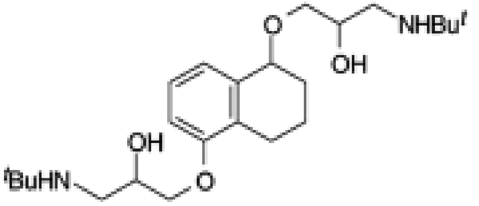
STORAGE

Levobunolol Hydrochloride should be protected from light.

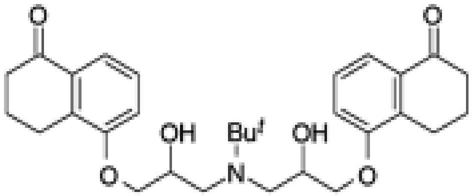
IMPURITIES



A. 5-(3-*tert*-butylamino-2-hydroxypropoxy)-1,2,3,4-tetrahydro-1-naphthol



B. 1,1′-(1,2,3,4-tetrahydro-1,5-naphthalenedioxy)bis(3-*tert*-butylamino)-2-propanol

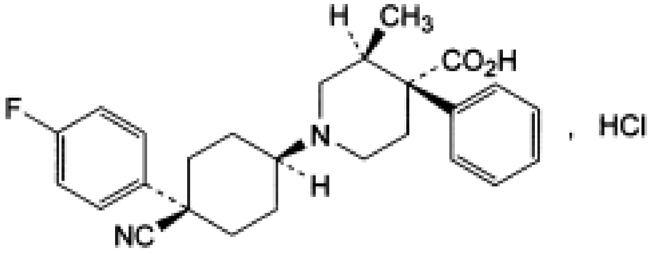


C. *meso*-5,5′-[(3,3′-*tert*-butylamino)bis(2-hydroxypropoxy)]bis-3,4-dihydronaphthalen-1(2 *H*)-one

Levocabastine Hydrochloride

General Notices

(Ph Eur monograph 1484)



$C_{26}H_{29}FN_2O_2,HCl$ 457.0 *79547-78-7*

Action and use

Histamine H_1 receptor antagonist; antihistamine.

Ph Eur

DEFINITION

(3*S*,4*R*)-1-[*cis*-4-Cyano-4-(4-fluorophenyl)cyclohexyl]-3-methyl-4-phenylpiperidine-4-carboxylic acid monohydrochloride.

Content

98.5 per cent to 101.5 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water, sparingly soluble in methanol, slightly soluble in ethanol (96 per cent) and in a 2 g/l solution of sodium hydroxide.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

Preparation Discs.

Comparison *levocabastine hydrochloride CRS.*

B. Dissolve 50 mg in a mixture of 0.4 ml of *ammonia R* and 2 ml of *water R*. Mix, allow to stand for 5 min and filter. Acidify the filtrate with *dilute nitric acid R*. It gives reaction (a) of chlorides (*2.3.1*).

C. Specific optical rotation (see Tests).

TESTS

Solution S

Dissolve 0.250 g in *methanol R* and dilute to 25.0 ml with the same solvent.

Appearance of solution

Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution Y_7 (*2.2.2, Method II*).

Specific optical rotation (*2.2.7*)

- 102 to - 106 (dried substance), determined on solution S.

Related substances

Capillary electrophoresis (*2.2.47*). *Prepare the solutions immediately before use*.

Test solution Dissolve 25.0 mg of the substance to be examined in a 2 g/l solution of *sodium hydroxide R* and dilute to 10.0 ml with the same solution.

Reference solution (a) Dissolve 2.5 mg of *levocabastine hydrochloride CRS* and 2.5 mg of *levocabastine impurity D CRS* in a 2 g/l solution of *sodium hydroxide R* and dilute to 200.0 ml with the same solution.

Reference solution (b) Dilute 5.0 ml of this test solution to 100.0 ml with a 2 g/l solution of *sodium hydroxide R.* Dilute 1.0 ml of this solution to 10.0 ml with a 2 g/l solution of *sodium hydroxide R.*

Blank solution A 2 g/l solution of *sodium hydroxide R*.

Capillary:

— *material*: uncoated fused silica;

— *size*: effective length = 0.5 m, Ø = 75 µm.

Temperature 50 °C.

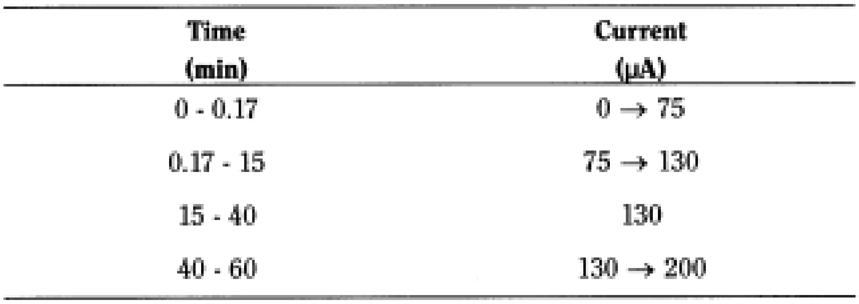
Electrolyte solution Dissolve 1.08 g of *sodium dodecyl sulphate R* and 0.650 g of *hydroxypropyl-*β*-cyclodextrin R* in 5 ml of *2-propanol R* and dilute to 50.0 ml with buffer solution pH 9.0 prepared as follows: dissolve 1.39 g of *boric acid R* in *water R* and adjust to pH 9.0 with *1 M sodium hydroxide* (about 9 ml). Dilute to 100.0 ml with *water R*.

Detection Spectrophotometer at 214 nm.

Preconditioning of the capillary Rinse the capillary for 2 min with a 2 g/l solution of *sodium hydroxide R* and for at least 5 min with the electrolyte solution.

Injection Under pressure (3,45 kPa) for 5 s.

Migration:



Time (min)	Current (µA)
0 - 0.17	0 → 75
0.17 - 15	75 → 130
15 - 40	130
40 - 60	130 → 200

Migration times Levocabastine = about 28 min; impurity D = about 30 min.

System suitability Reference solution (a):

— *resolution*: minimum 4 between the peaks due to levocabastine and impurity D; if necessary adjust the current gradient.

Limits:

— *impurities A, B, C, D, E*: for each impurity, not more than the area of the principal peak in the electropherogram obtained with reference solution (b) (0.5 per cent);

— *total*: not more than twice the area of the principal peak in the electropherogram obtained with reference solution (b) (1.0 per cent);

— *disregard limit*: 0.1 times the area of the principal peak in the electropherogram obtained with reference solution (b) (0.05 per cent); disregard any peak due to the blank.

Loss on drying (*2.2.32*)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*)

Maximum 0.1 per cent, determined on 1.0 g in a platinum crucible.

ASSAY

Dissolve 0.175 g in 50 ml of *ethanol (96 per cent) R* and add 5.0 ml of *0.01 M hydrochloric acid*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume added between the 1st and 3rd point of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 22.85 mg of $C_{26}H_{30}ClFN_2O_2$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A, B, C, D, E.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034).* It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use)*: *F, G, H, I.*

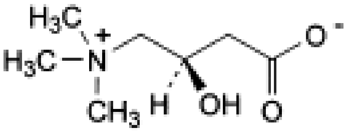
Ph Eur

Levocarnitine

General Notices

(Ph Eur monograph 1339)



$C_7H_{15}NO_3$ 161.2 *541-15-1*

Action and use

Carnitine substitute.

Ph Eur

DEFINITION

(3*R*)-3-Hydroxy-4-(trimethylammonio)butanoate.

Content

98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or colourless crystals, hygroscopic.

Solubility

Freely soluble in water, soluble in warm ethanol (96 per cent), practically insoluble in acetone.

IDENTIFICATION

First identification *A, B.*

Second identification *A, C.*

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).

Preparation Discs, prepared using substance previously dried *in vacuo* at 50 °C for 5 h.

Comparison *levocarnitine CRS.*

C. To 1 ml of solution S (see Tests) add 9 ml of *water R*, 10 ml of *dilute sulphuric acid R* and 30 ml of *ammonium reineckate solution R*. A pink precipitate is formed. Allow to stand for 30 min. Filter and wash with *water R*, with *ethanol (96 per cent) R* and then with *acetone R* and dry at 80 °C. The precipitate melts (*2.2.14*) at 147 °C to 150 °C.

TESTS

Solution S

Dissolve 5.00 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 50.0 ml with the same solvent.

Appearance of solution

Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

pH (*2.2.3*)

6.5 to 8.5.

Dilute 10 ml of solution S to 20 ml with *carbon dioxide-free water R.*

Specific optical rotation (*2.2.7*)

- 29.0 to - 32.0 (anhydrous substance), determined on solution S at 25 °C.

Related substances

Liquid chromatography (*2.2.29*).

Test solution Dissolve 0.10 g of the substance to be examined in the mobile phase and dilute to 20.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (b) Dissolve 12.5 mg of *levocarnitine impurity A CRS* in *water R* and dilute to 50.0 ml with the same solvent. Dilute 2.0 ml of this solution to 20.0 ml with the mobile phase.

Reference solution (c) Dissolve 10.0 mg of *levocarnitine impurity A CRS* in *water R* and dilute to 10.0 ml with the same solvent. Dilute 2.0 ml of this solution to 20.0 ml with the mobile phase.

Reference solution (d) Dissolve 0.100 g of *levocarnitine CRS* in reference solution (c) and dilute to 10.0 ml with the same solution.

Column:

— *size:* *l* = 0.30 m, Ø = 3.9 mm;

— *stationary phase*: *aminopropylmethylsilyl silica gel for chromatography R* (10 µm);

— *temperature*: 30 °C.

Mobile phase Mix 35 volumes of a 6.81 g/l solution of *potassium dihydrogen phosphate R* adjusted to pH 4.7 with *dilute sodium hydroxide solution R*, and 65 volumes of *acetonitrile R*.

Flow rate 1 ml/min.

Detection Spectrophotometer at 205 nm.

Injection 25 µl of the test solution and reference solutions (a), (b) and (d).

Retention time Levocarnitine = about 9.6 min; impurity A = about 10.6 min.

System suitability Reference solution (d):

— *resolution*: minimum 0.9 between the peaks due to levocarnitine and impurity A when the chromatogram is recorded over 15 min.

Limits:

— *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent).

Chlorides (*2.4.4*)

Maximum 200 ppm.

Dilute 2.5 ml of solution S to 15 ml with *water R*.

Sulphates (*2.4.13*)

Maximum 300 ppm.

Dilute 5 ml of solution S to 15 ml with *distilled water R*.

Heavy metals (*2.4.8*)

Maximum 10 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R.*

Water (*2.5.12*)

Maximum 1.0 per cent, determined on 2.00 g.

Sulphated ash (*2.4.14*)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.125 g in a mixture of 3 volumes of *anhydrous formic acid R* and 50 volumes of *anhydrous acetic acid R*. Add 0.2 ml of *crystal violet solution R*. Titrate with *0.1 M perchloric acid* until the colour changes from violet to green.

1 ml of *0.1 M perchloric acid* is equivalent to 16.12 mg of $C_7H_{15}NO_3$.

STORAGE

In an airtight container .

IMPURITIES

Specified impurities A.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general

acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. DEFINITION

(2*S*)-2-Amino-3-(3,4-dihydroxyphenyl)propanoic acid.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Slightly soluble in water, practically insoluble in ethanol (96 per cent). It is freely soluble in *1 M* *hydrochloric acid* and sparingly soluble in *0.1 M hydrochloric acid*.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

Comparison *levodopa CRS*.

TESTS

Appearance of solution

The solution is not more intensely coloured than reference solution BY_6 (*2.2.2, Method II*).

Dissolve 1.0 g in a 103 g/l solution of *hydrochloric acid R* and dilute to 25 ml with the same solution.

pH (*2.2.3*)

4.5 to 7.0.

Shake 0.10 g with 10 ml of *carbon dioxide-free water R* for 15 min.

Related substances

Liquid chromatography (*2.2.29*). *Use freshly prepared solutions.*

Solution A 10.3 g/l solution of *hydrochloric acid R*.

Test solution Dissolve 0.100 g of the substance to be examined in solution A and dilute to 25 ml with solution A.

Reference solution (a) Dilute 1.0 ml of the test solution to 50.0 ml with solution A. Dilute 5.0 ml of this solution to 100.0 ml with solution A.

Reference solution (b) Dissolve 8 mg of *tyrosine R* (impurity B) and 4 mg of *3-methoxy-l-tyrosine R* (L-isomer of impurity C) in 2 ml of the test solution and dilute to 50 ml with solution A. Dilute 5 ml of this solution to 100 ml with solution A.

Column:

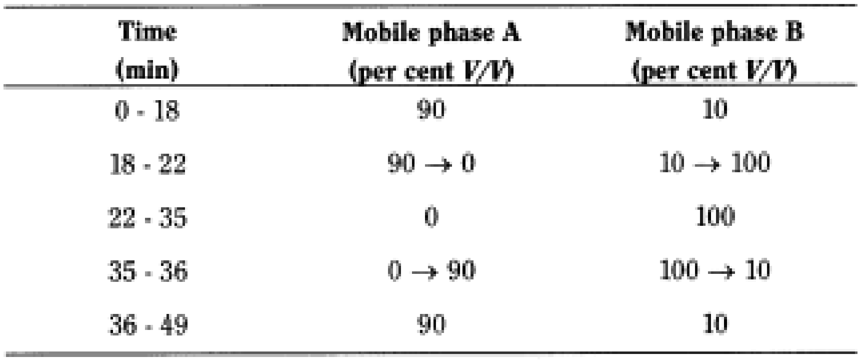
— *size:* *l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase*: spherical *di-isobutyloctadecylsilyl silica gel for chromatography R* (5 µm) with a pore size of 8 nm.

Mobile phase:

— *mobile phase A*: *0.1 M phosphate buffer solution pH 3.0*;

— *mobile phase B*: *methanol R*, *0.1 M phosphate buffer solution pH 3.0* (18:85 *V/V*);



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 18	90	10
18 - 22	90 → 0	10 → 100
22 - 35	0	100
35 - 36	0 → 90	100 → 10
36 - 49	90	10

Flow rate 1 ml/min.

Detection Spectrophotometer at 280 nm.

Injection 20 µl.

Relative retention With reference to levodopa (retention time = about 6 min): impurity A = about 0.7; impurity B = about 2; impurity C = about 3.5.

System suitability Reference solution (b):

— *resolution*: minimum 10 between the peaks due to levodopa and impurity B.

Limits:

— *correction factor*: for the calculation of content, multiply the peak area of impurity B by 2.2;

— *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

— *impurity B*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

— *impurity C*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

— *unspecified impurities*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent);

— *total*: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);

— *disregard limit*: 0.3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.03 per cent).

Enantiomeric purity

Liquid chromatography (*2.2.29*). *Use freshly prepared solutions.*

Test solution Dissolve 25 mg of the substance to be examined in the mobile phase and dilute to 25 ml with the mobile phase.

Reference solution (a) Dilute 5.0 ml of the test solution to 20.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 50.0 ml with the mobile phase.

Reference solution (b) Dissolve 10 mg of *D-dopa R* (impurity D) in 10 ml of the test solution. Dilute 1 ml of this solution to 100 ml with the mobile phase.

Column:

— *size:* *l* = 0.15 m, Ø = 3.9 mm;

— *stationary phase*: spherical *end-capped octadecylsilyl silica gel for chromatography R* (5 µm) with a specific surface area of 350 m2/g and a pore size of 10 nm.

Mobile phase Dissolve separately 200 mg of *copper acetate R* and 387 mg of *N,N-dimethyl-l-phenylalanine R* in *water R*; mix the 2 solutions and adjust immediately to pH 4.0 with *acetic acid R*; add 50 ml of *methanol R* and dilute to 1000 ml with *water R*; mix and filter.

Flow rate 1 ml/min.

Detection Spectrophotometer at 280 nm.

Injection 20 µl.

Run time Twice the retention time of levodopa.

Relative retention With reference to levodopa (retention time = about 7 min): impurity D = about 0.4.

System suitability Reference solution (b):

— *resolution*: minimum 5 between the peaks due to impurity D and levodopa.

Limit:

— *impurity D:* not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent).

Heavy metals (*2.4.8*)

Maximum 10 ppm.

2.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying (*2.2.32*)

Maximum 1.0 per cent, determined on 0.500 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.180 g, heating if necessary, in 5 ml of *anhydrous formic acid R*. Add 25 ml of *anhydrous acetic acid R*. Add 25 ml of *dioxan R* and 0.1 ml of *crystal violet solution R*. Titrate with *0.1 M perchloric acid*, until a green colour is obtained.

1 ml of *0.1 M perchloric acid* is equivalent to 19.72 mg of $C_9H_{11}NO_4$.

STORAGE

Protected from light.

DEFINITION

(2*S*)-3-(4-Phenylpiperazin-1-yl)propane-1,2-diol.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Slightly soluble in water, freely soluble in dilute acetic acid and in methanol, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Specific optical rotation (*2.2.7*): - 30.0 to - 33.5 (dried substance).

Dissolve 1.50 g in a 21 g/l solution of *hydrochloric acid R* and dilute to 50.0 ml with the same acid.

B. Infrared absorption spectrophotometry (*2.2.24*).

Comparison levodropropizine CRS.

TESTS

pH (*2.2.3*)

9.2 to 10.2.

Suspend 2.5 g in *carbon dioxide-free water R*, heat to dissolve, cool to room temperature and dilute to 100 ml with the same solvent.

Impurity B and related substances Liquid chromatography (*2.2.29*).

Test solution Dissolve 24.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (a) Dissolve 12.0 mg of *1-phenylpiperazine R* (impurity B) in methanol R and dilute to 100.0 ml with the same solvent. Dilute 1.0 ml of this solution to 100.0 ml with the mobile phase.

Reference solution (b) Mix 2 ml of the test solution with 2 ml of reference solution (a) and dilute to 10 ml with the mobile phase.

Column:
- — *size: l* = 0.15 m, Ø = 4.6 mm;
- — *stationary phase*: *base-deactivated octylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Mix 12 volumes of *methanol R* and 88 volumes of a 6.81 g/l solution of *potassium dihydrogen phosphate R* adjusted to pH 3.0 with *phosphoric acid R*.

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 20 µl.

System suitability Reference solution (b):

- — *resolution*: minimum 2.0 between the peaks due to levodropropizine and impurity B.

Limits:
- — *impurity B*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- — *unspecified impurities*: for each impurity, not more than 0.2 times the area of the peak due to impurity B in the chromatogram obtained with reference solution (a) (0.10 per cent);
- — *disregard limit*: 0.02 times the area of the peak due to impurity B in the chromatogram obtained with reference solution (a) (0.01 per cent).

Impurity C

Gas chromatography (*2.2.28*). *Prepare the solutions immediately before use.*

Test solution Dissolve 0.50 g of the substance to be examined in *methylene chloride R* and dilute to 2.5 ml with the same solvent.

Reference solution (a) Dissolve 0.20 g of *glycidol R* (impurity C) in *methylene chloride R* and dilute to 100.0 ml with the same solvent. Dilute 0.5 ml of this solution to 100.0 ml with *methylene chloride R.*

Reference solution (b) Dissolve 0.50 g of the substance to be examined in *methylene* *chloride R*, add 0.5 ml of reference solution (a) and dilute to 2.5 ml with *methylene chloride R*.

Column:
- *material*: fused silica;
- *size:* l = 30 m, Ø = 0.53 mm;
- *stationary phase*: *poly[(cyanopropyl)(phenyl)][dimethyl]siloxane R* (film thickness 3 µm).

Carrier gas *helium for chromatography R*.

Flow rate 2.5 ml/min.

Split ratio 1:8.

Temperature:
- *column*: 140 °C;
- *injection port*: 170 °C;
- *detector*: 250 °C.

Detection Flame ionisation.

Injection 1 µl of the test solution and reference solution (b).

Use a split-liner consisting of a column about 1 cm long packed with glass wool.

At the end of a series of tests, heat the column at 250 °C for 4-6 h.

Limit:
- *impurity C*: not more than 0.5 times the area of the corresponding peak in the chromatogram obtained with reference solution (b) (10 ppm).

Enantiomeric purity

Liquid chromatography (*2.2.29*).

Solvent mixture *anhydrous ethanol R*, *hexane R* (40:60 *V/V*).

Test solution Dissolve 10.0 mg of the substance to be examined in 10.0 ml of the solvent mixture. Dilute 1.0 ml of this solution to 50.0 ml with the solvent mixture.

Reference solution (a) Dissolve 10.0 mg of *levodropropizine CRS* in 10.0 ml of the solvent mixture. Dilute 1.0 ml of this solution to 50.0 ml with the solvent mixture.

Reference solution (b) Dissolve 10.0 mg of *levodropropizine impurity A CRS* in 10.0 ml of the solvent mixture. Dilute 1.0 ml of this solution to 50.0 ml with the solvent mixture.

Reference solution (c) Dilute 1.0 ml of reference solution (b) to 50.0 ml with the solvent mixture.

Reference solution (d) Dilute 0.5 ml of reference solution (b) to 25 ml with reference solution (a).

Column:
- *size:* l = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *silica gel OD for chiral separations R*.

Mobile phase *diethylamine R*, *anhydrous ethanol R*, *hexane R* (0.2:5:95 *V/V/V*).

Flow rate 0.8 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 20 µl of the test solution and reference solutions (a), (c) and (d).

Elution order Impurity A, levodropropizine.

System suitability:

— *retention times*: the retention times of the principal peaks in the chromatograms obtained with the test solution and reference solution (a) are similar;

— *resolution*: minimum 1.3 between the peaks due to impurity A and levodropropizine in the chromatogram obtained with reference solution (d).

Limit:

— *impurity A:* not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (2 per cent).

Loss on drying (*2.2.32*)

Maximum 1.0 per cent, determined on 0.500 g by drying *in vacuo* at 60 °C over *diphosphorus pentoxide R* at a pressure of 0.15-0.25 kPa for 4 h.

Sulphated ash (*2.4.14*)

Maximum 0.2 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.100 g in 50 ml of *anhydrous acetic acid R*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M perchloric acid*. Read the volume added at the 2nd point of inflexion.

1 ml of *0.1 M perchloric acid* is equivalent to 11.82 mg of $C_{13}H_{20}N_2O_2$.

STORAGE

Protected from light.

IMPURITIES

and enantiomer

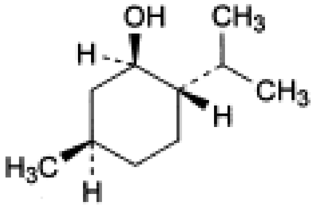
C. [(2*RS*)-oxiran-2-yl]methanol (glycidol).

Ph Eur

Levomenthol

General Notices

(Ph Eur monograph 0619)



$C_{10}H_{20}O$ 156.3 *2216-51-5*

Action and use

Decongestant.

Preparations

Levomenthol Cream

Menthol and Benzoin Inhalation

Ph Eur

DEFINITION

(1*R*,2*S*,5*R*)-5-Methyl-2-(1-methylethyl)cyclohexanol.

CHARACTERS

Appearance

Prismatic or acicular, colourless, shiny crystals.

Solubility

Practically insoluble in water, very soluble in ethanol (96 per cent) and in light petroleum, freely soluble in fatty oils and in liquid paraffin, very slightly soluble in glycerol.

mp: about 43 °C.

IDENTIFICATION

First identification A, C.

Second identification B, D.

A. Specific optical rotation (see Tests).

B. Thin-layer chromatography (*2.2.27*).

Test solution Dissolve 25 mg of the substance to be examined in *methanol R* and dilute to 5 ml with the same solvent.

Reference solution Dissolve 25 mg of *menthol CRS* in *methanol R* and dilute to 5 ml with the same solvent.

Plate *TLC silica gel G plate R*.

Mobile phase *ethyl acetate R*, *toluene R* (5:95 *V/V*).

Application 2 µl.

Development Over a path of 15 cm.

Drying In air, until the solvents have evaporated.

Detection Spray with *anisaldehyde solution R* and heat at 100-105 °C for 5-10 min.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

C. Examine the chromatograms obtained in the test for related substances.

Results The principal peak in the chromatogram obtained with test solution (b) is similar in position and approximate dimensions to the principal peak in the chromatogram obtained with reference solution (c).

D. Dissolve 0.20 g in 0.5 ml of *anhydrous pyridine R*. Add 3 ml of a 150 g/l solution of *dinitrobenzoyl chloride R* in *anhydrous pyridine R*. Heat on a water-bath for 10 min. Add 7.0 ml of *water R* in small quantities with stirring and allow to stand in iced water for 30 min. A precipitate is formed. Allow to stand and decant the supernatant liquid. Wash the precipitate with 2 quantities, each of 5 ml, of iced *water R*, recrystallise from 10 ml of *acetone R*, wash with iced *acetone R* and dry at 75 °C at a pressure not exceeding 2.7 kPa for 30 min. The crystals melt (*2.2.14*) at 154 °C to 157 °C.

TESTS

Solution S

Dissolve 2.50 g in 10 ml of *ethanol (96 per cent) R* and dilute to 25.0 ml with the same solvent.

Appearance of solution

Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Acidity or alkalinity

Dissolve 1.0 g in *ethanol (96 per cent) R* and dilute to 10 ml with the same solvent. Add 0.1 ml of *phenolphthalein solution R*. The solution is colourless. Not more than 0.5 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator to pink.

Specific optical rotation (*2.2.7*)

- 48 to - 51, determined on solution S.

Related substances

Gas chromatography (*2.2.28*).

Test solution (a) Dissolve 0.20 g of the substance to be examined in *methylene chloride R* and dilute to 50.0 ml with the same solvent.

Test solution (b) Dilute 1.0 ml of test solution (a) to 10.0 ml with *methylene chloride R*.

Reference solution (a) Dissolve 40.0 mg of the substance to be examined and 40.0 mg of *isomenthol R* in *methylene chloride R* and dilute to 100.0 ml with the same solvent.

Reference solution (b) Dilute 0.10 ml of test solution (a) to 100.0 ml with *methylene chloride R*.

Reference solution (c) Dissolve 40.0 mg of *menthol CRS* in *methylene chloride R* and dilute to 100.0 ml with the same solvent.

Column:
- *material*: glass;
- *size:* l = 2.0 m, Ø = 2 mm;
- *stationary phase*: *diatomaceous earth for gas chromatography R* impregnated with 15 per cent *m/m* of *macrogol 1500 R*.

Carrier gas *nitrogen for chromatography R*.

Flow rate 30 ml/min.

Temperature:
- *column*: 120 °C;
- *injection port*: 150 °C;
- *detector*: 200 °C.

Detection Flame ionisation.

Injection 1 µl.

Run time Twice the retention time of menthol.

System suitability:
- *resolution*: minimum 1.4 between the peaks due to menthol and isomenthol in the chromatogram obtained with reference solution (a);
- *signal-to-noise ratio*: minimum 5 for the principal peak in the chromatogram obtained with reference solution (b).

Limits Test solution (a):
- *total*: not more than 1 per cent of the area of the principal peak;
- *disregard limit*: 0.05 per cent of the area of the principal peak.

Residue on evaporation

Maximum 0.05 per cent.

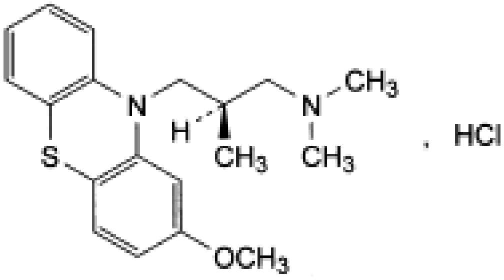
Evaporate 2.00 g on a water-bath and heat in an oven at 100-105 °C for 1 h. The residue weighs not more than 1.0 mg.

Ph Eur

Levomepromazine Hydrochloride

General Notices

(Ph Eur monograph 0505)



$C_{19}H_{24}N_2OS,HCl$ 364.9 *4185-80-2*

Action and use

Dopamine receptor antagonist; neuroleptic.

Preparation

Levomepromazine Injection

Ph Eur

DEFINITION

Levomepromazine hydrochloride contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of (2*R*)-3-(2-methoxy-10*H*-phenothiazin-10-yl)-*N*,*N*,2-trimethylpropan-1-amine hydrochloride, calculated with reference to the dried substance.

CHARACTERS

A white or very slightly yellow, crystalline powder, slightly hygroscopic, freely soluble in water and in alcohol. It deteriorates when exposed to air and light. It exists in two forms, one melting at about 142 °C and the other at about 162 °C.

IDENTIFICATION

A. *Prepare the solution protected from bright light and carry out the measurements immediately.* Dissolve 50.0 mg in *water R* and dilute to 500.0 ml with the same solvent. Dilute 10.0 ml of this solution to 100.0 ml with *water R*. Examined between 230 nm and 340 nm (*2.2.25*), the solution shows two absorption maxima, at 250 nm and 302 nm. The specific absorbance at the maximum at 250 nm is 640 to 700.

B. It complies with the identification test for phenothiazines by thin-layer chromatography (*2.3.3*): use *levomepromazine hydrochloride CRS* to prepare the reference solution.

C. Introduce 0.2 g into a 100 ml separating funnel. Add 5 ml of *water R* and 0.5 ml of *strong sodium hydroxide solution R*. Shake vigorously with two quantities, each of 10 ml, of *ether R.* Combine the ether layers, dry over *anhydrous sodium sulphate R* and evaporate to dryness. Keep the residue at 100 °C to 105 °C for 15 min and allow to crystallise in iced water. Initiate crystallisation if necessary by scratching the wall of the flask with a glass rod. Dry the crystals at 60 °C for 2 h. The crystals melt (*2.2.14*) at 122 °C to 128 °C.

D. It gives reaction (b) of chlorides (*2.3.1*).

TESTS

Solution S

Dissolve 2.50 g in *carbon dioxide-free water R* and dilute to 25.0 ml with the same solvent.

Acidity or alkalinity

To 10 ml of solution S add 0.1 ml of *bromocresol green solution R*. Not more than 0.5 ml of *0.01 M sodium hydroxide* or 1.0 ml of *0.01 M hydrochloric acid* is required to change the colour of the indicator.

Specific optical rotation (*2.2.7*)

+ 9.5 to + 11.5, determined on solution S and calculated with reference to the dried substance.

Related substances

Carry out the test protected from bright light. Examine by thin-layer chromatography (*2.2.27*), using *silica gel* GF_{254} *R* as the coating substance.

Test solution Dissolve 0.2 g of the substance to be examined in a mixture of 5 volumes of *diethylamine R* and 95 volumes of *methanol R* and dilute to 10 ml with the same mixture of solvents. Prepare immediately before use.

Reference solution Dilute 0.5 ml of the test solution to 100 ml with a mixture of 5 volumes of *diethylamine R* and 95 volumes of *methanol R*.

Apply separately to the plate 10 µl of each solution. Develop over a path of 15 cm using a mixture of 10 volumes of *acetone R*, 10 volumes of *diethylamine R* and 80 volumes of *cyclohexane R*. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with the reference solution (0.5 per cent).

Loss on drying (*2.2.32*)

Not more than 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

Sulphated ash (*2.4.14*)

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 5 ml of *water R* and add 50 ml of *2-propanol R*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M sodium hydroxide* is equivalent to 36.49 mg of $C_{19}H_{25}ClN_2OS$.

STORAGE

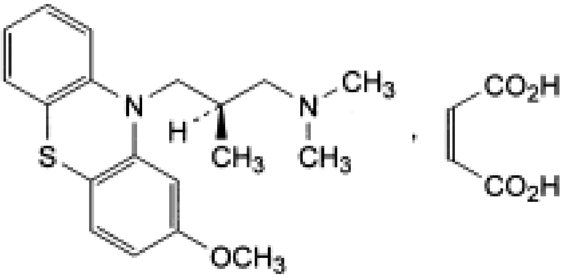
Store in an airtight container , protected from light.

Ph Eur

Levomepromazine Maleate

General Notices

(Ph Eur monograph 0925)



$C_{19}H_{24}N_2OS,C_4H_4O_4$ 444.6 *7104-38-3*

Action and use

Dopamine receptor antagonist; neuroleptic.

Preparation

Levomepromazine Tablets

Ph Eur

DEFINITION

Levomepromazine maleate contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of (2*R*)-3-(2-methoxy-10*H*-phenothiazin-10-yl)-*N*,*N*,2-trimethylpropan-1-amine (*Z*)-butenedioate, calculated with reference to the dried substance.

CHARACTERS

A white or slightly yellowish, crystalline powder, slightly soluble in water, sparingly soluble in methylene chloride, slightly soluble in alcohol. It deteriorates when exposed to air and light.

It melts at about 186 °C, with decomposition.

IDENTIFICATION

First identification A, B.

Second identification A, C, D.

A. It complies with the test for specific optical rotation (see Tests).

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *levomepromazine maleate CRS*. Examine the substances prepared as discs.

C. It complies with the identification test for phenothiazines by thin-layer chromatography (*2.3.3*): use *levomepromazine maleate CRS* to prepare the reference solution.

D. Examine by thin-layer chromatography (*2.2.27*), using *silica gel* GF_{254} *R* as the coating substance.

Test solution Dissolve 0.20 g of the substance to be examined in a mixture of 10 volumes of *water R* and 90 volumes of *acetone R* and dilute to 10 ml with the same mixture of solvents.

Reference solution Dissolve 50 mg of *maleic acid CRS* in a mixture of 10 volumes of *water R* and 90 volumes of *acetone R* and dilute to 10 ml with the same mixture of solvents.

Apply separately to the plate as bands 10 mm by 2 mm 5 µl of each solution. Develop over a path of 12 cm using a mixture of 3 volumes of *water R*, 7 volumes of *anhydrous formic acid R* and 90 volumes of *di-isopropyl ether R*. Dry the plate at 120 °C for 10 min and examine in ultraviolet light at 254 nm. The chromatogram obtained with the test solution shows a band at the starting-point and another band similar in position and size to the principal band in the chromatogram obtained with the reference solution.

TESTS

pH (*2.2.3*)

Carry out the test protected from bright light. Introduce 0.50 g into a conical flask and add 25.0 ml of *carbon dioxide-free water R*. Shake and allow the solids to settle. The pH of the supernatant solution is 3.5 to 5.5.

Specific optical rotation (*2.2.7*)

Dissolve 1.25 g in *dimethylformamide R* and dilute to 25.0 ml with the same solvent. The specific optical rotation is - 7.0 to - 8.5, calculated with reference to the dried substance.

Related substances

Carry out the test protected from bright light and prepare the solutions immediately before use. Examine by thin-layer chromatography (*2.2.27*), using *silica gel* GF_{254} *R* as the coating substance.

Test solution Dissolve 0.20 g of the substance to be examined in a mixture of 10 volumes of *water R* and 90 volumes of *acetone R* and dilute to 10 ml with the same mixture of solvents.

Reference solution Dilute 0.5 ml of the test solution to 100 ml with a mixture of 10 volumes of *water R* and 90 volumes of *acetone R*.

Apply separately to the plate 10 µl of each solution. Develop over a path of 15 cm using a mixture of 10 volumes of *acetone R*, 10 volumes of *diethylamine R* and 80 volumes of *cyclohexane R*. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with the reference solution (0.5 per cent).

Loss on drying (*2.2.32*)

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

Sulphated ash (*2.4.14*)

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

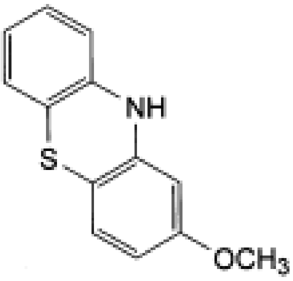
Dissolve 0.350 g in 50 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 44.46 mg of $C_{23}H_{28}N_2O_5S$.

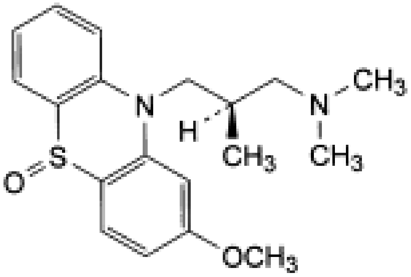
STORAGE

Store protected from light.

IMPURITIES



A. 2-methoxyphenothiazine,



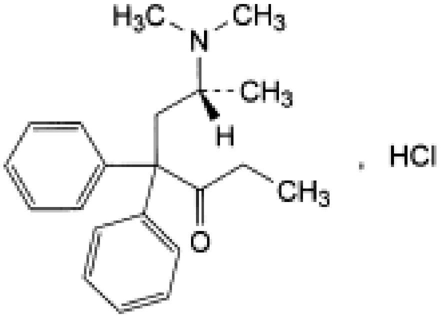
B. 10-[(2*R*)-3-(dimethylamino)-2-methylpropyl]-2-methoxy-10*H*-phenothiazine 5-oxide.

Ph Eur

Levomethadone Hydrochloride

General Notices

(Ph Eur monograph 1787)



$C_{21}H_{27}NO,HCl$ 345.9 *125-58-6*

Action and use

Opioid analgesic.

Ph Eur

DEFINITION

(6*R*)-6-(Dimethylamino)-4,4-diphenylheptan-3-one hydrochloride.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Soluble in water, freely soluble in alcohol.

IDENTIFICATION

First identification A, C, D.

Second identification A, B, D.

A. Specific optical rotation (see Tests).

B. Melting point (*2.2.14*): 239 °C to 242 °C.

C. Infrared absorption spectrophotometry (*2.2.24*).

Comparison *Ph. Eur. reference spectrum of methadone hydrochloride.*

D. Dilute 1 ml of solution S (see Tests) to 5 ml with *water R* and add 1 ml of *dilute ammonia R1*. Mix, allow to stand for 5 min and filter. The filtrate gives reaction (a) of chlorides (*2.3.1*).

TESTS

Solution S

Dissolve 2.50 g in *carbon dioxide-free water R* and dilute to 50.0 ml with the same solvent.

Appearance of solution

Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Acidity or alkalinity

Dilute 10 ml of solution S to 25 ml with *carbon dioxide-free water R*. To 10 ml of the solution add 0.2 ml of *methyl red solution R* and 0.2 ml of *0.01 M sodium hydroxide*. The solution is yellow. Add 0.4 ml of *0.01 M hydrochloric acid*. The solution is red.

Specific optical rotation (*2.2.7*)

- 125 to - 135 (dried substance), determined on solution S.

Related substances

Liquid chromatography (*2.2.29*).

Test solution Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 50.0 ml with the mobile phase. Dilute 1.0 ml of the solution to 10.0 ml with the mobile phase.

Reference solution (b) Dissolve 12.0 mg of *imipramine hydrochloride CRS* in the mobile phase and dilute to 10 ml with the mobile phase. To 1 ml of the solution add 5 ml of the test solution and dilute to 10 ml with the mobile phase.

Column:
- *size:* *l* = 0.125 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm),
- *temperature*: 25 °C.

Mobile phase Mix 35 volumes of *acetonitrile R* and 65 volumes of an 11.5 g/l solution of *phosphoric acid R* adjusted to pH 3.6 with *tetraethylammonium hydroxide solution R*.

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 210 nm.

Equilibration About 30 min.

Injection 10 µl.

Run time 7 times the retention time of levomethadone.

Retention time Levomethadone = about 5 min.

System suitability Reference solution (b):

- *resolution*: minimum 2.5 between the peaks due to imipramine and levomethadone.

Limits:

- *any impurity*: not more than half the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- *total*: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Dextromethadone

Liquid chromatography (*2.2.29*).

Test solution Dissolve 40.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution Dilute 1.0 ml of the test solution to 10.0 ml with the mobile phase. Dilute 1.0 ml of the solution to 20.0 ml with the mobile phase.

Column:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *2-hydroxypropylbetadex for chromatography R* (5 µm);
- *temperature*: 10 °C.

Mobile phase Mix 1 volume of *triethylamine R* adjusted to pH 4.0 with *phosphoric acid R*, 15 volumes of *acetonitrile R* and 85 volumes of a 13.6 g/l solution of *potassium dihydrogen phosphate R*.

Flow rate 0.7 ml/min.

Detection Spectrophotometer at 210 nm.

Equilibration About 30 min.

Injection 10 µl.

Relative retention With reference to levomethadone: dextromethadone = about 1.4.

System suitability Test solution:

- *number of theoretical plates*: minimum 2000, calculated for the peak due to levomethadone;
- *tailing factor*: maximum 3 for the peak due to levomethadone.

Limit:

- *dextromethadone*: not more than the area of the principal peak in the chromatogram obtained with the reference solution (0.5 per cent).

Loss on drying (*2.2.32*)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in a mixture of 40 ml of *water R* and 5 ml of *acetic acid R*. Titrate with *0.1 M silver nitrate*. Determine the end-point potentiometrically (*2.2.20*), using a silver electrode.

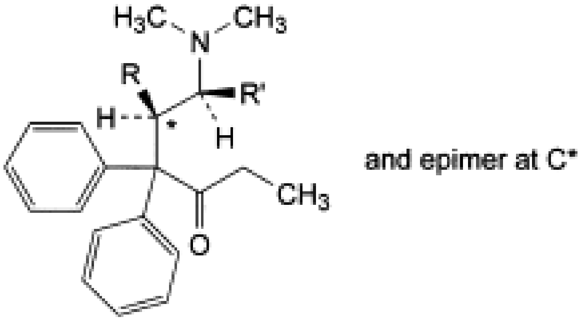
1 ml of *0.1 M silver nitrate* is equivalent to 34.59 mg of $C_{21}H_{28}ClNO$.

STORAGE

Protected from light.

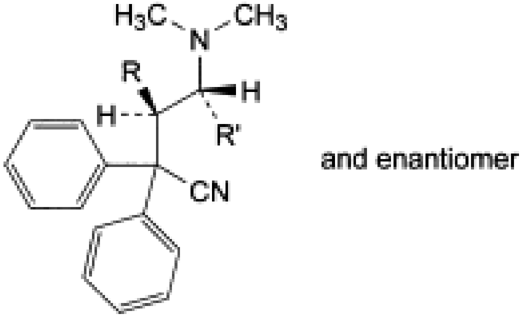
IMPURITIES

Specified impurities A, B, C, D, E, F.



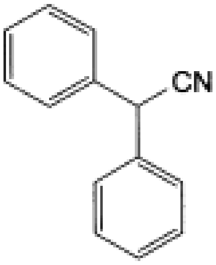
A. R = H, R′ = CH_3: (6*S*)-6-(dimethylamino)-4,4-diphenylheptan-3-one,

D. R = CH_3, R′ = H: (5*RS*)-6-(dimethylamino)-5-methyl-4,4-diphenylhexan-3-one,

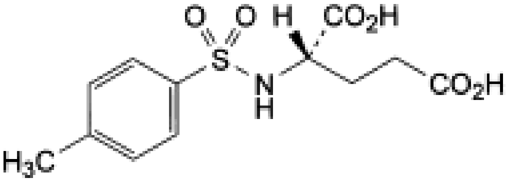


B. R = H, R′ = CH_3: (4*RS*)-4-(dimethylamino)-2,2-diphenylpentanenitrile,

C. R = CH_3, R′ = H: (3*RS*)-4-(dimethylamino)-3-methyl-2,2-diphenylbutanenitrile,



E. diphenylacetonitrile,



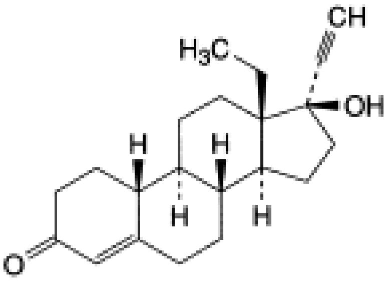
F. (2*S*)-2-[[(4-methylphenyl)sulphonyl]amino]pentanedioic acid (*N*-*p*-tosyl-L-glutamic acid).

Ph Eur

Levonorgestrel

General Notices

(Ph Eur monograph 0926)



$C_{21}H_{28}O_2$ 312.5 *797-63-7*

Action and use

Progestogen.

Preparations

Levonorgestrel Tablets

Levonorgestrel and Ethinylestradiol Tablets

Ph Eur

DEFINITION

Levonorgestrel contains not less than 98.0 per cent and not more than the equivalent of 102.0 per cent of 13β-ethyl-17β-hydroxy-18,19-dinor-17α-pregn-4-en-20-yn-3-one, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder, practically insoluble in water, sparingly soluble in methylene chloride, slightly soluble in alcohol.

IDENTIFICATION

A. It complies with the test for specific optical rotation (see Tests).

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *levonorgestrel CRS*.

TESTS

Specific optical rotation (*2.2.7*)

Dissolve 0.200 g in *chloroform R* and dilute to 10.0 ml with the same solvent. The specific optical rotation is - 30 to - 35.

Related substances

Examine by thin-layer chromatography (*2.2.27*), using *silica gel G R* as the coating substance.

Test solution Dissolve 0.2 g of the substance to be examined in *chloroform R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dilute 1 ml of the test solution to 10 ml with *methylene chloride R*. Dilute 1 ml of this solution to 20 ml with *methylene chloride R*.

Reference solution (b) Dilute 4 ml of reference solution (a) to 10 ml with *methylene chloride R*.

Reference solution (c) Dissolve 5 mg of *levonorgestrel CRS* and 5 mg of *ethinylestradiol CRS* in *methylene chloride R* and dilute to 50 ml with the same solvent.

Apply separately to the plate 10 µl of each solution. Develop over a path of 15 cm using a mixture of 20 volumes of *ethyl acetate R* and 80 volumes of *methylene chloride R.* Allow the plate to dry in air, spray with a 100 g/l solution of *phosphomolybdic acid R* in *alcohol R*, heat at 100 °C to 105 °C for 15 min and examine immediately. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the principal spot in the chromatogram obtained with reference solution (a) (0.5 per cent) and at most two such spots are more intense than the spot in the chromatogram obtained with reference solution (b) (0.2 per cent). The test is not valid unless the chromatogram obtained with reference solution (c) shows two clearly separated spots.

Loss on drying (*2.2.32*)

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*)

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 45 ml of *tetrahydrofuran R*. Add 10 ml of a 100 g/l solution of *silver nitrate R*. After 1 min, titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically (*2.2.20*). Carry out a blank titration.

1 ml of *0.1 M sodium hydroxide* is equivalent to 31.25 mg $C_{21}H_{28}O_2$.

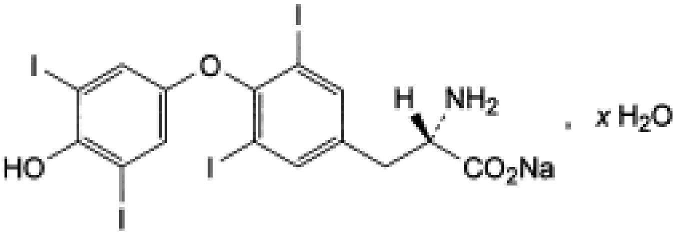
Ph Eur

Levothyroxine Sodium

General Notices

(Ph Eur monograph 0401)



$C_{15}H_{10}I_4NNaO_4,xH_2O$ 799 *55-03-8*

Action and use

Thyroid hormone replacement

Preparation

Levothyroxine Tablets

Ph Eur

DEFINITION

Levothyroxine sodium contains not less than 97.0 per cent and not more than the equivalent of 102.0 per cent of sodium (2*S*)-2-amino-3-[4-(4-hydroxy-3,5-diiodophenoxy)-3,5-diiodophenyl]propanoate, calculated with reference to the dried substance. It contains a variable amount of water.

CHARACTERS

An almost white or slightly brownish-yellow powder, or a fine, crystalline powder, very slightly soluble in water, slightly soluble in ethanol (96 per cent). It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

First identification A, B, E.

Second identification A, C, D, E.

A. It complies with the test for specific optical rotation (see Tests).

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum

obtained with *levothyroxine sodium CRS*.

C. Examine by thin-layer chromatography (*2.2.27*), using *silica gel G R* as the coating substance.

Test solution Dissolve 5 mg of the substance to be examined in a mixture of 5 volumes of *concentrated ammonia R* and 70 volumes of *methanol R* and dilute to 5 ml with the same mixture of solvents.

Reference solution (a) Dissolve 5 mg of *levothyroxine sodium CRS* in a mixture of 5 volumes of *concentrated ammonia R* and 70 volumes of *methanol R* and dilute to 5 ml with the same mixture of solvents.

Reference solution (b) Dissolve 5 mg of *liothyronine sodium CRS* in a mixture of 5 volumes of *concentrated ammonia R* and 70 volumes of *methanol R* and dilute to 5 ml with the same mixture of solvents. Mix 1 ml of this solution and 1 ml of the test solution.

Apply separately to the plate 5 µl of each solution. Develop over a path of 15 cm using a mixture of 20 volumes of *concentrated ammonia R*, 35 volumes of *2-propanol R* and 55 volumes of *ethyl acetate R*. Allow the plate to dry in air and spray with *ninhydrin solution R*. Heat at 100-105 °C until the spots appear. Examine in daylight. The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a). The test is not valid unless the chromatogram obtained with reference solution (b) shows 2 clearly separated spots.

D. To about 50 mg in a porcelain dish add a few drops of *sulphuric acid R* and heat. Violet vapour is evolved.

E. To 200 mg add 2 ml of *dilute sulphuric acid R*. Heat on a water-bath and then carefully over a naked flame, increasing the temperature gradually up to about 600 ± 50 °C. Continue the ignition until most of the black particles have disappeared. Dissolve the residue in 2 ml of *water R*. The solution gives reaction (a) of sodium (*2.3.1*).

TESTS

Solution S

Dissolve 0.500 g in 23 ml of a gently boiling mixture of 1 volume of *1 M hydrochloric acid* and 4 volumes of *ethanol (96 per cent) R*. Cool and dilute to 25.0 ml with the same mixture of solvents.

Appearance of solution

Freshly prepared solution S is not more intensely coloured than reference solution BY_3 (*2.2.2, Method II*).

Specific optical rotation (*2.2.7*)

+ 16 to + 20, determined on solution S and calculated with reference to the dried substance.

Liothyronine and other related substances. Examine the chromatograms obtained in the assay. In the chromatogram obtained with test solution (a), the area of any peak due to liothyronine is not greater than that of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent) and the sum of the areas of all the peaks apart from the principal peak and any peak due to liothyronine is not greater than the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent). Disregard any peak with an area less than that of the peak in the chromatogram obtained with reference solution (d).

Loss on drying (*2.2.32*)

6.0 per cent to 12.0 per cent, determined on 0.100 g by drying in an oven at 105 °C.

ASSAY

Examine by liquid chromatography (*2.2.29*). *Protect the solutions from light throughout the assay.*

Test solution (a) Dissolve 20.0 mg of the substance to be examined in *methanolic sodium hydroxide solution R* and dilute to 100.0 ml with the same solvent.

Test solution (b) Dilute 2.0 ml of test solution (a) to 200 ml with *methanolic sodium hydroxide solution R*.

Reference solution (a) Dissolve 20.0 mg of *levothyroxine sodium CRS* in *methanolic sodium hydroxide solution R* and dilute to 100.0 ml with the same solvent. Dilute 2.0 ml of this solution to 200 ml with *methanolic sodium hydroxide solution R*.

Reference solution (b) Dissolve 5 mg of *liothyronine sodium CRS* in *methanolic sodium hydroxide solution R* and dilute to 50.0 ml with the same solvent. Dilute 10.0 ml of the solution to 50 ml with *methanolic sodium hydroxide solution R*. Dilute 10.0 ml of this solution to 100 ml with *methanolic sodium hydroxide solution R*.

Reference solution (c) Mix equal volumes of reference solution (a) and reference solution (b) .

Reference solution (d) Dilute 1 ml of reference solution (a) to 10 ml with *methanolic sodium hydroxide solution R*.

The chromatographic procedure may be carried out using:

— a column 0.25 m long and 4 mm in internal diameter packed with *nitrile silica gel for chromatography R* (5-10 µm);

— as mobile phase at a flow rate of 1 ml/min a mixture of 1 volume of *phosphoric acid R*, 300 volumes of *acetonitrile R* and 700 volumes of *water R*;

— as detector a spectrophotometer set at 225 nm;

— a loop injector.

Inject separately 50 µl of each solution. Continue the chromatography for 3.5 times the retention time of the principal peak. The assay is not valid unless the resolution between the peaks due to levothyroxine and liothyronine in the chromatogram obtained with reference solution (c) is at least 4 and the principal peak in the chromatogram obtained with reference solution (d) has a signal-to-noise ratio of at least 5.

Calculate the percentage content of $C_{15}H_{10}I_4NNaO_4$ from the declared content of *levothyroxine sodium CRS*.

STORAGE

In an airtight container , protected from light, at a temperature of 2 °C to 8 °C.

Lidocaine and Chlorhexidine Gel

Lidocaine Injection

Lidocaine and Adrenaline Injection/Lidocaine and Epinephrine Injection

Sterile Lidocaine Solution

Ph Eur

DEFINITION

2-(Diethylamino)-*N*-(2,6-dimethylphenyl)acetamide hydrochloride monohydrate.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Very soluble in water, freely soluble in ethanol (96 per cent).

IDENTIFICATION

First identification B, D.

Second identification A, C, D.

A. Melting point (*2.2.14*): 74 °C to 79 °C, determined without previous drying.

B. Infrared absorption spectrophotometry (*2.2.24*).

Comparison *lidocaine hydrochloride CRS*.

C. To about 5 mg add 0.5 ml of *fuming nitric acid R*. Evaporate to dryness on a water-bath, cool and dissolve the residue in 5 ml of *acetone R*. Add 0.2 ml of *alcoholic potassium hydroxide solution R*. A green colour is produced.

D. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

Solution S

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 20 ml with the same solvent.

Appearance of solution

Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

pH (*2.2.3*)

4.0 to 5.5.

Dilute 1 ml of solution S to 10 ml with *carbon dioxide-free water R.*

Related substances

Liquid chromatography (*2.2.29*).

Test solution Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dissolve 50.0 mg of *2,6-dimethylaniline R* (impurity A) in the mobile phase and dilute to 100.0 ml with the mobile phase. Dilute 10.0 ml of this solution to 100.0 ml with the mobile phase.

Reference solution (b) Dissolve 5 mg of *2-chloro-N-(2,6-dimethylphenyl)acetamide R* (impurity H) in the mobile phase and dilute to 10 ml with the mobile phase.

Reference solution (c) Dilute 1.0 ml of the test solution to 10.0 ml with the mobile phase.

Reference solution (d) Mix 1.0 ml of reference solution (a), 1.0 ml of reference solution (b) and 1.0 ml of reference solution (c) and dilute to 100.0 ml with the mobile phase.

Column:

- *size:* l = 0.15 m, Ø = 3.9 mm;
- *stationary phase*: *end-capped polar-embedded octadecylsilyl amorphous organosilica polymer R* (5 µm);
- *temperature*: 30 °C.

Mobile phase Mix 30 volumes of *acetonitrile for chromatography R* and 70 volumes of a 4.85

g/l solution of *potassium dihydrogen phosphate R* adjusted to pH 8.0 with *strong sodium hydroxide solution R*.

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 230 nm.

Injection 20 µl.

Run time 3.5 times the retention time of lidocaine.

Relative retention with reference to lidocaine (retention time = about 17 min): impurity H = about 0.37; impurity A = about 0.40.

System suitability Reference solution (d):

— *resolution*: minimum 1.5 between the peaks due to impurities H and A.

Limits:

— *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (d) (0.01 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the peak due to lidocaine in the chromatogram obtained with reference solution (d) (0.10 per cent);

— *total*: not more than 5 times the area of the peak due to lidocaine in the chromatogram obtained with reference solution (d) (0.5 per cent);

— *disregard limit*: 0.5 times the area of the peak due to lidocaine in the chromatogram obtained with reference solution (d) (0.05 per cent).

Heavy metals (*2.4.8*)

Maximum 5 ppm.

Dissolve 1.0 g in *water R* and dilute to 25 ml with the same solvent. Carry out the prefiltration. 10 ml of the prefiltrate complies with test E. Prepare the reference solution using 2 ml of *lead standard solution (1 ppm Pb) R.*

Water (*2.5.12*)

5.5 per cent to 7.0 per cent, determined on 0.25 g.

Sulphated ash (*2.4.14*)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.220 g in 50 ml of *ethanol (96 per cent) R* and add 5.0 ml of *0.01 M hydrochloric acid*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 27.08 mg of $C_{14}H_{23}ClN_2O$.

STORAGE

Protected from light.

Ph Eur

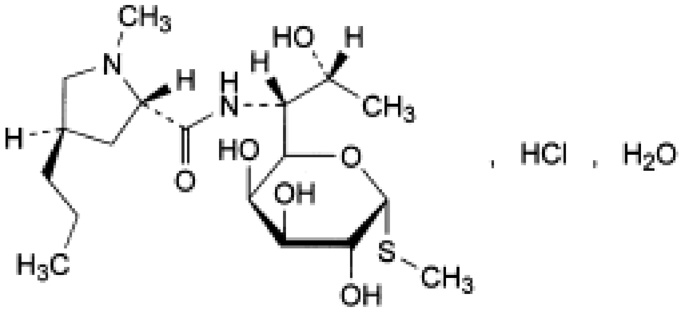
Lincomycin Hydrochloride

General Notices

(Ph Eur monograph 0583)



$C_{18}H_{34}N_2O_6S,HCl,H_2O$ 461.0 *7179-49-9*

Action and use

Antibacterial.

Preparations

Lincomycin Capsules

Lincomycin Injection

Ph Eur

DEFINITION

Lincomycin hydrochloride consists mainly of the methyl 6,8-dideoxy-6-[[[(2*S*,4*R*)-1-methyl-4-propylpyrrolidin-2-yl]carbonyl]amino]-1-thio-D-*erythro*-α-D-*galacto*-octopyranoside hydrochloride, an antimicrobial substance produced by *Streptomyces lincolnensis* var. *lincolnensis* or by any other means. It contains not less than 89.5 per cent and not more than 102.0 per cent of lincomycin hydrochloride ($C_{18}H_{35}ClN_2O_6S$), calculated with reference to the anhydrous substance.

CHARACTERS

A white or almost white, crystalline powder, very soluble in water, slightly soluble in ethanol (96 per cent), very slightly soluble in acetone.

IDENTIFICATION

First identification A, D.

Second identification B, C, D.

A. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *lincomycin hydrochloride CRS*.

B. Examine by thin-layer chromatography (*2.2.27*), using *silica gel G R* as the coating substance.

Test solution Dissolve 10 mg of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dissolve 10 mg of *lincomycin hydrochloride CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dissolve 10 mg of *lincomycin hydrochloride CRS* and 10 mg of *clindamycin hydrochlo*ride *CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Apply separately to the plate 5 µl of each solution. Develop over a path of 15 cm using the upper layer from a mixture of 20 volumes of *2-propanol R*, 40 volumes of a 150 g/l solution of *ammonium acetate R* previously adjusted to pH 9.6 with *ammonia R* and 45 volumes of *ethyl acetate R*. Allow the plate to dry in air and spray with a 1 g/l solution of *potassium permanganate R*. The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a). The test is not valid unless the chromatogram obtained with reference solution (b) shows two clearly separated spots.

C. Dissolve about 10 mg in 2 ml of *dilute hydrochloric acid R* and heat in a water-bath for 3 min. Add 3 ml of *sodium carbonate solution R* and 1 ml of a 20 g/l solution of *sodium nitroprusside R*. A violet-red colour develops.

D. Dissolve 0.1 g in *water R* and dilute to 10 ml with the same solvent. The solution gives reaction (a) of chlorides (*2.3.1*).

TESTS

Solution S

Dissolve 2.0 g in *carbon dioxide-free water R* and dilute to 20 ml with the same solvent.

Appearance of solution

Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution Y_6 (*2.2.2, Method II*).

pH (*2.2.3)*

The pH of solution S is 3.5 to 5.5.

Specific optical rotation (*2.2.7*)

Dissolve 1.000 g in *water R* and dilute to 25.0 ml with the same solvent. The specific optical rotation is + 135 to + 150, calculated with reference to the anhydrous substance.

Lincomycin B

Examine the chromatogram obtained in the assay with test solution (a). The area of the peak due to *lincomycin B*, which is eluted just before lincomycin, is not more than 5 per cent of the area of the peak due to lincomycin.

Heavy metals (*2.4.8*)

2.0 g complies with test C for heavy metals (5 ppm). Prepare the reference solution using 1.0 ml of *lead standard solution (10 ppm Pb) R*.

Water (*2.5.12*)

3.1 per cent to 4.6 per cent, determined on 0.500 g by the semi-micro determination of water.

Sulphated ash (*2.4.14*)

Not more than 0.5 per cent, determined on 1.0 g.

Bacterial endotoxins (*2.6.14*)

Less than 0.50 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for removal of bacterial endotoxins.

ASSAY

Examine by gas chromatography (*2.2.28*), using *dotriacontane R* as the internal standard.

Internal standard solution Dissolve 0.200 g of *dotriacontane R* in *chloroform R* and dilute to 25.0 ml with the same solvent.

Test solution (a) Dissolve 0.100 g of the substance to be examined in a 20 g/l solution of *imidazole R* in *chloroform R* and dilute to 100.0 ml with the same solution. Shake until dissolution is complete. Place 4.0 ml of the solution in a ground-glass-stoppered 15 ml centrifuge tube. Add 1.0 ml of a mixture of 1 volume of *chlorotrimethylsilane R* and 99 volumes of *N,O-bis(trimethylsilyl)acetamide R* and swirl gently. Position the glass stopper loosely in the tube and heat at 65 °C for 30 min.

Test solution (b) Prepare as described for test solution (a) but add 10.0 ml of the internal standard solution before dissolution of the substance to be examined.

Reference solution Prepare as described for test solution (a) using 0.100 g of *lincomycin hydrochloride CRS* instead of the substance to be examined and adding 10.0 ml of the internal standard solution before dissolution of the reference substance.

The chromatographic procedure may be carried out using:

— a glass column 1.5 m long and 3 mm in internal diameter packed with *silanised diatomaceous earth for gas chromatography R* impregnated with 3 per cent *m/m* of *poly (methylphenylsiloxane) R*;

— *helium for chromatography R* as the carrier gas at a flow rate of about 45 ml/min;

— a flame-ionisation detector,

maintaining the temperature of the column at 260 °C and that of the injection port and of the detector between 260 °C and 290 °C. Inject the chosen volume of the test solutions and the reference solution.

STORAGE

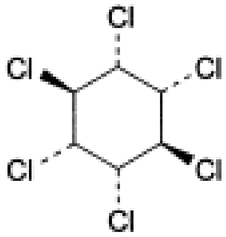
Store in an airtight container at a temperature not exceeding 30 °C. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

Ph Eur

Lindane

General Notices

(Ph Eur monograph 0772)



$C_6H_6Cl_6$ 290.8 *58-89-9*

Action and use

Insecticide.

Ph Eur

DEFINITION

Lindane contains not less than 99.0 per cent and not more than the equivalent of 100.5 per cent of *r*-1,*c*-2,*t*-3,*c*-4,*c*-5,*t*-6-hexachlorocyclohexane.

CHARACTERS

A white or almost white, crystalline powder, practically insoluble in water, freely soluble in acetone, soluble in ethanol.

IDENTIFICATION

First identification A, B.

Second identification A, C, D.

A. Melting point (*2.2.14*): 112 °C to 115 °C.

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *lindane CRS*. Examine the substances prepared as discs.

C. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Dissolve about 5 mg in 4 ml of *alcohol R*. Add 1 ml of *0.5 M potassium hydroxide alcoholic*. Allow to stand for 10 min. The solution gives reaction (a) of chlorides (*2.3.1*).

TESTS

Appearance of solution

Dissolve 0.50 g in *acetone R* and dilute to 10 ml with the same solvent. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution B7 (*2.2.2, Method II*).

Related substances Examine by thin-layer chromatography (*2.2.27*), using *silica gel G R* as the coating substance.

Test solution (a) Dissolve 1.0 g of the substance to be examined in *chloroform R* and dilute to 10 ml with the same solvent.

Test solution (b) Dilute 1 ml of test solution (a) to 10 ml with *chloroform R*.

Reference solution (a) Dissolve 0.1 g of *lindane CRS* in *chloroform R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dilute 1 ml of test solution (b) to 10 ml with *chloroform R*.

Reference solution (c) Dissolve 10 mg of α*-hexachlorocyclohexane CRS* in test solution (a) and dilute to 5 ml with the same solvent.

Apply separately to the plate 1 µl of each solution. Develop over a path of 12 cm using a mixture of 10 volumes of *chloroform R* and 90 volumes of *cyclohexane R*. Dry the plate in a current of air, irradiate with ultraviolet light at 254 nm for 15 min and spray with a 6 g/l solution of *dicarboxidine hydrochloride R* in alcohol (90 per cent *V/V*) *R*. Examine in daylight. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (1.0 per cent). The test is not valid unless the chromatogram obtained with reference solution (c) shows two clearly separated spots.

Chlorides (*2.4.4*)

To 0.75 g, finely powdered, add 15 ml of *water R*. Boil for 1 min. Allow to cool, shaking frequently, and filter. To 10 ml of the filtrate add 3 ml of *water R* and 2 ml of *alcohol R*. The solution complies with the limit test for chlorides (100 ppm).

Sulphated ash (*2.4.14*)

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

To 0.200 g add 10 ml of *alcohol R* and warm on a water-bath until dissolved. Cool, add 20 ml of *0.5 M alcoholic potassium hydroxide* and allow to stand for 10 min, swirling frequently. Add 50 ml of *water R*, 20 ml of *dilute nitric acid R*, 25.0 ml of *0.1 M silver nitrate* and 5 ml of *ferric ammonium sulphate solution R2*. Titrate with *0.1 M ammonium thiocyanate* until a reddish-yellow colour is obtained. Carry out a blank titration.

1 ml of *0.1 M silver nitrate* is equivalent to 9.694 mg of $C_6H_6Cl_6$.

STORAGE

Store protected from light.

Ph Eur

Linoleoyl Macrogolglycerides

General Notices

(Ph Eur monograph 1232)

Action and use

Excipient.

Ph Eur

DEFINITION

Mixtures of monoesters, diesters and triesters of glycerol and monoesters and diesters of macrogols.

They are obtained by partial alcoholysis of an unsaturated oil mainly containing triglycerides of linoleic (*cis*, *cis*-9,12-octadecadienoic) acid, using macrogol with a mean relative molecular mass between 300 and 400, or by esterification of glycerol and macrogol with unsaturated fatty acids, or by mixing glycerol esters and condensates of ethylene oxide with the fatty acids of this unsaturated oil.

CHARACTERS

Appearance

Amber, oily liquid which may give rise to a deposit after prolonged periods at 20 °C.

Solubility

Practically insoluble but dispersible in water, freely soluble in methylene chloride.

Viscosity

About 35 mPa·s at 40 °C.

Relative density

About 0.95 at 20 °C.

Refractive index

About 1.47 at 20 °C.

IDENTIFICATION

A. Thin-layer chromatography (*2.2.27*).

Test solution Dissolve 1.0 g of the substance to be examined in *methylene chloride R* and dilute to 20 ml with the same solvent.

Plate *TLC silica gel plate R*.

Mobile phase *hexane R*, *ether R* (30:70 *V/V*).

Application 10 µl.

Development Over a path of 15 cm.

Drying In air.

Detection Spray with a 0.1 g/l solution of *rhodamine B R* in *ethanol (96 per cent) R* and examine in ultraviolet light at 365 nm.

Results The chromatogram shows a spot due to triglycerides with an R_F value of about 0.9 (R_{st} 1) and spots due to 1,3-diglycerides (R_{st} 0.7), to 1,2-diglycerides (R_{st} 0.6), to monoglycerides (R_{st} 0.1) and to esters of macrogol (R_{st} 0).

B. Hydroxyl value (see Tests).

C. Saponification value (see Tests).

D. Fatty acid composition (see Tests).

TESTS

Acid value (*2.5.1*)

Maximum 2.0, determined on 2.0 g.

Hydroxyl value (*2.5.3, Method A*)

45 to 65, determined on 1.0 g.

Iodine value (*2.5.4, Method A*)

90 to 110.

Peroxide value (*2.5.5, Method A*)

Maximum 12.0, determined on 2.0 g.

Saponification value (*2.5.6*)

150 to 170, determined on 2.0 g.

Alkaline impurities

Into a test tube introduce 5.0 g and carefully add a mixture, neutralised if necessary with *0.01 M hydrochloric acid* or with *0.01 M sodium hydroxide*, of 0.05 ml of a 0.4 g/l solution of *bromophenol blue R* in *ethanol (96 per cent) R*, 0.3 ml of *water R* and 10 ml of *ethanol (96 per cent) R*. Shake and allow to stand. Not more than 1.0 ml of *0.01 M hydrochloric acid* is required to change the colour of the upper layer to yellow.

Free glycerol

Maximum 3.0 per cent.

Dissolve 1.20 g in 25.0 ml of *methylene chloride R*. Heat if necessary. After cooling, add 100 ml of *water R*. Shake and add 25.0 ml of *periodic acetic acid solution R*. Shake and allow to stand for 30 min. Add 40 ml of a 75 g/l solution of *potassium iodide R*. Allow to stand for 1 min. Add 1 ml of *starch solution R*. Titrate the iodine with *0.1 M sodium thiosulphate*. Carry out a blank titration.

1 ml of *0.1 M sodium thiosulphate* is equivalent to 2.3 mg of glycerol.

Composition of fatty acids (*2.4.22, Method A*).

Composition of the fatty-acid fraction of the substance:

— *palmitic acid* : 4.0 per cent to 20.0 per cent;

— *stearic acid* : maximum 6.0 per cent;

— *oleic acid* : 20.0 per cent to 35.0 per cent;

— *linoleic acid* : 50.0 per cent to 65.0 per cent;

— *linolenic acid* : maximum 2.0 per cent;

— *arachidic acid*: maximum 1.0 per cent;

— *eicosenoic acid*: maximum 1.0 per cent.

Ethylene oxide and dioxan (*2.4.25*)

Maximum 1 ppm of ethylene oxide and maximum 10 ppm of dioxan.

Heavy metals (*2.4.8*)

Maximum 10 ppm.

2.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Water (*2.5.12*)

Maximum 1.0 per cent, determined on 1.0 g. Use a mixture of 30 volumes of *anhydrous methanol R* and 70 volumes of *methylene chloride R* as solvent.

Total ash (*2.4.16*)

Maximum 0.1 per cent.

STORAGE

Protected from light.

LABELLING

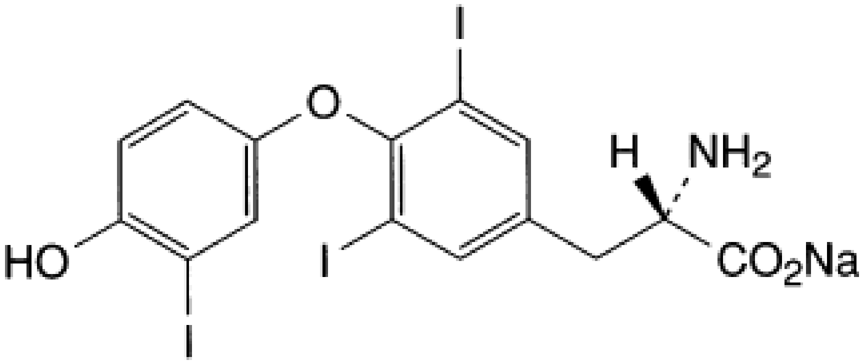
The label states the type of macrogol used (mean relative molecular mass) or the number of units of ethylene oxide per molecule (nominal value).

Ph Eur

Liothyronine Sodium

General Notices

(Ph Eur monograph 0728)



$C_{15}H_{11}I_3NNaO_4$ 673 *55-06-1*

Action and use

Thyroid hormone replacement.

Preparation

Liothyronine Tablets

Ph Eur

DEFINITION

Sodium (2*S*)-2-amino-3-[4-(4-hydroxy-3-iodophenoxy)-3,5-diiodophenyl]propanoate.

Content

95.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or slightly coloured powder.

Solubility

Practically insoluble in water, slightly soluble in ethanol (96 per cent). It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

First identification A, C, E.

Second identification A, B, D, E.

A. Specific optical rotation (see Tests).

B. Ultraviolet and visible absorption spectrophotometry *(2.2.25)*.

Test solution Dissolve 10.0 mg in *0.1 M sodium hydroxide* and dilute to 100.0 ml with the same solvent.

Spectral range 230-350 nm.

Absorption maximum At 319 nm.

Specific absorbance at the absorption maximum 63 to 69 (dried substance).

C. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison liothyronine sodium CRS.

D. To about 50 mg in a porcelain dish add a few drops of *sulphuric acid R* and heat. Violet vapour is evolved.

E. To 200 mg add 2 ml of *dilute sulphuric acid R*. Heat on a water-bath and then carefully over a naked flame, increasing the temperature gradually up to about 600 °C. Continue the ignition until most of the particles have disappeared. Dissolve the residue in 2 ml of *water R*. The solution gives reaction (a) of sodium (*2.3.1*).

TESTS

Specific optical rotation *(2.2.7)*

+ 18.0 to + 22.0 (dried substance).

Dissolve 0.200 g in a mixture of 1 volume of *1 M hydrochloric acid* and 4 volumes of *ethanol (96 per cent) R* and dilute to 20.0 ml with the same mixture of solvents.

Related substances

Liquid chromatography *(2.2.29)*. *Protect the solutions from light throughout the test.*

Solution A Mix 10 volumes of mobile phase A with 90 volumes of *methanol R.*

Solution B Mix 30 volumes of mobile phase B and 70 volumes of mobile phase A. Mix equal volumes of this solution with solution A.

Test solution Dissolve 20.0 mg of the substance to be examined in 20 ml of solution A. Dilute 4.0 ml of this solution to 20.0 ml with solution B.

Reference solution (a) Dissolve 2.5 mg of *levothyroxine sodium CRS* (impurity A) and 2.5 mg of *liothyronine sodium CRS* in solution A and dilute to 25 ml with the same solution. Dilute 1.0 ml of this solution to 50.0 ml with solution B.

Reference solution (b) Dilute 1.0 ml of reference solution (a) to 10.0 ml with solution B.

Reference solution (c) Dissolve the contents of a vial of *liothyronine for peak identification CRS* (containing impurities A, B, C, D and E) in solution B and dilute to 1.0 ml with the same solution.

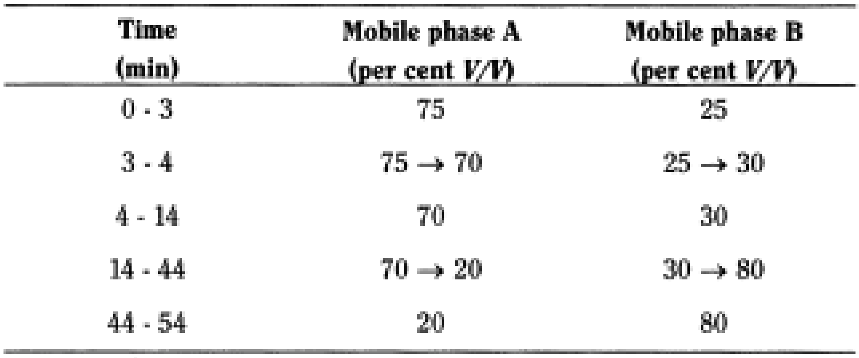
Reference solution (d) Dissolve 20.0 mg of *liothyronine sodium CRS* in 20 ml of solution A.

Dilute 4.0 ml of this solution to 20.0 ml with solution B.

Blank solution Solution B.

Column:
- *size*: *l* = 0.15 m, Ø = 4.0 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (3 µm).

Mobile phase:
- *mobile phase A*: dissolve 9.7 g of *sulphamic acid R* in *water R* and dilute to 2000 ml with the same solvent; add 1.5 g of *sodium hydroxide R* and adjust to pH 2.0 with *2 M sodium hydroxide*;
- *mobile phase B*: *acetonitrile R1*;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 3	75	25
3 - 4	75 → 70	25 → 30
4 - 14	70	30
14 - 44	70 → 20	30 → 80
44 - 54	20	80

Flow rate 1 ml/min.

Detection Spectrophotometer at 225 nm.

Injection 25 µl of the test solution and reference solutions (a), (b) and (c).

Identification of impurities Use the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A, B, C, D and E.

- *relative retention* with reference to liothyronine (retention time = about 14 min): impurity B = about 0.2; impurity E = about 0.5; impurity A = about 1.4; impurity C = about 2; impurity D = about 2.4.

System suitability:
- *resolution*: minimum 5.0 between the peaks due to impurity A and liothyronine in the chromatogram obtained with reference solution (a).

Limits:
- *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (1.0 per cent);
- *impurity E*: not more than 5 times the area of the peak due to liothyronine in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *impurities B, C*: for each impurity, not more than 3 times the area of the peak due to liothyronine in the chromatogram obtained with reference solution (b) (0.3 per cent);
- *impurity D*: not more than twice the area of the peak due to liothyronine in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the peak due to liothyronine in the chromatogram obtained with reference solution (b) (0.10 per cent);

— *total*: not more than twice the area of the peak due to liothyronine in the chromatogram obtained with reference solution (a) (2.0 per cent);

— *disregard limit*: 0.5 times the area of the peak due to liothyronine in the chromatogram obtained with reference solution (b) (0.05 per cent).

Chlorides

Maximum 2.0 per cent, expressed as NaCl (dried substance).

Dissolve 0.500 g in a 2 g/l solution of *sodium hydroxide R* and dilute to 100 ml with the same solvent. Add 15 ml of *dilute nitric acid R* and titrate with *0.05 M silver nitrate*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.05 M silver nitrate* is equivalent to 2.93 mg of NaCl.

Loss on drying *(2.2.32)*

Maximum 4.0 per cent, determined on 0.500 g by drying *in vacuo* at 60 °C for 4 h.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modifications.

Injection Test solution and reference solution (d).

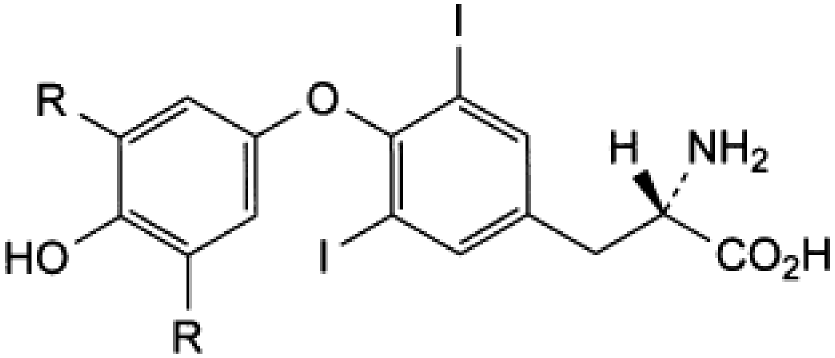
Calculate the percentage content of $C_{15}H_{11}I_3NNaO_4$ from the declared content of *liothyronine sodium CRS.*

STORAGE

In an airtight container , protected from light, at a temperature between 2 °C and 8 °C.

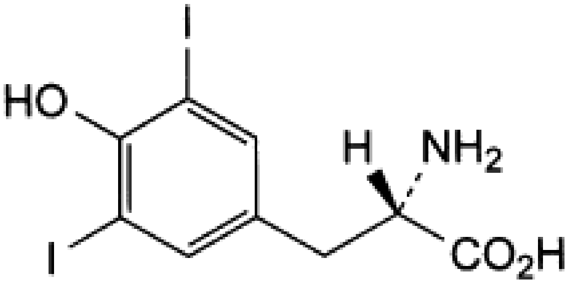
IMPURITIES

Specified impurities *A, B, C, D, E.*

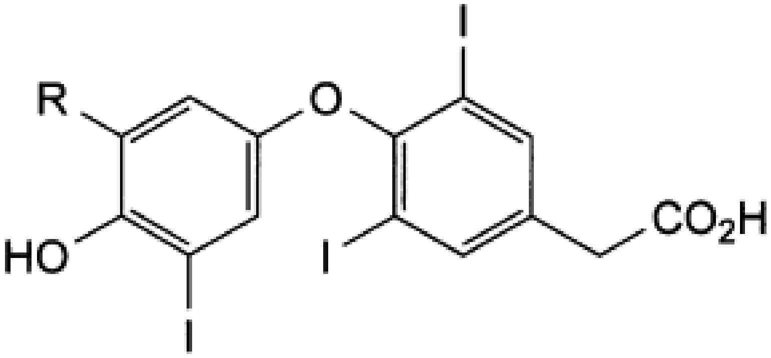


A. R = I: levothyroxine,

E. R = H: (2*S*)-2-amino-3-[4-(4-hydroxyphenoxy)-3,5-diiodophenyl]propanoic acid (diiodothyronine).



B. (2*S*)-2-amino-3-(4-hydroxy-3,5-diiodophenyl)propanoic acid (diiodotyrosine),



C. R = H: [4-(4-hydroxy-3-iodophenoxy)-3,5-diiodophenyl]acetic acid (triiodothyroacetic acid) ,

D. R = I: [4-(4-hydroxy-3,5-diiodophenoxy)-3,5-diiodophenyl]acetic acid (tetraiodothyroacetic acid),

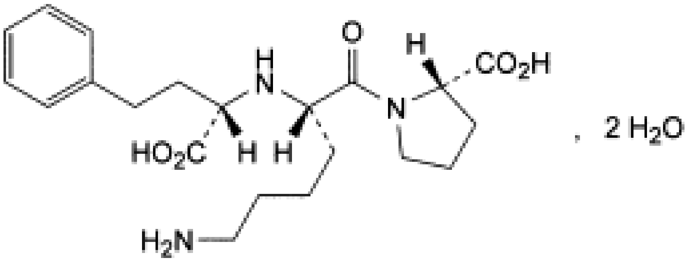
Ph Eur

Lisinopril Dihydrate

General Notices

(Ph Eur monograph 1120)



$C_{21}H_{31}N_3O_5,2H_2O$ 441.5 *83915-83-7*

Action and use

Angiotensin converting enzyme inhibitor.

Preparation

Lisinopril Tablets

Ph Eur

DEFINITION

(2*S*)-1-[(2*S*)-6-Amino-2-[[(1*S*)-1-carboxy-3-phenylpropyl]amino]hexanoyl]pyrrolidine-2-carboxylic acid dihydrate.

Content

98.5 per cent to 101.5 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Soluble in water, sparingly soluble in methanol, practically insoluble in acetone and in anhydrous ethanol.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

Preparation Discs.

Comparison *lisinopril dihydrate CRS.*

TESTS

Specific optical rotation (*2.2.7*)

- 43 to - 47 (anhydrous substance).

Dissolve 0.5 g in *zinc acetate solution R* and dilute to 50.0 ml with the same solvent.

Related substances

Liquid chromatography (*2.2.29*).

Test solution Dissolve 20.0 mg of the substance to be examined in mobile phase A and dilute to 10.0 ml with mobile phase A.

Reference solution (a) Dissolve the contents of 1 vial of *lisinopril dihydrate for performance test CRS* with 1.0 ml of mobile phase A.

Reference solution (b) Dilute 0.5 ml of the test solution to 50.0 ml with mobile phase A.

Column:

— *size:* l = 0.25 m, Ø = 4.6 mm;

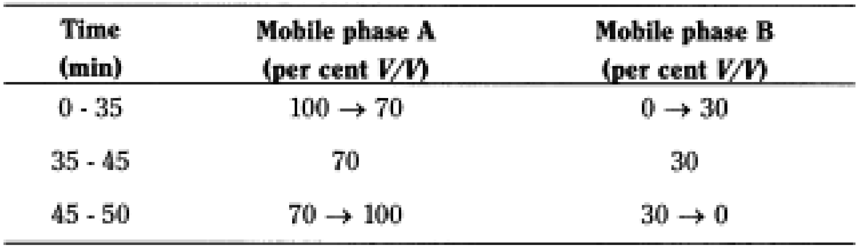
— *stationary phase*: *octylsilyl silica gel for chromatography R*;

— *temperature*: 50 °C.

Mobile phase:

— *mobile phase A*: mix 30 volumes of *acetonitrile R* and 970 volumes of a 3.12 g/l *sodium dihydrogen phosphate R* solution adjusted to pH 5.0 with a 50 g/l solution of *sodium hydroxide R*;

— *mobile phase B*: mix 200 volumes of *acetonitrile R* and 800 volumes of a 3.12 g/l *sodium dihydrogen phosphate R* solution adjusted to pH 5.0 with a 50 g/l solution of *sodium hydroxide R*;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 35	100 → 70	0 → 30
35 - 45	70	30
45 - 50	70 → 100	30 → 0

Flow rate 1.8 ml/min.

Detection Spectrophotometer at 210 nm.

Equilibration With mobile phase A for at least 30 min.

Injection 20 µl.

System suitability Reference solution (a):

— the chromatogram obtained is similar to the chromatogram supplied with *lisinopril dihydrate for performance test CRS* in that the peaks due to impurity A and impurity E fall on either side of the peak due to lisinopril;

— *peak-to-valley ratio*: minimum 9, where H_r = height above the baseline of the peak due to impurity A and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to lisinopril, and minimum 9 where H_r = height above the baseline of the peak due to impurity E and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to lisinopril; if necessary, adjust the pH of the mobile phase to 4.5 with *phosphoric acid R*; a further adjustment to pH 4.0 may be necessary with some columns before satisfactory separation of impurity A, lisinopril and impurity E is obtained; if, after adjustment, the retention time of the peak due to impurities C and D becomes extended to the point where integration becomes difficult, increase the content of mobile phase B from 30 per cent to 40 per cent over the interval from 35-45 min from the start of the chromatogram; maintain this concentration for a further 10 min and return the concentration of mobile phase A to 100 per cent over the next 10 min prior to the next injection.

Limits:

— *impurities A, B, C, D, E, F*: for each impurity, not more than 0.3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);

— *sum of impurities other than E*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard any peak occurring in the first 3 min.

Water (*2.5.12*)

8.0 per cent to 9.5 per cent, determined on 0.200 g.

Sulphated ash (*2.4.14*)

Maximum 0.1 per cent, determined on 1.0 g.

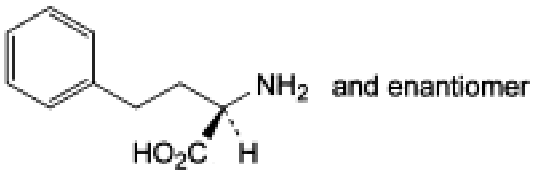
ASSAY

Dissolve 0.350 g in 50 ml of *distilled water R*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically (*2.2.20*).

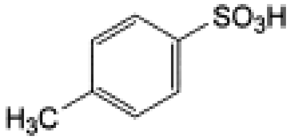
1 ml of *0.1 M sodium hydroxide* is equivalent to 40.55 mg of $C_{21}H_{31}N_3O_5$.

IMPURITIES

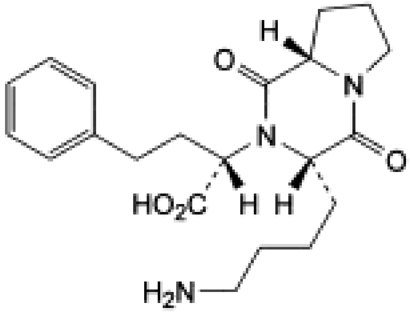
Specified impurities A, B, C, D, E, F.



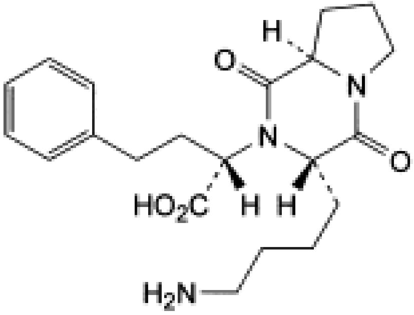
A. (2*RS*)-2-amino-4-phenylbutanoic acid,



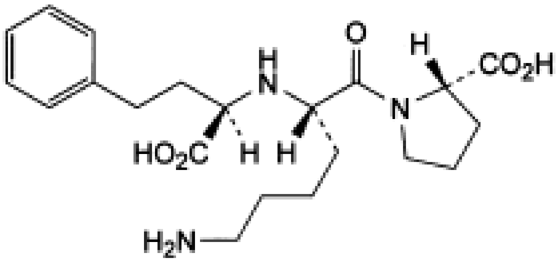
B. 4-methylbenzenesulphonic acid,



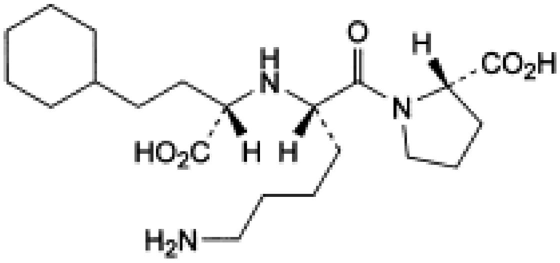
C. (2*S*)-2-[(3*S*,8aS)-3-(4-aminobutyl)-1,4-dioxohexahydropyrrolo[1,2-a]pyrazin-2(1*H*)-yl]-4-phenylbutanoic acid (*S*,*S*,*S*-diketopiperazine),



D. (2*S*)-2-[(3*S*,8a*R*)-3-(4-aminobutyl)-1,4-dioxohexahydropyrrolo[1,2-a]pyrazin-2(1*H*)-yl]-4-phenylbutanoic acid (*R*,*S*,*S*-diketopiperazine),



E. (2*S*)-1-[(2*S*)-6-amino-2-[[(1*R*)-1-carboxy-3-phenylpropyl]amino]hexanoyl]pyrrolidine-2-carboxylic acid (lisinopril *R*,*S*,*S*-isomer),



F. (2*S*)-1-[(2*S*)-6-amino-2-[[(1*S*)-1-carboxy-3-cyclohexylpropyl]amino]hexanoyl]pyrrolidine-2-carboxylic acid (cyclohexyl analogue).

Ph Eur

Lithium Carbonate

General Notices

(Ph Eur monograph 0228)

Li_2CO_3 73.9 *554-13-2*

Action and use

Prophylaxis of affective disorders.

Preparations

Lithium Carbonate Tablets

Prolonged-release Lithium Carbonate Tablets

Ph Eur

DEFINITION

Content: 98.5 per cent to 100.5 per cent.

CHARACTERS

Appearance

White or almost white powder.

Solubility

Slightly soluble in water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. When moistened with *hydrochloric acid R*, it gives a red colour to a non-luminous flame.

B. Dissolve 0.2 g in 1 ml of *hydrochloric acid R*. Evaporate to dryness on a water-bath. The residue dissolves in 3 ml of *ethanol (96 per cent) R*.

C. It gives the reaction of carbonates (*2.3.1*).

TESTS

Solution S

Suspend 10.0 g in 30 ml of *distilled water R* and dissolve by the addition of 22 ml of *nitric acid R*. Add *dilute sodium hydroxide solution R* until the solution is neutral and dilute to 100 ml with *distilled water R*.

Appearance of solution

Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Chlorides (*2.4.4*)

Maximum 200 ppm.

Dilute 2.5 ml of solution S to 15 ml with *water R*.

Sulphates (*2.4.13*)

Maximum 200 ppm.

Disperse 1.25 g in 5 ml of *distilled water R* and dissolve by adding 5 ml of *hydrochloric acid R1*. Boil for 2 min. Cool and add *dilute sodium hydroxide solution R* until neutral. Dilute to 25 ml with *distilled water R*.

Arsenic (*2.4.2, Method A*)

Maximum 2 ppm, determined on 0.5 g.

Calcium (*2.4.3*)

Maximum 200 ppm.

Dilute 5 ml of solution S to 15 ml with *distilled water R*.

Iron (*2.4.9*)

Maximum 20 ppm.

Dilute 5 ml of solution S to 10 ml with *water R*.

Magnesium (*2.4.6*)

Maximum 150 ppm.

Dilute 1 ml of solution S to 10 ml with *water R*. Dilute 6.7 ml of this solution to 10 ml with *water R.*

Potassium

Maximum 3.00 × 102 ppm.

Atomic emission spectrometry (*2.2.22, Method I*).

Test solution Dissolve 1.0 g in 10 ml of *hydrochloric acid R1* and dilute to 50.0 ml with *water R*.

Reference solutions Prepare the reference solutions using a solution of *potassium chloride R* containing 500 µg of K per millilitre, diluted as necessary with *water R*.

Wavelength 766.5 nm.

Sodium

Maximum 3.00 × 10^2 ppm.

Atomic emission spectrometry (*2.2.22, Method I*).

Test solution Dissolve 1.0 g in 10 ml of *hydrochloric acid R1* and dilute to 50.0 ml with *water R*.

Reference solutions Prepare the reference solutions using a solution of *sodium chloride R* containing 500 µg of Na per millilitre, diluted as necessary with *water R*.

Wavelength 589 nm.

Heavy metals (*2.4.8*)

Maximum 20 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R*.

ASSAY

Dissolve 0.500 g in 25.0 ml of *1 M hydrochloric acid*. Titrate with *1 M sodium hydroxide*, using *methyl orange solution R* as indicator.

1 ml of *1 M hydrochloric acid* is equivalent to 36.95 mg of Li_2CO_3.

Ph Eur

Lithium Citrate

General Notices

(Ph Eur monograph 0621)

$C_6H_5Li_3O_7,4H_2O$ 282.0 *6080-58-6*

Action and use

Prophylaxis of affective disorders.

Preparation

Lithium Citrate Oral Solution

Ph Eur

DEFINITION

Trilithium 2-hydroxypropane-1,2,3-tricarboxylate tetrahydrate.

Content

98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, fine crystalline powder.

Solubility

Freely soluble in water, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. When moistened with *hydrochloric acid R*, it gives a red colour to a non-luminous flame.

B. Dilute 3 ml of solution S (see Tests) to 10 ml with *water R*. Add 3 ml of *potassium ferriperiodate solution R*. A white or yellowish-white precipitate is formed.

C. To 1 ml of solution S add 4 ml of *water R*. The solution gives the reaction of citrates (*2.3.1*).

TESTS

Solution S

Dissolve 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Acidity or alkalinity

To 10 ml of solution S add 0.1 ml of *phenolphthalein solution R*. Not more than 0.2 ml of *0.1 M hydrochloric acid* or *0.1 M sodium hydroxide* is required to change the colour of the indicator.

Readily carbonisable substances

To 0.20 g of the powdered substance to be examined add 10 ml of *sulphuric acid R* and heat in a water-bath at 90 ± 1 °C for 60 min. Cool rapidly. The solution is not more intensely coloured than reference solution Y_2 or GY_2 (*2.2.2, Method II*).

Chlorides (*2.4.4*)

Maximum 100 ppm.

Dilute 5 ml of solution S to 15 ml with *water R*.

Oxalates

Maximum 300 ppm, calculated as anhydrous oxalate ion.

Dissolve 0.50 g in 4 ml of *water R*, add 3 ml of *hydrochloric acid R* and 1 g of *zinc R* in granules and heat on a water-bath for 1 min. Allow to stand for 2 min, decant the liquid into a test-tube containing 0.25 ml of a 10 g/l solution of *phenylhydrazine hydrochloride R* and heat to boiling. Cool rapidly, transfer to a graduated cylinder and add an equal volume of *hydrochloric acid R* and 0.25 ml of *potassium ferricyanide solution R*. Shake and allow to stand for 30 min. Any pink colour in the solution is not more intense than that in a standard prepared at the same time and in the same manner using 4 ml of a 0.05 g/l solution of *oxalic acid R*.

Sulphates (*2.4.13*)

Maximum 500 ppm.

To 3 ml of solution S add 2 ml of *hydrochloric acid R1* and dilute to 17 ml with *distilled water R*. Prepare the reference solution using 15 ml of a mixture of 2 ml of *hydrochloric acid R1* and 15 ml of *sulphate standard solution (10 ppm* SO_4*) R* and compare the opalescence after 15 min.

Heavy metals (*2.4.8*)

Maximum 10 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Water (*2.5.12*)

24.0 per cent to 27.0 per cent, determined on 0.100 g. After adding the substance to be examined, stir for 15 min before titrating. Carry out a blank titration.

ASSAY

Dissolve 80.0 mg in 50 ml of *anhydrous acetic acid R*, heating to about 50 °C. Allow to cool. Titrate with *0.1 M perchloric acid*, using 0.25 ml of *naphtholbenzein solution R* as indicator, until the colour changes from yellow to green.

1 ml of *0.1 M perchloric acid* is equivalent to 7.00 mg of $C_6H_5Li_3O_7$.

STORAGE

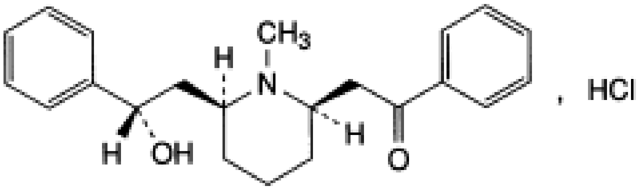
In an airtight container .

Ph Eur

Lobeline Hydrochloride

General Notices

(Ph Eur monograph 1988)



$C_{22}H_{27}NO_2,HCl$ 373.9 *134-63-4*

Action and use

Respiratory stimulant.

Ph Eur

DEFINITION

2-[(2*R*,6*S*)-6-[(2*S*)-2-Hydroxy-2-phenylethyl]-1-methylpiperidin-2-yl]-1-phenylethanone hydrochloride.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, microcrystalline powder.

Solubility

Sparingly soluble in water, freely soluble in alcohol, soluble in methylene chloride.

IDENTIFICATION

First identification A, B.

Second identification B, C.

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison lobeline hydrochloride CRS.

B. Solution S (see Tests) gives reaction (a) of chlorides (*2.3.1*).

C. Examine the chromatograms obtained in the test for foreign alkaloids.

Results The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (b).

TESTS

Solution S

Dissolve 0.250 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 25.0 ml with the same solvent.

Appearance of solution

Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

pH (*2.2.3*)

4.6 to 6.4 for solution S.

Specific optical rotation (*2.2.7*)

- 55 to - 59 (dried substance), determined on solution S.

Foreign alkaloids

Thin-layer chromatography (*2.2.27*).

Test solution (a) Dissolve 0.10 g of the substance to be examined in *methanol R* and dilute to 5.0 ml with the same solvent.

Test solution (b) Dilute 1 ml of test solution (a) to 10 ml with *methanol R.*

Reference solution (a) Dilute 0.1 ml of test solution (a) to 10 ml with *methanol R*.

Reference solution (b) Dissolve 10 mg of *lobeline hydrochloride CRS* in *methanol R* and dilute to 5 ml with the same solvent.

Plate *TLC silica gel* GF_{254} *plate R*.

Mobile phase *diethylamine R*, *cyclohexane R* (10:90 *V/V*).

Application 10 µl.

Development Over 2/3 of the plate.

Drying At 120 °C.

Detection Examine in ultraviolet light at 254 nm.

Limits In the chromatogram obtained with test solution (a):

— *any impurity*: any spot, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (a) (1 per cent).

Related substances

Liquid chromatography (*2.2.29*).

Test solution Dissolve 10.0 mg of the substance to be examined in the mobile phase and

dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (b) Dissolve 5 mg of *phenytoin CRS* in the mobile phase and dilute to 100.0 ml with the mobile phase. To 1 ml of the solution add 0.1 ml of the test solution and dilute to 25 ml with the mobile phase.

Column:

— *size:* *l* = 0.25 m, Ø = 4 mm;

— *stationary phase*: spherical *end-capped octylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Dissolve 1.0 g of *sodium methanesulphonate R* and 2.50 g of *disodium hydrogen phosphate dihydrate R* in a mixture of 3 volumes of a 6.7 per cent *V/V* solution of *phosphoric acid R*, 29 volumes of *acetonitrile R* and 70 volumes of *water R* and dilute to 1000 ml with the same mixture of solvents.

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 210 nm.

Injection 10 µl.

Run time 2 times the retention time of lobeline which is about 17 min.

System suitability Reference solution (b):

— *resolution*: minimum 4.0 between the peaks due to phenytoin and to lobeline.

Limits:

— *any impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

— *total*: maximum of 2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

— *disregard level*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Sulphates (*2.4.13*)

Maximum 0.1 per cent.

15 ml of solution S complies with the limit test for sulphates.

Loss on drying (*2.2.32*)

Maximum 1.0 per cent, determined on 1.000 g in vacuo.

Sulphated ash (*2.4.14*)

Maximum 0.1 per cent, determined on the residue obtained in the test for loss on drying.

ASSAY

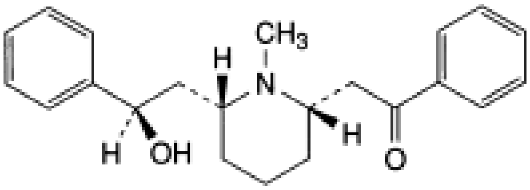
Dissolve 0.300 g in 50 ml of *alcohol R*. Add 5 ml of *0.01 M hydrochloric acid*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 37.39 mg of $C_{22}H_{28}ClNO_2$.

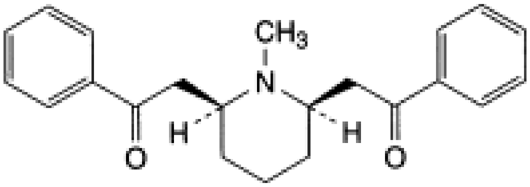
STORAGE

Protected from light.

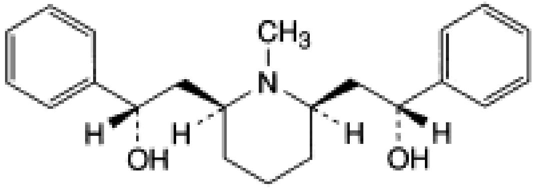
IMPURITIES



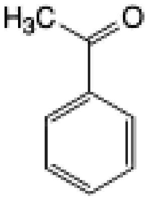
A. 2-[(2*S*,6*R*)-6-[(2*R*)-2-hydroxy-2-phenylethyl]-1-methylpiperidin-2-yl]-1-phenylethanone ((+)-lobeline),



B. 2,2′-[(2*R*,6*S*)-1-methylpiperidine-2,6-diyl]bis(1-phenylethanone) (lobelanine),



C. *meso*-(1*R*,1′*S*)-2,2′-[(2*R*,6*S*)-1-methylpiperidine-2,6-diyl]bis(1-phenylethanol) (lobelanidine),

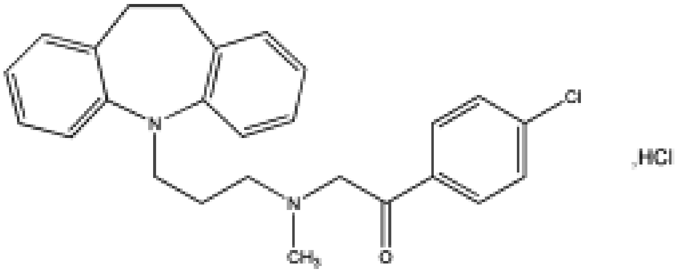


D. acetophenone.

Ph Eur

Lofepramine Hydrochloride

General Notices



$C_{26}H_{27}ClN_2O,HCl$ 455.4   *26786-32-3*

Action and use

Monoamine reuptake inhibitor; tricyclic antidepressant.

Preparation

Lofepramine Tablets

DEFINITION

Lofepramine Hydrochloride is 5-(3-[*N*-(4-chlorophenacyl)-*N*-methylamino]propyl)10,11-dihydro-5*H*-dibenz[*b,f*]azepine hydrochloride. It contains not less than 98.5% and not more than 101.0% of $C_{26}H_{27}ClN_2O,HCl$, calculated with reference to the dried substance.

CHARACTERISTICS

A fine, yellowish white to greenish yellow powder.

Very soluble in *ethanol (96%)* and in *methanol*; slightly soluble in *acetone*; very slightly soluble in *water*.

It exhibits polymorphism.

IDENTIFICATION

A. The *infrared absorption spectrum*, Appendix II A, is concordant with the reference spectrum of *lofepramine hydrochloride (form A) (RS 399A)*.

B. 2 ml of a 1% w/v solution in *ethanol (96%)* complies with the test for *chlorides*, Appendix VI.

TESTS

Related substances

Carry out the method for *liquid chromatography*, Appendix III D, using the following solutions.

Solution (1) contains 0.1% w/v of the substance being examined in the mobile phase. For solution (2) dilute 1 volume of solution (1) to 200 volumes with the mobile phase. Solution (3) contains 0.0002% w/v each of *desipramine hydrochloride EPCRS* and *imipramine hydrochloride EPCRS* in the mobile phase.

Inject 20 µl of solutions (1) and (2). Inject 20 µl of solution (3) and allow the chromatography to continue for 4 times the retention time of the principal peak.

The chromatographic procedure may be carried out using (a) a stainless steel column (25 cm × 4.6 mm) packed with *base-deactivated end-capped octylsilyl silica gel for chromatography* (5 µm) (Lichrospher 60 RP-select B is suitable) maintained at 50°, (b) as the mobile phase with a flow rate of 1.5 ml per minute a 0.09% w/v solution of *sodium dodecyl sulphate* in a mixture of 550 volumes of *acetonitrile*, 325 volumes of *water* and 125 volumes of a buffer solution of pH 1.0 containing 0.015% w/v of *glycine*, 0.018% w/v of *sodium chloride* and 0.44% w/v of *hydrochloric acid* and (c) a detection wavelength of 254 nm.

The test is not valid unless, in the chromatogram obtained with solution (3), the *resolution factor* between the two principal peaks is at least 0.9.

In the chromatogram obtained with solution (1) the area of any *secondary peak* is not greater than the area of the peak in the chromatogram obtained with solution (2) (0.5%) and the sum of the areas of any *secondary peaks* is not greater than twice the area of the peak in the chromatogram obtained with solution (2) (1%).

Loss on drying

When dried at a temperature of 100° at a pressure not exceeding 0.2 kPa, loses not more than 0.5% of its weight. Use 1 g.

ASSAY

Carry out the method for *liquid chromatography*, Appendix III D, using the following solutions. Solution (1) contains 0.02% w/v of the substance being examined in the mobile phase. Solution (2) contains 0.02% w/v of *lofepramine hydrochloride BPCRS* in the mobile phase.

The chromatographic procedure described under the test for Related substances may be used.

Inject 20 µl of each solution.

Calculate the content of $C_{26}H_{27}ClN_2O,HCl$ from the chromatograms obtained and using the declared content of $C_{26}H_{27}ClN_2O,HCl$ in *lofepramine hydrochloride BPCRS*.

STORAGE

Lofepramine Hydrochloride should be kept in an airtight container and protected from light.

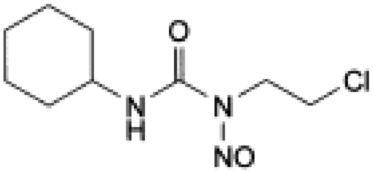
Lomustine

General Notices

(Ph Eur monograph 0928)



$C_9H_{16}ClN_3O_2$ 233.7 *13010-47-4*

Action and use

Cytotoxic alkylating agent.

Preparation

Lomustine Capsules

Ph Eur

DEFINITION

1-(2-Chloroethyl)-3-cyclohexyl-1-nitrosourea.

Content

98.5 per cent to 100.5 per cent (dried substance).

CHARACTERS

Appearance

Yellow, crystalline powder.

Solubility

Practically insoluble in water, freely soluble in acetone and in methylene chloride, soluble in ethanol (96 per cent).

Carry out the tests protected from light and prepare all the solutions immediately before use.

IDENTIFICATION

First identification *C.*

Second identification *A, B, D, E.*

A. Melting point (*2.2.14*): 89 °C to 91 °C.

B. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

Test solution Dissolve 50.0 mg in *ethanol (96 per cent) R* and dilute to 50.0 ml with the same solvent. Dilute 2.0 ml of this solution to 100.0 ml with *ethanol (96 per cent) R*.

Spectral range 220-350 nm.

Absorption maximum At 230 nm.

Specific absorbance at the absorption maximum 250 to 270.

C. Infrared absorption spectrophotometry (*2.2.24*).

Preparation Discs.

Comparison *lomustine CRS*.

D. Examine the chromatograms obtained in the test for related substances.

Results The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

E. Dissolve about 25 mg in 1 ml of *methanol R*, add 0.1 ml of *dilute sodium hydroxide solution R* and 2 ml of *water R.* Acidify by adding *dropwise dilute nitric acid R*. Filter. The filtrate gives reaction (a) of chlorides (*2.3.1*).

TESTS

Related substances

A. Thin-layer chromatography (*2.2.27*).

Test solution (a) Dissolve 0.25 g of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Test solution (b) Dilute 1 ml of test solution (a) to 25 ml with *methanol R*.

Reference solution (a) Dissolve 10 mg of *lomustine CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dilute 1 ml of test solution (b) to 10 ml with *methanol R*.

Reference solution (c) Dilute 1 ml of test solution (b) to 20 ml with *methanol R*.

Reference solution (d) Dissolve 10 mg of *lomustine CRS* and 10 mg of *dicyclohexylurea R* (impurity C) in *methanol R* and dilute to 10 ml with the same solvent.

Plate *TLC silica gel G plate R*.

Mobile phase *glacial acetic acid R*, *toluene R* (20:80 *V/V*).

Application 5 µl.

Development Over a path of 15 cm.

Drying At 110 °C for 1 h.

Chlorine treatment Place at the bottom of a chromatography tank an evaporating dish containing a mixture of 1 volume of *hydrochloric acid R1*, 1 volume of *water R* and 2 volumes of a 15 g/l solution of *potassium permanganate R*; close the tank and allow to stand for 15 min; place the dried plate in the tank and close the tank; leave the plate in contact with the chlorine vapour for 5 min; withdraw the plate and place it in a current of cold air until the excess of chlorine is removed and an area of coating below the points of application does not give a blue colour with a drop of *potassium iodide and starch solution R*.

Detection Spray with *potassium iodide and starch solution R*.

System suitability Reference solution (d):

— the chromatogram shows 2 clearly separated principal spots.

Limit Test solution (a):

— *impurities A, B, C*: any spot, apart from the principal spot, is not more intense than the principal spot in the chromatogram obtained with reference solution (b) (0.4 per cent) and at most one such spot is more intense than the principal spot in the chromatogram obtained with reference solution (c) (0.2 per cent).

B. Liquid chromatography (*2.2.29*).

Test solution Dissolve 0.25 g of the substance to be examined in *methanol R* and dilute to 10.0 ml with the same solvent.

Reference solution Dilute 1.0 ml of the test solution to 100.0 ml with *methanol R*.

Column:
— *size:* l = 0.25 m, Ø = 4 mm;

— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5-10 µm).

Mobile phase *methanol R*, *water R* (50:50 *V/V*).

Flow rate 2 ml/min.

Detection Spectrophotometer at 230 nm.

Injection 20 µl.

Limits:
— *total*: not more than the area of the principal peak in the chromatogram obtained with the reference solution (1 per cent);

— *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with the reference solution (0.05 per cent).

Chlorides (*2.4.4*)

Maximum 500 ppm.

Dissolve 0.24 g in 4 ml of *methanol R* and add 20 ml of *water R*. Allow to stand for 20 min and filter. To 10 ml of the filtrate, add 5 ml of *methanol R*. When preparing the standard, replace the 5 ml of *water R* with 5 ml of *methanol R*.

Loss on drying (*2.2.32*)

Maximum 1.0 per cent, determined on 1.000 g by drying in a desiccator over *diphosphorus pentoxide R* at a pressure not exceeding 0.7 kPa for 24 h.

ASSAY

Dissolve 0.200 g in about 3 ml of *ethanol (96 per cent) R* and add 20 ml of a 200 g/l solution of *potassium hydroxide R* and boil under a reflux condenser for 2 h. Add 75 ml of *water R* and 4 ml of *nitric acid R*. Cool and titrate with *0.1 M silver nitrate*, determining the end-point potentiometrically (*2.2.20*). Carry out a blank titration.

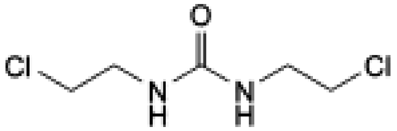
1 ml of *0.1 M silver nitrate* is equivalent to 23.37 mg of $C_9H_{16}ClN_3O_2$.

STORAGE

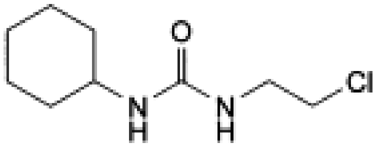
Protected from light.

IMPURITIES

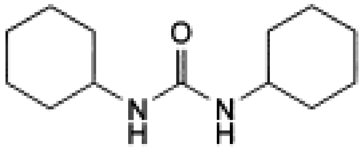
Specified impurities A, B, C.



A. 1,3-bis(2-chloroethyl)urea,



B. 1-(2-chloroethyl)-3-cyclohexylurea,



C. 1,3-dicyclohexylurea.

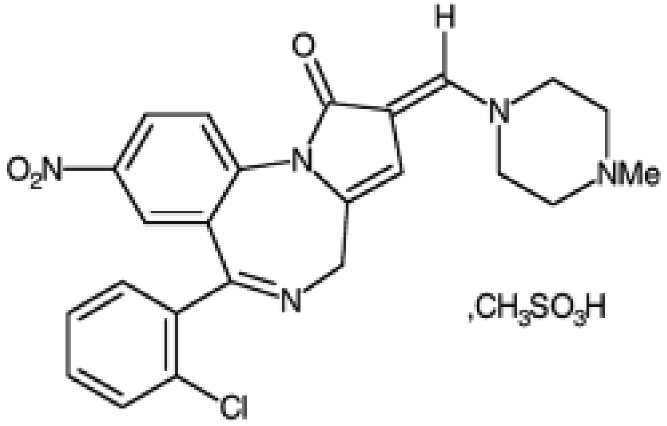
Loprazolam Mesilate

General Notices



$C_{23}H_{21}ClN_6O_3,CH_4O_3S,H_2O$ 579.1 *70111-54-5*

Action and use

Benzodiazepine.

Preparation

Loprazolam Tablets

DEFINITION

Loprazolam Mesilate is (*Z*)-6-(2-chlorophenyl)-2,4-dihydro-2-(4-methylpiperazin-1-ylmethylene)-8-nitroimidazo[1,2-*a*][1,4]benzodiazepin-1-one methanesulphonate monohydrate. It contains not less than 98.5% and not more than 101.0% of $C_{23}H_{21}ClN_6O_3,CH_4O_3S$, calculated with reference to the dried substance.

CHARACTERISTICS

A yellow, crystalline powder.

Slightly soluble in *water* and in *ethanol (96%)*; very slightly soluble in *ether*.

IDENTIFICATION

A. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of loprazolam mesilate *(RS 205)*.

B. The *light absorption*, Appendix II B, in the range 210 to 370 nm of a 0.001% w/v solution in *ethanol (96%)* exhibits a maximum at 330 nm and a shoulder at 240 nm. The *absorbance* at the maximum is about 0.7.

TESTS

N-Methylpiperazine

Carry out the method for *thin-layer chromatography*, Appendix III A, using a silica gel precoated plate (Merck silica gel 60 plates are suitable) and a mixture of 80 volumes of *chloroform*, 20 volumes of *methanol* and 2 volumes of 13.5M *ammonia* as the mobile phase. Apply separately to the plate 10 µl of each of two solutions in a mixture of equal volumes of *chloroform* and *methanol* containing (1) 2.0% w/v of the substance being examined and (2) 0.0050% w/v of N-*methylpiperazine*. After removal of the plate, allow it to dry in air, heat at 110° for 15 minutes and spray with a mixture of 50 volumes of a 2% w/v solution of *potassium iodide* and 1 volume of a 10% w/v solution of *chloroplatinic(IV) acid*. Any spot corresponding to *N*-methylpiperazine in the chromatogram obtained with solution (1) is not more intense than the spot in the chromatogram obtained with solution (2) (0.25%).

Related substances

Carry out the method for *thin-layer chromatography*, Appendix III A, using a silica gel precoated plate (Merck silica gel 60 plates are suitable) and a mixture of 80 volumes of *chloroform* and 20 volumes of *methanol* as the mobile phase. Before use, stand the plate in *methanol*, allowing the solvent front to ascend 17 cm, allow to dry in air, heat the plate at 100° to 105° for 1 hour and use with the flow of mobile phase in the same direction as that used for the pretreatment. Apply separately to the plate 10 µl of each of three solutions in a mixture of 46 volumes of *chloroform*, 46 volumes of *methanol* and 8 volumes of *water* containing (1) 2.0% w/v of the substance being examined, (2) 0.0020% w/v of the substance being examined and (3) 0.010% w/v of *6-(2-chlorophenyl)-2,4-dihydro-2-[(dimethylamino)methylene]-8-nitroimidazo[1,2-*a*][1,4]benzodiazepin-1-one BPCRS* (dimethylamino analogue). After removal of the plate, allow it to dry in air, spray the plate with a 5% w/v solution of *titanium(III) chloride* in a solution of hydrochloric acid containing 10% w/v of HCl and then spray with a solution containing 0.4 g of *4-dimethyl-aminocinnamaldehyde* in a mixture of 20 ml of 6M *hydrochloric acid* and 100 ml of *ethanol (96%)*. Heat at 100° until spots appear (about 10 minutes). Any spot corresponding to the dimethylamino analogue in the chromatogram obtained with solution (1) is not more intense than the spot in the chromatogram obtained with solution (3) (0.5%) and any other *secondary spot* is not more intense than the spot in the chromatogram obtained with solution (2) (0.1%).

Loss on drying

When dried at 100° to 105° for 3 hours, loses 2.5 to 4.5% of its weight. Use 1 g.

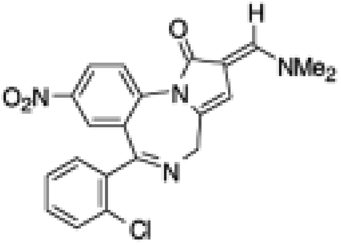
Sulphated ash

Not more than 0.1%, Appendix IX A.

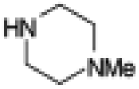
ASSAY

Dissolve 0.25 g in 60 ml of a 50% v/v solution of *propan-2-ol* and titrate with 0.05M *sodium hydroxide VS* determining the end point potentiometrically. Each ml of 0.05M *sodium hydroxide VS* is equivalent to 28.05 mg of $C_{23}H_{21}ClN_6O_3,CH_4O_3S$.

IMPURITIES



A. 6-(2-chlorophenyl)-2,4-dihydro-2-[(dimethylamino)methylene]-8-nitroimidazo[1,2-*a*][1,4] benzodiazepin-1-one,

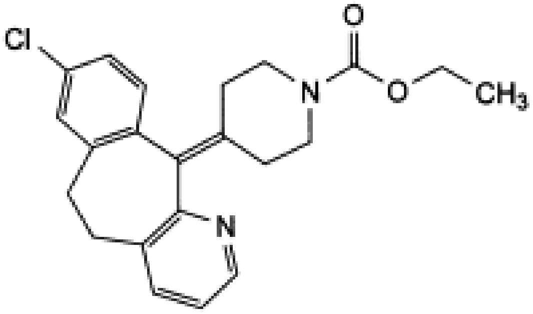


B. *N*-methylpiperazine.

Loratadine

General Notices

(Ph Eur monograph 2124)



$C_{22}H_{23}ClN_2O_2$ 382.9 *79794-75-5*

Action and use

Histamine H1 receptor antagonist; antihistamine.

Ph Eur

DEFINITION

Ethyl 4-(8-chloro-5,6-dihydro-11*H*-benzo[5,6]cyclohepta[1,2-*b*]pyridin-11-ylidene)piperidine-1-carboxylate.

Content

98.5 per cent to 101.5 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, freely soluble in acetone and in methanol.

It shows polymorphism (*5.9*).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

Comparison   *loratadine CRS.*

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *acetone R*, evaporate to dryness and record new spectra using the residues.

TESTS

Appearance of solution

The solution is clear (*2.2.1*) and not more intensely coloured than reference solution BY_5 (*2.2.2, Method II*).

Dissolve 1.0 g in *methanol R* and dilute to 20.0 ml with the same solvent.

Impurity H

Gas chromatography (*2.2.28*).

Internal standard solution   Dissolve 25 mg of *isoamyl benzoate R* in *methylene chloride R* and dilute to 100 ml with the same solvent. Dilute 5.0 ml of this solution to 50 ml with *methylene chloride R*.

Test solution   Dissolve 25.0 mg of the substance to be examined in *methylene chloride R*, add 1.0 ml of reference solution (a) and 1.0 ml of the internal standard solution and dilute to 5.0 ml with *methylene chloride R*.

Reference solution (a)   Dissolve 25.0 mg of *loratadine impurity H CRS* in *methylene chloride R* and dilute to 100.0 ml with the same solvent. Dilute 5.0 ml of this solution to 50.0 ml with *methylene chloride R*.

Reference solution (b)   To 1.0 ml of reference solution (a) add 1.0 ml of the internal standard solution and dilute to 5.0 ml with *methylene chloride R*.

Column:

— *material*: fused silica;

— *size: l* = 25 m, Ø = 0.32 mm;

— *stationary phase*: *poly(dimethyl)siloxane R* (film thickness 0.52 µm).

Carrier gas   *helium for chromatography R.*

Flow rate   1.0 ml/min.

Split ratio   1:30.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 1	80
	1 - 23	80 → 300
	23 - 33	300
Injection port		260
Detector		300

Detection Flame ionisation.

Injection 1 µl of the test solution and reference solution (b).

Relative retention With reference to loratadine (retention time = about 32 min): impurity H = about 0.33; isoamyl benzoate = about 0.37.

System suitability Reference solution (b):

— *resolution*: minimum 2.0 between the peaks due to impurity H and isoamyl benzoate;

— *signal-to-noise ratio*: minimum 10 for the peak due to impurity H.

Limit:

— *impurity H*: calculate the ratio (*R*) of the area of the peak due to impurity H to the area of the peak due to isoamyl benzoate from the chromatogram obtained with reference solution (b); from the chromatogram obtained with the test solution, calculate the ratio of the area of the peak due to impurity H to the area of the peak due to isoamyl benzoate: this ratio is not greater than twice *R* (0.1 per cent).

Related substances

Liquid chromatography (*2.2.29*).

Test solution Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 25.0 ml with the mobile phase.

Reference solution (a) Dissolve 5 mg of *loratadine impurity F CRS* in the mobile phase and dilute to 25 ml with the mobile phase. Dilute 1 ml of this solution to 10 ml with the mobile phase.

Reference solution (b) Dissolve 5 mg of *loratadine for system suitability CRS* (containing impurities A and E) in the mobile phase, add 0.5 ml of reference solution (a) and dilute to 5 ml with the mobile phase.

Reference solution (c) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Column:

— *size*: *l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase*: spherical *end-capped octadecylsilyl silica gel for chromatography R* (5 µm) with very low silanol activity;

— *temperature*: 40 °C.

Mobile phase Mix 30 volumes of *methanol R*, 35 volumes of a 6.8 g/l solution of *potassium dihydrogen phosphate R* previously adjusted to pH 2.80 ± 0.05 with *phosphoric acid R* and 40 volumes of *acetonitrile R*.

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 220 nm.

Injection 20 µl of the test solution and reference solutions (b) and (c).

Run time 5 times the retention time of loratadine.

Identification of impurities Use the chromatogram supplied with *loratadine for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A and E.

Relative retention With reference to loratadine (retention time = about 12 min): impurity D = about 0.2; impurity B = about 0.4; impurity F = about 0.9; impurity E = about 1.1; impurity A = about 2.4; impurity C = about 2.7.

System suitability Reference solution (b):

— *peak-to-valley ratio*: minimum 2.5, where H_p = height above the baseline of the peak due to impurity E and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to loratadine.

Limits:

— *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 1.7; impurity E = 3.4; impurity F = 1.6;

— *impurity F*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent);

— *impurities A, B, C, D, E*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.10 per cent);

— *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.5 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

Sulphates (*2.4.13*)

Maximum 150 ppm.

Ignite 1.33 g at 800 ± 25 °C and take up the residue with 20 ml of *distilled water R.* Filter, if necessary, through paper free from sulphates. Repeat the filtration with new paper filters until the filtrate is no longer turbid.

Loss on drying (*2.2.32*)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 50 ml of *glacial acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 38.29 mg of $C_{22}H_{23}ClN_2O_2$.

IMPURITIES

Specified impurities A, B, C, D, E, F, H.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general

acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10*. *Control of impurities in substances for pharmaceutical use)*: *G*.

Ph Eur

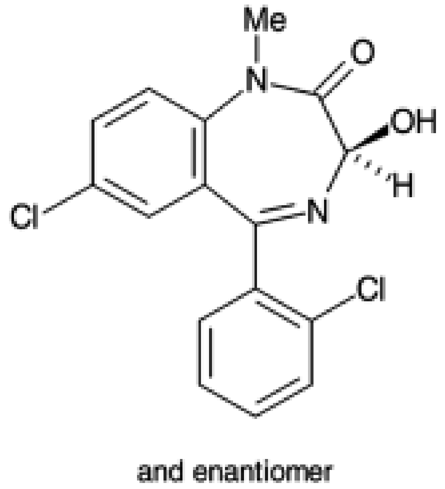
Lormetazepam

General Notices



$C_{16}H_{12}Cl_2N_2O_2$ 335.2 *848-75-9*

Action and use

Benzodiazepine.

Preparation

Lormetazepam Tablets

DEFINITION

Lormetazepam is (*RS*)-7-chloro-5-(2-chlorophenyl)-1,3-dihydro-3-hydroxy-1-methyl-1,4-benzodiazepin-2-one. It contains not less than 99.0% and not more than 101.0% of $C_{16}H_{12}Cl_2N_2O_2$, calculated with reference to the dried substance.

CHARACTERISTICS

A white, crystalline powder.

Practically insoluble in *water*; soluble in *ethanol (96%)* and in *methanol*.

IDENTIFICATION

A. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of lormetazepam *(RS 207)*.

B. In the test for Related substances, the chromatogram obtained with solution (2) shows a peak with the same retention time as the principal peak in the chromatogram obtained with solution (4).

TESTS

Related substances

Carry out the method for *liquid chromatography*, Appendix III D, using five solutions in *methanol (70%)* containing (1) 0.25% w/v of the substance being examined, (2) 0.0005% w/v of the substance being examined, (3) 0.00025% w/v of the substance being examined, (4) 0.0005% w/v of *lormetazepam BPCRS* and (5) 0.00025% w/v each of *lormetazepam BPCRS* and *lorazepam BPCRS*.

The chromatographic procedure may be carried out using (a) a column (20 cm × 4.6 mm) packed with *end-capped octadecylsilyl silica gel for chromatography* (5 µm) (Hypersil ODS is suitable), (b) as the mobile phase with a flow rate of 2 ml per minute a mixture of 48 volumes of *methanol* and 52 volumes of a phosphate buffer prepared by dissolving 4.91 g of *sodium dihydrogen orthophosphate* and 0.633 g of *disodium hydrogen orthophosphate* in sufficient *water* to produce 1000 ml and (c) a detection wavelength of 230 nm.

The test is not valid unless the *resolution factor* between the two principal peaks in the chromatogram obtained with solution (5) is at least 4.

In the chromatogram obtained with solution (1) the area of any *secondary peak* is not greater than that of the principal peak in the chromatogram obtained with solution (2) (0.2%) and not more than two such peaks have an area greater than the area of the principal peak in the chromatogram obtained with solution (3) (0.1%). The sum of the areas of all such peaks is not greater than 2.5 times the area of the principal peak obtained with solution (2) (0.5%).

Loss on drying

When dried to constant weight at 105° for 3 hours, loses not more 1.0% of its weight. Use 1 g.

Sulphated ash

Not more than 0.1%, Appendix IX A.

ASSAY

Dissolve 0.5 g in 50 ml of *nitroethane* and carry out Method I for *non-aqueous titration*, Appendix VIII A, determining the end point potentiometrically. Each ml of 0.1M *perchloric acid VS* is equivalent to 33.52 mg of $C_{16}H_{12}Cl_2N_2O_2$.

STORAGE

Lormetazepam should be protected from light.

DEFINITION

(1*S*,3*R*,7*S*,8*S*,8a*R*)-8-[2-[(2*R*,4*R*)-4-Hydroxy-6-oxotetrahydro-2*H*-pyran-2-yl]ethyl]-3,7-dimethyl-1,2,3,7,8,8a-hexahydronaphthalen-1-yl (2*S*)-2-methylbutanoate.

Content

97.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white crystalline powder.

Solubility

Practically insoluble in water, soluble in acetone, sparingly soluble in anhydrous ethanol.

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).

Preparation Discs.

Comparison *lovastatin CRS.*

TESTS

Appearance of solution

The solution is clear (*2.2.1*) and not more intensely coloured than reference solution B_6 or BY_6 (*2.2.2, Method II*).

Dissolve 0.200 g in *acetonitrile R* and dilute to 20.0 ml with the same solvent.

Specific optical rotation (*2.2.7*)

+ 325 to + 340 (dried substance).

Dissolve 0.125 g in *acetonitrile R* and dilute to 25.0 ml with the same solvent.

Related substances

Liquid chromatography (*2.2.29*).

Test solution (a) Dissolve 20.0 mg of the substance to be examined in *acetonitrile R* and dilute to 50.0 ml with the same solvent.

Test solution (b) Dilute 10.0 ml of test solution (a) to 20.0 ml with *acetonitrile R*.

Reference solution (a) Dissolve 10.0 mg of *lovastatin CRS* in *acetonitrile R* and dilute to 50.0 ml with the same solvent.

Reference solution (b) Dilute 0.5 ml of test solution (a) to 100.0 ml with *acetonitrile R*.

Reference solution (c) To 5.0 ml of reference solution (a) add 1 mg of *simvastatin CRS* and dilute to 50.0 ml with *acetonitrile R*.

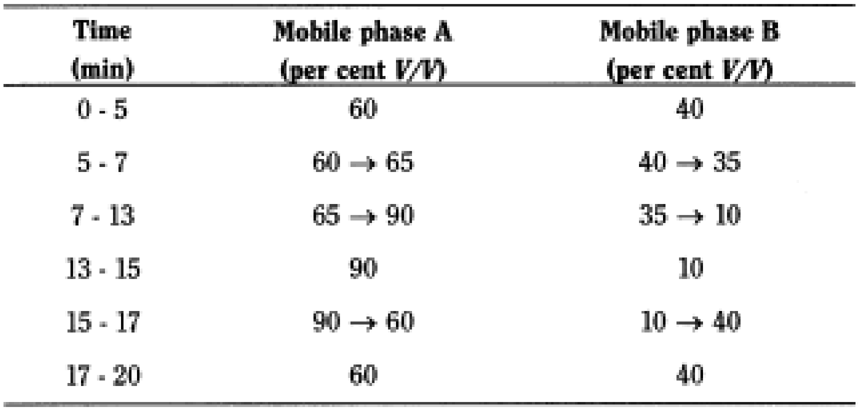
Column:
— *size:* l = 0.25 m, Ø = 4.6 mm;

— *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:

— *mobile phase A*: *acetonitrile R*;

— *mobile phase B*: 0.1 per cent *V/V* solution of *phosphoric acid R*;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 5	60	40
5 - 7	60 → 65	40 → 35
7 - 13	65 → 90	35 → 10
13 - 15	90	10
15 - 17	90 → 60	10 → 40
17 - 20	60	40

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 238 nm.

Injection 10 µl of test solution (a) and reference solutions (b) and (c).

Relative retention With reference to lovastatin (retention time = about 7 min): impurity B = about 0.6; impurity A = about 0.8; simvastatin = about 1.1; impurity C = about 1.2; impurity D = about 2.3.

System suitability Reference solution (c):

— *resolution*: minimum 5.0 between the peaks due to lovastatin and simvastatin.

Limits:

— *impurities A, B, C, D*: for each impurity, not more than 0.6 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);

— *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (1 per cent);

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Heavy metals (*2.4.8*)

Maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying (*2.2.32*)

Maximum 0.5 per cent, determined on 1.000 g by drying in a desiccator under high vacuum at 60 °C for 3 h.

Sulphated ash (*2.4.14*)

Maximum 0.2 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

Injection Test solution (b) and reference solution (a).

Calculate the content of $C_{24}H_{36}O_5$ from the declared content of *lovastatin CRS*.

DEFINITION

(2*S*)-2-Amino-6-[[[[(4*S*,4a*S*,5a*S*,6*S*,12a*S*)-4-(dimethylamino)-3,6,10,12,12a-pentahydroxy-6-methyl-1,11-dioxo-1,4,4a,5,5a,6,11,12a-octahydrotetracen-2-yl]carbonyl]amino]methyl]amino] hexanoic acid (reaction product of formaldehyde, lysine and tetracycline).

Semi-synthetic product derived from a fermentation product.

Content

81.0 per cent to 102.0 per cent (equivalent to 60.0 per cent to 75.0 per cent of tetracycline) (anhydrous substance).

CHARACTERS

Appearance

Yellow, hygroscopic powder.

Solubility

Very soluble in water, slightly soluble in ethanol (96 per cent), practically insoluble in methylene chloride.

IDENTIFICATION

A. Thin-layer chromatography (*2.2.27*).

Test solution Dissolve 5 mg of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dissolve 5 mg of *tetracycline hydrochloride CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dissolve 5 mg of *tetracycline hydrochloride CRS*, 5 mg of *demeclocycline hydrochloride R* and 5 mg of *oxytetracycline hydrochloride R* in *methanol R* and dilute to 10 ml with the same solvent.

Plate *TLC octadecylsilyl silica gel* F_{254} *plate R* (2-10 µm).

Mobile phase Mix 20 volumes of *acetonitrile R*, 20 volumes of *methanol R* and 60 volumes of a 63 g/l solution of o*xalic acid R* previously adjusted to pH 2.0 with *concentrated ammonia R.*

Application 2 µl.

Development Over half of the plate.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

System suitability Reference solution (b):

— the chromatogram shows 3 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

B. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 50 mg of the substance to be examined in 50 ml of *water R.*

Reference solution (a) Dissolve 10 mg of *lysine hydrochloride CRS* in *water R* and dilute to 50 ml with the same solvent.

Reference solution (b) Dissolve 10 mg of *arginine CRS* and 10 mg of *lysine hydrochloride CRS* in *water R* and dilute to 25 ml with the same solvent.

Plate *TLC silica gel plate R.*

Mobile phase *concentrated ammonia R*, *2-propanol R* (30:70 *V/V*).

Application 5 µl.

Development Over 3/4 of the plate.

Drying At 100-105 °C until the ammonia disappears completely.

Detection Spray with *ninhydrin solution R* and heat at 100-105 °C for 15 min.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated principal spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve 0.2 g in 5 ml of *water R,* add 0.3 ml of *orthophosphoric acid R* and distil. To 1 ml of the distillate add 10 ml of *chromotropic acid-sulphuric acid solution R*. A violet colour is produced.

D. Specific optical rotation (see Tests).

TESTS

pH *(2.2.3)*

7.8 to 8.2.

Dissolve 0.1 g in 10 ml of *carbon dioxide-free water R.*

Specific optical rotation *(2.2.7)*

- 180 to - 210 (anhydrous substance).

Dissolve 0.250 g in *water R* and dilute to 50.0 ml with the same solvent.

Free tetracycline (impurity H)

Maximum 2.5 per cent (anhydrous and methanol-free substance).

To 0.5 g add 50 ml of *butyl acetate R* and allow to stand at 25 °C for 1 h. Filter and extract the filtrate with 2 quantities, each of 25 ml, of *0.1 M hydrochloric acid*. Combine the extracts and dilute to 50.0 ml with *0.1 M hydrochloric acid*. Dilute 10.0 ml of this solution to 100.0 ml with *0.1 M hydrochloric acid*. The absorbance (*2.2.25*) measured at 355 nm is not greater than 0.64.

Light-absorbing impurities

The absorbance *(2.2.25)* is not greater than 0.50 at 430 nm (anhydrous and methanol-free substance).

Dissolve 25.0 mg in *0.01 M hydrochloric acid* and dilute to 10.0 ml with the same acid.

Related substances

Liquid chromatography *(2.2.29)*. *Prepare the solutions immediately before use.*

Test solution Dissolve 0.125 g of the substance to be examined in 5.0 ml of *water R*. Add 1.0 ml of a 40 g/l solution of *sodium metabisulphite R* and allow to stand in the dark at 20-25 °C for 16-24 h, without stirring. Add 50 ml of *0.05 M hydrochloric acid*, shake to dissolve the precipitate and dilute to 100.0 ml with *water R.*

Reference solution (a) Dissolve 25.0 mg of *tetracycline hydrochloride CRS* in *0.01 M hydrochloric acid* and dilute to 25.0 ml with the same acid.

Reference solution (b) Dissolve 12.5 mg of *4-epitetracycline hydrochloride CRS* (impurity A) in *0.01 M hydrochloric acid* and dilute to 50.0 ml with the same acid.

Reference solution (c) Dissolve 10.0 mg of *anhydrotetracycline hydrochloride CRS* (impurity C) in *0.01 M hydrochloric acid* and dilute to 100.0 ml with the same acid.

Reference solution (d) Dissolve 10.0 mg of *4-epianhydrotetracycline hydrochloride CRS* (impurity D) in *0.01 M hydrochloric acid* and dilute to 50.0 ml with the same acid.

Reference solution (e) Mix 1 ml of reference solution (a), 2 ml of reference solution (b) and 5 ml of reference solution (d) and dilute to 25 ml with *0.01 M hydrochloric acid.*

Reference solution (f) Mix 40.0 ml of reference solution (b), 20.0 ml of reference solution (c) and 5.0 ml of reference solution (d) and dilute to 200.0 ml with *0.01 M hydrochloric acid.*

Column:

— *size*: l = 0.25 m, Ø = 4.6 mm;

— *stationary phase*: *styrene-divinylbenzene copolymer R* (8 µm) with a pore size of 10 nm;

— *temperature*: 60 °C.

Mobile phase Weigh 80.0 g of *2-methyl-2-propanol R* and transfer to a 1000 ml volumetric flask with the aid of 200 ml of *water R*; add 100 ml of a 35 g/l solution of *dipotassium hydrogen phosphate R* adjusted to pH 8.0 with *dilute phosphoric acid R*, 200 ml of a 10 g/l solution of *tetrabutylammonium hydrogen sulphate R* adjusted to pH 8.0 with *dilute sodium hydroxide solution R,* and 10 ml of a 40 g/l solution of *sodium edetate R* adjusted to pH 8.0 with *dilute sodium hydroxide solution R*; dilute to 1000.0 ml with *water R.*

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 20 µl of the test solution and reference solutions (e) and (f).

Run time 5 times the retention time of the principal peak in the chromatogram obtained with the test solution.

Relative retention With reference to tetracycline (retention time = about 8 min): impurity E = about 0.50; impurity A = about 0.6; impurity F = about 0.68; impurity B (eluting on the tail of the principal peak) = about 1.2; impurity D = about 1.45; impurity G = about 1.45; impurity C = about 2.95.

System suitability Reference solution (e):

— *resolution*: minimum 3.0 between the 1st peak (impurity A) and the 2nd peak (tetracycline) and minimum 5.0 between the 2nd peak and the 3rd peak (impurity D); adjust the concentration of 2-methyl-2-propanol in the mobile phase if necessary;

— *symmetry factor*: maximum 1.25 for the peak due to tetracycline.

Limits:

— *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (f) (5.0 per cent);

— *impurity C*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (f) (1.0 per cent);

— *impurities B, E, F*: for each impurity, not more than 0.1 times the area of the peak due to impurity A in the chromatogram obtained with reference solution (f) (0.5 per cent);

— *sum of impurities D and G*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (f) (0.5 per cent);

— *any other impurity*: for each impurity, not more than 0.04 times the area of the peak due to impurity A in the chromatogram obtained with reference solution (f) (0.2 per cent);

— *total*: not more than 1.6 times the area of the peak due to impurity A in the chromatogram obtained with reference solution (f) (8.0 per cent);

— *disregard limit*: 0.02 times the area of the peak due to impurity A in the chromatogram obtained with reference solution (f) (0.1 per cent).

Methanol ***(2.4.24, System A)***

Maximum 1.5 per cent.

Water ***(2.5.12)***

Maximum 5.0 per cent, determined on 0.20 g.

Sulphated ash ***(2.4.14)***

Maximum 0.5 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

Injection Test solution and reference solution (a).

System suitability:

— *repeatability*: maximum relative standard deviation of 1.0 per cent after 6 injections of reference solution (a).

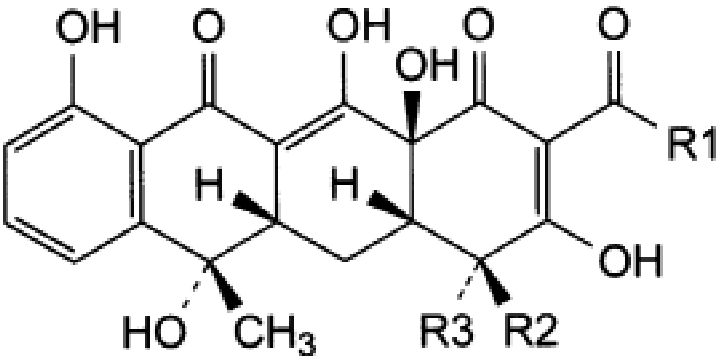
Calculate the percentage content of tetracycline and multiply it by 1.356 to obtain the percentage content of lymecycline.

STORAGE

In an airtight container, protected from light.

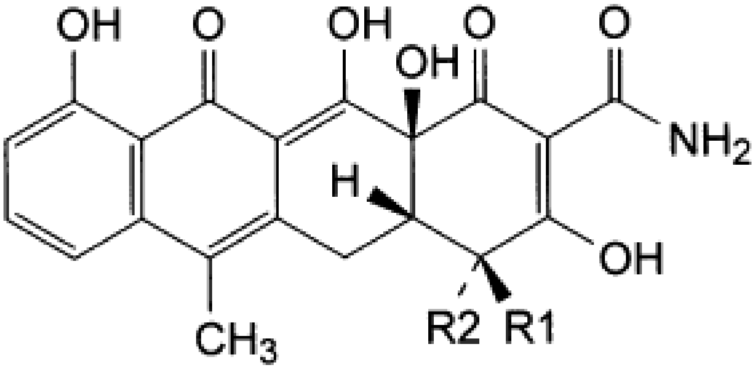
IMPURITIES

Specified impurities *A, B, C, D, E, F, G, H.*



A. R1 = NH_2, R2 = H, R3 = $N(CH_3)_2$: (4*R*,4a*S*,5a*S*,6*S*,12a*S*)-4-(dimethylamino)-3,6,10,12,12a-pentahydroxy-6-methyl-1,11-dioxo-1,4,4a,5,5a,6,11,12a-octahydrotetracene-2-carboxamide (4-epitetracycline),

B. R1 = CH_3, R2 = $N(CH_3)_2$, R3 = H: (4*S*,4a*S*,5a*S*,6*S*,12a*S*)-2-acetyl-4-(dimethylamino)-3,6,10,12,12a-pentahydroxy-6-methyl-4a,5a,6,12a-tetrahydrotetracene-1,11(4*H*,5*H*)-dione (2-acetyl-2-decarbamoyltetracycline),



C. R1 = $N(CH_3)_2$, R2 = H: (4*S*,4a*S*,12a*S*)-4-(dimethylamino)-3,10,11,12a-tetrahydroxy-6-methyl-1,12-dioxo-1,4,4a,5,12,12a-hexahydrotetracene-2-carboxamide (anhydrotetracycline),

D. R1 = H, R2 = $N(CH_3)_2$: (4*R*,4a*S*,12a*S*)-4-(dimethylamino)-3,10,11,12a-tetrahydroxy-6-methyl-1,12-dioxo-1,4,4a,5,12,12a-hexahydrotetracene-2-carboxamide (4-epianhydrotetracycline),

E. unknown structure,

F. unknown structure,

G. chlortetracycline,

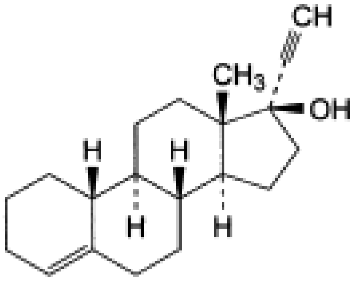
H. tetracycline.

Ph Eur

Lynestrenol

General Notices

(Ph Eur monograph 0558)



$C_{20}H_{28}O$ 284.4   *52-76-6*

Action and use

Progestogen.

Ph Eur

DEFINITION

Lynestrenol contains not less than 98.0 per cent and not more than the equivalent of 102.0 per cent of 19-nor-17α-pregn-4-en-20-yn-17-ol, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder, practically insoluble in water, soluble in acetone and in alcohol.

IDENTIFICATION

First identification B.

Second identification A, C.

A. Melting point (*2.2.14*): 161 °C to 165 °C.

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *lynestrenol CRS*.

C. Examine the chromatograms obtained in the test for related substances in ultraviolet light at 365 nm. The principal spot in the chromatogram obtained with test solution (b) is similar in position, fluorescence and size to the principal spot in the chromatogram obtained with reference solution (b).

TESTS

Appearance of solution

Dissolve 0.2 g in *alcohol R* and dilute to 10 ml with the same solvent. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Specific optical rotation (*2.2.7*)

Dissolve 0.900 g in *alcohol R* and dilute to 25.0 ml with the same solvent. The specific optical rotation is - 9.5 to - 11, calculated with reference to the dried substance.

Related substances

Examine by thin-layer chromatography (*2.2.27*), using *silica gel G R* as the coating substance.

Test solution (a) Dissolve 0.125 g of the substance to be examined in *chloroform R* and dilute to 25 ml with the same solvent.

Test solution (b) Dilute 5 ml of test solution (a) to 10 ml with *chloroform R*.

Reference solution (a) Dilute 1 ml of test solution (a) to 100 ml with *chloroform R*. Dilute 5 ml of the solution to 10 ml with *chloroform R*.

Reference solution (b) Dissolve 25 mg of *lynestrenol CRS* in *chloroform R* and dilute to 10 ml with the same solvent.

Apply separately to the plate 10 µl of each solution. Develop over a path of 15 cm using a mixture of 20 volumes of *acetone R* and 80 volumes of *heptane R*. Allow the plate to dry in air, spray with *0.25 M alcoholic sulphuric acid R* and heat at 105 °C for 10 min. Examine in ultraviolet light at 365 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (a) (0.5 per cent).

Loss on drying (*2.2.32*)

Not more than 0.5 per cent, determined on 0.500 g by drying in an oven at 105 °C.

ASSAY

Dissolve 0.150 g in 40 ml of *tetrahydrofuran R* and add 5.0 ml of a 100 g/l solution of silver *nitrate R*. Titrate with *0.1 M sodium hydroxide*. Determine the end-point potentiometrically (*2.2.20*), using a glass indicator electrode and as comparison electrode a silver-silver chloride double-junction electrode with a saturated solution of *potassium nitrate R* as junction liquid. Carry out a blank titration.

1 ml of *0.1 M sodium hydroxide* is equivalent to 28.44 mg of $C_{20}H_{28}O$.

STORAGE

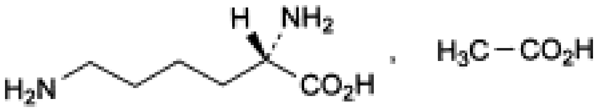
Store protected from light.

Ph Eur

Lysine Acetate

General Notices

(Ph Eur monograph 2114)



$C_6H_{14}N_2O_2,C_2H_4O_2$ 206.2 *57282-49-2*

Action and use

Amino acid.

Ph Eur

DEFINITION

(2*S*)-2,6-Diaminohexanoic acid acetate.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or colourless crystals.

Solubility

Freely soluble in water, very slightly soluble in ethanol (96 per cent).

IDENTIFICATION

First identification A, B, E.

Second identification A, C, D, E.

A. It complies with the test for specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).

Comparison *lysine acetate CRS.*

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *water R*, evaporate to dryness at 60 °C and record new spectra using the residues.

C. Examine the chromatograms obtained in the test for ninhydrin-positive substances.

Results The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. To 0.1 ml of solution S (see Tests) add 2 ml of *water R* and 1 ml of a 50 g/l solution of *phosphomolybdic acid R*. A yellowish-white precipitate is formed.

E. It gives reaction (a) of acetates (*2.3.1*).

TESTS

Solution S

Dissolve 5.0 g in *distilled water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Specific optical rotation (*2.2.7*)

+ 8.5 to + 10.0 (dried substance), determined on solution S.

Ninhydrin-positive substances

Thin-layer chromatography *(2.2.27)*.

Test solution (a) Dissolve 0.10 g of the substance to be examined in *water R* and dilute to 10 ml with the same solvent.

Test solution (b) Dilute 1.0 ml of test solution (a) to 50 ml with *water R*.

Reference solution (a) Dissolve 10 mg of *lysine acetate CRS* in *water R* and dilute to 50 ml with the same solvent.

Reference solution (b) Dilute 5 ml of test solution (b) to 20 ml with *water R*.

Reference solution (c) Dissolve 10 mg of *lysine acetate CRS* and 10 mg of *arginine CRS* in *water R* and dilute to 25 ml with the same solvent.

Plate *TLC silica gel plate R.*

Mobile phase *concentrated ammonia R*, *2-propanol R* (30:70 *V/V*).

Application 5 µl.

Development Over 2/3 of the plate.

Drying At 100-105 °C until the ammonia has evaporated.

Detection Spray with *ninhydrin solution R* and heat at 100-105 °C for 15 min.

System suitability Reference solution (c):

— the chromatogram shows 2 clearly separated spots.

Limits Test solution (a):

— *any impurity*: any spot, apart from the principal spot, is not more intense than the principal spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

Chlorides (*2.4.4*)

Maximum 200 ppm.

Dilute 2.5 ml of solution S to 15 ml with *water R*.

Sulphates (*2.4.13*)

Maximum 300 ppm.

Dilute 5 ml of solution S to 15 ml with *distilled water R*.

Ammonium (*2.4.1, Method B*)

Maximum 200 ppm, determined on 50 mg.

Prepare the standard using 0.1 ml of *ammonium standard solution (100 ppm* NH_4*) R*.

Iron (*2.4.9*)

Maximum 30 ppm.

In a separating funnel, dissolve 0.33 g in 10 ml of *dilute hydrochloric acid R*. Shake with 3 quantities, each of 10 ml, of *methyl isobutyl ketone R1*, shaking for 3 min each time. To the combined organic layers add 10 ml of *water R* and shake for 3 min. The aqueous layer complies with the test.

Heavy metals (*2.4.8*)

Maximum 10 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R.*

Loss on drying (*2.2.32*)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 60 °C for 3 h.

Sulphated ash (*2.4.14*)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 80.0 mg in 3 ml of *anhydrous formic acid R*. Add 50 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*). Carry out a blank titration.

1 ml of *0.1 M perchloric acid* is equivalent to 10.31 mg of $C_8H_{18}N_2O_4$.

STORAGE

Protected from light.

IMPURITIES

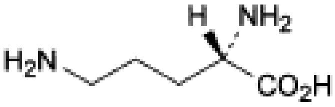
Specified impurities A, B, C, D, E, F.

A. aspartic acid,

B. glutamic acid,

C. alanine,

D. valine,



E. (2*S*)-2,5-diaminopentanoic acid (ornithine),

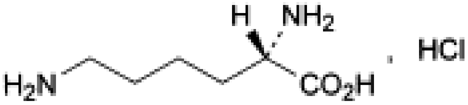
F. arginine.

Ph Eur

Lysine Hydrochloride

General Notices

(Ph Eur monograph 0930)



$C_6H_{14}N_2O_2$,HCl 182.7 *657-27-2*

Action and use

Amino acid.

Ph Eur

DEFINITION

Lysine hydrochloride contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of (*S*)-2,6-diaminohexanoic acid hydrochloride, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder or colourless crystals, freely soluble in water, slightly soluble in alcohol.

IDENTIFICATION

First identification A, B, E.

Second identification A, C, D, E.

A. It complies with the test for specific optical rotation (see Tests).

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *lysine hydrochloride CRS*. Examine the substances prepared as discs. If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *water R*, evaporate to dryness at 60 °C, and record new spectra using the residues.

C. Examine the chromatograms obtained in the test for ninhydrin-positive substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. To 0.1 ml of solution S (see Tests) add 2 ml of *water R* and 1 ml of a 50 g/l solution of *phosphomolybdic acid R*. A yellowish-white precipitate is formed.

E. To 0.1 ml of solution S add 2 ml of *water R*. The solution gives reaction (a) of chlorides (*2.3.1*).

TESTS

Solution S

Dissolve 5.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution B_7 or GY_7 (*2.2.2, Method II*).

Specific optical rotation (*2.2.7*)

Dissolve 2.00 g in *hydrochloric acid R1* and dilute to 25.0 ml with the same acid. The specific optical rotation is + 21.0 to + 22.5, calculated with reference to the dried substance.

Ninhydrin-positive substances

Examine by thin-layer chromatography (*2.2.27*), using a *TLC silica gel plate R*.

Test solution (a) Dissolve 0.10 g of the substance to be examined in *water R* and dilute to 10 ml with the same solvent.

Test solution (b) Dilute 1 ml of test solution (a) to 50 ml with *water R*.

Reference solution (a) Dissolve 10 mg of *lysine hydrochloride CRS* in *water R* and dilute to 50 ml with the same solvent.

Reference solution (b) Dilute 5 ml of test solution (b) to 20 ml with *water R*.

Reference solution (c) Dissolve 10 mg of *lysine hydrochloride CRS* and 10 mg of *arginine CRS* in *water R* and dilute to 25 ml with the same solvent.

Apply separately to the plate 5 µl of each solution. Develop over a path of 15 cm using a mixture of 30 volumes of *concentrated ammonia R* and 70 volumes of *2-propanol R*. Dry the plate at 100 °C to 105 °C until the ammonia disappears completely. Spray with *ninhydrin solution R* and heat at 100 °C to 105 °C for 15 min. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (c) shows two clearly separated principal spots.

Sulphates (*2.4.13*)

Dilute 5 ml of solution S to 15 ml with *distilled water R*. The solution complies with the limit test for sulphates (300 ppm).

Ammonium (*2.4.1*)

50 mg complies with limit test B for ammonium (200 ppm). Prepare the standard using 0.1 ml of *ammonium standard solution (100 ppm NH4) R*.

Iron (*2.4.9*)

In a separating funnel, dissolve 0.33 g in 10 ml of *dilute hydrochloric acid R*. Shake with three quantities, each of 10 ml, of *methyl isobutyl ketone R1*, shaking for 3 min each time. To the combined organic layers add 10 ml of *water R* and shake for 3 min. The aqueous layer complies with the limit test for iron (30 ppm).

Heavy metals (*2.4.8*)

12 ml of solution S complies with limit test A for heavy metals (10 ppm). Prepare the standard using *lead standard solution (1 ppm Pb) R*.

Loss on drying (*2.2.32*)

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*)

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in 5 ml of *anhydrous formic acid R*. Add 50 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 18.27 mg of $C_6H_{15}ClN_2O_2$.

STORAGE

Store protected from light.

Ph Eur

Virgin Linseed Oil

General Notices

(Ph Eur monograph 1908)

Ph Eur

DEFINITION

Virgin oil obtained by cold expression from ripe seeds of *Linum usitatissimum* L. A suitable antioxidant may be added.

CHARACTERS

Appearance

Clear, yellow or brownish-yellow liquid, on exposure to air turning dark and gradually thickening. When cooled, it becomes a soft mass at about - 20 °C.

Solubility

Very slightly soluble in alcohol, miscible with light petroleum.

Relative density

About 0.931.

Refractive index

About 1.480.

IDENTIFICATION

First identification *B, C.*

Second identification *A, B.*

A. Identification of fatty oils by thin-layer chromatography (*2.3.2*). The chromatogram obtained is similar to the type chromatogram for linseed oil.

B. It complies with the test for iodine value (see Tests).

C. It complies with the test for composition of fatty acids (see Tests).

TESTS

Acid value (*2.5.1*)

Maximum 4.5.

Iodine value (*2.5.4*)

160 to 200.

Peroxide value (*2.5.5*)

Maximum 15.0.

Saponification value (*2.5.6*)

188 to 195. Carry out the saponification for 1 h.

Unsaponifiable matter (*2.5.7*)

Maximum 1.5 per cent, determined on 5.0 g.

Composition of fatty acids

Gas chromatography (*2.4.22, Method C*). Use the calibration mixture in Table 2.4.22.-3.

Composition of the fatty-acid fraction of the oil:

— *fatty acids with a chain length less than* C_{16}: maximum 1.0 per cent;

— *palmitic acid*: 3.0 per cent to 8.0 per cent;

— *palmitoleic acid* (equivalent chain length on polyethyleneglycol adipate 16.3): maximum 1.0 per cent;

— *stearic acid*: 2.0 per cent to 8.0 per cent;

— *oleic acid* (equivalent chain length on polyethyleneglycol adipate 18.3): 11.0 per cent to 35.0 per cent;

— *linoleic acid* (equivalent chain length on polyethyleneglycol adipate 18.9): 11.0 per cent to 24.0 per cent;

— *linolenic acid* (equivalent chain length on polyethyleneglycol adipate 19.7): 35.0 per cent to 65.0 per cent;

— *arachidic acid*: maximum 1.0 per cent.

Cadmium (*2.4.27*)

Maximum 0.5 ppm.

Water (*2.5.32*)

Maximum 0.1 per cent, determined on 5.00 g.

STORAGE

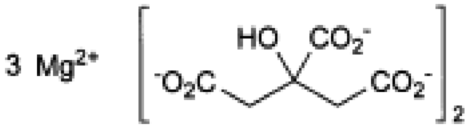
In an airtight container, protected from light.

Ph Eur

Anhydrous Magnesium Citrate

General Notices

(Ph Eur monograph 2339)



$Mg_3(C_6H_5O_7)_2$ 451.1 *3344-18-1*

Ph Eur

DEFINITION

Trimagnesium bis(2-hydroxypropane-1,2,3-tricarboxylate).

Content

15.0 per cent to 16.5 per cent of Mg (dried substance).

CHARACTERS

Appearance

White or almost white, fine, slightly hygroscopic powder.

Solubility

Soluble in water, practically insoluble in ethanol (96 per cent). It dissolves in dilute hydrochloric acid.

IDENTIFICATION

A. It gives the reaction of citrates *(2.3.1)*.

B. It gives the reaction of magnesium *(2.3.1)*.

C. pH (see Tests).

D. Loss on drying (see Tests).

TESTS

Solution S

Dissolve 5.0 g in *carbon dioxide-free water R*, heating at 60 °C, cool and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solutions Y_7 or BY_6 *(2.2.2, Method II)*.

pH *(2.2.3)*

6.0 to 8.5 for solution S.

Oxalates

Maximum 280 ppm.

Dissolve 0.50 g in 4 ml of *water R*. Add 3 ml of *hydrochloric acid R* and 1 g of *activated zinc R*. Allow to stand for 5 min. Transfer the liquid to a tube containing 0.25 ml of a 10 g/l solution of *phenylhydrazine hydrochloride R*. Heat to boiling. Cool rapidly, transfer to a graduated cylinder and add an equal volume of *hydrochloric acid R* and 0.25 ml of *potassium ferricyanide solution R*. Shake and allow to stand for 30 min. Any pink colour in the solution is not more intense than that in a standard prepared at the same time and in the same manner using 4 ml of a 50 mg/l solution of *oxalic acid R*.

Sulphates *(2.4.13)*

Maximum 0.2 per cent.

Dilute 1.5 ml of solution S to 15 ml with *distilled water R*.

Calcium *(2.4.3)*

Maximum 0.2 per cent.

Dilute 1.0 ml of solution S to 15 ml with *distilled water R*.

Iron *(2.4.9)*

Maximum 100 ppm.

Dilute 2.0 ml of solution S to 10 ml with *distilled water R*.

Heavy metals *(2.4.8)*

Maximum 10 ppm.

Dissolve 5.0 g in 15 ml of *dilute hydrochloric acid R* with heating. Adjust to pH 3.5 with *ammonia R* and dilute to 50 ml with *distilled water R*. 12 ml of this solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Loss on drying *(2.2.32)*

Maximum 3.5 per cent, determined on 1.000 g by drying in an oven at 180 ± 10 °C for 5 h.

ASSAY

Dissolve 0.150 g in 50 ml of *water R*. Carry out the complexometric titration of magnesium *(2.5.11)*.

1 ml of *0.1 M sodium edetate* is equivalent to 2.431 mg of Mg.

STORAGE

In a non-metallic, airtight container .

Ph Eur

Basic Butylated Methacrylate Copolymer

General Notices

(Ph Eur monograph 1975)

Action and use

Excipient.

Ph Eur

DEFINITION

Copolymer of 2-(dimethylamino)ethyl methacrylate, butyl methacrylate and methyl methacrylate having a mean relative molecular mass of about 150 000. The ratio of 2-dimethylaminoethyl methacrylate groups to butyl methacrylate and methyl methacrylate groups is about 2:1:1.

Content of dimethylaminoethyl groups

20.8 per cent to 25.5 per cent (dried substance).

CHARACTERS

Appearance

Colourless or yellowish granules or white or almost white powder, slightly hygroscopic.

Solubility

Practically insoluble in water, freely soluble in methylene chloride. It dissolves slowly in alcohol.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison Ph. Eur. reference spectrum of basic butylated methacrylate copolymer.

B. It complies with the limits of the assay.

TESTS

Solution S

Dissolve 12.5 g in a mixture of 35.0 g of *acetone R* and 52.5 g of *2-propanol R*.

Viscosity (*2.2.10*)

3 mPa·s to 6 mPa·s, determined on solution S.

Apparatus Rotating viscosimeter.

Dimensions:

— *spindle*: diameter = 25.15 mm, height = 90.74 mm, shaft diameter = 4 mm;

— *cylinder*: diameter = 27.62 mm, height = 0.135 m.

Stirring speed 30 r/min.

Volume of solution 16 ml of solution S.

Temperature 20 C.

Absorbance (*2.2.25*)

Maximum 0.30 at 420 nm, determined on solution S.

Appearance of film

Spread evenly 1.0 ml of solution S on a glass plate. Upon drying a clear film is formed.

Monomers

Maximum 0.3 per cent, for the sum of contents of butyl methacrylate, methyl methacrylate and 2-dimethylaminoethyl methacrylate calculated by procedures A and B.

A. Butyl methacrylate and methyl methacrylate. Liquid chromatography (*2.2.29*).

Test solution Dissolve 1.00 g of the substance to be examined in *phosphate buffer solution pH 2.0 R* and dilute to 50.0 ml with the same buffer solution.

Reference solution Dissolve 10.0 mg of *butyl methacrylate R* and 10.0 mg of *methyl methacrylate R* in 10.0 ml of *acetonitrile R* and dilute to 50.0 ml with *water R*. Dilute 1.0 ml of the solution to 50.0 ml with *water R*.

Column:

— *size: l* = 0.125 m, Ø = 4.6 mm;

— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (7 µm).

Mobile phase *phosphate buffer solution pH 2.0 R*, *methanol R* (45:55 *V/V*).

Flow rate 2.0 ml/min.

Detection Spectrophotometer at 205 nm.

Injection 50 µl.

B. 2-Dimethylaminoethyl methacrylate. Liquid chromatography (*2.2.29*).

Test solution Dissolve 1.00 g of the substance to be examined in *tetrahydrofuran R* and dilute to 50.0 ml with the same solvent.

Reference solution Dissolve 10.0 mg of *2-(dimethylamino)ethyl methacrylate R* in *tetrahydrofuran R* and dilute to 50.0 ml with the same solvent. Dilute 2.0 ml of the solution to 50.0 ml with *tetrahydrofuran R*.

Column:

— *size: l* = 0.125 m, Ø = 4.6 mm;

— *stationary phase*: *aminopropylsilyl silica gel for chromatography R* (10 µm).

Mobile phase Mix 25 volumes of a 3.404 g/l solution of *potassium dihydrogen phosphate R* and 75 volumes of *tetrahydrofuran R*.

Flow rate 2.0 ml/min.

Detection Spectrophotometer at 215 nm.

Injection 50 µl.

Heavy metals (*2.4.8*)

Maximum 20 ppm.

2.0 g complies with limit test C. Prepare the standard using 4.0 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying (*2.2.32*)

Maximum 2.0 per cent, determined on 1.000 g by drying in an oven at 110 C for 3 h.

Sulphated ash (*2.4.14*)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

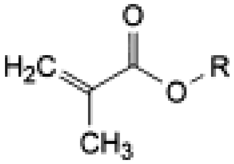
Dissolve 0.200 g in a mixture of 4 ml of *water R* and 96 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 7.21 mg of $C_4H_{10}N$.

STORAGE

In an airtight container .

IMPURITIES



A. R = $[CH_2]_3$-CH_3: butyl methacrylate,

B. R = CH_3: methyl methacrylate,

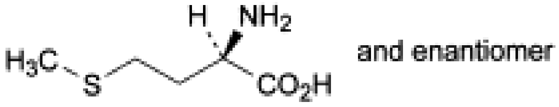
C. R = CH_2-CH_2-$N(CH_3)_2$: 2-(dimethylamino)ethyl methacrylate.

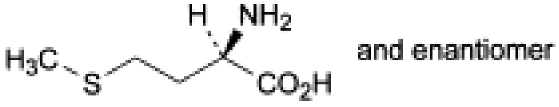
Ph Eur

DL- Methionine

General Notices

(Ph Eur monograph 0624)





$C_5H_{11}NO_2S$ 149.2 *59-51-8*

Action and use

Used in treatment of paracetamol overdose.

Ph Eur

DEFINITION

DL-Methionine contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of (2*RS*)-2-amino-4-(methylsulphanyl)butanoic acid, calculated with reference to the dried substance.

CHARACTERS

Almost white, crystalline powder or small flakes, sparingly soluble in water, very slightly soluble in alcohol. It dissolves in dilute acids and in dilute solutions of the alkali hydroxides.

It melts at about 270 °C (instantaneous method).

IDENTIFICATION

First identification A, C.

Second identification B, C, D.

A. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *DL-methionine CRS*. Dry the substances at 105 °C.

B. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve 2.50 g in *1 M hydrochloric acid* and dilute to 50.0 ml with the same acid. The angle of optical rotation (*2.2.7*) is - 0.05° to + 0.05°.

D. Dissolve 0.1 g of the substance to be examined and 0.1 g of *glycine R* in 4.5 ml of *dilute sodium hydroxide solution R.* Add 1 ml of a 25 g/l solution of *sodium nitroprusside R*. Heat to 40 °C for 10 min. Allow to cool and add 2 ml of a mixture of 1 volume of *phosphoric acid* R and 9 volumes of *hydrochloric acid R*. A deep-red colour develops.

TESTS

Solution S

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

pH (*2.2.3*)

The pH of solution S is 5.4 to 6.1.

Related substances

Examine by thin-layer chromatography (*2.2.27*), using *silica gel G R* as the coating substance.

Test solution (a) Dissolve 0.2 g in *water R* and dilute to 10 ml with the same solvent.

Test solution (b) Dilute 1 ml of test solution (a) to 50 ml with *water R*.

Reference solution (a) Dissolve 20 mg of *dl-methionine CRS* in *water R* and dilute to 50 ml with the same solvent.

Reference solution (b) Dilute 1 ml of reference solution (a) to 10 ml with *water R*.

Apply separately to the plate 5 µl of each solution. Develop over a path of 10 cm using a mixture of 20 volumes of *glacial acetic acid R*, 20 volumes of *water R* and 60 volumes of *butanol R*. Allow the plate to dry in air and spray with *ninhydrin solution R*. Heat the plate at 100 °C to 105 °C for 15 min. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.2 per cent).

Chlorides

Dissolve 0.25 g in 35 ml of *water R*. Add 5 ml of *dilute nitric acid R* and 10 ml of *silver nitrate solution R2*. Allow to stand protected from light for 5 min. Any opalescence in the solution is not more intense than that in a standard prepared at the same time in the same manner using a mixture of 10 ml of *chloride standard solution (5 ppm Cl) R* and 25 ml of *water R* (200 ppm). Examine the tubes laterally against a black background.

Sulphates (*2.4.13*)

Dissolve 1.0 g in 20 ml of *distilled water R*, heating to 60 °C. Cool to 10 °C and filter. 15 ml of the solution complies with the limit test for sulphates (200 ppm).

Heavy metals (*2.4.8*)

1.0 g complies with limit test D for heavy metals (20 ppm). Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying (*2.2.32*)

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*)

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.140 g in 3 ml of *anhydrous formic acid R*. Add 30 ml of *anhydrous acetic acid R*. Immediately after dissolution, titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 14.92 mg of $C_5H_{11}NO_2S$.

STORAGE

Store protected from light.

Ph Eur

Dried Magnesium Sulphate

General Notices

Dried Epsom Salts

Preparation

Magnesium Sulphate Paste

DEFINITION

Dried Magnesium Sulphate contains not less than 62.0% and not more than 70.0% of $MgSO_4$. It may be prepared by drying magnesium sulphate at 100° until it has lost approximately 25% of its weight.

CHARACTERISTICS

A white powder.

Freely soluble in *water*; dissolves more rapidly in hot *water*.

IDENTIFICATION

Yields the reactions characteristic of *magnesium salts* and of *sulphates*, Appendix VI.

TESTS

Acidity or alkalinity

To 10 ml of a 7.5% w/v solution in *carbon dioxide-free water* add 0.05 ml of *phenol red solution*. Not more than 0.2 ml of either 0.01M *hydrochloric acid VS* or 0.01M *sodium hydroxide VS* is required to change the colour of the solution.

Arsenic

0.33 g dissolved in 25 ml of *water* complies with the *limit test for arsenic*, Appendix VII (3 ppm)
.

Heavy metals

Dissolve 1.3 g in 20 ml of *water* and add 1 g of *ammonium chloride*. 12 ml of the resulting solution complies with *limit test A for heavy metals*, Appendix VII. Use *lead standard solution (1 ppm Pb)* to prepare the standard (15 ppm).

Iron

0.33 g dissolved in 10 ml of *water* complies with the *limit test for iron*, Appendix VII (30 ppm).

Chloride

0.13 g dissolved in 15 ml of *water* complies with the *limit test for chlorides*, Appendix VII (400 ppm).

Insoluble matter

7.5 g dissolves in 20 ml of *water*, producing a solution which may be slightly turbid at first but which becomes clear in a few minutes.

ASSAY

Dissolve 0.3 g in 50 ml of *water* and carry out the *complexometric titration of magnesium*, Appendix VIII D. Each ml of 0.1M *disodium edetate VS* is equivalent to 12.04 mg of $MgSO_4$.

Heavy Magnesium Carbonate

General Notices

(Ph Eur monograph 0043)

546-93-0

Action and use

Antacid; osmotic laxative.

Ph Eur

DEFINITION

Hydrated basic magnesium carbonate.

Content

40.0 per cent to 45.0 per cent, calculated as MgO (M_r 40.30).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water. It dissolves in dilute acids with effervescence.

IDENTIFICATION

A. Bulk density *(2.9.34)*: minimum 0.25 g/ml.

B. It gives the reaction of carbonates *(2.3.1)*.

C. Dissolve about 15 mg in 2 ml of *dilute nitric acid R* and neutralise with *dilute sodium hydroxide solution R*. The solution gives the reaction of magnesium *(2.3.1)*.

TESTS

Solution S

Dissolve 5.0 g in 100 ml of *dilute acetic acid R*. When the effervescence has ceased, boil for 2 min, allow to cool and dilute to 100 ml with *dilute acetic acid R*. Filter, if necessary, through a previously ignited and tared porcelain or silica filter crucible of suitable porosity to give a clear filtrate.

Appearance of solution

Solution S is not more intensely coloured than reference solution B_4 *(2.2.2, Method II)*.

Soluble substances

Maximum 1.0 per cent.

Mix 2.00 g with 100 ml of *water R* and boil for 5 min. Filter whilst hot through a sintered-glass filter (40) *(2.1.2)*, allow to cool and dilute to 100 ml with *water R*. Evaporate 50 ml of the filtrate to dryness and dry at 100-105 °C. The residue weighs not more than 10 mg.

Substances insoluble in acetic acid

Maximum 0.05 per cent.

Any residue obtained during the preparation of solution S, washed, dried, and ignited at 600 ± 50 °C, weighs not more than 2.5 mg.

Chlorides *(2.4.4)*

Maximum 700 ppm.

Dilute 1.5 ml of solution S to 15 ml with *water R*.

Sulphates *(2.4.13)*

Maximum 0.6 per cent.

Dilute 0.5 ml of solution S to 15 ml with *distilled water R*.

Arsenic *(2.4.2, Method A)*

Maximum 2 ppm, determined on 10 ml of solution S.

Calcium *(2.4.3)*

Maximum 0.75 per cent.

Dilute 2.6 ml of solution S to 150 ml with *distilled water R*. 15 ml of the solution complies with the test.

Iron *(2.4.9)*

Maximum 400 ppm.

Dissolve 0.1 g in 3 ml of *dilute hydrochloric acid R* and dilute to 10 ml with *water R*. Dilute 2.5 ml of the solution to 10 ml with *water R*.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

To 20 ml of solution S add 15 ml of *hydrochloric acid R1* and shake with 25 ml of *methyl isobutyl ketone R* for 2 min. Allow to stand, separate the aqueous lower layer and evaporate to dryness. Dissolve the residue in 1 ml of *acetic acid R* and dilute to 20 ml with *water R*. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

ASSAY

Dissolve 0.150 g in a mixture of 2 ml of *dilute hydrochloric acid R* and 20 ml of *water R*. Carry out the complexometric titration of magnesium *(2.5.11)*.

1 ml of *0.1 M sodium edetate* is equivalent to 4.030 mg of MgO.

FUNCTIONALITY-RELATED CHARACTERISTICS

This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). This section is a non-mandatory part of the monograph and it is not necessary to verify the characteristics to demonstrate compliance. Control of these characteristics can however contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.The following characteristics may be relevant for heavy magnesium carbonate used as a filler in tablets.

Particle-size distribution ***(2.9.31 or 2.9.38)*****.**

Bulk and tapped density ***(2.9.34)*****.**

Ph Eur

Heavy Magnesium Oxide

General Notices

(Ph Eur monograph 0041)

MgO 40.30 *1309-48-4*

Action and use

Antacid; osmotic laxative.

Ph Eur

DEFINITION

Content

98.0 per cent to 100.5 per cent of MgO (ignited substance).

CHARACTERS

Appearance

Fine, white or almost white powder.

Solubility

Practically insoluble in water. It dissolves in dilute acids with at most slight effervescence.

IDENTIFICATION

A. 15 g has an apparent volume (*2.9.15*) before settling of not more than 60 ml.

B. Dissolve about 15 mg in 2 ml of *dilute nitric acid R* and neutralise with *dilute sodium hydroxide solution R*. The solution gives the reaction of magnesium (*2.3.1*).

C. Loss on ignition (see Tests).

TESTS

Solution S

Dissolve 5.0 g in a mixture of 30 ml of *distilled water R* and 70 ml of *acetic acid R*, boil for 2 min, cool and dilute to 100 ml with *dilute acetic acid R.* Filter, if necessary, through a previously ignited and tared porcelain or silica filter crucible of suitable porosity to give a clear filtrate.

Appearance of solution

Solution S is not more intensely coloured than reference solution B_3 (*2.2.2, Method II*).

Soluble substances

Maximum 2.0 per cent.

To 2.00 g add 100 ml of *water R* and boil for 5 min. Filter whilst hot through a sintered-glass filter (40) (*2.1.2*), allow to cool and dilute to 100 ml with *water R*. Evaporate 50 ml of the filtrate to dryness and dry at 100-105 °C. The residue weighs a maximum of 20 mg.

Substances insoluble in acetic acid

Maximum 0.1 per cent.

Any residue obtained during the preparation of solution S, washed, dried, and ignited at 600 ± 50 °C, weighs a maximum of 5 mg.

Chlorides (*2.4.4*)

Maximum 0.1 per cent.

Dilute 1 ml of solution S to 15 ml with *water R*.

Sulphates (*2.4.13*)

Maximum 1.0 per cent.

Dilute 0.3 ml of solution S to 15 ml with *distilled water R*.

Arsenic (*2.4.2, Method A*)

Maximum 4 ppm, determined on 5 ml of solution S.

Calcium (*2.4.3*)

Maximum 1.5 per cent.

Dilute 1.3 ml of solution S to 150 ml with *distilled water R*. 15 ml of the solution complies with the test.

Iron (*2.4.9*)

Maximum 0.07 per cent.

Dissolve 0.15 g in 5 ml of *dilute hydrochloric acid R* and dilute to 10 ml with *water R*. Dilute 1 ml of the solution to 10 ml with *water R*.

Heavy metals (*2.4.8*)

Maximum 30 ppm.

To 20 ml of solution S add 15 ml of *hydrochloric acid R1* and shake with 25 ml of *methyl isobutyl ketone R* for 2 min. Allow to stand, then separate and evaporate the aqueous layer to dryness. Dissolve the residue in 1 ml of *acetic acid R* and dilute to 30 ml with *water R*. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Loss on ignition

Maximum 8.0 per cent, determined on 1.00 g at 900 ± 25 °C.

ASSAY

Dissolve 0.320 g in 20 ml of *dilute hydrochloric acid R* and dilute to 100.0 ml with *water R*. Using 20.0 ml of the solution, carry out the complexometric titration of magnesium (*2.5.11*).

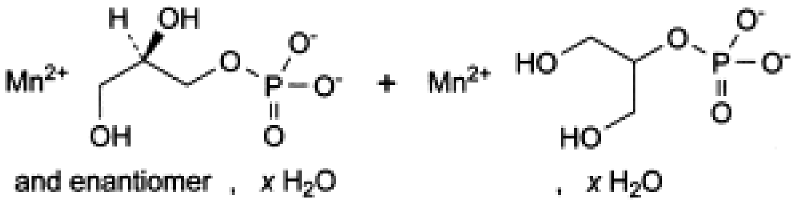
1 ml of *0.1 M sodium edetate* is equivalent to 4.030 mg of MgO.

Ph Eur

Hydrated Manganese Glycerophosphate

General Notices

(Ph Eur monograph 2163)



$C_3H_7MnO_6P,xH_2O$ 225.0

Ph Eur

DEFINITION

Mixture of variable proportions of hydrated manganese (II) (2*RS*)-2,3-dihydroxypropyl phosphate and hydrated manganese (II) 2-hydroxy-1-(hydroxymethyl)ethyl phosphate.

Content

97.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or pale pink, hygroscopic powder.

Solubility

Practically insoluble in water and in ethanol (96 per cent). It is freely soluble in dilute mineral acids.

IDENTIFICATION

A. Mix 1 g with 1 g of *potassium hydrogen sulphate R* in a test tube fitted with a delivery tube. Heat strongly and direct the white vapour towards a piece of filter paper impregnated with a freshly prepared 10 g/l solution of *sodium nitroprusside R*. The filter paper develops a blue colour in contact with *piperidine R*.

B. Disperse 50 mg in 5 ml of *water R*. Add 0.5 ml of *ammonium sulphide solution R*. A pale pink precipitate is formed that dissolves on the addition of 1 ml of *acetic acid R*.

C. Ignite 0.1 g in a crucible. Take up the residue with 5 ml of *nitric acid R* and heat on a water-bath for 1 min. Filter. The filtrate gives reaction (b) of phosphates (*2.3.1*).

TESTS

Solution S

Dissolve 5.0 g in 20 ml of *dilute hydrochloric acid R*. Filter if necessary. Add *dilute ammonia R1* until a precipitate is formed. Dissolve the precipitate by adding the minimum quantity needed of *dilute hydrochloric acid R* and dilute to 100 ml with *distilled water R*.

Glycerol and ethanol (96 per cent)-soluble substances

Maximum 1.0 per cent.

Shake 1.00 g with 25 ml of *ethanol (96 per cent) R* for 1 min. Filter. Evaporate the filtrate to dryness on a water-bath and dry the residue at 70 °C for 1 h. The residue weighs a maximum of 10 mg.

Chlorides (*2.4.4*)

Maximum 0.15 per cent.

Dissolve 0.22 g in a mixture of 1 ml of *nitric acid R* and 10 ml of *water R* and dilute to 100 ml with *water R*.

Phosphates (*2.4.11*)

Maximum 0.3 per cent.

Dilute 1.0 ml of solution S to 100.0 ml with *water R*. To 10 ml of this solution add 140 ml of *water R*.

Sulphates (*2.4.13*)

Maximum 0.2 per cent.

Dilute 5 ml of solution S to 50 ml with *distilled water R*.

Iron (*2.4.9*)

Maximum 50 ppm.

Dilute 4 ml of solution S to 10 ml with *water R*.

Heavy metals (*2.4.8*)

Maximum 20 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Loss on drying (*2.2.32*)

Maximum 12.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

ASSAY

To 0.200 g add 50 ml of *water R* and stir until dissolution. Add 10 mg of *ascorbic acid R*, 20 ml of *ammonium chloride buffer solution pH 10.0 R* and 0.3 ml of a 2 g/l solution of *mordant black 11 R* in *triethanolamine R*. Titrate with *0.1 M sodium edetate* until the colour changes from violet to pure blue.

1 ml of *0.1 M sodium edetate* is equivalent to 22.50 mg of $C_3H_7MnO_6P$.

STORAGE

In an airtight container .

Ph Eur

Industrial Methylated Spirit (Ketone-free)

General Notices

Industrial Denatured Alcohol (Ketone-free)

DEFINITION

Industrial Methylated Spirit (Ketone-free) is a mixture of nineteen volumes of ethanol of an appropriate strength with one volume of approved wood naphtha substantially free from ketones. Two strengths are available containing 99% by volume and 95% by volume of alcohol (also known as 74 OP and 66 OP respectively).

CHARACTERISTICS; IDENTIFICATION; TESTS

Acidity or alkalinity; Clarity of solution; Apparent density; Aldehydes; Non-volatile matter

Complies with the requirements stated under Industrial Methylated Spirit.

Ketones

Dilute 5 ml to 10 ml with *water*, add 1 ml of a 1.0% w/v solution of *2-nitrobenzaldehyde* in *ethanol (50%)* followed by 1 ml of a 15% w/v solution of *sodium hydroxide* in *water* and allow to stand for 15 minutes. Any colour produced is not more intense than that produced by treating in the same manner 10 ml of a 0.025% v/v solution of *acetone* in *ethanol (50%)* (500 ppm).

Industrial Methylated Spirit

General Notices

Industrial Methylated Spirits; IMS
Industrial Denatured Alcohol

DEFINITION

Industrial Methylated Spirit is a mixture of nineteen volumes of ethanol of an appropriate strength with one volume of approved wood naphtha. Two strengths are available containing 99% by volume and 95% by volume of alcohol (also known as 74 OP and 66 OP respectively) .

CHARACTERISTICS

A colourless, clear, mobile, volatile liquid, boiling at about 78°.

IDENTIFICATION

Mix 0.1 ml with 0.05 ml of an 11% w/w solution of *orthophosphoric acid* and 0.25 ml of *dilute potassium permanganate solution*. After 1 minute add a few mg of *sodium metabisulphite* and shake until the mixture is decolorised. Add 1.5 ml of a 50% v/v solution of *sulphuric acid* and a few mg of finely powdered *chromotropic acid sodium salt*, shake well and heat on a water bath for 5 minutes. A deep violet colour is produced.

TESTS

Acidity or alkalinity

25 ml requires not more than 0.2 ml of 0.1M *sodium hydroxide VS* to produce a pink colour with *phenolphthalein solution R1* and not more than 1.0 ml of 0.1M *hydrochloric acid VS* to produce a red colour with *methyl red solution*.

Clarity of solution

Dilute 5.0 ml to 100 ml with *water*. The solution is *clear*, Appendix IV A.

Apparent density

For '66 OP' grade, not greater than 811.6 kg m^{-3}, and for '74 OP' grade, not greater than 792.8 kg m^{-3}, Appendix V G.

Aldehydes

To 5.0 ml add 5 ml of *water* and 1 ml of *decolorised fuchsin solution* and allow to stand for 30 minutes. Any colour produced is not more intense than that obtained by treating in the same manner 5 ml of a 0.005% w/v solution of redistilled *acetaldehyde* in *aldehyde-free ethanol (96%)* (50 ppm).

Non-volatile matter

When evaporated and dried at 105°, leaves not more than 0.01% w/v of residue.

Light Magnesium Carbonate

General Notices

(Ph Eur monograph 0042)

Action and use

Antacid; osmotic laxative.

Preparation

Aromatic Magnesium Carbonate Mixture

Ph Eur

DEFINITION

Hydrated basic magnesium carbonate.

Content

40.0 per cent to 45.0 per cent, calculated as MgO (M_r 40.30).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water. It dissolves in dilute acids with effervescence.

IDENTIFICATION

A. 15 g has an apparent volume (*2.9.15*) before settling of at least 100 ml.

B. It gives the reaction of carbonates (*2.3.1*).

C. Dissolve about 15 mg in 2 ml of *dilute nitric acid R* and neutralise with *dilute sodium hydroxide solution R*. The solution gives the reaction of magnesium (*2.3.1*).

TESTS

Solution S

Dissolve 5.0 g in 100 ml of *dilute acetic acid R*. When the effervescence has ceased, boil for 2 min, allow to cool and dilute to 100 ml with *dilute acetic acid R*. Filter, if necessary, through a previously ignited and tared porcelain or silica filter crucible of suitable porosity to give a clear filtrate.

Appearance of solution

Solution S is not more intensely coloured than reference solution B_4 (*2.2.2, Method II*).

Soluble substances

Maximum 1.0 per cent.

Mix 2.00 g with 100 ml of *water R* and boil for 5 min. Filter whilst hot through a sintered-glass filter (40) (*2.1.2*), allow to cool and dilute to 100 ml with *water R*. Evaporate 50 ml of the filtrate to dryness and dry at 100-105 °C. The residue weighs a maximum of 10 mg.

Substances insoluble in acetic acid

Maximum 0.05 per cent.

Any residue obtained during the preparation of solution S, washed, dried and ignited at 600 ± 50 °C, weighs a maximum of 2.5 mg.

Chlorides (*2.4.4*)

Maximum 700 ppm.

Dilute 1.5 ml of solution S to 15 ml with *water R*.

Sulphates (*2.4.13*)

Maximum 0.3 per cent.

Dilute 1 ml of solution S to 15 ml with *distilled water R*.

Arsenic (*2.4.2, Method A*)

Maximum 2 ppm, determined on 10 ml of solution S.

Calcium (*2.4.3*)

Maximum 0.75 per cent.

Dilute 2.6 ml of solution S to 150 ml with *distilled water R*. 15 ml of the solution complies with the test.

Iron (*2.4.9*)

Maximum 400 ppm.

Dissolve 0.1 g in 3 ml of *dilute hydrochloric acid R* and dilute to 10 ml with *water R*. Dilute 2.5 ml of the solution to 10 ml with *water R.*

Heavy metals (*2.4.8*)

Maximum 20 ppm.

To 20 ml of solution S add 15 ml of *hydrochloric acid R1* and shake with 25 ml of *methyl isobutyl ketone R* for 2 min. Allow to stand, separate the aqueous lower layer and evaporate to dryness. Dissolve the residue in 1 ml of *acetic acid R* and dilute to 20 ml with *water R*. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

ASSAY

Dissolve 0.150 g in a mixture of 2 ml of *dilute hydrochloric acid R* and 20 ml of *water R*. Carry out the complexometric titration of magnesium (*2.5.11*).

1 ml of *0.1 M sodium edetate* is equivalent to 4.030 mg of MgO.

Ph Eur

Light Magnesium Oxide

General Notices

Light Magnesia

(Ph Eur monograph 0040)

MgO 40.30 *1309-48-4*

Action and use

Antacid; osmotic laxative.

Preparation

Magnesium Hydroxide Mixture

Ph Eur

DEFINITION

Content

98.0 per cent to 100.5 per cent of MgO (ignited substance).

CHARACTERS

Appearance

Fine, white or almost white, amorphous powder.

Solubility

Practically insoluble in water. It dissolves in dilute acids with at most slight effervescence.

IDENTIFICATION

A. 15 g has an apparent volume (*2.9.15*) before settling of at least 100 ml.

B. Dissolve about 15 mg in 2 ml of *dilute nitric acid R* and neutralise with *dilute sodium hydroxide solution R*. The solution gives the reaction of magnesium (*2.3.1*).

C. Loss on ignition (see Tests).

TESTS

Solution S

Dissolve 5.0 g in a mixture of 30 ml of *distilled water R* and 70 ml of *acetic acid R*, boil for 2 min, cool and dilute to 100 ml with *dilute acetic acid R*. Filter, if necessary, through a previously ignited and tared porcelain or silica filter crucible of a suitable porosity to give a clear filtrate.

Appearance of solution

Solution S is not more intensely coloured than reference solution B_2 (*2.2.2, Method II*).

Soluble substances

Maximum 2.0 per cent.

To 2.00 g add 100 ml of *water R* and boil for 5 min. Filter whilst hot through a sintered-glass filter (40) (*2.1.2*), allow to cool and dilute to 100 ml with *water R*. Evaporate 50 ml of the filtrate to dryness and dry at 100-105 °C. The residue weighs a maximum of 20 mg.

Substances insoluble in acetic acid

Maximum 0.1 per cent.

Any residue obtained during the preparation of solution S, washed, dried, and ignited at 600 ± 50 °C, weighs a maximum of 5 mg.

Chlorides (*2.4.4*)

Maximum 0.15 per cent.

Dilute 0.7 ml of solution S to 15 ml with *water R*.

Sulphates (*2.4.13*)

Maximum 1.0 per cent.

Dilute 0.3 ml of solution S to 15 ml with *distilled water R*.

Arsenic (*2.4.2, Method A*)

Maximum 4 ppm, determined on 5 ml of solution S.

Calcium (*2.4.3*)

Maximum 1.5 per cent.

Dilute 1.3 ml of solution S to 150 ml with *distilled water R*. 15 ml of the solution complies with the test.

Iron (*2.4.9*)

Maximum 0.1 per cent.

Dissolve 50 mg in 5 ml of *dilute hydrochloric acid R* and dilute to 10 ml with *water R*. Dilute 2 ml of t his solution to 10 ml with *water R.*

Heavy metals (*2.4.8*)

Maximum 30 ppm.

To 20 ml of solution S add 15 ml of *hydrochloric acid R1* and shake with 25 ml of *methyl isobutyl ketone R* for 2 min. Allow to stand, then separate and evaporate the aqueous layer to dryness. Dissolve the residue in 1.5 ml of *acetic acid R* and dilute to 30 ml with *water R*. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Loss on ignition

Maximum 8.0 per cent, determined on 1.00 g at 900 ± 25 °C.

ASSAY

Dissolve 0.320 g in 20 ml of *dilute hydrochloric acid R* and dilute to 100.0 ml with *water R.* Using 20.0 ml of the solution, carry out the complexometric titration of magnesium (*2.5.11*).

1 ml of *0.1 M sodium edetate* is equivalent to 4.030 mg of MgO.

Ph Eur

Liquid Maltitol

General Notices

(Ph Eur monograph 1236)

Ph Eur

DEFINITION

Aqueous solution of a hydrogenated, partly hydrolysed starch, composed of a mixture of mainly 4-*C*-α-D-glucopyranosyl-D-glucitol (D-maltitol) with D-glucitol (D-sorbitol) and hydrogenated oligo- and polysaccharides.

Content:

— *D-maltitol* ($C_{12}H_{24}O_{11}$): minimum 50.0 per cent *m/m* (anhydrous substance) and 95.0 per cent to 105.0 per cent of the content stated on the label;

— *D-sorbitol* ($C_6H_{14}O_6$): maximum 8.0 per cent *m/m* (anhydrous substance);

— *anhydrous substance*: 68.0 per cent *m/m* to 85.0 per cent *m/m*.

CHARACTERS

Appearance

Clear, colourless, syrupy liquid.

Solubility

Miscible with water and with glycerol.

IDENTIFICATION

First identification *A.*

Second identification *B, C.*

A. Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time to the principal peak in the chromatogram obtained with reference solution (a).

B. Thin-layer chromatography (*2.2.27*).

Test solution Dilute 0.35 g of the substance to be examined to 100 ml with *water R*.

Reference solution (a) Dissolve 20 mg of *maltitol CRS* in *water R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dissolve 20 mg of *maltitol CRS* and 20 mg of *sorbitol CRS* in *water R* and dilute to 10 ml with the same solvent.

Plate *TLC silica gel G plate R.*

Mobile phase *water R*, *ethyl acetate R*, *propanol R* (10:20:70 *V/V/V*)

Application 2 µl.

Development Over a path of 17 cm.

Drying In air.

Detection Spray with *4-aminobenzoic acid solution R*. Dry in a current of cold air until the acetone is removed. Heat at 100-105 °C for 15 min. Allow to cool and spray with a 2 g/l solution of *sodium periodate R*. Dry in a current of cold air. Heat at 100 °C for 15 min.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and colour to the principal spot in the chromatogram obtained with reference solution (a).

C. To 3 ml of a freshly prepared 100 g/l solution of *pyrocatechol R*, add 6 ml of *sulphuric acid R* while cooling in iced water. To 3 ml of the cooled mixture, add 0.3 ml of solution S (see Tests). Heat gently over a naked-flame for about 30 s. A pink colour develops.

TESTS

Solution S

Dilute 7.0 g to 50 ml with *water R.*

Appearance of solution

Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Conductivity (*2.2.38*)

Maximum 10 µS·cm^{-1}, measured on undiluted liquid maltitol while gently stirring with a magnetic stirrer.

Reducing sugars

Maximum 0.2 per cent, calculated as glucose equivalent.

To 5.0 g add 6 ml of *water R*, 20 ml of *cupri-citric solution R* and a few glass beads. Heat so that boiling begins after 4 min and maintain boiling for 3 min. Cool rapidly and add 100 ml of a 2.4 per cent *V/V* solution of *glacial acetic acid R* and 20.0 ml of *0.025 M iodine.* With continuous shaking, add 25 ml of a mixture of 6 volumes of *hydrochloric acid R* and 94 volumes of *water R* and, when the precipitate has dissolved, titrate the excess of iodine with *0.05 M sodium thiosulphate* using 1 ml of *starch solution R*, added towards the end of the titration, as indicator. Not less than 12.8 ml of *0.05 M sodium thiosulphate* is required.

Lead (*2.4.10*)

Maximum 0.5 ppm.

Nickel (*2.4.15*)

Maximum 1 ppm.

Water (*2.5.12*)

15.0 per cent *m/m* to 32.0 per cent *m/m*, determined on 0.100 g. Use as solvent a mixture of equal volumes of *anhydrous methanol R* and *formamide R*. Carry out the titration at about 50 °C.

ASSAY

Liquid chromatography (*2.2.29*).

Test solution Mix 1.00 g of the solution to be examined with 20 ml of *water R* and dilute to 50.0 ml with the same solvent.

Reference solution (a) Dissolve 50.0 mg of *maltitol CRS* in 2 ml of *water R* and dilute to 5.0 ml with the same solvent.

Reference solution (b) Dissolve 8.0 mg of *sorbitol CRS* in 2 ml of *water R* and dilute to 5.0 ml with the same solvent.

Reference solution (c) Dissolve 50 mg of *maltitol R* and 50 mg of *sorbitol R* in 2 ml of *water R* and dilute to 5.0 ml with the same solvent.

Column:

- *size:* *l* = 0.3 m, Ø = 7.8 mm;
- *stationary phase*: *strong cation exchange resin (calcium form) R* (9 µm);
- *temperature*: 85 ± 2 °C.

Mobile phase *degassed water R.*

Flow rate 0.5 ml/min.

Detection Refractometer maintained at a constant temperature.

Injection 20 µl.

Run time 3 times the retention time of maltitol.

Relative retention with reference to maltitol (retention time = about 16 min): sorbitol = about 1.8.

System suitability Reference solution (c):

- *resolution*: minimum 2 between the peaks due to sorbitol and maltitol.

Calculate the percentage contents of D-maltitol and D-sorbitol from the declared contents of *maltitol CRS* and *sorbitol CRS.*

LABELLING

The label states the content of D-maltitol.

Ph Eur

Macrogol 15 Hydroxystearate

General Notices

(Ph Eur monograph 2052)

Action and use

Non-ionic surfactant.

Ph Eur

DEFINITION

Mixture of mainly monoesters and diesters of 12-hydroxystearic (12-hydroxyoctadecanoic) acid and macrogols obtained by ethoxylation of 12-hydroxystearic acid. The number of moles of ethylene oxide reacted per mole of 12-hydroxystearic acid is 15 (nominal value). It contains free macrogols.

CHARACTERS

Appearance

Yellowish, waxy mass.

Solubility

Very soluble in water, soluble in ethanol (96 per cent), insoluble in liquid paraffin.

It solidifies at about 25 °C.

IDENTIFICATION

A. Thin-layer chromatography (*2.2.27*).

Test solution To 1.0 g add 100 ml of a 100 g/l solution of *potassium hydroxide R* and boil under a reflux condenser for 30 min. Acidify the warm solution with 20 ml of *hydrochloric acid R* and cool to room temperature. Shake the mixture with 50 ml of *ether R* and allow to stand until a separation of the layers is visible. Separate the clear upper layer, add 5 g of *anhydrous sodium sulphate R*, wait for 30 min, filter and evaporate to dryness on a water-bath. Dissolve 50 mg of the residue in 25 ml of *ether R*.

Reference solution Dissolve 50 mg of *12-hydroxystearic acid R* in 25 ml of *methylene chloride R*.

Plate *TLC octadecylsilyl silica gel plate R*.

Mobile phase *methylene chloride R*, *glacial acetic acid R*, *acetone R* (10:40:50 *V/V/V*).

Application 2 µl.

Development Over 2/3 of the plate.

Drying In a current of cold air.

Detection Spray with a 80 g/l solution of *phosphomolybdic acid R* in *2-propanol R* and heat at 120 °C for 1-2 min.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and colour to the principal spot in the chromatogram obtained with the reference solution.

B. Dissolve 15.0 g in 50 ml of *water R*. The viscosity (*2.2.9*) has a maximum of 20 mPa·s.

C. Free macrogols (see Tests).

TESTS

Appearance of solution

The solution is not more opalescent than reference suspension III (*2.2.1*) and not more intensely coloured than reference solution B_6 or BY_6 (*2.2.2, Method II*).

Dissolve 2.0 g in *water R* and dilute to 20 ml with the same solvent.

Acid value (2.5.1) Maximum 1.0, determined on 2.0 g.

Hydroxyl value (2.5.3, Method A) 90 to 110.

Iodine value (2.5.4, Method A) Maximum 2.0.

Peroxide value (2.5.5, Method A) Maximum 5.0.

Saponification value (2.5.6) 53 to 63.

Free macrogols Size-exclusion chromatography (*2.2.30*).

Test solution Dissolve 1.20 g of the substance to be examined in the mobile phase and dilute to 250.0 ml with the mobile phase.

Reference solution (a) Dissolve about 0.4 g of *macrogol 1000 R* in the mobile phase and dilute to 250.0 ml with the mobile phase.

Reference solution (b) Dilute 50.0 ml of reference solution (a) to 100.0 ml with the mobile phase.

Precolumns (2):

— *size:* *l* = 0.125 m, Ø = 4 mm;

— *stationary phase*: *spherical octadecylsilyl silica gel for chromatography R* (5 µm) with a pore size of 10 nm.

Column:

— *size:* *l* = 0.30 m, Ø = 7.8 mm;

— *stationary phase*: *hydroxylated polymethacrylate gel R* (6 µm) with a pore size of 12 nm.

Connect both precolumns to the column using a 3-way valve and switch the mobile phase flow according to the following programme:

— 0-114 s: precolumn 1 and column;

— 115 s to the end: precolumn 2 and column;

— 115 s to 7 min: flow back of precolumn 1.

Mobile phase *water R*, *methanol R* (2:8 *V/V*).

Flow rate 1.1 ml/min.

Detection Refractometer.

Injection 50 µl.

Calculate the percentage content of free macrogols using the following expression:

$$\frac{A_1 \times m_2 \times 200}{m_1 \times (A_2 + 2A_3)}$$

m_1 = mass of the substance to be examined in the test solution, in grams,

m_2 = mass of *macrogol 1000 R* in reference solution (a), in grams,

A_1 = area of the peak due to free macrogols in the substance to be examined in the chromatogram obtained with the test solution,

A_2 = area of the peak due to macrogol 1000 in the chromatogram obtained with reference solution (a),

A_3 = area of the peak due to macrogol 1000 in the chromatogram obtained with reference solution (b).

Limit:

— *free macrogols*: 27.0 per cent to 39.0 per cent.

Ethylene oxide and dioxan (*2.4.25*)

Maximum 1 ppm of ethylene oxide and maximum 50 ppm of dioxan.

Nickel (*2.4.31*)

Maximum 1 ppm.

Water (*2.5.12*)

Maximum 1.0 per cent, determined on 2.00 g.

Total ash (*2.4.16*)

Maximum 0.3 per cent, determined on 1.0 g.

STORAGE

In an airtight container .

Ph Eur

Macrogol 20 Glycerol Monostearate

General Notices

(Ph Eur monograph 2044)

Action and use

Non-ionic surfactant.

Ph Eur

DEFINITION

Macrogol 20 glycerol monostearate is obtained by ethoxylation with ethylene oxide of different types of glycerol stearates, mainly *Glycerol monostearate 40-55 (0495)*. The number of moles of ethylene oxide reacted per mole of glycerol stearate is 20 (nominal value).

CHARACTERS

Appearance

Pale yellow, oily liquid or gel.

Solubility

Soluble in water at 40 °C and above and in ethanol (96 per cent), practically insoluble in light liquid paraffin and in fatty oils.

Relative density

About 1.07.

IDENTIFICATION

A. Hydroxyl value (see Tests).

B. Saponification value (see Tests).

C. Composition of fatty acids (see Tests).

D. Place 1 g in a test tube and add 0.1 ml of *sulphuric acid R*. Heat the tube until white fumes appear. The fumes turn filter paper impregnated with *alkaline potassium tetraiodomercurate solution R* black.

TESTS

Acid value *(2.5.1)*

Maximum 2.0, determined on 5.0 g.

Hydroxyl value (*2.5.3, Method A*)

65 to 85, determined on 0.350 g.

Iodine value (*2.5.4, Method A*)

Maximum 2.0.

Peroxide value (*2.5.5, Method A*)

Maximum 6.0.

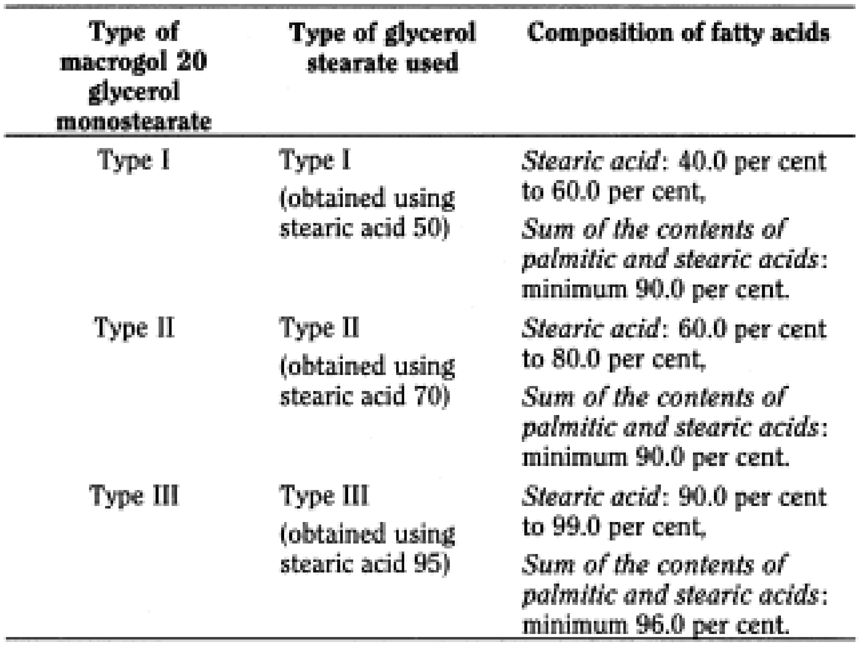
Saponification value (*2.5.6*)

40 to 60.

Composition of fatty acids

Gas chromatography (*2.4.22, Method C*).

Composition of the fatty-acid fraction of the substance:



Type of macrogol 20 glycerol monostearate	Type of glycerol stearate used	Composition of fatty acids
Type I	Type I (obtained using stearic acid 50)	*Stearic acid*: 40.0 per cent to 60.0 per cent, *Sum of the contents of palmitic and stearic acids*: minimum 90.0 per cent.
Type II	Type II (obtained using stearic acid 70)	*Stearic acid*: 60.0 per cent to 80.0 per cent, *Sum of the contents of palmitic and stearic acids*: minimum 90.0 per cent.
Type III	Type III (obtained using stearic acid 95)	*Stearic acid*: 90.0 per cent to 99.0 per cent, *Sum of the contents of palmitic and stearic acids*: minimum 96.0 per cent.

Ethylene oxide and dioxan (*2.4.25, Method A*)

Maximum 1 ppm of ethylene oxide and maximum 10 ppm of dioxan.

Heavy metals *(2.4.8*)

Maximum 10 ppm.

2.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Water (*2.5.12*)

Maximum 3.0 per cent, determined on 1.00 g.

Total ash (*2.4.16*)

Maximum 0.2 per cent.

STORAGE

Protected from light.

LABELLING

The label states the type of macrogol 20 glycerol monostearate.

Ph Eur

Macrogol 40 Sorbitol Heptaoleate

General Notices

(Ph Eur monograph 2396)

Action and use

Non-ionic surfactant.

Ph Eur

DEFINITION

Mixture of esters of fatty acids, mainly *Oleic acid (0799)*, and sorbitol ethoxylated with approximately 40 moles of ethylene oxide for each mole of sorbitol. 7 moles of oleic acid are used for each mole of sorbitol. It also contains macrogol fatty acid esters.

CHARACTERS

Appearance

Clear or slightly opalescent, yellowish, viscous, hygroscopic liquid.

Solubility

Dispersible in water, soluble in isopropyl myristate, in isopropyl palmitate, in mineral oils and in vegetable fatty oils.

Relative density

About 1.0.

Viscosity *(2.2.9)*

About 175 mPa·s at 25 °C.

IDENTIFICATION

First identification A, D.

Second identification B, C, D.

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison macrogol 40 sorbitol heptaoleate CRS.

B. Hydroxyl value (see Tests).

C. Saponification value (see Tests).

D. Composition of fatty acids (see Tests).

TESTS

Acid value *(2.5.1)*

Maximum 12.0, determined on 3.0 g.

Hydroxyl value *(2.5.3, Method A)*

22 to 55.

Peroxide value

Maximum 10.0.

Introduce 10.0 g into a 100 ml beaker, dissolve with *glacial acetic acid R* and dilute to 20 ml with the same acid. Add 1 ml of *saturated potassium iodide solution R* and allow to stand for 1 min. Add 50 ml of *carbon dioxide-free water R* and a magnetic stirring bar. Titrate with *0.01 M sodium thiosulphate*, determining the end-point potentiometrically *(2.2.20)*. Carry out a blank titration.

Determine the peroxide value using the following expression:

$$\frac{(n_1 - n_2) \times M \times 1000}{m}$$

n_1 = volume of *0.01 M sodium thiosulphate* required for the titration of the substance to be examined, in millilitres;

n_2 = volume of *0.01 M sodium thiosulphate* required for the blank titration, in millilitres;

M = molarity of the sodium thiosulphate solution;

m = mass of the substance to be examined, in grams.

Saponification value *(2.5.6)*

90 to 110, determined on 4.0 g.

Use 30.0 ml of *0.5 M alcoholic potassium hydroxide*, heat under reflux for 60 min and add 50 ml of *anhydrous ethanol R* before carrying out the titration.

Composition of fatty acids *(2.4.22, Method C)*

Use the mixture of calibrating substances in Table 2.4.22.-3.

Composition of the fatty-acid fraction of the substance:

- — *myristic acid*: maximum 5.0 per cent;
- — *palmitic acid*: maximum 16.0 per cent;
- — *palmitoleic acid*: maximum 8.0 per cent;
- — *stearic acid*: maximum 6.0 per cent;
- — *oleic acid*: minimum 58.0 per cent;
- — *linoleic acid*: maximum 18.0 per cent;

— *linolenic acid* : maximum 4.0 per cent.

Ethylene oxide and dioxan *(2.4.25, Method A)*

Maximum 1 ppm of ethylene oxide and maximum 10 ppm of dioxan.

Water *(2.5.12)*

Maximum 0.5 per cent, determined on 0.50 g.

Sulphated ash

Maximum 0.25 per cent.

Heat a silica crucible to redness for 30 min, allow to cool in a desiccator and weigh. Evenly distribute 1.0 g of the substance to be examined in the crucible and weigh. Dry at 100-105 °C for 1 h and ignite in a muffle furnace at 600 ± 25 °C, until the substance is thoroughly charred. Carry out the test for sulphated ash *(2.4.14)* on the residue obtained, starting from "Moisten the substance to be examined...".

STORAGE

In an airtight container , protected from light.

Ph Eur

Macrogol 6 Glycerol Caprylocaprate

General Notices

(Ph Eur monograph 1443)

Action and use

Non-ionic surfactant.

Ph Eur

DEFINITION

Mixture of mainly mono- and diesters of polyoxyethylene glycerol ethers mainly with caprylic (octanoic) and capric (decanoic) acids. The average number of moles of ethylene oxide reacted per mole of substance is 6.

Macrogol 6 glycerol caprylocaprate may be obtained by ethoxylation of glycerol and esterification with distilled coconut or palm kernel fatty acids, or by ethoxylation of mono- and diglycerides of caprylic and capric acids.

CHARACTERS

Appearance

Pale yellow liquid.

Solubility

Partly soluble in water, freely soluble in castor oil, in glycerol, in isopropanol and in propylene glycol.

Viscosity

About 145 mPa·s.

IDENTIFICATION

A. Dissolve 1.0 g in 99 g of a mixture of 10 volumes of *2-propanol R* and 90 volumes of *water R*. Heat the solution obtained to about 40 °C. A turbidity is produced. Allow to cool until the turbidity disappears. The cloud point is between 15 °C and 35 °C.

B. Saponification value (see Tests).

C. Composition of fatty acids (see Tests).

TESTS

Appearance

The substance to be examined is clear (*2.2.1*) and not more intensely coloured than reference solution Y_2 (*2.2.2, Method I*).

Alkalinity

Dissolve 2.0 g in a hot mixture of 10 ml of *ethanol (96 per cent) R* and 10 ml of *water R*. Add 0.1 ml of *bromothymol blue solution R1*. Not more than 0.5 ml of *0.1 M hydrochloric acid* is required to change the colour of the indicator to yellow.

Acid value (*2.5.1*)

Maximum 5.0, determined on 5.0 g.

Hydroxyl value (*2.5.3, Method A*)

165 to 225.

Saponification value (*2.5.6*)

85 to 105, determined on 2.0 g.

Composition of fatty acids

Gas chromatography (*2.4.22, Method A*).

Composition of the fatty-acid fraction of the substance:

— *caproic acid*: maximum 2.0 per cent;

— *caprylic acid*: 50.0 per cent to 80.0 per cent;

— *capric acid*: 20.0 per cent to 50.0 per cent;

— *lauric acid*: maximum 3.0 per cent;

— *myristic acid*: maximum 1.0 per cent.

Ethylene oxide and dioxan (*2.4.25*)

Maximum 1 ppm of ethylene oxide and maximum 10 ppm of dioxan.

Water (*2.5.12*)

Maximum 1.0 per cent, determined on 1.00 g.

Total ash (*2.4.16*)

Maximum 0.3 per cent.

Ph Eur

Macrogol Cetostearyl Ether

General Notices

(Ph Eur monograph 1123)

Action and use

Non-ionic surfactant.

Ph Eur

DEFINITION

Mixture of ethers of mixed macrogols with linear fatty alcohols, mainly cetostearyl alcohol. It may contain some free macrogols and it contains various amounts of free cetostearyl alcohol. The number of moles of ethylene oxide reacted per mole of cetostearyl alcohol is 2 to 33 (nominal value).

CHARACTERS

Appearance

White or yellowish-white, waxy, unctuous mass, pellets, microbeads or flakes.

Solubility:

— macrogol cetostearyl ether with low numbers of moles of ethylene oxide reacted per mole: practically insoluble in water, soluble in ethanol (96 per cent) and in methylene chloride;

— macrogol cetostearyl ether with higher numbers of moles of ethylene oxide reacted per mole: dispersible or soluble in water, soluble in ethanol (96 per cent) and in methylene chloride.

It solidifies at 32 °C to 52 °C.

IDENTIFICATION

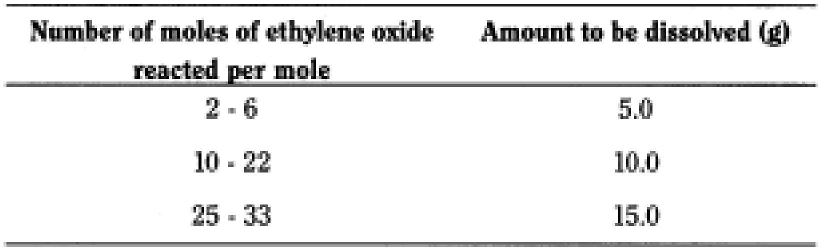
A. Hydroxyl value (see Tests).

B. Iodine value (see Tests).

C. Saponification value (see Tests).

D. Thin-layer chromatography (*2.2.27*).

Test solution Dissolve the prescribed amount of substance to be examined (see table below) in a mixture of 1 volume of *water R* and 9 volumes of *methanol R* and dilute to 75 ml with the same mixture of solvents.



Number of moles of ethylene oxide reacted per mole	Amount to be dissolved (g)
2 - 6	5.0
10 - 22	10.0
25 - 33	15.0

Add 60 ml of *hexane R* and shake for 3 min. The formation of foam can be reduced by the addition of some drops of *ethanol (96 per cent) R*. Filter the upper layer through *anhydrous sodium sulphate R*, wash the filter with 3 quantities, each of 10 ml, of *hexane R* and evaporate the combined filtrates to dryness. Dissolve 0.05 g of the residue in 10 ml of *methanol R* (the solution may be opalescent).

Reference solution Dissolve 25 mg of *stearyl alcohol CRS* in *methanol R* and dilute to 25 ml with the same solvent.

Plate *TLC silica gel plate R.*

Mobile phase *ethyl acetate R.*

Application 20 µl.

Development Over a path of 15 cm.

Drying In air.

Detection Spray with vanillin-sulphuric acid reagent prepared as follows: dissolve 0.5 g of *vanillin R* in 50 ml of *ethanol (96 per cent) R* and dilute to 100 ml with *sulphuric acid R*; allow to dry in air; heat at about 130 °C for 15 min and allow to cool in air.

Results The chromatogram obtained with the test solution shows several spots; one of these spots corresponds to the principal spot in the chromatogram obtained with the reference solution.

E. Dissolve or disperse 0.1 g in 5 ml of *ethanol (96 per cent) R*, add 2 ml of *water R*, 10 ml of *dilute hydrochloric acid R*, 10 ml of *barium chloride solution R1* and 10 ml of a 100 g/l solution of *phosphomolybdic acid R*. A precipitate is formed.

TESTS

Appearance of solution

The solution is not more intensely coloured than reference solution BY_5 (*2.2.2, Method II*).

Dissolve 5.0 g in *ethanol (96 per cent) R* and dilute to 50 ml with the same solvent.

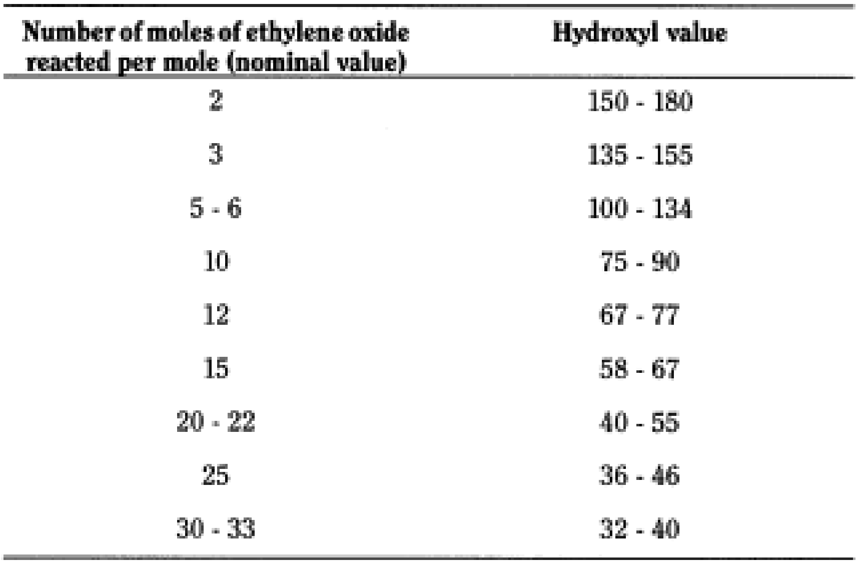
Alkalinity

Dissolve 2.0 g in a hot mixture of 10 ml of *ethanol (96 per cent) R* and 10 ml of *water R*. Add 0.1 ml of *bromothymol blue solution R1*. Not more than 0.5 ml of *0.1 M hydrochloric acid* is required to change the colour of the indicator to yellow.

Acid value (*2.5.1*)

Maximum 1.0, determined on 5.0 g.

Hydroxyl value (*2.5.3, Method A*).



Number of moles of ethylene oxide reacted per mole (nominal value)	Hydroxyl value
2	150 - 180
3	135 - 155
5 - 6	100 - 134
10	75 - 90
12	67 - 77
15	58 - 67
20 - 22	40 - 55
25	36 - 46
30 - 33	32 - 40

Iodine value (*2.5.4, Method A*)

Maximum 2.0.

Saponification value (*2.5.6*)

Maximum 3.0, determined on 10.0 g.

Ethylene oxide and dioxan (*2.4.25*)

Maximum 1 ppm of ethylene oxide and maximum 10 ppm of dioxan.

Water (*2.5.12*)

Maximum 3.0 per cent, determined on 2.00 g.

Total ash (*2.4.16*)

Maximum 0.2 per cent, determined on 2.0 g.

STORAGE

In an airtight container .

LABELLING

The label states the number of moles of ethylene oxide reacted per mole of cetostearyl alcohol (nominal value).

Ph Eur

Macrogol Glycerol Cocoates

General Notices

(Ph Eur monograph 1122)

Action and use

Pharmaceutical aids.

Ph Eur

DEFINITION

Mixtures of mono-, di- and triesters of ethoxylated glycerol with fatty acids of vegetable origin having a composition corresponding to the fatty acid composition of the oil extracted from the hard, dried fraction of the endosperm of *Cocos nucifera* L. The average number of moles of ethylene oxide reacted per mole of substance (nominal value) is either 7 (macrogol 7 glycerol cocoate) or 23 (macrogol 23 glycerol cocoate).

CHARACTERS

Appearance

Clear, yellowish, oily liquid.

Solubility

Soluble in water and in ethanol (96 per cent) and practically insoluble in light petroleum (50-70 °C) for macrogol 7 glycerol cocoate and macrogol 23 glycerol cocoate.

Relative density

About 1.05 for macrogol 7 glycerol cocoate; about 1.09 for macrogol 23 glycerol cocoate.

IDENTIFICATION

A. Dissolve 1.0 g of macrogol 7 glycerol cocoate in 99 g of a mixture of 10 volumes of *2-propanol R* and 90 volumes of *water R*. Heat the solution to about 65 °C. A turbidity is produced. Allow to cool until the turbidity disappears. The cloud point is between 35 °C and 54 °C.

Heat a 10 g/l solution of macrogol 23 glycerol cocoate in a 100 g/l solution of *sodium chloride R* to about 90 °C. A turbidity is produced. Allow to cool until the turbidity disappears. The cloud point is between 65 °C and 85 °C.

B. Iodine value (see Tests).

C. Saponification value (see Tests).

TESTS

Appearance

The substance to be examined is clear (*2.2.1*) and not more intensely coloured than reference solution Y_2 (*2.2.2, Method I*).

Alkalinity

Dissolve 2.0 g in a hot mixture of 10 ml of *ethanol (96 per cent) R* and 10 ml of *water R*. Add 0.1 ml of *bromothymol blue solution R1*. Not more than 0.5 ml of *0.1 M hydrochloric acid* is required to change the colour of the indicator to yellow.

Acid value (*2.5.1*)

Maximum 5.0, determined on 5.0 g.

Hydroxyl value (*2.5.3, Method A*)

See Table 1122.-1.

Saponification value (*2.5.6*)

See Table 1122.-1.

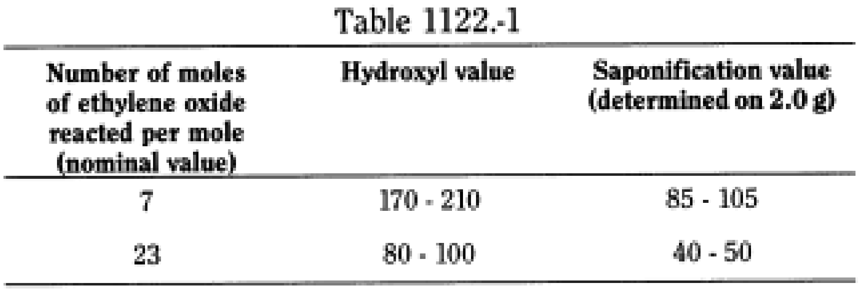


Table 1122.-1

Number of moles of ethylene oxide reacted per mole (nominal value)	Hydroxyl value	Saponification value (determined on 2.0 g)
7	170 - 210	85 - 105
23	80 - 100	40 - 50

Iodine value (*2.5.4, Method A*)

Maximum 5.0.

Composition of fatty acids

Gas chromatography (*2.4.22, Method A*).

Composition of the fatty-acid fraction of the substance:

— *caproic acid*: maximum 1.0 per cent;

— *caprylic acid*: 5.0 per cent to 10.0 per cent;

— *capric acid*: 4.0 per cent to 10.0 per cent;

— *lauric acid*: 40.0 per cent to 55.0 per cent;

— *myristic acid*: 14.0 per cent to 23.0 per cent;

— *palmitic acid*: 8.0 per cent to 12.0 per cent;

— *stearic acid*: 1.0 per cent to 5.0 per cent;

— *oleic acid*: 5.0 per cent to 10.0 per cent;

— *linoleic acid*: maximum 3.0 per cent.

Ethylene oxide and dioxan (*2.4.25*)

Maximum 1 ppm of ethylene oxide and maximum 10 ppm of dioxan.

Water (*2.5.12*)

Maximum 1.0 per cent, determined on 1.0 g.

Total ash (*2.4.16*)

Maximum 0.3 per cent.

LABELLING

The label states the number of moles of ethylene oxide reacted per mole of substance (nominal value).

Ph Eur

Macrogol Lauryl Ether

General Notices

(Ph Eur monograph 1124)

Action and use

Non-ionic surfactant.

Ph Eur

DEFINITION

Mixture of ethers of mixed macrogols with fatty alcohols, mainly $C_{12}H_{26}O$. It contains a variable amount of free $C_{12}H_{26}O$ and it may contain free macrogols. The number of moles of ethylene oxide reacted per mole of $C_{12}H_{26}O$ is 3 to 23 (nominal value).

CHARACTERS

— Macrogol lauryl ether with 3 to 5 units of ethylene oxide per molecule.

Appearance

Colourless liquid.

Solubility

Practically insoluble in water, soluble or dispersible in alcohol, practically insoluble in light petroleum.

— Macrogol lauryl ether with 9 to 23 units of ethylene oxide per molecule.

Appearance

White or almost white, waxy mass.

Solubility

Soluble or dispersible in water, soluble in alcohol, practically insoluble in light petroleum.

IDENTIFICATION

A. It complies with the test for hydroxyl value (see Tests).

B. It complies with the test for iodine value (see Tests).

C. It complies with the test for saponification value (see Tests).

D. Dissolve or disperse 0.1 g in 5 ml of *alcohol R*, add 10 ml of *dilute hydrochloric acid R*, 10 ml of *barium chloride solution R1* and 10 ml of a 100 g/l solution of *phosphomolybdic acid R*. A precipitate is formed.

TESTS

Appearance of solution

The solution is not more intensely coloured than reference solution BY_5 (*2.2.2, Method II*).

Dissolve 5.0 g in *alcohol R* and dilute to 50 ml with the same solvent.

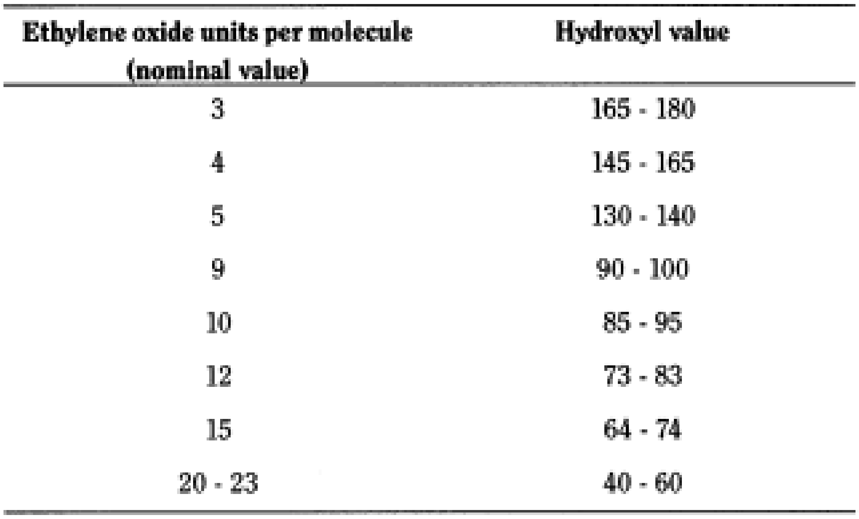
Alkalinity

Dissolve 2.0 g in a hot mixture of 10 ml of *water R* and 10 ml of *alcohol R*. Add 0.1 ml of *bromothymol blue solution R1*. Not more than 0.5 ml of *0.1 M hydrochloric acid* is required to change the colour of the indicator to yellow.

Acid value (*2.5.1*)

Maximum 1.0, determined on 5.0 g.

Hydroxyl value (*2.5.3, Method A*).



Ethylene oxide units per molecule (nominal value)	Hydroxyl value
3	165 - 180
4	145 - 165
5	130 - 140
9	90 - 100
10	85 - 95
12	73 - 83
15	64 - 74
20 - 23	40 - 60

Iodine value (*2.5.4*)

Maximum 2.0.

Saponification value (*2.5.6*)

Maximum 3.0, determined on 10.0 g.

Ethylene oxide and dioxan (*2.4.25*)

Maximum 1 ppm of ethylene oxide and maximum 10 ppm of dioxan.

Water (*2.5.12*)

Maximum 3.0 per cent, determined on 2.00 g.

Total ash (*2.4.16*)

Maximum 0.2 per cent, determined on 2.0 g.

STORAGE

In an airtight container .

LABELLING

The label states the number of moles of ethylene oxide reacted per mole of $C_{12}H_{26}O$ (nominal value).

Ph Eur

Macrogol Oleate

General Notices

(Ph Eur monograph 1618)

Action and use

Non-ionic surfactant.

Ph Eur

DEFINITION

A mixture of monoesters and diesters of mainly oleic (*cis*-9-octadecenoic) acid and macrogols. It may be obtained by ethoxylation of *Oleic acid (0799)* or by esterification of macrogols with oleic acid of animal or vegetable origin. It may contain free macrogols. The average polymer length is equivalent to 5-6 or 10 moles of ethylene oxide per mole (nominal value). A suitable antioxidant may be added.

CHARACTERS

Appearance

Slightly yellowish, viscous liquid.

Solubility

Dispersible in water, soluble in ethanol (96 per cent) and in 2-propanol, dispersible in oils, miscible with fatty oils and with waxes.

Refractive index

About 1.466.

IDENTIFICATION

First identification *A, C.*

Second identification *A, B.*

A. Saponification value (see Tests).

B. Thin-layer chromatography (*2.2.27*).

Test solution To 20 mg add 10 ml of *methylene chloride R* and mix.

Plate *TLC silica gel F_{254} plate R.*

Mobile phase 25 per cent *V/V* solution of *concentrated ammonia R*, *2-propanol R* (20:80 *V/V*).

Application 10 µl.

Development Over a path of 15 cm.

Drying In air.

Detection Spray with *potassium iodobismuthate solution R4*; examine the plate about 10 min later.

Results The chromatogram obtained shows 3 principal spots, corresponding, in order of increasing R_F value, to free macrogol, macrogol mono-oleate and macrogol dioleate.

C. Composition of fatty acids (see Tests).

TESTS

Alkalinity

Dissolve 2.0 g in *ethanol (96 per cent) R* and dilute to 20 ml with the same solvent. To 2 ml of this solution add 0.05 ml of *phenol red solution R*. The solution is not red.

Acid value (*2.5.1*)

Maximum 2.0.

Hydroxyl value (*2.5.3, Method A*)

See Table 1618.-1.

Iodine value (*2.5.4, Method A*)

See Table 1618.-1.

Peroxide value (*2.5.5, Method A*)

Maximum 12.0.

Saponification value (*2.5.6*)

See Table 1618.-1.

Table 1618.-1

	5-6 moles of ethylene oxide	**10 moles of ethylene oxide**
Hydroxyl value	50 - 70	65 - 90
Iodine value	50 - 60	27 - 34
Saponification value	105 - 120	68 - 85

Composition of fatty acids

Gas chromatography (*2.4.22, Method A*).

Composition of the fatty-acid fraction of the substance:

— *myristic acid*: maximum 5.0 per cent;

— *stearic acid*: maximum 6.0 per cent;

— *palmitic acid*: maximum 16.0 per cent;

— *palmitoleic acid*: maximum 8.0 per cent;

— *oleic acid*: 65.0 per cent to 88.0 per cent;

— *linoleic acid*: maximum 18.0 per cent;

— *linolenic acid*: maximum 4.0 per cent;

— *fatty acids with a chain length greater than* C_{18}: maximum 4.0 per cent.

Residual ethylene oxide and dioxan (*2.4.25*)

Maximum 1 ppm of residual ethylene oxide and 10 ppm of residual dioxan.

Water (*2.5.12*)

Maximum 2.0 per cent, determined on 1.00 g using *anhydrous methanol R* as the solvent.

Total ash (*2.4.16*)

Maximum 0.3 per cent, determined on 1.0 g.

STORAGE

In an airtight container .

LABELLING

The label states the number of moles of ethylene oxide per mole (nominal value).

Ph Eur

Macrogol Oleyl Ether

General Notices

(Ph Eur monograph 1125)

Action and use

Non-ionic surfactant.

Ph Eur

DEFINITION

Mixture of ethers of mixed macrogols with linear fatty alcohols, mainly oleyl alcohol. It contains a variable amount of free oleyl alcohol and it may contain free macrogols. The number of moles of ethylene oxide reacted per mole of oleyl alcohol is 2 to 20 (nominal value) . A suitable antioxidant may be added.

CHARACTERS

— Macrogol oleyl ether with 2 to 5 units of ethylene oxide per molecule.

Appearance

Yellow liquid.

Solubility

Practically insoluble in water, soluble in alcohol, practically insoluble in light petroleum.

— Macrogol oleyl ether with 10 to 20 units of ethylene oxide per molecule.

Appearance

Yellowish-white waxy mass.

Solubility

Dispersible or soluble in water, soluble in alcohol, practically insoluble in light petroleum.

IDENTIFICATION

A. It complies with the test for hydroxyl value (see Tests).

B. It complies with the test for iodine value (see Tests).

C. It complies with the test for saponification value (see Tests).

D. Dissolve or disperse 0.1 g in 5 ml of *alcohol R*, add 2 ml of *water R*, 10 ml of *dilute hydrochloric acid R*, 10 ml of *barium chloride solution R1* and 10 ml of a 100 g/l solution of *phosphomolybdic acid R*. A precipitate is formed.

TESTS

Appearance of solution

The solution is not more intensely coloured than reference solution BY_5 (*2.2.2, Method II*).

Dissolve 5.0 g in *alcohol R* and dilute to 50 ml with the same solvent.

Alkalinity

Dissolve 2.0 g in a hot mixture of 10 ml of *water R* and 10 ml of *alcohol R*. Add 0.1 ml of *bromothymol blue solution R1*. Not more than 0.5 ml of *0.1 M hydrochloric acid* is required to change the colour of the indicator to yellow.

Acid value (*2.5.1*)

Maximum 1.0, determined on 5.0 g.

Hydroxyl value (*2.5.3, Method A*)

See Table 1125.-1.

Iodine value (*2.5.4*)

See Table 1125.-1.

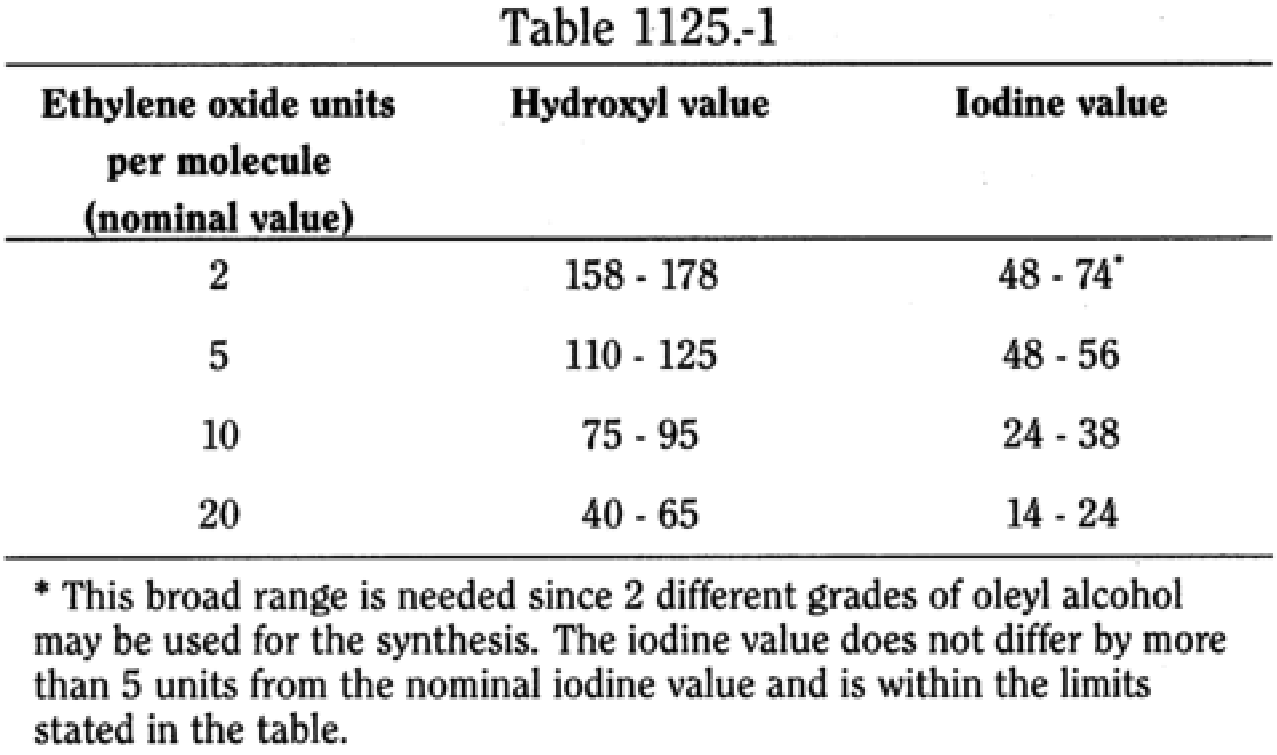


Table 1125.-1

Ethylene oxide units per molecule (nominal value)	Hydroxyl value	Iodine value
2	158 - 178	48 - 74*
5	110 - 125	48 - 56
10	75 - 95	24 - 38
20	40 - 65	14 - 24

* This broad range is needed since 2 different grades of oleyl alcohol may be used for the synthesis. The iodine value does not differ by more than 5 units from the nominal iodine value and is within the limits stated in the table.

Peroxide value (*2.5.5*)

Maximum 10.0.

Saponification value (*2.5.6*)

Maximum 3.0.

Ethylene oxide and dioxan (*2.4.25*)

Maximum 1 ppm of ethylene oxide and 10 ppm of dioxan.

Water (*2.5.12*)

Maximum 3.0 per cent, determined on 2.00 g.

Total ash (*2.4.16*)

Maximum 0.2 per cent, determined on 2.0 g.

STORAGE

In an airtight container , protected from light.

LABELLING

The label states:

— the number of moles of ethylene oxide reacted per mole of oleyl alcohol (nominal value);

— the nominal iodine value for the type with 2 units of ethylene oxide per molecule.

Ph Eur

Macrogol Stearate

General Notices

(Ph Eur monograph 1234)

Action and use

Non-ionic surfactant.

Ph Eur

DEFINITION

Mixture of monoesters and diesters of mainly stearic (octadecanoic) acid and/or palmitic (hexadecanoic) acid and macrogols. It may be obtained by ethoxylation or by esterification of macrogols with stearic acid 50 (type I) or stearic acid 95 (type II) (see *Stearic acid (1474)*). It may contain free macrogols. The average polymer length is equivalent to 6 to 100 ethylene oxide units per molecule (nominal value).

CHARACTERS

Appearance

White or slightly yellowish waxy mass.

Solubility

Soluble in alcohol and in 2-propanol. Macrogol stearate corresponding to a product with 6 to 9 units of ethylene oxide per molecule is practically insoluble, but freely dispersible in water and miscible with fatty oils and with waxes. Macrogol stearate corresponding to a product with 20 to 100 units of ethylene oxide per molecule is soluble in water and practically insoluble in fatty oils and in waxes.

IDENTIFICATION

A. It complies with the test for saponification value (see Tests).

B. It complies with the test for composition of fatty acids (see Tests).

TESTS

Alkalinity

Dissolve 2.0 g in *alcohol R* and dilute to 20 ml with the same solvent. To 2 ml of this solution add 0.05 ml of *phenol red solution R*. The solution is not red.

Melting point (*2.2.15*)

See Table 1234.-1.

Melt about 10 g at 80-90 °C. Introduce into the tube by capillary action, a sufficient amount of the substance, to form in the tube a column of the prescribed height. Allow to stand at 0 °C for 2 h.

Acid value (*2.5.1*)

Maximum 2.0, determined on 2.0 g.

Hydroxyl value (*2.5.3, Method A*)

See Table 1234.-1.

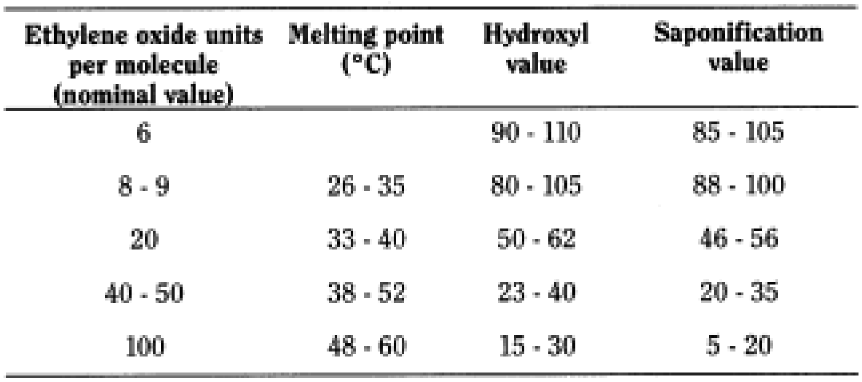
Iodine value (*2.5.4*)

Maximum 2.0.

Saponification value (*2.5.6*)

See Table 1234.-1.

Table 1234.-1



Ethylene oxide units per molecule (nominal value)	Melting point (°C)	Hydroxyl value	Saponification value
6		90 - 110	85 - 105
8 - 9	26 - 35	80 - 105	88 - 100
20	33 - 40	50 - 62	46 - 56
40 - 50	38 - 52	23 - 40	20 - 35
100	48 - 60	15 - 30	5 - 20

Reducing substances

Dissolve or disperse 2.0 g in *water R* and dilute to 20 ml with the same solvent. Mix 1.0 ml of the solution with 9 ml of *0.1 M sodium hydroxide* and 0.5 ml of *triphenyltetrazolium chloride solution R*. Heat in a water-bath at 70 °C. After 5 min, the solution is not more intensely coloured than a mixture of 0.15 ml of yellow primary solution, 0.9 ml of red primary solution and 8.95 ml of a 10 g/l solution of *hydrochloric acid R* (*2.2.2, Method II*).

Composition of fatty acids

Gas chromatography (*2.4.22, Method C*).

Composition of the fatty acid fraction of the substance:

	Type of fatty acid used	Composition of fatty acids
Macrogol stearate type I	Stearic acid 50	*Stearic acid*: 40.0 per cent to 60.0 per cent, *Sum of the contents of palmitic and stearic acids*: not less than 90.0 per cent.
Macrogol stearate type II	Stearic acid 95	*Stearic acid*: 90.0 per cent to 99.0 per cent, *Sum of the contents of palmitic and stearic acids*: not less than 96.0 per cent.

Ethylene oxide and dioxan (*2.4.25*)

Maximum 1 ppm of ethylene oxide and 10 ppm of dioxan.

Heavy metals (*2.4.8*)

Maximum 10 ppm.

2.0 g complies with limit test C. Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R.*

Water (*2.5.12*)

Maximum 3.0 per cent, determined on 0.50 g. Use as the solvent a mixture of equal volumes of *anhydrous methanol R* and *methylene chloride R*.

Total ash (*2.4.16*)

Maximum 0.3 per cent, determined on 1.0 g.

STORAGE

In an airtight container .

LABELLING

The label states:

— the number of ethylene oxide units per molecule (nominal value);

— the type of macrogol stearate.

Ph Eur

Macrogol Stearyl Ether

General Notices

(Ph Eur monograph 1340)

Action and use

Non-ionic surfactant.

Ph Eur

DEFINITION

Mixture of ethers obtained by ethoxylation of stearyl alcohol. It may contain some free macrogols and various amounts of free stearyl alcohol. The number of moles of ethylene oxide reacted per mole of stearyl alcohol is 2 to 20 (nominal value).

CHARACTERS

Appearance

White or yellowish-white, waxy, unctuous mass, pellets, microbeads or flakes.

Solubility:

— macrogol stearyl ether with 2 moles of ethylene oxide reacted per mole: practically insoluble in water, soluble in ethanol (96 per cent) with heating and in methylene chloride;

— macrogol stearyl ether with 10 moles of ethylene oxide reacted per mole: soluble in water and in ethanol (96 per cent);

— macrogol stearyl ether with 20 moles of ethylene oxide reacted per mole: soluble in water, in ethanol (96 per cent) and in methylene chloride.

After melting, it solidifies at about 45 °C.

IDENTIFICATION

A. Hydroxyl value (see Tests).

B. Iodine value (see Tests).

C. Saponification value (see Tests).

D. Thin-layer chromatography (*2.2.27*).

Test solution Dissolve 10.0 g in a mixture of 1 volume of *water R* and 9 volumes of *methanol R* and dilute to 75 ml with the same mixture of solvents. Add 60 ml of *heptane R* and shake for 3 min. The formation of foam can be reduced by the addition of a few drops of *ethanol (96 per cent) R*. Filter the upper layer through *anhydrous sodium sulphate R*, wash the filter with 3 quantities, each of 10 ml, of *heptane R* and evaporate the combined filtrates to dryness.

Dissolve 50 mg of the residue in 10 ml of *methanol R* (the solution may be opalescent).

Reference solution Dissolve 25 mg of *stearyl alcohol CRS* in *methanol R* and dilute to 25 ml with the same solvent.

Plate *TLC silica gel plate R.*

Mobile phase *ethyl acetate R.*

Application 20 µl.

Development Over a path of 15 cm.

Drying In air.

Detection Spray with vanillin-sulphuric acid reagent prepared as follows: dissolve 0.5 g of *vanillin R* in 50 ml of *ethanol (96 per cent) R* and dilute to 100 ml with *sulphuric acid R*; allow to dry in air; heat at about 130 °C for 15 min and allow to cool in air.

Results The chromatogram obtained with the test solution shows several spots; one of these spots corresponds to the principal spot in the chromatogram obtained with the reference solution.

E. Dissolve or disperse 0.1 g in 5 ml of *ethanol 96 per cent R*, add 2 ml of *water R*, 10 ml of *dilute hydrochloric acid R*, 10 ml of *barium chloride solution R1* and 10 ml of a 100 g/l solution of *phosphomolybdic acid R*. A precipitate is formed.

TESTS

Appearance of solution

The solution is not more intensely coloured than reference solution BY_5 (*2.2.2, Method II*).

Dissolve 5.0 g in *ethanol (96 per cent) R* and dilute to 50 ml with the same solvent.

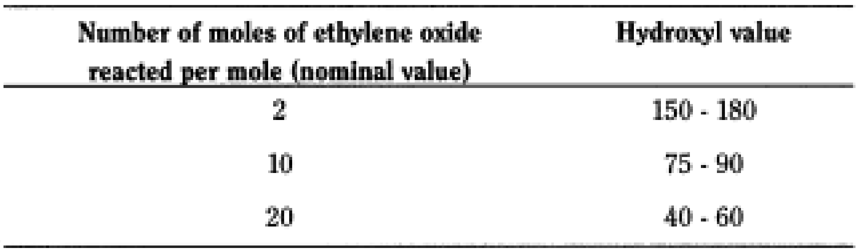
Alkalinity

Dissolve 2.0 g in a hot mixture of 10 ml of *ethanol (96 per cent) R* and 10 ml of *water R*. Add 0.1 ml of *bromothymol blue solution R1*. Not more than 0.5 ml of *0.1 M hydrochloric acid* is required to change the colour of the indicator to yellow.

Acid value (*2.5.1*)

Maximum 1.0, determined on 5.0 g.

Hydroxyl value (*2.5.3, Method A*).



Number of moles of ethylene oxide reacted per mole (nominal value)	Hydroxyl value
2	150 - 180
10	75 - 90
20	40 - 60

Iodine value (*2.5.4, Method A*)

Maximum 2.0.

Saponification value (*2.5.6*)

Maximum 3.0, determined on 10.0 g.

Ethylene oxide and dioxan (*2.4.25*)

Maximum 1 ppm of ethylene oxide and maximum 10 ppm of dioxan.

Water (*2.5.12*)

Maximum 3.0 per cent, determined on 1.00 g.

STORAGE

In an airtight container .

LABELLING

The label states the number of moles of ethylene oxide reacted per mole of stearyl alcohol (nominal value).

Ph Eur

Macrogols

General Notices

(Ph Eur monograph 1444)

Action and use

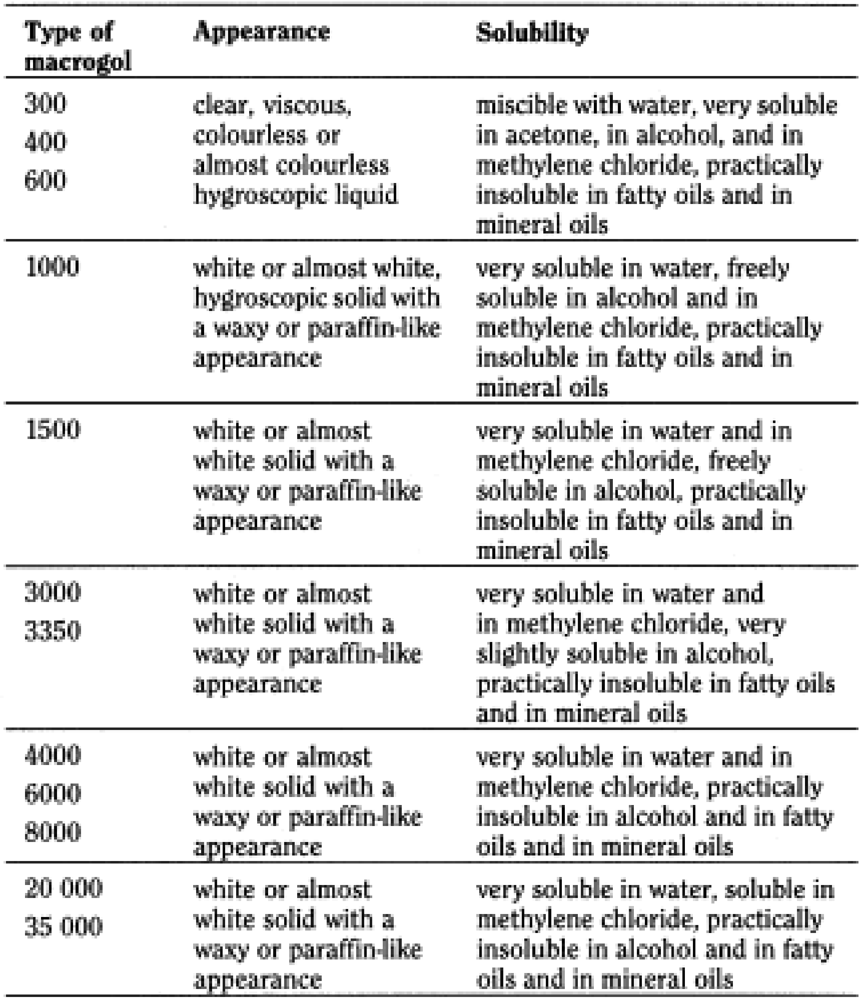
Non-ionic surfactant.

Ph Eur

DEFINITION

Mixtures of polymers with the general formula $H\text{-}(OCH_2\text{-}CH_2)_n\text{-}OH$ where *n* represents the average number of oxyethylene groups. The type of macrogol is defined by a number that indicates the average relative molecular mass. A suitable stabiliser may be added.

CHARACTERS



Type of macrogol	Appearance	Solubility
300 400 600	clear, viscous, colourless or almost colourless hygroscopic liquid	miscible with water, very soluble in acetone, in alcohol, and in methylene chloride, practically insoluble in fatty oils and in mineral oils
1000	white or almost white, hygroscopic solid with a waxy or paraffin-like appearance	very soluble in water, freely soluble in alcohol and in methylene chloride, practically insoluble in fatty oils and in mineral oils
1500	white or almost white solid with a waxy or paraffin-like appearance	very soluble in water and in methylene chloride, freely soluble in alcohol, practically insoluble in fatty oils and in mineral oils
3000 3350	white or almost white solid with a waxy or paraffin-like appearance	very soluble in water and in methylene chloride, very slightly soluble in alcohol, practically insoluble in fatty oils and in mineral oils
4000 6000 8000	white or almost white solid with a waxy or paraffin-like appearance	very soluble in water and in methylene chloride, practically insoluble in alcohol and in fatty oils and in mineral oils
20 000 35 000	white or almost white solid with a waxy or paraffin-like appearance	very soluble in water, soluble in methylene chloride, practically insoluble in alcohol and in fatty oils and in mineral oils

IDENTIFICATION

A. It complies with the test for viscosity (see Tests).

B. To 1 g in a test-tube add 0.5 ml of *sulphuric acid R*, close the test-tube with a stopper fitted with a bent delivery tube and heat until white fumes are evolved. Collect the fumes via the delivery tube into 1 ml of *mercuric chloride solution R*. An abundant white, crystalline precipitate is formed.

C. To 0.1 g add 0.1 g of *potassium thiocyanate R* and 0.1 g of *cobalt nitrate R* and mix thoroughly with a glass rod. Add 5 ml of *methylene chloride R* and shake. The liquid phase becomes blue.

TESTS

Appearance of solution

The solution is clear (*2.2.1*) and not more intensely coloured than reference solution BY_6 (*2.2.2, Method II*).

Dissolve 12.5 g in *water R* and dilute to 50 ml with the same solvent.

Acidity or alkalinity

Dissolve 5.0 g in 50 ml of *carbon dioxide-free water R* and add 0.15 ml of *bromothymol blue* *solution R1*. The solution is yellow or green. Not more than 0.1 ml of *0.1 M sodium hydroxide* is required to change the colour of the indicator to blue.

Viscosity (*2.2.9*)

The viscosity is calculated using a density given in Table 1444.-1.

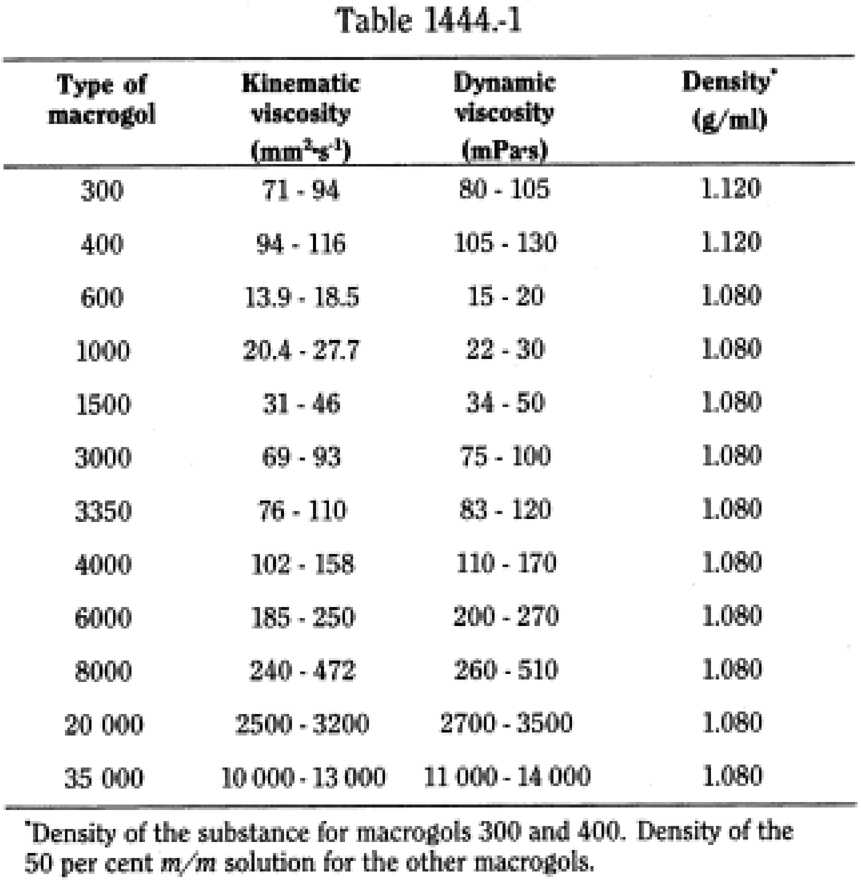


Table 1444.-1

Type of macrogol	Kinematic viscosity ($mm^2 s^{-1}$)	Dynamic viscosity (mPa·s)	Density* (g/ml)
300	71 - 94	80 - 105	1.120
400	94 - 116	105 - 130	1.120
600	13.9 - 18.5	15 - 20	1.080
1000	20.4 - 27.7	22 - 30	1.080

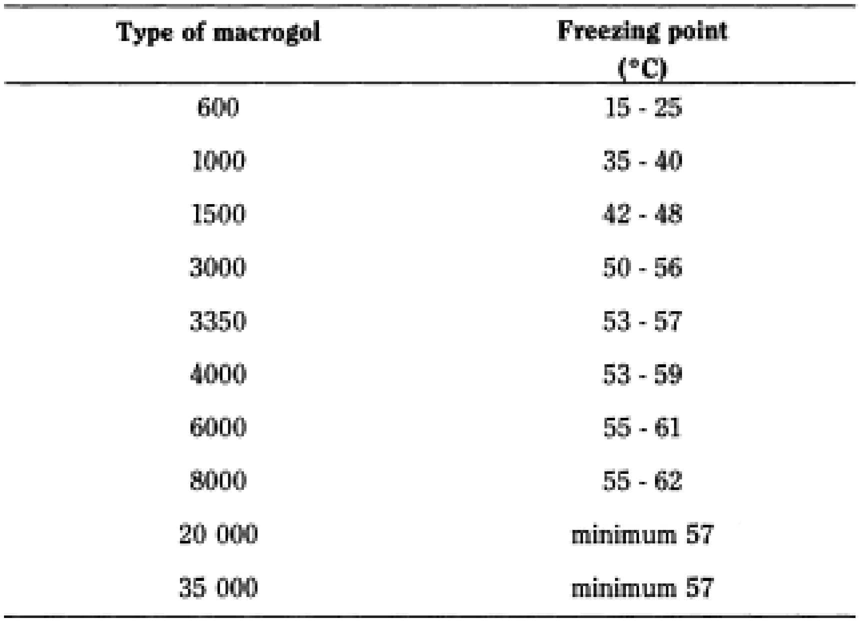
*Density of the substance for macrogols 300 and 400. Density of the 50 per cent *m/m* solution for the other macrogols.

For macrogols having a relative molecular mass greater than 400, determine the viscosity on a 50 per cent m/m solution of the substance to be examined.

Freezing point (*2.2.18*)

See Table 1444.-2.

Table 1444.-2



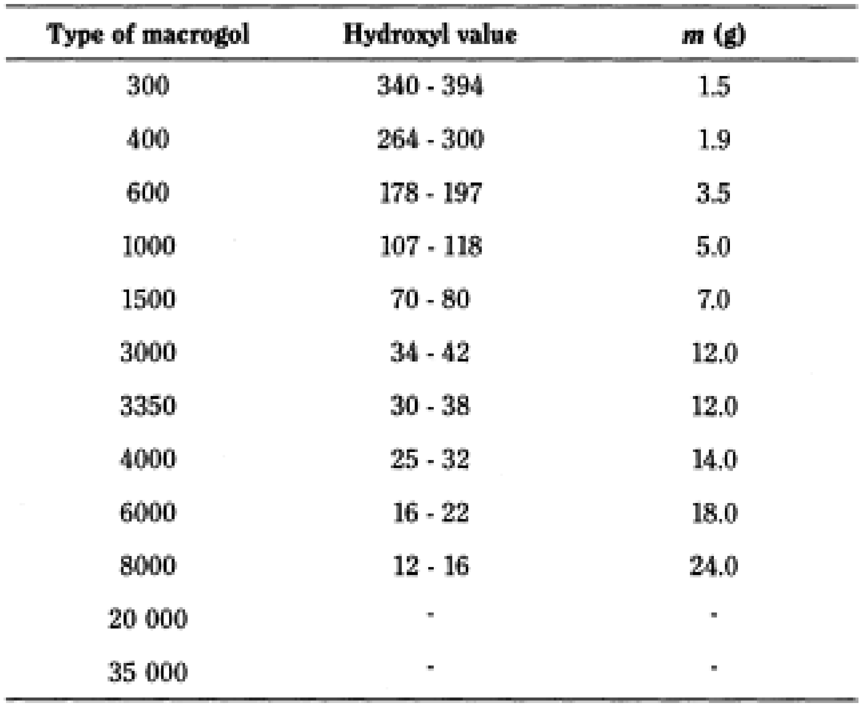
Type of macrogol	Freezing point (°C)
600	15 - 25
1000	35 - 40
1500	42 - 48
3000	50 - 56
3350	53 - 57
4000	53 - 59
6000	55 - 61
8000	55 - 62
20 000	minimum 57
35 000	minimum 57

Hydroxyl value

Introduce *m* g (see Table 1444.-3) into a dry conical flask fitted with a reflux condenser. Add 25.0 ml of *phthalic anhydride solution R*, swirl to dissolve and boil under a reflux condenser on a hot plate for 60 min. Allow to cool. Rinse the condenser first with 25 ml of *pyridine R* and then with 25 ml of *water R*, add 1.5 ml of *phenolphthalein solution R* and titrate with *1 M sodium hydroxide* until a faint pink colour is obtained (n_1 ml). Carry out a blank test (n_2 ml). Calculate the hydroxyl value using the expression:

$$\frac{56.1 \times (n_2 - n_1)}{m}$$

Table 1444.-3



Type of macrogol	Hydroxyl value	*m* (g)
300	340 - 394	1.5
400	264 - 300	1.9
600	178 - 197	3.5
1000	107 - 118	5.0
1500	70 - 80	7.0
3000	34 - 42	12.0
3350	30 - 38	12.0
4000	25 - 32	14.0
6000	16 - 22	18.0
8000	12 - 16	24.0
20 000	-	-
35 000	-	-

For macrogols having a relative molecular mass greater than 1000, if the water content is more than 0.5 per cent, dry a sample of suitable mass at 100-105 °C for 2 h and carry out the determination of the hydroxyl value on the dried sample.

Reducing substances

Dissolve 1 g in 1 ml of a 10 g/l solution of *resorcinol R* and warm gently if necessary. Add 2 ml of *hydrochloric acid R*. After 5 min the solution is not more intensely coloured than reference solution R_3 (*2.2.2, Method I*).

Formaldehyde

Maximum 30 ppm.

Test solution To 1.00 g add 0.25 ml of chromotropic acid, *sodium salt solution R*, cool in iced water and add 5.0 ml of *sulphuric acid R*. Allow to stand for 15 min and complete slowly to 10 ml with *water R*.

Reference solution Dilute 0.860 g of *formaldehyde solution R* to 100 ml with *water R*. Dilute 1.0 ml of this solution to 100 ml with *water R*. In a 10 ml flask, mix 1.00 ml of this solution with 0.25 ml of *chromotropic acid, sodium salt solution R*, cool in iced water and add 5.0 ml of *sulphuric acid R*. Allow to stand for 15 min and complete slowly to 10 ml with *water R*.

Blank solution In a 10 ml flask mix 1.00 ml of *water R* with 0.25 ml of chromotropic acid, *sodium salt solution R*, cool in iced water and add 5.0 ml of *sulphuric acid R*. Complete slowly to 10 ml with water *R*.

Determine the absorbance (*2.2.25*) of the test solution at 567 nm, against the blank solution. It is not higher than that of the reference solution.

If the use of macrogols with a higher content of formaldehyde may have adverse effects, the competent authority may impose a limit of not more than 15 ppm.

Ethylene glycol and diethylene glycol

Carry out this test only if the macrogol has a relative molecular mass below 1000.

Gas chromatography (*2.2.28*).

Test solution Dissolve 5.00 g of the substance to be examined in *acetone R* and dilute to 100.0 ml with the same solvent.

Reference solution Dissolve 0.10 g of *ethylene glycol R* and 0.50 g of *diethylene glycol R* in *acetone R* and dilute to 100.0 ml with the same solvent. Dilute 1.0 ml of this solution to 10.0 ml with *acetone R*.

Column:
- *material*: glass;
- *size: l* = 1.8 m, Ø = 2 mm;
- *stationary phase*: *silanised diatomaceous earth for gas chromatography R*, impregnated with 5 per cent *m/m* of *macrogol 20 000 R*,

Carrier gas *nitrogen for chromatography R*.

Flow rate 30 ml/min.

Temperature:
- *column*: if necessary, precondition the column by heating at 200 °C for about 15 h; adjust the initial temperature of the column to obtain a retention time of 14-16 min for diethylene glycol; raise the temperature of the column by about 30 °C at a rate of 2 °C/min but without exceeding 170 °C;
- *injection port and detector*: 250 °C.

Detection Flame ionisation.

Injection 2 µl.

Carry out 5 replicate injections to check the repeatability of the response.

Limit Maximum 0.4 per cent, calculated as the sum of the contents of ethylene glycol and diethylene glycol.

Ethylene oxide and dioxan (*2.4.25*)

Maximum 1 ppm of ethylene oxide and 10 ppm of dioxan.

Heavy metals (*2.4.8*)

Maximum 20 ppm.

Dissolve 2.0 g in *water R* and dilute to 20 ml with the same solvent. 12 ml of the solution complies with limit test A. Prepare the standard using *lead standard solution (2 ppm Pb) R*.

Water (*2.5.12*)

Maximum 2.0 per cent for macrogol with a relative molecular mass not greater than 1000 and maximum 1.0 per cent for macrogol with a relative molecular mass greater than 1000, determined on 2.00 g.

Sulphated ash (*2.4.14*)

Maximum 0.2 per cent, determined on 1.0 g.

STORAGE

In an airtight container.

LABELLING

The label states:

- — the type of macrogol;
- — the content of formaldehyde.

Ph Eur

Magaldrate

General Notices

(Ph Eur monograph 1539)

$Al_5Mg_{10}(OH)_{31}(SO_4)_2,xH_2O$ (anhydrous) 1097 *74978-16-8*

Action and use

Antacid.

Preparation

Magaldrate Oral Suspension

Ph Eur

DEFINITION

Magaldrate is composed of aluminium and magnesium hydroxides and sulphates. Its composition corresponds approximately to the formula $Al_5Mg_{10}(OH)_{31}(SO_4)_2,xH_2O$.

Content

90.0 per cent to 105.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water and in ethanol (96 per cent). It is soluble in dilute mineral acids.

IDENTIFICATION

A. Dissolve 0.6 g in 20 ml of *3 M hydrochloric acid R*, add about 30 ml of *water R* and heat to boiling. Adjust to pH 6.2 with *dilute ammonia R1*, continue boiling for a further 2 min, filter and retain the precipitate and the filtrate. To 2 ml of the filtrate add 2 ml of *ammonium chloride solution R* and neutralise with a solution prepared by dissolving 2 g of *ammonium carbonate R* and 2 ml of *dilute ammonia R1* in 20 ml of *water R*; no precipitate is produced. Add *disodium hydrogen phosphate solution R*; a white, crystalline precipitate is produced which does not dissolve in *dilute ammonia R1*.

B. The precipitate retained in identification test A gives the reaction of aluminium (*2.3.1*).

C. The filtrate retained in identification test A gives reaction (a) of sulphates (*2.3.1*).

TESTS

Soluble chlorides

Maximum 3.5 per cent.

Disperse 1 g in 50 ml of *water R*, boil for 5 min, cool, dilute again to 50.0 ml, mix and filter. To 25.0 ml of the filtrate add 0.2 ml of *potassium chromate solution R* and titrate with *0.1 M silver nitrate* until a persistent violet-red colour is obtained. Not more than 5.0 ml of *0.1 M silver nitrate* is required.

Soluble sulphates

Maximum 1.9 per cent.

To 2.5 ml of the filtrate obtained in the test for soluble chlorides, add 30 ml of *water R*, neutralise to *blue litmus paper R* with *hydrochloric acid R*, add 3 ml of *1 M hydrochloric acid*, 3 ml of a 120 g/l solution of *barium chloride R* and dilute to 50 ml with *water R*. Mix and allow to stand for 10 min. Any opalescence in the test solution is not more intense than that of a standard prepared at the same time in the same manner using 1 ml of *0.01 M sulphuric acid* instead of 2.5 ml of filtrate.

Sulphates

16.0 per cent to 21.0 per cent (dried substance).

Dissolve 0.875 g in a mixture of 5 ml of *glacial acetic acid R* and 10 ml of *water R* and dilute to 25 ml with *water R*. Prepare a chromatographic column of 1 cm in internal diameter containing 15 ml of *cation exchange resin R* (150-300 µm), previously washed with 30 ml of *water R*. Transfer 5.0 ml of the solution to be examined to the column and elute with 15 ml of *water R*. To the eluate add 5 ml of a 53.6 g/l solution of *magnesium acetate R*, 32 ml of *methanol R* and 0.2 ml of *alizarin S solution R*. Add from a burette about 4.0 ml of *0.05 M barium chloride*, add a further 0.2 ml of *alizarin S solution R* and slowly complete the titration until the yellow colour disappears and a violet-red tinge is visible.

1 ml of *0.05 M barium chloride* is equivalent to 4.803 mg of SO_4.

Aluminium hydroxide

32.1 per cent to 45.9 per cent (dried substance).

Dissolve 0.800 g in 10 ml of *dilute hydrochloric acid R1*, heating on a water-bath. Cool and dilute to 50.0 ml with *water R*. To 10.0 ml of this solution, add *dilute ammonia R1* until a precipitate begins to appear. Add the smallest quantity of *dilute hydrochloric acid R* needed to dissolve the precipitate and dilute to 20 ml with *water R*. Carry out the complexometric titration of aluminium (*2.5.11*).

1 ml of *0.1 M sodium edetate* is equivalent to 7.80 mg of $Al(OH)_3$.

Magnesium hydroxide

49.2 per cent to 66.6 per cent (dried substance).

Dissolve 0.100 g in 2 ml of *dilute hydrochloric acid R* and carry out the complexometric titration of magnesium (*2.5.11*).

1 ml of *0.1 M sodium edetate* is equivalent to 5.832 mg of $Mg(OH)_2$.

Sodium

Maximum 0.10 per cent.

Atomic absorption spectrometry (*2.2.23, Method I*).

Test solution Weigh 2.00 g into a 100 ml volumetric flask, place in an ice-bath, add 5 ml of *nitric acid R* and swirl to mix. Allow to warm to room temperature and dilute to 100 ml with *water R*. Filter, if necessary, to obtain a clear solution. Dilute 10.0 ml of the filtrate to 100.0 ml with *water R*.

Reference solutions Prepare the reference solutions using *sodium standard solution (200 ppm Na) R*, diluted as necessary with *dilute nitric acid R*.

Source Sodium hollow-cathode lamp.

Wavelength 589 nm.

Atomisation device Air-acetylene flame.

Heavy metals (*2.4.8*)

Maximum 30 ppm.

Dissolve 2.0 g in 30 ml of *hydrochloric acid R1* and shake with 50 ml of *methyl isobutyl ketone R* for 2 min. Allow to stand, then separate and evaporate the aqueous layer to dryness. Dissolve the residue in 30 ml of *water R*. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R*.

Loss on drying (*2.2.32*)

10.0 per cent to 20.0 per cent, determined on 1.000 g by drying in an oven at 200 °C for 4 h.

ASSAY

To 1.500 g add 50.0 ml of *1 M hydrochloric acid*. Titrate the excess hydrochloric acid with *1 M sodium hydroxide* to pH 3.0, determining the end-point potentiometrically (*2.2.20*). Carry out a blank titration.

1 ml of *1 M hydrochloric acid* is equivalent to 35.40 mg of $Al_5Mg_{10}(OH)_{31}(SO_4)_2$.

Ph Eur

Magnesium Acetate Tetrahydrate

General Notices

(Ph Eur monograph 2035)

$Mg(CH_3COO)_2,4H_2O$ 214.5 *16674-78-5*

Action and use

Used in dialysis solutions.

Ph Eur

DEFINITION

Content

98.0 per cent to 101.0 per cent of magnesium acetate (anhydrous substance).

CHARACTERS

Appearance

Colourless crystals or white or almost white, crystalline powder.

Solubility

Freely soluble in water and in alcohol.

IDENTIFICATION

A. Dissolve about 100 mg in 2 ml of *water R*. Add 1 ml of *dilute ammonia R1* and heat. A white precipitate is formed that dissolves slowly on addition of 5 ml of *ammonium chloride solution R*. Add 1 ml of *disodium hydrogen phosphate solution R*. A white crystalline precipitate is formed.

B. It gives reaction (b) of acetates (*2.3.1*).

TESTS

pH (*2.2.3*)

7.5 to 8.5.

Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 50 ml with the same solvent.

Chlorides (*2.4.4*)

Maximum 330 ppm.

Dissolve 1.0 g in *water R* and dilute to 100 ml with the same solvent. 15 ml of the solution complies with the limit test for chlorides.

Nitrates

Maximum 3 ppm.

Dissolve 1.0 g in *distilled water R* and dilute to 10 ml with the same solvent, add 5 mg of *sodium chloride R*, 0.05 ml of *indigo carmine solution R* and while stirring, 10 ml of *nitrogen-free sulphuric acid R*. A blue colour is produced which persists for at least 10 min.

Sulphates (*2.4.13*)

Maximum 600 ppm.

Dissolve 0.25 g in *distilled water R* and dilute to 15 ml with the same solvent.

Aluminium (*2.4.17*)

Maximum 1 ppm.

Prescribed solution Dissolve 4.0 g in *water R* and dilute to 100 ml with the same solvent. Add 10 ml of acetate buffer solution pH 6.0 R.

Reference solution Mix 2 ml of *aluminium standard solution (2 ppm Al) R*, 10 ml of *acetate buffer solution pH 6.0 R* and 98 ml of *water R*.

Blank solution Mix 10 ml of *acetate buffer solution pH 6.0 R* and 100 ml of *water R*.

Calcium (*2.4.3*)

Maximum 100 ppm.

Dissolve 1.0 g in *distilled water R* and dilute to 15 ml with the same solvent.

Potassium

Maximum 0.10 per cent.

Atomic emission spectrometry (*2.2.22, Method II*).

Test solution Dissolve 0.5 g in *water R* and dilute to 100 ml with the same solvent.

Reference solutions Prepare the reference solutions using *potassium standard solution (600 ppm K) R*, diluted as necessary with *water R*.

Wavelength 766.5 nm.

Sodium

Maximum 0.50 per cent.

Atomic emission spectrometry (*2.2.22, Method II*).

Test solution Dissolve 1.0 g in *water R* and dilute to 100 ml with the same solvent.

Reference solutions Prepare the reference solutions using *sodium standard solution (200 ppm Na) R*, diluted as necessary with *water R*.

Wavelength 589.0 nm.

Heavy metals (*2.4.8*)

Maximum 40 ppm.

Dissolve 1.0 g in *water R* and dilute to 20 ml with the same solvent. 12 ml of the solution complies with limit test A. Prepare the standard using *lead standard solution (2 ppm Pb) R*.

Readily oxidisable substances

Dissolve 2.0 g in 100 ml of boiling *water R*, add 6 ml of a 150 g/l solution of *sulphuric acid R* and 0.3 ml of *0.02 M potassium permanganate*. Mix and boil gently for 5 min. The pink colour is not completely discharged.

Water (*2.5.12*)

33.0 per cent to 35.0 per cent, determined on 0.100 g.

ASSAY

Dissolve 0.150 g in 300 ml of *water R*. Carry out the complexometric titration of magnesium (*2.5.11*).

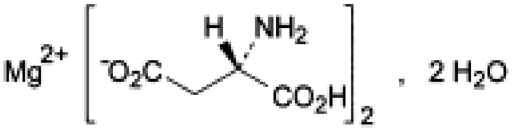
1 ml of *0.1 M sodium edetate* is equivalent to 14.24 mg of $C_4H_6MgO_4$.

Ph Eur

Magnesium Aspartate

General Notices

(Magnesium Aspartate Dihydrate, Ph Eur monograph 1445)



$C_8H_{12}MgN_2O_8,2H_2O$ 324.5 *72231-13-1*

Ph Eur

DEFINITION

Magnesium aspartate dihydrate contains not less than 98.0 per cent and not more than the equivalent of 102.0 per cent of magnesium di[(*S*)-2-aminohydrogenobutane-1,4-dioate], calculated with reference to the anhydrous substance.

CHARACTERS

A white or almost white, crystalline powder or colourless crystals, freely soluble in water.

IDENTIFICATION

A. It complies with the test for specific optical rotation (see Tests).

B. Examine the chromatograms obtained in the test for ninhydrin-positive substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Ignite about 15 mg until a white residue is obtained. Dissolve the residue in 1 ml of *dilute hydrochloric acid R*, neutralise to *red litmus paper R* by the addition of *dilute sodium hydroxide solution R* and filter if necessary. The solution gives the reaction of magnesium (*2.3.1*).

TESTS

Solution S

Dissolve 2.5 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

pH (*2.2.3*)

The pH of solution S is 6.0 to 8.0.

Specific optical rotation (*2.2.7*)

Dissolve 0.50 g in a 515 g/l solution of *hydrochloric acid R* and dilute to 25.0 ml with the same acid. The specific optical rotation is + 20.5 to + 23.0, calculated with reference to the anhydrous substance.

Ninhydrin-positive substances

Examine by thin-layer chromatography (*2.2.27*), using a *TLC silica gel plate R*.

Test solution (a) Dissolve 0.10 g of the substance to be examined in *water R* and dilute to 10 ml with the same solvent.

Test solution (b) Dilute 1 ml of test solution (a) to 50 ml with *water R*.

Reference solution (a) Dissolve 10 mg of *magnesium aspartate dihydrate CRS* in *water R* and dilute to 50 ml with the same solvent.

Reference solution (b) Dilute 5 ml of test solution (b) to 20 ml with *water R*.

Reference solution (c) Dissolve 10 mg of *magnesium aspartate dihydrate CRS* and 10 mg of *glutamic acid CRS* in 2 ml of *water R* and dilute to 25 ml with the same solvent.

Apply to the plate 5 µl of each solution. Allow the plate to dry in air. Develop over a path of 15 cm using a mixture of 20 volumes of *glacial acetic acid R*, 20 volumes of *water R* and 60 volumes of *butanol R*. Allow the plate to dry in air and spray with *ninhydrin solution R*. Heat at 100 °C to 105 °C for 15 min. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (c) shows two clearly separated principal spots.

Chlorides (*2.4.4*)

Dilute 10 ml of solution S to 15 ml with *water R*. The solution complies with the limit test for chlorides (200 ppm).

Sulphates (*2.4.13*)

Dilute 12 ml of solution S to 15 ml with *distilled water R*. The solution complies with the limit test for sulphates (500 ppm). Carry out the evaluation of the test after 30 min.

Ammonium (*2.4.1*)

50 mg complies with limit test B for ammonium (200 ppm). Prepare the standard using 0.1 ml of *ammonium standard solution (100 ppm NH_4) R*.

Iron (*2.4.9*)

In a separating funnel, dissolve 0.20 g in 10 ml of *dilute hydrochloric acid R*. Shake with three quantities, each of 10 ml, of *methyl isobutyl ketone R1*, shaking for 3 min each time. To the combined organic layers add 10 ml of *water R* and shake for 3 min. The aqueous layer complies with the limit test for iron (50 ppm).

Heavy metals (*2.4.8*)

Dissolve 2.0 g with gentle heating in 20 ml of *water R*. 12 ml of the solution complies with limit test A for heavy metals (10 ppm). Prepare the standard using *lead standard solution (1 ppm Pb) R*.

Water (*2.5.12*)

10.0 per cent to 14.0 per cent, determined on 0.100 g by the semi-micro determination of water. Dissolve the substance in 10 ml of *formamide R1* at 50 °C protected from moisture, add 10 ml of anhydrous *methanol R* and allow to cool. Carry out a blank determination.

ASSAY

Dissolve 0.260 g in 10 ml of *water R* and carry out the complexometric titration of magnesium (*2.5.11*).

1 ml of *0.1 M sodium edetate* is equivalent to 28.85 mg of $C_8H_{12}MgN_2O_8$.

IMPURITIES

aspartic acid.

Ph Eur

Magnesium Chloride Hexahydrate

General Notices

(Ph Eur monograph 0402)

$M_gCl_2,6H_2O$ 203.3 *7791-18-6*

Action and use

Used in the treatment of electrolyte deficiencies and in dialysis solutions.

Preparation

Magnesium Chloride Injection

Ph Eur

DEFINITION

Content

98.0 per cent to 101.0 per cent of $MgCl_2,6H_2O$.

CHARACTERS

Appearance

Colourless crystals, hygroscopic.

Solubility

Very soluble in water, freely soluble in ethanol (96 per cent).

IDENTIFICATION

A. Water (see Tests).

B. It gives reaction (a) of chlorides (*2.3.1*).

C. It gives the reaction of magnesium (*2.3.1*).

TESTS

Solution S

Dissolve 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100.0 ml with the same solvent.

Appearance of solution

Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Acidity or alkalinity

To 5 ml of solution S add 0.05 ml of *phenol red solution R*. Not more than 0.3 ml of *0.01 M hydrochloric acid* or *0.01 M sodium hydroxide* is required to change the colour of the indicator.

Bromides

Maximum 500 ppm.

Dilute 2.0 ml of solution S to 10.0 ml with *water R*. To 1.0 ml of this solution add 4.0 ml of *water R*, 2.0 ml of *phenol red solution R3* and 1.0 ml of *chloramine solution R2* and mix immediately. After exactly 2 min, add 0.30 ml of *0.1 M sodium thiosulphate*, mix and dilute to 10.0 ml with *water R*. The absorbance (*2.2.25*) of the solution measured at 590 nm, using *water R* as the compensation liquid, is not greater than that of a standard prepared at the same time and in the same manner using 5.0 ml of a 3 mg/l solution of *potassium bromide R*.

Sulphates (*2.4.13*)

Maximum 100 ppm, determined on solution S.

Aluminium (*2.4.17*)

Maximum 1 ppm, if intended for use in the manufacture of peritoneal dialysis solutions, haemodialysis solutions, or haemofiltration solutions.

Prescribed solution Dissolve 4 g in 100 ml of *water R* and add 10 ml of *acetate buffer solution pH 6.0 R*.

Reference solution Mix 2 ml of *aluminium standard solution (2 ppm Al) R*, 10 ml of *acetate buffer solution pH 6.0 R* and 98 ml of *water R*.

Blank solution Mix 10 ml of *acetate buffer solution pH 6.0 R* and 100 ml of *water R*.

Arsenic (*2.4.2, Method A*)

Maximum 2 ppm, determined on 0.5 g.

Calcium (*2.4.3*)

Maximum 0.1 per cent.

Dilute 1 ml of solution S to 15 ml with *distilled water R*.

Iron (*2.4.9*)

Maximum 10 ppm, determined on solution S.

Potassium

Maximum 5.0×10^2 ppm, if intended for use in the manufacture of parenteral dosage forms.

Atomic emission spectrometry (*2.2.22, Method I*).

Test solution Dissolve 1.00 g in *water R* and dilute to 100.0 ml with the same solvent.

Reference solutions Prepare the reference solutions using the following solution, diluted as necessary with *water R*: dissolve 1.144 g of *potassium chloride R*, previously dried at 100-105 °C for 3 h in *water R* and dilute to 1000.0 ml with the same solvent (600 µg of K per millilitre).

Wavelength 766.5 nm.

Heavy metals (*2.4.8*)

Maximum 10 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R.*

Water (*2.5.12*)

51.0 per cent to 55.0 per cent, determined on 50.0 mg.

ASSAY

Dissolve 0.300 g in 50 ml of *water R*. Carry out the complexometric titration of magnesium (*2.5.11*).

1 ml of *0.1 M sodium edetate* is equivalent to 20.33 mg of $MgCl_2,6H_2O$.

STORAGE

In an airtight container .

LABELLING

The label states:

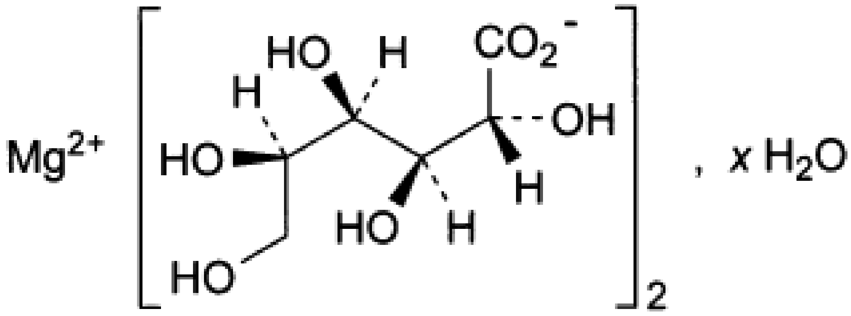
- — where applicable, that the substance is suitable for use in the manufacture of peritoneal dialysis solutions, haemodialysis solutions or haemofiltration solutions;
- — where applicable, that the substance is suitable for use in the manufacture of parenteral dosage forms.

Ph Eur

Magnesium Gluconate

General Notices

(Ph Eur monograph 2161)



$C_{12}H_{22}MgO_{14},xH_2O$ 414.6 *3632-91-5*
(anhydrous)

Ph Eur

DEFINITION

Anhydrous or hydrated magnesium D-gluconate.

Content

98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, amorphous, hygroscopic, crystalline or granular powder.

Solubility

Freely soluble in water, slightly soluble in ethanol (96 per cent), very slightly soluble in methylene chloride.

IDENTIFICATION

A. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 20 mg of the substance to be examined in 1 ml of *water R.*

Reference solution Dissolve 20 mg of *calcium gluconate CRS* in 1 ml of *water R*, heating if necessary in a water-bath at 60 °C.

Plate *TLC silica gel plate R* (5-40 µm) [or *TLC silica gel plate R* (2-10 µm)].

Mobile phase *concentrated ammonia R*, *ethyl acetate R*, *water R*, *ethanol (96 per cent) R* (10:10:30:50 *V/V/V/V*).

Application 1 µl.

Development Over 3/4 of the plate.

Drying At 100-105 °C for 20 min, then allow to cool to room temperature.

Detection Spray with a solution containing 25 g/l of *ammonium molybdate R* and 10 g/l of *cerium sulphate R* in *dilute sulphuric acid R*, then heat at 100-105 °C for about 10 min.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

B. To 10 ml of solution S (see Tests) add 3 ml of *ammonium chloride solution R.* A slight opalescence may be observed. Add 10 ml of *disodium hydrogen phosphate solution R*. A white precipitate is formed that does not dissolve upon the addition of 2 ml of *dilute ammonia R1*.

TESTS

Solution S

Dissolve 1.0 g in *water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution Y_7 *(2.2.2, Method II)*.

Sucrose and reducing sugars

Dissolve 0.5 g in a mixture of 2 ml of *hydrochloric acid R1* and 10 ml of *water R.* Boil for 5 min, allow to cool, add 10 ml of *sodium carbonate solution R* and allow to stand for 10 min. Dilute to 25 ml with *water R* and filter. To 5 ml of the filtrate add 2 ml of *cupri-tartaric solution R* and boil for 1 min. Allow to stand for 2 min. No red precipitate is formed.

Chlorides *(2.4.4)*

Maximum 500 ppm.

Dilute 5 ml of solution S to 15 ml with *water R*.

Sulphates *(2.4.13)*

Maximum 500 ppm.

Dissolve 2.0 g in a mixture of 10 ml of *acetic acid R* and 90 ml of *distilled water R.*

Heavy metals *(2.4.8)*

Maximum 10 ppm.

Dissolve 2.0 g in 20 ml of *water R*. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R.*

Water *(2.5.32)*

Maximum 12.0 per cent, determined on 80 mg.

Microbial contamination

Total viable aerobic count *(2.6.12)* not more than 10^3 micro-organisms per gram, determined by plate count.

ASSAY

Dissolve 0.350 g in 100 ml of *water R* and carry out the complexometric titration of magnesium *(2.5.11)*.

1 ml of *0.1 M sodium edetate* is equivalent to 41.46 mg of $C_{12}H_{22}MgO_{14}$.

STORAGE

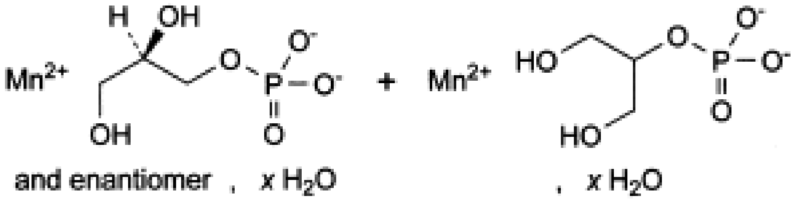
In an airtight container .

Ph Eur

Magnesium Glycerophosphate

General Notices

(Ph Eur monograph 1446)



$C_3H_7MgO_6P$ 194.4 *927-20-8*

Action and use

Excipient.

Ph Eur

DEFINITION

Mixture, in variable proportions, of magnesium salts of (*RS*)-2,3-dihydroxypropyl phosphate and 2-hydroxy-1-(hydroxymethyl)ethyl phosphate, which may be hydrated.

Content

11.0 per cent to 12.5 per cent of Mg (dried substance).

CHARACTERS

Appearance

White or almost white powder, hygroscopic.

Solubility

Practically insoluble in ethanol (96 per cent). It dissolves in dilute solutions of acids.

IDENTIFICATION

A. Mix 1 g with 1 g of *potassium hydrogen sulphate R* in a test tube fitted with a glass tube. Heat strongly and direct the white vapour towards a piece of filter paper impregnated with a freshly prepared 10 g/l solution of *sodium nitroprusside R*. The filter paper develops a blue colour in contact with *piperidine R*.

B. Ignite 0.1 g in a crucible. Take up the residue with 5 ml of *nitric acid R* and heat on a water-bath for 1 min. Filter. The filtrate gives reaction (b) of phosphates (*2.3.1*).

C. It gives the reaction of magnesium (*2.3.1*).

TESTS

Solution S

Dissolve 2.5 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is not more opalescent than reference suspension III (*2.2.1*).

Acidity

Dissolve 1.0 g in 100 ml of *carbon dioxide-free water R*. Add 0.1 ml of *phenolphthalein solution R*. Not more than 1.5 ml of *0.1 M sodium hydroxide* is required to change the colour of the indicator.

Glycerol and ethanol (96 per cent)-soluble substances

Maximum 1.5 per cent.

Shake 1.0 g with 25 ml of *ethanol (96 per cent) R* for 2 min. Filter and wash the residue with 5 ml of *ethanol (96 per cent) R*. Combine the filtrate and the washings, evaporate to dryness on a water-bath and dry the residue at 70 °C for 1 h. The residue weighs a maximum of 15 mg.

Chlorides (*2.4.4*)

Maximum 0.15 per cent.

Dissolve 1.0 g in *water R* and dilute to 100 ml with the same solvent. Dilute 3.5 ml of this solution to 15 ml with *water R.*

Phosphates (*2.4.11*)

Maximum 0.5 per cent.

Dilute 4 ml of solution S to 100 ml with *water R*. Dilute 1 ml of this solution to 100 ml with *water R*.

Sulphates (*2.4.13*)

Maximum 0.1 per cent.

Dilute 3 ml of solution S to 15 ml with *distilled water R*.

Iron (*2.4.9*)

Maximum 150 ppm.

Dissolve 67 mg in *water R* and dilute to 10 ml with the same solvent.

Heavy metals (*2.4.8*)

Maximum 20 ppm.

To 20 ml of solution S add 15 ml of *hydrochloric acid R* and shake with 25 ml of *methyl isobutyl ketone R* for 2 min. Allow to stand, then separate and evaporate the aqueous layer to dryness. Dissolve the residue in 2.5 ml of *acetic acid R* and dilute to 20 ml with *water R*. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Loss on drying (*2.2.32*)

Maximum 12.0 per cent, determined on 1.000 g by drying in an oven at 150 °C for 4 h.

ASSAY

Dissolve 0.200 g in 40 ml of *water R*. Carry out the complexometric titration of magnesium (*2.5.11*).

1 ml of *0.1 M sodium edetate* is equivalent to 2.431 mg of Mg.

STORAGE

In an airtight container .

Ph Eur

Magnesium Hydroxide

General Notices

(Ph Eur monograph 0039)

$Mg(OH)_2$ 58.32 *1309-42-8*

Action and use

Antacid; osmotic laxative.

Preparations

Co-magaldrox Oral Suspension

Co-magaldrox Tablets

Ph Eur

DEFINITION

Content

95.0 per cent to 100.5 per cent of $Mg(OH)_2$.

CHARACTERS

Appearance

White or almost white, fine, amorphous powder.

Solubility

Practically insoluble in water. It dissolves in dilute acids.

IDENTIFICATION

A. Dissolve about 15 mg in 2 ml of *dilute nitric acid R* and neutralise with *dilute sodium hydroxide solution R*. The solution gives the reaction of magnesium (*2.3.1*).

B. It complies with the test for loss on ignition (see Tests).

TESTS

Solution S

Dissolve 5.0 g in a mixture of 50 ml of *acetic acid R* and 50 ml of *distilled water R*. Not more than slight effervescence is produced. Boil for 2 min, cool and dilute to 100 ml with *dilute acetic acid R*. Filter, if necessary, through a previously ignited and tared porcelain or silica filter crucible of suitable porosity to give a clear filtrate.

Appearance of solution

Solution S is not more intensely coloured than reference solution B_3 (*2.2.2, Method II*).

Soluble substances

Maximum 2.0 per cent.

Mix 2.00 g with 100 ml of *water R* and boil for 5 min. Filter whilst hot through a sintered-glass filter (40) (*2.1.2*), allow to cool and dilute to 100 ml with *water R*. Evaporate 50 ml of the filtrate to dryness and dry at 100-105 °C. The residue weighs not more than 20 mg.

Substances insoluble in acetic acid

Maximum 0.1 per cent.

Any residue obtained during the preparation of solution S, washed, dried, and ignited at 600 ± 50 °C, weighs not more than 5 mg.

Chlorides (*2.4.4*)

Maximum 0.1 per cent.

1 ml of solution S diluted to 15 ml with *water R* complies with the limit test for chlorides.

Sulphates (*2.4.13*)

Maximum 0.5 per cent.

0.6 ml of solution S diluted to 15 ml with *distilled water R* complies with the limit test for sulphates.

Arsenic (*2.4.2*)

Maximum 4 ppm.

5 ml of solution S complies with limit test A.

Calcium (*2.4.3*)

Maximum 1.5 per cent.

Dilute 1.3 ml of solution S to 150 ml with *distilled water R*. 15 ml of the solution complies with the limit test for calcium.

Iron (*2.4.9*)

Maximum 0.07 per cent.

Dissolve 0.15 g in 5 ml of *dilute hydrochloric acid R* and dilute to 10 ml with *water R*. 1 ml of this solution diluted to 10 ml with *water R* complies with the limit test for iron.

Heavy metals (*2.4.8*)

Maximum 30 ppm.

Dissolve 2.0 g in 20 ml of *hydrochloric acid R1* and shake with 25 ml of *methyl isobutyl ketone R* for 2 min. Allow to stand, separate the aqueous layer and evaporate to dryness. Dissolve the residue in 30 ml of *water R*. 12 ml of the solution complies with limit test A. Prepare the standard using *lead standard solution (2 ppm Pb) R*.

Loss on ignition

29.0 per cent to 32.5 per cent.

Heat 0.5 g gradually to 900 ± 50 °C and ignite to constant mass.

ASSAY

Dissolve 0.100 g in a mixture of 20 ml of *water R* and 2 ml of *dilute hydrochloric acid R* and carry out the complexometric titration of magnesium (*2.5.11*).

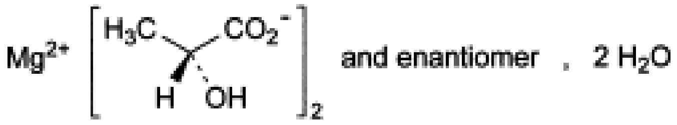
1 ml of *0.1 M sodium edetate* is equivalent to 5.832 mg of $Mg(OH)_2$.

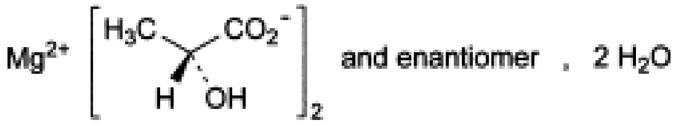
Ph Eur

Magnesium Lactate Dihydrate

General Notices

(Ph Eur monograph 2160)





$C_6H_{10}MgO_6,2H_2O$ 238.5 *18917-93-6*

Ph Eur

DEFINITION

Magnesium bis(2-hydroxypropanoate) or mixture of magnesium (2*R*)-, (2*S*)- and (2*RS*)-2-hydroxypropanoate dihydrate.

Content

98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline or granular powder.

Solubility

Slightly soluble in water, soluble in boiling water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. It gives the reaction of lactates (*2.3.1*).

B. It gives the reaction of magnesium (*2.3.1*).

TESTS

Solution S

Dissolve 5.0 g with heating in *carbon dioxide-free water R* prepared from *distilled water R*, allow to cool and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is not more opalescent than reference suspension II (*2.2.1*) and not more intensely coloured than reference solution BY_6 (*2.2.2, Method II*).

pH (*2.2.3*)

6.5 to 8.5 for solution S.

Chlorides (*2.4.4*)

Maximum 200 ppm.

Dilute 5 ml of solution S to 15 ml with *water R*.

Sulphates (*2.4.13*)

Maximum 400 ppm.

Dilute 7.5 ml of solution S to 15 ml with *distilled water R*.

Iron (*2.4.9*)

Maximum 50 ppm.

Dilute 4 ml of solution S to 10 ml with *water R*.

Heavy metals (*2.4.8*)

Maximum 20 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R.*

Loss on drying (*2.2.32*)

14.0 per cent to 17.0 per cent, determined on 0.500 g by drying in an oven at 125 °C.

ASSAY

Dissolve 0.180 g in *water R* and dilute to 300 ml with the same solvent. Carry out the complexometric titration of magnesium (*2.5.11*).

1 ml of *0.1 M sodium edetate* is equivalent to 20.25 mg of $C_6H_{10}MgO_6$.

Ph Eur

Magnesium Peroxide

General Notices

(Ph Eur monograph 1540)

Ph Eur

DEFINITION

Mixture of magnesium peroxide and magnesium oxide.

Content

22.0 per cent to 28.0 per cent of MgO2 (M_r 56.30).

CHARACTERS

Appearance

White or slightly yellow, amorphous, light powder.

Solubility

Practically insoluble in water and in ethanol (96 per cent). It dissolves in dilute mineral acids.

IDENTIFICATION

A. Dissolve about 15 mg in 2 ml of *dilute nitric acid R* and neutralise with *dilute sodium hydroxide solution R*. The solution gives the reaction of magnesium (*2.3.1*).

B. Dissolve 0.1 g in 2 ml of *dilute sulphuric acid R* and dilute to 10 ml with *water R*. Shake 1 ml of this solution with 5 ml of *ether R* and 0.5 ml of *potassium dichromate solution R1*. The ether layer is blue.

TESTS

Solution S1

Dissolve cautiously 5.0 g in 40 ml of *hydrochloric acid R1*. Cautiously evaporate the solution to 10 ml and dilute to 100 ml with a mixture of equal volumes of *acetic acid R* and distilled *water R*. Filter, if necessary, through a previously ignited and tared porcelain or silica filter crucible of suitable porosity to give a clear filtrate. Keep the residue for the test for acid insoluble substances.

Solution S2

Dilute 5 ml of solution S1 to 25 ml with *distilled water R*.

Appearance of solution

Solution S1 is not more intensely coloured than reference solution B_4 (*2.2.2, Method II*).

Acidity or alkalinity

To 2.0 g add 100 ml of *carbon dioxide-free water R* and heat to boiling for 5 min. Filter whilst hot through a sintered-glass filter (40) (*2.1.2*), allow to cool and dilute to 100 ml with *carbon dioxide-free water R*. To 15 ml of the filtrate, add 0.1 ml of *phenolphthalein solution R*. The solution is red. Not more than 0.2 ml of *0.1 M hydrochloric acid* is necessary to change the colour of the indicator. Keep the filtrate for the test for soluble substances.

Acid insoluble substances

Maximum 0.1 per cent.

Any residue obtained during the preparation of solution S1, washed, dried and ignited at 600 ± 50 °C, weighs a maximum of 5 mg.

Soluble substances

Maximum 1.5 per cent.

Take 50 ml of the filtrate obtained in the test for acidity or alkalinity, evaporate to dryness and dry at 100-105 °C. The residue weighs a maximum of 15 mg.

Chlorides (*2.4.4*)

Maximum 0.1 per cent.

Dissolve 50 mg in 5 ml of *dilute nitric acid R* and dilute to 15 ml with *water R*.

Sulphates (*2.4.13*)

Maximum 0.5 per cent.

Dilute 3 ml of solution S2 to 15 ml with *distilled water R*.

Arsenic (*2.4.2, Method A*)

Maximum 4 ppm, determined on 5 ml of solution S1.

Calcium (*2.4.3*)

Maximum 1.0 per cent.

Dilute 1 ml of solution S2 to 15 ml with *distilled water R*.

Iron (*2.4.9*)

Maximum 500 ppm.

Dilute 2 ml of solution S2 to 10 ml with *water R*.

Heavy metals (*2.4.8*)

Maximum 30 ppm.

To 20 ml of solution S1 add 15 ml of *hydrochloric acid R1* and shake with 25 ml of *methyl isobutyl ketone R* for 2 min. Allow to stand, then separate and evaporate the aqueous layer to dryness. Dissolve the residue in 1.5 ml of *acetic acid R* and dilute to 30 ml with *water R*. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

ASSAY

Dissolve 80.0 mg, shaking cautiously, in a mixture, previously cooled to 20 °C, of 10 ml of *sulphuric acid R* and 90 ml of *water R*. Titrate with *0.02 M potassium permanganate* until a pink colour is obtained.

1 ml of *0.02 M potassium permanganate* is equivalent to 2.815 mg of MgO_2.

STORAGE

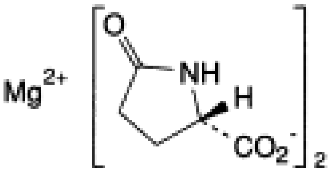
Protected from light.

Ph Eur

Magnesium Pidolate

General Notices

(Ph Eur monograph 1619)



$C_{10}H_{12}N_2O_6Mg$ 280.5 *62003-27-4*

Ph Eur

DEFINITION

Magnesium bis[(2*S*)-5-oxopyrrolidine-2-carboxylate].

Content

8.49 per cent to 8.84 per cent of Mg (A_r = 24.31) (anhydrous substance).

CHARACTERS

Appearance

Amorphous, white or almost white powder, hygroscopic.

Solubility

Very soluble in water, soluble in methanol, practically insoluble in methylene chloride.

IDENTIFICATION

A. Thin-layer chromatography (*2.2.27*).

Test solution Dissolve 60 mg in 2 ml of *water R* and dilute to 10 ml with *methanol R*.

Reference solution Dissolve 55 mg of *pidolic acid CRS* in 2 ml of *water R* and dilute to 10 ml with *methanol R*.

Plate TLC silica gel plate R.

Mobile phase methanol R, *glacial acetic acid R*, *methylene chloride R* (15:20:65 *V/V/V*).

Application 1 µl.

Development Over 2/3 of the plate.

Drying At 100-105 °C for 15 min.

Detection Spray with *concentrated sodium hypochlorite solution R*. Allow to stand for 10 min and spray abundantly with *glacial acetic acid R*. Allow to stand again for 10 min and dry the plate at 100-105 °C for 2 min. Spray with *potassium iodide and starch solution R* until spots appear.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution. The chromatogram obtained with the test solution may show 2 faint secondary spots.

B. To 0.15 ml of solution S (see Tests) add 1.8 ml of *water R*. The solution gives the reaction of magnesium (*2.3.1*).

TESTS

Solution S

Dissolve 5.00 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 50.0 ml with the same solvent.

Appearance of solution

Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution B_8 (*2.2.2, Method I*).

pH (*2.2.3*)

5.5 to 7.0 for solution S.

Specific optical rotation (*2.2.7*)

- 23.3 to - 26.5 (anhydrous substance), determined on solution S.

Related substances

Liquid chromatography (*2.2.29*).

Test solution Dissolve 0.500 g of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase.

Reference solution (b) Dissolve 50.0 mg *pidolate impurity B CRS* in the mobile phase and dilute to 100.0 ml with the mobile phase. Dilute 5.0 ml of the solution to 50.0 ml with the mobile phase.

Reference solution (c) Dilute 10.0 ml of reference solution (b) to 100.0 ml with the mobile phase.

Reference solution (d) Dilute 1.0 ml of *nitrate standard solution (100 ppm NO_3) R* to 100.0 ml with the mobile phase.

Reference solution (e) Dilute 6.0 ml of reference solution (a) to 10.0 ml with reference solution (b).

Column:

— *size:* *l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Dissolve 1.56 g of *sodium dihydrogen phosphate R* in 1000 ml of *water R* and adjust to pH 2.5 with a 10 per cent *V/V* solution of *phosphoric acid R*.

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 210 nm.

Injection 10 µl loop injector; inject the test solution and reference solutions (b), (c), (d) and (e).

Run time 4 times the retention time of pidolic acid.

Retention times Pidolic acid = about 4.5 min; impurity B = about 7.5 min.

System suitability Reference solution (e):

— *resolution*: minimum 10 between the peaks due to pidolic acid and to impurity B.

Limits:

— *impurity B*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);

— *total of other impurities*: not more than half of the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *disregard limit*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent); disregard any peak corresponding to the nitrate ion (NO_3^-).

Impurity A

Thin-layer chromatography (*2.2.27*).

Test solution Dissolve 0.250 g of the substance to be examined in 4 ml of *water R* and dilute to 50.0 ml with *methanol R*.

Reference solution (a) Dissolve 60.0 mg of *glutamic acid R* in 50 ml of *water R* and dilute to 100.0 ml with *methanol R*. Dilute 1.0 ml of the solution to 20.0 ml with *methanol R*.

Reference solution (b) Dissolve 10 mg of *glutamic acid R* and 10 mg of *aspartic acid R* in *water R* and dilute to 25 ml with the same solvent. Dilute 1 ml of the solution to 10 ml with *water R.*

Plate TLC silica gel plate R.

Mobile phase glacial acetic acid R, *water R*, *butanol R* (20:20:60 *V/V/V*).

Application 5 µl.

Development Over 2/3 of the plate.

Drying In air.

Detection Spray with *ninhydrin solution R* and heat at 100-105 °C for 15 min.

System suitability The test is not valid unless the chromatogram obtained with reference solution (b) shows 2 clearly separated spots.

Limit:

— *impurity A*: any spot corresponding to impurity A in the chromatogram obtained with the test solution is not more intense that the spot in the chromatogram obtained with reference solution (a) (0.6 per cent).

Chlorides (*2.4.4*)

Maximum 500 ppm.

Dilute 1.0 ml of solution S to 15.0 ml of *water R*. The solution complies with the limit test for chlorides.

Nitrates

Examine the chromatogram obtained with the test solution in the test for related substances.

Limit:

— *nitrates*: not more than the area of the principal peak in the chromatogram obtained with reference solution (d) (200 ppm).

Sulphates (*2.4.13*)

Maximum 0.1 per cent.

Dilute 1.5 ml of solution S to 15.0 ml with *distilled water R*. The solution complies with the limit test for sulphates.

Arsenic (*2.4.2*)

Maximum 2 ppm.

5.0 ml of solution S complies with limit test A.

Iron (*2.4.9*)

Maximum 200 ppm.

Dilute 0.5 ml of solution S to 10 ml of *water R*. The solution complies with the limit test for iron.

Heavy metals (*2.4.8*)

Maximum 20 ppm.

12 ml of solution S complies with limit test A. Prepare the standard using *lead standard solution (2 ppm Pb) R*.

Water (*2.5.12*)

Maximum 8.0 per cent, determined on 0.200 g.

ASSAY

Dissolve 0.300 g in 50 ml of *water R*. Carry out the complexometric titration of magnesium (*2.5.11*).

1 ml of *0.1 M sodium edetate* is equivalent to 2.431 mg of Mg.

STORAGE

In an airtight container .

Ph Eur

Magnesium Stearate

General Notices

(Ph Eur monograph 0229)

Action and use

Excipient.

Ph Eur

DEFINITION

Magnesium stearate is a mixture of magnesium salts of different fatty acids consisting mainly of stearic (octadecanoic) acid [$(C_{17}H_{35}COO)_2Mg$; M_r 591.3] and palmitic (hexadecanoic) acid [$(C_{15}H_{31}COO)_2Mg$; M_r 535.1] with minor proportions of other fatty acids. It contains not less than 4.0 per cent and not more than 5.0 per cent of Mg (A_r 24.30), calculated with reference to the dried substance. The fatty acid fraction contains not less than 40.0 per cent of stearic acid and the sum of stearic acid and palmitic acid is not less than 90.0 per cent.

CHARACTERS

A white or almost white, very fine, light powder, greasy to the touch, practically insoluble in water and in ethanol.

IDENTIFICATION

First identification C, D.

Second identification A, B, D.

A. The residue obtained in the preparation of solution S (see Tests) has a freezing point (*2.2.18*) not lower than 53 °C.

B. The acid value of the fatty acids (*2.5.1*) is 195 to 210, determined on 0.200 g of the residue obtained in the preparation of solution S dissolved in 25 ml of the prescribed mixture of solvents.

C. Examine the chromatograms obtained in the test for fatty acid composition. The retention times of the principal peaks in the chromatogram obtained with the test solution are approximately the same as those of the principal peaks in the chromatogram obtained with the reference solution.

D. 1 ml of solution S gives the reaction of magnesium (*2.3.1*).

TESTS

Solution S

To 5.0 g add 50 ml of *peroxide-free ether R*, 20 ml of *dilute nitric acid R* and 20 ml of *distilled water R* and heat under a reflux condenser until dissolution is complete. Allow to cool. In a separating funnel, separate the aqueous layer and shake the ether layer with 2 quantities, each of 4 ml, of *distilled water R*. Combine the aqueous layers, wash with 15 ml of *peroxide-free ether R* and dilute to 50 ml with *distilled water R* (solution S). Evaporate the organic layer to dryness and dry the residue at 100-105°C. Keep the residue for identification tests A and B.

Acidity or alkalinity

To 1.0 g add 20 ml of *carbon dioxide-free water R* and boil for 1 min with continuous stirring. Cool and filter. To 10 ml of the filtrate add 0.05 ml of *bromothymol blue solution R1*. Not more than 0.5 ml of *0.01 M hydrochloric acid* or *0.01 M sodium hydroxide* is required to change the colour of the indicator.

Chlorides (*2.4.4*)

0.5 ml of solution S diluted to 15 ml with *water R* complies with the limit test for chlorides (0.1 per cent).

Sulphates (*2.4.13*)

0.3 ml of solution S diluted to 15 ml with *distilled water R* complies with the limit test for sulphates (0.5 per cent).

Cadmium

Not more than 3.0 ppm of Cd, determined by atomic absorption spectrometry (*2.2.23, Methoa II*).

Test solution Place 50.0 mg of the substance to be examined in a polytetrafluoroethylene digestion bomb and add 0.5 ml of a mixture of 1 volume of *hydrochloric acid R* and 5 volumes of *cadmium- and lead-free nitric acid R*. Allow to digest at 170 °C for 5 h. Allow to cool. Dissolve the residue in *water R* and dilute to 5.0 ml with the same solvent.

Reference solutions Prepare the reference solutions using *cadmium standard solution (10 ppm Cd) R,* diluted as necessary with a 1 per cent *V/V* solution of *hydrochloric acid R*.

Measure the absorbance at 228.8 nm, using a cadmium hollow-cathode lamp as a source of radiation and a graphite furnace as atomic generator.

Lead Not more than 10.0 ppm of Pb, determined by atomic absorption spectrometry (*2.2.23*, *Method II*).

Test solution Use the solution described in the test for cadmium.

Reference solutions Prepare the reference solutions using *lead standard solution (10 ppm Pb) R*, diluted as necessary with *water R*.

Measure the absorbance at 283.3 nm, using a lead hollow-cathode lamp as a source of radiation and a graphite furnace as atomic generator, depending on the apparatus the line at 217.0 nm may be used.

Nickel

Not more than 5.0 ppm of Ni, determined by atomic absorption spectrometry (*2.2.23, Methoa II*).

Test solution Use the solution described in the test for cadmium.

Reference solutions Prepare the reference solutions using *nickel standard solution (10 ppm*

Ni) R, diluted as necessary with *water R*.

Measure the absorbance at 232.0 nm, using a nickel hollow-cathode lamp as a source of radiation and a graphite furnace as atomic generator.

Loss on drying (*2.2.32*)

Not more than 6.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Microbial contamination

Total viable aerobic count (*2.6.12*) not more than 10^3 micro-organisms per gram, determined by plate count. It complies with the test for *Escherichia coli* (*2.6.13*).

ASSAY

MAGNESIUM

To 0.500 g in a 250 ml conical flask add 50 ml of a mixture of equal volumes of *butanol R* and *ethanol R*, 5 ml of *concentrated ammonia R*, 3 ml of *ammonium chloride buffer solution pH 10.0 R*, 30.0 ml of *0.1 M sodium edetate* and 15 mg of *mordant black 11 triturate R*. Heat to 45-50 °C until the solution is clear and titrate with *0.1 M zinc sulphate* until the colour changes from blue to violet. Carry out a blank titration.

1 ml of *0.1 M sodium edetate* is equivalent to 2.431 mg of Mg.

FATTY ACID COMPOSITION

Examine by gas chromatography (*2.2.28*).

Test solution In a conical flask fitted with a reflux condenser, dissolve 0.10 g of the substance to be examined in 5 ml of *boron trifluoride-methanol solution R*. Boil under a reflux condenser for 10 min. Add 4 ml of *heptane R* through the condenser and boil again under a reflux condenser for 10 min. Allow to cool. Add 20 ml of a *saturated sodium chloride solution R*. Shake and allow the layers to separate. Remove about 2 ml of the organic layer and dry over 0.2 g of *anhydrous sodium sulphate R*. Dilute 1.0 ml of the solution to 10.0 ml with *heptane R*.

Reference solution Prepare the reference solution in the same manner as the test solution using 50.0 mg of *palmitic acid CRS* and 50.0 mg of *stearic acid CRS* instead of magnesium stearate.

The chromatographic procedure may be carried out using:

— a fused-silica column 30 m long and 0.32 mm in internal diameter coated with macrogol 20 000 R (film thickness 0.5 µm);

— *helium for chromatography R* as the carrier gas at a flow rate of 2.4 ml/min;

— a flame-ionisation detector,

with the following temperature programme:

	Time (min)	Temperature (°C)	Rate (°C/min)	Comment
Column	0 - 2	70	–	isothermal
	2 - 36	70 → 240	5	linear gradient
	36 - 41	240	–	isothermal
Injection port		220		
Detector		260		

Inject 1 µl of the reference solution. When the chromatogram is recorded in the prescribed conditions, the relative retention of methyl palmitate to that of methyl stearate is about 0.88. The test is not valid unless, in the chromatogram obtained with the reference solution, the resolution between the peaks corresponding to methyl stearate and methyl palmitate is at least 5.0.

Inject 1 µl of the test solution. Calculate the percentage content of stearic acid and palmitic acid from the areas of the peaks in the chromatogram obtained with the test solution by the normalisation procedure, disregarding the peak due to the solvent.

FUNCTIONALITY-RELATED CHARACTERISTICS

This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient. This section is a non-mandatory part of the monograph and it is not necessary to verify the characteristics to demonstrate compliance. Control of these characteristics can however contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.

The following characteristic may be relevant for magnesium stearate used as a lubricant in solid dosage forms (compressed and powder).

Specific surface area (*2.9.26, Method I*)

Determine the specific surface area in the P/P_o range of 0.05 to 0.15.

Sample outgassing 2 h at 40 °C.

Ph Eur

Magnesium Sulphate Heptahydrate

General Notices

Epsom Salts

(Ph Eur monograph 0044)

$MgSO_4,7H_2O$ 246.5 *10034-99-8*

Action and use

Osmotic laxative; used in treatment of electrolyte deficiency.

Preparations

Magnesium Sulphate Injection

Magnesium Sulphate Mixture

Ph Eur

DEFINITION

Content

99.0 per cent to 100.5 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or brilliant, colourless crystals.

Solubility

Freely soluble in water, very soluble in boiling water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. It gives the reactions of sulphates (*2.3.1*).

B. It gives the reaction of magnesium (*2.3.1*).

TESTS

Solution S

Dissolve 5.0 g in *water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Acidity or alkalinity

To 10 ml of solution S add 0.05 ml of *phenol red solution R*. Not more than 0.2 ml of *0.01 M hydrochloric acid* or *0.01 M sodium hydroxide* is required to change the colour of the indicator.

Chlorides (*2.4.4*)

Maximum 300 ppm.

Dilute 1.7 ml of solution S to 15 ml with *water R*.

Arsenic (*2.4.2, Method A*)

Maximum 2 ppm, determined on 0.5 g.

Iron (*2.4.9*)

Maximum 20 ppm.

Dilute 5 ml of solution S to 10 ml with *water R*.

Heavy metals (*2.4.8*)

Maximum 10 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R.*

Loss on drying (*2.2.32*)

48.0 per cent to 52.0 per cent, determined on 0.500 g by drying in an oven at 110-120 °C for 1 h and then at 400 °C to constant mass.

ASSAY

Dissolve 0.450 g in 100 ml of *water R* and carry out the complexometric titration of magnesium (*2.5.11*).

1 ml of *0.1 M sodium edetate* is equivalent to 12.04 mg of $MgSO_4$.

Ph Eur

Magnesium Trisilicate

General Notices

(Ph Eur monograph 0403)

Action and use

Antacid.

Preparations

Magnesium Trisilicate Mixture

Compound Magnesium Trisilicate Oral Powder

Compound Magnesium Trisilicate Tablets

Ph Eur

DEFINITION

It has a variable composition corresponding approximately to $Mg_2Si_3O_8,xH_2O$.

Content:

— *magnesium oxide* (MgO; M_r 40.30): minimum 29.0 per cent (ignited substance),

— *silicon dioxide* (SiO_2; M_r 60.1): minimum 65.0 per cent (ignited substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water and in ethanol (96 per cent).

IDENTIFICATION

A. 10.25 g gives the reaction of silicates (*2.3.1*).

B. 1 ml of solution S (see Tests) neutralised with *dilute sodium hydroxide solution R* gives the reaction of magnesium (*2.3.1*).

TESTS

Solution S

To 2.0 g add a mixture of 4 ml of *nitric acid R* and 4 ml of *distilled water R*. Heat to boiling with frequent shaking. Add 12 ml of *distilled water R* and allow to cool. Filter or centrifuge to obtain a clear solution and dilute to 20 ml with *distilled water R*.

Alkalinity

To 10.0 g in a 200 ml conical flask, add 100.0 g of *water R* and heat on a water-bath for 30 min. Allow to cool and make up to the initial mass with *water R*. Allow to stand and filter or centrifuge until a clear liquid is obtained. To 10 ml of this liquid add 0.1 ml of *phenolphthalein solution R*. Not more than 1.0 ml of *0.1 M hydrochloric acid* is required to change the colour of the indicator.

Water-soluble salts

Maximum 1.5 per cent.

In a platinum dish, evaporate to dryness on a water-bath 20.0 ml of the liquid obtained in the test for alkalinity. The residue, ignited to constant mass at 900 ± 50 °C, weighs a maximum of 30 mg.

Chlorides (*2.4.4*)

Maximum 500 ppm.

Dilute 0.5 ml of solution S to 15 ml with *water R*. Prepare the standard using a mixture of 5 ml of *chloride standard solution (5 ppm Cl) R* and 10 ml of *water R*.

Sulphates (*2.4.13*)

Maximum 0.5 per cent.

Dilute 0.3 ml of solution S to 15 ml with *distilled water R*.

Arsenic (*2.4.2, method A*)

Maximum 4 ppm, determined on 2.5 ml of solution S.

Heavy metals (*2.4.8*)

Maximum 40 ppm.

Neutralise 10 ml of solution S with *dilute ammonia R1*, using *metanil yellow solution R* as an external indicator. Dilute to 20 ml with *water R* and filter if necessary. 12 ml of this solution complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R.*

Loss on ignition

17 per cent to 34 per cent, determined on 0.5 g by ignition to constant mass at 900 ± 50 °C in a platinum crucible.

Acid-absorbing capacity

Suspend 0.25 g in *0.1 M hydrochloric acid*, dilute to 100.0 ml with the same acid and allow to stand for 2 h in a water-bath at 37 ± 0.5 °C, with frequent shaking. Allow to cool. To 20.0 ml of the supernatant solution add 0.1 ml of *bromophenol blue solution R* and titrate with *0.1 M sodium hydroxide* until a blue colour is obtained. The acid-absorbing capacity is not less than 100.0 ml of *0.1 M hydrochloric acid* per gram.

ASSAY

Magnesium oxide

To 1.000 g in a 200 ml conical flask, add 35 ml of *hydrochloric acid R* and 60 ml of *water R* and heat in a water-bath for 15 min. Allow to cool, filter, wash the conical flask and the residue with *water R* and dilute the combined filtrate and washings to 250.0 ml with *water R*. Neutralise 50.0 ml of the solution with *strong sodium hydroxide solution R* (about 8 ml). Carry out the complexometric titration of magnesium (*2.5.11*).

1 ml of *0.1 M sodium edetate* is equivalent to 4.030 mg of MgO.

Silicon dioxide

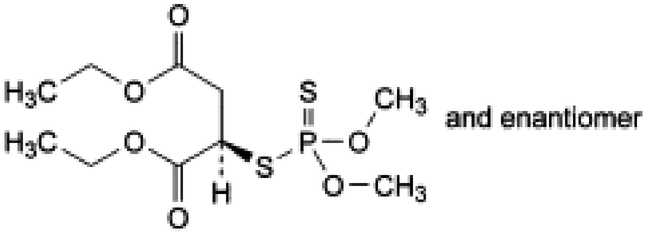
To 0.700 g add 10 ml of *dilute sulphuric acid R* and 10 ml of *water R*. Heat for 90 min on a water-bath with frequent shaking, replacing the evaporated water. Allow to cool and decant onto an ashless filter paper (diameter 7 cm). Wash the precipitate by decantation with 3 quantities, each of 5 ml, of hot *water R*, transfer it to the filter and wash it with hot *water R* until 1 ml of the filtrate remains clear after the addition of 0.05 ml of *dilute hydrochloric acid R* and 2 ml of *barium chloride solution R1*. Incinerate the filter and its contents in a platinum crucible, then ignite the residue (SiO_2) at 900 ± 50 °C to constant mass.

Ph Eur

Malathion

General Notices

(Ph Eur monograph 1343)



$C_{10}H_{19}O_6PS_2$ 330.4 *121-75-5*

Action and use

Organophosphorus insecticide.

Ph Eur

DEFINITION

Diethyl (2*RS*)-2-(dimethoxyphosphinodithioyl)butanedioate.

Content

98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

Clear, colourless or slightly yellowish liquid.

Solubility

Slightly soluble in water, miscible with acetone, with cyclohexane, with ethanol (96 per cent) and with vegetable oils.

It solidifies at about 3 °C.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

Comparison malathion CRS.

TESTS

Relative density (*2.2.5*)

1.220 to 1.240.

Optical rotation (*2.2.7*)

- 0.1 ° to + 0.1 °.

Dissolve 2.50 g in *ethanol (96 per cent) R* and dilute to 25.0 ml with the same solvent.

Related substances

Liquid chromatography (*2.2.29*).

Solvent mixture *water R*, *acetonitrile R* (1:3 *V/V*).

Test solution (a) Dissolve 0.10 g of the substance to be examined in the solvent mixture and dilute to 5.0 ml with the solvent mixture.

Test solution (b) Dilute 1.0 ml of test solution (a) to 10.0 ml with the solvent mixture.

Reference solution (a) Dissolve 0.100 g of *malathion CRS* in the solvent mixture and dilute to 50.0 ml with the solvent mixture.

Reference solution (b) Dilute 0.5 ml of test solution (a) to 100.0 ml with the solvent mixture.

Reference solution (c) Dissolve 5.0 mg of *malathion impurity A CRS* and 5.0 mg of *malathion impurity B CRS* in the solvent mixture, then dilute 50.0 ml with the solvent mixture.

Reference solution (d) Dilute 2.0 ml of reference solution (c) to 10.0 ml with the solvent mixture.

Column:

— *size:* *l* = 0.15 m, Ø = 4.6 mm;

— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (10 µm);

— *temperature*: 35 °C.

Mobile phase *acetonitrile R*, *water R* (45:55 *V/V*).

Flow rate 1 ml/min.

Detection Spectrophotometer at 210 nm.

Injection 20 µl of test solution (a) and reference solutions (b), (c) and (d).

Retention time Impurity B = about 3.5 min; impurity A = about 5 min; malathion = about 16 min.

System suitability Reference solution (c):

— *resolution*: minimum 2.0 between the peaks due to impurities B and A.

Limits:

— *impurity A*: not more than 3 times the area of the corresponding peak in the chromatogram obtained with reference solution (d) (0.3 per cent);

— *impurity B*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (d) (0.1 per cent);

— *sum of impurities other than A and B*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (1 per cent);

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Water (*2.5.12*)

Maximum 0.1 per cent, determined on 2.000 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

Injection Test solution (b) and reference solution (a).

System suitability Reference solution (a):

— *repeatability*: maximum relative standard deviation of 1.0 per cent after 6 injections.

Calculate the percentage content of $C_{10}H_{19}O_6PS_2$ from the declared content of *malathion CRS.*

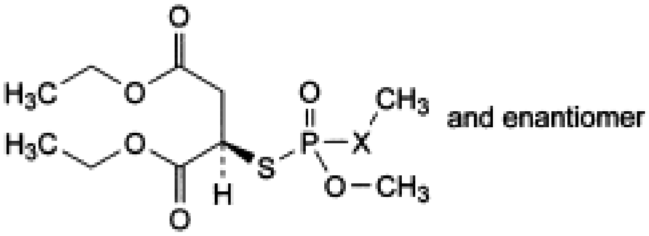
STORAGE

In an airtight container, protected from light.

IMPURITIES

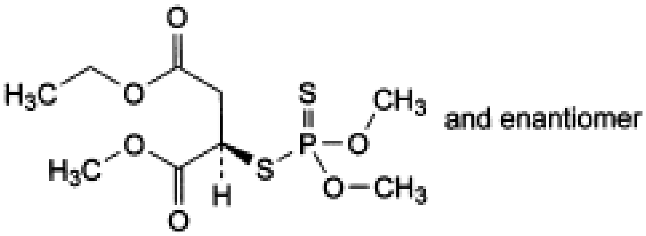
Specified impurities A, B.

Other detectable impurities (The following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034).* It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use): C.*



A. X = S: diethyl (2*RS*)-2-[(methoxy)(methylsulphanyl)-*S*-phosphinothioyl]butanedioate (isomalathion),

B. X = O: diethyl (2*RS*)-2-(dimethoxy-*S*-phosphinothioyl)butanedioate (maloxon),



and enantiomer

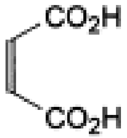
C. ethyl and methyl (2*RS*)-2-(dimethoxyphosphinodithioyl)butanedioate (methyl analogue).

Ph Eur

Maleic Acid

General Notices

(Ph Eur monograph 0365)



$C_4H_4O_4$ 116.1 *110-16-7*

Ph Eur

DEFINITION

Maleic acid contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of (*Z*)-butenedioic acid, calculated with reference to the anhydrous substance.

CHARACTERS

A white or almost white, crystalline powder, freely soluble in water and in alcohol.

IDENTIFICATION

A. Dilute 5 ml of solution S (see Tests) to 10 ml with *water R*. The pH of the dilution is less than 2.

B. Examine the chromatograms obtained in the test for fumaric acid. The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve 0.1 g in 10 ml of *water R* (solution a). To 0.3 ml of solution (a) add a solution of 10 mg of *resorcinol R* in 3 ml of *sulphuric acid R*. Heat on a water-bath for 15 min; no colour develops. To 3 ml of solution (a) add 1 ml of *bromine water R*. Heat on a water-bath to remove the bromine (15 min), heat to boiling and cool. To 0.2 ml of this solution add a solution of 10 mg of *resorcinol R* in 3 ml of *sulphuric acid R*. Heat on a water-bath for 15 min. A violet-pink colour develops.

TESTS

Solution S

Dissolve 5.0 g in *water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution Y_7 (*2.2.2,* *Method II*).

Fumaric acid

Examine by thin-layer chromatography (*2.2.27*), using *silica gel GF_{254} R* as the coating substance.

Test solution (a) Dissolve 0.5 g of the substance to be examined in *acetone R* and dilute to 5 ml with the same solvent.

Test solution (b) Dilute 1 ml of test solution (a) to 50 ml with *acetone R*.

Reference solution (a) Dissolve 20 mg of *maleic acid CRS* in *acetone R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dissolve 15 mg of *fumaric acid CRS* in *acetone R* and dilute to 10 ml with the same solvent.

Reference solution (c) Mix 5 ml of reference solution (a) and 5 ml of reference solution (b).

Apply separately to the plate 5 µl of test solutions (a) and (b), 5 µl of reference solutions (a) and (b) and 10 µl of reference solution (c). Develop in a non-saturated tank over a path of 10 cm using a mixture of 12 volumes of *anhydrous formic acid R*, 16 volumes of *chloroform R*, 32 volumes of *butanol R* and 44 volumes of *heptane R*. Dry the plate at 100 °C for 15 min and examine in ultraviolet light at 254 nm. Any spot corresponding to fumaric acid in the chromatogram obtained with test solution (a) is not more intense than the spot in the chromatogram obtained with reference solution (b) (1.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (c) shows two clearly separated spots.

Iron

To 10 ml of solution S add 2 ml of *dilute hydrochloric acid R* and 0.05 ml of *bromine water R*. After 5 min, remove the excess of bromine by passing a current of air and add 3 ml of *potassium thiocyanate solution R*. Shake. Prepare a standard at the same time and in the same manner, using a mixture of 5 ml of *iron standard solution (1 ppm Fe) R*, 1 ml of *dilute hydrochloric acid R*, 6 ml of *water R* and 0.05 ml of *bromine water R*. Allow both solutions to stand for 5 min. Any red colour in the test solution is not more intense than that in the standard (5 ppm).

Heavy metals (*2.4.8*)

1.0 g complies with limit test D for heavy metals (10 ppm). Prepare the standard using 1 ml of *lead standard solution (10 ppm Pb) R*.

Water (*2.5.12*)

Not more than 2.0 per cent, determined on 1.00 g by the semi-micro determination of water.

Sulphated ash (*2.4.14*)

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.500 g in 50 ml of *water R*. Titrate with *1 M sodium hydroxide* using 0.5 ml of *phenolphthalein solution R* as indicator.

1 ml of *1 M sodium hydroxide* is equivalent to 58.04 mg of $C_4H_4O_4$.

STORAGE

Store in a glass container, protected from light.

Preparation Discs.

Comparison *maltitol CRS*.

B. Melting point (*2.2.14*): 148 °C to 151 °C.

C. Specific optical rotation (*2.2.7*): + 105.5 to + 108.5 (anhydrous substance).

Dissolve 5.00 g in *water R* and dilute to 100.0 ml with the same solvent.

D. Thin-layer chromatography (*2.2.27*) .

Test solution Dissolve 25 mg of the substance to be examined in *water R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dissolve 25 mg of *maltitol CRS* in *water R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dissolve 25 mg of *maltitol CRS* and 25 mg of *sorbitol CRS* in *water R* and dilute to 10 ml with the same solvent.

Plate *TLC silica gel G plate R.*

Mobile phase *water R*, *ethyl acetate R*, *propanol R* (10:20:70 *V/V/V*).

Application 2 µl.

Development Over a path of 17 cm.

Drying In air.

Detection Spray with *4-aminobenzoic acid solution R*. Dry in a current of cold air until the acetone is removed. Heat at 100-105 °C for 15 min. Allow to cool and spray with a 2 g/l solution of *sodium periodate R*. Dry in a current of cold air. Heat at 100 °C for 15 min.

System suitability Test solution (b):

— the chromatogram shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

TESTS

Appearance of solution

The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dissolve 5.0 g in *water R* and dilute to 50 ml with the same solvent.

Conductivity (*2.2.38*)

Maximum 20 µS·cm^{-1}.

Dissolve 20.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100.0 ml with the same solvent. Measure the conductivity of the solution, while gently stirring with a magnetic stirrer.

Reducing sugars

Maximum 0.2 per cent, expressed as glucose equivalent.

Dissolve 5.0 g in 6 ml of *water R* with the aid of gentle heat. Cool and add 20 ml of *cupri-citric solution R* and a few glass beads. Heat so that boiling begins after 4 min and maintain boiling for 3 min. Cool rapidly and add 100 ml of a 2.4 per cent *V/V* solution of *glacial acetic acid R* and 20.0 ml of *0.025 M iodine*. With continuous shaking, add 25 ml of a mixture of 6 volumes of *hydrochloric acid R* and 94 volumes of *water R* and, when the precipitate has dissolved, titrate the excess of iodine with *0.05 M sodium thiosulphate* using 1 ml of *starch solution R*, added towards the end of the titration as indicator. Not less than 12.8 ml of *0.05 M sodium* thiosulphate is required.

Related substances

Liquid chromatography (*2.2.29*).

Test solution Dissolve 5.0 g of the substance to be examined in 20 ml of *water R* and dilute to 100.0 ml with the same solvent.

Reference solution (a) Dissolve 0.50 g of *maltitol CRS* in 2.0 ml of *water R* and dilute to 10.0 ml with the same solvent.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with *water R*.

Reference solution (c) Dilute 10.0 ml of reference solution (b) to 100.0 ml with *water R*.

Reference solution (d) Dissolve 0.5 g of *maltitol R* and 0.5 g of *sorbitol R* in 5 ml of *water R* and dilute to 10.0 ml with the same solvent.

Column:

— *size: l* = 0.3 m, Ø = 7.8 mm;

— *stationary phase*: *strong cation exchange resin (calcium form) R* (9 µm);

— *temperature*: 85 ± 1 °C.

Mobile phase *degassed water R.*

Flow rate 0.5 ml/min.

Detection Refractometer maintained at a constant temperature.

Injection 20 µl of the test solution and reference solutions (b), (c) and (d).

Run time 3 times the retention time of maltitol.

Relative retention With reference to maltitol (retention time = about 16 min): impurity B = about 0.8; impurity A = about 1.8.

System suitability Reference solution (d):

— *resolution*: minimum 2 between the peaks due to maltitol and impurity A.

Limits:

— *any impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);

— *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (2.0 per cent);

— *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent).

Lead (*2.4.10*)

Maximum 0.5 ppm.

Nickel (*2.4.15*)

Maximum 1 ppm.

Water (*2.5.12*)

Maximum 1.0 per cent, determined on 1.00 g.

Microbial contamination

If intended for use in the manufacture of parenteral dosage forms, the total viable aerobic count (*2.6.12*) is not more than 10^2 bacteria and 10^2 fungi per gram, determined by plate count. It complies with the tests for *Escherichia coli* and *Salmonella* (*2.6.13*).

Bacterial endotoxins (*2.6.14*)

If intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins:

— less than 4 IU/g for parenteral dosage forms having a concentration of less than 100 g/l of maltitol,

— less than 2.5 IU/g for parenteral dosage forms having a concentration of 100 g/l or more of maltitol.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

Injection Test solution and reference solution (a).

Calculate the percentage content of D-maltitol from the declared content of *maltitol CRS*.

LABELLING

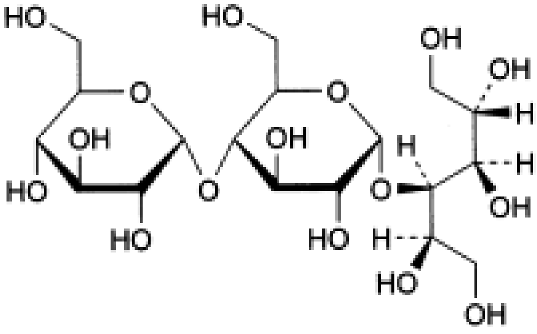
The label states:

— where applicable, the maximum concentration of bacterial endotoxins,;

— where applicable, that the substance is suitable for use in the manufacture of parenteral dosage forms.

IMPURITIES

A. sorbitol,



B. *C*-α-D-glucopyranosyl-(1→4)-*C*-α-D-glucopyranosyl-(1→4)-D-glucitol (maltotriitol).

Ph Eur

Maltodextrin

General Notices

(Ph Eur monograph 1542)

Action and use

Excipient.

Ph Eur

DEFINITION

Mixture of glucose, disaccharides and polysaccharides, obtained by the partial hydrolysis of starch.

The degree of hydrolysis, expressed as dextrose equivalent (DE), is not greater than 20 (nominal value).

CHARACTERS

Appearance

White or almost white, slightly hygroscopic powder or granules.

Solubility

Freely soluble in water.

IDENTIFICATION

A. Dissolve 0.1 g in 2.5 ml of *water R* and heat with 2.5 ml of *cupri-tartaric solution R*. A red precipitate is formed.

B. Dip, for 1 s, a suitable stick with a reactive pad containing glucose-oxidase, peroxidase and a hydrogen-donating substance, such as tetramethylbenzidine, in a 100 g/l solution of the substance to be examined. Observe the colour of the reactive pad; within 60 s the colour changes from yellow to green or blue.

C. It is a powder or granules.

D. Dextrose equivalent (see Tests).

TESTS

Solution S

Dissolve 12.5 g in *carbon dioxide-free water R* and dilute to 50.0 ml with the same solvent.

pH (*2.2.3*)

4.0 to 7.0.

Mix 1 ml of a 223.6 g/l solution of *potassium chloride R* and 30 ml of solution S.

Sulphur dioxide (*2.5.29*)

Maximum 20 ppm.

Heavy metals (*2.4.8*)

Maximum 10 ppm.

Dilute 4 ml of solution S to 30 ml with *water R*. The solution complies with test E. Prepare the reference solution using 10 ml of *lead standard solution (1 ppm Pb) R*.

Loss on drying (*2.2.32*)

Maximum 6.0 per cent, determined on 10.00 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*)

Maximum 0.5 per cent, determined on 1.0 g.

Dextrose equivalent (DE)

Within 2 DE units of the nominal value.

Weigh an amount of the substance to be examined equivalent to 2.85-3.15 g of reducing carbohydrates, calculated as dextrose equivalent, into a 500 ml volumetric flask. Dissolve in water R and dilute to 500.0 ml with the same solvent. Transfer the solution to a 50 ml burette.

Pipette 25.0 ml of *cupri-tartaric solution R* into a 250 ml flask and add 18.5 ml of the test solution from the burette, mix and add a few glass beads. Place the flask on a hot plate, previously adjusted so that the solution begins to boil within 2 min ± 15 s. Allow to boil for exactly 120 s, add 1 ml of a 1 g/l solution of *methylene blue R* and titrate with the test solution (V_1) until the blue colour disappears. Maintain the solution at boiling throughout the titration.

Standardise the cupri-tartaric solution using a 6.00 g/l solution of *glucose R* (V_0).

Calculate the dextrose equivalent using the following expression:

$$\frac{300 \times V_0 \times 100}{V_1 \times M \times D}$$

V_0 = total volume of glucose standard solution, in millilitres,

V_1 = total volume of test solution, in millilitres,

M = sample mass, in grams,

D = percentage content of dry matter in the substance.

Microbial contamination

Total viable aerobic count (*2.6.12*) not more than 10^3 bacteria and 10^2 fungi per gram, determined by plate count. It complies with the tests for *Escherichia coli* and *Salmonella*

(*2.6.13*).

LABELLING

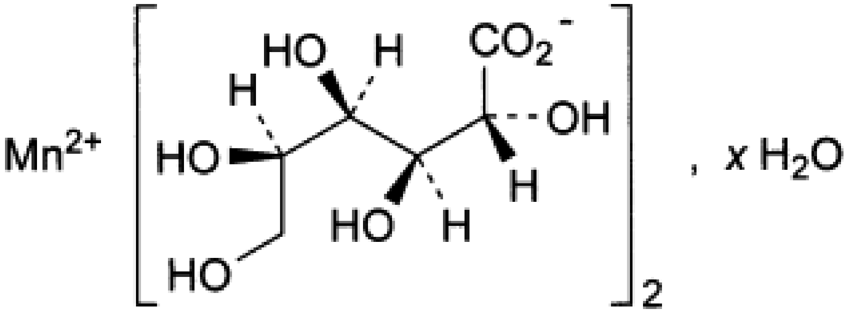
The label states the dextrose equivalent (DE) (= nominal value).

Ph Eur

Manganese Gluconate

General Notices

(Ph Eur monograph 2162)



$C_{12}H_{22}MnO_{14,}xH_20$ 445.2 *6485-39-8*
(anhydrous)

Ph Eur

DEFINITION

Anhydrous or hydrated manganese(II) D-gluconate.

Content

98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or pale pink, slightly hygroscopic, crystalline powder.

Solubility

Soluble in water, practically insoluble in anhydrous ethanol, insoluble in methylene chloride.

IDENTIFICATION

A. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 20 mg of the substance to be examined in 1 ml of *water R*.

Reference solution Dissolve 20 mg of *calcium gluconate CRS* in 1 ml of *water R*, heating if necessary in a water-bath at 60 °C.

Plate *TLC silica gel plate R* (5-40 µm) [or *TLC silica gel plate R* (2-10 µm)].

Mobile phase *concentrated ammonia R*, *ethyl acetate R*, *water R*, *ethanol (96 per cent) R* (10:10:30:50 *V/V/V/V*).

Application 1 µl.

Development Over 3/4 of the plate.

Drying At 100-105 °C for 20 min, then allow to cool to room temperature.

Detection Spray with a solution containing 25 g/l of *ammonium molybdate R* and 10 g/l of *cerium sulphate R* in *dilute sulphuric acid R*, and heat at 100-105 °C for about 10 min.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

B. Dissolve 50 mg in 5 ml of *water R*. Add 0.5 ml of *ammonium sulphide solution R*. A pale pink precipitate is formed that dissolves upon the addition of 1 ml of *glacial acetic acid R.*

TESTS

Solution S

Dissolve 1.0 g in *water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is not more opalescent than reference suspension II (*2.2.1*) and not more intensely coloured than intensity 6 of the range of reference solutions of the most appropriate colour *(2.2.2, Method II)*.

Sucrose and reducing sugars

Dissolve 0.5 g in a mixture of 2 ml of *hydrochloric acid R1* and 10 ml of *water R*. Boil for 5 min, allow to cool, add 10 ml of *sodium carbonate solution R* and allow to stand for 10 min. Dilute to 25 ml with *water R* and filter. To 5 ml of the filtrate add 2 ml of *cupri-tartaric solution R* and boil for 1 min. Allow to stand for 2 min. No red precipitate is formed.

Chlorides *(2.4.4)*

Maximum 500 ppm.

Dilute 5 ml of solution S to 15 ml with *water R.*

Sulphates *(2.4.13)*

Maximum 500 ppm.

Dissolve 2.0 g in a mixture of 10 ml of *acetic acid R* and 90 ml of *distilled water R.*

Zinc

Maximum 50 ppm.

To 10 ml of solution S add 1 ml of *sulphuric acid R* and 0.1 ml of *potassium ferrocyanide solution R*. After 30 s, any opalescence in the solution is not more intense than that in a mixture of 1.0 ml of *zinc standard solution (10 ppm Zn) R*, 9 ml of *water R,* 1 ml of *sulphuric acid R* and 0.1 ml of *potassium ferrocyanide solution R.*

Heavy metals ***(2.4.8)***

Maximum 10 ppm.

Dissolve 2.0 g in 20 ml of *water R,* heating in a water-bath at 60 °C. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R.*

Water ***(2.5.32)***

Maximum 9.0 per cent, determined on 80 mg.

Microbial contamination

Total viable aerobic count *(2.6.12)* not more than 10^3 micro-organisms per gram, determined by plate count.

ASSAY

Dissolve 0.400 g in 50 ml of *water R*. Add 10 mg of *ascorbic acid R,* 20 ml of *ammonium chloride buffer solution pH 10.0 R* and 0.2 ml of a 2 g/l solution of *mordant black 11 R* in *triethanolamine R*. Titrate with *0.1 M sodium edetate* until the colour changes from violet to pure blue.

1 ml of *0.1 M sodium edetate* is equivalent to 44.52 mg of $C_{12}H_{22}MnO_{14}$.

STORAGE

In a non-metallic, airtight container .

Ph Eur

Manganese Sulphate Monohydrate

General Notices

(Ph Eur monograph 1543)

$MnSO_4,H_2O$ 169.0 *10034-96-5*

Ph Eur

DEFINITION

Content

99.0 per cent to 101.0 per cent (ignited substance).

CHARACTERS

Appearance

Pale pink crystalline powder, slightly hygroscopic.

Solubility

Freely soluble in water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Solution S (see Tests) gives reaction (a) of sulphates (*2.3.1*).

B. Dissolve 50 mg in 5 ml of *water R*. Add 0.5 ml of *ammonium sulphide solution R*. A pale pink precipitate is formed which dissolves on the addition of 1 ml of *anhydrous acetic acid R*.

C. Loss on ignition (see Tests).

TESTS

Solution S

Dissolve 10.0 g in *distilled water R* and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is not more opalescent than reference suspension II (*2.2.1*).

Chlorides (*2.4.4*)

Maximum 100 ppm.

Dilute 5 ml of solution S to 15 ml with *water R*.

Iron (*2.4.9*)

Maximum 10 ppm, determined on solution S.

Zinc

Maximum 50 ppm.

To 10 ml of solution S add 1 ml of *sulphuric acid R* and 0.1 ml of *potassium ferrocyanide solution R*. After 30 s, any opalescence in the solution is not more intense than that in a mixture of 5 ml of *zinc standard solution (10 ppm Zn) R*, 5 ml of *water R*, 1 ml of *sulphuric acid R* and 0.1 ml of *potassium ferrocyanide solution R*.

Heavy metals (*2.4.8*)

Maximum 20 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R.*

Loss on ignition

10.0 per cent to 12.0 per cent, determined on 1.00 g at 500 ± 50 °C.

ASSAY

Dissolve 0.150 g in 50 ml of *water R*. Add 10 mg of *ascorbic acid R*, 20 ml of *ammonium chloride buffer solution pH 10.0 R* and 0.2 ml of a 2 g/l solution of *mordant black 11 R* in *triethanolamine R*. Titrate with *0.1 M sodium edetate* until the colour changes from violet to pure blue.

1 ml of *0.1 M sodium edetate* is equivalent to 15.10 mg of $MnSO_4$.

Ph Eur

Manganese Sulphate

General Notices

$MnSO_4,4H_2O$ 223.1 *7785-87-7*

DEFINITION

Manganese Sulphate is manganese(II) sulphate tetrahydrate. It contains not less than 98.0% and not more than 100.5% of $MnSO_4$, calculated with reference to the substance ignited at 450° to 500°.

CHARACTERISTICS

Pale pink crystals or crystalline powder.

Freely soluble in *water*; practically insoluble in *ethanol (96%)*.

IDENTIFICATION

A. Dissolve 0.5 g in 10 ml of *water* and add 1 ml of *sodium sulphide solution*. A pink precipitate is produced which is soluble in 6M *acetic acid*.

B. To 0.1 g add 2 g of *lead(IV) oxide* and 5 ml of *nitric acid*, boil gently for a few minutes, add 100 ml of *water* and filter. A purple solution is produced.

C. Yields the reactions characteristic of *sulphates*, Appendix VI.

TESTS

Arsenic

0.25 g complies with the *limit test for arsenic*, Appendix VII (4 ppm).

Heavy metals

Dissolve 0.50 g in 50 ml of *water*, add 1 ml of 1M *acetic acid* and pass *hydrogen sulphide* through the solution for 20 seconds. The colour produced within 2 minutes is not more intense than that obtained by treating 10 ml of *lead standard solution (2 ppm Pb)* diluted to 50 ml in the same manner (40 ppm).

Iron

Dissolve 1.0 g in 10 ml of *water* and add 2 ml of 1M *hydrochloric acid* and, dropwise, 0.05M *potassium permanganate* until a permanent pink colour is produced. Add 5 ml of a 10% w/v solution of *ammonium thiocyanate* and 20 ml of a mixture of equal volumes of *isoamyl alcohol* and *amyl acetate*, shake well and allow to separate. Any colour in the upper layer is not more intense than that obtained by treating 2 ml of *iron standard solution (20 ppm Fe)* diluted to 10 ml in the same manner (40 ppm).

Zinc

Dissolve 2.0 g in 10 ml of *water*, add 3 ml of 1M *hydrochloric acid* and 0.3 ml of a freshly prepared 3% w/v solution of *potassium hexacyanoferrate(II)*, mix and allow to stand for 15 minutes. Any turbidity produced is not more intense than that obtained by treating 10 ml of *zinc standard solution (100 ppm Zn)* in the same manner (500 ppm).

Chloride

15 ml of a 1.0% w/v solution complies with the *limit test for chlorides*, Appendix VII (330 ppm).

Loss on ignition

When ignited to constant weight at 450° to 500°, loses 31.0 to 34.0% of its weight. Use 1 g.

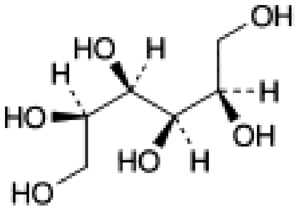
ASSAY

Dissolve 0.15 g in 40 ml of *water*, add 8 ml of freshly boiled and cooled *nitric acid*, cool, add 1.5 g of *sodium bismuthate* and shake for 2 minutes. Add 25 ml of a mixture of 3 volumes of *nitric acid* and 97 volumes of *water*, filter, wash the residue with 40 ml of the mixture, collecting the filtrate and washings in 50 ml of 0.1M *ammonium iron(II) sulphate VS*, and titrate immediately with 0.02M *potassium permanganate VS*. Repeat the operation without the substance being examined. The difference between the titrations represents the amount of ammonium iron(II) sulphate required. Each ml of 0.1M *ammonium iron(II) sulphate VS* is equivalent to 3.020 mg of $MnSO_4$.

Mannitol

General Notices

(Ph Eur monograph 0559)



$C_6H_{14}O_6$ 182.2 *69-65-8*

Action and use

Diuretic.

Preparation

Mannitol Intravenous Infusion

Ph Eur

DEFINITION

D-Mannitol.

Content

98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or free-flowing granules.

Solubility

Freely soluble in water, very slightly soluble in ethanol (96 per cent).

It shows polymorphism (*5.9*).

IDENTIFICATION

First identification C.

Second identification A, B, D.

A. Specific optical rotation (*2.2.7*): + 23 to + 25 (anhydrous substance).

Dissolve 2.00 g of the substance to be examined and 2.6 g of *disodium tetraborate R* in about 20 ml of *water R* at 30 °C; shake continuously for 15-30 min without further heating. Dilute the resulting clear solution to 25.0 ml with *water R*.

B. Melting point (*2.2.14*): 165 °C to 170 °C.

C. Infrared absorption spectrophotometry (*2.2.24*).

Preparation Discs.

Comparison mannitol CRS.

If the spectra obtained in the solid state show differences, dissolve separately in 2 glass vials 25 mg of the substance to be examined and 25 mg of the reference substance in 0.25 ml of *distilled water R* without heating. The solutions obtained are clear. Evaporate to dryness by heating in a microwave oven with a power range of 1000-1300 W for 15-30 min or by heating in an oven *in vacuo* at 100 °C. Non-sticky, white or slightly yellowish powders are obtained. Record new spectra using the residues.

D. Thin-layer chromatography (*2.2.27*).

Test solution Dissolve 25 mg of the substance to be examined in *water R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dissolve 25 mg of *mannitol CRS* in *water R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dissolve 25 mg of *mannitol R* and 25 mg of *sorbitol R* in *water R* and dilute to 10 ml with the same solvent.

Plate TLC silica gel G plate R.

Mobile phase water R, *ethyl acetate R*, *propanol R* (10:20:70 *V/V/V*).

Application 2 µl.

Development Over 2/3 of the plate.

Drying In air.

Detection Spray with *4-aminobenzoic acid solution R*. Dry in a current of cold air until the acetone is removed. Heat at 100 °C for 15 min. Allow to cool and spray with a 2 g/l solution of *sodium periodate R*. Dry in a current of cold air. Heat at 100 °C for 15 min.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

TESTS

Appearance of solution

The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dissolve 5.0 g in *water R* and dilute to 50 ml with the same solvent.

Conductivity (*2.2.38*)

Maximum 20 µS·cm^{-1}.

Dissolve 20.0 g in *carbon dioxide-free water R* prepared from *distilled water R* by heating at 40-50 °C and dilute to 100.0 ml with the same solvent. After cooling, measure the conductivity of the solution while gently stirring with a magnetic stirrer.

Reducing sugars

Maximum 0.2 per cent (calculated as glucose equivalent).

Dissolve 5.0 g in 25 ml of *water R* with the aid of gentle heating. Cool and add 20 ml of *cupri-citric solution R* and a few glass beads. Heat so that boiling begins after 4 min and maintain boiling for 3 min. Cool rapidly and add 100 ml of a 2.4 per cent *V/V* solution of *glacial acetic acid R* and 20.0 ml of *0.025 M iodine*. With continuous shaking, add 25 ml of a mixture of 6 volumes of *hydrochloric acid R* and 94 volumes of *water R* and, when the precipitate has dissolved, titrate the excess of iodine with *0.05 M sodium thiosulphate* using 1 ml of *starch solution R*, added towards the end of the titration, as indicator. Not less than 12.8 ml of *0.05 M sodium thiosulphate* is required.

Related substances

Liquid chromatography (*2.2.29*).

Test solution Dissolve 5.0 g of the substance to be examined in 25 ml of *water R* and dilute to 100.0 ml with the same solvent.

Reference solution (a) Dissolve 0.50 g of *mannitol CRS* in 2.5 ml of *water R* and dilute to 10.0 ml with the same solvent.

Reference solution (b) Dilute 2.0 ml of the test solution to 100.0 ml with *water R*.

Reference solution (c) Dilute 0.5 ml of reference solution (b) to 20.0 ml with *water R*.

Reference solution (d) Dissolve 0.5 g of *mannitol R* and 0.5 g of *sorbitol R* (impurity A) in 5 ml of *water R* and dilute to 10.0 ml with the same solvent.

Reference solution (e) Dissolve 0.1 g of *maltitol R* (impurity B) and 0.1 g of *isomalt R* (impurity C) in 5 ml of *water R* and dilute to 100 ml with the same solvent.

Column:

- *size:* *l* = 0.3 m, Ø = 7.8 mm;
- *stationary phase*: *strong cation-exchange resin (calcium form) R* (9 µm);
- *temperature*: 85 ± 1 °C.

Mobile phase *degassed water R.*

Flow rate 0.5 ml/min.

Detection Refractometer maintained at a constant temperature.

Injection 20 µl of the test solution and reference solutions (b), (c), (d) and (e).

Run time Twice the retention time of mannitol.

Relative retention With reference to mannitol (retention time = about 22 min): impurity C (eluted in 2 peaks) = about 0.7; impurity B = about 0.8; impurity A = about 1.2.

System suitability Reference solution (d):

— *resolution*: minimum 2 between the peaks due to mannitol and impurity A.

Limits:

— *impurities A, B*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (2.0 per cent);

— *impurity C*: for the sum of the areas of the 2 peaks, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (2.0 per cent);

— *unspecified impurities*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (0.10 per cent);

— *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (2.0 per cent);

— *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

Lead (*2.4.10*)

Maximum 0.5 ppm.

Dissolve the substance to be examined in 150.0 ml of the prescribed mixture of solvents.

Nickel (*2.4.15*)

Maximum 1 ppm.

Dissolve the substance to be examined in 150.0 ml of the prescribed mixture of solvents.

Water (*2.5.12*)

Maximum 0.5 per cent, determined on 1.00 g. Use as solvent 40 ml of a mixture of equal volumes of *anhydrous methanol R* and *formamide R* at about 50 °C.

Microbial contamination

If intended for use in the manufacture of parenteral dosage forms: the total viable aerobic count (*2.6.12*) is not more than 10^2 bacteria and 10^2 fungi per gram, determined by plate count; it complies with the tests for *Escherichia coli* and *Salmonella* (*2.6.13*).

Bacterial endotoxins (*2.6.14*)

If intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins: less than 4 IU/g for parenteral dosage forms having a concentration of 100 g/l or less of mannitol, and less than 2.5 IU/g for parenteral dosage forms having a concentration of more than 100 g/l of mannitol.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

Injection Test solution and reference solution (a).

Calculate the percentage content of D-mannitol from the areas of the peaks and the declared content of *mannitol CRS*.

LABELLING

The label states:

— where applicable, the maximum concentration of bacterial endotoxins;

— where applicable, that the substance is suitable for use in the manufacture of parenteral dosage forms.

IMPURITIES

Specified impurities   A, B, C.

A. sorbitol,

Reference solution (b) Dissolve 10 mg of *maprotiline impurity D CRS* in reference solution (a) and dilute to 2 ml with reference solution (a).

Plate *TLC silica gel F_{254} plate R.*

Mobile phase *ethyl acetate R*, *dilute ammonia R1*, *2-butanol R* (4:5:14 *V/V/V*).

Application 5 µl.

Development Over a path of 10 cm.

Drying In a current of warm air.

Detection Examine in ultraviolet light at 254 nm.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated principal spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Dilute 0.5 ml of solution S (see Tests) to 2 ml with *methanol R*. The solution gives reaction (a) of chlorides (*2.3.1*).

TESTS

Solution S

Dissolve 1.0 g in *methanol R* and dilute to 20 ml with the same solvent.

Appearance of solution

Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution BY_6 (*2.2.2, Method II*).

Related substances

Liquid chromatography (*2.2.29*).

Test solution Dissolve 0.10 g of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 10.0 ml with the mobile phase. Dilute 2.0 ml of this solution to 100.0 ml with the mobile phase.

Reference solution (b) Dissolve 1.0 mg of *maprotiline impurity D CRS* in the test solution and dilute to 10.0 ml with the test solution.

Column:

- *size: l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *silica gel for chromatography R* (5 µm).

Mobile phase Dissolve about 0.580 g of *ammonium acetate R* in 200 ml of *water R* and add 2 ml of a 70 g/l solution of *concentrated ammonia R*; add 150 ml of *2-propanol R* and 650 ml of *methanol R*; the resulting apparent pH value is between 8.2 and 8.4.

Flow rate 1 ml/min.

Detection Spectrophotometer at 272 nm.

Injection 20 µl.

Run time 1.5 times the retention time of maprotiline.

Relative retention With reference to maprotiline (retention time = about 10.3 min): impurity A = about 0.3; impurity B = about 0.47; impurity C = about 0.74; impurity D = about 0.81; impurity E = about 1.26.

System suitability Reference solution (b):

- *resolution*: 1.8 to 3.2 between the peaks due to impurity D and maprotiline; if necessary, adjust the pH of the mobile phase, in steps of 0.1 pH unit, by adding a 50 per cent *V/V* solution of *acetic acid R* if the resolution is less than 1.8, or by adding a 70 g/l solution of *concentrated ammonia R* if the resolution is greater than 3.2.

Limits:

- *impurities A, B, C, D, E*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1 per cent);
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.02 per cent).

Loss on drying (*2.2.32*)

Maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 80 °C at a pressure not exceeding 2.5 kPa for 6 h.

Sulphated ash (*2.4.14*)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in a mixture of 5 ml of *0.1 M hydrochloric acid* and 50 ml of *ethanol (96 per cent) R*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 31.39 mg of $C_{20}H_{24}ClN$.

IMPURITIES

Specified impurities *A, B, C, D, E.*

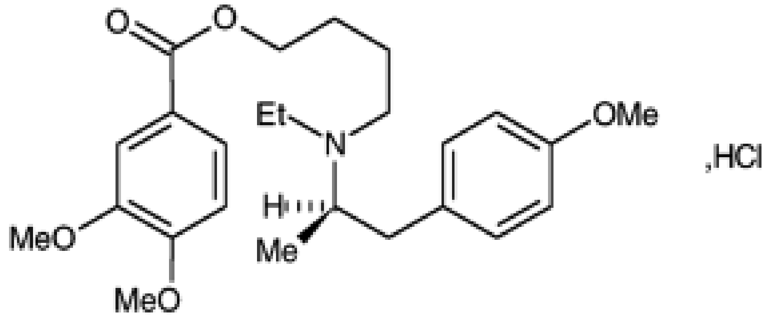
Mebeverine Hydrochloride

General Notices



and enantiomer

$C_{25}H_{35}NO_5,HCl$ 466.0 *2753-45-9*

Action and use

Smooth muscle relaxant; antispasmodic.

Preparation

Mebeverine Tablets

DEFINITION

Mebeverine Hydrochloride is (*RS*)-4-[ethyl(4-methoxy-α-methylphenethyl)amino]butyl veratrate hydrochloride. It contains not less than 99.0% and not more than 101.0% of $C_{25}H_{35}NO_5,HCl$, calculated with reference to the dried substance.

CHARACTERISTICS

A white or almost white, crystalline powder.

Very soluble in *water*; freely soluble in *ethanol (96%)*; practically insoluble in *ether*.

IDENTIFICATION

A. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of mebeverine hydrochloride *(RS 209)*.

B. Dissolve 25 mg in 2 ml of *water*, acidify with 2M *nitric acid* and centrifuge. The supernatant liquid yields reaction A characteristic of *chlorides*, Appendix VI, beginning at the words 'add 0.4 ml of...'.

TESTS

Acidity

pH of a 2% w/v solution, 4.5 to 6.5, Appendix V L.

Ether-soluble extractive

Dissolve 40 mg in 25 ml of 2M *hydrochloric acid* and shake with 50 ml of *ether* for 1 minute. Wash the ether layer with three 25 ml quantities of *water*, evaporate the ether to dryness using a rotary evaporator and dissolve the residue in sufficient *methanol* to produce 20 ml. The *absorbance* of the resulting solution at 260 nm is not more than 0.23, Appendix II B.

Non-tertiary amine

Dissolve 0.5 g in 5 ml of *pyridine*, add 5 ml of *copper chloride-pyridine reagent* and heat at 50° for 30 minutes. Cool, add sufficient *acetone* to produce 50 ml and measure the *absorbance* of the resulting solution at 405 nm, Appendix II B, using in the reference cell a solution obtained by treating 5 ml of *pyridine* in the same manner. The absorbance is not more than that obtained by repeating the test using 5 ml of a 0.0060% w/v solution of *di*-n-*butylamine* in *pyridine* and beginning at the words 'add 5 ml of *copper chloride-pyridine reagent*...'.

Related substances

Carry out the method for *thin-layer chromatography*, Appendix III A, using a silica gel F_{254} precoated plate (Merck silica gel 60 F_{254} plates are suitable) and a mixture of 50 volumes of *absolute ethanol*, 50 volumes of *chloroform* and 1 volume of 18M *ammonia* as the mobile phase. Apply separately to the plate 10 µl of each of three solutions in *acetone* containing (1) 2.0% w/v of the substance being examined, (2) 0.010% w/v of the substance being examined and (3) 0.0020% w/v of *veratric acid*. After removal of the plate, allow it to dry in air and examine under *ultraviolet light (254 nm)*. Expose the plate to iodine vapour for 1 hour. When viewed under ultraviolet light any spot corresponding to veratric acid in the chromatogram obtained with solution (1) is not more intense than the spot in the chromatogram obtained with solution (3). By each method of visualisation any other *secondary spot* in the chromatogram obtained with solution (1) is not more intense than the spot in the chromatogram obtained with solution (2).

Loss on drying

When dried at 105° for 1 hour, loses not more than 0.5% of its weight. Use 1 g.

Sulphated ash

Not more than 0.1%, Appendix IX A.

ASSAY

Carry out Method I for *non-aqueous titration*, Appendix VIII A, using 0.4 g, adding 7 ml of *mercury(II) acetate solution* and determining the end point potentiometrically. Each ml of 0.1M *perchloric acid VS* is equivalent to 46.60 mg of $C_{25}H_{35}NO_5,HCl$.

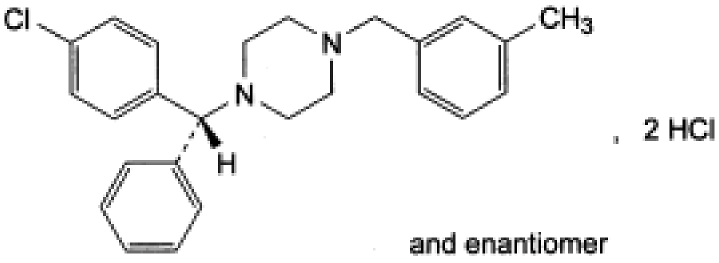
STORAGE

Mebeverine Hydrochloride should be kept in an airtight container, protected from light and stored at a temperature not exceeding 30°.

Meclozine Hydrochloride

General Notices

(Ph Eur monograph 0622)



$C_{25}H_{29}Cl_3N_2$ 463.9 *1104-22-9*

Action and use

Histamine H_1 receptor antagonist; antihistamine.

Ph Eur

DEFINITION

Meclozine hydrochloride contains not less than 98.0 per cent and not more than the equivalent of 102.0 per cent of 1-[(*RS*-(4-chlorophenyl)phenylmethyl]-4-(3-methylbenzyl) piperazine dihydrochloride, calculated with reference to the anhydrous substance.

CHARACTERS

A yellow or yellowish-white, crystalline powder, slightly soluble in water, soluble in alcohol and in methylene chloride.

IDENTIFICATION

First identification *B, D.*

Second identification *A, C, D.*

A. Dissolve 15.0 mg in *0.1 M hydrochloric acid* and dilute to 100.0 ml with the same acid. Dilute 10.0 ml of this solution to 100.0 ml with *0.1 M hydrochloric acid*. Examined between 220 nm and 350 nm (*2.2.25*), the solution shows an absorption maximum at 232 nm and weak absorbance without a defined maximum between 260 nm and 300 nm. The specific absorbance at the maximum is 345 to 380, calculated with reference to the anhydrous substance.

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *meclozine hydrochloride CRS*. Examine the substances prepared as discs using *potassium chloride R*.

C. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Dissolve about 15 mg in 2 ml of *alcohol R*. The solution gives reaction (a) of chlorides (*2.3.1*).

TESTS

Appearance of solution

Dissolve 0.50 g in *alcohol R* and dilute to 25 ml with the same solvent. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution Y_6 (*2.2.2, Method II*).

Acidity or alkalinity

Calculate the acidity or alkalinity from the titration volumes noted in the Assay using the equation:

$$A = V_2 - 2V_1$$

V_1 = volume of *0.1 M sodium hydroxide* added at the first point of inflexion,

V_2 = volume of *0.1 M sodium hydroxide* added at the second point of inflexion.

A is - 0.3 ml to 0.3 ml for 0.3500 g of the substance to be examined.

Related substances

Examine by thin-layer chromatography (*2.2.27*), using *silica gel G R* as the coating substance.

Test solution (a) Dissolve 0.50 g of the substance to be examined in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 10 ml with the same mixture of solvents.

Test solution (b) Dilute 1 ml of test solution (a) to 10 ml with a mixture of equal volumes of *methanol R* and *methylene chloride R*.

Reference solution (a) Dissolve 50 mg of *meclozine hydrochloride CRS* in a mixture of equal volumes of *methanol R* and *methylene chloride* R and dilute to 10 ml with the same mixture of solvents.

Reference solution (b) Dilute 0.5 ml of test solution (b) to 10 ml with a mixture of equal volumes of *methanol R* and *methylene chloride R*.

Apply separately to the plate 10 µl of each solution. Develop over a path of 15 cm using a mixture of 0.5 volumes of *concentrated ammonia R*, 5 volumes of *methanol R*, 30 volumes of toluene R and 60 volumes of *methylene chloride R*. Allow the plate to dry in air and spray with *dilute potassium iodobismuthate solution R.* Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). Disregard any yellowish-white spot at the starting point.

Water (*2.5.12*)

Not more than 5.0 per cent, determined on 0.200 g by the semi-micro determination of water.

Sulphated ash (*2.4.14*)

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.3500 g in 50 ml of *alcohol R*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume added between the two points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 46.39 mg of $C_{25}H_{29}Cl_3N_2$.

STORAGE

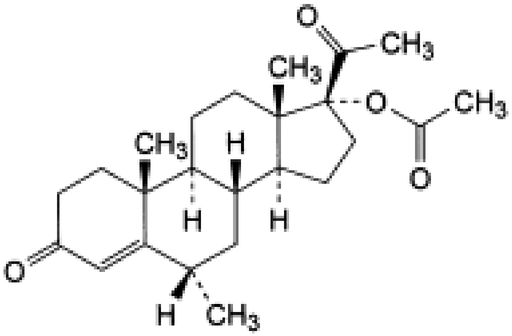
Store in an airtight container .

Ph Eur

Medroxyprogesterone Acetate

General Notices

(Ph Eur monograph 0673)



$C_{24}H_{34}O_4$ 386.5 *71-58-9*

Action and use

Progestogen.

Preparations

Medroxyprogesterone Injection

Medroxyprogesterone Tablets

Ph Eur

DEFINITION

6-Methyl-3,20-dioxopregn-4-en-17-yl acetate.

Content

97.0 per cent to 103.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, freely soluble in methylene chloride, soluble in acetone, sparingly soluble in ethanol (96 per cent).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

Comparison *medroxyprogesterone acetate CRS.*

TESTS

Specific optical rotation (*2.2.7*)

+ 47 to + 53 (dried substance).

Dissolve 0.250 g in *acetone R* and dilute to 25.0 ml with the same solvent.

Impurity F

Thin-layer chromatography (*2.2.27*).

Test solution Dissolve 0.200 g of the substance to be examined in *methylene chloride R* and dilute to 10.0 ml with the same solvent.

Reference solution To 20.0 mg of *medroxyprogesterone acetate for performance test CRS* (containing 0.5 per cent of impurity F) add 1.0 ml of *methylene chloride R* and dissolve.

Plate *TLC silica gel plate R*.

Mobile phase *tetrahydrofuran R*, *1,1-dimethylethyl methyl ether R*, *heptane R* (10:45:45 *V/V/V*).

Application 10 µl.

Development 1 Over a path of 10 cm.

Drying 1 In air.

Development 2 Over a path of 10 cm in the same direction with the same mobile phase.

Drying 2 At 120 °C for 10 min.

Detection Spray with a 200 g/l solution of *toluenesulphonic acid R* in *ethanol (96 per cent) R*. Heat at 120 °C for 10 min. Allow to cool. Examine the chromatograms in ultraviolet light at 365 nm.

System suitability Reference solution:

— the chromatogram obtained shows 2 clearly separated spots.

Limit:

— *impurity F*: in the chromatogram obtained with the test solution the blue fluorescent spot with an R_F value higher than the principal spot due to medroxyprogesterone acetate is not more intense than the corresponding blue fluorescent spot due to impurity F in the chromatogram obtained with the reference solution (0.5 per cent).

Related substances

Liquid chromatography (*2.2.29*).

Test solution Dissolve 20.0 mg of the substance to be examined in a mixture of equal volumes of *acetonitrile R* and *water R* and dilute to 10.0 ml with the same mixture of solvents.

Reference solution (a) Dissolve 4 mg of *medroxyprogesterone acetate for system suitability CRS* (containing impurities A, B, C, D, E, G and I) in a mixture of equal volumes of *acetonitrile R* and *water R* and dilute to 2 ml with the same mixture of solvents.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with a mixture of equal volumes of *acetonitrile R* and *water R*.

Reference solution (c) Dilute 1.0 ml of reference solution (b) to 10.0 ml with a mixture of equal volumes of *acetonitrile R* and *water R*.

Column:

— *size:* *l* = 0.25 m, Ø = 3.0 mm;

— *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);

— *temperature*: 60 °C.

Mobile phase *tetrahydrofuran R*, *acetonitrile R*, *water R* (12:23:65 *V/V/V*).

Flow rate 0.9 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 10 µl.

Run time Twice the retention time of medroxyprogesterone acetate.

Identification of impurities Use the chromatogram supplied with *medroxyprogesterone acetate for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, B, C, D, E, G and I.

Relative retention With reference to medroxyprogesterone acetate (retention time = about 20 min): impurity A = about 0.3; impurity I = about 0.5; impurity H = about 0.65; impurity B = about 0.7; impurity C = about 0.8; impurity G = about 0.85; impurity D = about 0.9; impurity E = about 0.95.

System suitability Reference solution (a):

— *peak-to-valley ratio*: minimum 2.5, where H_p = height above the baseline of the peak due to impurity E and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to medroxyprogesterone acetate.

Limits:

— *correction factor*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 1.5; impurity G = 2.6;

— *impurity D*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);

— *impurity B*: not more than 0.7 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.7 per cent);

— *impurity A*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.3 per cent);

— *impurities C, E, G, I*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.10 per cent);

— *total*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.5 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

Loss on drying (*2.2.32*)

Maximum 1.0 per cent, determined on 0.500 g by drying in an oven at 105 °C for 3 h.

ASSAY

Dissolve 50.0 mg in *ethanol (96 per cent) R* and dilute to 50.0 ml with the same solvent. Dilute 2.0 ml of this solution to 100.0 ml with *ethanol (96 per cent) R*. Measure the absorbance (*2.2.25*) at the absorption maximum at 241 nm.

Calculate the content of $C_{24}H_{34}O_4$ taking the specific absorbance to be 420.

STORAGE

Protected from light.

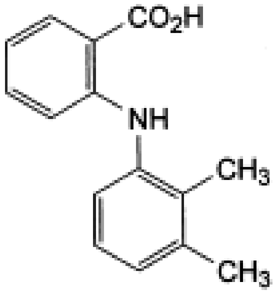
Mefenamic Acid

General Notices

(Ph Eur monograph 1240)



$C_{15}H_{15}NO_2$ 241.3 *61-68-7*

Action and use

Cyclo-oxygenase inhibitor; analgesic; anti-inflammatory.

Preparations

Mefenamic Acid Capsules

Mefenamic Acid Tablets

Ph Eur

DEFINITION

Mefenamic acid contains not less than 99.0 per cent and not more than the equivalent of 100.5 per cent of 2-[(2,3-dimethylphenyl)amino]benzoic acid, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, microcrystalline powder, practically insoluble in water, slightly soluble in alcohol and in methylene chloride. It dissolves in dilute solutions of alkali hydroxides.

It shows polymorphism (*5.9*).

IDENTIFICATION

First identification B.

Second identification A, C, D.

A. Dissolve 20 mg in a mixture of 1 volume of *1 M hydrochloric acid* and 99 volumes of *methanol R* and dilute to 100 ml with the same mixture of solvents. Dilute 5 ml of the solution to 50 ml with a mixture of 1 volume of *1 M hydrochloric acid* and 99 volumes of *methanol R*. Examined between 250 nm and 380 nm (*2.2.25*), the solution shows two absorption maxima, at 279 nm and 350 nm. The ratio of the absorbance measured at the maximum at 279 nm to that measured at 350 nm is 1.1 to 1.3.

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *mefenamic acid CRS*. Examine the substances prepared as discs. If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in *alcohol R*, evaporate to dryness and record new spectra using the residues.

C. Dissolve about 25 mg in 15 ml of *methylene chloride R* and examine in ultraviolet light at 365 nm; the solution exhibits a strong greenish-yellow fluorescence. Carefully add 0.5 ml of a saturated solution of *trichloroacetic acid R* dropwise and examine in ultraviolet light at 365 nm. The solution does not exhibit fluorescence.

D. Dissolve about 5 mg in 2 ml of *sulphuric acid R* and add 0.05 ml of *potassium dichromate solution R1*. An intense blue colour is produced, turning rapidly to brownish-green.

TESTS

Related substances

Examine by thin-layer chromatography (*2.2.27*), using a *TLC silica gel* GF_{254} *plate R*.

Test solution Dissolve 0.125 g of the substance to be examined in a mixture of 1 volume of *methanol* R and 3 volumes of *methylene chloride R* and dilute to 5 ml with the same mixture of solvents.

Reference solution (a) Dilute 1 ml of the test solution to 50 ml with a mixture of 1 volume of *methanol R* and 3 volumes of *methylene chloride R*. Dilute 1 ml of the solution to 10 ml with a mixture of 1 volume of *methanol R* and 3 volumes of *methylene chloride R*.

Reference solution (b) Dissolve 5 mg of *flufenamic acid R* and 5 mg of *mefenamic acid CRS* in a mixture of 1 volume of *methanol* R and 3 volumes of *methylene chloride R* and dilute to 10 ml with the same mixture of solvents.

Apply to the plate 20 µl of each solution. Develop over a path of 15 cm using a mixture of 1 volume of *glacial acetic acid R*, 25 volumes of *dioxan R* and 90 volumes of *toluene R*. Dry the plate in a current of warm air. Expose the plate to iodine vapour for 5 min and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (a) (0.2 per cent). The test is not valid unless the chromatogram obtained with reference solution (b) shows two clearly separated spots.

2,3-Dimethylaniline

Solution (a) Dissolve 0.250 g of the substance to be examined in a mixture of 1 volume of *methanol R* and 3 volumes of *methylene chloride R* and dilute to 10 ml with the same mixture of solvents. This solution is used to prepare the test solution.

Solution (b) Dissolve 50 mg of *2,3-dimethylaniline R* in a mixture of 1 volume of *methanol R* and 3 volumes of *methylene chloride R* and dilute to 100 ml with the same mixture of solvents. Dilute 1 ml of the solution to 100 ml with a mixture of 1 volume of *methanol R* and 3 volumes of *methylene chloride R*. This solution is used to prepare the standard.

Using three flat-bottomed tubes, place in the first 2 ml of solution (a), in the second 1 ml of solution (b) and 1 ml of a mixture of 1 volume of *methanol R* and 3 volumes of *methylene* *chloride R* and in the third 2 ml of a mixture of 1 volume of *methanol R* and 3 volumes of *methylene chloride R* (used to prepare a blank). To each tube add 1 ml of a freshly prepared 10 g/l solution of *dimethylaminobenzaldehyde R* in *methanol R* and 2 ml of *glacial acetic acid R* and allow to stand at room temperature for 10 min. The intensity of the yellow colour of the test solution is between that of the blank and that of the standard (100 ppm).

Copper

Not more than 10.0 ppm of Cu, determined by atomic absorption spectrometry (*2.2.23*, *Method I*).

Test solution Place 1.00 g of the substance to be examined in a silica crucible, moisten with *sulphuric acid R,* heat cautiously on a flame for 30 min and then progressively to 650 ± 50 °C. Continue ignition until all black particles have disappeared. Allow to cool, dissolve the residue in *0.1 M hydrochloric acid* and dilute to 25.0 ml with the same acid.

Reference solutions Prepare the reference solutions using *copper standard solution (0.1 per cent Cu) R*, diluted as necessary with *0.1 M nitric acid*.

Measure the absorbance at 324.8 nm using a copper hollow-cathode lamp as a source of radiation and an air-acetylene flame.

Loss on drying (*2.2.32*)

Not more than 0.5 per cent, determined on 1.000 g by drying at 105 °C.

Sulphated ash (*2.4.14*)

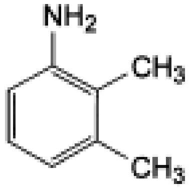
Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

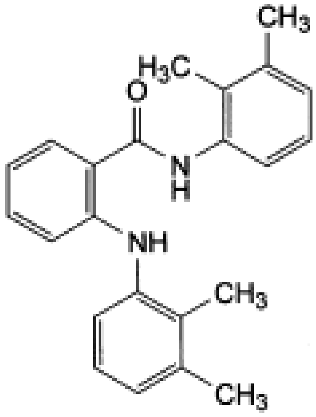
Dissolve with the aid of ultrasound 0.200 g in 100 ml of warm *ethanol R*, previously neutralised to *phenol red solution R*. Add 0.1 ml of *phenol red solution R* and titrate with *0.1 M sodium hydroxide.*

1 ml of *0.1 M sodium hydroxide* is equivalent to 24.13 mg of $C_{15}H_{15}NO_2$.

IMPURITIES



A. 2,3-dimethylaniline,



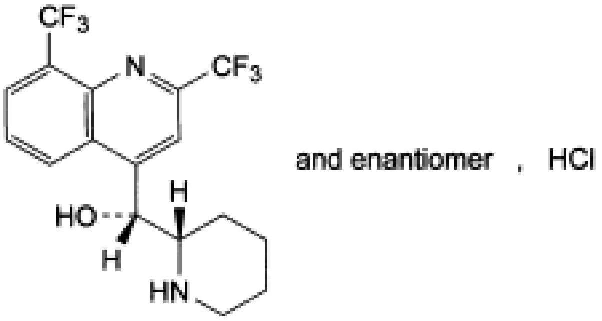
B. *N*-(2,3-dimethyphenyl)-2-[(2,3-dimethylphenyl)amino]benzamide.

Ph Eur

Mefloquine Hydrochloride

General Notices

(Ph Eur monograph 1241)



$C_{17}H_{17}ClF_6N_2O$ 414.8 *51773-92-3*

Action and use

Antiprotozoal (malaria).

Ph Eur

DEFINITION

(*RS*)-[2,8-Bis(trifluoromethyl)quinolin-4-yl][(2*SR*)-piperidin-2-yl]methanol hydrochloride.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or slightly yellow, crystalline powder.

Solubility

Very slightly soluble in water, freely soluble in methanol, soluble in ethanol (96 per cent).

It shows polymorphism (*5.9*).

mp: about 260 °C, with decomposition.

IDENTIFICATION

First identification A, E.

Second identification *B, C, D, E.*

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison *mefloquine hydrochloride CRS.*

If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in *methanol R*, evaporate to dryness and record new spectra using the residues.

B. Thin-layer chromatography (*2.2.27*).

Test solution Dissolve 8 mg of the substance to be examined in *methanol R* and dilute to 5 ml with the same solvent.

Reference solution (a) Dissolve 8 mg of *mefloquine hydrochloride CRS* in *methanol R* and dilute to 5 ml with the same solvent.

Reference solution (b) Dilute 2.5 ml of the test solution to 100 ml with *methanol R*.

Reference solution (c) To 1 ml of reference solution (b) add 1 ml of a 0.016 g/l solution of *quinidine sulphate R* in *methanol R*.

Plate *TLC silica gel* F_{254} *plate R*.

Pretreatment Develop the plate with a mixture of 20 volumes of *methanol R* and 80 volumes of *methylene chloride R*, and dry at 100-105 °C for 15 min before use.

Mobile phase *anhydrous acetic acid R*, *methanol R*, *methylene chloride R* (10:10:80 *V/V/V*).

Application 20 µl.

Development Over a path of 10 cm.

Drying In a current of warm air for 15 min.

Detection Examine in ultraviolet light at 254 nm; lightly spray with a mixture prepared immediately before use of 1 volume of *sulphuric acid R* and 40 volumes of *iodoplatinate reagent R*; spray with *strong hydrogen peroxide solution R*.

System suitability Reference solution (c):

— the chromatogram shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Mix about 10 mg with 45 mg of *heavy magnesium oxide R* and ignite in a crucible until a practically white residue is obtained. Allow to cool, then add 2 ml of *water R*, 0.05 ml of *phenolphthalein solution R1* and about 1 ml of *dilute hydrochloric acid R* to make the solution colourless. Filter. To the filtrate add a freshly prepared mixture of 0.1 ml of *alizarin S solution R* and 0.1 ml of *zirconyl nitrate solution R*. Mix, allow to stand for 5 min and compare the colour of the solution with a blank prepared in the same manner. The test solution is yellow and the blank is red.

D. To about 20 mg add 0.2 ml of *sulphuric acid R*. Blue fluorescence appears in ultraviolet light at 365 nm.

E. It gives reaction (b) of chlorides (*2.3.1*).

TESTS

Solution S

Dissolve 2.50 g in *methanol R* and dilute to 50.0 ml with the same solvent.

Appearance of solution

Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution BY_7 (*2.2.2, Method I*).

Optical rotation (*2.2.7*)

- 0.2° to + 0.2°, determined on solution S.

Related substances

Liquid chromatography (*2.2.29*).

Test solution Dissolve 0.10 g of the substance to be examined in the mobile phase and dilute to 25.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 50.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 20.0 ml with the mobile phase.

Reference solution (b) Dissolve 8 mg of *mefloquine hydrochloride CRS* and 8 mg of *quinidine sulphate R* in the mobile phase, then dilute to 50.0 ml with the mobile phase. Dilute 5.0 ml of this solution to 100.0 ml with the mobile phase.

Precolumn:
- — *size: l* = 0.025 m, Ø = 4 mm;
- — *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

Column:
- — *size: l* = 0.25 m, Ø = 4 mm;
- — *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography* R (5 µm).

Mobile phase Dissolve 1 g of *tetraheptylammonium bromide R* in a mixture of 200 volumes of *methanol R*, 400 volumes of a 1.5 g/l solution of *sodium hydrogen sulphate R* and 400 volumes of *acetonitrile R*.

Flow rate 0.8 ml/min.

Detection Spectrophotometer at 280 nm.

Equilibration With the mobile phase at a flow rate of 2 ml/min for about 30 min.

Injection 20 µl.

Run time 10 times the retention time of mefloquine.

Retention time Quinidine = about 2 min; mefloquine = about 4 min; impurity B = about 15 min; impurity A = about 36 min.

System suitability Reference solution (b):

- — *resolution*: minimum 8.5 between the peaks due to quinidine and mefloquine.

Limits:
- — *impurity with a relative retention with reference to mefloquine of about 0.7* : not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a)

(0.2 per cent);

— *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

— *sum of impurities other than the impurity with a relative retention with reference to mefloquine of about 0.7* : not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

— *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.02 per cent).

Heavy metals (*2.4.8*)

Maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Water (*2.5.12*)

Maximum 3.0 per cent, determined on 1.000 g.

Sulphated ash (*2.4.14*)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.350 g in 15 ml of *anhydrous formic acid R* and add 40 ml of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 41.48 mg of $C_{17}H_{17}ClF_6N_2O$.

STORAGE

Protected from light.

IMPURITIES

DEFINITION

1-Deoxy-1-(methylamino)-D-glucitol.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water, sparingly soluble in ethanol (96 per cent), practically insoluble in methylene chloride.

mp

About 128 °C.

IDENTIFICATION

First identification A.

Second identification *B, C, D.*

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *Ph. Eur. reference spectrum of meglumine.*

B. To 5 ml of *water R*, add 0.5 ml of *paraldehyde R* and 1 ml of *dilute sulphuric acid R*. Shake vigorously and heat on a water-bath until opalescence appears. Allow to stand for 15 min. To 1 ml of this solution add 0.2 ml of a freshly prepared 100 g/l solution of *sodium nitroprusside R*, 50 mg of the substance to be examined and 2 ml of a 50 g/l solution of *disodium tetraborate R*. A blue colour develops.

C. Dissolve 0.1 g in 2 ml of *nitric acid R*. Add 5 ml of a 6.4 g/l solution of *sodium periodate R*, then add 5 ml of *nitric acid R* and 25 ml of a 17 g/l solution of *silver nitrate R*. Allow to stand in the dark for 10 min. A white precipitate is formed.

D. It complies with the limits of the assay.

TESTS

Solution S

Dissolve 20.0 g in *distilled water R* and dilute to 100.0 ml with the same solvent.

Appearance of solution

The solution is clear *(2.2.1)* and its absorbance *(2.2.25)* at 420 nm is not greater than 0.03.

Dissolve the residue obtained in the test for loss on drying in *water R* and dilute to 10 ml with the same solvent.

Specific optical rotation *(2.2.7)*

- 16.0 to - 17.0 (dried substance).

Dilute 12.5 ml of solution S to 25.0 ml with *water R*.

Reducing substances

Maximum 0.2 per cent, expressed as glucose.

Dilute 1.25 ml of solution S to 2.5 ml with *water R*, add 2 ml of *cupri-tartaric solution R*. Heat on a water-bath for 10 min. Cool under running water for 1 min and then sonicate the tube for 20 s. Immediately filter through a filter 25 mm in diameter and 0.5 µm in pore size. Rinse with 10 ml of *water R*. Prepare a standard in the same manner using 2.5 ml of a solution obtained by dissolving 20 mg of *glucose R* in *water R* and diluting to 100 ml with the same solvent. Any precipitate on the membrane filter obtained with the test solution is not more intensely coloured than the precipitate obtained with the standard.

Chlorides *(2.4.4)*

Maximum 100 ppm.

To 2.5 ml of solution S add 12.5 ml of *water R*.

Sulphates *(2.4.13)*

Maximum 150 ppm.

To 5 ml of solution S add 10 ml of *distilled water R*.

Iron

Maximum 10 ppm.

To 10 ml of solution S add about 0.8 ml of *hydrochloric acid R* and 0.05 ml of *bromine water R*. Allow to stand for 5 min, evaporate the excess of bromine in a current of air and add 3 ml of *potassium thiocyanate solution R*. Prepare a reference solution at the same time and in the same manner using 10 ml of *iron standard solution (2 ppm Fe) R*, to which 2 ml of *hydrochloric acid R* has been added. After 5 min, any red colour in the test solution is not more intense than that in the reference solution.

Heavy metals *(2.4.8)*

Maximum 10 ppm.

Adjust 10 ml of solution S to pH 3-4 with *dilute acetic acid R*. Dilute to 20 ml with *water R*. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

Bacterial endotoxins *(2.6.14)*

Less than 1.5 IU/g, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

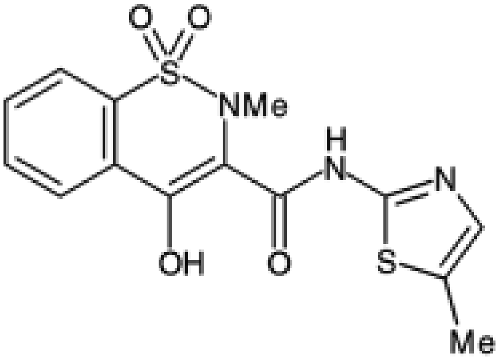
Dissolve 0.180 g in 30 ml of *water R*. Titrate with *0.05 M sulphuric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.05 M sulphuric acid* is equivalent to 19.52 mg of $C_7H_{17}NO_5$.

Ph Eur

Meloxicam

General Notices



$C_{14}H_{13}N_3O_4S_2$ 351.4 *71125-38-7*

Action and use

Cyclo-oxygenase inhibitor; analgesic; anti-inflammatory.

Preparation

Meloxicam Tablets

DEFINITION

Meloxicam is 4-hydroxy-2-methyl-*N*-(5-methyl-1,3-thiazol-2-yl)-2 *H*-1,2-benzothiazine-3-carboxamide 1,1-dioxide. It contains not less than 99.0% and not more than 100.5% of $C_{14}H_{13}N_3O_4S_2$, calculated with reference to the dried substance.

CHARACTERISTICS

A pale yellow powder.

Practically insoluble in *water*; slightly soluble in *acetone*; soluble in *dimethylformamide*; very slightly soluble in *ethanol (96%)* and in *methanol*.

IDENTIFICATION

A. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of meloxicam *(RS 374)*.

B. The *light absorption*, Appendix II B, in the range 240 nm to 450 nm of a 0.0015% w/v solution in *methanol* exhibits a maximum at 354 nm. The *absorbance* at 354 nm is about 0.8.

TESTS

Clarity of solution

A 5.0% w/v solution in *dimethylformamide* is *clear*, Appendix IV A.

Related substances

Carry out the method for *liquid chromatography*, Appendix III D, using the following solutions.

(1) Prepare a 0.4% w/v solution of the substance being examined in a mixture of 50 volumes of *methanol (40%)* and 3 volumes of 0.4M *sodium hydroxide* and dilute a portion of this solution with an equal volume of *methanol (40%)*.

(2) Dilute 1 volume of solution (1) to 100 volumes with *methanol (40%)* and further dilute 1 volume of this solution to 10 volumes with *methanol (40%)*.

(3) Prepare in the same manner as solution (1) using *meloxicam impurity standard BPCRS* in place of the substance being examined.

CHROMATOGRAPHIC CONDITIONS

(a) Use a stainless steel column (15 cm × 4.6 mm) packed with *end-capped octadecylsilyl silica gel for chromatography* (5 µm) (Inertsil ODS2 is suitable).

(b) Use linear gradient elution and the mobile phase described below.

(c) Use a flow rate of 1 ml per minute.

(d) Use a column temperature of 45°.

(e) Use detection wavelengths of 260 and 350 nm.

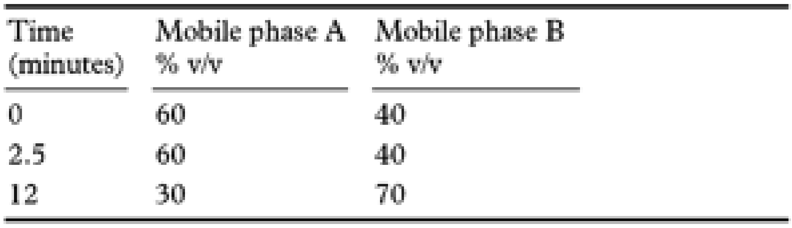
(f) Inject 10 µl of each solution.

(g) For solution (1) allow the chromatography to proceed for 20 minutes or until impurity C has eluted.

MOBILE PHASE

Mobile phase A A 0.1% w/v solution of *potassium dihydrogen orthophosphate* adjusted to pH 6.0 with *dilute sodium hydroxide solution.*

Mobile phase B *methanol*.



Time (minutes)	Mobile phase A % v/v	Mobile phase B % v/v
0	60	40
2.5	60	40
12	30	70

SYSTEM SUITABILITY

The test is not valid unless, at each wavelength, the chromatogram obtained with solution (3) closely resembles the corresponding chromatogram supplied with *meloxicam impurity standard BPCRS*.

LIMITS

In the chromatogram obtained with solution (1) at 350 nm:

— the areas of any peaks corresponding to impurity A and impurity C are not greater than half the area of the peak in the chromatogram obtained with solution (2) at 350 nm (0.1% of impurity A assuming a correction factor of 2.0, and 0.05% for impurity C).

In the chromatogram obtained with solution (1) at 260 nm:

— the area of any peak corresponding to impurity B is not greater than the area of the peak in the chromatogram obtained with solution (2) at 350 nm (0.1%).

In both the chromatograms obtained with solution (1) at 350 nm and at 260 nm:

— the area of any other *secondary peak* is not greater than the area of the peak in the chromatogram obtained with solution (2) at 350 nm (0.1%).

Calculate the percentage content of impurities A and C at 350 nm, the percentage content of impurity B at 260 nm and the percentage content of any other secondary peaks at the wavelength of higher response. The nominal total content of any such impurities is not greater than 0.3%.

Heavy metals

2.0 g complies with *limit test C for heavy metals*, Appendix VII (10 ppm). Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb)*.

Loss on drying

When dried to a constant weight at 105°, loses not more than 0.5% of its weight. Use 3 g.

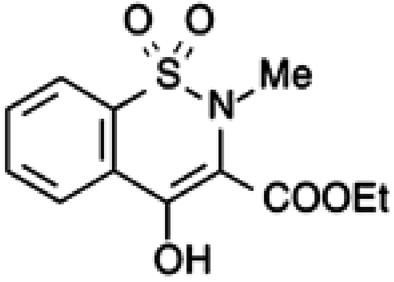
Sulphated ash

Not more than 0.1%, Appendix IX A. Use 1 g.

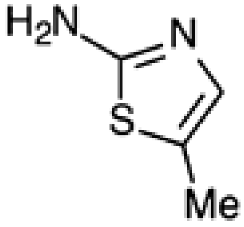
ASSAY

Dissolve 0.25 g in a mixture of 50 ml of *anhydrous acetic acid* and 5 ml of *anhydrous formic acid* and carry out the method for *non-aqueous titration*, Appendix VIII A, determining the end-point potentiometrically. Each ml of 0.1M *perchloric acid VS* is equivalent to 35.14 mg of $C_{14}H_{13}N_3O_4S_2$.

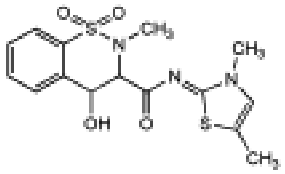
IMPURITIES



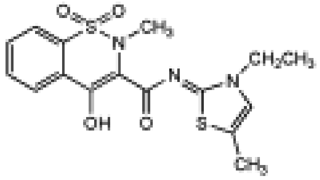
A. ethyl 4-hydroxy-2-methyl-2*H*-1,2-benzothiazine-3-carboxylate 1,1-dioxide,



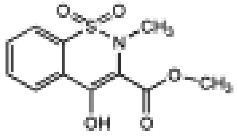
B. 5-methyl 1,3-thiazol-2-amine,



C. *N*-[(2*Z*)-3,5-dimethyl-1,3-thiazol-2(3*H*)-ylidene]-4-hydroxy-2-methyl-2*H*-1,2-benzothiazine-3-carboxamide-1,1-dioxide,



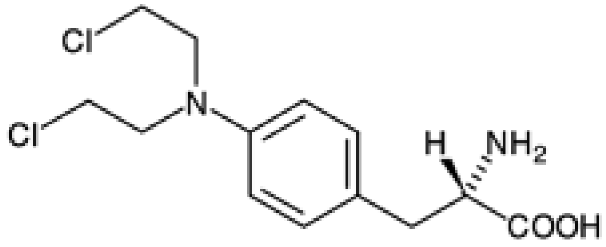
D. *N*-[(2*Z*)-3,ethyl-5-methyl-1,3-thiazol-2(3*H*)-ylidene]-4-hydroxy-2-methyl-2*H*-1,2-benzothiazine-3-carboxamide 1,1-dioxide,



E. methyl 4-hydroxy-2-methyl-2*H*-1,2-benzothiazine-3-carboxylate 1,1-dioxide.

Melphalan

General Notices



$C_{13}H_{18}Cl_2N_2O_2$ 305.2 *148-82-3*

Action and use

Cytotoxic alkylating agent.

Preparations

Melphalan Injection

Melphalan Tablets

DEFINITION

Melphalan is 4-bis(2-chloroethyl)amino-L-phenylalanine. It contains not less than 93.0% and not more than 100.5% of $C_{13}H_{18}Cl_2N_2O_2$, calculated with reference to the dried substance.

CHARACTERISTICS

A white or almost white powder.

Practically insoluble in *water*; slightly soluble in *methanol*; practically insoluble in *ether*. It dissolves in dilute mineral acids.

IDENTIFICATION

A. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of melphalan (*RS 212*).

B. A 0.5% w/v solution in *methanol* is laevorotatory.

TESTS

Ionisable chlorine

Dissolve 0.4 g in a mixture of 75 ml of *water* and 2 ml of *nitric acid*, allow to stand for 2 minutes and titrate with 0.1M *silver nitrate VS* determining the end point potentiometrically. Not more than 0.8 ml is required.

Loss on drying

When dried at 100° at a pressure not exceeding 0.7 kPa for 2 hours, loses not more than 7.0% of its weight. Use 1 g.

Sulphated ash

Not more than 0.3%, Appendix IX A.

ASSAY

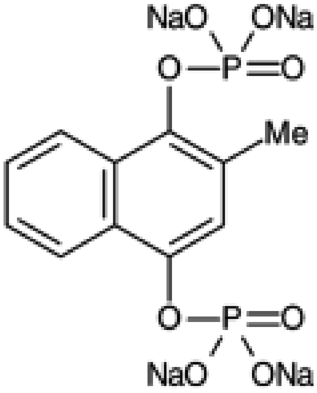
To 0.4 g add 20 ml of a 20% w/v solution of *potassium hydroxide*, heat on a water bath for 2 hours, replacing water lost by evaporation, and cool. Add 75 ml of *water* and 4 ml of *nitric acid*, cool and titrate with 0.1M *silver nitrate VS* determining the end point potentiometrically. Subtract the volume of 0.1M *silver nitrate VS* used in the test for Ionisable chlorine. Each ml of 0.1M *silver nitrate VS* represented by the difference is equivalent to 15.26 mg of $C_{13}H_{18}Cl_2N_2O_2$.

STORAGE

Melphalan should be protected from light.

Menadiol Sodium Phosphate

General Notices



$C_{11}H_8Na_4O_8P_2,6H_2O$ 530.2 *6700-42-1*

Action and use

Vitamin K analogue.

Preparations

Menadiol Phosphate Injection

Menadiol Phosphate Tablets

DEFINITION

Menadiol Sodium Phosphate is tetrasodium 2-methylnaphthalene-1,4-diyl di(orthophosphate) hexahydrate. It contains not less than 98.0% and not more than 100.5% of $C_{11}H_8Na_4O_8P_2$, calculated with reference to the anhydrous substance.

CHARACTERISTICS

A white to pink, crystalline powder; hygroscopic.

Very soluble in *water*; practically insoluble in *ethanol (96%)*.

IDENTIFICATION

A. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of menadiol sodium phosphate *(RS 213)*.

B. To 10 ml of a 2% w/v solution add 10 ml of 1M *sulphuric acid*, 10 ml of 0.1M *cerium(IV) sulphate* and 1 ml of *hydrogen peroxide solution (20 vol)* and extract with two 10 ml quantities of *chloroform*. Evaporate the combined chloroform extracts to dryness on a water bath and dry the residue at 40° at a pressure not exceeding 0.7 kPa. The *infrared* *absorption spectrum* of the residue, Appendix II A, is concordant with the *reference spectrum* of menadione.

C. Dissolve 40 mg in 2 ml of *water*, heat gently with 2 ml of *sulphuric acid* until white fumes are evolved, add *nitric acid* dropwise until digestion is complete and cool. Add 2 ml of *water*, heat until white fumes are evolved again, cool, add a further 10 ml of *water* and neutralise to *litmus paper* with 5M *ammonia*. The solution yields reaction A characteristic of *sodium salts* and reaction B characteristic of *phosphates*, Appendix VI.

TESTS

Inorganic phosphate

Dissolve 25 mg in 10 ml of *water*, add 4 ml of 1M *sulphuric acid*, 1 ml of a 10% w/v solution of *ammonium molybdate* and 2 ml of *methylaminophenyl-sulphite reagent* and allow to stand for 15 minutes. The *absorbance* of the solution at 730 nm, Appendix II B, is not more than the *absorbance* of a solution prepared in the same manner but using 10 ml of a 0.0025% w/v solution of *potassium dihydrogen orthophosphate* in place of the solution of the substance being examined (0.7%).

Total phosphate

Dissolve 85 mg in 50 ml of *glacial acetic acid*, add 5 ml of *mercury(II) acetate solution* and carry out Method I for *non-aqueous titration*, Appendix VIII A, determining the end point potentiometrically. Not less than 7.7 ml and not more than 8.3 ml of 0.1M *perchloric acid VS* is required.

Related substances

Carry out in subdued light the method for *thin-layer chromatography*, Appendix III A, using *silica gel* GF_{254} as the coating substance and a mixture of 50 volumes of *propan-1-ol*, 50 volumes of a 2% w/v solution of *ammonium chloride*, 5 volumes of *butan-1-ol* and 1.5 volumes of *diethylamine* as the mobile phase. Apply separately to the plate 5 µl of each of three solutions in *methanol (50%)* containing (1) 4.0 w/v of the substance being examined, (2) 0.020% w/v of the substance being examined and (3) 0.0080% w/v of *2-methyl-1,4-naphthaquinone*. After removal of the plate, allow it to dry in air and examine under *ultraviolet light (254 nm)*. Any spot corresponding to 2-methyl-1,4-naphthaquinone (menadione) in the chromatogram obtained with solution (1) is not more intense than the spot in the chromatogram obtained with solution (3) and any other *secondary spot* is not more intense than the spot in the chromatogram obtained with solution (2).

Water

19.0 to 21.5% w/w, Appendix IX A. Use 0.25 g.

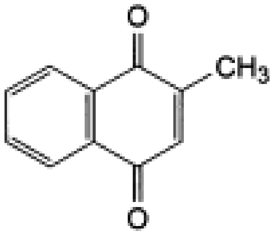
ASSAY

Dissolve 0.1 g in 25 ml of *water*, add 25 ml of *glacial acetic acid* and 25 ml of 3M *hydrochloric acid* and titrate with 0.02M *cerium(IV) sulphate VS* using platinum and calomel electrodes and determining the end point potentio-metrically. Each ml of 0.02M *cerium(IV) sulphate VS* is equivalent to 4.221 mg of $C_{11}H_8Na_4O_8P_2$.

Menadione

General Notices

(Ph Eur monograph 0507)



$C_{11}H_8O_2$ 172.2 *58-27-5*

Action and use

Vitamin K analogue.

Ph Eur

DEFINITION

Menadione contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of 2-methylnaphthalene-1,4-dione, calculated with reference to the dried substance.

CHARACTERS

A pale-yellow, crystalline powder, practically insoluble in water, freely soluble in toluene, sparingly soluble in alcohol and in methanol. It is unstable in light.

IDENTIFICATION

First identification A, B.

Second identification A, C, D.

A. Melting point (*2.2.14*): 105 °C to 108 °C.

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *menadione CRS*.

C. Dissolve about 1 mg in 5 ml of *alcohol R*, add 2 ml of *ammonia R* and 0.2 ml of *ethyl cyanoacetate R*. An intense bluish-violet colour develops. Add 2 ml of *hydrochloric acid R*. The colour disappears.

D. Dissolve about 10 mg in 1 ml of *alcohol R*, add 1 ml of *hydrochloric acid R* and heat in a water-bath. A red colour develops.

TESTS

Related substances

Carry out the test protected from bright light. Examine by thin-layer chromatography (*2.2.27*), using *silica gel* GF_{254} *R* as the coating substance.

Test solution Dissolve 0.2 g of the substance to be examined in *acetone R* and dilute to 10 ml with the same solvent.

Reference solution Dilute 0.5 ml of the test solution to 100 ml with *acetone R*.

Apply separately to the plate 5 µl of each solution. Develop over a path of 15 cm using a mixture of 1 volume of *nitromethane R*, 2 volumes of *acetone R*, 5 volumes of ethylene *chloride R* and 90 volumes of *cyclohexane R*. Dry the plate in a current of hot air. Repeat the development and drying a further two times. Examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with the reference solution (0.5 per cent).

Loss on drying (*2.2.32*)

Not more than 0.5 per cent, determined on 1.000 g by drying over *diphosphorus pentoxide R* at a pressure of 2 kPa to 3 kPa for 4 h.

Sulphated ash (*2.4.14*)

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in 15 ml of *glacial acetic acid R* in a flask with a stopper fitted with a valve. Add 15 ml of *dilute hydrochloric acid R* and 1 g of *zinc powder R*. Close the flask. Allow the mixture to stand for 60 min, protected from light, with occasional shaking. Filter the solution over a cotton wad, wash with three quantities, each of 10 ml, of *carbon dioxide-free water R*. Add 0.1 ml of *ferroin R* and immediately titrate the combined filtrate and washings with *0.1 M ammonium and cerium nitrate*.

1 ml of *0.1 M ammonium and cerium nitrate* is equivalent to 8.61 mg of $C_{11}H_8O_2$.

STORAGE

Store protected from light.

Ph Eur

Menotrophin

General Notices

9002-68-0

Action and use

1:1 ratio of follicle stimulating hormone and luteinizing hormone.

Preparation

Menotrophin Injection

DEFINITION

Menotrophin is a dry preparation containing glycoprotein gonadotrophins possessing follicle-stimulating and luteinising activities. It contains not less than 40 IU of follicle-stimulating hormone activity per mg. The ratio of IU of luteinising hormone (LH) activity to IU of follicle-stimulating hormone (FSH) activity is approximately 1. The preparation is exclusively or predominantly of pituitary origin and obtained from the urine of post-menopausal women but, where necessary, chorionic gonadotrophin obtained from the urine of pregnant women may be added to achieve the above ratio.

PRODUCTION

Menotrophin may be prepared by a suitable fractionation procedure followed by ion-exchange chromatography. It is prepared in conditions designed to minimise microbial contamination. The manufacturing process must have been shown to eliminate any adventitious viral contamination such as hepatitis virus or HIV by appropriate validated methods.

CHARACTERISTICS

An almost white or slightly yellow powder.

Soluble in *water*.

IDENTIFICATION

Causes enlargement of the ovaries of immature female rats and increases the weight of the seminal vesicles and prostate gland of immature male rats when administered as directed in the Assay.

TESTS

Hepatitis antigens

Examined by a suitably sensitive immunochemical method, Appendix XIV B, hepatitis antigens are not detected.

HIV antigens

Examined by a suitably sensitive immunochemical method, Appendix XIV B, HIV antigens are not detected.

Pyrogens

Complies with the *test for pyrogens*, Appendix XIV D. Use per kg of the rabbit's weight 1 ml of a solution in *sodium chloride injection* containing 5 IU of follicle stimulating hormone activity per ml.

Water

Not more than 5% w/w when determined by *gas chromatography*, Appendix III B, using throughout dry glassware which may be siliconised and the following solutions. For solution (1) dilute 15 µl of *anhydrous methanol* (internal standard) with sufficient *propan-2-ol R1* to produce 100 ml. For solution (2) dissolve 4 mg of the substance being examined in 0.5 ml of *propan-2-ol R1*. For solution (3) dissolve 4 mg of the substance being examined in 0.5 ml of solution (1). For solution (4) add 10 µl of *water* to 50 ml of solution (1).

The chromatographic procedure may be carried out using a stainless steel column (1 m × 2 mm) packed with porous polymer beads (60 to 80 mesh) (Chromosorb 102 is suitable), maintained at 120° with a thermal conductivity detector at 150° and using *helium* as the carrier gas.

From the chromatograms obtained and taking into account any water detectable in solution (1), calculate the percentage content of water taking 0.9972 g as its weight per ml at 20°.

ASSAY

Carry out the *biological assay of menotrophin* described below. For each component the estimated potency is not less than 80% and not more than 125% of the stated potency. The fiducial limits of error are not less than 64% and not more than 156% of the stated potency.

STORAGE

Menotrophin should be kept in an airtight, tamper-evident container and protected from light. Under these conditions it may be expected to retain its potency for not less than 3 years.

LABELLING

The label states (1) the number of IU (Units) of follicle-stimulating hormone activity and the number of IU (Units) of luteinising hormone activity in the container; (2) the number of IU (Units) of follicle-stimulating hormone activity per mg and the number of IU (Units) of luteinising hormone activity per mg; (3) where applicable, the number of IU (Units) of chorionic gonadotrophin activity per mg; (4) the date after which the material is not intended to be used; (5) the conditions under which it should be stored; (6) where applicable, that it is sterile.

Menotrophin intended for use in the manufacture of a parenteral dosage form without a further appropriate sterilisation procedure complies with the following additional requirement

Sterility

Complies with the *test for sterility*, Appendix XVI A.

BIOLOGICAL ASSAY OF MENOTROPHIN

The potency of menotrophin with respect to its follicle-stimulating hormone activity is estimated by comparing its effect in enlarging the ovaries of immature female rats with that of the Standard Preparation of human urinary FSH and human urinary LH under the conditions of a suitable method of assay. The potency of menotrophin with respect to its luteinising hormone activity is estimated by comparing its effect in increasing the weight of the seminal vesicles or the prostate gland of immature male rats with that of the Standard Preparation of human urinary FSH and human urinary LH under the conditions of a suitable method of assay.

Standard Preparation

The Standard Preparation is the International Standard preparation of human urinary follicle-stimulating hormone and luteinising hormone, consisting of a freeze-dried extract of urine from post-menopausal women together with lactose, or another suitable preparation the potency of which has been determined in relation to the International Standard.

SUGGESTED METHOD

Follicle-stimulating hormone activity

Select female rats of the same strain, 19 to 28 days old and differing in age by not more than 3 days, and having weights such that the difference between the heaviest rat and the lightest rat is not more than 10 g. Assign the rats at random to six equal groups of at least five animals. If sets of six litter mates are available, allot one litter mate from each set to each group and mark according to litter.

Choose three doses of the Standard Preparation and three doses of the preparation being examined such that the smallest dose produces a positive response in some of the rats and the largest dose does not produce a maximum response in all of the rats. Use doses in geometric progression. As an initial approximation, total doses of 1.5, 3.0 and 6.0 IU may be tried although the dose will depend on the sensitivity of the animals used, which may vary widely.

Dissolve separately the total quantities of the preparation being examined and of the Standard Preparation corresponding to the daily doses to be used in sufficient *albumin-phosphate buffer pH 7.2* containing not less than 70 IU of *chorionic gonadotrophin* per ml so that the daily dose is about 0.2 ml. Add a suitable antimicrobial preservative such as 0.4% w/v of *phenol* or 0.002% w/v of *thiomersal*. Store the solutions at a temperature of 2° to 8°. Inject subcutaneously into each rat the daily dose allocated to its group. Repeat the procedure after 24 and 48 hours. About 24 hours after the last injection, kill the rats and remove the ovaries. Remove any extraneous fluid and tissue and immediately weigh the ovaries from each animal. Record the combined weight of both ovaries from each rat. Calculate the result of the assay by standard statistical methods using the weight of the ovaries as the response. (The precision of the assay may be improved by a suitable correction of the organ weight with reference to the weight of the animal from which it was taken; an analysis of covariance may be used).

Luteinising hormone activity

Select male rats of the same strain, approximately 19 to 28 days old and differing in age by not more than 3 days, and having weights such that the difference between the heaviest rat and the lightest rat is not more than 10 g. Assign the rats at random to six equal groups of at least five animals. If sets of six litter mates are available, allot one litter mate from each set to each group and mark according to litter.

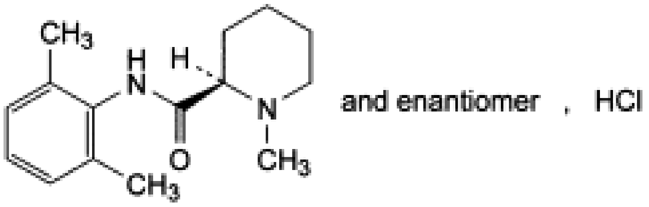
Choose three doses of the Standard Preparation and three doses of the preparation being examined such that the smallest dose is sufficient to produce a positive response in some of the rats and the largest dose does not produce a maximum response in all of the rats. Use doses in geometric progression. As an initial approximation, total doses of 7, 14 and 28 IU may be tried although the dose will depend on the sensitivity of the animals used, which may vary widely.

Dissolve separately the total quantities of the preparation being examined and of the Standard Preparation corresponding to the daily doses to be used in sufficient *albumin-phosphate buffer pH 7.2* so that the daily dose is about 0.2 ml. Add a suitable antimicrobial preservative such as 0.4% w/v of *phenol* or 0.002% w/v of *thiomersal*. Store the solutions at a temperature of 2° to 8°. Inject subcutaneously into each rat the daily dose allocated to its group on 4 consecutive days at the same time each day. On the fifth day, about 24 hours after the last injection, kill the rats and remove the seminal vesicles or the prostate gland. Remove any extraneous fluid and tissue and weigh immediately the seminal vesicles or the prostate gland. Calculate the result of the assay by standard statistical methods, using the weight of the vesicles or the prostate gland as the response. (The precision of the assay may be improved by a suitable correction of the organ weight with reference to the weight of the animal from which it was taken; an analysis of covariance may be used.)

Mepivacaine Hydrochloride

General Notices

(Ph Eur monograph 1242)



$C_{15}H_{23}ClN_2O$ 282.8   *1722-62-9*

Action and use

Local anaesthetic.

Ph Eur

DEFINITION

(*RS*)-*N*-(2,6-Dimethylphenyl)-1-methylpiperidine-2-carboxamide hydrochloride.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water and in ethanol (96 per cent), very slightly soluble in methylene chloride.

mp: about 260 °C, with decomposition.

IDENTIFICATION

First identification   A, B, D.

Second identification   B, C, D.

A. Infrared absorption spectrophotometry (*2.2.24*).

Preparation Discs.

Comparison *mepivacaine hydrochloride CRS.*

B. Thin-layer chromatography (*2.2.27*).

Test solution Dissolve 20 mg of the substance to be examined in *ethanol (96 per cent) R* and dilute to 5 ml with the same solvent.

Reference solution (a) Dissolve 20 mg of *mepivacaine hydrochloride CRS* in *ethanol (96 per cent) R* and dilute to 5 ml with the same solvent.

Reference solution (b) Dissolve 20 mg of *mepivacaine hydrochloride CRS* and 20 mg of *lidocaine hydrochloride CRS* in *ethanol (96 per cent) R* and dilute to 5 ml with the same solvent.

Plate *TLC silica gel* F_{254} *plate R.*

Mobile phase *concentrated ammonia R*, *methanol R*, *ether R* (1:5:100 *V/V/V*).

Application 10 µl.

Development Over a path of 12 cm.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated principal spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

C. To 5 ml of solution S (see Tests) add 1 ml of *dilute sodium hydroxide solution R* and shake with 2 quantities, each of 10 ml, of *ether R*. Dry the combined upper layers over *anhydrous sodium sulphate R*. Filter and evaporate the ether on a water-bath. Dry the residue at 100-105 °C for 2 h. The melting point (*2.2.14*) is 151 °C to 155 °C.

D. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

Solution S

Dissolve 1.5 g in *carbon dioxide-free water R* and dilute to 30 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution B_7 (*2.2.2, Method II*).

pH (*2.2.3*)

4.0 to 5.0.

Dilute 2 ml of solution S to 5 ml with *carbon dioxide-free water R*.

Optical rotation (*2.2.7*)

- 0.10 ° to + 0.10 °, determined on solution S.

Related substances

Liquid chromatography (*2.2.29*).

Test solution Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dissolve 20.0 mg of the substance to be examined and 30.0 mg of *mepivacaine impurity B CRS* in the mobile phase and dilute to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 100.0 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Column:

— *size:* l = 0.125 m, Ø = 4.6 mm;

— *stationary phase*: *base-deactivated octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Mix 35 volumes of *acetonitrile R1* and 65 volumes of a 2.25 g/l solution of *phosphoric acid R* adjusted to pH 7.6 with *strong sodium hydroxide solution R*.

Flow rate 1 ml/min.

Detection Spectrophotometer at 220 nm.

Injection 20 µl.

Run time 3 times the retention time of mepivacaine.

System suitability Reference solution (a):

— *resolution*: minimum 2.5 between the peaks due to impurity B and mepivacaine.

Limits:

— *impurities B, C, D, E*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent), and not more than one of the peaks has an area greater than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

— *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.02 per cent).

Impurity A

Maximum 100 ppm.

Dissolve 0.50 g in *methanol R* and dilute to 10 ml with the same solvent. To 2 ml of this solution add 1 ml of a freshly prepared 10 g/l solution of *dimethylaminobenzaldehyde R* in *methanol R* and 2 ml of *glacial acetic acid R* and allow to stand for 10 min. Any yellow colour in the solution is not more intense than that in a standard prepared at the same time and in the same manner using 2 ml of a 5 mg/l solution of *2,6-dimethylaniline R* in *methanol R*.

Heavy metals (*2.4.8*)

Maximum 5 ppm.

Dissolve 1.0 g in *water R* and dilute to 25 ml with the same solvent. Carry out the prefiltration. 10 ml of the filtrate complies with test E. Prepare the reference solution using 2 ml of *lead standard solution (1 ppm Pb) R*.

Loss on drying (*2.2.32*)

Maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in a mixture of 5.0 ml of *0.01 M hydrochloric acid* and 50 ml of *ethanol (96 per cent) R*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 28.28 mg of $C_{15}H_{23}ClN_2O$.

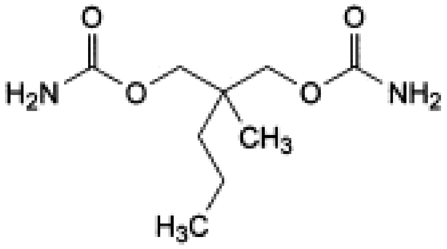
Meprobamate

General Notices

(Ph Eur monograph 0407)



$C_9H_{18}N_2O_4$ 218.3 *57-53-4*

Action and use

Hypnotic.

Ph Eur

DEFINITION

Meprobamate contains not less than 97.0 per cent and not more than the equivalent of 101.0 per cent of 2-methyl-2-propylpropane-1,3-diyl dicarbamate, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, amorphous or crystalline powder, slightly soluble in water, freely soluble in alcohol.

IDENTIFICATION

First identification A, B.

Second identification A, C, D.

A. Melting point (*2.2.14*): 104 °C to 108 °C.

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *meprobamate CRS*.

C. To 0.5 g add 1 ml of *acetic anhydride R* and 0.05 ml of *sulphuric acid R*, mix and allow to stand for 30 min, shaking frequently. Pour the solution dropwise into 50 ml of *water R*, mix and allow to stand. Initiate crystallisation by scratching the wall of the tube with a glass rod. Collect the precipitate by filtration, wash and dry at 60 °C. The precipitate melts (*2.2.14*) at 124 °C to 128 °C.

D. Dissolve 0.2 g in 15 ml of *0.5 M alcoholic potassium hydroxide* and boil under a reflux condenser for 15 min. Add 0.5 ml of *glacial acetic acid R* and 1 ml of a 50 g/l solution of *cobalt nitrate R* in *ethanol R*. A deep-blue colour develops.

TESTS

Appearance of solution

Dissolve 1.0 g in 20 ml of *ethanol R*. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Related substances

Examine by thin-layer chromatography (*2.2.27*), using *silica gel G R* as the coating substance.

Test solution Dissolve 0.20 g of the substance to be examined in *alcohol R* and dilute to 10 ml with the same solvent.

Reference solution Dilute 0.1 ml of the test solution to 10 ml with *alcohol R*.

Apply separately to the plate 5 µl of each solution. Develop over a path of 15 cm using a mixture of 10 volumes of *pyridine R*, 30 volumes of *acetone R* and 70 volumes of *hexane R*. Dry the plate at 120 °C for 30 min, allow to cool and spray with a solution of 0.25 g of *vanillin R* in a cooled mixture of 10 ml of *alcohol R* and 40 ml of *sulphuric acid R* and heat at 100 °C to 105 °C for 30 min. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with the reference solution (1.0 per cent).

Heavy metals (*2.4.8*)

Dissolve 2.0 g in a mixture of 15 volumes of *water R* and 85 volumes of *acetone R* and dilute to 20 ml with the same mixture of solvents. 12 ml of the solution complies with limit test B for heavy metals (10 ppm). Prepare the standard using lead standard solution (1 ppm Pb) obtained by diluting *lead standard solution (100 ppm Pb) R* with the mixture of *water R* and *acetone R*.

Loss on drying (*2.2.32*)

Not more than 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C.

Sulphated ash (*2.4.14*).

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

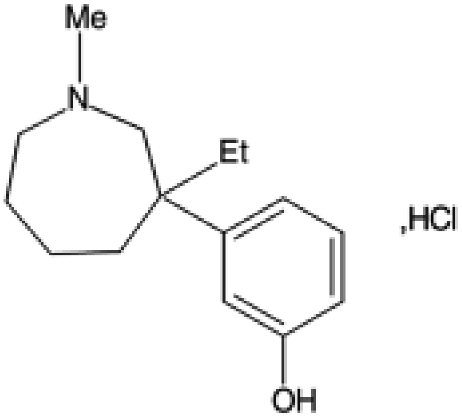
Dissolve 0.1000 g in 15 ml of a 25 per cent *V/V* solution of *sulphuric acid R* and boil under a reflux condenser for 3 h. Cool, dissolve by cautiously adding 30 ml of *water R*, cool again and place in a steam-distillation apparatus. Add 40 ml of *strong sodium hydroxide solution R* and distil immediately by passing steam through the mixture. Collect the distillate into 40 ml of a 40 g/l solution of *boric acid R* until the total volume in the receiver reaches about 200 ml. Add 0.25 ml of *methyl red mixed solution R*. Titrate with *0.1 M hydrochloric acid* until the colour changes from green to violet. Carry out a blank titration.

1 ml of *0.1 M hydrochloric acid* is equivalent to 10.91 mg of $C_9H_{18}N_2O_4$.

Ph Eur

Meptazinol Hydrochloride

General Notices



$C_{15}H_{23}NO,HCl$ 269.8 *59263-76-2*

Action and use

Opioid receptor partial agonist; analgesic.

Preparations

Meptazinol Injection

Meptazinol Tablets

DEFINITION

Meptazinol Hydrochloride is 3-(3-ethyl-1-methylperhydroazepin-3-yl)phenol hydrochloride. It contains not less than 99.0% and not more than 101.0% of $C_{15}H_{23}NO,HCl$, calculated with reference to the dried substance.

CHARACTERISTICS

A white or almost white powder.

Very soluble in *water* and in *methanol*; freely soluble in *ethanol (96%)*; very slightly soluble in *acetone*. It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

A. The *light absorption*, Appendix II B, in the range 230 to 350 nm of a 0.01% w/v solution in *ethanol (96%)* exhibits a maximum only at 275 nm. The *absorbance* at 275 nm is about 0.80.

B. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference* *spectrum* of meptazinol hydrochloride *(RS 215)*.

TESTS

Acidity or alkalinity

To 10 ml of a 2% w/v solution in *carbon dioxide-free water* add 0.2 ml of 0.01M *sodium hydroxide VS* and 0.1 ml of *methyl red solution*; the solution is yellow. Add 0.4 ml of 0.01M *hydrochloric acid VS*; the solution is red.

Colour of solution

A 10.0% w/v solution is not more intensely coloured than *reference solution* Y_6, Appendix IV B, Method II.

Related substances

Carry out the method for *thin-layer chromatography*, Appendix III A, using a silica gel precoated plate (Merck silica gel 60 F_{254} plates are suitable) and a mixture of 1 volume of 18M *ammonia*, 30 volumes of *chloroform* and 70 volumes of *ethyl acetate* as the mobile phase. Apply separately to the plate 10 µl of each of three solutions of the substance being examined in *methanol* containing (1) 1.0% w/v, (2) 0.01% w/v and (3) 0.005% w/v, respectively. After removal of the plate, allow it to dry in air, examine under *ultraviolet light (254 nm)*, expose to iodine vapour for 2 hours and examine again. For each examination any *secondary spot* in the chromatogram obtained with solution (1) is not more intense than the spot in the chromatogram obtained with solution (2) (1%) and not more than one such spot is more intense than the spot in the chromatogram obtained with solution (3) (0.5%).

Loss on drying

When dried at 105° for 3 hours, loses not more than 0.5% of its weight. Use 1 g.

Sulphated ash

Not more than 0.1%, Appendix IX A.

ASSAY

Dissolve 0.15 g in 50 ml of *anhydrous acetic acid* and add 5 ml of *mercury(II) acetate solution*. Carry out Method I for *non-aqueous titration*, Appendix VIII A, determining the end point potentiometrically. Each ml of 0.1M *perchloric acid VS* is equivalent to 26.98 mg of $C_{15}H_{23}NO,HCl$.

IMPURITIES

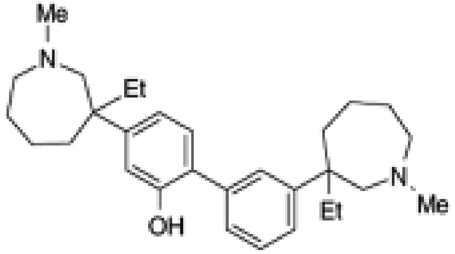
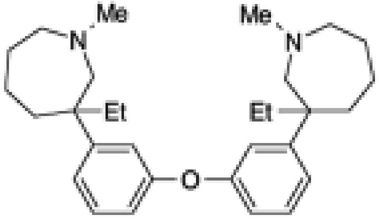
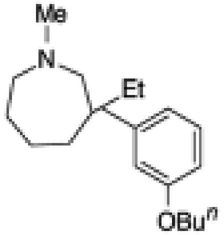
B. 3-ethyl-1-methyl-3-phenylperhydroazepine



C. 4-(3-ethyl-1-methylperhydroazepin-3-yl)-2-[3-(3-ethyl-1-methylperhydroazepin3-yl)phenyl]
phenol



D. 3,3′-oxybis(3-ethyl-1-methylperhydroazepin-3-ylbenzene)

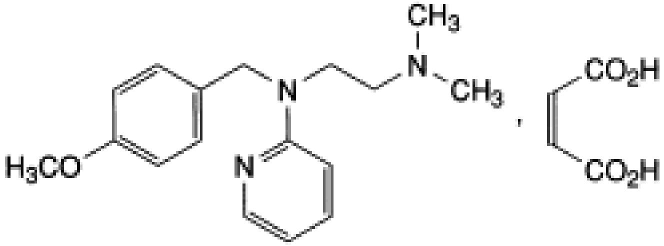


E. 3-ethyl-3-(3-butoxyphenyl)-1-methylperhydroazepine

Mepyramine Maleate

General Notices

(Ph Eur monograph 0278)



$C_{21}H_{27}N_3O_5$ 401.5 *59-33-6*

Action and use

Anti-emetic.

Preparation

Mepyramine Tablets

Ph Eur

DEFINITION

N-(4-Methoxybenzyl)-*N′*,*N′*-dimethyl-*N*-(pyridin-2-yl)ethane-1,2-diamine (*Z*)-butenedioate.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or slightly yellowish, crystalline powder.

Solubility

Very soluble in water, freely soluble in ethanol (96 per cent).

IDENTIFICATION

First identification *B.*

Second identification *A, C, D, E.*

A. Melting point (*2.2.14*): 99 °C to 103 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).

Preparation 50 g/l solutions in *methylene chloride R* using a 0.1 mm cell.

Comparison *mepyramine maleate CRS.*

C. Dissolve 0.100 g in *0.01 M hydrochloric acid* and dilute to 100.0 ml with the same acid. Dilute 1.0 ml of this solution to 100.0 ml with *0.01 M hydrochloric acid*. Examined between 220 nm and 350 nm (*2.2.25*), the solution shows 2 absorption maxima, at 239 nm and 316 nm. The specific absorbances at the absorption maxima are 431 to 477 and 196 to 220, respectively.

D. Thin-layer chromatography (*2.2.27*).

Test solution Dissolve 40 mg of the substance to be examined in *methylene chloride R* and dilute to 10 ml with the same solvent.

Reference solution Dissolve 40 mg of *mepyramine maleate CRS* in *methylene chloride R* and dilute to 10 ml with the same solvent.

Plate *TLC silica gel* GF_{254} *plate R*.

Mobile phase *diethylamine R*, *ethyl acetate R* (2:100 *V/V*).

Application 5 µl.

Development Over 2/3 of the plate.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

E. Triturate 0.1 g with 3 ml of *water R* and 1 ml of *strong sodium hydroxide solution R*. Shake with 3 quantities, each of 5 ml, of *ether R*. To 0.1 ml of the aqueous layer add a solution of 10 mg of *resorcinol R* in 3 ml of *sulphuric acid R*. Heat on a water-bath for 15 min; no colour develops. To the rest of the aqueous layer add 1 ml of *bromine water R*. Heat on a water-bath for 15 min and then heat to boiling and cool. To 0.2 ml of this solution add a solution of 10 mg of *resorcinol R* in 3 ml of *sulphuric acid R*. Heat on a water-bath for 15 min; a violet-pink colour develops.

TESTS

Solution S

Dissolve 5.0 g in *carbon dioxide-free water R* and dilute to 25 ml with the same solvent.

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution Y_6 *(2.2.2, Method II)*.

Dilute 5 ml of solution S to 25 ml with *carbon dioxide-free water R*.

pH *(2.2.3)*

4.9 to 5.2.

Dilute 1.0 ml of solution S to 10 ml with *carbon dioxide-free water R*.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 ml with the mobile phase.

Reference solution (a) Dissolve 5 mg of *anisaldehyde R* (impurity B), 5.0 mg of *mepyramine impurity A CRS* and 5.0 mg of *mepyramine impurity C CRS* in the mobile phase and dilute to 100.0 ml with the mobile phase. Dilute 2.0 ml of this solution to 100.0 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Column:
- *size:* l = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *phenylsilyl silica gel for chromatography R1* (5 µm).

Mobile phase Mix 0.1 volume of *triethylamine R,* 40 volumes of a 0.771 g/l solution of *ammonium acetate R* and 60 volumes of *methanol R*.

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 230 nm.

Injection 20 µl.

Run time 3 times the retention time of mepyramine.

Relative retention With reference to mepyramine (retention time = about 13 min): maleic acid = about 0.2; impurity C = about 0.3; impurity B = about 0.4; impurity A = about 0.5.

System suitability Reference solution (a):

- *resolution*: minimum 3.0 between the peaks due to impurities C and B.

Limits:
- *impurities A, C*: for each impurity, not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *impurity B*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard the peak due to maleic acid.

Chlorides ***(2.4.4)***

Maximum 100 ppm.

Dilute 2.5 ml of solution S to 15 ml with *water R*.

Heavy metals ***(2.4.8)***

Maximum 20 ppm.

1.0 g complies with test D. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying ***(2.2.32)***

Maximum 0.25 per cent, determined on 1.000 g by drying in an oven at 80 °C.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on the residue obtained in the test for loss on drying.

ASSAY

Dissolve 0.150 g in 40 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

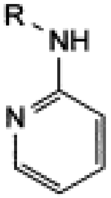
1 ml of *0.1 M perchloric acid* is equivalent to 20.07 mg of $C_{21}H_{27}N_3O_5$.

STORAGE

Protected from light.

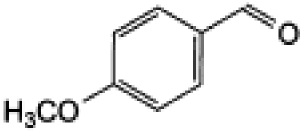
IMPURITIES

Specified impurities A, B, C.



A. R = CH_2-C_6H_4-p-OCH_3: *N*-(4-methoxybenzyl)pyridin-2-amine,

C. R = H: pyridin-2-amine,



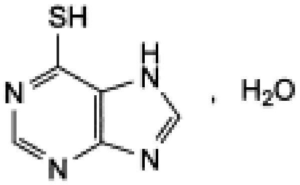
B. 4-methoxybenzaldehyde (anisaldehyde).

Ph Eur

Mercaptopurine

General Notices

(Ph Eur monograph 0096)



$C_5H_4N_4S,H_2O$ 170.2 *6112-76-1*

Action and use

Thiopurine cytotoxic.

Preparations

Mercaptopurine Oral Suspension

Mercaptopurine Tablets

Ph Eur

DEFINITION

Mercaptopurine contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of 7*H*-purine-6-thiol, calculated with reference to the anhydrous substance.

CHARACTERS

A yellow, crystalline powder, practically insoluble in water, slightly soluble in alcohol. It dissolves in solutions of alkali hydroxides.

IDENTIFICATION

A. Dissolve 20 mg in 5 ml of *dimethyl sulphoxide R* and dilute to 100 ml with *0.1 M hydrochloric acid*. Dilute 5 ml of the solution to 200 ml with *0.1 M hydrochloric acid*. Examined between 230 nm and 350 nm (*2.2.25*), the solution shows only one absorption maximum, at 325 nm.

B. Dissolve about 20 mg in 20 ml of *alcohol R* heated to 60 °C and add 1 ml of a saturated solution of *mercuric acetate R* in *alcohol R*. A white precipitate is formed.

C. Dissolve about 20 mg in 20 ml of *alcohol R* heated to 60 °C and add 1 ml of a 10 g/l solution of *lead acetate R* in *alcohol R*. A yellow precipitate is formed.

TESTS

Hypoxanthine

Examine by thin-layer chromatography (*2.2.27*), using *silica gel GF $_{254}$ R* as the coating substance.

Test solution Dissolve 50 mg of the substance to be examined in 1 ml of *dimethyl sulphoxide R* and dilute to 10 ml with *methanol R*.

Reference solution Dissolve 10 mg of *hypoxanthine R* in 10 ml of *dimethyl sulphoxide* R and dilute to 100 ml with *methanol R*.

Apply separately to the plate 5 µl of each solution. Develop over a path of 10 cm using a mixture of 3 volumes of *concentrated ammonia R*, 7 volumes of *water R* and 90 volumes of *acetone R*. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. Any spot corresponding to hypoxanthine in the chromatogram obtained with the test solution is not more intense than the spot in the chromatogram obtained with the reference solution (2.0 per cent).

Water (*2.5.12*)

10.0 per cent to 12.0 per cent, determined on 0.250 g by the semi-micro determination of water.

Sulphated ash (*2.4.14*)

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.100 g in 50 ml of *dimethylformamide R*. Titrate with *0.1 M tetrabutylammonium* hydroxide, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M tetrabutylammonium hydroxide* is equivalent to 15.22 mg of $C_5H_4N_4S$.

STORAGE

Store protected from light.

Ph Eur

Mercuric Chloride

General Notices

(Ph Eur monograph 0120)

$HgCl_2$ 271.5 *7487-94-7*

Ph Eur

DEFINITION

Content

99.5 per cent to 100.5 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or colourless or white or almost white crystals or heavy crystalline masses.

Solubility

Soluble in water and in glycerol, freely soluble in ethanol (96 per cent).

IDENTIFICATION

A. It gives the reactions of chlorides (*2.3.1*).

B. Solution S (see Tests) gives the reactions of mercury (*2.3.1*).

TESTS

Solution S

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 20 ml with the same solvent.

Appearance of solution

Solution S is not more opalescent than reference suspension II (*2.2.1*) and is colourless (*2.2.2, Method II*).

Acidity or alkalinity

To 10 ml of solution S add 0.1 ml of *methyl red solution R*. The solution is red. Add 0.5 g of *sodium chloride R*. The solution becomes yellow. Not more than 0.5 ml of *0.01 M hydrochloric acid* is required to change the colour to red.

Mercurous chloride

Dissolve 1.0 g in 30 ml of *ether R*. The solution shows no opalescence.

Loss on drying (*2.2.32*)

Maximum 1.0 per cent, determined on 2.00 g by drying *in vacuo* for 24 h.

ASSAY

Dissolve 0.500 g in 100 ml of *water R*. Add 20.0 ml of *0.1 M sodium edetate* and 5 ml of *buffer solution pH 10.9 R*. Allow to stand for 15 min. Add 0.1 g of *mordant black 11 triturate R* and titrate with *0.1 M zinc sulphate* until the colour changes to purple. Add 3 g of *potassium iodide R*, allow to stand for 2 min, add a further 0.1 g of *mordant black 11 triturate R* and titrate with *0.1 M zinc sulphate*.

1 ml of *0.1 M zinc sulphate* used in the second titration is equivalent to 27.15 mg of $HgCl_2$.

STORAGE

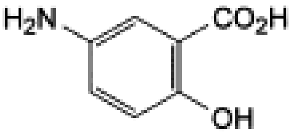
Protected from light.

Ph Eur

Mesalazine

General Notices

(Ph Eur monograph 1699)



$C_7H_7NO_3$ 153.1 *89-57-6*

Action and use

Aminosalicylate; treatment of ulcerative colitis.

Ph Eur

DEFINITION

5-Amino-2-hydroxybenzoic acid.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

Almost white or light grey or light pink powder or crystals.

Solubility

Very slightly soluble in water, practically insoluble in alcohol. It dissolves in dilute solutions of alkali hydroxides and in dilute hydrochloric acid.

IDENTIFICATION

First identification B.

Second identification A, C.

A. Dissolve 50.0 mg in 10 ml of a 10.3 g/l solution of *hydrochloric acid R* and dilute to 100.0 ml with the same acid. Dilute 5.0 ml to 200.0 ml with a 10.3 g/l solution of *hydrochloric acid R*. Examined between 210 nm and 250 nm *(2.2.25)*, the solution shows an absorption maximum at about 230 nm. The specific absorbance at the maximum is 430 to 450.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs.

Comparison *mesalazine CRS*.

C. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 50 mg of the substance to be examined in 10 ml of a mixture of equal volumes of *glacial acetic acid R* and *water R* and dilute to 20.0 ml with *methanol R*.

Reference solution Dissolve 50 mg of *mesalazine CRS* in 10 ml of a mixture of equal volumes of *glacial acetic acid R* and *water R* and dilute to 20.0 ml with *methanol R*.

Plate A suitable silica gel as the coating substance.

Mobile phase *glacial acetic acid R*, *methanol R*, *methyl isobutyl ketone R* (10:40:50 *V/V/V*).

Application 5 µl.

Development Over a path of 10 cm.

Drying In air.

Detection Examine in ultraviolet light at 365 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

TESTS

Appearance of solution

Maintain the solutions at 40 °C during preparation and measurements. Dissolve 0.5 g in *1 M hydrochloric acid* and dilute to 20 ml with the same acid. The solution is clear *(2.2.1)*. Immediately measure the absorbance *(2.2.25)* of the solution at 440 nm and 650 nm. The absorbance is not greater than 0.15 at 440 nm and 0.10 at 650 nm.

Reducing substances

Dissolve 0.10 g in *dilute hydrochloric acid R* and dilute to 25 ml with the same acid. Add 0.2 ml of *starch solution R* and 0.25 ml of *0.01 M iodine*. Allow to stand for 2 min. The solution is blue or violet-brown.

Related substances

Liquid chromatography (*2.2.29*). *Use freshly prepared solutions and mobile phases*.

Test solution Dissolve 50.0 mg of the substance to be examined in mobile phase A and dilute to 50.0 ml with mobile phase A.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with mobile phase A.

Reference solution (b) Dissolve 5.0 mg of *3-aminobenzoic acid R* in mobile phase A and dilute to 100.0 ml with mobile phase A. Dilute 1.0 ml to 25.0 ml with the test solution.

Reference solution (c) Dissolve 5.0 mg of *3-aminobenzoic acid R* in mobile phase A and dilute to 100.0 ml with mobile phase A. Dilute 1.0 ml to 50.0 ml with mobile phase A.

Reference solution (d) Dissolve 10.0 mg of *3-aminophenol R* in mobile phase A and dilute to

100.0 ml with mobile phase A. Dilute 1.0 ml to 50.0 ml with mobile phase A.

Reference solution (e) Dissolve 5.0 mg of *2,5-dihydroxybenzoic acid R* in mobile phase A and dilute to 100.0 ml with mobile phase A. Dilute 1.0 ml to 50.0 ml with mobile phase A.

Reference solution (f) Dissolve 15.0 mg of *salicylic acid R* in mobile phase A and dilute to 100.0 ml with mobile phase A. Dilute 1.0 ml to 50.0 ml with mobile phase A.

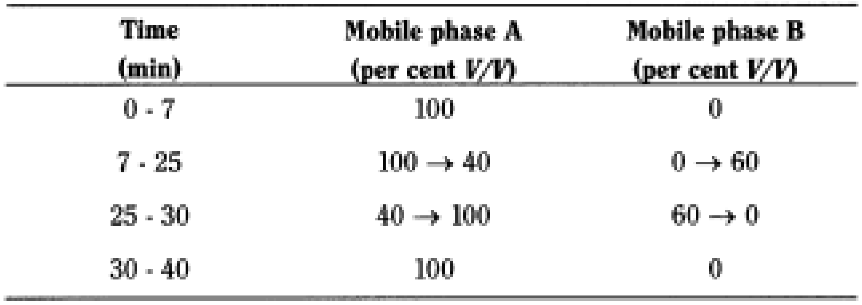
Blank solution Mobile phase A.

Column:

- — *size: l* = 0.25 m, Ø = 4.6 mm;
- — *stationary phase*: spherical *base-deactivated octylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:

- — *mobile phase A*: dissolve 2.2 g of *perchloric acid R* and 1.0 g of *phosphoric acid R* in *water R* and dilute to 1000.0 ml with the same solvent;
- — *mobile phase B*: dissolve 1.7 g of *perchloric acid R* and 1.0 g of *phosphoric acid R* in *acetonitrile R* and dilute to 1000.0 ml with the same solvent.



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 7	100	0
7 - 25	100 → 40	0 → 60
25 - 30	40 → 100	60 → 0
30 - 40	100	0

Flow rate 1.25 ml/min.

Detection Spectrophotometer at 220 nm.

Injection 10 µl.

Relative retention With reference to mesalazine (retention time = about 5 min): impurity B = about 0.8; impurity D = about 1.2; impurity G = about 3.1; impurity H = about 3.9.

System suitability Reference solution (b):

- — *peak-to-valley ratio*: minimum 1.5, where H_p = height above the baseline of the peak due to impurity D and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to mesalazine.

Limits:

- — *impurity B*: not more than the area of the principal peak in the chromatogram obtained with reference solution (d) (0.2 per cent);
- — *impurity D*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent);
- — *impurity G*: not more than the area of the principal peak in the chromatogram obtained with reference solution (e) (0.1 per cent);
- — *impurity H*: not more than the area of the principal peak in the chromatogram obtained

with reference solution (f) (0.3 per cent);

— *any other impurity*: not more than 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

— *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);

— *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent). Disregard any peaks obtained with the blank solution.

Impurity A and impurity C

Liquid chromatography *(2.2.29)*. *Use freshly prepared mobile phases.*

Test solution Dissolve 50.0 mg of the substance to be examined in mobile phase A and dilute to 50.0 ml with mobile phase A.

Reference solution (a) Dissolve 5.0 mg of *2-aminophenol R* in mobile phase A and dilute to 100.0 ml with mobile phase A. Dilute 10.0 ml to 100.0 ml with mobile phase A.

Reference solution (b) Dissolve 5.0 mg of *4-aminophenol R* in mobile phase A and dilute to 250.0 ml with mobile phase A. To 1.0 ml of this solution, add 1.0 ml of reference solution (a) and dilute to 100.0 ml with mobile phase A.

Reference solution (c) Dilute 1.0 ml of the test solution to 200.0 ml with mobile phase A. To 5.0 ml of this solution add 5.0 ml of reference solution (a).

Column:

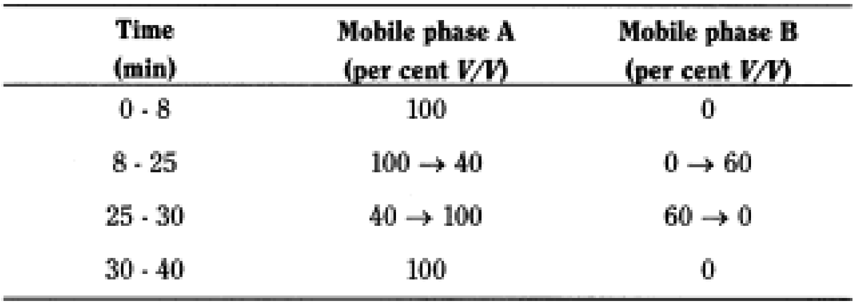
— *size: l* = 0.25 m, Ø = 4.6 mm,

— *stationary phase*: spherical *end-capped octadecylsilyl silica gel for chromatography R* (3 µm).

Mobile phase:

— *mobile phase A*: dissolve 2.2 g of *perchloric acid R* and 1.0 g of *phosphoric acid R* in *water R* and dilute to 1000.0 ml with the same solvent;

— *mobile phase B*: dissolve 1.7 g of *perchloric acid R* and 1.0 g of *phosphoric acid R* in *acetonitrile R* and dilute to 1000.0 ml with the same solvent.



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 8	100	0
8 - 25	100 → 40	0 → 60
25 - 30	40 → 100	60 → 0
30 - 40	100	0

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 220 nm.

Injection 20 µl; inject the test solution and reference solutions (b) and (c).

Relative retention With reference to mesalazine (retention time = about 9 min): impurity A =

about 0.5; impurity C = about 0.9.

System suitability Reference solution (c):

— *resolution*: minimum 3 between the peaks due to impurity C and mesalazine.

Limits:

— *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (200 ppm);

— *impurity C*: not more than 4 times the area of the corresponding peak in the chromatogram obtained with reference solution (b) (200 ppm).

Impurity K

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 40.0 mg of the substance to be examined in the mobile phase and dilute to 20.0 ml with the mobile phase.

Reference solution Dissolve 27.8 mg of *aniline hydrochloride R* in the mobile phase and dilute to 100.0 ml with the mobile phase. Dilute 0.20 ml of this solution to 20.0 ml with the mobile phase. Dilute 0.20 ml of this solution to 20.0 ml with the mobile phase.

Column:

— *size: l* = 0.25 m, Ø = 4 mm;

— *stationary phase*: spherical *octadecylsilyl silica gel for chromatography R* (5 µm);

— *temperature*: 40 °C.

Mobile phase Mix 15 volumes of *methanol R* and 85 volumes of a solution containing 1.41 g/l of *potassium dihydrogen phosphate R* and 0.47 g/l of *disodium hydrogen phosphate dihydrate R* previously adjusted to pH 8.0 with a 42 g/l solution of *sodium hydroxide R*.

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 205 nm.

Injection 50 µl.

Retention time impurity K = about 15 min.

System suitability Reference solution:

— *signal-to-noise ratio*: minimum 10 for the principal peak.

Limit:

— *impurity K*: not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (10 ppm).

Chlorides

Maximum 0.1 per cent.

Dissolve 1.50 g in 50 ml of *anhydrous formic acid R*. Add 100 ml of *water R* and 5 ml of *2 M nitric acid*. Titrate with *0.005 M silver nitrate* determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.005 M silver nitrate* is equivalent to 0.1773 mg of Cl.

Sulphates ***(2.4.13)***

Maximum 200 ppm.

Shake 1.0 g with 20 ml of *distilled water R* for 1 min and filter. 15 ml of the filtrate complies with the limit test for sulphates.

Heavy metals ***(2.4.8)***

Maximum 20 ppm.

1.0 g complies with limit test F. Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying ***(2.2.32)***

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

Maximum 0.2 per cent, determined on 1.0 g.

ASSAY

Dissolve 50.0 mg in 100 ml of boiling *water R*. Cool rapidly to room temperature and titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M sodium hydroxide* is equivalent to 15.31 mg of $C_7H_7NO_3$.

STORAGE

In an airtight container , protected from light.

IMPURITIES

$C_2H_5NaO_3S_2$ 164.2 *19767-45-4*

Action and use

Preventing adverse effects of cyclophosphamide and ifosfamide.

Ph Eur

DEFINITION

Sodium 2-sulphanylethanesulphonate.

Content

96.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or slightly yellow, crystalline powder, hygroscopic.

Solubility

Freely soluble in water, slightly soluble in ethanol (96 per cent), practically insoluble in cyclohexane.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison Ph. Eur. reference spectrum of mesna.

B. It gives reaction (a) of sodium (*2.3.1*).

TESTS

Solution S

Dissolve 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is not more opalescent than reference suspension II (*2.2.1*) and not more intensely coloured than reference solution Y_7 (*2.2.2, Method II*).

pH (*2.2.3*)

4.5 to 6.0.

Dilute 10 ml of solution S to 20 ml with *carbon dioxide-free water R*.

Related substances

Liquid chromatography (*2.2.29*).

Test solution Dissolve 0.10 g of the substance to be examined in the mobile phase and dilute to 25.0 ml with the mobile phase.

Reference solution (a) Dissolve 4.0 mg of *mesna impurity C CRS* in the mobile phase and dilute to 50.0 ml with the mobile phase. Dilute 2.0 ml of the solution to 20.0 ml with the mobile phase.

Reference solution (b) Dissolve 6.0 mg of *mesna impurity D CRS* in the mobile phase and dilute to 50.0 ml with the mobile phase.

Reference solution (c) Dilute 3.0 ml of the test solution to 10.0 ml with the mobile phase.

Reference solution (d) Dilute 1.0 ml of reference solution (c) to 100.0 ml with the mobile phase.

Reference solution (e) Dilute 6.0 ml of reference solution (c) to 20.0 ml with the mobile phase. To 10 ml of the solution add 10 ml of reference solution (a).

Column:
— *size*: *l* = 0.25 m, Ø = 4.6 mm;
— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (10 µm).

Mobile phase Dissolve 2.94 g of *potassium dihydrogen phosphate R*, 2.94 g of *dipotassium hydrogen phosphate R* and 2.6 g of *tetrabutylammonium hydrogen sulphate R* in about 600 ml of *water R*. Adjust to pH 2.3 with *phosphoric acid R*, add 335 ml of *methanol R* and dilute to 1000 ml with *water R*.

Flow rate 1 ml/min.

Detection Spectrophotometer at 235 nm.

Injection 20 µl.

Run time 4 times the retention time of mesna.

Relative retention With reference to mesna (retention time = about 4.8 min): impurities A and B = about 0.6; impurity E = about 0.8; impurity C = about 1.4; impurity D = about 2.3.

System suitability Reference solution (e):

— *resolution*: minimum 3.0 between the peaks due to mesna and impurity C.

Limits:
— *correction factors*: for the calculation of contents, multiply the peak areas of impurities A, B and E by 0.01;

— *impurity C:* not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

— *impurity D*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (3.0 per cent);

— *impurities A, B, E:* for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (d) (0.3 per cent);

— *any other impurity*: for each impurity, not more than one third of the area of the principal peak in the chromatogram obtained with reference solution (d) (0.1 per cent);

— *sum of other impurities*: not more than the area of the principal peak in the chromatogram obtained with reference solution (d) (0.3 per cent);

— *disregard limit*: 0.15 times the area of the principal peak in the chromatogram obtained with reference solution (d) (0.045 per cent).

Chlorides (*2.4.4*)

Maximum 250 ppm.

Dilute 1 ml of solution S to 15 ml with *water R*.

Sulphates (*2.4.13*)

Maximum 300 ppm.

Dilute 5 ml of solution S to 30 ml with *distilled water R*. 15 ml of the solution complies with the test.

Disodium edentate

Maximum 500 ppm.

Dissolve 4.000 g in 90 ml of *water R* and adjust to pH 4.5 using *0.1 M hydrochloric acid*. Add 10 ml of *acetate buffer solution pH 4.5 R* and 50 ml of *2-propanol R*. Add 2 ml of a 0.25 g/l solution of *dithizone R* in *2-propanol R*. Titrate with *0.01 M zinc sulphate* until the colour changes from bluish-grey to pink.

1 ml of *0.01 M zinc sulphate* is equivalent to 3.72 mg of $C_{10}H_{14}N_2Na_2O_8,2H_2O$.

Heavy metals (*2.4.8*)

Maximum 10 ppm.

Dilute 10 ml of solution S to 20 ml with *water R*. 12 ml of the solution complies with limit test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Loss on drying (*2.2.32*)

Maximum 1.0 per cent, determined on 1.000 g under high vacuum at 60 °C for 2 h.

ASSAY

Dissolve 0.120 g in 10 ml of *water R*. Add 10 ml of *1 M sulphuric acid* and 10.0 ml of *0.1 M iodine*. Titrate with *0.1 M sodium thiosulphate* adding 1 ml of *starch solution R* near the endpoint. Carry out a blank titration.

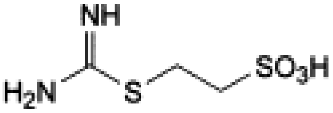
1 ml of *0.1 M sodium thiosulphate* is equivalent to 16.42 mg of $C_2H_5NaO_3S_2$.

STORAGE

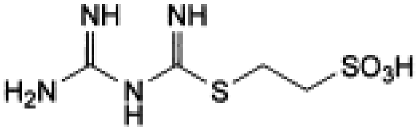
In an airtight container .

IMPURITIES

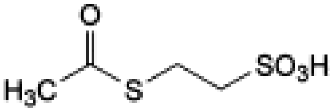
Specified impurities A, B, C, D, E.



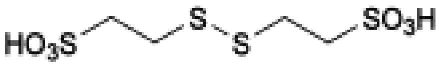
A. 2-(carbamimidoylsulphanyl)ethanesulphonic acid,



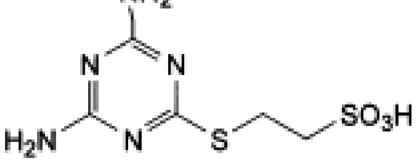
B. 2-[[(guanidino)(imino)methyl]sulphanyl]ethanesulphonic acid,



C. 2-(acetylsulphanyl)ethanesulphonic acid,



D. 2,2′-(disulphanediyl)bis(ethanesulphonic acid),



E. 2-(4,6-diamino-1,3,5-triazin-2-yl)sulphanylethanesulphonic acid.

Action and use

Androgen.

Ph Eur

DEFINITION

17β-Hydroxy-1α-methyl-5α-androstan-3-one.

Content

98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or yellowish crystalline powder.

Solubility

Practically insoluble in water, sparingly soluble in acetone, in ethyl acetate and in methanol.

IDENTIFICATION

A. Melting point *(2.2.14)*: 206 °C to 211 °C.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs.

Comparison *mesterolone CRS.*

TESTS

Specific optical rotation *(2.2.7)*

+ 20 to + 24 (dried substance).

Dissolve 0.200 g in *methylene chloride R* and dilute to 10.0 ml with the same solvent.

Impurity B

Maximum 0.5 per cent.

Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 100.0 mg of the substance to be examined in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 10.0 ml with the same mixture of solvents.

Reference solution (a) Dilute 1.0 ml of the test solution to 200.0 ml with a mixture of equal volumes of *methanol R* and *methylene chloride R*.

Reference solution (b) Dissolve 5.0 mg of *mesterolone impurity A CRS* in reference solution (a) and dilute to 100.0 ml with the same solution.

Plate *TLC silica gel plate R*.

Mobile phase *methanol R*, *acetone R*, *toluene R* (2:15:85 *V/V/V*).

Application 10 µl.

Development Over 2/3 of the plate.

Drying In air.

Detection Examine in ultraviolet light at 366 nm; spray with a 200 g/l solution of *toluenesulphonic acid R* in *alcohol R* and heat the plate for 10 min at 120 °C.

System suitability The chromatogram obtained with reference solution (b) shows 2 clearly separated spots (blue spot due to mesterolone and yellow spot due to impurity A).

Limit:

— *impurity B*: any blue spot, apart from the main spot, is not more intense than the spot in the chromatogram obtained with reference solution (a) (0.5 per cent).

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 50.0 mg of the substance to be examined in a mixture of 20 volumes of *water R* and 80 volumes of *acetonitrile R* and dilute to 25.0 ml with the same mixture of solvents.

Reference solution (a) Dissolve 50.0 mg of *mesterolone CRS* in a mixture of 20 volumes of *water R* and 80 volumes of *acetonitrile R* and dilute to 25.0 ml with the same mixture of solvents.

Reference solution (b) Dissolve 10.0 mg of *mesterolone impurity A CRS* in a mixture of 20 volumes of *water R* and 80 volumes of *acetonitrile R* and dilute to 5.0 ml with the same mixture of solvents.

Reference solution (c) Dilute 0.5 ml of reference solution (a) and 0.5 ml of reference solution (b) to 100.0 ml with a mixture of 20 volumes of *water R* and 80 volumes of *acetonitrile R*.

Column:

— *size: l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (3 µm).

Mobile phase *acetonitrile R*, *water R*, *methanol R* (20:40:60 *V/V/V*).

Flow rate 0.9 ml/min.

Detection Spectrophotometer at 200 nm.

Injection 50 µl; inject the test solution and reference solution (c).

Run time 3 times the retention time of mesterolone.

Relative retention With reference to mesterolone (retention time = about 22 min): impurity A = about 0.7.

System suitability Reference solution (c):

— *resolution*: minimum 6.0 between the peaks due to impurity A and to mesterolone.

Limits:

— *impurity A*: not more than the area of the peak due to impurity A in the chromatogram obtained with reference solution (c) (0.5 per cent);

— *any other impurity*: not more than half the area of the peak due to mesterolone in the chromatogram obtained with reference solution (c) (0.25 per cent);

— *total*: not more than 1.5 times the area of the peak due to mesterolone in the chromatogram obtained with reference solution (c) (0.75 per cent);

— *disregard limit*: 0.1 times the area of the peak due to mesterolone in the chromatogram obtained with reference solution (c) (0.05 per cent).

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

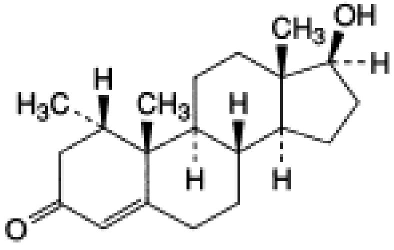
ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances.

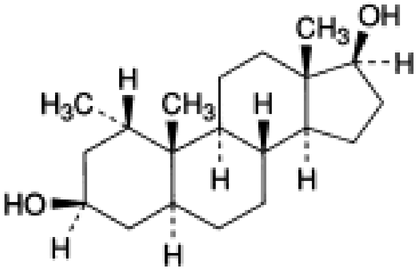
Injection 10 µl; inject the test solution and reference solution (a).

Calculate the percentage content of $C_{20}H_{32}O_2$.

IMPURITIES



A. 17β-hydroxy-1α-methylandrost-4-en-3-one,



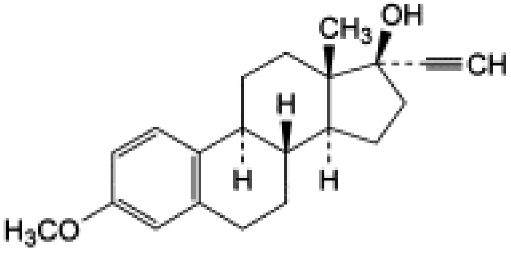
B. 1α-methyl-5α-androstane-3β,17β-diol.

Ph Eur

Mestranol

General Notices

(Ph Eur monograph 0509)



$C_{21}H_{26}O_2$ 310.4 *72-33-3*

Action and use

Estrogen.

Ph Eur

DEFINITION

Mestranol contains not less than 98.0 per cent and not more than the equivalent of 102.0 per cent of 3-methoxy-19-nor-17α-pregna-1,3,5(10)-trien-20-yn-17-ol, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder, practically insoluble in water, sparingly soluble in alcohol.

IDENTIFICATION

First identification *B.*

Second identification *A, C, D.*

A. Melting point *(2.2.14)*: 150 °C to 154 °C.

B. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *mestranol CRS*.

C. Examine the chromatograms obtained in the test for related substances in daylight and in ultraviolet light at 365 nm. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour, fluorescence and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Dissolve about 5 mg in 1 ml of *sulphuric acid R*. A red colour develops with a greenish-yellow fluorescence in ultraviolet light at 365 nm. Add the solution to 10 ml of *water R* and mix. The solution becomes pink and a pink to violet precipitate is formed on standing.

TESTS

Specific optical rotation *(2.2.7)*

Dissolve 0.100 g in *anhydrous pyridine R* and dilute to 10.0 ml with the same solvent. The specific optical rotation is - 20 to - 24, calculated with reference to the dried substance.

Absorbance *(2.2.25)*

Dissolve 25.0 mg in *alcohol R* and dilute to 25.0 ml with the same solvent. Dilute 10.0 ml of this solution to 100.0 ml with *alcohol R*. Examined between 260 nm and 310 nm, the solution shows two absorption maxima, at 279 nm and 288 nm, and a minimum at 286 nm. The specific absorbances at the maxima are 62 to 68 and 59 to 64, respectively.

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using *silica gel G R* as the coating substance.

Test solution (a) Dissolve 0.10 g of the substance to be examined in *chloroform R* and dilute to 10 ml with the same solvent.

Test solution (b) Dilute 1 ml of test solution (a) to 10 ml with *chloroform R*.

Reference solution (a) Dissolve 10 mg of *mestranol CRS* in c*hloroform R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dilute 1 ml of test solution (b) to 10 ml with *chloroform R.*

Reference solution (c) Dilute 5 ml of reference solution (b) to 10 ml with *chloroform R*.

Apply separately to the plate 5 µl of each solution. Develop over a path of 15 cm using a mixture of 10 volumes of *alcohol R* and 90 volumes of *toluene R*. Allow the plate to dry in air until the solvent has evaporated. Heat at 110 °C for 10 min. Spray the hot plate with alcoholic solution of *sulphuric acid R*. Heat again at 110 °C for 10 min. Examine in daylight and in ultraviolet light at 365 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (1.0 per cent) and at most one such spot is more intense than the spot in the chromatogram obtained with reference solution (c) (0.5 per cent).

Loss on drying *(2.2.32)*

Not more than 1.0 per cent, determined on 0.500 g by drying in an oven at 105 °C for 3 h.

ASSAY

Dissolve 0.200 g in 40 ml of *tetrahydrofuran R* and add 5 ml of a 100 g/l solution of *silver nitrate R*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically *(2.2.20)*. Carry out a blank titration.

1 ml of *0.1 M sodium hydroxide* is equivalent to 31.04 mg of $C_{21}H_{26}O_2$.

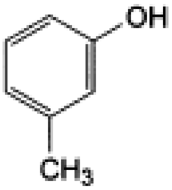
STORAGE

Store protected from light.

Metacresol

General Notices

(Ph Eur monograph 2077)



C_7H_8O 108.1 *108-39-4*

Action and use

Antiseptic; antimicrobial preservative.

Ph Eur

DEFINITION

3-Methylphenol.

CHARACTERS

Appearance

Colourless or yellowish liquid.

Solubility

Sparingly soluble in water, miscible with ethanol (96 per cent) and with methylene chloride.

Relative density

About 1.03.

mp

About 11 °C.

bp

About 202 °C.

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *Ph. Eur. reference spectrum of metacresol.*

TESTS

Solution S

Dissolve 1.5 g in *carbon dioxide-free water R* and dilute to 100 ml with the same solvent.

Appearance of solution

Freshly prepared solution S is not more opalescent than reference suspension III *(2.2.1)* and not more intensely coloured than reference solution BY_7 *(2.2.2, Method II)*.

Acidity

To 25 ml of solution S add 0.15 ml of *methyl red solution R*. The solution is red. Not more than 0.5 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator to yellow.

Related substances

Gas chromatography *(2.2.28)*: use the normalisation procedure.

Test solution Dissolve 1.00 g of the substance to be examined in *methanol R* and dilute to 100.0 ml with the same solvent.

Reference solution (a) Dissolve 0.10 g of *cresol R*, 0.10 g of *p-cresol R* and 0.10 g of the substance to be examined in *methanol R* and dilute to 20.0 ml with the same solvent.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with *methanol R*. Dilute 1.0 ml of this solution to 20.0 ml with *methanol R*.

Column:

- *material*: fused silica;
- *size: l* = 25 m, Ø = 0.25 mm;
- *stationary phase*: *poly[(cyanopropyl)(methyl)][(phenyl)(methyl)]siloxane R* (0.2 µm).

Carrier gas *helium for chromatography R*.

Flow rate 1.8 ml/min.

Split ratio 1:30.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 35	100
	35 - 40	100 → 150
	40 - 50	150
Injection port		200
Detector		200

Detection Flame ionisation.

Injection 1.0 µl.

Relative retention With reference to metacresol (retention time = about 28 min): impurity B = about 0.75; impurity C = about 0.98.

System suitability Reference solution (a):

— *resolution*: minimum 1.4 between the peaks due to impurity C and metacresol.

Limits:

— *impurities B, C*: for each impurity, not more than 0.5 per cent;

— *any other impurity*: for each impurity, not more than 0.1 per cent;

— *total*: not more than 1.0 per cent;

— *disregard limit*: the area of the peak due to metacresol in the chromatogram obtained with reference solution (b) (0.05 per cent).

Residue on evaporation

Maximum 0.1 per cent.

Evaporate 2.0 g to dryness on a water-bath under a fume hood and dry at 100-105 °C for 1 h. The residue weighs a maximum of 2 mg.

STORAGE

In an airtight container , protected from light.

IMPURITIES

Specified impurities *B, C.*

Other detectable impurities (The following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. Ph Eur

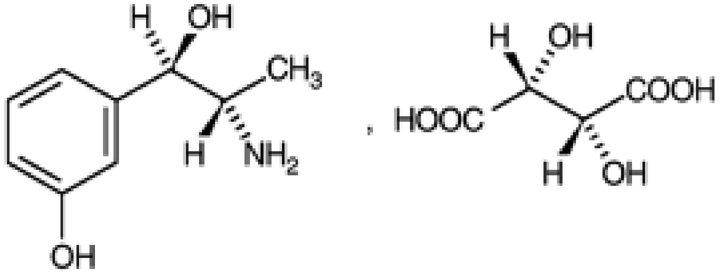
Metaraminol Tartrate

General Notices



$C_9H_{13}NO_2,C_4H_6O_6$ 317.3 *17171-57-2*

Action and use

Adrenoceptor agonist.

Preparation

Metaraminol Injection

DEFINITION

Metaraminol Tartrate is (1*R*,2*S*)-2-amino-1-(3-hydroxyphenyl)propan-1-ol hydrogen (2*R*,3*R*)-tartrate. It contains not less than 99.0% and not more than 101.0% of $C_9H_{13}NO_2,C_4H_6O_6$, calculated with reference to the dried substance.

CHARACTERISTICS

A white, crystalline powder.

Freely soluble in *water*; sparingly soluble in *ethanol (96%)*; practically insoluble in *ether*.

IDENTIFICATION

A. In the test for Related substances the principal spot in the chromatogram obtained with solution (2) corresponds to that in the chromatogram obtained with solution (4).

B. To 0.5 ml of a 0.05% w/v solution add 0.5 ml of *phosphomolybdotungstic reagent* and 5 ml of *dilute sodium carbonate solution* and allow to stand for 5 minutes. An intense blue colour is produced.

C. To 4 ml of a 0.05% w/v solution add 5 ml of *borate buffer pH 9.6* and 1 ml of a freshly prepared 0.5% w/v solution of *sodium 1,2-naphthaquinone-4-sulphonate* and allow to stand for 1 minute. Add 0.2 ml of a 2% v/v solution of *benzalkonium chloride solution* and 5 ml of *toluene* and shake. A mauve colour is immediately produced in the toluene layer (distinction from phenylephrine).

TESTS

Acidity

pH of a 5% w/v solution, 3.2 to 3.5, Appendix V L.

Phenones

Absorbance of a 0.2% w/v solution at 310 nm, not more than 0.2, calculated with reference to the dried substance, Appendix II B.

Related substances

Carry out in subdued light the method for *thin-layer chromatography*, Appendix III A, using a silica gel precoated plate (Merck silica gel 60 plates are suitable) and a mixture of 80 volumes of *chloroform*, 80 volumes of *methanol* and 10 volumes of 13.5M *ammonia* as the mobile phase. Apply separately to the plate 10 µl of each of the following solutions in *methanol*. Solutions (1), (2) and (3) are solutions of the substance being examined containing (1) 1.0% w/v, (2) 0.050% w/v and (3) 0.0050% w/v. Solution (4) contains 0.050% w/v of *metaraminol tartrate BPCRS*. After removal of the plate, allow it to dry in air and spray with a solution prepared in the following manner. Mix 25 ml of a 0.45% w/v solution of *sulphanilic acid* in 1M *hydrochloric acid* with 1.5 ml of a 5% w/v solution of *sodium nitrite*, allow to stand for 5 minutes and mix cautiously with 25 ml of 2M *sodium carbonate*. Any *secondary spot* in the chromatogram obtained with solution (1) is not more intense than the spot in the chromatogram obtained with solution (3) (0.5%).

Loss on drying

When dried to constant weight at 105°, loses not more than 0.5% of its weight. Use 1 g.

Sulphated ash

Not more than 0.1%, Appendix IX A.

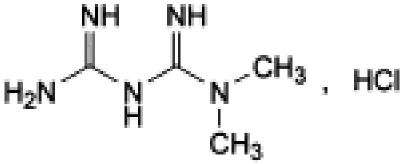
ASSAY

Carry out Method I for *non-aqueous titration*, Appendix VIII A, using 0.6 g and *crystal violet solution* as indicator. Each ml of 0.1M *perchloric acid VS* is equivalent to 31.73 mg of $C_9H_{13}NO_2,C_4H_6O_6$.

Metformin Hydrochloride

General Notices

(Ph Eur monograph 0931)



$C_4H_{11}N_5,HCl$ 165.6   *1115-70-4*

Action and use

Biguanide; treatment of diabetes mellitus.

Preparation

Metformin Tablets

Ph Eur

DEFINITION

1,1-Dimethylbiguanide hydrochloride.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white crystals.

Solubility

Freely soluble in water, slightly soluble in alcohol, practically insoluble in acetone and in methylene chloride.

IDENTIFICATION

First identification   *B, E.*

Second identification   *A, C, D, E.*

A. Melting point (*2.2.14*): 222 °C to 226 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).

Preparation Discs of *potassium chloride R*.

Comparison *metformin hydrochloride CRS.*

C. Thin-layer chromatography (*2.2.27*).

Test solution Dissolve 20 mg of the substance to be examined in *water R* and dilute to 5 ml with the same solvent.

Reference solution Dissolve 20 mg of *metformin hydrochloride CRS* in *water R* and dilute to 5 ml with the same solvent.

Plate *TLC silica gel G plate R*.

Mobile phase Upper layer of a mixture of 10 volumes of *glacial acetic acid R*, 40 volumes of *butanol R* and 50 volumes of *water R.*

Application 5 µl.

Development Over a path of 15 cm.

Drying At 100-105 °C for 15 min.

Detection Spray with a mixture of equal volumes of a 100 g/l solution of *sodium nitroprusside R*, a 100 g/l solution of *potassium ferricyanide R* and a 100 g/l solution of *sodium hydroxide R*, prepared 20 min before use.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

D. Dissolve about 5 mg in *water R* and dilute to 100 ml with the same solvent. To 2 ml of the solution add 0.25 ml of *strong sodium hydroxide solution R* and 0.10 ml of *α-naphthol solution R*. Mix and allow to stand in iced water for 15 min. Add 0.5 ml of *sodium hypobromite solution R* and mix. A pink colour develops.

E. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

Solution S

Dissolve 2.0 g in *water R* and dilute to 20 ml with the same solvent.

Appearance of solution

Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Related substances

Liquid chromatography (*2.2.29*).

Test solution Dissolve 0.50 g of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (a) Dissolve 20.0 mg of *cyanoguanidine R* in *water R* and dilute to 100.0 ml with the same solvent. Dilute 1.0 ml to 200.0 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of the test solution to 50.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 20.0 ml with the mobile phase.

Reference solution (c) Dissolve 10.0 mg of *melamine R* in about 90 ml of *water R.* Add 5.0 ml of the test solution and dilute to 100.0 ml with *water R*. Dilute 1.0 ml of this solution to 50.0 ml with the mobile phase.

Column:

— *size: l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase*: irregular, porous silica gel to which benzenesulphonic acid groups have been chemically bonded (10 µm);

Or

— *size: l* = 0.11 m, Ø = 4.7 mm;

— *stationary phase*: regular, porous silica gel to which benzenesulphonic acid groups have been chemically bonded (5 µm).

Mobile phase 17 g/l solution of *ammonium dihydrogen phosphate R* adjusted to pH 3.0 with *phosphoric acid R*.

Flow rate 1 ml/min.

Detection Spectrophotometer at 218 nm.

Injection 20 µl.

Run time Twice the retention time of metformin hydrochloride.

System suitability Reference solution (c):

— *resolution*: minimum of 10 between the peaks due to melamine and to metformin hydrochloride.

Limits:

— *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.02 per cent);

— *any other impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent).

Heavy metals (*2.4.8*)

Maximum 10 ppm.

12 ml of solution S complies with limit test A. Prepare the standard using *lead standard solution (1 ppm Pb) R.*

Loss on drying (*2.2.32*)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 5 h.

Sulphated ash (*2.4.14*)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.100 g in 4 ml of *anhydrous formic acid R*. Add 80 ml of *acetonitrile R*. Carry out the titration immediately. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 16.56 mg of $C_4H_{12}ClN_5$.

IMPURITIES

Specified impurities *A.*

Other detectable impurities (The following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034).* It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use): B, C, D, E, F.*

Ph Eur

Methacrylic Acid - Ethyl Acrylate Copolymer (1:1) Dispersion 30 per cent

General Notices

(Ph Eur monograph 1129)

Action and use

Excipient.

Ph Eur

DEFINITION

Methacrylic acid - ethyl acrylate copolymer (1:1) dispersion 30 per cent is a dispersion in water of a copolymer of methacrylic acid and ethyl acrylate having a mean relative molecular mass of about 250 000. The ratio of carboxylic groups to ester groups is about 1:1. It may contain suitable surface-active agents such as sodium dodecyl sulphate and polysorbate 80. It contains not less than 46.0 per cent *m/m* and not more than 50.6 per cent *m/m* of methacrylic acid units, calculated with reference to the residue on evaporation.

CHARACTERS

An opaque, white, slightly viscous liquid, miscible with water. On addition of solvents such as acetone, ethanol or 2-propanol, a precipitate is formed which dissolves on addition of excess solvent. It is miscible with a 40 g/l solution of sodium hydroxide.

It is sensitive to spoilage by microbial contaminants.

IDENTIFICATION

A. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the *Ph. Eur. reference spectrum of methacrylic acid - ethyl acrylate copolymer (1:1) dispersion 30 per cent.*

B. It complies with the limits of the assay.

TESTS

Apparent viscosity

Determine the viscosity *(2.2.10)* using a rotating viscometer at 20 °C. At a shear rate of 50 s^{-1}, the apparent viscosity is not more than 15 mPa·s.

Appearance of a film

Place 1 ml on a glass plate and allow to dry. A clear, brittle film is formed.

Particulate matter

Filter 100.0 g through a tared stainless steel sieve (90). Rinse with *water R* until a clear filtrate is obtained and dry at 100 °C to 105 °C. The mass of the residue is not more than 1.00 g.

Ethyl acrylate and methacrylic acid

Total content not more than 0.1 per cent, determined by liquid chromatography *(2.2.29)* and calculated with reference to the dried substance.

Blank solution To 50.0 ml of *methanol R* add 25.0 ml of mobile phase.

Test solution Dissolve 40 mg of the substance to be examined in 50.0 ml of *methanol R* and add 25.0 ml of mobile phase.

Reference solution Dissolve 10 mg each of *ethyl acrylate R* and *methacrylic acid R* in *methanol R* and dilute to 50.0 ml with the same solvent. Dilute 0.1 ml of this solution to 50.0 ml with *methanol R* and add 25.0 ml of mobile phase.

The chromatographic procedure may be carried out using:

— a stainless steel column 0.10 m long and 4 mm in internal diameter packed with *octadecylsilyl silica gel for chromatography R* (5 µm),

— as mobile phase at a flow rate of 2.5 ml/min a mixture of 30 volumes of *methanol R* and 70 volumes of *phosphate buffer solution pH 2.0 R*,

as detector a spectrophotometer set at 202 nm.

Inject 50 µl of each solution. The test is not valid unless the resolution between the peaks corresponding to ethyl acrylate and methacrylic acid in the chromatogram obtained with the reference solution is at least 2.0. The test is not valid if the chromatogram obtained with the blank solution shows peaks with the same retention times as ethyl acrylate or methacrylic acid.

Calculate the percentage content of monomers from the area of the peaks in the chromatograms obtained with the test solution and the reference solution and from the content of monomers in the reference solution.

Residue on evaporation

Dry 1.000 g at 110 °C for 5 h. The residue weighs not less than 0.285 g and not more than 0.315 g.

Sulphated ash *(2.4.14)*

Not more than 0.2 per cent, determined on 1.0 g.

Microbial contamination

Total viable aerobic count *(2.6.12)* not more than 10^3 micro-organisms per gram, determined by plate count.

ASSAY

Dissolve 1.500 g in a mixture of 40 ml of *water R* and 60 ml of *2-propanol R*. Titrate slowly while stirring with *0.5 M sodium hydroxide*, using *phenolphthalein solution R* as indicator.

1 ml of *0.5 M sodium hydroxide* is equivalent to 43.05 mg of $C_4H_6O_2$ (methacrylic acid units).

STORAGE

Store protected from freezing. Handle the substance so as to minimise microbial contamination.

LABELLING

The label states, where applicable, the name and concentration of any surface-active agents.

Ph Eur

Methacrylic Acid - Ethyl Acrylate Copolymer (1:1)

General Notices

(Ph Eur monograph 1128)

Action and use

Pharmaceutical aid.

Ph Eur

DEFINITION

Copolymer of methacrylic acid and ethyl acrylate having a mean relative molecular mass of about 250 000. The ratio of carboxylic groups to ester groups is about 1:1. The substance is in the acid form (type A) or partially neutralised using sodium hydroxide (type B). It may contain suitable surface-active agents such as sodium dodecyl sulphate and polysorbate 80.

Content:

— type A: 46.0 per cent to 50.6 per cent of methacrylic acid units (dried substance);

— type B: 43.0 per cent to 48.0 per cent of methacrylic acid units (dried substance).

CHARACTERS

Appearance

White or almost white, free-flowing powder.

Solubility

Practically insoluble in water (type A) or dispersible in water (type B), freely soluble in anhydrous ethanol, practically insoluble in ethyl acetate. It is freely soluble in a 40 g/l solution of sodium hydroxide.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Dissolve 0.1 g of the substance to be examined in 1 ml of *ethanol (90 per cent V/V) R*, and place 2 drops of the solution on a sodium chloride plate; dry to allow the formation of a film and cover with another sodium chloride plate.

Comparison Methacrylic acid - ethyl acrylate copolymer (1:1) (type A or type B) CRS.

B. It complies with the limits of the assay.

C. Sulphated ash (see Tests).

TESTS

Ethyl acrylate and methacrylic acid

Liquid chromatography *(2.2.29)*.

Blank solution To 50.0 ml of *methanol R* add 25.0 ml of the mobile phase.

Test solution Dissolve 40 mg of the substance to be examined in 50.0 ml of *methanol R* and add 25.0 ml of the mobile phase.

Reference solution Dissolve 10 mg of *ethyl acrylate R* and 10 mg of *methacrylic acid R* in *methanol R* and dilute to 50.0 ml with the same solvent. Dilute 0.1 ml of this solution to 50.0 ml with *methanol R* and add 25.0 ml of the mobile phase.

Column:

— *size*: *l* = 0.10 m, Ø = 4 mm;

— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase *methanol R*, *phosphate buffer solution pH 2.0 R* (30:70 *V/V*).

Flow rate 2.5 ml/min.

Detection Spectrophotometer at 202 nm.

Injection 50 µl.

System suitability:

— *resolution*: minimum 2.0 between the peaks due to ethyl acrylate and methacrylic acid in the chromatogram obtained with the reference solution;

— the chromatogram obtained with the blank solution does not show peaks with the same retention time as the peaks due to ethyl acrylate or methacrylic acid.

Limit:

— *sum of the contents of ethyl acrylate and methacrylic acid*: maximum 0.1 per cent.

Loss on drying *(2.2.32)*

Maximum 5.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 6 h.

Sulphated ash *(2.4.14)*

Maximum 0.4 per cent (type A) or 0.5 per cent to 3.0 per cent (type B), determined on 1.0 g.

ASSAY

Dissolve 1.000 g in a mixture of 40 ml of *water R* and 60 ml of *2-propanol R*. Titrate slowly while stirring with *0.5 M sodium hydroxide*, using *phenolphthalein solution R* as indicator.

1 ml of *0.5 M sodium hydroxide* is equivalent to 43.05 mg of $C_4H_6O_2$ (methacrylic acid units).

LABELLING

The label states the type (type A or type B).

FUNCTIONALITY-RELATED CHARACTERISTICS

This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient. This section is a non-mandatory part of the monograph and it is not necessary to verify the *characteristics to demonstrate compliance. Control of these characteristics can however contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.*

The following characteristics may be relevant for methacrylic acid - ethyl acrylate copolymer (1:1) used as gastro-resistant coating agent.

Apparent viscosity

— *Type A*: 100 mPa·s to 200 mPa·s.

Dissolve a quantity of the substance to be examined corresponding to 37.5 g of the dried substance in a mixture of 7.9 g of *water R* and 254.6 g of *2-propanol R*. Determine the viscosity *(2.2.10)* at 20 °C using a rotating viscometer at a shear rate of 10 s^{-1}.

— *Type B*: not more than 100 mPa·s.

Disperse a quantity of the substance to be examined corresponding to 80.0 g of the dried substance in *water R* and make up to 320 g with the same solvent. Stir for 3 h and determine the viscosity *(2.2.10)* at 23 °C using a rotating viscometer and a spindle rotating at 100 r/min (rotor 2).

Solubility of a film

Place 1 ml of the solution (type A) or dispersion (type B) prepared for the test on apparent viscosity on a glass plate and allow to dry. A clear brittle film is formed. Take a piece of the film and place it in a flask containing phosphate buffer solution pH 6.8. It dissolves.

Ph Eur

Methacrylic Acid - Methyl Methacrylate Copolymer (1:1)

General Notices

(Ph Eur monograph 1127)

Action and use

Excipient.

Ph Eur

DEFINITION

Copolymer of methacrylic acid and methyl methacrylate having a mean relative molecular mass of about 135 000. The ratio of carboxylic groups to ester groups is about 1:1.

Content

46.0 per cent to 50.6 per cent of methacrylic acid units (dried substance).

CHARACTERS

Appearance

White or almost white, free-flowing powder.

Solubility

Practically insoluble in water, freely soluble in anhydrous ethanol and in 2-propanol, practically insoluble in ethyl acetate. It is freely soluble in a 40 g/l solution of sodium hydroxide.

— *resolution*: minimum 4.0 between the peaks due to impurity B (1st peak) and impurity C (2nd peak).

Limit:

— *impurity A*: maximum 2 ppm *V/V*.

Calculate the content of impurity A in parts per million (*V/V*) using the following expression:

$$\frac{2 \times A_1}{A_2 - A_1}$$

A_1 = area of the peak due to impurity A in the chromatogram obtained with test solution (a),

A_2 = area of the peak due to impurity A in the chromatogram obtained with reference solution (b).

If necessary, the identity of impurity A can be confirmed using another suitable chromatographic system (stationary phase with a different polarity).

Related substances

Gas chromatography (*2.2.28*) as described in the test for impurity A.

Limits:

— *any impurity*: for each impurity, not more than the area of the peak due to 4-methylpentan-2-ol in the chromatogram obtained with test solution (b) (0.1 per cent);

— *total*: not more than 3 times the area of the peak due to 4-methylpentan-2-ol in the chromatogram obtained with test solution (b) (0.3 per cent);

— *disregard limit*: 0.05 times the area of the peak due to 4-methylpentan-2-ol in the chromatogram obtained with test solution (b) (50 ppm).

Reducing substances

To 20 ml add 0.1 ml of *0.02 M potassium permanganate*. The pink colour is not completely discharged within 5 min.

Residue on evaporation

Maximum 10 ppm.

Evaporate 100 g to dryness on a water bath and dry in an oven at 100-105 °C. The residue weighs a maximum of 1 mg.

Water (*2.5.12*)

Maximum 0.10 per cent, determined on 10.0 g.

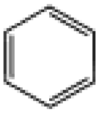
STORAGE

In an airtight container.

IMPURITIES

Specified impurities *A.*

Other detectable impurities (The following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use): B, C.*



A. benzene,

B. ethanol,

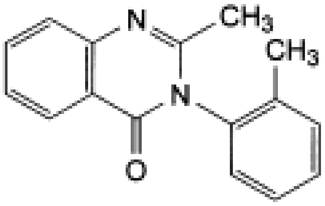
C. acetone.

Ph Eur

Methaqualone

General Notices

(Ph Eur monograph 0510)



$C_{16}H_{14}N_2O$ 250.3 *72-44-6*

Action and use

Hypnotic.

Ph Eur

DEFINITION

2-Methyl-3-(2-methylphenyl)quinazolin-4(3*H*)-one.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Very slightly soluble in water, soluble in ethanol (96 per cent). It dissolves in dilute sulphuric acid.

IDENTIFICATION

First identification *A, C.*

Second identification *A, B, D.*

A. Melting point (*2.2.14*): 114 °C to 117 °C.

B. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

Test solution Dissolve 50.0 mg in *0.1 M hydrochloric acid*, warming if necessary, and dilute to 100.0 ml with the same acid. Dilute 1.0 ml of this solution to 100.0 ml with *0.1 M hydrochloric acid*.

Spectral range 220-300 nm.

Absorption maxima At 235 nm and 270 nm.

Specific absorbances at the absorption maxima:
— at 235 nm: 1270 to 1390,

— at 270 nm: 315 to 345.

C. Infrared absorption spectrophotometry (*2.2.24*).

Comparison Ph. Eur. reference spectrum of methaqualone.

D. Dissolve about 10 mg in 2 ml of *ethanol (96 per cent) R*. Add 1 ml of *dimethylaminobenzaldehyde solution R1* and heat on a water-bath for 5 min. A reddish-orange colour develops.

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution BY_7 *(2.2.2, Method II)*.

Dissolve 1.0 g in *methanol R* and dilute to 25 ml with the same solvent.

Acidity

Shake 0.6 g with 30 ml of *carbon dioxide-free water R* for 5 min and filter. To 10 ml of the filtrate add 0.1 ml of *phenolphthalein solution R*. Not more than 0.2 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator.

2-Aminobenzoic acid

Maximum 20 ppm.

Test solution Dissolve 1.00 g in a mixture of 1 volume of *water R* and 3 volumes of *ethanol (96 per cent) R* and dilute to 50.0 ml with the same mixture of solvents.

Reference solution Dissolve 40 mg of *2-aminobenzoic acid R* in a mixture of 1 volume of *water R* and 3 volumes of *ethanol (96 per cent) R* and dilute to 100.0 ml with the same mixture of solvents; dilute 10.0 ml of this solution to 100.0 ml with a mixture of 1 volume of *water R* and 3 volumes of *ethanol (96 per cent) R*; dilute 0.5 ml of this solution to 50.0 ml with a mixture of 1 volume of *water R* and 3 volumes of *ethanol (96 per cent) R*.

To the test solution and to the reference solution add 5 ml of *dilute hydrochloric acid R* and cool in iced water for 5 min. Add 0.1 ml of *sodium nitrite solution R* and cool again in iced water for 5 min. Add 1.5 ml of a freshly prepared 10 g/l solution of *sulphamic acid R* and shake until the colour of the solution is discharged. Add 2.5 ml of a freshly prepared 2 g/l solution of *naphthylethylenediamine dihydrochloride R* and allow to stand for 2 h 30 min. The test solution is not more intensely coloured (*2.2.2, Method II*) than the reference solution.

o-Toluidine

Maximum 10 ppm.

Test solution Dissolve 0.50 g in *acetone R* and dilute to 10.0 ml with the same solvent.

Reference solution Dissolve 50 mg of freshly distilled *o-toluidine R* in 5 ml of *acetone R* and dilute to 100.0 ml with *dilute hydrochloric acid R*; dilute 10.0 ml of the solution to 100.0 ml with *dilute hydrochloric acid R*; dilute 0.1 ml of this solution to 10.0 ml with *acetone R*.

To the test solution and to the reference solution add 5 ml of *water R* and cool in iced water for 5 min. Add 0.1 ml of *sodium nitrite solution R* and cool again in iced water for 5 min. Add 10 ml of a freshly prepared 2 g/l solution of β*-naphthol R* in *dilute sodium hydroxide solution R*. The test solution is not more intensely coloured (*2.2.2, Method II*) than the reference solution.

Heavy metals (*2.4.8*)

Maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying (*2.2.32*)

Maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 C.

Sulphated ash (*2.4.14*)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 30 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 25.03 mg of $C_{16}H_{14}N_2O$.

STORAGE

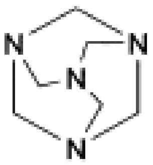
Protected from light.

Ph Eur

Methenamine

General Notices

(Ph Eur monograph 1545)



$C_6H_{12}N_4$ 140.2 *100-97-0*

Action and use

Anti-infective.

Ph Eur

DEFINITION

1,3,5,7-Tetraazotricyclo[3.3.1.1^{3,7}]decane.

Content

99.0 per cent to 100.5 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or colourless crystals.

Solubility

Freely soluble in water, soluble in ethanol (96 per cent) and in methylene chloride.

IDENTIFICATION

First identification A.

Second identification B, C, D.

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison methenamine CRS.

B. To 1 ml of solution S (see Tests) add 1 ml of *sulphuric acid R* and immediately heat to boiling. Allow to cool. To 1 ml of the solution add 4 ml of *water R* and 5 ml of *acetylacetone* *reagent R1*. Heat on a water-bath for 5 min. An intense yellow colour develops.

C. To 1 ml of solution S add 1 ml of *dilute sulphuric acid R* and immediately heat to boiling. The solution gives the reaction of ammonium salts and salts of volatile bases (*2.3.1*).

D. Dissolve 10 mg in 5 ml of *water R* and acidify with *dilute hydrochloric acid R*. Add 1 ml of *potassium iodobismuthate solution R*. An orange precipitate is formed immediately.

TESTS

Solution S

Dissolve 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Acidity or alkalinity

To 5 ml of solution S add 0.1 ml of *phenolphthalein solution R*. Not more than 0.2 ml of *0.1 M hydrochloric acid* or *0.1 M sodium hydroxide* is required to change the colour of the indicator.

Free formaldehyde

Maximum 50 ppm.

Dissolve 0.8 g in *water R* and dilute to 8 ml with the same solvent. Add 2 ml of *ammoniacal silver nitrate solution R*. After 5 min, any grey colour in the solution is not more intense than that in a standard prepared at the same time and in the same manner with a mixture of 8 ml of freshly prepared *formaldehyde standard solution (5 ppm* CH_2O*) R* and 2 ml of *ammoniacal silver nitrate solution R*.

Chlorides (*2.4.4*)

Maximum 100 ppm.

Dilute 5 ml of solution S to 15 ml with *water R*.

Sulphates (*2.4.13*)

Maximum 100 ppm, determined on solution S.

Ammonium (*2.4.1*)

Maximum 50 ppm.

Dilute 2 ml of freshly prepared solution S to 13 ml with *water R*. Add 2 ml of *dilute sodium hydroxide solution R.*

Heavy metals (*2.4.8*)

Maximum 20 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R.*

Loss on drying (*2.2.32*)

Maximum 2.0 per cent, determined on 1.000 g by drying in a desiccator.

ASSAY

Dissolve 0.100 g in 30 ml of *methanol R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 14.02 mg of $C_6H_{12}N_4$.

STORAGE

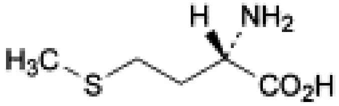
Protected from light.

Ph Eur

Methionine

General Notices

(Ph Eur monograph 1027)



$C_5H_{11}NO_2S$ 149.2 *63-68-3*

Action and use

Amino acid.

Ph Eur

DEFINITION

Methionine contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of (2*S*)-2-amino-4-(methylsulphanyl)butanoic acid, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder or colourless crystals, soluble in water, very slightly soluble in alcohol.

IDENTIFICATION

First identification A, B.

Second identification A, C, D.

A. It complies with the test for specific optical rotation (see Tests).

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *methionine CRS*. Examine the substances prepared as discs.

C. Examine the chromatograms obtained in the test for ninhydrin-positive substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Dissolve 0.1 g of the substance to be examined and 0.1 g of *glycine R* in 4.5 ml of *dilute sodium hydroxide solution R*. Add 1 ml of a 25 g/l solution of *sodium nitroprusside R*. Heat to 40 C for 10 min. Allow to cool and add 2 ml of a mixture of 1 volume of *phosphoric acid R* and 9 volumes of *hydrochloric acid R*. A dark red colour develops.

TESTS

Solution S

Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

pH (*2.2.3*)

The pH of solution S is 5.5 to 6.5.

Specific optical rotation (*2.2.7*)

Dissolve 1.00 g in *hydrochloric acid R1* and dilute to 50.0 ml with the same acid. The specific optical rotation is + 22.5 to + 24.0, calculated with reference to the dried substance.

Ninhydrin-positive substances

Examine by thin-layer chromatography (*2.2.27*), using a *TLC silica gel plate R*.

Test solution (a) Dissolve 0.10 g of the substance to be examined in *dilute hydrochloric acid R* and dilute to 10 ml with the same acid.

Test solution (b) Dilute 1 ml of test solution (a) to 50 ml with *water R*.

Reference solution (a) Dissolve 10 mg of *methionine CRS* in a 10 g/l solution of *hydrochloric acid R* and dilute to 50 ml with the same acid solution.

Reference solution (b) Dilute 5 ml of test solution (b) to 20 ml with *water R*.

Reference solution (c) Dissolve 10 mg of *methionine CRS* and 10 mg of *serine CRS* in a 10 g/l solution of *hydrochloric acid R* and dilute to 25 ml with the same acid solution.

Apply separately to the plate 5 µl of each solution. Develop over a path of 15 cm using a mixture of 20 volumes of *glacial acetic acid R*, 20 volumes of *water R* and 60 volumes of *butanol R*. Allow the plate to dry in air, spray with *ninhydrin solution R* and heat at 100 C to 105 C for 15 min. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (c) shows two clearly separated spots.

Chlorides

To 10 ml of solution S add 25 ml of *water R*, 5 ml of *dilute nitric acid R* and 10 ml of *silver nitrate solution R2*. Allow to stand protected from light for 5 min. Any opalescence in the solution is not more intense than that in a standard prepared at the same time and in the same manner using 10 ml of *chloride standard solution (5 ppm Cl) R* (200 ppm). Examine the tubes laterally against a black background.

Sulphates (*2.4.13*)

Dissolve 0.5 g in 3 ml of *dilute hydrochloric acid R* and dilute to 15 ml with *distilled water R*. The solution complies with the limit test for sulphates (300 ppm).

Ammonium (*2.4.1*)

0.10 g complies with limit test B for ammonium (200 ppm). Prepare the standard using 0.2 ml of *ammonium standard solution (100 ppm NH_4) R*.

Iron (*2.4.9*)

In a separating funnel, dissolve 1.0 g in 10 ml of *dilute hydrochloric acid R*. Shake with three quantities, each of 10 ml, of *methyl isobutyl ketone R1*, shaking for 3 min each time. To the combined upper layers add 10 ml of *water R* and shake for 3 min. The lower layer complies with the limit test for iron (10 ppm).

Heavy metals (*2.4.8*)

2.0 g complies with limit test C for heavy metals (10 ppm). Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying (*2.2.32*)

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 C.

Sulphated ash (*2.4.14*)

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.125 g in 5 ml of *anhydrous formic acid R*. Add 30 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 14.92 mg of $C_5H_{11}NO_2S$.

STORAGE

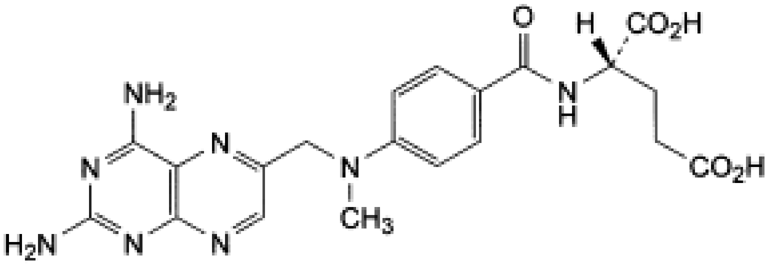
Store protected from light.

Ph Eur

Methotrexate

General Notices

(Ph Eur monograph 0560)



$C_{20}H_{22}N_8O_5$ 454.4 *59-05-2*

Action and use

Dihydrofolate reductase inhibitor; cytostatic.

Preparations

Methotrexate Injection

Methotrexate Tablets

Ph Eur

DEFINITION

(2*S*)-2-[[4-[[(2,4-Diaminopteridin-6-yl)methyl]methylamino]benzoyl]amino]pentanedioic acid.

Content

97.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

Yellow or orange, crystalline, hygroscopic powder.

Solubility

Practically insoluble in water, in ethanol (96 per cent) and in methylene chloride. It dissolves in dilute mineral acids and in dilute solutions of alkali hydroxides and carbonates.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

Comparison *methotrexate CRS.*

TESTS

Related substances

Liquid chromatography (*2.2.29*).

Test solution Dissolve 40.0 mg of the substance to be examined in a mixture of 0.5 ml of *dilute ammonia R1* and 5 ml of mobile phase A and dilute to 100.0 ml with mobile phase A.

Reference solution (a) Dissolve 40.0 mg of *methotrexate CRS* in a mixture of 0.5 ml of *dilute ammonia R1* and 5 ml of mobile phase A and dilute to 100.0 ml with mobile phase A.

Reference solution (b) Dilute 5.0 ml of the test solution to 100.0 ml with mobile phase A. Dilute 5.0 ml of this solution to 50.0 ml with mobile phase A.

Reference solution (c) Dilute 5.0 ml of reference solution (b) to 25.0 ml with mobile phase A.

Reference solution (d) Dissolve 5 mg of the substance to be examined, 5 mg of *4-aminofolic acid R* (impurity B), 5 mg of *methotrexate impurity C CRS*, 5 mg of *methotrexate impurity D CRS* and 5 mg of *methotrexate impurity E CRS* in a mixture of 0.5 ml of *dilute ammonia R1* and 5 ml of mobile phase A and dilute to 100 ml with mobile phase A.

Reference solution (e) Dissolve 8 mg of *methotrexate for peak identification CRS* (containing impurities H and I) in a mixture of 0.1 ml of *dilute ammonia R1* and 1 ml of mobile phase A and dilute to 20 ml with mobile phase A.

Column:

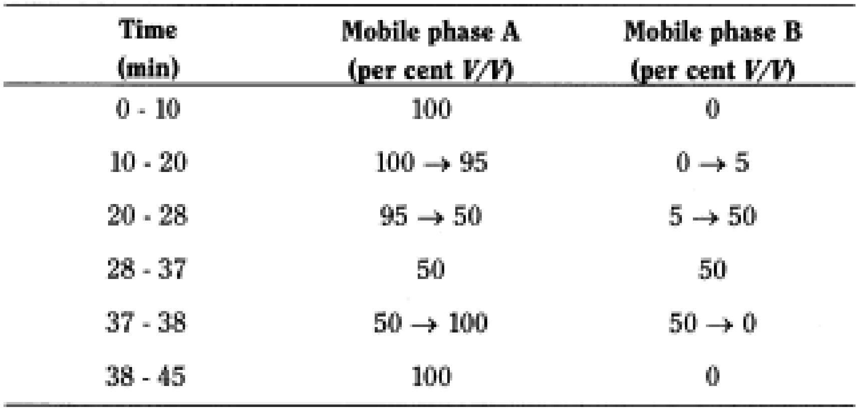
— *size:* l = 0.25 m, Ø = 4.0 mm;

— *stationary phase*: spherical *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:

— *mobile phase A*: mix 5 volumes of *acetonitrile for chromatography R* and 95 volumes of a 3.4 g/l solution of *anhydrous sodium dihydrogen phosphate R* previously adjusted to pH 6.0 with a 42 g/l solution of *sodium hydroxide R*;

— *mobile phase B*: mix 50 volumes of *acetonitrile for chromatography R* and 50 volumes of a 3.4 g/l solution of *anhydrous sodium dihydrogen phosphate R* previously adjusted to pH 6.0 with a 42 g/l solution of *sodium hydroxide R*;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 10	100	0
10 - 20	100 → 95	0 → 5
20 - 28	95 → 50	5 → 50
28 - 37	50	50
37 - 38	50 → 100	50 → 0
38 - 45	100	0

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 280 nm.

Injection 20 µl of the test solution and reference solutions (b), (c), (d) and (e).

Identification of impurities Use the chromatogram supplied with *methotrexate for peak identification CRS* and the chromatogram obtained with reference solution (e) to identify the peaks due to impurities H and I.

Relative retention Wth reference to methotrexate (retention time = about 18 min): impurity B = about 0.3; impurity C = about 0.4; impurity E = about 1.4; impurity I = about 1.5; impurity H = about 1.6.

System suitability:

— *resolution*: minimum 2.0 between the peaks due to impurities B and C and minimum 1.5 between the peaks due to impurity D and methotrexate, in the chromatogram obtained with reference solution (d); minimum 1.5 between the peaks due to impurities I and H in the chromatogram obtained with reference solution (e); if the resolution between impurity D and methotrexate does not comply, increase the flow rate to meet the requirement.

Limits:

— *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity E = 0.8; impurity I = 1.4;

— *impurity C*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *impurities B, E*: for each impurity, not more than 0.6 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);

— *impurities H, I*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent);

— *unspecified impurities*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent);

— *sum of impurities other than B, C and E*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *disregard limit*: 0.3 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.03 per cent).

Enantiomeric purity

Liquid chromatography (*2.2.29*).

Test solution Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase.

Reference solution (b) Dissolve 4.0 mg of *(RS)-methotrexate R* in the mobile phase and dilute to 100.0 ml with the mobile phase.

Column:

— *size:* *l* = 0.15 m, Ø = 4.0 mm;

— *stationary phase*: *bovine albumin R* bound to *silica gel for chromatography R* (7 µm) with a pore size of 30 nm.

Mobile phase Add 500 ml of a 7.1 g/l solution of *anhydrous disodium hydrogen phosphate R* to 600 ml of a 6.9 g/l solution of *sodium dihydrogen phosphate monohydrate R*, mix, and adjust to pH 6.9 with *dilute sodium hydroxide solution R*; to 920 ml of this mixture add 80 ml of *propanol R*.

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 302 nm.

Injection 20 µl.

System suitability Reference solution (b):

— *resolution*: minimum 2.0 between the peaks due to methotrexate and impurity F.

Limit:

— *impurity F*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (3.0 per cent).

Heavy metals (*2.4.8*)

Maximum 50 ppm.

1.0 g complies with test C. Prepare the reference solution using 5 ml of *lead standard solution (10 ppm Pb) R.*

Water (*2.5.12*)

Maximum 13.0 per cent, determined on 0.10 g.

Sulphated ash (*2.4.14*)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

Injection Test solution and reference solution (a).

Calculate the percentage content of $C_{20}H_{22}N_8O_5$ from the declared content of *methotrexate CRS.*

STORAGE

In an airtight container, protected from light.

IMPURITIES

Specified impurities B, C, E, F, H, I.

Other detectable impurities (The following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. Ph Eur

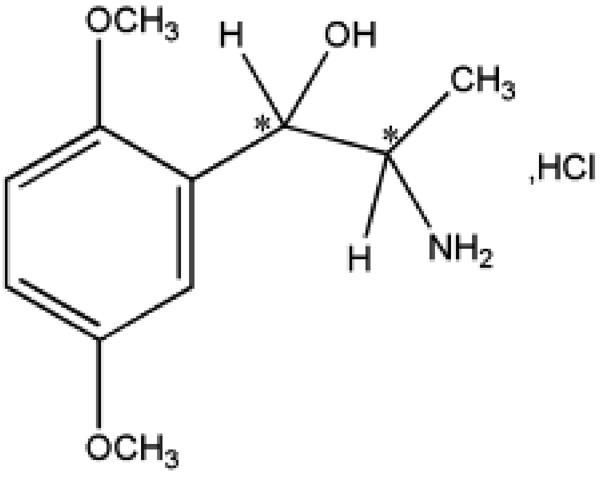
Methoxamine Hydrochloride

General Notices



mixture of four stereoisomers

$C_{11}H_{17}NO_3,HCl$ 247.7   *61-16-5*

Action and use

Adrenoceptor agonist.

Preparation

Methoxamine Injection

DEFINITION

Methoxamine Hydrochloride is all-*rac*-2-amino-1-(2,5-dimethoxyphenyl)propan-1-ol hydrochloride. It contains not less than 99.0% and not more than 101.0% of $C_{11}H_{17}NO_3,HCl$, calculated with reference to the dried substance.

CHARACTERISTICS

Colourless crystals or white, plate-like crystals or a white, crystalline powder.

Freely soluble in *water*; soluble in *ethanol (96%)*; very slightly soluble in *ether*.

IDENTIFICATION

A. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of methoxamine hydrochloride *(RS 220)*.

B. Yields the reactions characteristic of *chlorides*, Appendix VI.

TESTS

Acidity

pH of a 2% w/v solution, 4.0 to 6.0, Appendix V L.

Related substances

Carry out the method for *thin-layer chromatography*, Appendix III A, using *silica gel GF_{254}* as the coating substance and a mixture of 86 volumes of *chloroform*, 12 volumes of *methanol* and 2 volumes of 13.5M *ammonia* as the mobile phase. Apply separately to the plate 5 µl of each of three solutions in *methanol* containing (1) 2.0% w/v of the substance being examined, (2) 0.010% w/v of *2,5-dimethoxybenzaldehyde* and (3) 0.020% w/v of the substance being examined. After removal of the plate, allow it to dry in air and examine under *ultraviolet light (365 nm)*. Any spot corresponding to 2,5-dimethoxybenzaldehyde in the chromatogram obtained with solution (1) is not more intense than the spot in the chromatogram obtained with solution (2) (0.5%). Spray the plate with a 0.3% w/v solution of *ninhydrin* in *butan-1-ol* containing 3% v/v of *glacial acetic acid* and heat at 105° for 5 minutes. Any other *secondary spot* in the chromatogram obtained with solution (1) is not more intense than the spot in the chromatogram obtained with solution (3) (1%).

Loss on drying

When dried at 105° for 2 hours, loses not more than 0.5% of its weight. Use 1 g.

Sulphated ash

Not more than 0.1%, Appendix IX A.

ASSAY

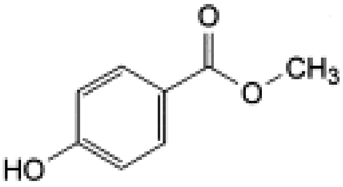
Carry out Method I for *non-aqueous titration*, Appendix VIII A, using 0.5 g and *1-naphtholbenzein solution* as indicator. Each ml of 0.1M *perchloric acid VS* is equivalent to 24.77 mg of $C_{11}H_{17}NO_3,HCl$.

Methyl Hydroxybenzoate

General Notices

Methylparaben

(Methyl Parahydroxybenzoate, Ph Eur monograph 0409)



$C_8H_8O_3$ 152.1 *99-763-3*

Action and use

Antimicrobial preservative.

Ph Eur

DEFINITION

Methyl 4-hydroxybenzoate.

Content

98.0 per cent to 102.0 per cent.

CHARACTERS

Appearance

White or almost white, crystalline powder or colourless crystals.

Solubility

Very slightly soluble in water, freely soluble in alcohol and in methanol.

IDENTIFICATION

First identification *A, B.*

Second identification *A, C, D.*

A. Melting point (*2.2.14*): 125 °C to 128 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).

Comparison *methyl parahydroxybenzoate CRS.*

C. Examine the chromatograms obtained in the test for related substances.

Results The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (b).

D. To about 10 mg in a test-tube add 1 ml of *sodium carbonate solution R*, boil for 30 s and cool (solution A). To a further 10 mg in a similar test-tube add 1 ml of *sodium carbonate solution R*; the substance partly dissolves (solution B). Add at the same time to solution A and solution B 5 ml of *aminopyrazolone solution R* and 1 ml of *potassium ferricyanide solution R* and mix. Solution B is yellow to orange-brown. Solution A is orange to red, the colour being clearly more intense than any similar colour which may be obtained with solution B.

TESTS

Solution S

Dissolve 1.0 g in *alcohol R* and dilute to 10 ml with the same solvent.

Appearance of solution

Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution BY_6 (*2.2.2, Method II*).

Acidity

To 2 ml of solution S add 3 ml of *alcohol R*, 5 ml of *carbon dioxide-free water R* and 0.1 ml of *bromocresol green solution R*. Not more than 0.1 ml of *0.1 M sodium hydroxide* is required to change the colour of the indicator to blue.

Related substances

Thin-layer chromatography (*2.2.27*).

Test solution (a) Dissolve 0.10 g of the substance to be examined in *acetone R* and dilute to 10 ml with the same solvent.

Test solution (b) Dilute 1 ml of test solution (a) to 10 ml with *acetone R*.

Reference solution (a) Dilute 0.5 ml of test solution (a) to 100 ml with *acetone R*.

Reference solution (b) Dissolve 10 mg of *methyl parahydroxybenzoate CRS* in *acetone R* and dilute to 10 ml with the same solvent.

Reference solution (c) Dissolve 10 mg of *ethyl parahydroxybenzoate CRS* in 1 ml of test solution (a) and dilute to 10 ml with *acetone R*.

Plate Suitable octadecylsilyl silica gel with a fluorescent indicator having an optimal intensity at 254 nm as the coating substance.

Mobile phase *glacial acetic acid R*, *water R*, *methanol R* (1:30:70 *V/V/V*).

Application 2 µl.

Development Over a path of 15 cm.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

System suitability The chromatogram obtained with reference solution (c) shows 2 clearly separated principal spots.

Limits:

— *any impurity*: any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (a) (0.5 per cent).

Sulphated ash (*2.4.14*)

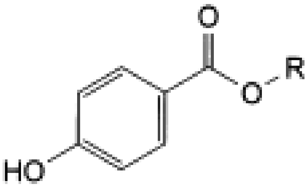
Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

To 1.000 g add 20.0 ml of *1 M sodium hydroxide*. Heat at about 70 °C for 1 h. Cool rapidly in an ice bath. Prepare a blank in the same manner. Carry out the titration on the solutions at room temperature. Titrate the excess sodium hydroxide with *0.5 M sulphuric acid ,* continuing the titration until the second point of inflexion and determining the end-point potentiometrically (*2.2.20*).

1 ml of *1 M sodium hydroxide* is equivalent to 152.1 mg of $C_8H_8O_3$.

IMPURITIES



A. R = H: 4-hydroxybenzoic acid,

B. R = CH_2-CH_3: ethyl 4-hydroxybenzoate,

C. R = CH_2-CH_2-CH_3: propyl 4-hydroxybenzoate,

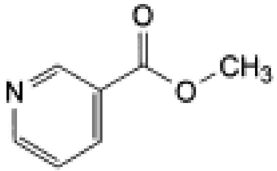
D. R = CH_2-CH_2-CH_2-CH_3: butyl 4-hydroxybenzoate.

Ph Eur

Methyl Nicotinate

General Notices

(Ph Eur monograph 2129)



$C_7H_7NO_2$ 137.1 *93-60-7*

Action and use

Vasodilator.

Ph Eur

DEFINITION

Methyl pyridine-3-carboxylate.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Very soluble in water, in ethanol (96 per cent) and in methylene chloride.

IDENTIFICATION

First identification B.

Second identification A, C, D.

A. Melting point (*2.2.14*): 40 °C to 42 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).

Comparison methyl nicotinate CRS.

C. Thin-layer chromatography (*2.2.27*).

Test solution Dissolve 10 mg of the substance to be examined in *methanol R* and dilute to 2 ml with the same solvent.

Reference solution Dissolve 10 mg of *methyl nicotinate CRS* in *methanol R* and dilute to 2 ml with the same solvent.

Plate *TLC silica gel F_{254} plate R.*

Mobile phase *methanol R*, *toluene R* (10:90 *V/V*).

Application 2 µl.

Development Over 2/3 of the plate.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

D. To 0.5 g add 0.1 g of *citric acid R* and 0.2 ml of *acetic anhydride R*. Heat cautiously for 1 min. A yellow colour is produced which turns first to orange, then to red and then to violet.

TESTS

Related substances

Liquid chromatography (*2.2.29*).

Test solution Dissolve 25 mg of the substance to be examined in the mobile phase and dilute to 25.0 ml with the mobile phase.

Reference solution (a) Dissolve 25 mg of *nicotinic acid R* in the mobile phase and dilute to 25.0 ml with the mobile phase. To 0.5 ml of this solution add 0.5 ml of the test solution and dilute to 100 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Column:

— *size:* l = 0.25 m, Ø = 4 mm;

— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase *acetic acid R*, *water R*, *acetonitrile R* (1:29:70 *V/V/V*).

Flow rate 1 ml/min.

Detection Spectrophotometer at 261 nm.

Injection 20 µl.

Run time 3 times the retention time of methyl nicotinate.

Retention time Methyl nicotinate = about 3.3 min.

System suitability Reference solution (a):

— *resolution*: minimum 2 between the peaks due to impurity A and methyl nicotinate.

Limits:

- — *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);
- — *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);
- — *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- — *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Chlorides (*2.4.4*)

Maximum 200 ppm.

Dissolve 0.25 g in *water R* and dilute to 15 ml with the same solvent.

Water (*2.5.12*)

Maximum 0.5 per cent, determined on 2.000 g.

Sulphated ash (*2.4.14*)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.120 g in 50 ml of *glacial acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 13.71 mg of $C_7H_7NO_2$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A.

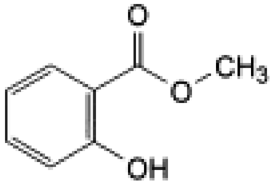
A. nicotinic acid.

Ph Eur

Methyl Salicylate

General Notices

(Ph Eur monograph 0230)



$C_8H_8O_3$ 152.1 *119-36-860-7*

Action and use

Counter-irritant.

Preparations

Methyl Salicylate Liniment

Methyl Salicylate Ointment

Ph Eur

DEFINITION

Methyl 2-hydroxybenzoate.

Content

99.0 per cent *m/m* to 100.5 per cent *m/m.*

CHARACTERS

Appearance

Colourless or slightly yellow liquid.

Solubility

Very slightly soluble in water, miscible with ethanol (96 per cent) and with fatty and essential oils.

IDENTIFICATION

A. Heat 0.25 ml with 2 ml of *dilute sodium hydroxide solution R* on a water-bath for 5 min. Add 3 ml of *dilute sulphuric acid R.* A crystalline precipitate is formed. Filter. The precipitate washed with *water R* and dried at 100-105 °C, melts (*2.2.14*) at 156 °C to 161 °C.

B. To 10 ml of a saturated solution add 0.05 ml of *ferric chloride solution R1*. A violet colour develops.

TESTS

Appearance of solution

The solution is clear (*2.2.1*) and not more intensely coloured than reference solution Y_7 (*2.2.2, Method II*).

To 2 ml add 10 ml of *ethanol (96 per cent) R*.

Acidity

Dissolve 5.0 g in a mixture of 0.2 ml of *bromocresol green solution R* and 50 ml of *ethanol (96 per cent) R* previously neutralised to a blue colour by addition of *0.1 M sodium hydroxide*. Not more than 0.4 ml of *0.1 M sodium hydroxide* is required to restore the blue colour.

Relative density (*2.2.5*)

1.180 to 1.186.

Refractive index (*2.2.6*)

1.535 to 1.538.

ASSAY

Dissolve 0.500 g in 25 ml of *ethanol (96 per cent) R*. Add 0.05 ml of *phenol red solution R* and neutralise with *0.1 M sodium hydroxide*. To the neutralised solution add 50.0 ml of *0.1 M sodium hydroxide* and heat under a reflux condenser on a water-bath for 30 min. Cool and titrate with *0.1 M hydrochloric acid*. Calculate the volume of *0.1 M sodium hydroxide* used in the saponification. Carry out a blank titration.

1 ml of *0.1 M sodium hydroxide* is equivalent to 15.21 mg of $C_8H_8O_3$.

STORAGE

Protected from light.

Ph Eur

Methylcellulose

General Notices

(Ph Eur monograph 0345)

9004-67-5

Action and use

Bulk-forming laxative; excipient.

Preparations

Methylcellulose Granules

Methylcellulose Tablets

Ph Eur

DEFINITION

Partly *O*-methylated cellulose.

CHARACTERS

Appearance

White, yellowish-white or greyish-white powder or granules, hygroscopic after drying.

Solubility

Practically insoluble in hot water, in acetone, in anhydrous ethanol and in toluene. It dissolves in cold water giving a colloidal solution.

IDENTIFICATION

A. Evenly distribute 1.0 g onto the surface of 100 ml of *water R* in a beaker, tapping the top of the beaker gently if necessary to ensure a uniform layer on the surface. Allow to stand for 1-2 min: the powdered material aggregates on the surface.

B. Evenly distribute 1.0 g into 100 ml of boiling *water R*, and stir the mixture using a magnetic stirrer with a bar 25 mm long: a slurry is formed and the particles do not dissolve. Allow the slurry to cool to 5 °C and stir using a magnetic stirrer: a clear or slightly turbid solution occurs with its thickness dependent on the viscosity grade.

C. To 0.1 ml of the solution obtained in identification B add 9 ml of a 90 per cent *V/V* solution of *sulphuric acid R*, shake, heat on a water-bath for exactly 3 min, immediately cool in an ice-bath, carefully add 0.6 ml of a 20 g/l solution of *ninhydrin R*, shake and allow to stand at 25 °C: a red colour develops and does not change to purple within 100 min.

D. Place 2-3 ml of the solution obtained in identification B on a glass slide as a thin film and allow the water to evaporate: a coherent, clear film forms on the glass slide.

E. Add exactly 50 ml of the solution obtained in identification B to exactly 50 ml of *water R* in a beaker. Insert a thermometer into the solution. Stir the solution on a magnetic stirrer/hot plate and begin heating, increasing the temperature at a rate of 2-5 °C per minute. Determine the temperature at which a turbidity increase begins to occur and designate the temperature as the flocculation temperature: the flocculation temperature is higher than 50 °C.

TESTS

Solution S

While stirring, introduce a quantity of the substance to be examined equivalent to 1.0 g of the dried substance into 50 g of *carbon dioxide-free water R* heated to 90 °C. Allow to cool, adjust the mass of the solution to 100 g with *carbon dioxide-free water R* and stir until dissolution is complete. Allow to stand at 2-8 °C for 1 h before carrying out the test for appearance of solution.

Appearance of solution

Solution S is not more opalescent than reference suspension III *(2.2.1)* and not more intensely coloured than reference solution Y_6 *(2.2.2, Method II)*.

pH *(2.2.3)*

5.0 to 8.0 for the solution prepared as described under Apparent viscosity.

Read the pH after the probe has been immersed for 5 ± 0.5 min.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with test F. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 5.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 1 h.

Sulphated ash *(2.4.14)*

Maximum 1.5 per cent, determined on 1.0 g.

FUNCTIONALITY-RELATED CHARACTERISTICS

This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient. This section is a non-mandatory part of the monograph and it is not necessary to verify the characteristics to demonstrate compliance. Control of these characteristics can however contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.

The following characteristics may be relevant for methylcellulose used as binder, viscosity-enhancing agent or film former.

Apparent viscosity

Minimum 80 per cent and maximum 120 per cent of the nominal value for samples with a viscosity of less than 600 mPa·s (Method 1); minimum 75 per cent and maximum 140 per cent of the nominal value for samples with a viscosity of 600 mPa·s or higher (Method 2).

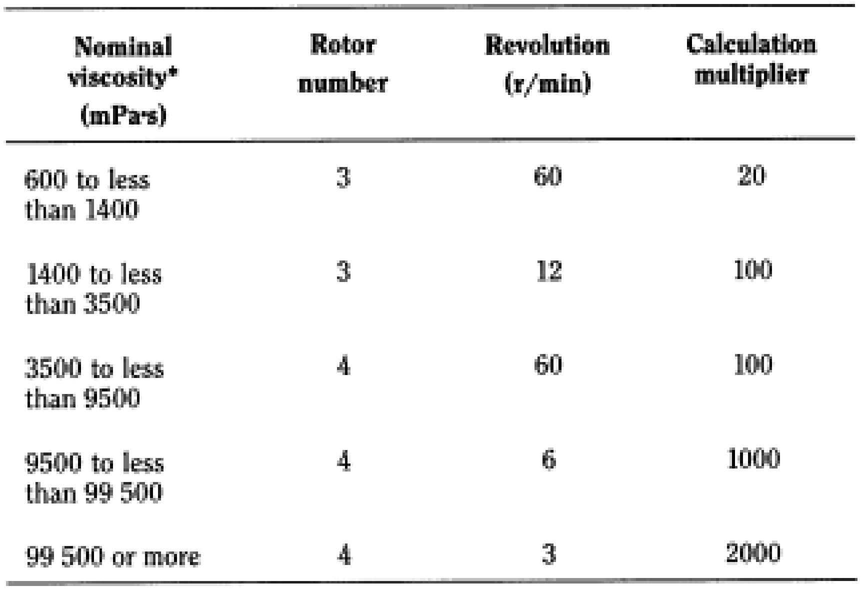
Method 1, to be applied to samples with a viscosity of less than 600 mPa·s Weigh accurately a quantity of the substance to be examined equivalent to 4.000 g of the dried substance. Transfer into a wide-mouthed bottle, and adjust the mass to 200.0 g with *water R*. Capping the bottle, stir by mechanical means at 400 ± 50 r/min for 10-20 min until the particles are thoroughly dispersed and wetted. Scrape down the insides of the bottle with a spatula if necessary, to ensure that there is no undissolved material on the sides of the bottle, and continue the stirring in a cooling water-bath maintained at a temperature below 5 °C for another 20-40 min. Adjust the solution mass if necessary to 200.0 g using cold *water R*. Centrifuge the solution if necessary to expel any entrapped air bubbles. Using a spatula remove any foam, if present. Determine the viscosity of this solution using the capillary viscometer method *(2.2.9)* to obtain the kinematic viscosity (ν). Separately, determine the density (ρ) *(2.2.5)* of the solution and calculate the dynamic viscosity (η), as $\eta = \rho\nu$.

Method 2, to be applied to samples with a viscosity of 600 mPa·s or higher Weigh accurately a quantity of the substance to be examined equivalent to 10.00 g of the dried substance. Transfer into a wide-mouthed bottle, and adjust the mass to 500.0 g with *water R*. Capping the bottle, stir by mechanical means at 400 ± 50 r/min for 10-20 min until the particles are thoroughly dispersed and wetted. Scrape down the insides of the bottle with a spatula if necessary, to ensure that there is no undissolved material on the sides of the bottle, and continue the stirring in a cooling water-bath maintained at a temperature below 5 °C for another 20-40 min. Adjust the solution mass if necessary to 500.0 g using cold *water R*. Centrifuge the solution if necessary to expel any entrapped air bubbles. Using a spatula, remove any foam, if present. Determine the viscosity *(2.2.10)* of this solution at 20 ± 0.1 °C using a rotating viscometer.

Apparatus Single-cylinder type spindle viscometer.

Rotor number, revolution and calculation multiplier Apply the conditions specified in Table 0345.-1.

Table 0345.-1.



Nominal viscosity* (mPa·s)	Rotor number	Revolution (r/min)	Calculation multiplier
600 to less than 1400	3	60	20
1400 to less than 3500	3	12	100
3500 to less than 9500	4	60	100
9500 to less than 99 500	4	6	1000
99 500 or more	4	3	2000

*the nominal viscosity is based on the manufacturer's specifications.

Allow the spindle to rotate for 2 min before taking the measurement. Allow a rest period of 2 min between subsequent measurements. Repeat the measurement twice and determine the mean of the 3 readings.

Degree of substitution

26.0 per cent to 33.0 per cent of methoxy groups (dried substance).

Gas chromatography *(2.2.28)*.

Apparatus:

— *reaction vial*: a 5 ml pressure-tight vial, 50 mm in height, 20 mm in external diameter and 13 mm in internal diameter at the mouth, equipped with a pressure-tight butyl rubber membrane stopper coated with polytetrafluoroethylene and secured with an aluminium crimped cap or another sealing system providing a sufficient air-tightness;

— *heater*: a heating module with a square aluminium block having holes 20 mm in diameter and 32 mm in depth, so that the reaction vials fit; mixing of the contents of the vial is effected using a magnetic stirrer equipped in the heating module or using a reciprocal shaker that performs approximately 100 cycles/min.

Internal standard solution 30 g/l solution of *octane R* in *xylene R.*

Test solution Weigh 65.0 mg of the substance to be examined, place in a reaction vial, add 0.06-0.10 g of *adipic acid R*, 2.0 ml of the internal standard solution and 2.0 ml of a 570 g/l solution of *hydriodic acid R*, immediately cap and seal the vial, and weigh accurately. Using a magnetic stirrer, mix the contents of the vial continuously for 60 min while heating the block so that the temperature of the contents is maintained at 130 ± 2 °C. If a reciprocal shaker or magnetic stirrer cannot be used, shake the vial well by hand at 5-minute intervals during the initial 30 min of the heating time. Allow the vial to cool, and again weigh accurately. If the loss of mass is less than 0.50 per cent of the contents and there is no evidence of a leak, use the upper layer of the mixture as the test solution.

Reference solution Place 0.06-0.10 g of *adipic acid R*, 2.0 ml of the internal standard solution and 2.0 ml of *hydroiodic acid R* in another reaction vial, cap and seal the vial, and weigh accurately. Add 45 µl of *methyl iodide R* through the septum with a syringe, and weigh accurately. Shake the reaction vial well, and use the upper layer as the reference solution.

Column:

— *size*: l = 1.8-3 m, Ø = 3-4 mm;

— *stationary phase*: *diatomaceous earth for gas chromatography R* impregnated with 10-20 per cent of *poly(dimethyl)(75)(diphenyl)(25)siloxane R* (film thickness 125-150 µm);

— *temperature*: 100 °C.

Carrier gas *helium for chromatography R* (thermal conductivity); *helium for chromatography R* or *nitrogen for chromatography R* (flame ionisation).

Flow rate Adjusted so that the retention time of the internal standard is about 10 min.

Detection Flame ionisation or thermal conductivity.

Injection 1-2 µl.

System suitability Reference solution:

— *resolution*: well-resolved peaks of methyl iodide (1st peak) and internal standard (2nd peak).

Calculation:

— *methoxy groups*: calculate the ratio (Q) of the area of the peak due to methyl iodide to the area of the peak due to the internal standard in the chromatogram obtained with the test solution, and the ratio (Q_1) of the area of the peak due to methyl iodide to the area of the peak due to the internal standard in the chromatogram obtained with the reference solution.

Calculate the percentage content of methoxy groups using the following expression:

$$\frac{Q \times m_1}{Q_1 \times m} \times 21.864$$

m_1 = mass of methyl iodide in the reference solution, in milligrams.

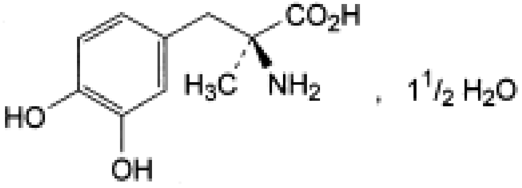
m = mass of the sample (dried substance), in milligrams.

Ph Eur

Methyldopa

General Notices

(Ph Eur monograph 0045)



$C_{10}H_{13}NO_4,1½H_2O$ 238.2 *41372-08-1*

Action and use

Alpha$_2$-adrenoceptor agonist; treatment of hypertension.

Preparation

Methyldopa Tablets

Ph Eur

DEFINITION

Methyldopa contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of (2*S*)-2-amino-3-(3,4-dihydroxyphenyl)-2-methylpropanoic acid, calculated with reference to the anhydrous substance.

CHARACTERS

A white or yellowish white, crystalline powder or colourless or almost colourless crystals, slightly soluble in water, very slightly soluble in alcohol. It is freely soluble in dilute mineral acids.

IDENTIFICATION

First identification A.

Second identification B, C, D.

A. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *methyldopa CRS*.

B. Dissolve about 2 mg in 2 ml of *water R* and add 0.2 ml of *ferric chloride solution R2*. A green colour develops which changes to bluish-violet on the addition of 0.1 g of *hexamethylenetetramine R*.

C. Dissolve about 5 mg in a mixture of 5 ml of *1 M hydrochloric acid* and 5 ml of *water R*. Add 0.1 ml of *sodium nitrite solution R* containing 100 g/l of *ammonium molybdate R*. A yellow colour is produced which becomes brownish-red on the addition of *strong sodium hydroxide solution R*.

D. To about 5 mg add 1 ml of *water R*, 1 ml of *pyridine R* and about 5 mg of *nitrobenzoyl chloride R* and heat to boiling. Add, while shaking, 0.2 ml of *sodium carbonate solution R*. An orange or amber colour develops.

TESTS

Appearance of solution

Dissolve 1.0 g in *1 M hydrochloric acid* and dilute to 25 ml with the same solvent. The solution is not more intensely coloured than reference solution BY_6 or B_6 (*2.2.2, Method II*).

Acidity

Dissolve 1.0 g with heating in 100 ml of *carbon dioxide-free water R*. Add 0.1 ml of *methyl red solution R*. Not more than 0.5 ml of *0.1 M sodium hydroxide* is required to produce the pure yellow colour of the indicator.

Optical rotation (*2.2.7*)

Dissolve a quantity equivalent to 2.20 g of the anhydrous substance in *aluminium chloride solution R* and dilute to 50.0 ml with the same solution. The angle of optical rotation is - 1.10° to - 1.23 °.

Absorbance (*2.2.25*)

Dissolve 40.0 mg in *0.1 M hydrochloric acid* and dilute to 100.0 ml with the same acid. Dilute 10.0 ml of this solution to 100.0 ml with *0.1 M hydrochloric acid*. Examined between 230 nm and 350 nm, the solution shows a single absorption maximum, at 280 nm. The specific absorbance at this maximum is 122 to 137, calculated with reference to the anhydrous substance.

Methoxymethyldopa and related substances

Examine by thin-layer chromatography (*2.2.27*), using *cellulose for chromatography R* as the coating substance.

Test solution Dissolve 0.1 g of the substance to be examined in a mixture of 0.4 ml of *hydrochloric acid R1* and 9.6 ml of *methanol R*.

Reference solution (a) Dissolve 5 mg of *3-methoxymethyldopa CRS* in 100 ml of *methanol R*.

Reference solution (b) To 1 ml of the test solution add 1 ml of reference solution (a).

Apply separately to the plate 10 µl of the test solution, 10 µl of reference solution (a) and 20 µl of reference solution (b). Develop over a path of 10 cm using a mixture of 15 volumes of *glacial acetic acid R*, 25 volumes of *water R* and 65 volumes of *butanol R*. Dry the plate immediately in a current of warm air and spray with a mixture of 5 volumes of a 50 g/l solution of *sodium nitrite R* and 45 volumes of a 3 g/l solution of *nitroaniline R* in a mixture of 20 volumes of *water R* and 80 volumes of *hydrochloric acid R*. Dry the plate immediately in a current of warm air and spray with a 200 g/l solution of *sodium carbonate R*. Examine the chromatograms immediately. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (a) (0.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (b) shows 2 clearly separated spots.

Heavy metals (*2.4.8*)

1.0 g complies with limit test C for heavy metals (20 ppm). Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Water (*2.5.12*)

10.0 per cent to 13.0 per cent, determined on 0.20 g by the semi-micro determination of water.

Sulphated ash (*2.4.14*)

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in a mixture of 15 ml of *anhydrous formic acid R* 30 ml of *anhydrous acetic acid R* and 30 ml of *dioxan R*. Titrate with *0.1 M perchloric acid* until a green colour is obtained using 0.1 ml of *crystal violet solution R* as indicator.

1 ml of *0.1 M perchloric acid* is equivalent to 21.12 mg of $C_{10}H_{13}NO_4$.

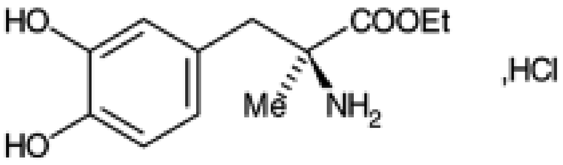
STORAGE

Store protected from light.

Ph Eur

Methyldopate Hydrochloride

General Notices



$C_{12}H_{17}NO_4,HCl$ 275.7 *2508-79-4*

Action and use

Alpha$_2$-adrenoceptor agonist; treatment of hypertension.

Preparation

Methyldopate Injection

DEFINITION

Methyldopate Hydrochloride is ethyl 3-(3,4-dihydroxyphenyl)-2-methyl-L-alaninate hydrochloride. It contains not less than 98.5% and not more than 101.0% of $C_{12}H_{17}NO_4,HCl$, calculated with reference to the dried substance.

CHARACTERISTICS

A white or almost white, crystalline powder.

Freely soluble in *water*, in *ethanol (96%)* and in *methanol*; practically insoluble in *ether*.

IDENTIFICATION

A. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of methyldopate hydrochloride *(RS 224)*.

B. The *light absorption*, Appendix II B, in the range 230 to 350 nm of a 0.008% w/v solution in 0.1M *hydrochloric acid* exhibits a maximum only at 280 nm. The *absorbance* at the maximum at 280 nm is about 0.80.

C. Yields reaction A characteristic of *chlorides*, Appendix VI.

TESTS

Acidity

pH of a 1% w/v solution, 3.0 to 5.0, Appendix V L.

Specific optical rotation

In a 4% w/v solution in 0.1M *hydrochloric acid* and determined at 405 nm, –13.5 to –14.9, calculated with reference to the dried substance, Appendix V F.

Related substances

Carry out the method for *thin-layer chromatography*, Appendix III A, using *silica gel* GF_{254} as the coating substance and a mixture of equal volumes of *acetone*, *butan-1-ol*, *glacial acetic acid*, *toluene* and *water* as the mobile phase, but allowing the solvent front to ascend 12 cm above the line of application. Apply separately to the plate 2 µl of each of three solutions in *methanol* containing (1) 10.0% w/v of the substance being examined, (2) 0.25% w/v of *methyldopa BPCRS* and (3) 0.040% w/v of *methyldopa BPCRS*. After removal of the plate, allow it to dry in air, heat at 105° for 10 minutes and examine under *ultraviolet light* (254 nm). Expose the plate to iodine vapour for 10 minutes and examine again. By each method of visualisation any spot corresponding to methyldopa in the chromatogram obtained with solution (1) is not more intense than the spot in the chromatogram obtained with solution (2) (2.5%) and any other *secondary spot* is not more intense than the spot in the chromatogram obtained with solution (3) (0.4%).

Loss on drying

When dried to constant weight at 105° at a pressure not exceeding 0.7 kPa, loses not more than 0.5% of its weight. Use 1 g.

Sulphated ash

Not more than 0.1%, Appendix IX A.

ASSAY

Carry out Method I for *non-aqueous titration*, Appendix VIII A, using 0.5 g and determining the end point potentiometrically. Each ml of 0.1M *perchloric acid VS* is equivalent to 27.57 mg of $C_{12}H_{17}NO_4$,HCl.

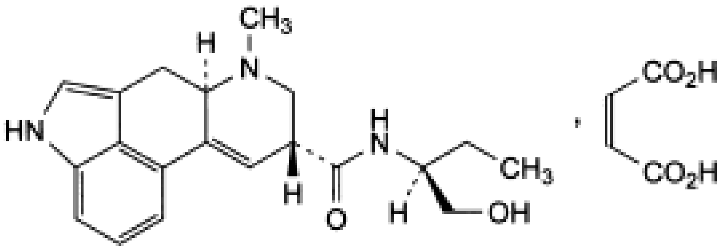
STORAGE

Methyldopate Hydrochloride should be protected from light.

Methylergometrine Maleate

General Notices

(Ph Eur monograph 1788)



$C_{20}H_{25}N_3O_2,C_4H_4O_4$ 455.5 *57432-61-8*

Oxytocic.

Ph Eur

DEFINITION

(6a*R*,9*R*)-*N*-[(1*S*)-1-(Hydroxymethyl)propyl]-7-methyl-4,6,6a,7,8,9-hexahydroindolo[4,3-fg]quinoline-9-carboxamide (2*Z*)-but-2-enedioate.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, hygroscopic, crystalline powder.

Solubility

Soluble in water, slightly soluble in anhydrous ethanol.

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison methylergometrine maleate CRS.

TESTS

Solution S

Dissolve 0.100 g in *carbon dioxide-free water R* and dilute to 20.0 ml with the same solvent.

pH *(2.2.3)*

4.4 to 5.2.

Dilute 2.0 ml of solution S to 50.0 ml with *carbon dioxide-free water R*.

Specific optical rotation *(2.2.7)*

+ 44.0 to + 50.0 (dried substance), determined on solution S.

Related substances

Liquid chromatography *(2.2.29)*: use the normalisation procedure. *Carry out the test protected from light*.

Test solution Dissolve 25.0 mg of the substance to be examined in 15 ml of mobile phase B and dilute to 50.0 ml with *water R*.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with *water R*. Dilute 1.0 ml of this solution to 20.0 ml with *water R*.

Reference solution (b) Dissolve the contents of a vial of *methylergometrine for system suitability CRS* (containing impurities A, B, C, D, E, F, G, H and I) in 1.0 ml of a mixture of 30 volumes of mobile phase B and 70 volumes of *water R*.

Column:
- *size: l* = 0.10 m, Ø = 4.6 mm;
- *stationary phase: end-capped octadecylsilyl silica gel for chromatography R* (3.5 µm).

Mobile phase:
- *mobile phase A*: 2 g/l solution of *ammonium carbamate R*;
- *mobile phase B*: *acetonitrile R, water R* (50:50 *V/V);*

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 5	85 → 65	15 → 35
5 - 10	65	35
10 - 15	65 → 20	35 → 80
15 - 20	20	80

Flow rate 2.0 ml/min.

Detection Spectrophotometer at 310 nm.

Injection 20 µl.

Identification of impurities Use the chromatogram supplied with *methylergometrine for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B, C, D, E, F, G, H and I.

Relative retention With reference to methylergometrine (retention time = 11 min): impurity A = about 0.2; impurity B = about 0.5; impurity C = about 0.6; impurity D = about 0.7; impurity I = about 1.10; impurity E = about 1.14; impurity F = about 1.2; impurity G = about 1.3; impurity H = about 1.4.

System suitability Reference solution (b):

— *resolution*: minimum 3.0 between the peaks due to methylergometrine and impurity I;

— minimum 1.5 between the peaks due to impurities I and E.

Limits:

— *impurities A, B, C, D, E, G*: for each impurity, maximum 0.5 per cent;

— *sum of impurities F, H and I*: maximum 1.0 per cent;

— *unspecified impurities*: for each impurity, maximum 0.10 per cent;

— *total*: maximum 2.0 per cent;

— *disregard limit*: the area of the peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Loss on drying ***(2.2.32)***

Maximum 2.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 60 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

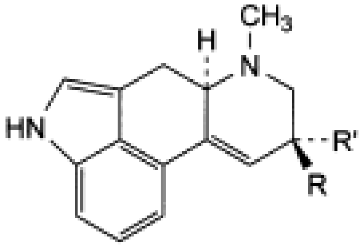
1 ml of *0.1 M perchloric acid* is equivalent to 45.55 mg of $C_{24}H_{29}N_3O_6$.

STORAGE

In an airtight container, protected from light.

IMPURITIES

Specified impurities *A, B, C, D, E, F, G, H, I.*



A. R = H, R′ = CO_2H: (6a*R*,9*R*)-7-methyl-4,6,6a,7,8,9-hexahydroindolo[4,3-*fg*]quinoline-9-carboxylic acid,

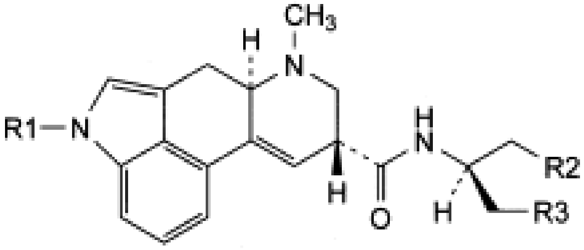
C. R = H, R′ = $CONH_2$: (6a*R*,9*R*)-7-methyl-4,6,6a,7,8,9-hexahydroindolo[4,3-*fg*]quinoline-9-carboxamide,

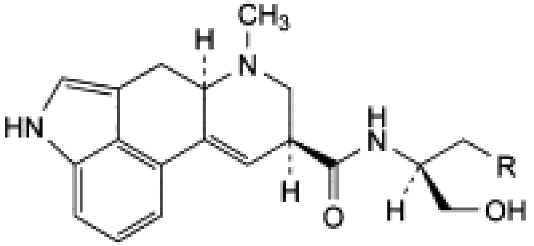
E. R = $CONH_2$, R′ = H: (6a*R*,9*S*)-7-methyl-4,6,6a,7,8,9-hexahydroindolo[4,3-*fg*]quinoline-9-carboxamide,



D. R1 = R2 = H, R3 = OH: (6a*R*,9*R*)-*N*-[(1*S*)-2-hydroxy-1-methylethyl]-7-methyl-4,6,6a,7,8,9-hexahydroindolo[4,3-*fg*]quinoline-9-carboxamide (ergometrine),

G. R1 = R2 = CH_3, R3 = OH: (6a*R*,9*R*)-*N*-[(1*S*)-1-(hydroxymethyl)propyl]-4,7-dimethyl-4,6,6a,7,8,9-hexahydroindolo[4,3-*fg*]quinoline-9-carboxamide (methysergide),

I. R1 = H, R2 = OH, R3 = CH_3: (6a*R*,9*R*)-*N*-[(1*R*)-1-(hydroxymethyl)propyl]-7-methyl-4,6,6a,7,8,9-hexahydroindolo[4,3-*fg*]quinoline-9-carboxamide (1'-*epi*-methyergometrine),



F. R = H: (6a*R*,9*S*)-*N*-[(1*S*)-2-hydroxy-1-methylethyl]-7-methyl-4,6,6a,7,8,9-hexahydroindolo[4,3-*fg*]quinoline-9-carboxamide (ergometrinine),

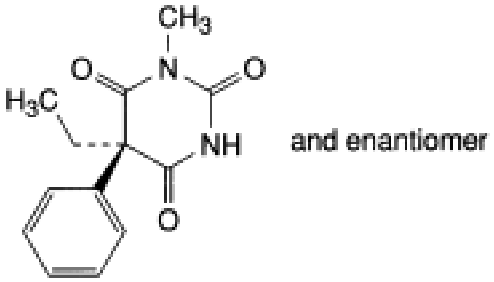
H. R = CH_3: (6a*R*,9*S*)-*N*-[(1*S*)-1-(hydroxymethyl)propyl]-7-methyl-4,6,6a,7,8,9-hexahydroindolo[4,3-*fg*]quinoline-9-carboxamide (methylergometrinine).

Ph Eur

Methylphenobarbital

General Notices

(Ph Eur monograph 0189)



$C_{13}H_{14}N_2O_3$ 246.3 *115-38-8*

Action and use

Barbiturate.

Preparation

Methylphenobarbital Tablets

Ph Eur

DEFINITION

Methylphenobarbital contains not less than 99.0 per cent and not more than the equivalent of 102.0 per cent of (5*RS*)-5-ethyl-1-methyl-5-phenylpyrimidine-2,4,6(1*H*,3*H*,5*H*)-trione, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder or colourless crystals, practically insoluble in water, very slightly soluble in ethanol. It forms water-soluble compounds with alkali hydroxides and carbonates and with ammonia.

IDENTIFICATION

First identification A, B.

Second identification A, C, D.

A. Determine the melting point (*2.2.14*) of the substance to be examined. Mix equal parts of the substance to be examined and *methylphenobarbital CRS* and determine the melting point of the mixture. The difference between the two melting points (which are about 178 °C) is not greater than 2 °C.

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *methylphenobarbital CRS*.

C. Examine by thin-layer chromatography (*2.2.27*), using *silica gel* GF_{254} *R* as the coating substance.

Test solution Dissolve 0.1 g of the substance to be examined in *chloroform R* and dilute to 100 ml with the same solvent.

Reference solution Dissolve 0.1 g of *methylphenobarbital CRS* in *chloroform R* and dilute to 100 ml with the same solvent.

Apply separately to the plate 10 µl of each solution. Develop over a path of 18 cm using the lower layer of a mixture of 5 volumes of *concentrated ammonia R*, 15 volumes of *alcohol R* and 80 volumes of *chloroform R*. Examine immediately in ultraviolet light at 254 nm. The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

D. To about 10 mg add 0.2 ml of *sulphuric acid R* and 0.1 ml of *nitric acid R*. Heat on a water-bath for 10 min. Cool in iced water and add 5 ml of *water R* and 5 ml of strong *sodium hydroxide solution R*. Add 5 ml of *acetone R*, shake and allow to stand. A dark-red colour develops in the upper layer.

TESTS

Appearance of solution

Dissolve 1.0 g, with gentle heating, in a mixture of 4 ml of *dilute sodium hydroxide solution R* and 6 ml of *water R*. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution Y_6 (*2.2.2, Method II*).

Acidity

Boil 1.0 g with 50 ml of *water R* for 2 min, allow to cool and filter. To 10 ml of the filtrate add 0.15 ml of *methyl red solution R*. The solution is orange-yellow. Not more than 0.1 ml of *0.1 M sodium hydroxide* is required to produce a pure yellow colour.

Related substances

Examine by thin-layer chromatography (*2.2.27*), using *silica gel* GF_{254} *R* as the coating substance.

Test solution Dissolve 1.0 g of the substance to be examined in *chloroform R* and dilute to 100 ml with the same solvent.

Reference solution Dissolve 0.1 g of *phenobarbital CRS* in *chloroform R* and dilute to 100 ml with the same solvent. Dilute 10 ml of the solution to 100 ml with *chloroform R*.

Apply separately to the plate 20 µl of each solution. Develop over a path of 15 cm using the lower layer of a mixture of 5 volumes of *concentrated ammonia R*, 15 volumes of *alcohol R* and 80 volumes of *chloroform R*. Examine immediately in ultraviolet light at 254 nm. Spray with *diphenylcarbazone mercuric reagent R*. Allow the plate to dry in air and spray with freshly prepared *alcoholic potassium hydroxide solution R* diluted 1 in 5 with *aldehyde-free alcohol R*. Heat at 100 °C to 105 °C for 5 min and examine immediately. When examined in ultraviolet light and after spraying, any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with the reference solution (1.0 per cent).

Loss on drying (*2.2.32*)

Not more than 0.5 per cent, determined on 1.00 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*)

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 5 ml of *pyridine R*. Add 0.5 ml of *thymolphthalein solution R* and 10 ml of *silver nitrate solution* in *pyridine R*. Titrate with *0.1 M ethanolic sodium hydroxide* until a pure blue colour is obtained. Carry out a blank titration.

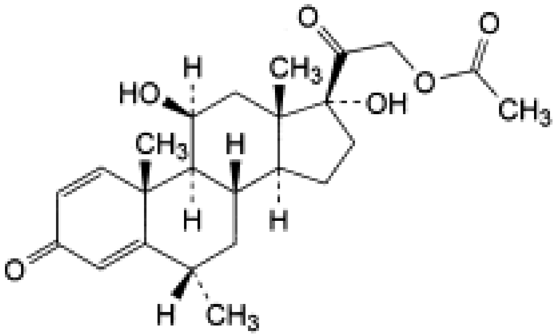
1 ml of *0.1 M ethanolic sodium hydroxide* is equivalent to 24.63 mg of $C_{13}H_{14}N_2O_3$.

Ph Eur

Methylprednisolone Acetate

General Notices

(Ph Eur monograph 0933)



$C_{24}H_{32}O_6$ 416.5 *53-36-1*

Action and use

Glucocorticoid.

Preparation

Methylprednisolone Acetate Injection

Ph Eur

DEFINITION

11β,17-Dihydroxy-6α-methyl-3,20-dioxopregna-1,4-dien-21-yl acetate.

Content

97.0 per cent to 103.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, sparingly soluble in acetone and in ethanol (96 per cent).

IDENTIFICATION

First identification A, B.

Second identification C, D, E.

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison *methylprednisolone acetate CRS.*

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *acetone R*, evaporate to dryness and record new spectra using the residues.

B. Thin-layer chromatography (*2.2.27*).

Solvent mixture *methanol R*, *methylene chloride R* (1:9 *V/V*).

Test solution Dissolve 10 mg of the substance to be examined in the solvent mixture and dilute to 10 ml with the solvent mixture.

Reference solution (a) Dissolve 10 mg of *methylprednisolone acetate CRS* in the solvent mixture and dilute to 10 ml with the solvent mixture.

Reference solution (b) Dissolve 10 mg of *prednisolone acetate CRS* and 10 mg of *methylprednisolone acetate CRS* in the solvent mixture, then dilute to 10 ml with the solvent mixture.

Plate *TLC silica gel GF_{254} plate R*.

Mobile phase *butanol R*, *toluene R*, *ether R* (5:10:85 *V/V/V*).

Application 5 µl.

Development Over a path of 15 cm.

Drying In air.

Detection A Examine in ultraviolet light at 254 nm.

Results A The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

Detection B Spray with *alcoholic solution of sulphuric acid R*. Heat at 120 °C for 10 min or until the spots appear. Allow to cool. Examine in daylight and in ultraviolet light at 365 nm.

Results B The principal spot in the chromatogram obtained with the test solution is similar in position, colour in daylight, fluorescence in ultraviolet light at 365 nm and size to the principal spot in the chromatogram obtained with reference solution (a).

System suitability Reference solution (b):

— the chromatogram shows 2 spots which, when examined in ultraviolet light at 365 nm, may not be completely separated.

C. Thin-layer chromatography (*2.2.27*).

Test solution (a) Dissolve 25 mg of the substance to be examined in *methanol R* and dilute to 5 ml with the same solvent (solution A). Dilute 2 ml of this solution to 10 ml with *methylene chloride R*.

Test solution (b) Transfer 2 ml of solution A to a 15 ml glass tube with a ground-glass stopper or a polytetrafluoroethylene cap. Add 10 ml of *saturated methanolic potassium* *hydrogen carbonate solution R* and immediately pass a current of *nitrogen R* through the solution for 5 min. Stopper the tube. Heat in a water-bath at 45 °C protected from light for 1 h. Allow to cool.

Reference solution (a) Dissolve 25 mg of *methylprednisolone acetate CRS* in *methanol R* and dilute to 5 ml with the same solvent (solution B). Dilute 2 ml of this solution to 10 ml with *methylene chloride R.*

Reference solution (b) Transfer 2 ml of solution B to a 15 ml glass tube with a ground-glass stopper or a polytetrafluoroethylene cap. Add 10 ml of *saturated methanolic potassium hydrogen carbonate solution R* and immediately pass a current of *nitrogen R* through the solution for 5 min. Stopper the tube. Heat in a water-bath at 45 °C protected from light for 1 h. Allow to cool.

Plate *TLC silica gel GF_{254} plate R*.

Mobile phase Add a mixture of 1.2 volumes of *water R* and 8 volumes of *methanol R* to a mixture of 15 volumes of *ether R* and 77 volumes of *methylene chloride R*.

Application 5 µl.

Development Over a path of 15 cm.

Drying In air.

Detection A Examine in ultraviolet light at 254 nm.

Results A The principal spot in each of the chromatograms obtained with the test solutions is similar in position and size to the principal spot in the chromatogram obtained with the corresponding reference solution.

Detection B Spray with *alcoholic solution of sulphuric acid R*. Heat at 120 °C for 10 min or until the spots appear. Allow to cool. Examine in daylight and in ultraviolet light at 365 nm.

Results B The principal spot in each of the chromatograms obtained with the test solutions is similar in position, colour in daylight, fluorescence in ultraviolet light at 365 nm and size to the principal spot in the chromatogram obtained with the corresponding reference solution. The principal spot in each of the chromatograms obtained with test solution (b) and reference solution (b) has an R_F value distinctly lower than that of the principal spot in each of the chromatograms obtained with test solution (a) and reference solution (a).

D. Add about 2 mg to 2 ml of *sulphuric acid R* and shake to dissolve. Within 5 min, an intense red colour develops. When examined in ultraviolet light at 365 nm, a reddish-brown fluorescence is seen. Add this solution to 10 ml of *water R* and mix. The colour fades and there is a greenish-yellow fluorescence in ultraviolet light at 365 nm.

E. About 10 mg gives the reaction of acetyl (*2.3.1*).

TESTS

Specific optical rotation (*2.2.7*)

+ 97 to + 105 (dried substance).

Dissolve 0.250 g in *dioxan R* and dilute to 25.0 ml with the same solvent.

Related substances

Liquid chromatography (*2.2.29*).

Test solution Dissolve 20.0 mg of the substance to be examined in 5 ml of *tetrahydrofuran R* and dilute to 10.0 ml with *water R*.

Reference solution (a) Dissolve 4 mg of *methylprednisolone acetate CRS* and 4 mg of *dexamethasone acetate CRS* in the mobile phase, then dilute to 20.0 ml with the mobile phase. Dilute 2.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of the test solution to 50.0 ml with the mobile phase.

Column:

— *size: l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase In a 1000 ml volumetric flask mix 260 ml *tetrahydrofuran R* and 700 ml of *water R*, then allow to equilibrate; dilute to 1000 ml with *water R* and mix again.

Flow rate 1 ml/min.

Detection Spectrophotometer at 254 nm.

Equilibration With the mobile phase for about 45 min.

Injection 20 µl.

Run time 1.5 times the retention time of methylprednisolone acetate.

Retention time Methylprednisolone acetate = about 43 min; dexamethasone acetate = about 57 min.

System suitability Reference solution (a):

— *resolution*: minimum 6.5 between the peaks due to methylprednisolone acetate and dexamethasone acetate; if necessary, adjust the concentration of *water R* in the mobile phase.

Limits:

— *total*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);

— *disregard limit*: 0.025 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Loss on drying (*2.2.32*)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

ASSAY

Dissolve 0.100 g in *ethanol (96 per cent) R* and dilute to 100.0 ml with the same solvent. Dilute 1.0 ml of this solution to 100.0 ml with *ethanol (96 per cent) R*. Measure the absorbance (*2.2.25*) at the absorption maximum at 243 nm.

Calculate the content of $C_{24}H_{32}O_6$ taking the specific absorbance to be 355.

STORAGE

Protected from light.

Results B The principal spot in each of the chromatograms obtained with the test solutions is similar in position, colour in daylight, fluorescence in ultraviolet light at 365 nm and size to the principal spot in the chromatogram obtained with the corresponding reference solution. The principal spot in each of the chromatograms obtained with test solution (b) and reference solution (b) has an R_F value distinctly higher than that of the principal spot in each of the chromatograms obtained with test solution (a) and reference solution (a).

D. Add about 2 mg to 2 ml of *sulphuric acid R* and shake to dissolve. Within 5 min a reddish-brown colour develops. Add this solution to 10 ml of water R and mix. The colour fades and a precipitate is formed.

TESTS

Appearance of solution

The solution is clear (*2.2.1*).

Dissolve 0.100 g in 5 ml of *sodium hydrogen carbonate solution R*.

Specific optical rotation (*2.2.7*)

+ 87 to + 95 (dried substance).

Dissolve 0.250 g in *dioxan R* and dilute to 25.0 ml with the same solvent.

Related substances

Liquid chromatography (*2.2.29*).

Test solution Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dissolve 25 mg of *methylprednisolone hydrogen succinate for performance test CRS* in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase.

Column:

- *size:* *l* = 0.25 m, Ø = 4.0 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase *acetonitrile R*, 3 per cent *V/V* solution of *glacial acetic acid R* (33:67 *V/V*).

Flow rate 1 ml/min.

Detection Spectrophotometer at 254 nm.

Equilibration With the mobile phase for about 30 min.

Injection 20 µl.

Run time Twice the retention time of methylprednisolone hydrogen succinate.

Retention time Methylprednisolone hydrogen succinate = about 22 min; impurity D (eluting immediately after the main peak and appearing as a shoulder) = about 24 min.

System suitability Reference solution (a):

- *peak-to-valley ratio*: minimum 4, where H_r = height above the base line of the peak due to impurity D and H_v = height above the base line of the lowest point of the curve separating this peak from the peak due to methylprednisolone hydrogen succinate; if necessary, adjust the concentration of acetonitrile in the mobile phase.

Limits:

- *impurities A, B, C, D*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1 per cent);
- *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Loss on drying (*2.2.32*)

Maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 50.0 mg in *ethanol (96 per cent) R* and dilute to 100.0 ml with the same solvent. Dilute 2.0 ml of this solution to 50.0 ml with *ethanol (96 per cent) R*. Measure the absorbance (*2.2.25*) at the absorption maximum at 243 nm.

Calculate the content of $C_{26}H_{34}O_8$ taking the specific absorbance to be 316.

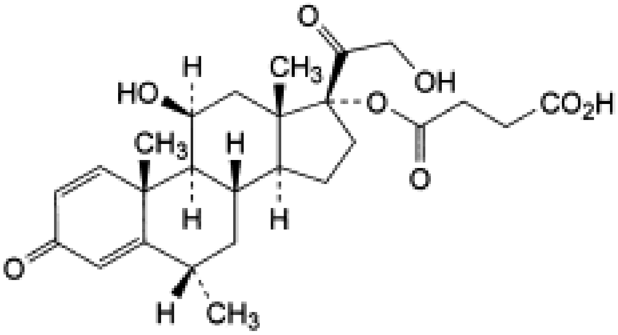
STORAGE

In an airtight container, protected from light.

IMPURITIES

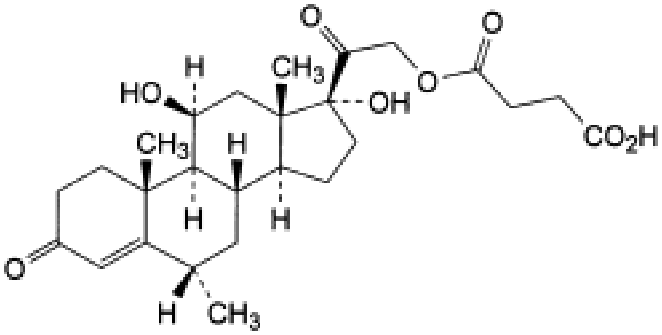
Specified impurities A, B, C, D.

A. methylprednisolone,



B. 4-[(11β,21-dihydroxy-6α-methyl-3,20-dioxopregna-1,4-dien-17-yl)oxy]-4-oxobutanoic acid (methylprednisolone 17-(hydrogen succinate)),

C. methylprednisolone acetate,



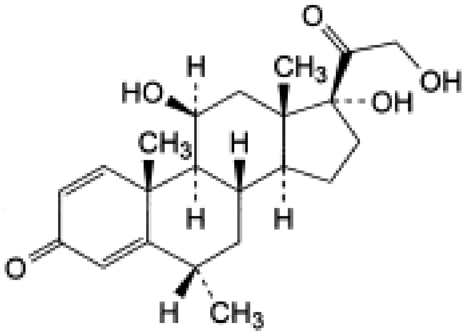
D. 4-[(11β,17-dihydroxy-6α-methyl-3,20-dioxopregn-4-en-21-yl)oxy]-4-oxobutanoic acid (methylhydrocortisone 21-(hydrogen succinate)).

Ph Eur

Methylprednisolone

General Notices

(Ph Eur monograph 0561)



$C_{22}H_{30}O_5$ 374.5 *83-43-2*

Action and use

Glucocorticoid.

Preparation

Methylprednisolone Tablets

Ph Eur

DEFINITION

11β,17,21-Trihydroxy-6α-methylpregna-1,4-diene-3,20-dione.

Content

97.0 per cent to 103.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, sparingly soluble in ethanol (96 per cent), slightly soluble in acetone and in methylene chloride.

It shows polymorphism (5.9).

IDENTIFICATION

First identification A, B.

Second identification C, D.

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison *methylprednisolone CRS.*

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *acetone R*, evaporate to dryness on a water-bath and record new spectra using the residues.

B. Thin-layer chromatography (*2.2.27*).

Solvent mixture *methanol R*, *methylene chloride R* (1:9 *V/V*).

Test solution Dissolve 10 mg of the substance to be examined in the solvent mixture and dilute to 10 ml with the solvent mixture.

Reference solution (a) Dissolve 20 mg of *methylprednisolone CRS* in the solvent mixture and dilute to 20 ml with the solvent mixture.

Reference solution (b) Dissolve 10 mg of *hydrocortisone CRS* in reference solution (a) and dilute to 10 ml with reference solution (a).

Plate *TLC silica gel F_{254} plate R*.

Mobile phase A Add a mixture of 1.2 volumes of *water R* and 8 volumes of *methanol R* to a mixture of 15 volumes of *ether R* and 77 volumes of *methylene chloride R*.

Mobile phase B *butanol R* saturated with *water R*, *toluene R*, *ether R* (5:15:80 *V/V/V*).

Application 5 µl.

1st development Over a path of 15 cm with mobile phase A.

2nd development Over a path of 15 cm with mobile phase B.

Drying In air.

Detection A Examine in ultraviolet light at 254 nm.

Results A The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

Detection B Spray with *alcoholic solution of sulphuric acid R*. Heat at 120 °C for 10 min or until the spots appear. Allow to cool. Examine in daylight and in ultraviolet light at 365 nm.

Results B The principal spot in the chromatogram obtained with the test solution is similar in position, colour in daylight, fluorescence in ultraviolet light at 365 nm and size to the principal spot in the chromatogram obtained with reference solution (a).

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

C. Thin-layer chromatography (*2.2.27*).

Test solution (a) Dissolve 25 mg of the substance to be examined in *methanol R* and dilute to 5 ml with the same solvent (solution A). Dilute 2 ml of solution A to 10 ml with *methylene chloride R*.

Test solution (b) Transfer 0.4 ml of solution A to a glass tube 100 mm long and 20 mm in diameter and fitted with a ground-glass stopper or a polytetrafluoroethylene cap and evaporate the solvent with gentle heating under a stream of *nitrogen R*. Add 2 ml of a 15 per cent *V/V* solution of *glacial acetic acid R* and 50 mg of *sodium bismuthate R*. Stopper the tube and shake the suspension in a mechanical shaker protected from light for 1 h. Add 2 ml of a 15 per cent *V/V* solution of *glacial acetic acid R* and filter into a 50 ml separating funnel, washing the filter with 2 quantities, each of 5 ml, of *water R*. Shake the clear filtrate with 10 ml of *methylene chloride R*. Wash the organic layer with 5 ml of *1 M sodium hydroxide* and 2 quantities, each of 5 ml, of *water R*. Dry over *anhydrous sodium sulphate R*.

Reference solution (a) Dissolve 25 mg of *methylprednisolone CRS* in *methanol R* and dilute to 5 ml with the same solvent (solution B). Dilute 2 ml of solution B to 10 ml with *methylene chloride R*.

Reference solution (b) Transfer 0.4 ml of solution B to a glass tube 100 mm long and 20 mm in diameter and fitted with a ground-glass stopper or a polytetrafluoroethylene cap and evaporate the solvent with gentle heating under a stream of *nitrogen R*. Add 2 ml of a 15 per cent *V/V* solution of *glacial acetic acid R* and 50 mg of *sodium bismuthate R*. Stopper the tube and shake the suspension in a mechanical shaker protected from light for 1 h. Add 2 ml of a 15 per cent *V/V* solution of *glacial acetic acid R* and filter into a 50 ml separating funnel, washing the filter with 2 quantities, each of 5 ml, of *water R*. Shake the clear filtrate with 10 ml of *methylene chloride R*. Wash the organic layer with 5 ml of *1 M sodium hydroxide* and 2 quantities, each of 5 ml, of *water R*. Dry over *anhydrous sodium sulphate R*.

Plate *TLC silica gel F_{254} plate R*.

Mobile phase *butanol R* saturated with *water R*, *toluene R*, *ether R* (5:10:85 *V/V/V*).

Application 5 µl of test solution (a) and reference solution (a), 10 µl of test solution (b) and reference solution (b), applying the latter 2 in small quantities in order to obtain small spots.

Development Over a path of 15 cm.

Drying In air.

Detection A Examine in ultraviolet light at 254 nm.

Results A The principal spot in each of the chromatograms obtained with the test solutions is similar in position, and size to the principal spot in the chromatogram obtained with the corresponding reference solution.

Detection B Spray with alcoholic solution of *sulphuric acid R* and heat at 120 °C for 15 min. Allow to cool. Examine in daylight and in ultraviolet light at 365 nm.

Results B The principal spot in each of the chromatograms obtained with the test solutions is similar in position, colour in daylight, fluorescence in ultraviolet light at 365 nm and size to the principal spot in the chromatogram obtained with the corresponding reference solution. The principal spot in each of the chromatograms obtained with test solution (b) and reference solution (b) have an R_F value distinctly higher than that of the principal spot in each of the chromatograms obtained with test solution (a) and reference solution (a).

D. Add about 2 mg to 2 ml of *sulphuric acid R* and shake to dissolve. Within 5 min, an intense red colour develops. When examined in ultraviolet light at 365 nm, brownish-red fluorescence is seen. Add this solution to 10 ml of *water R* and mix. The colour fades and there is a yellowish-green fluorescence in ultraviolet light at 365 nm.

TESTS

Specific optical rotation (*2.2.7*)

+ 79.0 to + 86.0 (dried substance).

Dissolve 0.250 g in *dioxan R* and dilute to 25.0 ml with the same solvent.

Related substances

Liquid chromatography (*2.2.29*).

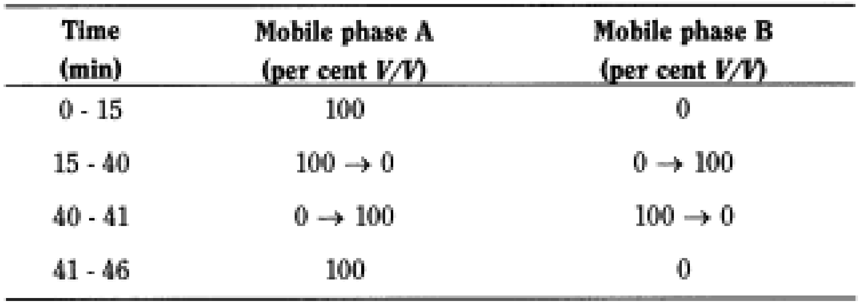
Test solution Dissolve 25.0 mg of the substance to be examined in a mixture of equal volumes of *acetonitrile R* and *methanol R* and dilute to 10.0 ml with the same mixture of solvents.

Reference solution (a) Dissolve 2 mg of *methylprednisolone CRS* and 2 mg of *betamethasone CRS* in mobile phase A and dilute to 100.0 ml with mobile phase A.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with mobile phase A.

Column:
- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 45 °C.

Mobile phase:
- *mobile phase A*: in a 1000 ml volumetric flask mix 250 ml of *acetonitrile R* with 700 ml of *water R* and allow to equilibrate; dilute to 1000 ml with *water R* and mix again;
- *mobile phase B*: *acetonitrile R*;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 15	100	0
15 - 40	100 → 0	0 → 100
40 - 41	0 → 100	100 → 0
41 - 46	100	0

Flow rate 2.5 ml/min.

Detection Spectrophotometer at 254 nm.

Equilibration With mobile phase B for at least 30 min, then with mobile phase A for 5 min. For subsequent chromatograms, use the conditions described from 40 min to 46 min.

Injection 20 µl; inject a mixture of equal volumes of *acetonitrile R* and *methanol R* as a blank.

Retention time Methylprednisolone = about 11.5 min; betamethasone = about 12.5 min.

System suitability Reference solution (a):

— *resolution*: minimum 1.5 between the peaks due to methylprednisolone and betamethasone; if necessary, adjust the concentration of acetonitrile in mobile phase A.

Limits:

— *impurities A, B, C, D*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (2 per cent);

— *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Loss on drying (*2.2.32*)

Maximum 1.0 per cent, determined on 0.500 g by drying in an oven at 105 °C.

ASSAY

Dissolve 0.100 g in *ethanol (96 per cent) R* and dilute to 100.0 ml with the same solvent. Dilute 2.0 ml of this solution to 100.0 ml with *ethanol (96 per cent) R*. Measure the absorbance (*2.2.25*) at the absorption maximum at 243 nm.

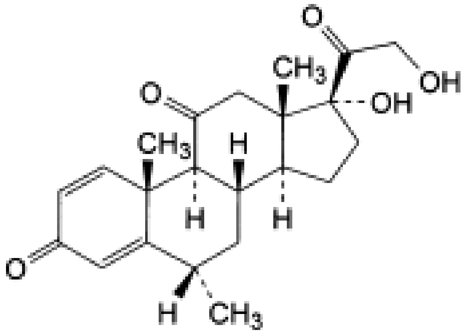
Calculate the content of $C_{22}H_{30}O_5$ taking the specific absorbance to be 395.

STORAGE

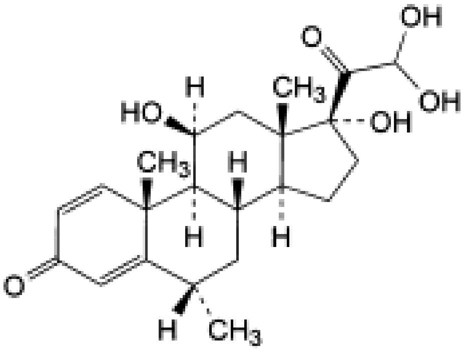
Protected from light.

IMPURITIES

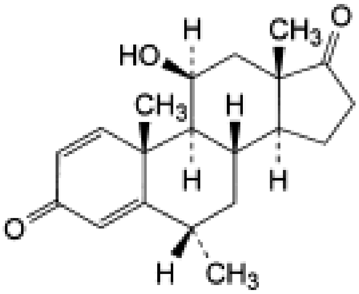
Specified impurities *A, B, C, D.*



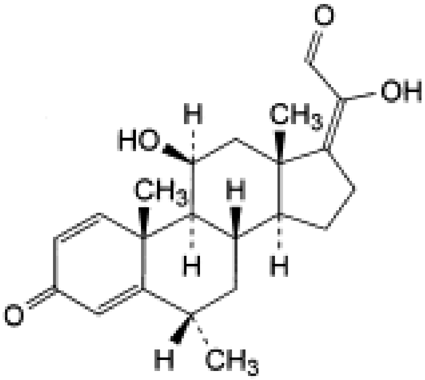
A. 17,21-dihydroxy-6α-methylpregna-1,4-diene-3,11,20-trione,



B. 11β,17,21,21-tetrahydroxy-6α-methylpregna-1,4-diene-3,20-dione,



C. 11β-hydroxy-6α-methylandrosta-1,4-diene-3,17-dione,



and (*Z*)-isomer

D. (*E*)- and (*Z*)-11β,20-dihydroxy-6α-methylpregna-1,4,17(20)-triene-3,21-dione.

Ph Eur

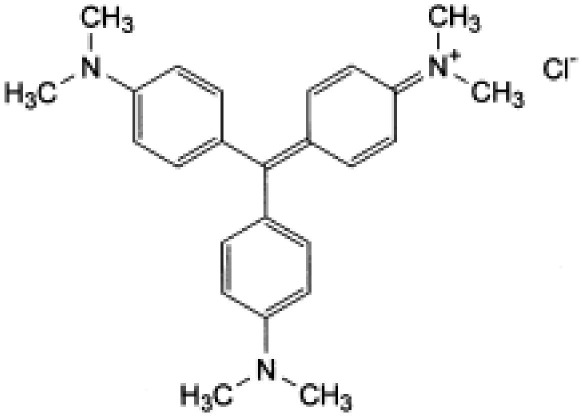
Methylrosanilinium Chloride

General Notices

(Ph Eur monograph 1990)



$C_{25}H_{30}ClN_3$ 408.0 *548-62-9*

Action and use

Antiseptic dye (gentian violet).

Ph Eur

DEFINITION

N-[4-[Bis[4-(dimethylamino)phenyl]methylene]cyclohexa-2,5-dienylidene]-*N*-methylmethanaminium chloride (hexamethyl-*p*-rosanilinium chloride). It contains not more than 10 per cent of pentamethyl-*p*-rosanilinium chloride and is also known as crystal violet and gentian violet.

Content

95.0 per cent to 103.0 per cent (anhydrous substance).

CHARACTERS

Appearance

Dark green, shiny powder, hygroscopic.

Solubility

Sparingly soluble in water, freely soluble in ethanol (96 per cent) and in methylene chloride.

IDENTIFICATION

First identification *A.*

Second identification *B, C.*

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison *methylrosanilinium chloride CRS.*

B. Thin-layer chromatography (*2.2.27*).

Test solution Dissolve 10 mg of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution Dissolve 10 mg of *methylrosanilinium chloride CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Plate *TLC silica gel G plate R.*

Mobile phase *glacial acetic acid R*, *water R*, *butanol R* (17:17:66 *V/V/V*).

Application 2 µl.

Development Over 2/3 of the plate.

Drying In air.

Detection Examine in daylight.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution. In the chromatogram obtained with the test solution, a secondary spot may be observed.

C. Dissolve 50 mg in *water R* and dilute to 5 ml with the same solvent; add 3 ml of *dilute sulphuric acid R*, 1 g of *zinc powder R* and heat gently. The mixture decolourises. Filter. To 3 ml of the filtrate add 0.5 ml of *silver nitrate solution R1*. A white turbidity is produced which slowly forms a dark, coagulating precipitate.

TESTS

***N*,*N*-Dimethylaniline (*2.4.26, Method A*)**

Maximum 100 ppm.

Test solution Dissolve in a ground-glass-stoppered tube 0.50 g of the substance to be examined in 30.0 ml of *water R*. Add 1.0 ml of the internal standard solution. Adjust the solution to 26-28 °C. Add 1.0 ml of *strong sodium hydroxide solution R* and mix for 2 min. Add 2.0 ml of *trimethylpentane R*. Shake for 2 min and centrifuge. Use the upper layer.

Reference solution Dissolve 50.0 mg of *N,N-dimethylaniline R* in 4.0 ml of *0.1 M hydrochloric acid* and dilute to 50.0 ml with *water R*. Dilute 1.0 ml of this solution to 100.0 ml with *water R*. To 0.50 g of the substance to be examined add 5.0 ml of this solution and dilute to 30.0 ml with *water R*. Add 1.0 ml of the internal standard solution and 1.0 ml of *strong sodium hydroxide solution R*. Add 2.0 ml of *trimethylpentane R*. Shake for 2 min and centrifuge. Use the upper layer.

Limit:

— calculate the ratio (*R*) of the area of the peak due to *N*,*N*-dimethylaniline to the area of the peak due to the internal standard from the chromatogram obtained with the reference solution; from the chromatogram obtained with the test solution, calculate the ratio of the area of the peak due to *N*,*N*-dimethylaniline to the area of the peak due to the internal standard: this ratio is not greater than 0.5 *R*.

Pentamethyl-*p*-rosanilinium

Liquid chromatography (*2.2.29*): use the normalisation procedure.

Test solution Dissolve 30.0 mg of the substance to be examined in *ethanol (96 per cent) R* and dilute to 100.0 ml with the same solvent.

Reference solution (a) Dissolve 3.0 mg of *methylrosanilinium for system suitability CRS* in *ethanol (96 per cent) R* and dilute to 10.0 ml with the same solvent.

Reference solution (b) Dilute 1.0 ml of the test solution to 20.0 ml with *ethanol (96 per cent) R*. Dilute 1.0 ml of this solution to 100.0 ml with *ethanol (96 per cent) R*.

Column:
- *size: l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *spherical octylsilyl silica gel for chromatography R* (5 µm).

Mobile phase *glacial acetic acid R*, *water R*, *methanol R* (10:190:800 *V/V/V*).

Flow rate 1 ml/min.

Detection Spectrophotometer at 589 nm.

Injection 20 µl.

Run time 2.5 times the retention time of the principal peak.

System suitability Reference solution (a):
- *resolution*: peak due to pentamethyl-*p*-rosanilinium is baseline separated from the peak due to methylrosanilinium.

Locate the peak due to pentamethyl-*p*-rosanilinium using the chromatogram provided with *methylrosanilinium for system suitability CRS*.

Limits:
- *pentamethyl-p-rosanilinium*: maximum 10 per cent.

Related substances

Liquid chromatography (2.2.29) as described in the test for pentamethyl-*p*-rosanilinium.

Limits:
- *impurity A*: maximum 1.0 per cent;
- *any other impurity*: for each impurity, maximum 0.1 per cent;
- *sum of impurities other than A*: maximum 1.0 per cent;
- *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard the peak due to pentamethyl-*p*-rosanilinium.

Substances insoluble in ethanol (90 per cent *V/V*)

Maximum 0.5 per cent.

In a conical flask introduce 1.0 g and add 50 ml of *ethanol (90 per cent V/V) R*. Boil under a reflux condenser for 1 h. Filter the warm liquid through a weighed sintered glass filter (16) (*2.1.2*) previously dried at 100-105 °C. Wash with hot *ethanol (90 per cent V/V) R* until a colourless filtrate is obtained. Dry at 100-105 °C until constant weight.

Water (*2.5.12*)

Maximum 10.0 per cent, determined on 0.100 g.

Sulphated ash (*2.4.14*)

Maximum 1.5 per cent, determined on 1.0 g.

ASSAY

Dissolve 50.0 mg in *ethanol (96 per cent) R* and dilute to 100.0 ml with the same solvent. Dilute 2.0 ml of the solution to 250.0 ml with *ethanol (96 per cent) R*. Measure the absorbance (*2.2.25*) at the maximum at 589 nm.

Calculate the content of $C_{25}H_{30}ClN_3$ taking the specific absorbance to be 2605.

STORAGE

In an airtight container .

IMPURITIES

Specified impurities A.

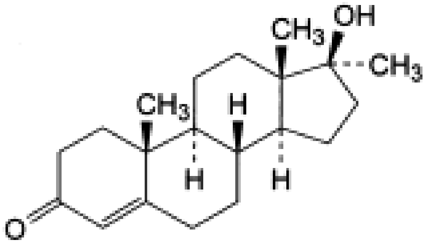
A. impurity of unknown structure with a relative retention of about 0.7.

Ph Eur

Methyltestosterone

General Notices

(Ph Eur monograph 0410)



$C_{20}H_{30}O_2$ 302.5 *58-18-4*

Action and use

Anabolic steroid.

Ph Eur

DEFINITION

17β-Hydroxy-17-methylandrost-4-en-3-one.

Content

97.0 per cent to 103.0 per cent (dried substance).

CHARACTERS

Appearance

White or slightly yellowish-white, crystalline powder.

Solubility

Practically insoluble in water, freely soluble in ethanol (96 per cent).

IDENTIFICATION

First identification B.

Second identification A, C.

A. Melting point *(2.2.14)*: 162 °C to 168 °C.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *methyltestosterone CRS.*

C. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 0.2 g of the substance to be examined in a mixture of 1 volume of *methanol R* and 9 volumes of *chloroform R* and dilute to 10 ml with the same mixture of solvents.

Reference solution Dissolve 20 mg of *methyltestosterone CRS* in 1 ml of a mixture of 1 volume of *methanol R* and 9 volumes of *chloroform R*.

Plate *TLC silica gel* F_{254} *plate R.*

Mobile phase *anhydrous acetic acid R, light petroleum R, butyl acetate R* (1:30:70 *V/V/V*).

Application 5 µl.

Development Over 2/3 of the plate.

Drying In air.

Detection Examine in ultraviolet light at 254 nm and spray with a saturated solution of *potassium dichromate R* in a mixture of 30 volumes of *water R* and 70 volumes of *sulphuric acid R*. Examine immediately in daylight.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

TESTS

Specific optical rotation *(2.2.7)*

+ 79 to + 85 (dried substance).

Dissolve 0.250 g in *ethanol (96 per cent) R* and dilute to 25.0 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 50 mg of the substance to be examined in *methanol R* and dilute to 100.0 ml with the same solvent.

Reference solution (a) Dilute 0.5 ml of the test solution to 100.0 ml with *methanol R*.

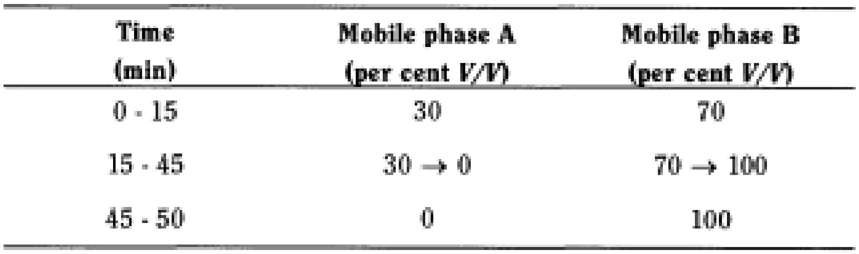
Reference solution (b) Dissolve 5 mg of *methyltestosterone for system suitability CRS* (containing impurity A) in *methanol R* and dilute to 10 ml with the same solvent.

Column:
— *size*: *l* = 0.15 m, Ø = 3.9 mm;

— *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:
— *mobile phase A*: *water R*;

— *mobile phase B*: *methanol R*;



Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 15	30	70
15 - 45	30 → 0	70 → 100
45 - 50	0	100

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 20 µl.

Identification of impurities Use the chromatogram supplied with *methyltestosterone for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peak due to impurity A.

Relative retention With reference to methyltestosterone (retention time = about 8 min): impurity A = about 1.5.

System suitability Reference solution (b):

— *resolution*: minimum 5 between the peaks due to methyltestosterone and impurity A.

Limits:

— *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

— *unspecified impurities*: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

— *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Loss on drying *(2.2.32)*

Maximum 2.0 per cent, determined on 0.500 g by drying in an oven at 105 °C for 2 h.

ASSAY

Dissolve 50.0 mg in *ethanol (96 per cent) R* and dilute to 50.0 ml with the same solvent. Dilute 10.0 ml of the solution to 100.0 ml with *ethanol (96 per cent) R*. Dilute 10.0 ml of this solution to 100.0 ml with *ethanol (96 per cent) R*. Measure the absorbance *(2.2.25)* at the absorption maximum at 241 nm.

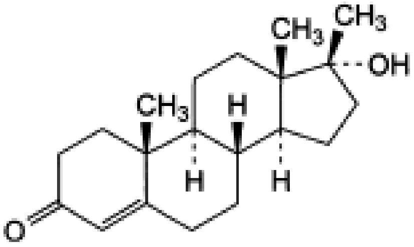
Calculate the content of $C_{20}H_{30}O_2$, taking the specific absorbance to be 540.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A.



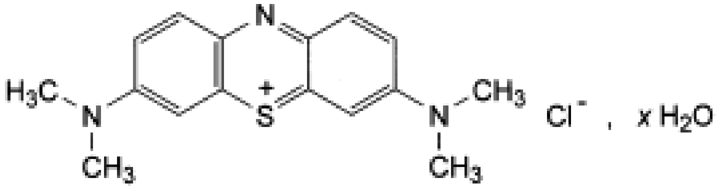
A. 17α-hydroxy-17-methylandrost-4-en-3-one.

Ph Eur

Methylthioninium Chloride

General Notices

(Ph Eur monograph 1132)



$C_{16}H_{18}ClN_3S,xH_2O$ 319.9 *61-73-4*
(anhydrous)

Action and use

Reducing agent; antidote to methaemoglobinaemia.

Preparation

Methylthioninium Injection

Ph Eur

DEFINITION

3,7-Bis(dimethylamino)phenothiazin-5-ylium chloride (methylene blue).

Content

95.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

Dark blue, crystalline powder with a copper-coloured sheen, or green crystals with a bronze-coloured sheen.

Solubility

Soluble in water, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

Test solution Dissolve 10 mg in *dilute hydrochloric acid R* and dilute to 100 ml with the same acid. Dilute 5 ml of the solution to 100 ml with *dilute hydrochloric acid R*.

Spectral range 240-800 nm.

Absorption maxima At 255-260 nm, 285-290 nm, 675-685 nm and 740-750 nm.

B. Thin-layer chromatography (*2.2.27*).

Test solution Dissolve 10 mg of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent. Dilute 1 ml of the solution to 10 ml with *methanol R*.

Reference solution Dissolve 10 mg of *methylthioninium chloride CRS* in *methanol R* and dilute to 10 ml with the same solvent. Dilute 1 ml of the solution to 10 ml with *methanol R*.

Plate *TLC silica gel plate R*.

Mobile phase *anhydrous formic acid R*, *propanol R* (20:80 *V/V*).

Application 2 µl.

Development Over a path of 8 cm.

Drying In air, protected from light.

Detection Examine in daylight.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution. A secondary spot may appear above the principal spot in both chromatograms.

C. Dissolve about 1 mg in 10 ml of *water R*. Add 1 ml of *glacial acetic acid R* and 0.1 g of *zinc powder R*. Heat to boiling. The solution becomes colourless. Filter and shake the filtrate. It becomes blue on contact with air.

D. Ignite 50 mg with 0.5 g of *anhydrous sodium carbonate R*. Cool and dissolve the residue in 10 ml of *dilute nitric acid R*. Filter. The filtrate, without further addition of *dilute nitric acid R*, gives reaction (a) of chlorides (*2.3.1*).

TESTS

Methanol-insoluble substances

Maximum 10.0 mg (1.0 per cent).

To 1.0 g add 20 ml of *methanol R* and boil under a reflux condenser for 5 min. Filter through a tared sintered-glass filter (40) (*2.1.2*) and wash the filter with *methanol R* until a colourless filtrate is obtained. Dry the filter at 100 °C and weigh.

Related substances

Liquid chromatography (*2.2.29*).

Test solution Dissolve 15.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (a) Dissolve 7.5 mg of *methylthioninium impurity A CRS* in the mobile phase and dilute to 50.0 ml with the mobile phase. To 1.0 ml of this solution add 1.0 ml of the test solution and dilute to 10.0 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase.

Column:

- *size:* *l* = 0.25 m, Ø = 4 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (7 µm).

Mobile phase Mix 27 volumes of *acetonitrile R* and 73 volumes of a mixture of 3.4 ml of *phosphoric acid R* and 1000 ml of *water R*.

Flow rate 1 ml/min.

Detection Spectrophotometer at 246 nm.

Injection 20 µl.

Run time Twice the retention time of methylthioninium.

Relative retention with reference to methylthioninium (retention time = about 11 min): impurity A = about 0.7.

System suitability Reference solution (a):

- *resolution*: minimum 1.5 between the peaks due to impurity A and methylthioninium. If necessary, adjust the concentration of acetonitrile in the mobile phase.

Limits:

- *impurity A*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (5.0 per cent);
- *any other impurity*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *sum of impurities other than A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- *disregard limit:* 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent).

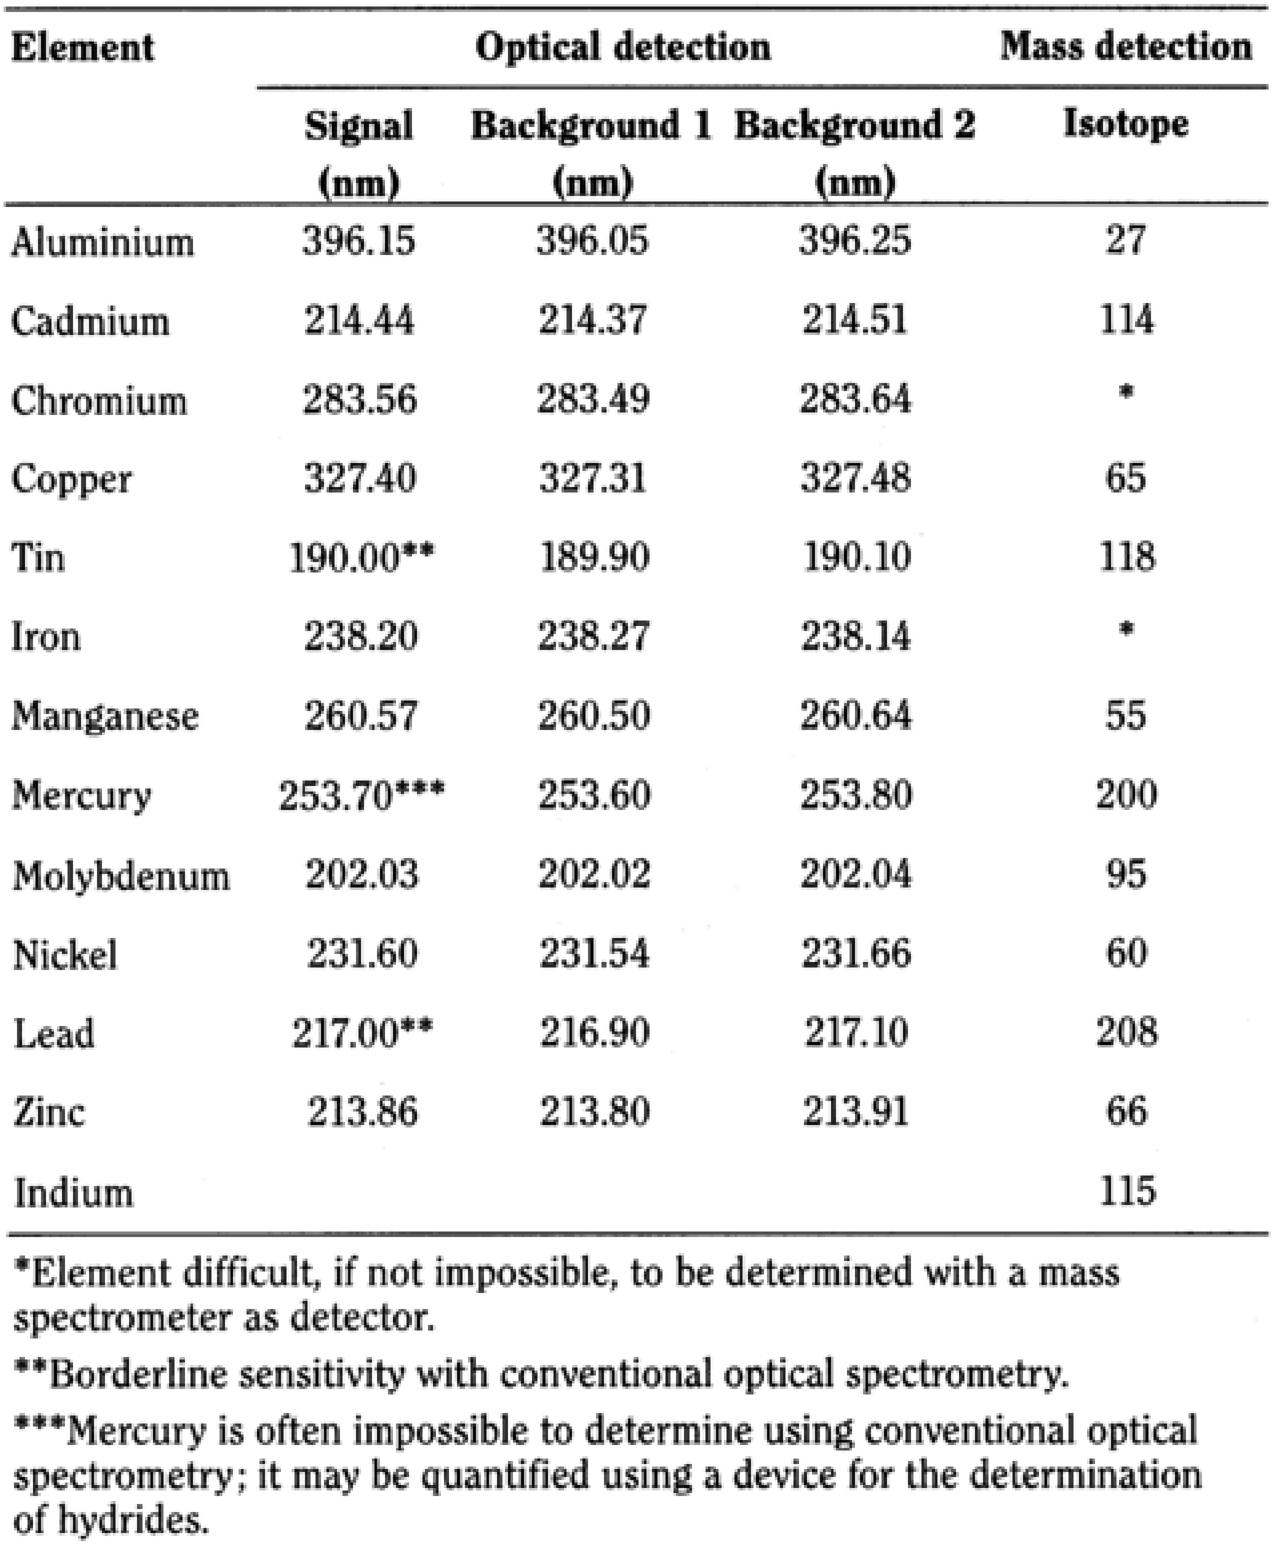
Metals

Atomic emission spectrometry (*2.2.22*) in argon plasma, using as detector a conventional optical system or a mass spectrometer; in the case of a mass spectrometer, use indium as internal standard.

Test solution In a 10 ml volumetric flask, dissolve with stirring 100 mg of the substance to be examined in 9 ml of *water R*, add 100.0 µl of a 10 µg/ml solution of indium prepared from indium *elementary standard solution for atomic spectrometry (1.000 g/l) R* in *nitric acid R* which has been diluted fifty-fold with *water R*. Dilute to 10.0 ml with *water R*.

Reference solutions Into a 100 ml volumetric flask, introduce 10.0 ml of a standard solution containing 1.00 µg/ml of each of the metals to be determined and prepared by dilution, with *water R*, of each *elementary standard solution for atomic spectrometry (1.000 g/l) R* for the corresponding elements. Add 1.00 ml of a 10 µg/ml solution of indium prepared from indium *elementary standard solution for atomic spectrometry (1.000 g/l) R* in *nitric acid R* which has been diluted fifty-fold with *water R*. Dilute to 100.0 ml with *water R*.

Blank solution Dilute one hundred-fold with *water R* the 10 µg/ml solution of indium used for the test and reference solutions.



Element	Optical detection			Mass detection
	Signal (nm)	Background 1 (nm)	Background 2 (nm)	Isotope

Loss on drying (*2.2.32*)

8.0 per cent to 22.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*)

Maximum 0.25 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 30 ml of *water R* with heating. Cool, add 50.0 ml of *potassium dichromate solution R1* and dilute to 100.0 ml with *water R*. Allow to stand for 10 min. Filter and discard the first 20 ml of filtrate. Introduce 50.0 ml of the filtrate into a flask with a ground-glass neck, add 50 ml of *dilute sulphuric acid R* and 8.0 ml of *potassium iodide solution R*. Allow to stand protected from light for 5 min, then add 80 ml of *water R*. Titrate with *0.1 M sodium thiosulphate* using 2 ml of *starch solution R*, added towards the end of the titration, as indicator. Carry out a blank titration.

1 ml of *0.1 M sodium thiosulphate* is equivalent to 10.66 mg of $C_{16}H_{18}ClN_3S$.

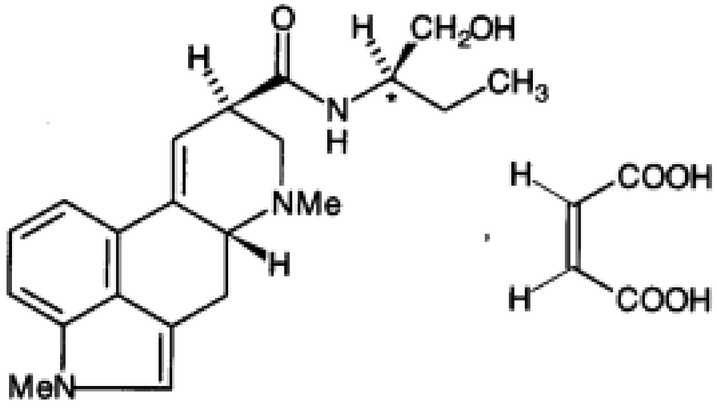
Methysergide Maleate

General Notices



and epimer at C*

$C_{21}H_{27}N_3O_2,C_4H_4O_4$ 469.5 *129-49-7*

Action and use

Non-selective 5HT receptor antagonist.

Preparation

Methysergide Tablets

DEFINITION

Methysergide Maleate is (1*RS*)-*N*-[1-(hydroxymethyl)propyl]-1-methyl-D-lysergamide hydrogen maleate. It contains not less than 98.0% and not more than 101.0% of $C_{21}H_{27}N_3O_2$, $C_4H_4O_4$, calculated with reference to the dried substance.

CHARACTERISTICS

A white or almost white, crystalline powder which may have a yellow or pink tinge.

Slightly soluble in *water* and in *methanol*; practically insoluble in *ether*.

IDENTIFICATION

A. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of methysergide maleate *(RS 227)*.

B. In the test for Related substances, the principal spot in the chromatogram obtained with solution (1) corresponds to that in the chromatogram obtained with solution (8).

C. Dissolve 1 mg in 1 ml of *ethanol (96%)* and add 1 ml of *dimethylaminobenzaldehyde solution R6*. A brownish red to violet colour is produced.

TESTS

Acidity

pH of a 0.2% w/v solution, 3.7 to 4.7, Appendix V L.

Specific optical rotation

In a 0.25% w/v solution, +35.0 to +45.0, calculated with reference to the dried substance, Appendix V F.

Related substances

Carry out the method for *thin-layer chromatography*, Appendix III A, protected from light using a suspension of *silica gel G* in 0.1M *sodium hydroxide* to prepare the plate and a mixture of 90 volumes of *chloroform* and 10 volumes of *methanol* as the mobile phase. Apply separately to the plate 5 µl of each of the following solutions. Solution (1) contains 2.0% w/v of the substance being examined in a mixture of 1 volume of 13.5M *ammonia* and 100 volumes of *methanol*. Solutions (2) to (8) are solutions of *methysergide maleate BPCRS* in a mixture of 1 volume of 13.5M *ammonia* and 100 volumes of *methanol* containing (2) 0.0050% w/v, (3) 0.010% w/v, (4) 0.015% w/v, (5) 0.020% w/v, (6) 0.030% w/v, (7) 0.040% w/v and (8) 2.0% w/v respectively. After removal of the plate, allow it to dry in air and examine under *ultraviolet light (365 nm)*. Assess the intensities of any *secondary spots* in the chromatogram obtained with solution (1) by reference to the spots in the chromatograms obtained with solutions (2) to (7), making allowance for area in assessing the intensities of spots of different R_f values and disregarding any spots less intense than the spot in the chromatogram obtained with solution (2). The total of the intensities so assessed does not exceed 2%.

Loss on drying

When dried to constant weight at 120° at a pressure not exceeding 0.7 kPa, loses not more than 7.0% of its weight. Use 1 g.

ASSAY

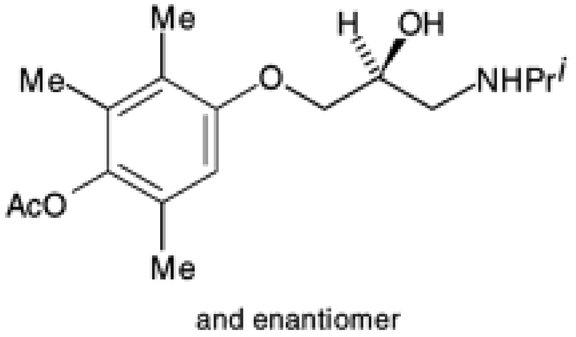
Carry out Method I for *non-aqueous titration*, Appendix VIII A, using 0.4 g and *1-naphtholbenzein solution* as indicator. Each ml of 0.1M *perchloric acid VS* is equivalent to 46.95 mg of $C_{21}H_{27}N_3O_2,C_4H_4O_4$.

STORAGE

Methysergide Maleate should be protected from light and stored at a temperature of 2° to 8°.

Metipranolol

General Notices



$C_{17}H_{27}NO_4$ 309.4 *22664-55-7*

Action and use

Beta-adrenoceptor antagonist.

Preparation

Metipranolol Eye Drops

DEFINITION

Metipranolol is (*RS*)-4-(2-hydroxy-3-isopropylaminopropoxy)-2,3,6-trimethylphenyl acetate. It contains not less than 99.0% and not more than 101.0% of $C_{17}H_{27}NO_4$, calculated with reference to the anhydrous substance.

CHARACTERISTICS

A white, crystalline powder; melting point, about 108°.

Practically insoluble in *water*; soluble in *ethanol (96%),* in *acetone* and in *methanol*. It dissolves in dilute mineral acids.

IDENTIFICATION

The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of metipranolol *(RS 375)*.

TESTS

Alkalinity

Shake 0.5 g with 20 ml of *water* for 5 minutes and filter. The pH of the filtrate is 9.0 to 10.0, Appendix V L.

Colour of solution

A 5.0% w/v solution in 1M *hydrochloric acid* is not more intensely coloured than *reference solution Y_6*, Appendix IV B.

Heavy metals

2 g complies with *limit test C for heavy metals*, Appendix VII. Use 2 ml of *lead standard solution (10 ppm Pb)* to prepare the standard (10 ppm).

Iron

Dissolve the residue obtained in the test for Sulphated ash in 1 ml of *hydrochloric acid*, evaporate to dryness, dissolve the residue in a mixture of 0.5 ml of 6M *acetic acid* and 7 ml of *water* and add sufficient *water* to produce 20 ml. 10 ml of this solution complies with the *limit test for iron*, Appendix VII (10 ppm).

Related substances

Carry out the method for *liquid chromatography*, Appendix III D, using the following solutions in *methanol*. Solution (1) contains 0.10% w/v of the substance being examined. Solution (2) contains 0.0005% w/v of the substance being examined. Solution (3) contains 0.001% w/v of *desacetylmetipranolol BPCRS*. Solution (4) contains 0.02% w/v of the substance being examined and 0.02% w/v of *desacetylmetipranolol BPCRS*.

The chromatographic procedure may be carried out using (a) a stainless steel column (15 cm × 4.6 mm) packed with *end-capped octadecylsilyl silica gel for chromatography* (5 µm) (Hypersil ODS is suitable), (b) as the mobile phase with a flow rate of 2 ml per minute a mixture of 1 volume of *perchloric acid*, 45 volumes of *methanol* and 54 volumes of *water*, the pH of the mixture being adjusted to 3.0 with 13.5M *ammonia* and (c) a detection wavelength of 275 nm. For solution (1) allow the chromatography to proceed for at least 3 times the retention time of the principal peak.

The test is not valid unless, in the chromatogram obtained with solution (4), the *resolution factor* between the two principal peaks is at least 5.

In the chromatogram obtained with solution (1) the area of any peak corresponding to desacetylmetipranolol is not greater than the area of the principal peak in the chromatogram obtained with solution (3) (1%) and the sum of the areas of any *secondary peaks* is not greater than the area of the principal peak in the chromatogram obtained with solution (2) (0.5%).

Sulphated ash

Not more than 0.1%, Appendix IX A. Use 2 g.

Water

Not more than 0.5% w/w, Appendix IX C. Use 1 g.

ASSAY

Carry out Method I for *non-aqueous titration*, Appendix VIII A, using 0.3 g and determining the end point potentiometrically. Each ml of 0.1M *perchloric acid VS* is equivalent to 30.94 mg of $C_{17}H_{27}NO_4$.

STORAGE

Metipranolol should be protected from light.

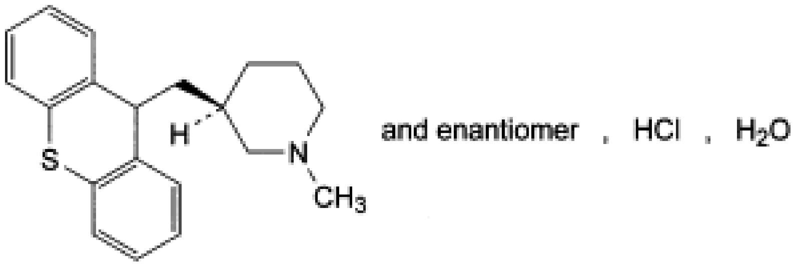
Metixene Hydrochloride

General Notices

(Ph Eur monograph 1347)



$C_{20}H_{23}NS,HCl,H_2O$ 363.9   *7081-40-5*

Action and use

Anticholinergic.

Ph Eur

DEFINITION

Metixene hydrochloride contains not less than 98.0 per cent and not more than the equivalent of 102.0 per cent of (*RS*)-1-methyl-3-[(9*H*-thioxanthen-9-yl)methyl]piperidine hydrochloride, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline or fine crystalline powder, soluble in water, soluble in alcohol and in methylene chloride.

IDENTIFICATION

A. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *metixene hydrochloride CRS*.

B. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

Appearance of solution

Dissolve 0.40 g in *methanol R* and dilute to 20.0 ml with the same solvent. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution Y_6 (*2.2.2, Method I*).

pH (*2.2.3*)

Dissolve 0.18 g in *carbon dioxide-free water R* heating if necessary at about 50 °C, cool and dilute to 10.0 ml with the same solvent. The pH of the solution, measured immediately, is 4.4 to 5.8.

Related substances

Examine by thin-layer chromatography (*2.2.27*), using a *TLC silica gel plate R*. Carry out the test rapidly and protected from light.

Test solution Dissolve 50 mg of the substance to be examined in *methylene chloride R* and dilute to 5.0 ml with the same solvent.

Reference solution (a) Dissolve 5 mg of *metixene hydrochloride CRS* in *methylene chloride R* and dilute to 100.0 ml with the same solvent.

Reference solution (b) Dissolve 20 mg of *thioxanthene CRS* in 50 ml of *methylene chloride R*. Dilute 1.0 ml of the solution to 20.0 ml with *methylene chloride R*.

Reference solution (c) Dissolve 5 mg of *thioxanthone CRS* in 50 ml of *methylene chloride R*. Dilute 1.0 ml of the solution to 20.0 ml with *methylene chloride R*.

Reference solution (d) Dilute 4 ml of reference solution (a) to 10.0 ml with *methylene chloride R.*

Apply to the plate as narrow bands 5 µl of each solution. Develop over a path of 10 cm using a mixture of 10 volumes of *glacial acetic acid R*, 10 volumes of *methanol R* and 80 volumes of *methylene chloride R*. Dry the plate in a stream of cold air. Spray with a mixture of 1 volume of *sulphuric acid R* and 9 volumes of *alcohol R* and heat at 100 °C for 10 min. Allow the plate to cool and examine in ultraviolet light at 365 nm. Thioxanthene shows orange fluorescence and thioxanthone shows greenish-blue fluorescence. Any band corresponding to thioxanthene in the chromatogram obtained with the test solution is not more intense than the band in the chromatogram obtained with reference solution (b) (0.2 per cent); any band corresponding to thioxanthone in the chromatogram obtained with the test solution is not more intense than the band in the chromatogram obtained with reference solution (c) (0.05 per cent); any band, apart from the principal band and the bands corresponding to thioxanthene and thioxanthone, is not more intense than the band in the chromatogram obtained with reference solution (a) (0.5 per cent) and at most one such band is more intense than the band in the chromatogram obtained with reference solution (d) (0.2 per cent). The test is not valid unless the bands in the chromatograms obtained with reference solutions (b) and (c) are clearly visible and differentiated.

Loss on drying (*2.2.32*)

Not less than 4.0 per cent and not more than 6.0 per cent, determined on 0.500 g by drying in an oven at 138-142 °C.

Sulphated ash (*2.4.14*)

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

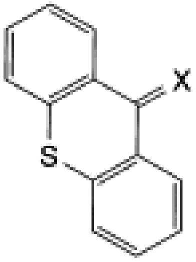
Dissolve 0.250 g in a mixture of 5.0 ml of *0.01 M hydrochloric acid* and 50 ml of *alcohol R*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 34.59 mg of $C_{20}H_{24}ClNS$.

STORAGE

Store protected from light.

IMPURITIES



A. X = H_2: 9*H*-thioxanthene,

B. X = O: 9*H*-thioxanthen-9-one (thioxanthone).

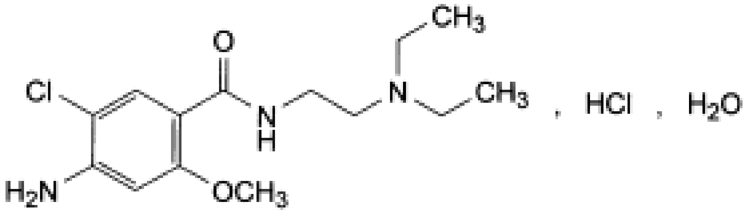
Metoclopramide Hydrochloride

General Notices

(Ph Eur monograph 0674)



$C_{14}H_{22}ClN_3O_2,HCl,H_2O$ 354.3 *54143-57-6*

Action and use

Dopamine receptor antagonist; antiemetic.

Preparations

Metoclopramide Injection

Metoclopramide Oral Solution

Metoclopramide Tablets

Ph Eur

DEFINITION

Metoclopramide hydrochloride contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 4-amino-5-chloro- *N*-[2-(diethylamino)ethyl]-2-methoxybenzamide hydrochloride, calculated with reference to the anhydrous substance.

CHARACTERS

White or almost white, crystalline powder or crystals, very soluble in water, freely soluble in alcohol, sparingly soluble in methylene chloride.

It melts at about 183 °C with decomposition.

IDENTIFICATION

First identification A, B, D.

Second identification A, C, D, E.

A. The pH (*2.2.3*) of solution S (see Tests) is 4.5 to 6.0.

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum

obtained with *metoclopramide hydrochloride CRS*. Examine the substances as discs prepared using *potassium chloride R*.

C. Examine the chromatograms obtained in the test for related substances in ultraviolet light before spraying with *dimethylaminobenzaldehyde solution R1*. The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Dilute 1 ml of solution S to 2 ml with *water R*. The solution gives reaction (a) of chlorides (*2.3.1*).

E. Dissolve about 2 mg in 2 ml of *water R*. The solution gives the reaction of primary aromatic amines (*2.3.1*).

TESTS

Solution S

Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 25 ml with the same solvent.

Appearance of solution

Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Related substances

Examine by thin-layer chromatography (*2.2.27*), using *silica gel* HF_{254} *R* as the coating substance.

Test solution (a) Dissolve 0.40 g of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Test solution (b) Dilute 1 ml of test solution (a) to 10 ml with *methanol R*.

Reference solution (a Dissolve 20 mg of *metoclopramide hydrochloride CRS* in *methanol R* and dilute to 5 ml with the same solvent.

Reference solution (b) Dilute 5 ml of test solution (a) to 100 ml with *methanol R*. Dilute 1 ml of this solution to 10 ml with *methanol R*.

Reference solution (c) Dissolve 10 mg of *N,N-diethylethylenediamine R* in *methanol R* and dilute to 50 ml with the same solvent.

Apply separately to the plate 5 µl of each solution. Develop over a path of 12 cm using a mixture of 2 volumes of *concentrated ammonia R*, 10 volumes of *dioxan R*, 14 volumes of *methanol R* and 90 volumes of *methylene chloride R*. Allow the plate to dry in air. Examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). Spray with *dimethylaminobenzaldehyde solution R1*. Allow the plate to dry in air. Any spot in the chromatogram obtained with test solution (a) that has not been visualised in ultraviolet light at 254 nm is not more intense than the spot in the chromatogram obtained with reference solution (c) (0.5 per cent).

Heavy metals (*2.4.8*)

12 ml of solution S complies with limit test A for heavy metals (20 ppm). Prepare the standard using *lead standard solution (2 ppm Pb) R*.

Water (*2.5.12*)

4.5 per cent to 5.5 per cent, determined on 0.500 g by the semi-micro determination of water.

Sulphated ash (*2.4.14*)

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.2500 g in a mixture of 5.0 ml of *0.01 M hydrochloric acid* and 50 ml of *alcohol R*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume of *0.1 M sodium hydroxide* added between the two points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 33.63 mg of $C_{14}H_{23}Cl_2N_3O_2$.

STORAGE

Store protected from light.

Detection Examine in ultraviolet light at 254 nm before spraying with *dimethylaminobenzaldehyde solution R1*.

Results The principal spot in the chromatogram obtained with test solution (a) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

TESTS

Appearance of solution

The freshly prepared solution is clear *(2.2.1)* and not more intensely coloured than reference solution Y_6 *(2.2.2, Method II)*.

Dissolve 2.5 g in 25 ml of *1 M hydrochloric acid*.

Related substances

A. Thin-layer chromatography *(2.2.27)*.

Test solution (a) Dissolve 40 mg of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Test solution (b) Dissolve 0.160 g of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dissolve 20 mg of *metoclopramide CRS* and 10 mg of *sulpiride CRS* in *methanol R* and dilute to 5 ml with the same solvent.

Reference solution (b) Dissolve 20 mg of *N,N-diethylethane-1,2-diamine R* (impurity E) in *methanol R* and dilute to 50 ml with the same solvent. Dilute 2 ml of this solution to 25 ml with *methanol R*.

Plate *TLC silica gel* F_{254} *plate R*.

Mobile phase *concentrated ammonia R, dioxan R, methanol R, methylene chloride R* (2:10:14:90 *V/V/V/V*).

Application 10 µl.

Development Over 2/3 of the plate.

Drying In air.

Detection Examine in ultraviolet light at 254 nm (identification C), then spray with *dimethylaminobenzaldehyde solution R1* and allow to dry in air.

System suitability Reference solution (a):

— the chromatogram shows 2 clearly separated spots.

Limit Test solution (b):

— *impurity E*: any spot due to impurity E (not visualised in ultraviolet light at 254 nm) is not more intense than the corresponding spot in the chromatogram obtained with reference solution (b) (0.2 per cent).

B. Liquid chromatography *(2.2.29)*.

Test solution Dissolve 10.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dilute 0.2 ml of the test solution to 100.0 ml with the mobile phase.

Reference solution (b) Dissolve 10 mg of *metoclopramide impurity A CRS* in the mobile phase and dilute to 100 ml with the mobile phase. Mix 1 ml of this solution with 0.1 ml of the test solution and dilute to 10 ml with the mobile phase.

Column:
— *size*: *l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Dissolve 6.8 g of *potassium dihydrogen phosphate R* in 700 ml of *water R*; add 0.2 ml of *N,N-dimethyloctylamine R* and adjust to pH 4.0 with *dilute phosphoric acid R*; dilute to 1000 ml with *water R*, add 250 ml of *acetonitrile R* and mix.

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 240 nm.

Injection 10 µl.

Run time 8 times the retention time of metoclopramide.

Relative retention With reference to metoclopramide (retention time = about 3.6 min): impurity A = about 0.82; impurity F = about 0.89; impurity H = about 0.91; impurity G = about 1.7; impurity C = about 2.7; impurity D = about 2.8; impurity B = about 6.4.

System suitability Reference solution (b):

— *resolution*: minimum 2.0 between the peaks due to impurity A and metoclopramide .

Limits:
— *impurities A, B, C, D, F, G, H*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

— *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.6 per cent);

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.02 per cent).

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying *(2.2.32)*

Maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

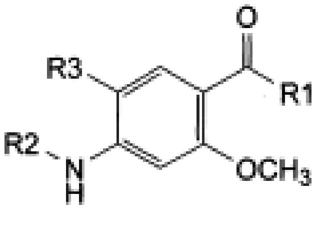
ASSAY

Dissolve 0.250 g in 50 ml of *anhydrous acetic acid R* and add 5 ml of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 29.98 mg of $C_{14}H_{22}ClN_3O_2$.

IMPURITIES

Specified impurities A, B, C, D, E, F, G, H.

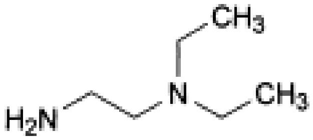


A. R1 = $NH-CH_2-CH_2-N(C_2H_5)_2$, R2 = $CO-CH_3$, R3 = Cl: 4-(acetylamino)-5-chloro-*N*-[2-(diethylamino)ethyl]-2-methoxybenzamide,

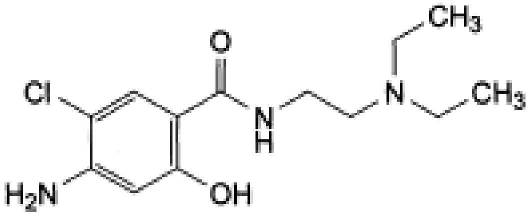
B. R1 = OCH_3, R2 = $CO-CH_3$, R3 = Cl: methyl 4-(acetylamino)-5-chloro-2-methoxybenzoate,

C. R1 = OH, R2 = H, R3 = Cl: 4-amino-5-chloro-2-methoxybenzoic acid,

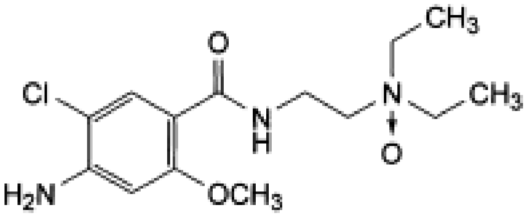
D. R1 = OCH_3, R2 = $CO-CH_3$, R3 = H: methyl 4-(acetylamino)-2-methoxybenzoate,



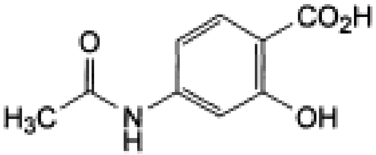
E. *N,N*-diethylethane-1,2-diamine,



F. 4-amino-5-chloro-*N*-[2-(diethylamino)ethyl]-2-hydroxybenzamide,



G. *N′*-(4-amino-5-chloro-2-methoxybenzoyl)-*N,N*-diethylethane-1,2-diamine *N*-oxide,



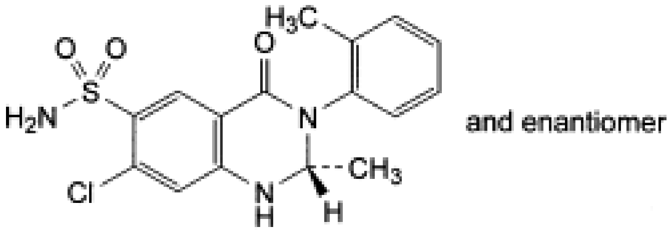
H. 4-(acetylamino)-2-hydroxybenzoic acid.

Ph Eur

Metolazone

General Notices

(Ph Eur monograph 1757)



$C_{16}H_{16}ClN_3O_3S$ 365.8 *17560-51-9*

Action and use

Thiazide-like diuretic.

Ph Eur

DEFINITION

(2*RS*)-7-Chloro-2-methyl-3-(2-methylphenyl)-4-oxo-1,2,3,4-tetrahydroquinazoline-6-sulphonamide.

Content

97.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or slightly yellowish, crystalline powder.

Solubility

Very slightly soluble in water, sparingly soluble in methanol, slightly soluble in ethyl acetate, very slightly soluble in methylene chloride.

It shows polymorphism (*5.9*).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

Comparison metolazone CRS.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *anhydrous ethanol R*, evaporate to dryness and record new spectra using the residues.

TESTS

Related substances

Liquid chromatography (*2.2.29*).

Test solution (a) Dissolve 30.0 mg of the substance to be examined in *methanol R* and dilute to 10.0 ml with the same solvent.

Test solution (b) Dilute 2.0 ml of test solution (a) to 100.0 ml with *methanol R*.

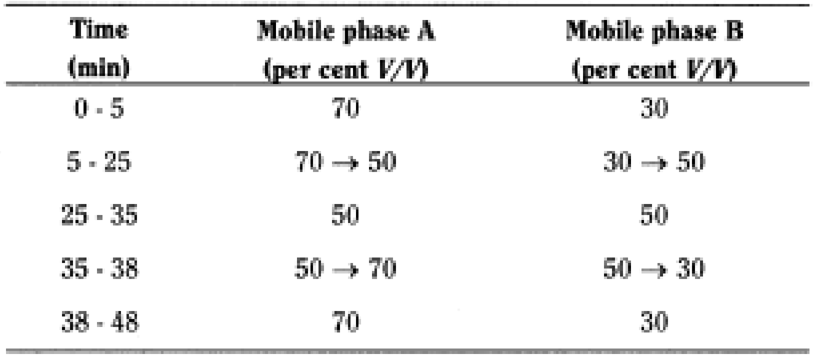
Reference solution (a) Dissolve 3.0 mg of *metolazone for system suitability CRS* (containing impurities A, B, C, D and E) in 1 ml of *methanol R*.

Reference solution (b) Dilute 1.0 ml of test solution (a) to 100.0 ml with *methanol R*. Dilute 5.0 ml of this solution to 10.0 ml with *methanol R*.

Reference solution (c) Dissolve 30.0 mg of *metolazone CRS* in *methanol R* and dilute to 10.0 ml with the same solvent. Dilute 2.0 ml of this solution to 100.0 ml with *methanol R*.

Column:
- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 30 °C.

Mobile phase:
- *mobile phase A*: 5.44 g/l solution of *potassium dihydrogen phosphate R*;
- *mobile phase B*: *methanol R*;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 5	70	30
5 - 25	70 → 50	30 → 50
25 - 35	50	50
35 - 38	50 → 70	50 → 30
38 - 48	70	30

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 230 nm.

Injection 10 µl of test solution (a) and reference solutions (a) and (b).

Identification of impurities Use the chromatogram supplied with *metolazone for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, B, C, D and E.

System suitability Reference solution (a):

— *resolution*: minimum 1.6 between the peaks due to impurities E and C and minimum 1.5 between the peaks due to impurities A and B.

Limits:

— *impurities A, B, C, D, E*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *unspecified impurities*: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

— *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Heavy metals (*2.4.8*)

Maximum 20 ppm.

1.0 g complies with test F. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying (*2.2.32*)

Maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

Sulphated ash (*2.4.14*)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

Injection Test solution (b) and reference solution (c).

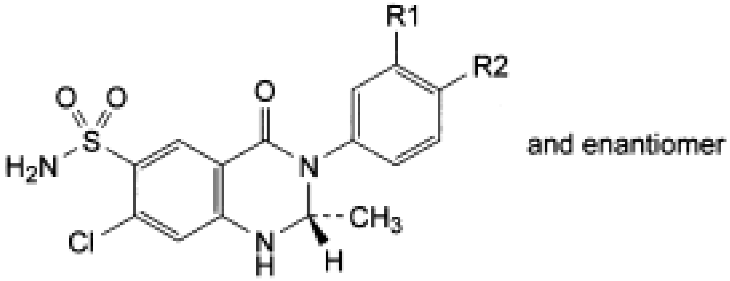
Calculate the percentage content of $C_{16}H_{16}ClN_3O_3S$ from the declared content of *metolazone CRS.*

STORAGE

Protected from light.

IMPURITIES

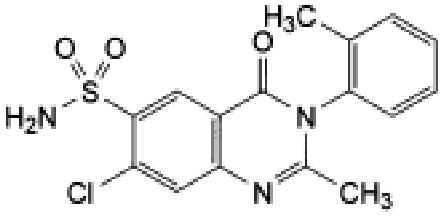
Specified impurities *A, B, C, D, E.*



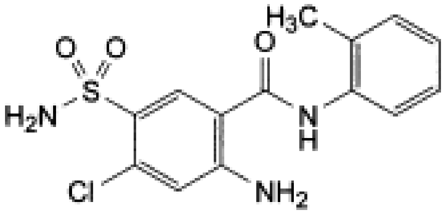
A. R1 = CH_3, R2 = H: (2*RS*)-7-chloro-2-methyl-3-(3-methylphenyl)-4-oxo-1,2,3,4-tetrahydroquinazoline-6-sulphonamide,

B. R1 = H, R2 = CH_3: (2*RS*)-7-chloro-2-methyl-3-(4-methylphenyl)-4-oxo-1,2,3,4-tetrahydroquinazoline-6-sulphonamide,

C. R1 = R2 = H: (2*RS*)-7-chloro-2-methyl-4-oxo-3-phenyl-1,2,3,4-tetrahydroquinazoline-6-sulphonamide,



D. 7-chloro-2-methyl-3-(2-methylphenyl)-4-oxo-3,4-dihydroquinazoline-6-sulphonamide,



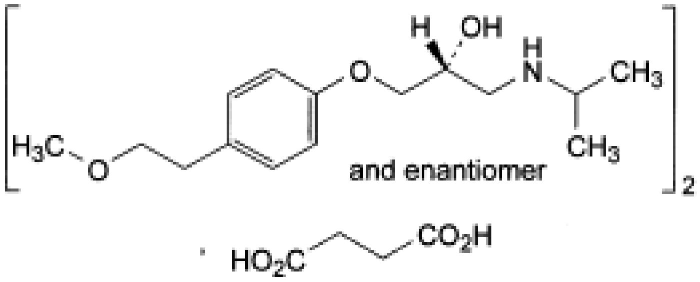
E. 2-amino-4-chloro-*N*-(2-methylphenyl)-5-sulphamoylbenzamide.

Ph Eur

Metoprolol Succinate

General Notices

(Ph Eur monograph 1448)



$C_{34}H_{56}N_2O_{10}$ 653 *98418-47-4*

Action and use

Beta-adrenoceptor antagonist.

Ph Eur

DEFINITION

Bis[(2*RS*)-1-[4-(2-methoxyethyl)phenoxy]-3-[(1-methylethyl)amino]propan-2-ol] butanedioate.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water, soluble in methanol, slightly soluble in alcohol, very slightly soluble in ethyl acetate.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

Comparison Ph. Eur. reference spectrum of metoprolol succinate.

TESTS

Solution S

Dissolve 0.500 g in *carbon dioxide-free water R* and dilute to 25.0 ml with the same solvent.

Appearance of solution

Solution S is not more opalescent than reference suspension II (*2.2.1*) and it is colourless (*2.2.2, Method II*).

pH (*2.2.3*)

7.0 to 7.6 for solution S.

Related substances

A. Thin-layer chromatography (*2.2.27*).

Test solution Dissolve 0.50 g of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution Dilute 1 ml of the test solution to 50 ml with *methanol R*. Dilute 5 ml of this solution to 50 ml with *methanol R*.

Plate *TLC silica gel plate R.*

Mobile phase Place 2 beakers each containing 30 volumes of *concentrated ammonia R* at the bottom of a chromatographic tank containing a mixture of 20 volumes of *methanol R* and 80 volumes of *ethyl acetate R*.

Application 10 µl.

Development Over a path of 12 cm in a tank saturated for at least 1 h.

Drying In air for at least 3 h.

Detection Expose the plate to iodine vapour for at least 15 h.

Limits:

— *any impurity*: any spot, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with the reference solution (0.2 per cent);

— *disregard* any spot on the starting line.

B. Liquid chromatography (*2.2.29*).

Test solution Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dissolve 5.0 mg of the substance to be examined and 3.0 mg of *metoprolol impurity A CRS* in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of the solution to 10.0 ml with the mobile phase.

Reference solution (c) If this solution is required (see below), it is to be prepared in a fume cupboard. This solution is used only to identify the peak due to impurity C. Dissolve 10 mg of the substance to be examined in 10 ml of *0.1 M hydrochloric acid*. Transfer this solution to an evaporating dish 10 cm in diameter. Place the dish so that the surface of the solution is 5 cm from a lamp emitting ultraviolet light (*2.1.3*) at 254 nm for 6 h. Dilute 0.5 ml of this solution to

25 ml with the mobile phase.

Column:

- *size: l* = 0.15 m, Ø = 3.9 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R1* (5 µm) with a pore size of 10 nm and a carbon loading of 19 per cent.

Mobile phase Dissolve 3.9 g of *ammonium acetate R* in 810 ml of *water R*, add 2.0 ml of *triethylamine R*, 10.0 ml of *glacial acetic acid R*, 3.0 ml of *phosphoric acid R* and 146 ml of *acetonitrile R* and mix.

Flow rate 1 ml/min.

Detection Spectrophotometer at 280 nm.

Injection 20 µl; inject the test solution and reference solutions (a) and (b).

Run time 3 times the retention time of metoprolol.

Relative retention With reference to metoprolol (retention time = about 7 min): impurity C = about 0.3; impurity A = about 0.7.

System suitability Reference solution (a):

- *resolution*: minimum of 6.0 between the peaks due to impurity A and to metoprolol.

Limits:

- *any impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent),
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent),
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard any peak due to succinic acid.

If a peak occurs with a retention time of about 2.3 min (impurity C) which has an area greater than the area of the principal peak in the chromatogram obtained with reference solution (b), prepare and inject reference solution (c). For the chromatogram obtained with the test solution, multiply the peak area of impurity C by a correction factor of 0.1.

Heavy metals (*2.4.8*)

Maximum 10 ppm.

Dissolve 2.0 g in 20 ml of *water R*. 12 ml of the solution complies with limit test A. Prepare the standard using *lead standard solution (1 ppm Pb) R*.

Loss on drying (*2.2.32*)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 40 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 32.64 mg of $C_{34}H_{56}N_2O_{10}$.

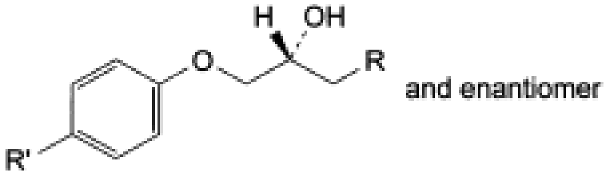
STORAGE

Protected from light.

IMPURITIES

By liquid chromatography A, B, C, D, E, F, G, H, J.

By thin-layer chromatography M, N, O.



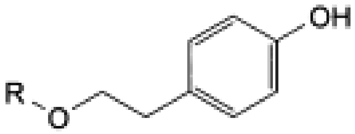
A. R = NH-CH_2-CH_3, R′ = CH_2-CH_2-OCH_3: (2*RS*)-1-(ethylamino)-3-[4-(2-methoxyethyl)phenoxy]propan-2-ol,

C. R = NH-CH(CH_3)$_2$, R′ = CHO: 4-[(2*RS*)-2-hydroxy-3-[(1-methylethyl)amino]propoxy]benzaldehyde,

D. R = OH, R′ = CH_2-CH_2-OCH_3: (2*RS*)-3-[4-(2-methoxyethyl)phenoxy]propane-1,2-diol,

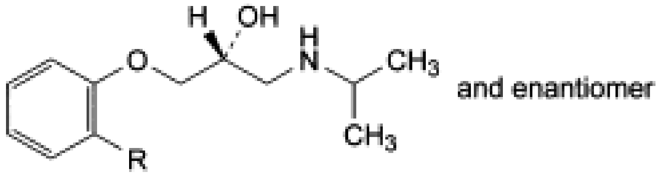
H. R = NH-CH(CH_3)$_2$, R′ = CH_2-CH_2-OH: (2*RS*)-1-[4-(2-hydroxyethyl)phenoxy]-3-[(1-methylethyl)amino]propan-2-ol,

J. R = O-CH_2-CHOH-CH_2-NH-CH(CH_3)$_2$, R′ = CH_2-CH_2-OCH_3: 1-[2-hydroxy-3-[(1-methylethyl)amino]propoxy]-3-[4-(2-methoxyethyl)phenoxy]propan-2-ol,



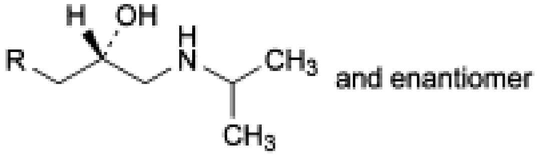
B. R = CH_3: 4-(2-methoxyethyl)phenol,

G. R = H: 2-(4-hydroxyphenyl)ethanol,



E. R = CH_2-CH_2-OCH_3: (2*RS*)-1-[2-(2-methoxyethyl)phenoxy]-3-[(1-methylethyl)amino]propan-2-ol,

F. R = H: (2*RS*)-1-[(1-methylethyl)amino]-3-phenoxypropan-2-ol,



M. R = NH-CH$(CH_3)_2$: 1,3-bis[(1-methylethyl)amino]propan-2-ol,

Ph Eur

DEFINITION

Bis[(2*RS*)-1-[4-(2-methoxyethyl)phenoxy]-3-[(1-methylethyl)amino]propan-2-ol] (2*R*,3*R*)-2,3-dihydroxybutanedioate.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or colourless crystals.

Solubility

Very soluble in water, freely soluble in alcohol.

It shows polymorphism (*5.9*).

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).

Comparison *metoprolol tartrate CRS.*

If the spectra obtained in the solid state show differences, record further spectra using discs prepared by placing 25 µl of a 100 g/l solution in *methylene chloride R* on a disc of *potassium bromide R* and evaporating the solvent. Examine immediately.

TESTS

Solution S

Dissolve 0.500 g in *carbon dioxide-free water R* and dilute to 25.0 ml with the same solvent.

Appearance of solution

Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution B_8 (*2.2.2, Method II*).

pH (*2.2.3*)

6.0 to 7.0 for solution S.

Specific optical rotation (*2.2.7*)

+ 7.0 to + 10.0 (dried substance), determined on solution S.

Related substances

A. Thin-layer chromatography (*2.2.27*).

Test solution Dissolve 0.50 g of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dilute 1 ml of the test solution to 20 ml with *methanol R*. Dilute 5 ml of this solution to 50 ml with *methanol R*.

Reference solution (b) Dilute 4 ml of reference solution (a) to 10 ml with *methanol R*.

Plate *TLC silica gel plate R.*

Mobile phase Place 2 beakers each containing 30 volumes of *concentrated ammonia R* at the bottom of a chromatographic tank containing a mixture of 20 volumes of *methanol R* and 80 volumes of *ethyl acetate R*.

Application 5 µl.

Development Over a path of 12 cm in a tank saturated for at least 1 h.

Drying In air for at least 3 h.

Detection Expose the plate to iodine vapour for at least 15 h.

Limits:

— *any impurity*: any spot, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (a) (0.5 per cent) and at most 1 such spot is more intense than the spot in the chromatogram obtained with reference solution (b) (0.2 per cent);

— *disregard* any spot on the starting-line.

B. Liquid chromatography (*2.2.29*).

Test solution Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dissolve 5.0 mg of *metoprolol tartrate CRS* and 3.0 mg of *metoprolol impurity A CRS* in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of the test solution to 20.0 ml with the mobile phase. Dilute 3.0 ml of the solution to 50.0 ml with the mobile phase.

Reference solution (c) If this solution is required (see below), it is to be prepared in a fume cupboard. This solution is used only to identify the peak due to impurity C. Dissolve 10 mg of *metoprolol tartrate CRS* in 10 ml of *0.1 M hydrochloric acid*. Transfer this solution to an evaporating dish 10 cm in diameter. Place the dish so that the surface of the solution is 5 cm from a lamp emitting ultraviolet light (*2.1.3*) at 254 nm for 6 h. Dilute 0.5 ml of this solution to 25 ml with the mobile phase.

First identification A, B.

Second identification B, C, D.

A. Infrared absorption spectrophotometry (*2.2.24*).

Preparation Discs.

Comparison *metrifonate CRS.*

B. Thin-layer chromatography (*2.2.27*).

Test solution Dissolve 10 mg of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution Dissolve 10 mg of *metrifonate CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Plate *TLC silica gel plate R.*

Mobile phase *glacial acetic acid R*, *dioxan R*, *toluene R* (5:25:70 *V/V/V*).

Application 10 µl.

Development In an unsaturated tank over a path of 15 cm.

Drying In air.

Detection Spray with a 50 g/l solution of *4-(4-nitrobenzyl)pyridine R* in *acetone R* and heat at 120 °C for 15 min; spray the still-warm plate with a 100 g/l solution of *tetraethylene pentamine R* in *acetone R* and examine immediately.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

C. Dissolve about 20 mg in 1 ml of *dilute sodium hydroxide solution R*. Add 1 ml of *pyridine R*. Shake and heat on a water-bath for 2 min. A red colour develops in the upper layer.

D. To 0.1 g add 0.5 ml of *nitric acid R*, 0.5 ml of a 500 g/l solution of *ammonium nitrate R1* and 0.1 ml of *strong hydrogen peroxide solution R*. Heat on a water-bath for 10 min. Heat to boiling and add 1 ml of *ammonium molybdate solution R*. A yellow colour is produced or a yellow precipitate is formed.

TESTS

Appearance of solution

The solution is clear (*2.2.1*) and not more intensely coloured than reference solution Y_7 (*2.2.2, Method II*).

Dissolve 5.0 g in 20 ml of *methanol R*.

Acidity

Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 50 ml with the same solvent. Add 0.1 ml of *methyl red solution R.* Not more than 1.0 ml of *0.1 M sodium hydroxide* is required to change the colour of the indicator to yellow.

Optical rotation (*2.2.7*)

- 0.10° to + 0.10°.

Dissolve 0.1 g in ethanol (96 per cent) and dilute to 10.0 ml with the same solvent.

Related substances

Liquid chromatography (*2.2.29*).

Solvent mixture Mobile phase B, mobile phase A (10:90 *V/V*).

Test solution Dissolve 0.20 g of the substance to be examined in the solvent mixture and dilute to 10.0 ml with the solvent mixture.

Reference solution (a) Use a freshly prepared solution. Dissolve 10.0 mg of *desmethylmetrifonate CRS* (impurity A) in the solvent mixture and dilute to 20.0 ml with the solvent mixture. Dilute 1.0 ml of this solution to 5.0 ml with the solvent mixture.

Reference solution (b) Dissolve 0.10 g of *dichlorvos R* (impurity B) in the solvent mixture and dilute to 50.0 ml with the solvent mixture. Dilute 1.0 ml of this solution to 50.0 ml with the solvent mixture.

Reference solution (c) Dilute 1.0 ml of the test solution to 10.0 ml with the solvent mixture. Dilute 5.0 ml of this solution to 100.0 ml with the solvent mixture.

Reference solution (d) Use a freshly prepared solution. Mix 1.0 ml of reference solution (a), 1.0 ml of reference solution (b) and 0.025 ml of the test solution.

Reference solution (e) Dilute 4.0 ml of the test solution to 100.0 ml with the solvent mixture. Dilute 1.0 ml of this solution to 10.0 ml with the solvent mixture.

Column:

— *size*: *l* = 0.25 m, Ø = 4.6 mm;

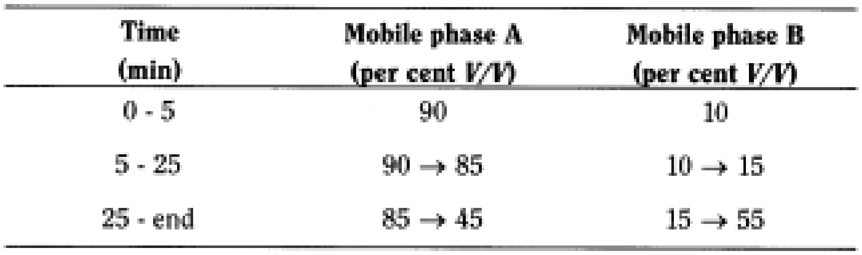
— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (10 µm);

— *temperature*: 40 °C.

Mobile phase:

— *mobile phase A*: 1.36 g/l solution of *potassium dihydrogen phosphate R*, previously adjusted to pH 2.9 with *phosphoric acid R*;

— *mobile phase B*: *acetonitrile R*;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 5	90	10
5 - 25	90 → 85	10 → 15
25 - end	85 → 45	15 → 55

Flow rate 1 ml/min.

Detection Spectrophotometer at 210 nm.

Injection 50 µl.

Run time 3 times the retention time of metrifonate.

Elution order Impurity A, metrifonate, impurity B.

System suitability Reference solution (d):

— *resolution*: minimum 3.0 between the peaks due to impurity A and metrifonate and minimum 4.5 between the peaks due to metrifonate and impurity B.

Limits:

- *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *impurity B*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.5 per cent);
- *sum of impurities other than A and B*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (1 per cent);
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (e) (0.04 per cent).

Chlorides

Maximum 500 ppm.

Dissolve 5.00 g in 30 ml of *ethanol (96 per cent) R* and add a mixture of 15 ml of *nitric acid R* and 100 ml of *water R*. Titrate with *0.01 M silver nitrate* determining the end-point potentiometrically (*2.2.20*), using a silver electrode.

1 ml of *0.01 M silver nitrate* is equivalent to 0.3546 mg of Cl.

Heavy metals (*2.4.8*)

Maximum 10 ppm.

Dissolve 2.0 g in 20 ml of *water R*. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Water (*2.5.12*)

Maximum 0.3 per cent, determined on 3.000 g.

ASSAY

Dissolve 0.300 g in 30 ml of *ethanol (96 per cent) R*. Add 10 ml of *ethanolamine R* and allow to stand for 1 h at 20-22 °C. Add a chilled mixture of 15 ml of *nitric acid R* and 100 ml of *water R* maintaining the temperature of the mixture at 20-22 °C. Maintain at that temperature and titrate with *0.1 M silver nitrate*, determining the end-point potentiometrically (*2.2.20*), using a silver electrode.

Calculate the percentage content of $C_4H_8Cl_3O_4P$, taking into account the content of chloride and using the following expression:

$$\left[\frac{V_{\mathrm{P}}}{M_{\mathrm{P}}} - \frac{V_{\mathrm{Cl}} \times 0.1}{M_{\mathrm{Cl}}}\right] \times 25.74 \times 0.1$$

V_{P} = volume of silver nitrate used in the assay, in millilitres,

M_{P} = mass of substance used in the assay, in grams,

V_{Cl} = volume of silver nitrate used in the test for chlorides, in millilitres,

M_{Cl} = mass of substance used in the test for chlorides, in grams.

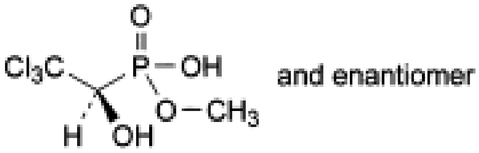
STORAGE

Protected from light.

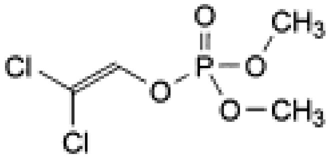
IMPURITIES

Specified impurities

A, B.



A. methyl (*RS*)-(2,2,2-trichloro-1-hydroxyethyl)phosphonate acid (desmethylmetrifonate),



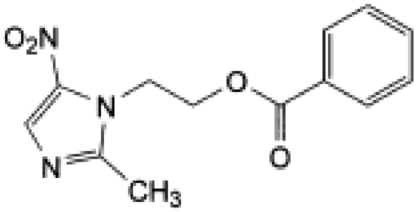
B. 2,2-dichloroethenyl dimethyl phosphate (dichlorvos).

Ph Eur

Metronidazole Benzoate

General Notices

(Ph Eur monograph 0934)



$C_{13}H_{13}N_3O_4$ 275.3 *13182-89-3*

Action and use

Imidazole antibacterial.

Preparation

Metronidazole Oral Suspension

Ph Eur

DEFINITION

2-(2-Methyl-5-nitro-1*H*-imidazol-1-yl)ethyl benzoate.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or slightly yellowish, crystalline powder or flakes.

Solubility

Practically insoluble in water, freely soluble in methylene chloride, soluble in acetone, slightly soluble in alcohol.

IDENTIFICATION

First identification C.

Second identification A, B, D.

A. Melting point (*2.2.14*): 99 °C to 102 °C.

B. Dissolve 0.100 g in a 103 g/l solution of *hydrochloric acid R* and dilute to 100.0 ml with the same acid. Dilute 1.0 ml of the solution to 100.0 ml with a 103 g/l solution of *hydrochloric acid R*. Examined between 220 nm and 350 nm (*2.2.25*), the solution shows 2 absorption maxima, at 232 nm and 275 nm. The specific absorbance at the absorption maximum at 232 nm is 525 to 575.

C. Infrared absorption spectrophotometry (*2.2.24*).

Comparison *Ph. Eur. reference spectrum of metronidazole benzoate*.

D. To about 10 mg add about 10 mg of *zinc powder R*, 1 ml of *water R* and 0.3 ml of *hydrochloric acid R*. Heat on a water-bath for 5 min and cool. The solution gives the reaction of primary aromatic amines (*2.3.1*).

TESTS

Appearance of solution

The solution is not more opalescent than reference suspension II (*2.2.1*) and not more intensely coloured than reference solution GY_3 (*2.2.2, Method II*).

Dissolve 1.0 g in *dimethylformamide R* and dilute to 10 ml with the same solvent.

Acidity

Dissolve 2.0 g in a mixture of 20 ml of *dimethylformamide R* and 20 ml of *water R*, previously neutralised with *0.02 M hydrochloric acid* or *0.02 M sodium hydroxide* using 0.2 ml of *methyl red solution R*. Not more than 0.25 ml of *0.02 M sodium hydroxide* is required to change the colour of the indicator.

Related substances

Liquid chromatography (*2.2.29*).

Solvent mixture Mix 45 volumes of mobile phase B and 55 volumes of mobile phase A.

Test solution Dissolve 0.100 g of the substance to be examined in the solvent mixture and dilute to 10.0 ml with the solvent mixture.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with the solvent mixture. Dilute 1.0 ml of the solution to 10.0 ml with the solvent mixture.

Reference solution (b) Dissolve 5.0 mg of *metronidazole CRS*, 5.0 mg of *2-methyl-5-nitroimidazole R* and 5.0 mg of *benzoic acid R* in the solvent mixture and dilute to 50.0 ml with the solvent mixture. Dilute 1.0 ml of the solution to 10.0 ml with the solvent mixture.

Column:

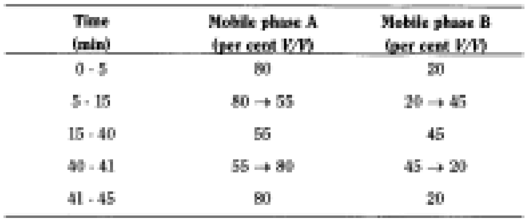
— *size*: *l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase*: *spherical di-isobutyloctadecylsilyl silica gel for chromatography R* (5 µm) with a specific surface area of 180 m2/g, a pore size of 8 nm and a carbon loading of 10 per cent.

Mobile phase:

— *mobile phase A*: 1.5 g/l solution of *potassium dihydrogen phosphate R* adjusted to pH 3.2 with *phosphoric acid R*;

— *mobile phase B*: *acetonitrile R*;



Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 5	80	20
5 - 15	80 → 55	20 → 45
15 - 40	55	45
40 - 41	55 → 80	45 → 20
41 - 45	80	20

Flow rate 1 ml/min.

Detection Spectrophotometer at 235 nm.

Injection 10 µl.

Relative retention With reference to metronidazole benzoate (retention time = about 20 min): impurity B = about 0.17; impurity A = about 0.20; impurity C = about 0.7.

System suitability Reference solution (b):

— *resolution*: minimum 2.0 between the peaks due to impurity A and impurity B.

Limits:

— *impurities A, B, C*: for each impurity, not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

— *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

— *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.01 per cent).

Heavy metals (*2.4.8*)

Maximum 20 ppm.

1.0 g complies with limit test C. Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying (*2.2.32*)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 80 °C for 3 h.

Sulphated ash (*2.4.14*)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 50 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 27.53 mg of $C_{13}H_{13}N_3O_4$.

STORAGE

Ph Eur

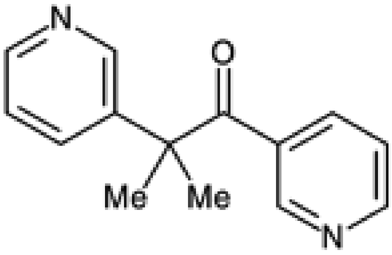
Metyrapone

General Notices



$C_{14}H_{14}N_2O$ 226.3 *54-36-4*

Action and use

11-Beta-hydroxylase inhibitor; inhibition of the formation of corticosteroids.

Preparation

Metyrapone Capsules

DEFINITION

Metyrapone is 2-methyl-1,2-di(3-pyridyl)-propan-1-one. It contains not less than 97.0% and not more than 103.0% of $C_{14}H_{14}N_2O$, calculated with reference to the dried substance.

CHARACTERISTICS

A white to light amber, crystalline powder.

Sparingly soluble in *water*; freely soluble in *ethanol (96%)*. It dissolves in dilute mineral acids.

IDENTIFICATION

A. The *infrared absorption spectrum*, Appendix II A, is concordant with *reference spectrum 1* of metyrapone *(RS 230)*.

B. The *light absorption*, Appendix II B, in the range 230 to 350 nm of a 0.002% w/v solution in 0.1M *hydrochloric acid* exhibits a maximum only at 260 nm. The *absorbance* at 260 nm is about 1.0.

C. To 5 ml of a 1% w/v solution in 1M *sulphuric acid* add 0.2 ml of *potassium tetraiodomercurate solution*. A cream precipitate is produced.

TESTS

Melting point

50° to 53°, Appendix V A.

Related substances

Carry out in subdued light the method for *thin-layer chromatography*, Appendix III A, using *silica gel* GF_{254} as the coating substance and a mixture of 90 volumes of *propan-2-ol*, 5 volumes of 13.5M *ammonia* and 5 volumes of *water* as the mobile phase. Apply separately to the plate 10 µl of each of two solutions of the substance being examined in *dichloromethane* containing (1) 5.0% w/v and (2) 0.010% w/v. After removal of the plate, allow it to dry in air and examine under *ultraviolet light (254 nm)*. Any *secondary spot* in the chromatogram obtained with solution (1) is not more intense than the spot in the chromatogram obtained with solution (2).

Loss on drying

When dried over *phosphorus pentoxide* at a pressure not exceeding 0.7 kPa for 6 hours, loses not more than 0.5% of its weight. Use 1 g.

Sulphated ash

Not more than 0.1%, Appendix IX A.

ASSAY

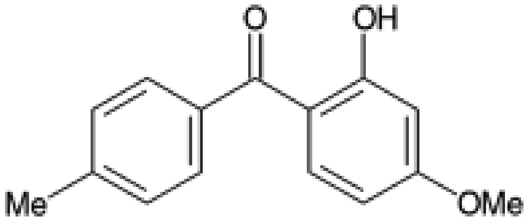
Carry out the following procedure protected from light. Dissolve 0.1 g in sufficient 0.1M *hydrochloric acid* to produce 100 ml. Dilute 5 ml to 50 ml with 0.1M *hydrochloric acid* and dilute 5 ml of this solution to 50 ml with 0.1M *hydrochloric acid*. Measure the *absorbance* of the resulting solution at the maximum at 260 nm, Appendix II B. Calculate the content of $C_{14}H_{14}N_2O$ taking 500 as the value of A(1%, 1 cm) at the maximum at 260 nm.

STORAGE

Metyrapone should be protected from light.

Mexenone

General Notices



$C_{15}H_{14}O_3$ 242.3 *1641-17-4*

Action and use

Sunscreen.

Preparation

Mexenone Cream

DEFINITION

Mexenone is 2-hydroxy-4-methoxy-4′-methylbenzophenone. It contains not less than 97.0% and not more than 103.0% of $C_{15}H_{14}O_3$, calculated with reference to the dried substance.

CHARACTERISTICS

A pale yellow, crystalline powder.

Practically insoluble in *water*; freely soluble in *acetone*; sparingly soluble in *ethanol (96%)*.

IDENTIFICATION

A. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of mexenone *(RS 232)*.

B. The *light absorption*, Appendix II B, in the range 230 to 350 nm of a 0.0015% w/v solution in *methanol* exhibits three maxima, at 243, 287 and 325 nm. The *absorbances* at the maxima are about 0.53, about 0.90 and about 0.66, respectively.

C. In the test for Related substances, the principal spot in the chromatogram obtained with solution (2) corresponds to the spot in the chromatogram obtained with solution (4).

TESTS

Melting point

99° to 102°, Appendix V A.

Iron

Ignite 1.0 g with 1 g of *anhydrous sodium carbonate*, cool, dissolve the residue in 5 ml of *hydrochloric acid* and dilute to 40 ml with *water*. 10 ml of the solution complies with the *limit test for iron*, Appendix VII (40 ppm).

Related substances

Carry out the method for *thin-layer chromatography*, Appendix III A, using *silica gel* GF_{254} as the coating substance and a mixture of 100 volumes of *toluene* and 10 volumes of *butan-2-one* as the mobile phase. Apply separately to the plate 5 µl of each of four solutions in *butan-2-one* containing (1) 10% w/v of the substance being examined, (2) 0.20% w/v of the substance being examined, (3) 0.10% w/v of the substance being examined and (4) 0.20% w/v of *mexenone BPCRS*. After removal of the plate, allow it to dry in air and examine under *ultraviolet light (254 nm)*. Any *secondary spot* in the chromatogram obtained with solution (1) is not more intense than the spot in the chromatogram obtained with solution (3) (1%).

Loss on drying

When dried to constant weight at 60° at a pressure not exceeding 3.5 kPa, loses not more than 0.5% of its weight. Use 1 g.

Sulphated ash

Not more than 0.1%, Appendix IX A.

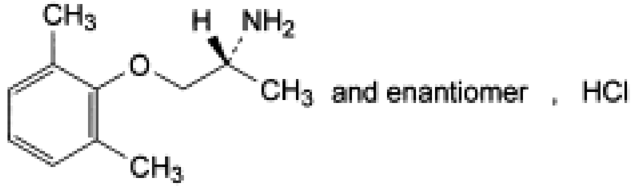
ASSAY

Dissolve 80 mg in sufficient *methanol* to produce 100 ml. Dilute 10 ml of the solution to 100 ml with *methanol* and further dilute 10 ml of this solution to 100 ml with *methanol*. Measure the *absorbance* of the resulting solution at the maximum at 287 nm, Appendix II B, and calculate the content of $C_{15}H_{14}O_3$ taking 640 as the value of A(1%, 1 cm) at the maximum at 287 nm.

Mexiletine Hydrochloride

General Notices

(Ph Eur monograph 1029)



$C_{11}H_{17}NO,HCl$ 215.7 *5370-01-4*

Action and use

Class I antiarrhythmic.

Preparations

Mexiletine Capsules

Mexiletine Injection

Ph Eur

DEFINITION

(2*RS*)-1-(2,6-Dimethylphenoxy)propan-2-amine hydrochloride.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water and in methanol, sparingly soluble in methylene chloride.

It shows polymorphism (*5.9*).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison *mexiletine hydrochloride CRS.*

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *methanol R*, evaporate to dryness and record new spectra using the residues.

B. Dilute 1.5 ml of solution S (see Tests) to 15 ml with *water R*. The solution gives reaction (a) of chlorides (*2.3.1*).

TESTS

Solution S

Dissolve 2.0 g in *carbon dioxide-free water R* and dilute to 20 ml with the same solvent.

Appearance of solution

The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dilute 5 ml of solution S to 10 ml with *water R*.

pH (*2.2.3*)

4.0 to 5.5 for solution S.

Impurity D

Thin-layer chromatography (*2.2.27*).

Test solution Dissolve 0.500 g of the substance to be examined in *methanol R* and dilute to 5.0 ml with the same solvent.

Reference solution (a) Dissolve the content of a vial of *mexiletine impurity D CRS* in 4.0 ml of *methanol R*.

Reference solution (b) Dilute 1.0 ml of the test solution to 20.0 ml with *methanol R*.

Reference solution (c) Dilute 1.0 ml of reference solution (a) to 5.0 ml with *methanol R*.

Reference solution (d) Dilute 1.0 ml of reference solution (a) to 5.0 ml with reference solution (b).

Plate *TLC silica gel plate R.*

Mobile phase *concentrated ammonia R*, *alcohol R*, *acetone R*, *toluene R* (3:7:45:45 *V/V/V/V*).

Application 5 µl of the test solution and reference solutions (c) and (d).

Development Over a path of 10 cm.

Drying In air.

Detection Spray with *ninhydrin solution R3* and heat at 100-105 °C for 15 min or until the spots appear.

System suitability The chromatogram obtained with reference solution (b) shows 2 clearly separated spots.

Limit:

- *impurity D*: any spot corresponding to impurity D in the chromatogram obtained with the test solution is not more intense than the spot in the chromatogram obtained with reference solution (c) (0.1 per cent).

Related substances

Liquid chromatography (*2.2.29*).

Test solution Dissolve 0.200 g of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 10.0 ml with the mobile phase.

Reference solution (b) Dissolve the content of a vial of *mexiletine impurity C CRS* in the mobile phase and transfer the solution quantitatively to a volumetric flask containing 16.0 mg of *2,6-dimethylphenol R*. Dilute to 20.0 ml with the mobile phase. Mix 1.0 ml of this solution with 2.0 ml of reference solution (a) and dilute the mixture to 100.0 ml with the mobile phase.

Column:
- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Mix 65 volumes of *methanol R2* and 35 volumes of a solution prepared as follows: dissolve 11.5 g of *anhydrous sodium acetate R* in 500 ml of *water R*, add 3.2 ml of *glacial acetic acid R*, mix and allow to cool; adjust to pH 4.8 with *glacial acetic acid R* and dilute to 1000 ml with *water R*.

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 262 nm.

Injection 20 µl.

Run time 5.5 times the retention time of mexiletine.

Relative retention With reference to mexiletine (retention time = about 4 min): impurity C = about 0.7; impurity A = about 1.8.

System suitability Reference solution (b):

- *resolution*: minimum 5.0 between the peaks due to mexiletine and impurity C.

Limits:
- *impurity A*: not more than 2.5 times the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.1 per cent);
- *impurity C*: not more than 20 times the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.1 per cent);
- *any other impurity*: for each impurity, not more than 0.5 times the area of the peak due to mexiletine in the chromatogram obtained with reference solution (b) (0.1 per cent);
- *total*: not more than 2.5 times the area of the peak due to mexiletine in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *disregard limit*: 0.25 times the area of the peak due to mexiletine in the chromatogram obtained with reference solution (b) (0.05 per cent).

Heavy metals (*2.4.8*)

Maximum 10 ppm.

2.0 g complies with limit test C. Prepare the standard using 2 ml of *lead standard solution (10* *ppm Pb) R.*

Water (*2.5.12*)

Maximum 0.5 per cent, determined on 1.00 g.

Sulphated ash (*2.4.14*)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

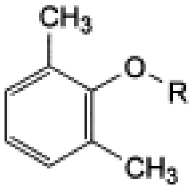
Dissolve 0.150 g in 50 ml of a mixture of equal volumes of *anhydrous acetic acid R* and *acetic anhydride R.* Titrate immediately with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*) and completing the titration within 2 min.

1 ml of *0.1 M perchloric acid* is equivalent to 21.57 mg of $C_{11}H_{18}ClNO$.

IMPURITIES

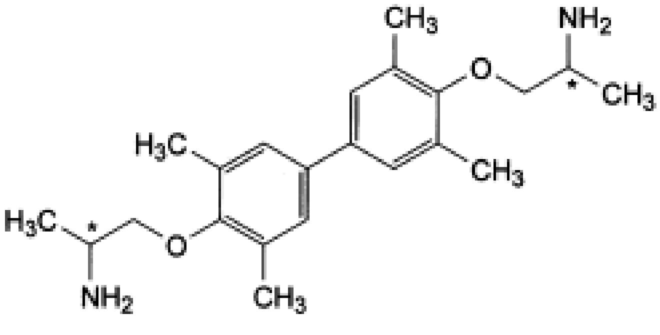
Specified impurities *A, C, D.*

Other detectable impurities (The following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B.*

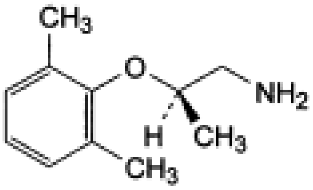


A. R = H: 2,6-dimethylphenol,

B. R = CH_2-CO-CH_3: 1-(2,6-dimethylphenoxy)propan-2-one,



C. 1,1′-[(3,3′,5,5′-tetramethylbiphenyl-4,4′-diyl)bisoxy]dipropan-2-amine,



and enantiomer

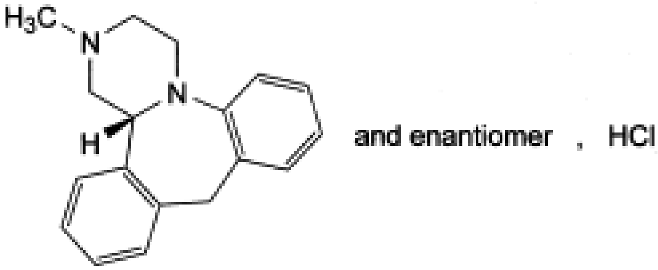
D. (2*RS*)-2-(2,6-dimethylphenoxy)propan-1-amine.

Ph Eur

Mianserin Hydrochloride

General Notices

(Ph Eur monograph 0846)



$C_{18}H_{20}N_2$,HCl 300.8 *21535-47-7*

Action and use

Monoamine reuptake inhibitor; tetracyclic antidepressant.

Preparation

Mianserin Tablets

Ph Eur

DEFINITION

Mianserin hydrochloride contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of (*RS*)-2-methyl-1,2,3,4,10,14b- hexahydrodibenzo[*c,f*]pyrazino [1,2-*a*]azepine hydrochloride, calculated with reference to the dried substance.

CHARACTERS

White or almost white, crystalline powder or crystals, sparingly soluble in water, soluble in methylene chloride, slightly soluble in alcohol.

IDENTIFICATION

First identification B, D.

Second identification A, C, D.

A. Dissolve 50.0 mg in *water R* and dilute to 50.0 ml with the same solvent. Dilute 5.0 ml of the solution to 50.0 ml with *water R*. Examined between 230 nm and 350 nm (*2.2.25*), the solution shows an absorption maximum at 279 nm. The specific absorption at the maximum is 64 to 72.

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum
